Foreword

I learnt about the denial of human rights and lack of justice before I knew what those concepts meant, legally. As refugees, the circumstances we are born into are shaped by powers beyond our reach. Yet *we* live the consequences of persecution and displacement and the laws purportedly used to provide pathways to protection.

The circumstances I was born into—as a Kurd whose family escaped genocide—shaped my interest in equality, justice, and human rights very early on. My family's history of resistance in the face of persecution and oppression instilled in me the importance of standing up for what is right, even when your life is on the line.

As the daughter of human rights activists, an ingrained passion for equality and justice inspired me to pursue a career in law. I wanted to understand the power of law to create positive change. So, I decided to dedicate my career to helping others find their voice and access justice, as a lawyer.

In Pakistan, I was denied an education because of my refugee status. And in New Zealand, when I was in high school, a careers adviser told me I 'should consider other options' because law school would be too difficult for *someone like me*—a refugee with no history of education in the family. People like me did not finish school, let alone end up at university. All our lives, we are trained to survive. Being a refugee means that our existence is based on trying to survive just another day and to reach safety. That's all we ever dreamed of. Wanting more than safety and survival seemed ungrateful. And there I was, 'Rêz the ungrateful refugee', dreaming of things that were not for me—going to law school.

To me, it was not just about studying law. It was all the barriers, the stereotypes, and the assumptions that I wanted to crush. To prove that we, refugees, could dream bigger than the constraints of our identities and experiences allowed. It was about taking back control of our own lives and, one day, hopefully, being able to influence the laws that apply to people who are displaced, as I once was.

As a refugee, going through the legal processes of refugee status determination, identification, credibility assessments, and asylum proceedings can be disempowering and frustrating. We are subject to laws and systems that were not created *for us* or *by us*. While it is referred to as 'refugee protection', in many ways it epitomizes a system that is often designed to protect *against us*. To keep us out.

Theoretically, seeking asylum is recognized, internationally, as a right; however, in practice, many asylum seekers are treated as criminals. The political discourse on refugees has shifted from seeing us as '*at* risk', to '*a* risk'. Paradoxically, a system designed to protect some of the most vulnerable people in the world can make us feel even more vulnerable and helpless, further exacerbating the pain of fleeing from our homes.

We find ourselves tasked with navigating the complexities of legal systems—often in languages foreign to us—to reach some semblance of protection afforded under the Refugee Convention as recognized refugees. Yet, disappointingly, successfully navigating these systems does not always result in any guarantees. Access to education, employment, and living a somewhat dignified life in the host country remain everyday uncertainties, as does the prospect of being resettled in a third country. With UNHCR figures indicating that less than one per cent of the world's refugees are resettled annually, the chances are slim.

My family was told it would be six months before we were resettled. It ended up being nine years. Being born as a refugee in a camp, I was at one point one of the statistics referred to in UNHCR's annual global trends reports about the number of displaced people worldwide. But I am also part of another statistic: the one per cent of refugees who complete higher education. While there are many scholars, like me, who also happen to have lived experiences of displacement, refugee voices are still largely unheard in refugee research and scholarship.

While many of the Refugee Convention's drafters were themselves refugees, and drew directly on their personal experiences of displacement, today we see a considerable lack of refugee engagement on issues that impact us. From decision-making outcomes to research that has the potential to influence law and policy related to the predicament faced by refugees, it is imperative that refugees play a key role.

Refugee situations have increased in scope, scale, and complexity, and this necessitates new and innovative methods for protection, assistance, and solutions. While the *status quo* continues to work for some issues, large-scale refugee movements and protracted refugee situations persist around the world, indicating that things must change.

My parents fled for my safety and took me to the opposite side of the world, yet I made my way right back to where they started. I am currently based in the Kurdish region of Iraq working as part of an international team of lawyers gathering evidence of the targeted genocidal campaign carried out by ISIS against the Yezidis, including mass executions, kidnappings, torture, sexual violence, and other egregious human rights abuses. This evidence will be used to build cases in collaboration with relevant European and Iraqi/Kurdish authorities to prosecute the perpetrators.

Finding the best responses and solutions for the complex issues facing the millions of displaced people across the globe requires strong evidence-based research and a commitment to translating findings into impact. It requires input from those with lived experiences of displacement for policies to be developed that are closer to the reality on the ground. Participation begets solutions.

Refugee participation is not only an 'ethical imperative'; it can also contribute to changes in policy, the development of law, and durable solutions that are innovative, sustainable, and more impactful. The importance of reflecting the perspectives of those with lived experiences of displacement has been highlighted in many fora. However, a number of obstacles still hinder the participation of refugee scholars. We need to develop more effective measures for redressing the imbalance in legal scholarship to include refugee voices. We must do better.

There are many avenues for better incorporating refugee perspectives into academic research in a more genuine and systematic way. Refugees are not homogeneous, and neither are our voices. Refugees belong to many different national, social, religious, and ethnic groups, and inevitably have varying opinions and beliefs. Therefore, no one scholar could ever represent a comprehensive 'refugee voice'. As such, scholarship should endeavour to seek input from scholars representing diverse views, and include different nationalities, ethnicities, and backgrounds.

We need to create scholarship identified by people currently displaced to address current and future challenges associated with forced displacement. To achieve these goals, this requires a prioritization and orientation towards capacity-building and co-designing, to ensure that it can provide a platform for scholars with displacement experiences. Leading and emerging scholars can facilitate research, training, and scholarship opportunities which result in specific deliverables, and ensure genuine and effective participation and involvement of refugees in academic work which has the potential to impact and respond to challenges and opportunities relating to us.

The *Handbook*'s approach is pivotal. As the editors note in their introductory chapter, it reflects a range of approaches—from doctrinal analysis of the law, through to critiques of foundational practices and underlying assumptions. As the editors explain, the *Handbook* does not simply 'recount the *status quo*' but also challenges it, and in so doing, sets the future research agenda for international refugee law. It is critical that this next phase incorporates a more balanced consideration of refugee voices. The methodological challenges this entails should not prevent the legal community from championing meaningful refugee participation in scholarship.

With unprecedented numbers of displaced people, we need to work together—now more than ever—to come up with practical, effective responses to displacement through multidimensional, multidisciplinary, and intersectional approaches. The call for 'nothing about us, without us' is not merely a call to engage with refugees in consultations and research, then to write about us. It is a call to make space for us to use our skills, perspectives, and experiences to contribute to scholarship directly. After all, we—refugees—are the experts of our lives and the issues affecting us, and we should be treated as such.

Rêz Gardî, Hewlêr, Kurdistan Region of Iraq, October 2020

Acknowledgements

The publication of this *Handbook* would not have been possible without the support and hard work of many individuals, and the institutional support of several organizations and funders. In the first place, thanks are due to Oxford University Press and the editors who commissioned and shepherded this *Handbook*, in particular, Merel Alstein and Jack McNichol. We are indebted to Merel for suggesting that we work together as a trio, which has been both a professional and a personal pleasure.

A volume of this scale requires many pairs of keen eyes. We are grateful to our editorial assistants who undertook meticulous copyediting and proofing: Hannah Gordon at Melbourne Law School, Dr Sean Lau at Harvard Law School, and Dr Yulia Ioffe, formerly at the University of Oxford, now at Queen Mary. Yulia took on a multifaceted role—an Assistant Editor in all but name, as well as a contributor to the *Handbook*. Her expertise on general international law, the rights of the child, and refugee law, were frequently called upon, as well as her editorial skills.

Over two days in July 2019, we had the privilege to host a workshop in the beautiful surroundings of All Souls College, Oxford, with the generous support of Emeritus Fellow Professor Guy S Goodwin-Gill. The College staff, in particular Irini Hatzimichali, ensured that the event was both efficiently and elegantly run. Our graduate student assistants, Natalie Nguyen, Dr Claire Walkey, and Elspeth Windsor, prepared meticulous notes for authors, which enabled us to share ideas with those who could not be there in person.

The workshop, which was attended by most of the authors, provided an opportunity to discuss and shape the contributions for the *Handbook*. We were deeply grateful to our contributors for the collaborative and generous spirit with which they approached the workshop, and for their willingness to both give and receive feedback so constructively. This collegial approach extended well beyond the workshop, as exemplified by authors' willingness to refine and revise their contributions—in several cases co-authoring chapters in newly established international collaborations—and to engage closely with us as editors to produce excellent scholarship. We are proud to be part of this community of scholars.

We gratefully acknowledge the various institutions and funders that supported the *Handbook*. Cathryn Costello and Michelle Foster's long-standing collaboration was supported by generous funding from the Allan Myers Oxford–Melbourne Law School fund. At Oxford, the Refugee Studies Centre (RSC) staff supported the organization of the workshop, in particular, Tamsin Kelk and Susanna Power. The RSC also supported the work on the *Handbook* via a grant from the Swiss Federal Department of Foreign

Affairs. We thank the Andrew & Renata Kaldor Centre for International Refugee Law at the University of New South Wales and the Peter McMullin Centre on Statelessness at the University of Melbourne for financial support towards workshop travel. Cathryn Costello's research was supported by her ERC *RefMig* grant under the European Union's Horizon 2020 research and innovation programme (Grant Agreement ERC STG 2016 REF-MIG (716968)).

We each owe a deep debt to our families. Much of the final editorial work was undertaken at a time of COVID-19-related restrictions, so we relied more than ever on our partners and others to take on additional caring responsibilities.

Finally, and most importantly, we thank all the contributors for their commitment, expertise, openness, and collegiality. It was a privilege and a pleasure to work with you. In particular, we acknowledge Rêz Gardî for her insightful, important, and moving Foreword.

Introducing International Refugee Law as a Scholarly Field 1
Cathryn Costello, Michelle Foster, and Jane McAdam

PART I INTERNATIONAL REFUGEE LAW—REFLECTIONS ON THE SCHOLARLY FIELD

1. International Refugee Law in the Early Years 23
Guy S Goodwin-Gill

2. Race, Refugees, and International Law 43
E Tendayi Achiume

3. A Feminist Appraisal of International Refugee Law 60
Adrienne Anderson and Michelle Foster

4. Queering International Refugee Law 78
Nuno Ferreira and Carmelo Danisi

5. The Politics of International Refugee Law and Protection 97
Rebecca Hamlin

6. The Ethics of International Refugee Protection 114
Seyla Benhabib and Nishin Nathwani

7. Refugees as Migrants 134
Idil Atak and François Crépeau

8. The Intersection of International Refugee Law and International Statelessness Law 152
Laura van Waas

PART II SOURCES

9. The Architecture of the UN Refugee Convention and Protocol 171
James C Hathaway

10. The Office of the United Nations High Commissioner for Refugees 186
James Milner and Jay Ramasubramanyam

11. Moving Towards an Integrated Approach of Refugee Law and Human Rights Law 202
Vincent Chetail

12. International Humanitarian Law and Refugee Protection 221
Reuven (Ruvi) Ziegler

13. Customary Refugee Law 240
Hélène Lambert

14. National Constitutions and Refugee Protection 258
Eve Lester

PART III REGIONAL REGIMES

15. Regional Refugee Regimes: Africa 279
Marina Sharpe

16. Regional Refugee Regimes: North America 296
Deborah Anker

17. Regional Refugee Regimes: Latin America 315
José H Fischel de Andrade

18. Regional Refugee Regimes: Middle East 334
Maja Janmyr and Dallal Stevens

19. Regional Refugee Regimes: Europe 352
Evangelia (Lilian) Tsourdi

20. Regional Refugee Regimes: Central Asia 370
Khalida Azhigulova

21. Regional Refugee Regimes: East Asia 389
Osamu Arakaki and Lili Song

22. Regional Refugee Regimes: South Asia 407
Jay Ramasubramanyam

23. Regional Refugee Regimes: Southeast Asia 423
Vitit Muntarbhorn

24. Regional Refugee Regimes: Oceania 441
Michelle Foster and Anna Hood

PART IV ACCESS TO PROTECTION AND INTERNATIONAL RESPONSIBILITY-SHARING

25. The Sharing of Responsibilities for the International Protection of Refugees 463
Madeline Garlick

26. Protection at Sea and the Denial of Asylum 483
Violeta Moreno-Lax

27. Extraterritorial Migration Control and Deterrence 502
Thomas Gammeltoft-Hansen and Nikolas Feith Tan

28. The Evolution of Safe Third Country Law and Practice 518
Luisa Feline Freier, Eleni Karageorgiou, and Kate Ogg

29. Smuggling of Migrants and Refugees 535
Andreas Schloenhardt

30. Human Trafficking and Refugees 553
Catherine Briddick and Vladislava Stoyanova

31. Refugee Status Determination 569
Bruce Burson

32. Asylum Procedure 588
Álvaro Botero and Jens Vedsted-Hansen

33. Credibility, Reliability, and Evidential Assessment 607
Gregor Noll

PART V THE SCOPE OF REFUGEE PROTECTION

34. The International and Regional Refugee Definitions Compared 625
Tamara Wood

35. UNRWA and Palestine Refugees 643
Susan M Akram

36. Complementary Protection 661
Jane McAdam

37. Temporary Protection and Temporary Refuge 678
Jean-François Durieux

38. The Internal Protection Alternative 695
Bríd Ní Ghráinne

39. Exclusion 711
Geoff Gilbert and Anna Magdalena Bentajou

40. Women in Refugee Jurisprudence 728
Catherine Dauvergne

41. Refugee Children 745
Jason Pobjoy

42. Sexual Orientation and Gender Identity in Refugee Claims 761
Jenni Millbank

43. Protecting Refugees with Disabilities 778
Mary Crock

44. Stateless Refugees 797
Hélène Lambert

45. Conflict Refugees 815
Cornelis (Kees) Wouters

46. Displacement in the Context of Climate Change and Disasters 832
Jane McAdam

47. Internal Displacement 848
Walter Kälin

PART VI REFUGEE RIGHTS AND REALITIES

48. The Right to Asylum 867
María-Teresa Gil-Bazo and Elspeth Guild

49. National Constitutions and the Right to Asylum 883
Stephen Meili

50. *Non-refoulement* 899
Penelope Mathew

51. Non-penalization and Non-criminalization 917
Cathryn Costello and Yulia Ioffe

52. The Right to Liberty 933
Eve Lester

53. The Right to Work 952
Cathryn Costello and Colm Ó Cinnéide

54. The Right to Education 971
Sarah Dryden-Peterson and Hania Mariën

55. The Right to Family Reunification 988
Frances Nicholson

56. The Digital Transformation of Refugee Governance 1007
Kristin Bergtora Sandvik

PART VII THE END OF REFUGEEHOOD—CESSATION AND DURABLE SOLUTIONS

57. Cessation 1029
Georgia Cole

58. Refugee Naturalization and Integration 1046
Fatima Khan and Reuven (Ruvi) Ziegler

59. Reimagining Voluntary Repatriation 1064
Marjoleine Zieck

60. Resettlement 1080
Susan Kneebone and Audrey Macklin

61. Onward Migration 1099
Katy Long

PART VIII ACCOUNTABILITY FOR DISPLACEMENT AND REFUGEE RIGHTS VIOLATIONS

62. Restitution and Other Remedies for Refugees and Internally Displaced Persons 1119
Megan Bradley

63. The Responsibility of Armed Groups Concerning Displacement 1138
Ben Saul

64. The Accountability of International Organizations in Refugee and Migration Law 1157
Jan Klabbers

65. Border Crimes as Crimes against Humanity 1174
Itamar Mann

Idil Atak is Associate Professor in the Department of Criminology and Faculty of Law, Ryerson University (Toronto).

Khalida Azhigulova is an independent researcher in human rights and asylum and migration law, and Founder and Director of the independent Centre for Research in Human Rights, Inclusion and Civil Society, Kazakhstan.

Seyla Benhabib is the Eugene Meyer Professor of Political Science and Philosophy Emerita at Yale University, and Senior Research Fellow and Professor Adjunct of Law at Columbia University.

Anna Magdalena Bentajou holds a Magister in Law (University of Vienna) as well as an LLM in International Human Rights and Humanitarian Law (University of Essex), and is currently working for Caritas Austria.

Álvaro Botero is a Rapporteur for the UN Committee on the Protection of the Rights of all Migrant Workers and Members of Their Families; coordinator of the Organization of American States Unit on Refugees and Forced Displacement; and an Adjunct Professor at the Washington College of Law at American University in Washington, DC.

Megan Bradley is Associate Professor of Political Science and International Development Studies, McGill University (Montreal).

Catherine Briddick is the Martin James Departmental Lecturer in Gender and Forced Migration at the Refugee Studies Centre, University of Oxford.

Bruce Burson is the manager of the refugee and protection stream at the New Zealand Immigration and Protection Tribunal.

Vincent Chetail is Professor of International Law and Director of the Global Migration Centre at the Graduate Institute of International and Development Studies (Geneva).

Georgia Cole is a Chancellor's Fellow at the School of Social and Political Sciences at the University of Edinburgh, and was formerly a Research Fellow at the Margaret Anstee Centre for Global Studies at Newnham College, University of Cambridge.

Cathryn Costello is Professor of Fundamental Rights and Co-Director of the Centre for Fundamental Rights at the Hertie School, Berlin, and Andrew W Mellon Professor of Refugee and Migration Law at the Refugee Studies Centre, University of Oxford.

François Crépeau is Hans & Tamar Oppenheimer Professor of Public International Law at McGill University (Montreal).

Mary Crock is Professor of Public Law and Director of the Sydney Centre for International Law at the University of Sydney Law School.

Carmelo Danisi is Adjunct Professor and Research Fellow in International Law at the University of Bologna, Italy, and Visiting Research Fellow at the University of Sussex, United Kingdom.

Catherine Dauvergne is the Provost and Vice-President Academic at Simon Fraser University, Canada.

Sarah Dryden-Peterson is Associate Professor of Education at the Harvard Graduate School of Education and Director of Refugee REACH, which fosters welcoming communities and quality education in settings of migration and displacement.

Jean-François Durieux is a senior Research Associate of the Refugee Law Initiative (University of London), an independent lecturer and trainer in international refugee law and the practice of refugee protection, and a former senior manager at UNHCR.

Nuno Ferreira is Professor of Law at the University of Sussex, United Kingdom.

José H Fischel de Andrade teaches part-time at the University of Milan (Statale) and Humboldt University (Berlin) and is a senior staff member of UNHCR.

Michelle Foster is a Professor and Director of the Peter McMullin Centre at Melbourne Law School, Australia.

Luisa Feline Freier is Associate Professor of Political Science at the Universidad del Pacífico (Lima, Peru).

Thomas Gammeltoft-Hansen is Professor WSR in Migration and Refugee Law at the iCourts Centre for Excellence, Faculty of Law, University of Copenhagen.

Rêz Gardî is an international lawyer and Harvard Satter Human Rights Fellow working in the Kurdistan Region of Iraq. She is also the Co-Founder of the Centre for Asia Pacific Refugee Studies based at the University of Auckland, New Zealand, and a Visiting Lecturer in Law at the University of Kurdistan, Hewlêr.

Madeline Garlick is Chief of the Protection Policy and Legal Advice Section in UNHCR's Division of International Protection, and also teaches at Sciences Po, Paris, and on an occasional basis at the Refugee Studies Centre, University of Oxford.

María-Teresa Gil-Bazo is Professor of International Law at the Universidad de Navarra, Spain and a Research Associate at the African Centre for Migration and Society at the University of the Witwatersrand, South Africa.

Geoff Gilbert is Professor of International Human Rights and Humanitarian Law at the University of Essex and Chair of the Global Academic Interdisciplinary Network established under the Global Compact on Refugees.

Guy S Goodwin-Gill is a Professor of Law at the Andrew & Renata Kaldor Centre for International Refugee Law at the University of New South Wales, Sydney and Emeritus Fellow, All Souls College, Oxford.

Elspeth Guild is a Jean Monnet Professor *ad personam* at Queen Mary University of London and a partner at the London law firm Kingsley Napley.

Rebecca Hamlin is Associate Professor in the Department of Political Science and Legal Studies at the University of Massachusetts, Amherst.

James C Hathaway is the James E and Sarah A Degan Professor of Law at the University of Michigan and Distinguished Visiting Professor of International Refugee Law at the University of Amsterdam.

Anna Hood is a Senior Lecturer at the University of Auckland, and has a BA/LLB (Hons) (Melbourne), LLM (NYU), and PhD (Melbourne).

Yulia Ioffe is a Postdoctoral Research Fellow at the School of Law, Queen Mary University of London, and was formerly a researcher at the Refugee Studies Centre, University of Oxford.

Maja Janmyr is Professor of International Migration Law at the Norwegian Centre for Human Rights, Faculty of Law, University of Oslo, Norway.

Walter Kälin is Professor Emeritus for International and Constitutional Law at the University of Bern in Switzerland, and was formerly the Representative of the UN Secretary-General on the Human Rights of Internally Displaced Persons.

Eleni Karageorgiou is a Ragnar Söderberg Postdoctoral Fellow at Law School, Lund University.

Fatima Khan is an Associate Professor and Director of the Refugee Rights Unit at the Law Faculty, University of Cape Town.

Jan Klabbers is Professor of International Law at the University of Helsinki.

Susan Kneebone is a Professorial Fellow, Senior Associate of the Asian Law Centre, and Affiliate of the Peter McMullin Centre on Statelessness at Melbourne Law School, Australia.

Hélène Lambert is a Professor of Law at the University of Technology Sydney.

Eve Lester is an Australian Research Council DECRA Fellow, College of Law, Australian National University, Founding Director of Boniĝi Monitoring, and a Myer Innovation Fellow 2020.

Katy Long is a Senior Research Associate at the Refugee Law Initiative at the School of Advanced Studies, University of London and an Honorary Fellow at the Centre for African Studies at the University of Edinburgh.

Audrey Macklin is Professor of Law and Chair in Human Rights at University of Toronto.

Itamar Mann is an Associate Professor at the University of Haifa, Faculty of Law; Principal Investigator at the Minerva Center for the Rule of Law under Extreme Conditions; and a legal adviser at the Global Legal Action Network (GLAN).

Hania Mariën is a doctoral student at the Harvard Graduate School of Education.

Penelope Mathew is Professor and Dean of Law at the University of Auckland.

Jane McAdam is Scientia Professor of Law and Director of the Andrew & Renata Kaldor Centre for International Refugee Law at the University of New South Wales, Sydney.

Stephen Meili is an Associate Professor of Law and the James H Binger Professor in Clinical Law at the University of Minnesota.

Jenni Millbank is a Distinguished Professor at the Faculty of Law, University of Technology Sydney.

James Milner is Associate Professor of Political Science at Carleton University, Canada, and Project Director of LERRN: The Local Engagement Refugee Research Network.

Violeta Moreno-Lax is Reader in Law and Founder of the Immigration Law Programme at Queen Mary University of London; Visiting Professor of EU Justice and Home Affairs at the College of Europe; and Legal Adviser at the Global Legal Action Network (GLAN).

Vitit Muntarbhorn is a Professor Emeritus at the Faculty of Law, Chulalongkorn University, Bangkok, and has served as a UN Special Rapporteur, UN Independent Expert, and a member of UN Commissions of Inquiry relating to human rights.

Nishin Nathwani is a PhD candidate in political science at Yale University, and previously worked for UNHCR in Switzerland, Lebanon, and Greece on the protection of lesbian, gay, bisexual, transgender, and intersex refugees and survivors of sexual and gender-based violence.

Bríd Ní Ghráinne is a Senior Researcher, Judicial Studies Institute, Masaryk University; Assistant Professor, Maynooth University; and Senior Non-Resident Fellow, Institute of International Relations Prague.

Frances Nicholson is a researcher on international refugee law, and a former UNHCR senior regional legal officer in Brussels and senior refugee law research officer in Geneva.

Gregor Noll is Professor of International Law and the current holder of the Torsten Söderberg Research Chair at the School of Business, Economics and Law at the University of Gothenburg, Sweden.

Colm Ó Cinnéide is Professor of Constitutional and Human Rights Law at University College London (UCL).

Kate Ogg is an Associate Professor at the ANU College of Law, Australian National University.

Jason Pobjoy is a barrister at Blackstone Chambers in London and a Research Associate at the Refugee Studies Centre, University of Oxford.

Jay Ramasubramanyam is a doctoral candidate in the Department of Law and Legal Studies and the Institute of Political Economy at Carleton University, Canada.

Kristin Bergtora Sandvik is a Research Professor in Humanitarian Studies, PRIO and Professor of Sociology of Law, Department of Criminology and Sociology of Law, University of Oslo.

Ben Saul is Challis Chair of International Law at the University of Sydney.

Andreas Schloenhardt is Professor of Criminal Law at the University of Queensland, Australia, and Honorary Professor of Foreign and International Criminal Law at the University of Vienna, Austria.

Marina Sharpe is Assistant Professor of International Studies at Canada's Royal Military College Saint-Jean.

Lili Song is a Lecturer in Law at the University of Otago, New Zealand.

Dallal Stevens is Professor of Refugee Law at the School of Law, University of Warwick, United Kingdom.

Vladislava Stoyanova is an Associate Professor in Public International Law, Lund University, Sweden.

Nikolas Feith Tan is a Senior Researcher at the Danish Institute for Human Rights.

Evangelia (Lilian) Tsourdi is Assistant Professor and Dutch Research Council grantee (NWO VENI) at the Faculty of Law and the Maastricht Centre for European Law of the University of Maastricht.

Laura van Waas is a Founder and Co-Director of the Institute on Statelessness and Inclusion, and an Assistant Professor at Tilburg Law School in the Netherlands.

Jens Vedsted-Hansen is a Professor of Law at Aarhus University, Denmark and a member of ECRI (European Commission against Racism and Intolerance) in respect of Denmark.

Tamara Wood is a Visiting Fellow at the Andrew & Renata Kaldor Centre for International Refugee Law at the University of New South Wales, Sydney, and a Lecturer in Law at the University of Tasmania.

Cornelis (Kees) Wouters is the senior refugee law advisor at UNHCR and head of the legal team responsible for developing UNHCR's legal guidance, supporting legislative engagement, and providing advice on refugee law matters.

Marjoleine Zieck is Professor of International Refugee Law at the Amsterdam Law School of the University of Amsterdam.

Reuven (Ruvi) Ziegler is an Associate Professor in International Refugee Law at the School of Law, University of Reading, United Kingdom.

INTRODUCING INTERNATIONAL REFUGEE LAW AS A SCHOLARLY FIELD

CATHRYN COSTELLO, MICHELLE FOSTER, AND JANE McADAM

1. Introduction

International refugee law is a recognized area of international law, yet relatively new as a sub-discipline, having been characterized as 'a new branch of law' by one of its most important contributors, the late Paul Weis, in only 1973.[1] However, since the adoption of the Refugee Convention 70 years ago, it has emerged as a dynamic and ever-challenging area of international law, particularly as its relationship to other branches of law continues to be explored and understood. Given the prevalence of refugee law in domestic legal and political settings, its relevance to regional frameworks and international governance, and the practical, ethical, and legal challenges it entails, it is timely to produce a critical work that examines the field at a crucial juncture. Accordingly, this *Handbook* draws together leading and emerging scholars to analyse the state of research across the refugee law regime as a whole, understood broadly to encompass various forms of cross-border displacement and the legal responses thereto.

Our aim was to create a book that did not just recount the *status quo*, but also critiqued it and set the agenda for the next phase of research. We encouraged authors to approach their subjects critically and from different starting points. Some chapters necessarily lend themselves to a more doctrinal approach, providing a clear elucidation of the state of the law, its effectiveness, and its future trajectory. Others are more iconoclastic, questioning foundational practices and legal assumptions. The result is a 65-chapter reference work involving 78 authors, of whom 48 are women. The gender

[1] Paul Weis, 'Refugee Law: A New Branch of Law' (1973) International Bar Journal 30.

(im)balance of the authors and editors reflects a notable feminization of this field of study, one which has decisively influenced its development.

The *Handbook* differs significantly from existing reference works on international refugee law, both in terms of its breadth and depth. In our editorial choices about authors, topics, and overall structure, we aspired for it to be global in scope—legally and geographically. In terms of law, we sought to ensure consideration of a wide range of international legal instruments relevant to refugee protection. While the Refugee Convention and Protocol are central instruments and reference points, they are not the only ones. Instead, refugee protection involves many other sources of law, including international human rights law, international humanitarian law, international migration law, the law of the sea, and international and transnational criminal law.

Geographically, we aimed to reflect on the practice of States all over the world, not just those in the Global North and/or parties to the Refugee Convention. We strove to include material on refugee law from most regions, and to ensure that regional protection instruments, particularly those of Latin America and Africa, were given their due throughout the *Handbook*. Yet, we recognize that to seek to be truly global is necessarily hubris, especially given global inequality in resources and power in the production of legal scholarship. The *Handbook* is in English and most of the contributors are from anglophone academic institutions in the Global North. We acknowledge, as Dauvergne so lucidly identifies in her chapter, that refugee scholars' common practice of 'assembling an overview of leading trends in the law' tends not to 'reflect Global South decision-making in any way, as Global South decisions have not attained that odd legal status of "leading" '.

Many doctrinal analyses of international refugee law focus on a handful of jurisdictions, including those analyses that inform UNHCR's interpretative guidance.[2] The *Handbook* attempts somewhat of a correction in this regard, but we recognize that international refugee law still has much to learn from the sophisticated methodological approaches emerging in comparative international law.[3]

In this introductory chapter to the *Handbook*, we begin by reflecting on the emergence of international refugee law as a scholarly sub-discipline in the twentieth century, and its role within the wider area of refugee studies (Section 2).[4] We note, in particular, the important interface between scholarship and praxis in the sub-discipline's development, as well as the field's methodological strengths and weaknesses. In Section 3, we

[2] See eg Cecilia M Bailliet, 'National Case Law as a Generator of International Refugee Law: Rectifying an Imbalance within UNHCR Guidelines on International Protection' (2015) 29 Emory International Law Review 2059.

[3] Anthea Roberts, Paul B Stephan, Pierre-Hugues Verdier, and Mila Versteeg (eds), *Comparative International Law* (OUP 2018); Anthea Roberts, *Is International Law International?* (OUP 2017).

[4] The name of this area of study is itself fraught: 'refugees' are one group of 'forced migrants', albeit with special protection in international law. See eg Claudena Skran and Carla N Daughtry, 'The Study of Refugees before "Refugee Studies" ' (2007) 26(3) RSQ 15; James C Hathaway, 'Forced Migration Studies: Could We Agree Just to "Date"?' (2007) 20 JRS 349; Roger Zetter, 'More Labels, Fewer Refugees' (2007) 20 JRS 172; BS Chimni, 'The Birth of a "Discipline": From Refugee to Forced Migration Studies' (2009) 22 JRS 11.

provide an overview of the *Handbook*, highlighting key themes and debates. In Section 4, we conclude with some observations about the future of international refugee law, identifying potential challenges and opportunities.

2. History and Praxis of International Refugee Law Scholarship

International law on refugees and displacement has ancient roots. The first international treaty with provisions on 'asylum' is usually identified as the Treaty of Kadesh, concluded in the thirteenth century BCE between Ramses II of Egypt and the Hittite King Hattusilis III, as referenced in the chapter by Gil-Bazo and Guild on 'The Right to Asylum'. The intervening millennia generated diverse forms of political organization and legal institutions, but dealing with those fleeing persecution and violence is perennial. The modern practice of asylum is a feature of statehood itself. So, too, is the basic congruence of territory, authority, and population that statehood entails. However, modern statehood is also the product of empire and colonialism, as well as the disintegration of both land and maritime empires in the nineteenth and twentieth centuries. The figure of the refugee, as distinguished from the citizen and the migrant, alters across these shifting cartographies.

a. The Emergence of the Scholarly Field

International refugee law, as conceived in this *Handbook*, is a twentieth-century creation. The first treaties on the protection of refugees emerged in the 1920s under the auspices of the League of Nations, responding to the displacement of particular groups of refugees who were identified by their nationality (or former nationality, as they had often been denationalized). Although the concept of 'protection' and the scope of those entitled to it has expanded in the intervening years, many of the same political challenges remain, not least in the realization and enforcement of the obligations that States have voluntarily accepted under international law.

Paul Weis was a Legal Advisor for the International Refugee Organization, and later a Legal Advisor, then Head of the Legal Department, at UNHCR. As well as writing several monographs, including *Nationality and Statelessness in International Law*,[5] he is noted for his commentary on the *travaux préparatoires* of the Refugee Convention.[6]

[5] Paul Weis, *Nationality and Statelessness in International Law* (London Institute of World Affairs 1956); Paul Weis, *Nationality and Statelessness in International Law* (2nd edn, Sijthoff and Noordhoff 1979).

[6] *The Refugee Convention, 1951: The Travaux Préparatoires Analysed with a Commentary by Dr Paul Weis* (UNHCR 1990).

Like many involved in the early years of refugee protection, he had personal experience of the persecution and displacement of the Nazi era, having survived Dachau. Later, in 1966 and 1972, Atle Grahl-Madsen, a law professor at the University of Oslo, published his two-volume treatise on international refugee law.[7] This provided the first detailed legal analysis of the field and launched a Nordic tradition of engagement with international refugee law.

The sub-field truly emerged with Guy S Goodwin-Gill's work, *International Law and the Movement of Persons between States*,[8] followed in 1983 by the first edition of *The Refugee in International Law*.[9] In 1991, James C Hathaway published *The Law of Refugee Status*,[10] which focused specifically on the refugee definition in the Refugee Convention and was heralded as pioneering a human rights-based approach to its interpretation.[11] These works follow the anglophone doctrinal tradition with a strong authorial voice. By contrast, Andreas Zimmermann's edited 2011 commentary on the Refugee Convention provides a detailed, methodical exposition of each of the 46 articles of the Refugee Convention and 11 articles of the Protocol.[12] As well as these monographs and commentaries, another milestone in the emergence of a distinct sub-discipline was the creation of the International Journal of Refugee Law (IJRL) in 1989. Founded by Goodwin-Gill, just one year after the establishment of the Journal of Refugee Studies (JRS), the IJRL aimed to 'stimulate research and thinking on refugee law'.[13]

No account of the milestones in the emergence of the field, however brief, could omit the scholarship of BS Chimni. Writing in 1998, he identified the containment of refugees in the Global South as the defining feature of the global refugee regime, and critiqued the role of UNHCR as seeking to 'operationalize the vision of containment of the powerful

[9] Guy S Goodwin-Gill, *The Refugee in International Law* (Clarendon Press 1983); see also Guy S Goodwin-Gill, *The Refugee in International Law* (2nd edn, Clarendon Press 1996); Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007). The fourth edition is in press, co-authored with Jane McAdam, with the assistance of Emma Dunlop.

[10] James C Hathaway, *The Law of Refugee Status* (Butterworths 1991). The second edition was published by Cambridge University Press in 2014, co-authored with Michelle Foster. Macklin noted that the explosion in case law and other developments between the editions was 'extraordinary': Audrey Macklin, 'Book Review: James C Hathaway & Michelle Foster, *The Law of Refugee Status* (2d ed Cambridge University Press, 2014)' (2017) 39 Human Rights Quarterly 220, 221.

[11] See eg Andrew Shacknove, 'Book Review: *The Law of Refugee Status*. By James C Hathaway' (1991) 4 JRS 291, who described it as 'the most important publication in the field of international refugee law since Guy Goodwin-Gill's volume' (291). He noted that Hathaway gave 'welcome and pioneering guidance' (292) and challenged 'the generally accepted, and UNHCR endorsed, assertion that "well-founded fear" entails two requirements' (292).

[12] Andreas Zimmermann (ed), *The 1951 Convention relating to the Status of Refugees and Its 1967 Protocol: A Commentary* (OUP 2011).

[13] The Editor-in-Chief and the Members of the Editorial Board, 'Editorial: Refugee Law and the Protection of Refugees' (1989) 1 IJRL 1, 2.

donor countries'.[14] He further argued that international refugee law 'has long occupied centre stage in refugee studies' and that its scholarship 'has been dominated by a positivist tradition which limits the possibility of engagement with politics'.[15] His seminal contributions are cited throughout the *Handbook*, including in chapters that explore contemporary containment practices and their now entrenched features.

Books, journals, and doctorates are the main form of scholarly knowledge production in law, disseminated through wider research networks. While in the main, refugee studies centres have tended to be interdisciplinary (such as the Refugee Studies Centre at the University of Oxford, the Centre for Refugee Studies at the University of York in Canada, and the Centre for Migration and Refugee Studies at the American University in Cairo), some other centres and groupings have a particular legal focus. For instance, since 1998, Hathaway has convened eight colloquia on cutting-edge topics relating to refugee and asylum law, resulting in eight sets of 'Michigan Guidelines' agreed by experts. Many of these are cited throughout the *Handbook*, testament to their influence. The Refugee Law Initiative (RLI) at the University of London was established by David Cantor in 2011, while in 2013, Jane McAdam founded the Andrew & Renata Kaldor Centre for International Refugee Law at the University of NSW in Australia. These, too, have supported the development of academic scholarship, policy-relevant research, and the creation of scholarly networks, in particular to support early career scholars globally.

The story of international refugee law thus far is one with European origins, with its deepest scholarly roots in prestigious Nordic and anglophone universities. That two of the *Handbook*'s editors are former doctoral supervisees of, and now co-authors with, two of the seminal scholars (McAdam/Goodwin-Gill; Foster/Hathaway), and the third (Costello) is a professor at Goodwin-Gill's most long-standing academic home, the University of Oxford, reflects a perhaps familiar pattern of academic social reproduction. However, this anglophone tradition is certainly not the only one in refugee law scholarship, nor the only one reflected in the *Handbook*, although admittedly it does dominate.

b. International Refugee Law as a Field of Praxis

The authors featured in this *Handbook* are not 'only' scholars; many have worked, or continue to work, directly 'in the field', with their scholarship and practice mutually informing each other. For instance, Achiume is the UN Special Rapporteur on Contemporary Forms of Racism, Racial Discrimination, Xenophobia and Related Intolerance, dedicating her first thematic report to the subject of racial discrimination in the context of citizenship, nationality, and immigration status.[16] Crépeau

[16] Human Rights Council, *Report of the Special Rapporteur on Contemporary Forms of Racism, Racial Discrimination, Xenophobia and Related Intolerance*, UN doc A/HRC/38/52 (25 April 2018).

was the UN Special Rapporteur on the Human Rights of Migrants from 2011 to 2017, during which time he issued several thematic reports, including on detention, the EU's 'external borders', and the relationship between climate change and migration. Muntarbhorn was appointed as the first UN Independent Expert on Violence and Discrimination based on Sexual Orientation and Gender Identity and has held an array of other UN-related roles. Kälin is the Envoy of the Chair of the Platform on Disaster Displacement, and a former Representative of the Secretary-General on the Human Rights of Internally Displaced Persons, whose erudite scholarship on internal displacement is enhanced by his acute understanding of realities on the ground. Wouters' analysis in the *Handbook* of 'conflict refugees' is infused with his deep knowledge from UNHCR operations, as is Garlick's expert assessment of the capacity of the Global Compact on Refugees to provide a stronger institutional framework for responsibility-sharing. Durieux's scholarship, too, draws on a long and distinguished UNHCR career. Burson's chapter on the evolution of refugee status determination is enriched by his professional experience as a decision-maker for New Zealand's Immigration and Protection Tribunal.

Other authors seek to influence the law from the outside, in particular by supporting strategic litigation and advocacy. For example, Moreno-Lax discusses litigation before the European Court of Human Rights in which she served as lead counsel. Mann's chapter includes an account of the communication to the International Criminal Court challenging Australia's offshore processing regime, in which he had a role via the pioneering legal NGO, the Global Legal Action Network. Across the globe, refugee law clinics have had a demonstrable impact on refugee protection and the development of international refugee law. Several of the authors founded and/or run prestigious and impactful legal clinics (Achiume (UCLA); Akram (Boston); Anker (Harvard); Khan (Cape Town); Meili (Minnesota)), and many other authors have supported clinical initiatives. The Refugee Law Project in Kampala, Uganda is a standard bearer, and clinical activities are increasingly developing in Europe.[17]

The scholarship and practice of the contributors reflects a common characteristic of refugee law research, namely, the pursuit of a 'dual imperative' to advance scholarly and protection objectives simultaneously. As Byrne and Gammeltoft-Hansen wrote recently, the sub-discipline is 'heavily influenced by international organizations and networks of practitioners that actively take part in and promote particular kinds of scholarly production',[18] with networks comprising 'overlapping communities of scholars, decision makers, practitioners, and representatives of non-governmental organizations'.[19] The benefits of such networks are evident: sharing knowledge, experi-

ence, and expertise, and prompting progressive legal developments. However, they also risk creating a feedback loop, and sometimes even an echo chamber. The opportunity to influence may at times risk stifling deeper reflection and foundational critique.

c. Methodology: Doctrine and Beyond

Much of the scholarship in international refugee law is unabashedly doctrinal. However, there is also a strong tradition of interdisciplinarity within refugee studies. Doctrinal legal scholarship often reflects the interests of powerful States and actors, and masks geopolitical interests and oppressive power structures. In light of the limitations of doctrinal scholarship, the first part of the *Handbook*—the overview of the field—is informed by the perspectives of history, politics, ethics, feminism, race, postcolonial theory, and queer theory. These important contributions seek to problematize the role of law, interrogate the complexity of the forces at play, and decentre purely doctrinal approaches.

The contributions to the *Handbook* are variously doctrinal and contextual, many drawing on socio-legal and empirical approaches, reflecting a healthily eclectic approach to methods. Nevertheless, one particular ethical and methodological concern with refugee law scholarship warrants mention here, namely the importance of reflecting the perspectives of those with lived experience of displacement and refugeehood. This has long been acknowledged, finding a place, for example, in the maiden editorials of both the JRS and IJRL over 30 years ago.[20] The IJRL's first editorial stressed that the journal was 'open to submissions from all engaged in refugee law and related work', including refugees.[21] However, while engaging with refugee voices is an ethical imperative, it remains a methodological challenge for legal scholarship in particular, which tends to privilege official sources and interpretations according to a strict hierarchical ordering. For some, the 'nothing about us, without us' call means investing in participatory research methods with refugees, radically decentring knowledge production. For others, it means turning to archival and non-traditional sources to problematize official accounts. Overall, though, legal scholarship has not confronted the challenge of refugee voices head on.

In her Foreword to the *Handbook*, Rêz Gardî considers the possibilities for better incorporating refugee perspectives into academic research in a more serious and systematic way. While many of the Refugee Convention's drafters were themselves refugees, and drew directly on their personal experiences of displacement, nowadays the gulf between the worlds of power, legal practice and influence, and the 'refugee experience' seems to have widened.

3. Structure and Content

The *Handbook* is divided into eight parts: 'International Refugee Law—Reflections on the Scholarly Field' (Part I), 'Sources' (Part II), 'Regional Regimes' (Part III), 'Access to Protection and International Responsibility-sharing' (Part IV), 'The Scope of Refugee Protection' (Part V), 'Refugee Rights and Realities' (Part VI), 'The End of Refugeehood—Cessation and Durable Solutions' (Part VII), and 'Accountability for Displacement and Refugee Rights Violations' (Part VIII).

Part I: International Refugee Law—Reflections on the Scholarly Field

As mentioned above, the authors in Part I were invited to reflect on the scholarly field of international refugee law in general, using different disciplinary and ethical lenses. The *Handbook* opens with Goodwin-Gill's history of international refugee law, focusing on the years from the creation of the League of Nations in 1920 to the end of the Second World War. This first quarter-century established refugees as a 'known legal category' with recognized rights. Yet, protection was and remains 'often offset by claims of national interest and national security'. Overall, Goodwin-Gill observes, international refugee law has 'demonstrated its dynamic character', expanding its protective capacity, particularly due to the 'normative background provided by human rights'. However, he concludes that 'the law alone does not provide solutions, and much remains to be done'.

While Goodwin-Gill problematizes law's promise in the face of political restriction, Achiume's chapter on 'Race, Refugees and International Law' invites us to consider law as part of the problem. She coaxes us out of complacency with her observation that 'international legal scholarship on refugees has a race problem', a 'racial aphasia', and 'a collective inability to talk about or theorize race'. Tracing the history of international refugee law scholarship, she observes that the implications of Chimni's contributions have not been fully internalized, putting forward a convincing case that study of race and refugees in international law requires 'a structural and intersectional conception of race and discrimination'. Achiume suggests that both Third World Approaches to International Law and Critical Race Theory offer scholars tools 'to engage with law as itself implicated in the social construction of race, and as an artefact that can compound racial subordination, including through facially neutral institutions and mechanisms'.

The next chapters examine international refugee law in light of other exclusionary social structures. Anderson and Foster's chapter, 'A Feminist Appraisal of International Refugee Law', acknowledges the profound normative shift from the Refugee Convention's gender-blind origins, thanks to feminist legal efforts. However, they argue that a truly gender-sensitive interpretation of the refugee definition remains elusive, and lament the comparative dearth of feminist legal scholarship examining the refugee experience beyond the definition. The chapter calls for research and advocacy employing interdisciplinary methods and informed by feminist theories, masculinity studies, and queer theory. Ferreira and Danisi's contribution, 'Queering International Refugee Law', engages a queer lens to explore aspects of sexual orientation and gender identity (SOGI) and asylum. They consider how refugee law has been 'progressively queered', but note that the process is far from complete.

Beyond these two chapters, gender and gender-identity issues are interwoven throughout the *Handbook*, including in chapters on the scope of refugee protection (for example, Dauvergne on 'Women in Refugee Jurisprudence' and Millbank on 'Sexual Orientation and Gender Identity in Refugee Claims'). Gender is given attention in other contexts, too, with Briddick and Stoyanova taking an explicitly feminist approach to 'Human Trafficking and Refugees', for example.

Hamlin's chapter, 'The Politics of International Refugee Law and Protection', explores how politics permeates all facets of international refugee law and protection, from the construction of the refugee, to the law's implementation, through to the reasons for diverse State commitment and compliance with refugee protection norms. Building on Chimni's insights into the geopolitics of refugee protection, she acknowledges the practices of containment of refugees but suggests that further research is needed to problematize the Global South/North binary. Further, she argues that future research 'should consider the political incentives of various different types of States, not just the prototypical liberal democratic receiving State' and 'shifting power dynamics between—but also within—the Global North and South deserve closer attention'. Hamlin urges that a refined geopolitical or postcolonial lens is needed to understand why States make formal commitments to international refugee law, but do not necessarily comply with them—a pervasive feature of the global regime. Several chapters in Part III take up that challenge, as does Milner and Ramasubramanyam's analysis of UNHCR in Part II.

Benhabib and Nathwani's chapter, 'The Ethics of International Refugee Protection', explores the contested ethical foundations of refugee admission and protection, identifying two diverging scholarly strands. The first, the 'statist ethics of refugee protection', includes both liberal nationalists and liberal internationalists, while the second is the 'cosmopolitan ethics of refugee protection'. Their account of the scholarship identifies 'divergences along several key axes, such as territorial sovereignty versus international obligation, legal formalism versus political action, and victimhood versus agency'. Yet, one overarching tension 'encapsulates the rest: *the legal versus the political*'. Drawing on Benhabib's concept of 'jurisgenerative politics', the chapter argues that 'a responsible ethics of refugee protection must look both to the law and to political praxis to elaborate our obligations towards those forcibly displaced across borders without effective State protection'. In a thought-provoking conclusion, they suggest that broadening refugee protection based on 'certain cosmopolitan views, including those rooted in postcolonial theory', risks eliding questions of displacement with 'immigration policy writ large'. This broadening, they argue, might ultimately erode States' obligations towards refugees in particular.

The elasticity and limits of the scope of protection is a central theme throughout the *Handbook*, as reflected in the final two contributions to Part I. Atak and Crépeau interrogate and problematize the categorical distinctions drawn between 'refugees' and 'migrants', while van Waas examines refugeehood and statelessness. Atak and Crépeau argue that 'conceptualizing refugees as migrants does not undermine the specific normative and institutional framework for refugee protection', but rather 'further promotes refugees' access to asylum and safety', ideas further explored in Long's chapter on onward migration (in Part VII). Van Waas articulates the importance of understanding the relationship between refugee law and the law on statelessness, 'in particular, the ability to critically reflect on the challenges that arise out of the separation, yet interaction', between the two. Lambert's later chapter on stateless refugees picks up on this last point, examining the extent to which the Refugee Convention protects stateless persons *as refugees* and arguing that 'the particular challenges pertinent to stateless refugees have been overlooked'.

Part II: Sources

Part II on 'Sources' opens with Hathaway's contribution, 'The Architecture of the UN Refugee Convention and Protocol'. For Hathaway, the Refugee Convention and Protocol are the 'heart' of refugee law. Their 'architecture' includes two key features that reflect 'legitimate host State concerns', namely, that refugees' rights accrue incrementally, and that such rights are not defined in absolute terms, but are 'instead contingent on what a particular host State provides to a specified group of non-refugees under its jurisdiction' (such as nationals or foreigners generally). This 'compromise' ought to support compliance with the Convention and, ultimately, ensure protection for refugees. However, Hathaway argues that the absence of mechanisms to ensure independent supervision of the Convention and fair responsibility-sharing amongst States (examined in Garlick's chapter) undermine these objectives.

In their chapter on UNHCR, Milner and Ramasubramanyam contrast the organization's role as a 'leading actor in the development and implementation of international refugee law' with its complicity in 'some of the most significant violations of the spirit and the letter' thereof. Drawing on Barnett and Finnemore's work on the power and pathologies of international organizations,[22] they explore the reasons for this dissonance in light of the political constraints on UNHCR, including its dependency on a handful of States for its funding and on host States for practical cooperation.

[22] See Michael N Barnett and Martha Finnemore, 'The Politics, Power, and Pathologies of International Organizations' (1999) 53 International Organization 699.

Chetail's chapter, 'Moving Towards an Integrated Approach of Refugee Law and Human Rights Law', argues that the systemic nature of international law means that a holistic approach to States' obligations 'opens up new perspectives to rethink and revisit the reach of refugee protection'. He maintains that 'human rights law supplements and upgrades refugee law to such an extent that the latter has become an integral component of the former', a position endorsed by a number of other chapters. It is exemplified by Pobjoy's analysis of the CRC in protecting refugee children, for instance, and Crock's work on the potential of the Convention on the Rights of Persons with Disabilities to enhance refugee protection.

In her chapter on 'Customary Refugee Law', Lambert posits that for 'all its difficulties and contestations', customary international law 'has the potential to play a vital role in refugee protection because major receiving countries are by and large not parties to the Refugee Convention and/or Protocol'. At a minimum, it protects against *refoulement*; its role with respect to temporary refuge and the right to receive asylum 'is more uncertain as both operate outside the scope of treaty law and the practice of States is more nuanced', although 'persuasive arguments have been made to the extent that temporary refuge may be regarded as international custom and the right to receive asylum as emerging custom'. Durieux's chapter on 'Temporary Protection and Temporary Refuge' also explores customary norms.

Ziegler's chapter on 'International Humanitarian Law and Refugee Protection' argues that interactions between international refugee law and international humanitarian law are 'both inevitable and challenging, due to terminological, institutional, and structural divergences, and to their being specialized regimes designed to be invoked in (divergent) exceptional circumstances'. Lester, meanwhile, notes that while not a panacea, national constitutions are in some cases effective in offering a new source of protection to refugees—a theme also explored in Meili's chapter on 'National Constitutions and the Right to Asylum'. Costello and Ó Cinnéide's chapter on 'The Right to Work' notes that, despite diverse degrees of constitutionalization of the right to work across different jurisdictions, and diverse approaches to the domestication of international law, remarkably similar jurisprudence has emerged.

Part III: Regional Regimes

Part III's 10 chapters on 'Regional Regimes' reflect the *Handbook*'s global aspirations. Some chapters assess parts of the world with distinctive regional refugee protection regimes: Sharpe's chapter on 'Africa', Fischel de Andrade's on 'Latin America', and Tsourdi's on 'Europe'. Other chapters examine how countries in particular geographical areas engage with international refugee law, even if no formal regional approach can be discerned. For instance, Arakaki and Song compare refugee protection across the diverse States and jurisdictions that comprise East Asia (encompassing China, Hong Kong, Japan, Korea, Macau, and Taiwan). Notably, the regional commonality is extremely low refugee recognition rates (an example of commitment without compliance, foreshadowed in Hamlin's chapter).

Several chapters identify intra-regional dynamics that have a profound impact on refugee protection, in particular where regional hegemons attempt to deflect or contain refugees elsewhere. This dynamic appears in Anker's chapter on 'North America' (examining Canada, the US, and Mexico—precisely to expose and explore this dynamic); and Tsourdi's chapter on 'Europe' (which includes Turkey). Foster and Hood's chapter on 'Oceania' (Polynesia, Micronesia, Melanesia, Australia, and New Zealand) emphasizes the role of the regional hegemon, Australia, but also resistance from weaker States, such as Papua New Guinea, to Australia's containment practices. For instance, the Supreme Court of Papua New Guinea ruled in 2016 that the country's detention facilities (established at Australia's behest, with its direct funding and involvement) violated the constitutional right to personal liberty.[23]

The 'regional' chapters reveal commonalities as well as contrasts. In diverse contexts, States that are not parties to the Refugee Convention have used religion and ethnicity to distinguish between particular groups of refugees, in some cases providing protection and in other cases withholding it. In their chapter on the Middle East, Janmyr and Stevens note that there 'is no single approach to cross-border displacement or refugee protection', but cast doubt on the 'pervasive regional claim to "hospitality" as the underlying rationale' for the region's 'generous treatment of "guests"'. The regional chapters also reveal various reasons, often historical or geopolitical, why some States have chosen to ratify the Refugee Convention and/or Protocol, and others have not. Azhigulova discusses the notion of 'strategic ratification' in the context of Central Asia, while Ramasubramanyam argues that States in South Asia have felt sidelined ever since the creation of the post-Second World War international refugee regime. Nevertheless, the institutional authority of UNHCR should not be underestimated: as Muntarbhorn observes in Southeast Asia, 'UNHCR's presence is essential' as it 'helps to advocate for refugee protection, especially to underline the importance of *non-refoulement* and the humane treatment of asylum seekers'. It also plays a crucial operational role in many States.

Part IV: Access to Protection and International Responsibility-sharing

Part IV comprises nine chapters. It opens with Garlick's chapter on 'The Sharing of Responsibilities for the International Protection of Refugees', which critiques the principle and practice of responsibility-sharing amongst States, examining several international initiatives based on the Global Compact on Refugees that seek to engage not only States, but also private actors and 'refugees themselves'.

23 *Namah v Pato* [2016] PGSC 13.

Weak norms on responsibility-sharing are the backdrop for the various containment practices examined in the next chapters. Moreno-Lax's chapter on 'Protection at Sea and the Denial of Asylum' argues that rescue at sea, often thought of as an archetypal manifestation of basic duties of humanity, has been distorted into a means to preclude access to asylum. Gammeltoft-Hansen and Tan, writing on 'Extraterritorial Migration Control and Deterrence', posit that over the last three decades, 'different forms of extraterritorial border controls have developed across the world, rendering access increasingly difficult' and making access to international mobility 'highly limited or non-existent' for most refugees. In their comparative analysis of 'The Evolution of Safe Third Country Law and Practice' in three regions, Freier, Karageorgiou, and Ogg illustrate how the safe third country mechanism has little regard for either refugee rights or inter-State solidarity in protecting refugees. Indeed, each of the chapters in Part IV explores a regional containment dynamic whereby powerful States shift responsibility for refugee protection to weaker, generally poorer, States.

Schloenhardt's chapter on 'Smuggling of Migrants and Refugees' notes that '[i]nternational law relating to smuggling of migrants complements international refugee law, but can also run into conflict with it'. He explains that States often use anti-smuggling rhetoric to justify containment measures, but that the Smuggling of Migrants Protocol does not provide a legal basis for these measures.[24] Briddick and Stoyanova critique anti-trafficking measures in a similar vein, examining ways in which victims of trafficking are entitled to the protection of refugee and human rights law (including through specific instruments relating to violence against women).

The three chapters on various aspects of refugee recognition processes offer diverse takes on these practices. Burson's chapter, 'Refugee Status Determination', explores the historical development of the adjudication of refugee claims, and questions the dichotomy between group and individual determination. He identifies key positive reforms, including a greater role for group-based determination, and some of the threats posed by new technologies. Botero and Vedsted-Hansen explore the function of human rights law in regulating asylum procedures, comparing and contrasting European and inter-American standards. Noll's chapter on 'Credibility, Reliability, and Evidential Assessment' explores robust empirical evidence that suggests that the outcomes of asylum processes are highly variable, even verging on the arbitrary. Moreover, he persuasively argues that both UNHCR guidance and EU law seeking to regulate the assessment of credibility (in practice, often the determinative element in asylum adjudication) is irrational. While Burson and Botero and Vedsted-Hansen view refugee status determination as a process in need of reform, Noll argues that the process accords so much discretion to decision-makers that the law's capacity for constraint is extremely limited.

[24] Protocol against the Smuggling of Migrants by Land, Sea and Air (adopted 15 November 2000, entered into force 28 January 2004) 2247 UNTS 507.

Part V: The Scope of Refugee Protection

Part V on 'The Scope of Refugee Protection' comprises 14 chapters. It opens with Wood's chapter on 'The International and Regional Refugee Definitions Compared', which illustrates the evolution and limitations of the Refugee Convention definition and contrasts it with the OAU Convention and Cartagena Declaration definitions (and their diverse institutionalization). Akram's chapter on 'UNRWA and Palestine Refugees' examines both the interpretative controversies surrounding article 1D of the Refugee Convention, and the history and politics of the UN Relief Work Agency's role. McAdam's analysis of complementary protection recognizes the added protective capacity of human rights law, but notes that there is still 'a need for greater, principled articulation of the relationship between refugee law and human rights law when it comes to the principle of *non-refoulement* and—importantly—the legal status granted to those who cannot be removed'. Durieux's chapter on 'Temporary Protection and Temporary Refuge' draws on wide-ranging examples from State practice, bringing much needed conceptual clarity to this topic. He argues for a customary international law understanding of the practices of admitting refugees on a temporary basis in mass influx situations.

Ní Ghráinne's chapter on 'The Internal Protection Alternative' examines this controversial gloss on the refugee definition, noting that it originated in German practice then spread widely. Despite widespread divergences in its interpretation and application across States, the chapter proposes 'a minimum binding standard of relevant IPA criteria from both State practice and the text of the Refugee Convention itself'. Gilbert and Bentajou, writing on 'Exclusion', argue that it is 'an unusual concept for the contemporary world of protection, where international human rights law applies to all human beings no matter what they might have done'. They describe exclusion as 'a relic of the immediate post-war era that international refugee law preserves', and argue that it can only be properly understood and interpreted when analysed within the context of international criminal law and the international law of armed conflict.

Dauvergne's chapter on 'Women in Refugee Jurisprudence' focuses on the Convention definition, and her analysis is sobering. While advocacy and scholarship on women and refugee jurisprudence 'began with a huge burst of energy and creativity in the final decade of the twentieth century', it has 'stalled spectacularly'. She argues that the 'newer challenge of protecting LGBTIQ+ claimants—women and men and non-binary persons—has generated much more that is new in the past decade than any work about women'. Nevertheless, in her chapter on 'Sexual Orientation and Gender Identity in Refugee Claims', Millbank observes that 'there is a persistent, indeed widening, gap between the formal acceptance of SOGI claims in refugee *law*…and the implementation of such law through the low-level administrative practice that comprises the vast bulk of refugee status determination'. It is clear that neither of these issues has been resolved, and that creativity is required, especially in the case of gender, to renew and inspire further critical work.

Pobjoy's intervention on 'Child Refugees' foregrounds the CRC as offering 'independent and more appropriate forms of protection status for children', and explores its relevance for protection and humanitarian assistance, durable solutions, and family reunification. Crock's chapter considers the impact of the Convention on the Rights of Persons with Disabilities on refugee protection, and the role of the Committee on the Rights of Persons with Disabilities in seeking to hold States to account in this regard. Lambert's chapter on 'Stateless Refugees' examines the intersections between statelessness and refugee recognition under the Refugee Convention. She argues that stateless people often should be recognized as refugees, since they are commonly persecuted for reasons of race or nationality, with arbitrary denial or withdrawal of nationality being at the heart of such persecution.

Wouters examines the capacity of the Refugee Convention to protect so-called 'conflict refugees', in light of the recognition that in contemporary conflicts, 'civilian populations are targeted or disproportionately affected because the conflict is rooted in, motivated, or driven by—and/or conducted along the lines of—race, ethnicity, religion, politics, gender, or social group divides'. He also examines the scope of regional definitions in Africa and Latin America to protect people fleeing 'truly indiscriminate' harms. McAdam's chapter on 'Displacement in the Context of Climate Change and Disasters' reflects on the 'ongoing need to tease out the intersections between refugee law, human rights law, disaster law, environmental law, and climate change law at the international, regional, and domestic levels, as well as to scrutinize the outer limits of the principle of *non-refoulement* when it comes to protecting those at risk'. Finally, Kälin's chapter on 'Internal Displacement' examines the conceptual distinctions between internally displaced persons (IDPs) and refugees, highlighting the concerning fact that 'IDP protection lags behind' refugee protection, even though IDP numbers dwarf those of refugees.

Part VI: Refugee Rights and Realities

The nine chapters in this Part explore the rights of refugees, by necessity taking a selective approach. Two chapters consider the right to asylum. Gil-Bazo and Guild outline the contours and limitations of the right in international law, while Meili analyses the right to asylum in national constitutions, which he describes as 'a rather neglected backwater of international refugee law'. Mathew examines 'the interaction between shrinking and expansive approaches to *non-refoulement*', noting that while the principle's scope has expanded in reach, 'States have often sought to avoid its application in practice'. Together, these three chapters illustrate the complexities and contestations around these central concepts of refugee protection.

In the chapter on 'Non-penalization and Non-criminalization', Costello and Ioffe examine article 31 of the Refugee Convention, alongside other provisions that may protect against penalization and criminalization for migration-related reasons. In the chapters on 'The Right to Liberty' (Lester), 'The Right to Work' (Costello and Ó Cinnéide), 'The Right to Education' (Dryden-Peterson and Mariën), and

'The Right to Family Reunification' (Nicholson), strong protections are contrasted with widespread, although not universal, non-compliance. The chapters identify various modes to make rights effective, including domestic litigation, transnational political pressure, and local activism. Finally, Sandvik's chapter on 'The Digital Transformation of Refugee Governance' confronts a different reality, namely, the increasing reliance on technology to 'govern' refugees, in ways that further diminish refugees' agency and ability to hold powerful actors to account.

Part VII: The End of Refugeehood—Cessation and Durable Solutions

The *Handbook* aims to examine legal issues arising from all aspects of the global refugee regime, including 'solutions' for refugees. In this regard, we shine a legal spotlight on practices that are often viewed as more political in nature. Part VII comprises five chapters. Cole's chapter on 'Cessation' reviews the profound shifts in State and UNHCR practice when it comes to the cessation of refugee status, which at times make refugee status increasingly precarious.

A trio of contributions problematizes the orthodox 'durable solutions'. Khan and Ziegler's chapter on 'Refugee Naturalization and Integration' examines the diminished emphasis on the acquisition of host country citizenship for refugees over time, noting, in particular, the Global Compact on Refugees' 'timid reference' to the prospects of host countries providing naturalization as merely 'useful'.[25] They argue powerfully that measures short of naturalization, such as those focusing solely on economic inclusion, often set up a 'vicious cycle' in which 'many refugees find themselves in protracted displacement with neither a "durable" solution in sight, nor the legal, economic, and social capacity to properly integrate in their asylum countries'. Zieck's chapter, 'Reimagining Voluntary Repatriation', examines the historical antecedents to UNHCR's voluntary repatriation practices, and argues for a profound rethinking. The practice, she suggests, should be transformed from the 'voluntary return of unrepatriable persons, which of necessity puts a heavy premium on the voluntariness of return', to only engaging in repatriation after cessation of refugee status. Kneebone and Macklin's chapter on 'Resettlement' argues that this particular 'solution' is in intractable tension with 'asylum'. While asylum is legally regulated, resettlement is framed as entailing 'a moral appeal to humanitarian discretion', remaining 'untethered to obligation'. Exploring both the historical development of resettlement and its regulation (in soft law and institutional practice), they conclude that it 'portrays sovereignty in its most flattering light' and is often invoked to downplay legal obligations and asylum. Laws could be created to enact 'relationships of dignity and respect between refugees and agents of power', but they are currently lacking. Finally, Long examines 'Onward Migration' as a possible 'fourth' durable solution, both

[25] Global Compact on Refugees, para 97.

problematizing refugees' lack of opportunities for international mobility, and opening up new conceptual and practical approaches thereto.

Overall, these chapters not only critique each solution in turn, but also cast doubt on much of the discourse and institutional practice that characterizes 'solutions'. For most refugees, there is no solution, in that they will neither quickly return to their home country, nor find a new permanent home. Indeed, many refugees are born into refugeehood and some live in exile for several generations without secure rights or status.

Part VIII: Accountability for Displacement and Refugee Rights Violations

Part VIII, the final part of the book, aims to adopt a reparative justice angle, asking how accountability for the wrongs perpetuated against refugees are to be legally righted. Its four chapters examine the accountability of States, international organizations, and armed groups. It opens with Bradley's chapter on 'Restitution and Other Remedies for Refugees and Internally Displaced Persons', which traces 'significant progress . . . in advancing international norms on remedies for refugees and IDPs', which have focused predominantly on the restitution of housing, land, and property. She explores how gender, race, class, and other intersecting power relations influence redress, and how to move beyond a narrow focus on property restitution. Saul's chapter on 'The Responsibility of Armed Groups Concerning Displacement' examines the extent of non-State armed groups' responsibility for displaced people under international refugee law, international human rights law, international humanitarian law, and international criminal law, concluding that '[f]rom a protection standpoint . . . there remains room for normative improvement, even if it is politically unlikely'.

One of the most serious accountability gaps relates to international organizations, in particular those charged to protect refugees. In this Part, Klabbers' chapter on 'The Accountability of International Organizations in Refugee and Migration Law' problematizes UNHCR, the International Organization for Migration (IOM), and other international organizations' lack of legal and political accountability for such violations. Klabbers argues that the accountability deficit for international organizations is due to a false conceptualization of their nature, ignoring the fact that they exercise public powers, often over vulnerable populations.

International criminal law not only criminalizes acts that lead to displacement and create refugees, but, as Mann argues, many of the human rights violations perpetrated in order to deter and contain refugees should be regarded as crimes against humanity. His chapter on 'Border Crimes as Crimes against Humanity' offers three politico-ethical readings of the basis for this category, and claims that border crimes can be considered crimes against humanity since they not only violate categorical ethical imperatives, but also a cosmopolitan vision of how borders ought to be constituted in an interconnected globe.

4. The Future Research Agenda: Challenges and Possibilities

As editors, we set ambitious aims for the *Handbook*. Many have been achieved, some have not, but at the very least, we have opened up new lines of scholarly inquiry. Doctrinally, the integration of different bodies of international law into refugee law—most notably, international human rights law and international humanitarian law—is already well underway, contributing to the wider project of systemic integration of international law. Yet, there remain many possibilities for better incorporating both established and emerging norms in support of the progressive interpretation of refugee law, which is arguably one endeavour of the legal scholar. The *Handbook* also critiques existing norms from a variety of ethical and ideological positions, with several chapters identifying foundational flaws, opening up space for radical rethinking.

A strong critical theme relates to the lack of effectiveness of many commitments in refugee law. Even States that accept obligations to protect refugees often do not implement them. Modes of non-compliance range from overt and egregious rights violations, through to the more common practice of refusing to recognize refugees as such, leaving them in a rightless limbo. This is despite a high number of ratifications of the relevant refugee and human rights law treaties, widespread 'domestication' of protection norms, and enforceability and/or oversight by regional human rights courts and international treaty-monitoring bodies. In diverse legal contexts, many national judges have also found ways to protect refugees, at least from *refoulement*, at times also securing a legal status and other rights for them. However, even in the highly judicialized region of Europe, as Tsourdi notes, courts are often under political pressure and constraint, leading to greater deference to States' migration control imperatives. Empirical legal scholarship on 'backlash' against courts and the rise of authoritarianism are, regrettably, increasingly pertinent to refugee protection, and in need of further scholarly attention.

While violations by States may be remedied by courts, there is no obvious forum to hold international organizations, including UNHCR and IOM, to account. It is noteworthy that groundbreaking work on the legal responsibility of UN institutions for human rights violations was prompted by witnessing UNHCR's work in the field (in particular, the human rights violations entailed in encampment).[26] These issues are explored further in Klabbers' chapter, and also that by Milner and Ramasubramanyam, with both confirming the accountability gap. For the millions of refugees who depend on food rations from the World Food Programme, or await status determination by UNHCR, or, in the case of Palestine refugees, depend entirely on UNRWA for their

Why and How UNHCR Governance of "Development" Refugee Camps Should Be Subject to International Human Rights Law' (1998) 1 Yale Human Rights and Development Law Journal 107; Guglielmo Verdirame, *The UN and Human Rights: Who Guards the Guardians?* (CUP 2011).

livelihood and social services, being subject to unaccountable power over one's life and death is the defining refugee experience.

As the *Handbook* was nearing completion, the world was hit by the COVID-19 pandemic. This resulted in previously unfathomable restrictions on movement globally, including the right to seek asylum and to enjoy protection. By June 2020, 219 States, territories, and areas had implemented over 64,500 restrictive measures, predominantly concerning border closures and entry restrictions.[27] At least 99 States made no exception for people seeking asylum.[28] Also at this time, there was a wave of global protest against racial injustice, triggered by the shocking police killing of African-American George Floyd on 25 May 2020 in the US. While protests occurred in, and responded to, diverse contexts, many highlighted the links between racial injustice, colonial legacies, and the violation of refugees' rights. The 'Black Lives Matter' movement ought to compel us all to reflect on the systemic biases of the disciplines and institutions within which we work. As several chapters in the *Handbook* attest, refugee law is part of a system that enables border violence and other rights violations, and that legitimates exclusion—at times, racist exclusion. We must constantly question what we do and how we do it, and whether our 'objectivity' is in fact deeply partial. Our original hope that this *Handbook* would stimulate further innovative research on international refugee law now seems guaranteed by these external forces, which should continue to push us to ensure that the law meets its protective promise, while highlighting its imbrication with exclusionary politics.

PART I

INTERNATIONAL REFUGEE LAW—REFLECTIONS ON THE SCHOLARLY FIELD

CHAPTER 1

INTERNATIONAL REFUGEE LAW IN THE EARLY YEARS

GUY S GOODWIN-GILL

1. Introduction

Where to begin? The history of international refugee law has been written many times already, and this brief introduction takes the creation of the League of Nations in 1920 as the point of departure, for the 'modern' system of protection is inextricably linked to another story—the twentieth century's first attempts at cooperation on matters of international concern.[1] The early activities attracted comment on law and practice at the time,[2] and more recent narratives have served both academic and forensic purposes—to demonstrate the personal impact of individuals, such as Fridtjof Nansen, the first High Commissioner for Refugees;[3] Gustave Ador, President of the International Committee of the Red Cross;[4] Herbert Hoover and the American Relief Association;[5] or James Grover McDonald, the High Commissioner for Refugees (Jewish and other) coming

from Germany.[6] History has also been called in aid to trace the evolution of the refugee definition,[7] or to track the consolidation of the principle of protection, or to show how States' responses to refugees came to be organized, if never perfectly, in what today passes for the international refugee regime.[8]

This path has been trodden so often and so well, that few new insights are likely to emerge. International refugee law evolved within the politics of confrontation, mediated from time to time by the idealism of those participating in these first experiments in international cooperation, by the voices of individuals, including refugees, amongst the private voluntary agencies that provided relief and participated in international institutions, and by those who acted as advocates and interlocutors with governments.

At times, the history seems to confirm the absence of any clear, consistent intent or commitment on the part of States, either to deal with causes and find solutions, or to regulate practice between themselves on the basis of rules, let alone vis-à-vis the individual refugee considered as agent and rights holder. The refugee is commonly portrayed as a transitory phenomenon and if he or she or they are to be treated otherwise than as just another foreigner, then it will be done reluctantly, with as little violation as possible of the State's sovereign competence. Overall, however, the picture is more complex.

Raising refugees to a known legal category and entrenching certain rights in their regard was certainly progress, but these days it is often offset by claims of national interest and national security.

a. The League of Nations

The Covenant of the League of Nations was adopted as Part I of the Treaty of Versailles on 29 April 1919, and the organization itself was inaugurated on 10 January 1920, after the Peace Treaty came into force.[9] At first glance, the Covenant appeared to allow little scope for involvement in humanitarian issues, but there were also sufficient references to social justice and 'to the regulation of matters of international interest' to open the

[9] 'The Covenant of the League of Nations' (1920) 1 LNOJ 3 (The Covenant). The original members who ratified the Peace Treaty were Belgium, Bolivia, Brazil, British Empire (Canada, Australia, South Africa, New Zealand, India), France, Guatemala, Italy, Japan, Poland, Peru, Siam, Czecho-Slovakia, and Uruguay; the Argentine Republic, Chile, Paraguay, Persia, and Spain had also acceded by the end of 1919: 'Original Members Who Have Ratified the Treaty of Peace' (1920) 1 LNOJ 12.

way for action;[10] and three issues resonated in the early years—the plight of prisoners of war, many of whom remained in exile years after the conclusion of hostilities; health matters, particularly when linked to famine and the threat of epidemics; and the anomalous situation of refugees without the protection of their country of origin or nationality. Here, politics were to play an important role, for many States were initially unwilling to recognize or otherwise deal with the Soviets, the Bolshevik revolution was seen as an affront to civilized government, and in several cases diplomats and consular officials from the old *régime* continued to exercise their functions.[11]

Some of the problems of population displacement brought about by the war, the October 1917 revolution and the collapse of the Ottoman and Austro-Hungarian empires, were even then becoming apparent. Long-established religious minorities in the borderlands of Persia, Turkey, and the British and French mandates were now unsettled, with the plight of Assyrian and Armenian refugees in Mesopotamia the subject of lengthy correspondence between those responsible in the field and the ministries and cabinet office in London.[12]

With the defeat of anti-Bolshevik forces in Russia in late 1920, the British and the French were to be found assisting with the evacuation of military and civilian refugees, their former allies, from the Crimea,[13] each country acting unilaterally, with some cooperation at the working level.[14] The British 'contingent' of about 4,500 refugees was initially dispersed in Egypt, Cyprus, Malta, and the Serb-Croat-Slovene Kingdom, and they were eventually accepted for permanent settlement by Bulgaria and other countries, thanks to a British contribution of £150,000 (about £7 million at today's value).[15]

b. Matters of International Concern

The situation in Russia was a major source of concern, and in February 1920, the Supreme Council of the Allies, acting on an initiative of the International Labour Office,

invited the Council of the League to organize an inquiry into the conditions prevailing there.[16] Not surprisingly, the Soviet government rejected the idea.[17]

Other issues of international concern soon surfaced, with Russia again the link, and article 25 of the Covenant proved to be a useful basis for involvement in 'humanitarian activities', notwithstanding the absence of express words.[18] The League Council relied on this in April 1920, when it decided to invite Fridtjof Nansen to assume responsibility for the repatriation of prisoners of war (POWs).[19] Despite the civil conflict and the League's other difficulties with Russia, Nansen made considerable progress with repatriation in both directions, working together with the International Committee of the Red Cross (ICRC), national Red Cross societies, and voluntary organizations,[20] with the governments of Poland and Germany, the Soviet authorities, Estonia, and Finland.[21]

Famine, too, had clear international implications. Mortality from this and from disease in Russia was estimated to be about four million above average for the civil population between 1918–20, and from October 1921 to June 1922, almost five million deaths resulted.[22] Article 23(f) of the Covenant provided a clear basis for the establishment of the International Health Bureau and for related measures,[23] and in September 1921, the League Assembly recognized the 'urgent necessity' of combatting the famine. As many governments were unable or unwilling to take any action, it turned to the Council to consider intervention.

In March 1922, Nansen, who had been appointed High Commissioner for Refugees the previous September, reported that the famine had become 'far greater in extent and

far more disastrous in its consequences than anyone had predicted'.[24] With winter coming to an end and the ever-present risk of epidemics, millions were now more likely to 'migrate from their homes in search of countries where food may be obtained', which would be a major problem for Europe, particularly States bordering Russia.[25] Closing frontiers—the so-called *cordon sanitaire*—was not working, and the issues had to be tackled at source. In Nansen's view, refugees and famine were but two aspects of a single problem, namely, the reconstruction of Russia, including economic welfare, international trade, and other matters of common interest.[26] Finally, an International Committee for Russian Relief was set up, serviced by the Secretariat of the High Commissioner for Russian Refugees in Geneva, but in practice the League was far less successful than the American Relief Association under the direction of Herbert Hoover. On one level, however, the League did succeed, and through the efforts of its then recently established Health Office and the Director, Ludwik Rajchman,[27] it engaged successfully with the Soviet government, implemented practical alternatives to frontier closures, and tackled the causes of the epidemics at source.[28]

c. Refugees

The ICRC and the Red Cross movement had already been working with the League on the repatriation of prisoners of war, the typhus epidemic in Poland, and relief work generally in Eastern Europe. Gustave Ador, the ICRC's President, took advantage of these successes and the Council's February 1921 meeting in Paris to submit 'a fresh proposal', focusing on Russian refugees.[29] He urged the appointment of a commissioner as 'an obligation of international justice', and because the League was 'the only supernational

See Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007) 421 fn 2.

political authority capable of solving a problem which is beyond the power of exclusively humanitarian organisations'.[30] The accompanying memorandum noted that the refugees were 'without legal protection and without any well-defined legal status'.[31] The ICRC proposed that a High Commissioner be appointed, to define the legal position of Russian refugees so that they should not be 'unprotected by any *legal organisation recognised by international law*';[32] to organize their employment and repatriation;[33] and to coordinate the efforts of private organizations.

The Secretary-General, Sir Eric Drummond, circulated these ideas to governments in order to assess the level of support for international action.[34] The replies may not have satisfied his wish for concrete proposals, but they do start to highlight the then very present concerns of governments, and presage some of those to come. Many were persuaded of the need for joint action, although of varying kinds.[35] The government of Czecho-Slovakia, for example, emphasized that the legal status of the refugees, including 'international protection in connection with . . . passports, certificates of identity, and all other documents bearing on legal status', could not be settled by isolated action, lest further complications arise.[36] The Foreign Minister, Dr Edvard Beneš, thought it obvious that every government that recognized the Soviets would have to find 'some uniform method of protecting Russian non-Bolshevik refugees'.[37]

A single organization in the form of a High Commissioner could deal directly with the Soviets, as Nansen had done for POWs. Beneš proposed that agreement be sought amongst States, particularly on the employment question and on related issues, such as passports, identity cards, and movement. The Swiss government was no less concerned with the documents question, for this in turn was linked to legal status; its own practice had had to deal with ever-changing political difficulties, and it regretted that repatriation appeared to have been rejected without discussion. Nevertheless, 'an international system regarding the validity of Russian identification papers would . . . be extremely useful, as it would afford greater liberty of movement'.[38]

The situation of refugees was by no means uniform, and policy and practice often reflected the nature and extent of the problem faced by different States. In Poland, a 'front-line' State, Russian refugees were governed by the March 1921 Treaty of Riga.

[36] 'The Question of the Russian Refugees' (n 34) annex 6 (Czecho-Slovak Republic). [37] ibid.

[38] ibid annex 8, app 1 (Switzerland). Roumania also favoured a special passport for Russian refugees—'an *ad hoc* passport issued in the name of the League of Nations by the Governments of those countries in which they are refugees': 'Russian Refugees: Further Communications' (n 34) annex 2.

Russian citizens were under the diplomatic and consular protection of Moscow, but refugees might choose to reject this protection, in which case they enjoyed 'the right of sanctuary, and cannot, for political reasons, be subject to extradition'. Moreover, under the February 1921 Convention of Riga, all repatriation had to be voluntary.[39] Finland, another 'front-line' State, was particularly keen on League of Nations assistance, because repatriation could not be foreseen at present, and relief from the American Red Cross was running out.[40]

Non-State stakeholders also strongly supported the League's involvement.[41] In his June 1921 report, the French representative, Gabriel Hanotaux, noted that there was general support for an organization under a High Commissioner,[42] with the key question being whom to appoint. Administrative and financial issues also needed attention, and he wondered whether the resources of the former Russian government deposited abroad might be used in whole or in part.[43] The Council did not take this up, but otherwise adopted his recommendations, including both the appointment of a High Commissioner and the prompt convening of a conference of States concerned.[44]

In anticipation of the 'Conference of Enquiry' to be held in Geneva from 22–24 August 1921, governments and three non-States parties supplied information on the numbers and condition of Russian refugees in their territories.[45] In between the narrative and what had been done and was now being done for refugees,[46] several common concerns emerged: the particular problems faced by 'front-line' States; the provision of relief and education for children;[47] the impact of famine on refugee movements; burden-sharing contrasted with unilateral endeavours; the legal status of refugees and their documentation, especially passports for foreign travel; and employment for

refugees in a time of economic depression. Any papers issued to Russian refugees needed to be recognized internationally, and the Conference recommended that immigration regulations might be modified in favour of refugees seeking employment, even if only temporarily. In addition, the Conference laid the foundations for what would come to be called *non-refoulement*, stressing that no Russian refugee should be compelled to return; nevertheless, information should be gathered with regard to those who might in fact want to go back.[48] The protection and employment needs of Russian intellectuals also attracted special mention, as did the education of refugee children and the close connection between refugees and relief work for the starving populations of Russia. It would not be just, 'to leave the burden of relieving Russian refugees to the few nations which have hitherto borne it alone'; in this regard, all States 'ought to be invited to contribute in proportion to their resources for this urgent and essential task for the common interest of mankind'.[49]

2. The League of Nations High Commissioner for Russian Refugees

Nansen assumed the post of High Commissioner in early September 1921, and immediately faced the crisis of refugees, 'absolutely without resources', starving to death in the streets of Constantinople.[50] Reporting to the Secretary-General and the Council, Nansen emphasized not only the need for relief, but also that the only 'real solution' was productive employment in countries where the refugees would not become a charge on public funds.

This crisis and the following twelve months of the High Commissioner's office helped to set the outline, the themes, and the recurrent concerns of States for what would ultimately evolve into today's not entirely functional international refugee regime. From an organizational perspective, States readily recognized the need for intergovernmental action, but they were equally concerned that the High Commissioner should not be responsible for direct relief;[51] the refugees may have been a political, social, and humanitarian problem, but the financial aspect was never far away. Nansen, in any event, saw his primary goal as promoting refugee self-reliance, if not where they were, then through 'resettlement' in other countries where work was available or the cost of living was cheaper.[52]

[51] cf 'Statute of the Office of the United Nations High Commissioner for Refugees', UNGA res 428(V) (14 December 1950) para 20.

[52] The word 'resettlement', commonly understood today to mean one State's acceptance for settlement of refugees from countries of 'first asylum', was not then in use.

With help from the International Labour Office, a census of refugees was conducted, but the few replies to Nansen's appeal for places were mostly negative. Nevertheless, he managed to appoint representatives in a number of countries, persuaded governments to nominate officials to deal directly with his office, and set up a joint committee of voluntary agencies to help coordinate relief.[53] A recognizably similar interactional structure is part of today's regime.[54]

a. Certificates of Identity and Passports

Following the lead offered by the August and September 1921 conferences, Nansen stressed the importance of passports and papers for travel, when the strategy was to move refugees to where work was available. He proposed two ways forward: either the necessary papers should be issued by the countries in which the refugees had found temporary abode; or they might be issued by the High Commissioner on behalf of the League. His discussions with governments inclined Nansen to the former and he urged them to indicate whether they could agree to his proposals.[55]

On 25 March 1922, in the context specifically of evacuation from Constantinople,[56] the Council submitted Nansen's proposals to governments, asking them to deliver identity certificates free of charge to refugees on their territory who needed them; to 'visa' the documents issued by other governments as if they were ordinary passports; not to charge for visas issued to refugees, where so requested by the High Commissioner's representative; to arrange for transit visas to be issued promptly and without charge; and finally to contribute to the provision of transportation facilities, including food for refugees in transit.[57]

These proposals provided the agenda for the conference convened by Nansen in Geneva in July 1922, which led to certificates of identity for Russian refugees.[58] Participating States unanimously agreed on the form of the certificate, and recommended its adoption also by other States, both members and non-members of the League. Nansen's major hope was that such a certificate would facilitate refugees' freedom of movement and travel to where employment might be available.[59] One deficiency, however, would have to be remedied, for, at the time, States insisted that

the grant of a certificate, 'does not in any way imply the right for the refugee to return to the State in which he has obtained it without the special authorization of that State'.[60]

For some 'front-line' States, the certificate was valuable if it facilitated 'self-resettlement'. Poland, which did not participate in the Conference, shortly afterwards circulated a memorandum reflecting its concerns on these issues.[61] The government had initially imposed no controls on the influx of Russian refugees, considering their presence as 'temporary, and as preliminary to their definite settlement in other countries'.[62] Amongst the 'several hundreds of thousands' of refugees, besides former combatants in the anti-Soviet movement, it identified two groups: 'Political refugees persecuted by the Bolshevik authorities', and 'Refugees seeking an improvement in the conditions of life'.[63] It confirmed that 'political refugees' were able to remain indefinitely, 'in accordance with the principle of the right of asylum, provided they did not prejudice the interests of the State and constitute a danger to public security'. Those in the second category were allowed to remain temporarily, subject to the law regulating foreigners.

The Polish government furthermore issued special permits for travel to other countries, but noted with regret that such countries were either unwilling to visa such passports, or insisted that Poland undertake to readmit the holder.[64] It encouraged the League to take initiatives in spreading the load, given that Russian refugees were concentrated in just a few countries that faced heavy financial burdens and political and social drawbacks unknown to more distant States.

States continued to assume the temporariness of the refugee problem, partly because they feared extended financial commitments,[65] but the 'humanitarian activities' of the League and their moral and political aspects exerted their own pressure;[66] still, where large numbers of refugees were involved, repatriation often looked like the only way out. The American Relief Association and the American Red Cross, major philanthropic partners in assisting Russian refugees, considered that there could be 'no final satisfactory solution' other than return; they requested that 'protection in and repatriation to Russia' be taken up with the Soviet government.[67]

b. Developing Standards: 1923 and Beyond

By 1923, the High Commissioner's reports to the Council had begun to assume a familiar pattern. They provided an accounting of the numbers of Russian refugees 'evacuated' or otherwise departing from Constantinople, the extent of relief provided, and the contributions of particular States. The High Commissioner also flagged actual or ongoing problems, such as legal status, identity certificates, the particular needs of orphans and invalids, or the question of repatriation.[68] At the same time, Nansen found himself drawn into analogous issues, such as the exchange of Greek and Turkish populations, and thus into schemes for relief and large-scale resettlement, or on behalf of Armenian refugees and other groups similarly situated.

i. *The Principle of No Compulsory Return*

A number of distinct protection problems were also the subject of intervention by the High Commissioner; for example, the situation of Russian refugees in China, many of whom had been engaged in military activities against the Soviet government; or the evacuation to Serbia of a particular group of Russian refugees whose presence in Constantinople was deemed dangerous; or the threatened expulsion, 'for military reasons', of refugees from Roumania; or of refugees alleged to have left their country, not on political grounds, but for economic and other reasons. The High Commissioner intervened successfully, pointing out that many refugees had lost their nationality and would not be allowed to enter Russia, and initiated steps to ensure their relocation in other countries.[69] The word '*non-refoulement*' was not then in use, but the principle of no involuntary return remained central to the policy-thinking of the League, its Member States, and humanitarian partners.[70]

The view nevertheless persisted that the refugee problem comprised just two phases—the first, 'transitory'; and the second, the permanent solution of repatriation, 'if and when' conditions became favourable. By 1923, some 6,000 Russian refugees were reported to have returned home, the internal situation was thought to be improving, but pending general repatriation, the High Commissioner's duty must be to organize the refugees' protection, 'in the widest sense of the term'.[71] A year later, however, the prospect of repatriation as a general solution had fallen away,[72] and in an attempt to reduce the costs to the League, Nansen proposed, and the Council accepted in principle, that the International Labour Office assume responsibility for employment and

emigration.[73] At the same time, the Council also approved extending the identity certificates scheme to Armenian refugees, authorization for which Nansen succeeded in steering through without the need for another conference.[74] One important change, although with the emphasis always on the absence of any obligation, was that space be left on the document for an authorization to re-enter the country of issue.[75] Without committing themselves further, States approved the principle of a 'return clause', 'in order to facilitate freedom of movement', and adopted a number of recommendations (*voeux*) regarding fees and a revolving fund for refugees, to be financed from the sale of stamps and from State contributions.[76]

ii. *'Defining' Refugees*

The Armenian extension was confirmed in the 1926 Arrangement, which was also the first occasion on which the 'refugee' was defined. Limited as it was to just two 'national' categories, the defining characteristics were that those in question no longer enjoyed the protection of their 'former' government, and had not acquired another nationality.[77] Two years later, States sought to define legal status more clearly,[78] and the 1928 Arrangement extended the passport scheme to certain 'Turkish, Assyrian, Assyro-Chaldean and assimilated refugees'.[79] It also recommended that the High Commissioner and his representatives, much like a national consul, should assume responsibility for certain services relating to legal status, such as certifying the identity of refugees, their family position and civil status, their signature, copies and translations of documents, as well as testifying to the good character and conduct of individual refugees and recommending them for visas, residence permits, and so forth.[80]

The language of recommendations, rather than that of law or right or obligation, was also maintained with regard to freedom of movement in the State of residence, the return clause in certificates of identity, and even in the case of expulsion, which should 'be avoided or suspended . . . where the person concerned is not in a position to enter a neighbouring country in a regular manner'; but even that did not apply in the case of a refugee who enters in violation of national law.[81] In fact, 1928 was the high point of

attempts to improve the lot of refugees by way of recommendations. The following year, the League Assembly recognized that its responsibility for refugees would continue, and also that any immediate and radical solution was impossible. It looked forward to refugee work being wound up within 10 years, and suggested that the High Commissioner's services be entrusted to the Secretary-General for a trial period.[82] In the absence of any administrative objection to political and legal protection being transferred to the Secretariat, the Inter-Governmental Advisory Commission (IGAC) proposed that an international refugee office be created to deal with all aspects of relief.[83] After a year's trial, the Assembly endorsed this 'bifurcated' approach, with 'legal protection, civil rights and legal status' remaining the responsibility of the Secretary-General.[84] A sub-committee looked at the technical aspects of the new arrangement, and Max Huber, President of the ICRC and a former President of the Permanent Court of International Justice, agreed to draft the statutes.[85] The office was conceived as a separate institution, under the direction of the League in the sense of article 24 of the Covenant,[86] but enjoying independence and freedom of decision. Its lifespan was nevertheless limited to nine years, 'as its objects are successively accomplished'.[87] On 1 April 1931, the Nansen International Refugee Office began its work of coordinating and facilitating relief; in practice, it also dealt with protection.[88]

iii. *'Protecting' Refugees*

Although it is sometimes said that 'political and legal protection' was never defined, the 1928 Arrangement had indicated a variety of protection activities which the High Commissioner might undertake, and the IGAC adopted a pragmatic approach to the refugee as someone either deprived of their nationality, or no longer enjoying the protection of the government of their country of origin or, indeed, of any government. In part, the relevant international institutions would indeed act as a substitute and provide that 'diplomatic protection' which had otherwise been lost, but one should beware of reading too much into that function alone.[89] As the private voluntary agency

members of the IGAC repeatedly pointed out, 'protection' also required that refugees not be expelled, save on the most serious grounds, and that no refugee should be escorted to the frontier of a neighbouring country unless they were entitled to be admitted there.[90]

As attention turned to the eventual winding up of the Nansen Office, so the idea of a convention to ensure protection began to be discussed.[91] The IGAC thought that the existing rules, deriving primarily from the 1928 Arrangement, left something to be desired with regard both to legal status and the conditions of life. Indeed, a striking feature to emerge from government responses to requests about implementation was the 'comparative inefficiency of the recommendations'.[92] In its view,

> a formal convention would be the most effective means of assuring refugees of stability for their legal status; security and stability for settlement and work; facilities for the practice of professions and trade and for travel, admission to schools and universities, assistance and relief, and easy and unrestricted access to the courts.[93]

The Nansen Office appointed a committee of experts to look at the convention question, the IGAC noting that the system of 'mere recommendations' had proven inadequate and that the problem of 'instability' could only be effectively addressed by formal agreement between States.[94] The Council of the League approved and the IGAC and the Nansen Office were tasked with drafting a convention and convening a conference.[95]

3. The 1933 Convention Relating to the International Status of Refugees

The Convention relating to the International Status of Refugees was adopted on 18 October 1933, after a short conference in Geneva.[96] From one perspective, it did little more than translate the *status quo*—the 1922, 1924, 1926, and 1928 arrangements—into treaty language, and it held back from extending protection beyond the existing recognized

categories of refugees.[97] The suggestion for a more open approach, incorporating all those who did not enjoy, or no longer enjoyed, the protection of their country of origin and had not acquired another nationality, was rejected by those preparing the draft for fear it would raise objections from governments.[98] Even at the time, it was well understood that many refugees—Italians, Hungarians, Austrians, and Germans—continued to have no protection.[99]

The 1933 Convention entered into force on 15 June 1935, but by then the League was well into decline and the prospects for international peace and security were seriously at risk.[100] Only eight States ratified the Convention,[101] but for all its deficiencies, it represents an important marker on the road to a rights-based system of protection.[102] Thus, it confirmed the applicable law with regard to personal status, including divorce (domicile or residence);[103] free and ready access to the courts;[104] qualified access to the labour market;[105] and it called for the standard of 'most favourable treatment accorded to foreign nationals' to be applied with regard to industrial accidents, welfare and relief, social insurance, and education,[106] while any rights contingent on reciprocity should not be denied on that account.[107]

Under the somewhat innocuous rubric of 'administrative measures', article 2 required States to issue Nansen certificates valid for not less than one year, and to include a return clause.[108] Article 3, though not entirely unambiguous in context, is often cited as the first occurrence in treaty of the principle of *non-refoulement*; each Contracting State undertook, 'not to remove or keep from its territory by application of police measures, such as expulsions or non-admittance at the frontier (*refoulement*), refugees who have been authorised to reside there regularly, unless the said measures are dictated by reasons of national security or public order'.[109]

The one major weakness of the 1933 Convention, remarked on then and later, was its perpetuation of the limited coverage offered by earlier practice.[110] When it was clear

that something had to be done for refugees from Nazism, the League set up a High Commissioner for Refugees (Jewish and other) coming from Germany, but outside the League because of Germany's continuing membership (it left in October 1933).[111] The United Kingdom House of Lords debated the resulting challenges in February 1935, focusing on refugees from the Saar and Germany, the funding problems faced by the High Commissioner, the need for resettlement and, as Viscount Cecil argued, for there to be just one organization to deal with a political question bearing on the peace of the world.[112] Four months later, Norway took up these issues in the League; with many thousands of refugees falling outside existing arrangements, the only practicable solution was a central organization, 'under or within the League … to carry out, for all refugees to whom the League has decided or may decide to accord assistance and protection, such functions as are now exercised by the Nansen Office'.[113]

a. Developments after 1933

In the meantime, the High Commissioner for Refugees coming from Germany, James McDonald, resigned in December 1935, owing to what he perceived as nearly intractable problems calling for political intervention by the League, rather than a purely 'humanitarian' response.[114] A few months later in July 1936, States did adopt a 'provisional arrangement' containing a working definition of 'refugees coming from Germany',[115] and once again included provisions on identity certificates, travel, and visas.[116] Legal status was covered in terms similar to the 1933 Convention, but there was no reference to employment,[117] and distinctly qualified limitations on expulsion and *refoulement*.[118] This provisional agreement was soon superseded by the 1938 Convention, specifically extending the personal scope of protection to stateless persons who had left Germany, 'after being established therein and who are proved not to enjoy, in law or in fact, the protection of the German Government'.[119] It retained the measures adopted earlier on certificates of identity, included additional provisions on the 'right of sojourn and

residence',[120] and qualified limitations again on expulsion and *refoulement*.[121] Other articles dealt with legal standing, access to the labour market, industrial accidents, social welfare, education, assistance with emigration, taxation, and reciprocity.[122]

i. *The Institut de Droit International*

Many of these legal issues were considered concurrently by the *Institut de Droit International*.[123] Earlier meetings and resolutions had dealt with a number of related problems,[124] but in 1936, the Institut addressed the legal status of stateless persons and refugees in general. It defined the refugee to include, 'tout individu qui, en raison d'événements politiques survenus sur le territoire dont il était ressortissant, a quitté volontairement ou non ce territoires ou en demeure éloigné, qui n'a acquis aucune autre nationalité nouvelle et ne jouit pas de la protection diplomatique d'aucun autre Etat'.[125] Other articles made general provision on personal law and status, called for the issue of passports to both stateless persons and refugees, and proposed limiting the expulsion of those otherwise authorized to remain to cases where another State had agreed to admit them.[126]

ii. *Political Developments*

However, any positive impact that these legal proposals or even the 1938 Convention might have had was largely frustrated or overtaken by political developments.[127] The Council had finally agreed to a single organization, the High Commissioner for Refugees under the Protection of the League of Nations, which would superintend the entry into force and application of earlier conventions, facilitate the coordination of humanitarian relief, assist with the promotion of emigration and permanent settlement, and establish contact with the Inter-Governmental Committee on Refugees (IGCR) set

[127] Among other developments, the *Anschluss* with Austria and the annexation of the Sudetenland necessitated further definitional refinements: Additional Protocol to the Provisional Arrangements and to the Convention Signed at Geneva on July 4th, 1936 and February 10th, 1938, Respectively, Concerning the Status of Refugees Coming from Germany (adopted 14 September 1939) 198 LNTS 141; 'International Assistance to Refugees: Letters from the French and United Kingdom Governments', LON doc C.26.1939 (12 January 1939); 'International Assistance to Refugees: Extension of the Powers of the High Commissioner to Refugees from Territories ceded by Czechoslovakia to Germany', LON doc C.50.1939. XII (16 January 1939).

up following the Evian Conference convened by President Roosevelt in July,[128] but activities for refugees slowed more or less to a stop with the outbreak of hostilities.

In 1943, Britain and the United States met in Bermuda and agreed that the IGCR mandate should include not just Germans, but 'all persons, wherever they may be, who, as a result of events in Europe, have had to leave, or may have to leave, their country of residence because of danger to their lives or liberties on account of their race, religion or political beliefs'.[129] This was to determine policy and management, however, not for the purpose of confirming legal status or rights. The large-scale displacements occasioned by conflict were seen once again as essentially temporary, with repatriation the goal on the eventual termination of hostilities.[130] To these ends also, in November 1943, 44 States set up the United Nations Relief and Rehabilitation Administration (UNRRA), with the task of supporting military operations in Europe by providing assistance to the displaced and organizing their return home.[131] UNRRA is estimated to have repatriated some six million displaced, but it was not mandated to assist or protect 'refugees' unwilling to return; with the end of the war, the demise of the League of Nations, the emergence of the UN, and the beginnings of an East–West divide, attention turned to resolving the remaining problems.

4. The End of the Early Years

Significantly, and already at its first session, the UN General Assembly unanimously adopted resolution 8(I) on 12 February 1946.[132] It recognized the international dimensions to the refugee problem, and underlined the principle that no refugee having valid objections should be compelled to return to their country of origin, even as it also confirmed that otherwise the main task of international efforts should be to encourage and assist early repatriation. The General Assembly instructed the Economic and Social Council (ECOSC) to consider every aspect of the problem, in the expectation that a new international body would be created to these ends. By December, ECOSOC had not only reported, but also drafted the Constitution for the International Refugee Organization (IRO),[133] and once again, politics entered the picture.[134]

[128] 'Annex 1, International Assistance to Refugees' (1938) 189 LNOJ Special Supp 76, 86 (Resolution No 1), 87 (Resolution No 5). See generally, Tommie Sjöberg, *The Powers and the Persecuted: The Refugee Problem and the Inter-Governmental Committee on Refugees (IGCR), 1938–1947* (Lund University Press 1991).

[129] Sjöberg (n 128) 16. See also 'International Assistance to Refugees: Report of Sir Herbert Emerson, High Commissioner for Refugees', LON doc C.19.M.19.1943.XII (August 1943).

[132] 'Question of Refugees', UNGA res 8(I) (12 February 1946) (42–0–0; unanimity was not to last).

[133] 'Refugees and Displaced Persons', UNGA res 62(I)(II) (15 December 1946) (adopted 30–5–18).

[134] See the 1946 exchange between Eleanor Roosevelt and Andrei Gromyko: UNGA, Sixty Sixth Plenary Meeting (15 December 1946) UN doc A/PV.66, 1420–9; see also Report of the High Commissioner for Refugees to the General Assembly, UNGA, Sixth Session Supp No 9, UN doc A/2011 (1952) para 11; 'Draft report of the Third Committee', UN doc A/2084 (26 January 1952) paras 34–57 on the commissioning and publication of Jacques Vernant, *The Refugee in the Post-War World* (Yale University Press 1953). See also Gil Loescher, *Beyond Charity* (OUP 1993) 57–9.

At this point, the history of the early years comes to an end. The next 25 years or so would see the IRO wound up and replaced by the Office of the United Nations High Commissioner for Refugees; the conclusion of new refugee treaties—the 1951 Convention and its 'amending' 1967 Protocol; the unanimous adoption of the 1967 UN Declaration on Territorial Asylum; the first regional treaty—the 1969 OAU Convention; a ruling by the International Court of Justice on asylum in Latin America, followed by two regional initiatives on territorial and diplomatic asylum; and off to one side, of course, the persistent challenges raised by Palestine refugees under the mandate of the UNRWA.[135]

Within the international refugee regime at large, the bases for discourse and cooperation have been strengthened over the past 70 years, but the politics remain resistant to such fundamental changes as are needed, either to deal effectively with causes, or to bring about prompt and equitable solutions consistently with the demands of international justice. Overall, 'international refugee law' has nevertheless demonstrated its dynamic character; within the *legal* framework, such as the refugee definition, it has shown itself capable of responding positively to the emerging protection needs of groups and individuals at risk, while the normative background provided by human rights has strengthened its capacity to provide a principled approach to larger groups and categories of the displaced. However, the law alone does not provide solutions, and much remains to be done in the face of bureaucratic ineptitude and the bankruptcy of policies premised, for example, on the illusion of deterrence and the 'value' of cruel and inhuman practices.

If a first principle is needed, international refugee law starts with recognition of the inherent dignity and worth of every human being. Although many things can be deduced from first principles, a legal system is also about accountability for what is done to others. International criminal law, in time and in part, may address the liability of those whose policies and practices are the root of displacement, while international refugee law is about the architecture of response, and the accountability of systems in which decisions and actions impact on individuals in search of refuge.

The early years achieved much in the way of internationalizing and institutionalizing the responsibilities of the community of nations in matters of common concern; they began with innate recognition of the basic principle of protection, that no one should be sent back to conditions in which he or she would be at risk of harm. The early history 'struggled' thereafter with delimiting the scope and numbers of those who might or should benefit from international action, sometimes for self-interested reasons, or because of the costs, or for political reasons, or because of a felt need to discourage exile as a solution to national

problems. Only in 1967, was a refugee definition finally agreed that could be generalized across time and space, and even then it remained limited to those with a well-founded fear of being persecuted for particular reasons. State practice and customary international law had already moved ahead, however, even if the normative framework of response remained patchy.

Within that legal framework, there is much still to be done, both within the scheme offered by the 1951 Refugee Convention and 1967 Protocol, and within the interstices of that protection, which is required by human rights and customary international law. Lists are rarely comprehensive, but in the years ahead international refugee law will need to engage or re-engage with issues such as: *access to asylum generally*, within the increasingly complex scenario of migration management; *access to a decision-making procedure* consistent with international standards, which is capable of effectively identifying refugees, stateless persons, and others in need of international protection, for example, as a consequence of climate change or disaster; *humane treatment and non-discrimination* for all who move between States, irrespective of status; *detention and alternatives to detention* that comply with international standards; *documentation* of those entitled to international protection, which is essential to recognition as a person before the law, to exercise of the right to freedom of movement, and to travel for the purpose of finding solutions; *equality of treatment* for refugees and stateless persons with regard to employment, education, and social rights; and defence of the fundamental principles of protection, including *non-refoulement*.

The tension between the claims of those in search of protection and the State anxious about its 'sovereign borders' is not likely to disappear, but it will be for the next iterations of international refugee law to show how to mediate that conflict, consistently with human dignity and security from harm.

CHAPTER 2

RACE, REFUGEES, AND INTERNATIONAL LAW

E TENDAYI ACHIUME

1. Introduction

> Given the centrality of racialization to geopolitics and the inauguration of the central institutions of international affairs in the twentieth century, to think of 'race' as but one of many variables in what can also be called the century of the refugee is somewhat myopic. In short, to refer to the geopolitics of refuge as a 'Global Refugee Regime' unwittingly falls into the trap of missing the centrality of racialization as an embedded system of oppression [.][1]

The experiences of refugees are heavily mediated by race and ethnicity, and the first quarter of the twenty-first century offers no shortage of examples. Although groups marked and targeted as foreign may vary across place and time, for refugees, race remains a vital concept to make sense both of their experiences, and of the legal and policy frameworks that govern these experiences.[2]

However, international legal scholarship on refugees has a race problem. It has not paid sufficient attention to the significance of race in this field,[3] suffering from a sort of 'racial aphasia', a collective inability to talk about or theorize race. This aphasia entails

[1] Christopher Kyriakides, Dina Taha, Carlo Handy Charles, and Rodolfo D Torres, 'Introduction: The Racialized Refugee Regime' (2019) 35(1) Refuge 3, 5.

[2] As Laura Westra has argued, racial discrimination permeates the experiences of most refugees at all stages, from their displacement all the way through relocation in host nations. Laura Westra, 'The Case for Asylum Seekers: Reverting to Human Rights' in Laura Westra, Satvinder Juss, and Tullio Scovazzi (eds), *Towards a Refugee Oriented Right of Asylum* (Routledge 2015) 233–64.

[3] For exceptions to this trend, see, for example, the race-conscious international human rights literature cited in Hope Lewis, 'Reflections on Blackcrit Theory: Human Rights' (2000) 45 Villanova Law Review 1075, 1079–84.

effacement, amnesia and neglect of racism's histories and structures.[4] There are many likely explanations for international refugee law scholarship's racial aphasia, including the fractured and controversial meaning of the term 'race', and the legal significance of this designation. For this reason, the starting point of this chapter is the meaning of 'race' as it should be understood in relation to refugees and international law (Section 2). It then turns to examine the treatment of race in the Refugee Convention and the role of the International Convention on the Elimination of All Forms of Racial Discrimination (ICERD) as regards refugees (Section 3), before turning to wider questions concerning the racialized nature of the global refugee regime (Section 4). Section 5 concludes with proposals for a new research agenda.

2. Race and Refugees: The Conceptual Terrain

a. Race as Structure

The term 'race' refers to the 'the historically contingent social systems of meaning that attach to elements of morphology and ancestry'.[5] This definition unequivocally rejects the scientifically and morally discredited notion of biological races, and instead recognizes race as a potent social construction, one that is intimately shaped by law, amongst other things.[6] It recognizes that the social construction of race is informed by physical features and lineage, not because features and lineage are a function of biological racial variation, but because societies invest morphology and ancestry with social meaning, including through law.[7] At the same time, race is by no means simply, or even mostly, about physical attributes such as colour. It is centrally about the legal social, political, and economic meaning of being categorized as Black, White, Brown, or any other racial designation.[8]

There is a tendency to treat race as, mostly, an identity attribute of individuals and groups and, at the same time, to ignore the ways in which race operates as a structure of power according to which privileges and rights are allocated. Quijano reminds us that race today is the product of centuries-long colonial intervention and exploitation,

during which 'race became the fundamental criterion for the distribution of the world population into ranks, places, and roles in . . . society's structure of power'.[9] In the colonial context, race structured rights and privileges on hierarchical terms determined by White supremacy. Although formal decolonization has occurred in most of the world, race persists as a *neo*-colonial structure, one that still allocates benefits and privileges to the advantage of some and the disadvantage of others—largely along the same geopolitical and racial lines that characterized the European colonial project.

This contemporary understanding of race informs the analysis in this chapter, although it is important to emphasize that the imperial and structural account of race highlighted here is not intended as a totalizing account of everything that race means or does everywhere in the world and at all times. Rather, the point is that this empire-based and structural account is one amongst those required for comprehensive legal analysis of race and refugees under international law.[10] A 2019 special issue of the journal *Refuge*, on 'Racialized Refuge', offers an example of the rich descriptive and analytical insights made possible by treating race 'not . . . as a discrete variable for consideration but as part of an embedded structure of oppression in which the racialized refugee regime is generated and reproduced'.[11] Refugee scholars and advocates must contend with a structural and power-based understanding of race because this is a fundamental way in which race impacts refugees.[12]

Race requires consideration alongside other social categories and structures, such as ethnicity, indigeneity, national origin, and even religion. These grounds may sometimes function alongside race, or act as proxies for race. The experiences of indigenous refugees are often overlooked in international legal scholarship.[13] Religion is also often neglected, yet scholars have compellingly argued that in certain contexts, animus targeting

religious groups—such as Muslims in the United States—is often in reality racialized animus, in that it operates on the basis of racial ascriptions (such as being 'Muslim-looking'), rather than on the basis of religious belief or conduct.[14]

In addition to consideration of racial proxies, meaningful analysis of race must also account for the intersectional nature of categories and structures that embody inequality and discrimination.[15] At its core, the concept of intersectionality is an attempt to capture the interactions amongst two or more structures or systems of oppression (such as patriarchy and economic disadvantage), and to address the ways in which specific laws and policies create burdens or hardships that 'flow along these intersecting axes contributing actively to create a dynamic of disempowerment'.[16] Intersectional analysis of gender and race, in particular, is essential for refugees. In a 2001 article, Pittaway and Bartolomei mapped race and gender discrimination against refugees, noting that the two forms of discrimination often occur together and may be mutually constitutive.[17] Their analysis is intersectional, grappling with the specific conditions women refugees face on the receiving end of a legal regime steeped in patriarchy.[18] They offer examples of the gendered racial discrimination experienced by women both from host States and societies (including in the resettlement process), and from within refugee communities that pressure women to maintain their traditional roles for the sake of patriarchal cultural preservation. Elsewhere, Akram has examined how stereotypes of Islam interact with gender stereotypes in judicial adjudication to undercut the refugee claims of Muslim women in the US.[19]

b. Racism, Xenophobia, and Xenophobic Discrimination

The complexity of the intersecting and multiple structures that shape the experiences of refugees is perhaps most vividly illustrated through a brief interrogation of the

[14] Muneer I Ahmad, 'A Rage Shared by Law: Post-September 11 Racial Violence as Crimes of Passion' (2004) 92 California Law Review 1259, 1278 ('[T]he "Muslim-looking" construct is neither religion-nor conduct-based'). See also Emmanuel Mauleón, 'Black Twice: Policing Black Muslim Identities' (2018) 65 *UCLA Law Review* 1326 (arguing the inherent racialization of religion). Minority groups persecuted on a religious basis are often also ethnic minorities, in a way that can make religion a proxy of ethnicity. See eg Stephanie E Berry, 'Bringing Muslim Minorities within the International Convention on the Elimination of All Forms of Racial Discrimination: Square Peg in a Round Hole?' (2011) 11 Human Rights Law Review 423, 431–6, 450.

xenophobia and xenophobic discrimination to which refugees are subject. Common conceptions of xenophobia tend to emphasize individual prejudice or irrational dislike of foreigners. I have argued elsewhere that for legal analysis, xenophobia must also be understood as political—motivated and informed by collective sensibilities regarding who belongs to the nation and may permissibly enjoy its benefits, and who may not.[20] Xenophobic backlash entails backlash against perceived threats to collective sovereignty and individual citizenship. In simple terms, xenophobic discrimination is discrimination on the basis of actual or perceived 'foreignness', where foreignness is the status of being an outsider to a given political community.[21] For refugees in the international context, it is the status of being an outsider to a given State that is typically at stake when they confront xenophobic discrimination.[22]

Both for analytical and governance purposes, it is important to understand xenophobic backlash against refugees as, in many cases, intimately related to racist backlash, but also as distinctive in noteworthy respects. This is because conflating racism and xenophobia risks obscuring distinct processes of othering and exclusion that may require different analytical and remedial intervention. Xenophobic backlash very specifically challenges the status of non-nationals as beneficiaries of the goods of national membership, whereas racism or racist backlash does not always or even mostly connote this specific bone of political contention.[23] Xenophobic discrimination is often fuelled by 'xenophobic anxiety': 'the concerns (anxieties) that polity insiders mobilize in discourse and action in order to motivate, justify, or legitimate racialized or otherwise normatively suspect exclusion of foreigners',[24] where foreigners are those constructed as undeserving of the benefits of national membership. In other words, at stake in xenophobic backlash and anxiety[25] is a more direct reaction against the inclusion of refugees, and against their enjoyment of the benefits of national membership. Sensibilities about national belonging in relation to refugees are heavily influenced by conceptions of sovereignty. As a result, addressing xenophobia may require measures specifically tailored to address national discourses about who belongs and who does not. Anti-racism interventions, by contrast, may not always require the same, because belonging through citizenship is not always what is salient in racist discourse or structures, even if racism is often a factor driving this backlash.

Foreignness is an intersectional category, which is to say that it implicates identity at the intersection of many different social structures: nationality, national origin, race,

[20] E Tendayi Achiume, 'Governing Xenophobia' (2018) 51 Vanderbilt Journal of Transnational Law 333, 369.

[21] E Tendayi Achiume, 'Beyond Prejudice: Structural Xenophobic Discrimination against Refugees' (2014) 45 *Georgetown Journal of International Law* 323, 331. For more detailed analysis of foreignness as a basis for discrimination against refugees, see 331–7.

[22] Internally displaced persons, for example, may experience xenophobic responses from co-nationals, where their foreignness is a product not of a different national origin, but rather their status as perceived or actual outsiders to a particular region, community, or city. See eg Aurelia Wa Kabwe-Segatti and Loren B Landau, 'Displacement and Difference in Lubumbashi' (2007) 27 Forced Migration Review 71, 71–2.

[23] For a more detailed elaboration of this point, see Achiume (n 20) 368–71.

[24] ibid 370.

[25] ibid.

religion, class, ethnicity, gender, and others.[26] What this means in practice, for example, is that even amongst refugees of the same nationality or national origin, religion, race, or other category can differentially determine who is socially constructed as foreign and thus vulnerable to xenophobic discrimination. A Christian and a Muslim refugee both of Syrian nationality, for instance, can receive very different treatment in Europe in ways that makes clear that for law and policymakers, focusing on nationality/national origin alone is an untenable approach to xenophobic discrimination.[27] The differential treatment of White Zimbabwean refugees relative to Black Zimbabwean refugees in South Africa offers another example,[28] and more generally, Gqola has shown how 'sexualized, class marked and racialized South African stories about immigrant communities'[29] have structured violence against these communities. That said, race may not always salient in the construction of foreignness. The sometimes xenophobic and even violent treatment of white eastern Europeans in western Europe illustrates the case of xenophobic discrimination where 'race' as generally understood is not strictly implicated, as with ethnically Polish migrants in the United Kingdom, for example.[30]

Class is also salient in the construction of foreignness. Indeed, some might consider class the sole or primary determinant of xenophobia against Third World refugees who come from predominantly economically disadvantaged countries, while at the same time viewing race as epiphenomenal.[31] On such a view, it is class and not race that triggers backlash and discrimination against refugees. This 'it is class not race' position misses the historically mutually constitutive relationship between class and race,[32] and ignores how racialization still shapes class today. Race still affects wages and wealth in

[26] Achiume (n 21) 331; Natsu Taylor Saito, 'Alien and Non-Alien Alike: Citizenship, "Foreignness," and Racial Hierarchy in American Law' (1997) 76 Oregon Law Review 261, 332.

[27] See eg Zosia Wasik and Henry Foy, 'Poland Favors Christian Refugees from Syria', *Financial Times* (21 August 2015).

[28] Achiume (n 21) 333.

[29] Pumla Dineo Gqola, 'Brutal Inheritances: Echoes, Negrophobia and Masculinist Violence' in Shireen Hassim, Tawana Kupe, and Eric Worby (eds), *Go Home or Die Here: Violence, Xenophobia and the Reinvention of Difference in South Africa* (Wits University Press 2008) 213.

[30] Some have argued that the experiences of Poles in the UK are best described as xenophobia *and* racism, because white Poles are subject to 'racialization', which these scholars argue can occur on account of ethnic or migrant status and in the absence of 'putative phenotypical or biological difference'. See Alina Rzepnikowska, 'Racism and Xenophobia Experienced by Polish Migrants in the UK before and after Brexit Vote' (2019) 45 Journal of Ethnic and Migration Studies 61, 64 (citations omitted).

[31] The term 'Third World' is a geopolitical and ideological category that refers to the regions and nations of the world that were once formal European colonies. Rajagopal, amongst others, has explained the general analytical and political significance of the category: Balakrishnan Rajagopal, 'Locating the Third World in Cultural Geography' (1999) 15 Third World Legal Studies 1, 3–4. In 'Migration as Decolonization' I detail the theoretical significance of this category for legal analysis of borders and migration. E Tendayi Achiume, 'Migration as Decolonization' (2019) 71 Stanford Law Review 1509.

[32] Using the work of Franz Fanon, for example, Robert Knox explains the connection between race and class under colonialism, which recalls the discussion of race as structure in Section 2(a), above: '"in the colonial context", race served a role in structuring the distribution of political and economic benefits of imperial exploitation. It was by virtue of their race that white settlers gained access to the material benefits of colonial capitalism': Robert Knox, 'Valuing Race? Stretched Marxism and the Logic of Imperialism' (2016) 4 London Review of International Law 81, 104.

society, just as gender does, such that class and race cannot be collapsed into one another.[33] Furthermore, immigration law and enforcement—including as it relates to refugees and asylum seekers—enacts racialized exclusion through class-based restrictions.[34] The point here is that legal analysis of xenophobic backlash must be careful to probe the multiple, intersecting structures that shape the experiences of refugees, and to take race seriously as one amongst them for the vast majority of the world's refugees who are predominantly from the Global South.[35]

3. The Doctrine and Its Enforcement

a. Race and Ethnicity in the Refugee Convention

For many refugees, their race, ethnicity, and/or religion are the very reason for the persecution that forces them to seek international protection. In the twenty-first century, the conditions confronting Rohingya exemplify ethno-religious discrimination and persecution as root causes of refugee displacement. Over a million Rohingya have fled persecution, ethnic cleansings, and what some UN actors have even described as genocide in Myanmar,[36] a State that has formalized an ethno-nationalist conception of citizenship that officially excludes this group.[37] Through its refugee definition, international refugee law directly responds to racial discrimination as a cause of refugee displacement.[38] Article 1A(2) of the Refugee Convention lists the bases for refugee

[33] See eg European Network Against Racism, 'Racism & Discrimination in Employment in Europe 2013–2017' (2017) <https://ec.europa.eu/migrant-integration/librarydoc/enar-shadow-report-racism-discrimination-in-employment-in-europe-2013–2017> accessed 28 May 2020 (documenting race, class, and gender discrimination in European labour markets, including against migrant women); Val Colic-Peisker, 'The "Visibly Different" Refugees in the Australian Labour Market' in Sonia McKay (ed), *Refugees, Recent Migrants and Employment: Challenging Barriers and Exploring Pathways* (Routledge 2009) (finding that racism helps trap non-white refugees in low-income jobs).

status, which include a well-founded fear of being persecuted for reasons of race, religion, and nationality (amongst others). Also in relation to racial persecution, article 33(1) prohibits States from expelling or returning refugees to 'the frontiers of territories where [their lives or freedom] would be threatened on account of race, religion, [and] nationality' (amongst others). Racial or religious persecution triggers *non-refoulement* obligations.

The drafting history of the Refugee Convention supports a broad interpretation of 'race' as a protected ground.[39] Hathaway and Foster note that a broad conception of race has been the approach adopted by a wide range of Contracting States to the Convention.[40] UNHCR has endorsed this approach, noting that race must be understood 'in its widest sense to include all kinds of ethnic groups',[41] and that racial discrimination 'will frequently amount to persecution in the sense of the 1951 Convention'.[42] At the same time, it has cautioned that belonging to a certain racial group alone will not normally be sufficient to substantiate a claim to refugee status.[43] Von Sternberg explains that racial discrimination has special status under the Refugee Convention: whereas racial discrimination 'will frequently amount to persecution', the same is not true of the other enumerated grounds in article 1A(2).[44]

Notwithstanding the broad conception of race reflected in the Refugee Convention, and the inclusion of religion and ethnicity as bases for refugee status, Pittaway and Bartolomei note that narrow judicial and administrative interpretations often result in discriminatory failure to recognize refugees fleeing racial and ethnic persecution.[45] Von Sternberg similarly notes that in the US, cases recognizing refugees 'based on the race category [have] been sparse', though he notes that there is reason to believe the trend was shifting at the time of his study.[46] He notes also that '[a] comparatively liberal test for establishing racial persecution had been earlier adopted in Canada'.[47] Although instructive, Von Sternberg's study only offers a region-specific analysis. Broader transnational Refugee Convention-based comparative research is required to understand the extent to which refugees successfully vindicate refugee claims on the basis of racial persecution.

Notwithstanding the prohibition of discrimination in the Refugee Convention and its Protocol, discrimination in access to, and enjoyment of, these instruments' protections nonetheless persists. In some cases, discriminatory application of the Convention is explicit and formal in its racialized exclusion of refugees from recognition and protection. For example, in the wake of arrivals in Europe of Syrian refugees in significant numbers, the US and a number of countries in Europe pursued religious and country of origin bans that were plainly discriminatory against refugees fleeing Muslim-majority

[39] See eg James C Hathaway and Michelle Foster, *The Law of Refugee Status* (CUP 2014) 394–5 (noting the historical evidence for this approach, and its consistency with treating race as social construct).

countries.[48] In reality, States that are geographically remote from conflict often exercise great discretion in determining not only the numbers, but also the kinds of refugees they admit. In particular, selective admission via refugee resettlement allows States in the Global North to employ racialized, religious, and even gendered preferences in their selections for admission.[49]

Furthermore, as Pittaway and Bartolomei argue in their analysis of the racial implications of global refugee policy that facilitates regional containment of Global South refugees, 'racism remains inherent in this approach, for refugees in the South are most likely to be assisted with basic food and medical supplies, while refugees from the North are often offered resettlement in the North, and or substantial assistance in the rebuilding of infrastructure'.[50] Westra has joined others in critiquing the predominance of long-term refugee encampment of Third World refugees, arguing that the very origins of refugee camps lie in racially discriminatory concentration camps developed under colonialism.[51] Furthermore, scholars have examined how discriminatory stereotypes influence the way that adjudicators in national asylum systems apply and develop standards for conferring refugee status.[52] Emeriau finds that in the French asylum system 'Muslims are 30 percent less likely to be granted asylum compared to otherwise similar Christian applicants'.[53] And others have examined how policy and legislation can itself embed racial and ethnic preferences that arguably violate article 3 of the Refugee Convention.[54] Macklin, for example, has mapped how Canada has used different policy and institutional arrangements (including visas and safe country of origin designations) effectively to exclude European Roma from seeking asylum in Canada.[55] In some countries,

scholars have argued that racism is actually institutionalized in asylum law and policy governed by the Refugee Convention.[56]

In addition to racial discrimination through law and formal policy, refugees also confront article 3 discrimination in their encounters with border and refugee policy enforcement officials,[57] and through the policies and practices of humanitarian or protection agencies.[58] Reports of racial discrimination against Haitian or indigenous refugees at the US southern border,[59] or that against African refugees in South Africa, all provide examples.[60] But the empirical scope and extent of the problem of racial discrimination against refugees in the enforcement of the Convention's provisions remains difficult to determine because of the dearth of studies addressing this issue. This is a pressing area for additional multidisciplinary research.

b. Racial and Xenophobic Discrimination under ICERD

Although the Refugee Convention prohibits discriminatory application of its provisions, it does not define prohibited racial discrimination. A different international human rights treaty regime does supply such a definition, in addition to offering the most comprehensive international framework for combatting racial discrimination. This treaty, ICERD, should be understood as central to the international legal terrain concerning race and refugees, and to the protection of refugees from discrimination.[61] However, it is largely absent in litigation on behalf of refugees that nonetheless relies on

[56] See eg Kalia C Randolph, 'Executive Order 13769 and America's Long-Standing Practice of Institutionalized Racial Discrimination towards Refugees and Asylum Seekers' (2017) 47 Stetson Law Review 1.

[57] See eg European Network against Racism and Michela Semprebon, 'Racism, Racial Discrimination, and Migration in Italy 2015/2016', Research Briefing (2016) 5–6 <https://www.enar-eu.org/IMG/pdf/italy_research_briefing_final.pdf> accessed 12 May 2020; *R (European Roma Rights Centre) v Immigration Officer at Prague Airport* [2004] UKHL 55, [2005] 2 AC 1, para 72.

[58] Hathaway, for example, argues that UNHCR has been instrumental in achieving the racialized regional containment of Third World refugees to prevent access of these refugees to countries in the Global North: James C Hathaway, 'A Reconsideration of the Underlying Premise of Refugee Law' (1990) 31 Harvard International Law Journal 129, 157–61. Others have criticized the vastly different resources UNHCR spends on white European refugees relative to black African refugees: T Christian Miller and Ann M Simmons, 'Relief Camps for Africans, Kosovars Worlds Apart', *Los Angeles Times* (21 May 1999).

other international human rights treaties.[62] The limited legal engagement and experimentation with ICERD's application to racial discrimination against refugees is a missed opportunity when considered in light of the protection this and other international human rights law treaties stand to offer. The doctrinal dynamism of international human rights law, in part due to the existence of dedicated treaty bodies such as the Committee for the Elimination of Racial Discrimination (CERD), means that non-discrimination and equality protections based in international human rights law have the potential to play a meaningful role in the lives of refugees.[63]

Article 1(1) of ICERD defines prohibited racial discrimination as 'any distinction, exclusion, restriction or preference based on race, colour, descent, or national or ethnic origin which has the purpose or effect of nullifying or impairing the recognition, enjoyment or exercise, on an equal footing, of human rights and fundamental freedoms in the political, economic, social, cultural or any other field of public life'.[64] This definition is appropriately broad, such that discrimination on the basis of descent, national origin, or ethnic origin is encompassed by this prohibition. Although article 1(2) carves out distinctions between citizens and non-citizens from the definition of prohibited racial discrimination, CERD has interpreted this provision to mean that restrictions on the basis of citizenship are permissible only when proportionately tailored to achieve a legitimate end, judged in light of ICERD's object and purpose.[65] Furthermore, this prohibition includes both direct and indirect forms of discrimination, meaning that racially disparate conduct or policies which affect human rights violate international human rights law, even in the absence of discriminatory intent or purpose. These and other provisions equip ICERD to provide the basis for an anti-subordination approach to racial discrimination, one that takes seriously the legal dismantling of structures and institutions that perpetuate racial or ethnic underclasses,[66] including for refugees. In the regional context, the Inter-American Court of Human Rights' jurisprudence offers examples of human rights-based anti-racial subordination interventions in this vein.[67]

[66] For discussion of a human rights anti-subordination or substantive approach to racial equality and non-discrimination, see Achiume (n 8).

[67] *Case of Expelled Dominicans and Haitians v Dominican Republic*, Inter-American Court of Human Rights Series C No 282 (28 August 2014); *Benito Tide Méndez et al v Dominican Republic*, Inter-American Court of Human Rights Series C No 64/12 (29 March 2012).

ICERD's refugee potential is illustrated by the *Roma Rights* case.[68] The case involved a UK government policy (and related practices) adopted in the wake of increased asylum applications by Roma from the Czech Republic. The UK stationed immigration officers at Prague airport to pre-screen passengers before boarding, and under this programme almost 90 per cent of Roma were denied leave to enter the UK, as compared to only 0.2 per cent of non-Roma.[69] The court's review of the applicable policy guidance concluded that immigration officials treated Roma less favourably because they were Roma, in other words, on grounds of race or ethnicity.[70] The court overturned the government policy as being racially discriminatory, but it failed to reach this decision on the basis of article 3 of the Refugee Convention, which it found not to contain 'a freestanding non discrimination provision'.[71] Instead, the court relied on international human rights law—ICERD and the ICCPR—as well as the *jus cogens* prohibition on racial discrimination under customary international law.[72]

There is, as yet, no international legal definition of xenophobic discrimination, although international actors have deployed existing anti-discrimination frameworks to address it.[73] Xenophobic discrimination is foreignness discrimination, which may manifest as explicit anti-foreigner prejudice, but may also be structural and take the form of individual or multiple overlapping policies and practices that on grounds of foreignness disproportionately undercut enjoyment of human rights.[74] Xenophobic backlash has received attention from UNHCR and from international human rights organizations, which have, amongst other things, proposed guidelines for combatting this discrimination.[75] I have argued that the underlying approach in such initiatives has been a *prejudice approach*, namely, one that restricts its engagement with xenophobic

[68] *Roma Rights* (n 58). No, 58. Another instructive example of human rights possibilities for protection (for refugees who subsequently naturalize) is *Biao v Denmark*, App No 38590/10 (ECtHR, Grand Chamber, 24 May 2016), in which the European Court of Human Rights found a Danish family reunification policy to be prohibited indirect racial discrimination under European human rights law.

[69] *Roma Rights* (n 58) para 34. No, 58.

[70] ibid para 36.

[71] ibid para 43.

[72] ibid paras 44–7.

[73] For an overview of the nascent global anti-xenophobia framework, see Achiume (n 20). In 2015, the UN Human Rights Council tasked its Ad Hoc Committee on Complementary Standards to ICERD with initiating the drafting of an international protocol that would criminalize 'acts of a racist and xenophobic nature', pursuant to a UNGA resolution calling for such a draft. See Human Rights Council, 'Elaboration of Complementary Standards to the International Convention on the Eliminations of All Forms of Racial Discrimination', UN doc A/HRC/34/L.31/Rev.1 (21 March 2017). It is conceivable that the yield of this process might include a legal definition of prohibited xenophobic discrimination.

[74] For a fuller legal analysis of xenophobic discrimination with examples, see Achiume (n 21).

[75] UNHCR, 'Combating Racism, Racial Discrimination, Xenophobia and related Intolerance through a Strategic Approach' (December 2009) <https://www.refworld.org/docid/4b30931d2.html> accessed 28 May 2020; International Labour Office, International Organization for Migration, and UNHCR, 'International Migration, Racism, Discrimination and Xenophobia' (August 2001) <https://www.refworld.org/docid/49353b4d2.html> accessed 28 May 2020; Human Rights First, 'Combatting Xenophobic Violence: A Framework For Action' (4 December 2011) 1 <https://www.humanrightsfirst.org/resource/combating-xenophobic-violence-framework-action> accessed 17 May 2020.

discrimination to contexts characterized by explicit racial or xenophobic animus.[76] A prejudice approach is inadequate for theorizing the racialized impact of law, policy, and practice governing the circumstances of refugees and other non-nationals. Such an approach cannot account for structural xenophobic discrimination, which 'results from the disparate impact of measures on refugees and other groups on account of foreignness, when these measures interact with each other and with context'.[77] Typically, these measures are not ostensibly driven by explicit prejudice, and each on its own may even serve to advance unrelated, meritorious policy goals. An example from South Africa is a series of facially neutral regulations and practices in the housing, employment, education, and financial sector which together have the cumulative effect of depriving refugees of enjoyment of socio-economic rights to which they are legally entitled.[78] Such structural forms of exclusion on account of foreigner status—where they result in discriminatory rights violations—should be understood as prohibited at least under ICERD.[79] All the same, more scholarship is required to interrogate other possible protections against racial and xenophobic discrimination for refugees through ICERD, and through other areas of international law.[80]

4. Regime Analysis

This section revisits the scholarship, mostly by legal scholars, that has examined the structure, history, and development of the international refugee regime in relation to race. Much of this literature marks three prior periods in refugee policy trajectory: the post-Second World War regime creation phase, the Cold War politics phase, and the post-Cold War phase.[81] Scholars argue that international refugee law has always allowed for the protection of some who were racially or ethnically vulnerable, but also entirely excluded others on a discriminatory basis, according to the interests of powerful States.

In 'A Reconsideration of the Underlying Premise of Refugee Law', Hathaway advanced the argument that international refugee law and its policies and institutions function as 'a means of reconciling the sovereign prerogative of States to control

[76] Achiume (n 20) 365–6. A new guidance note released by UNHCR is a welcome development in this regard, and broadens its scope to engage with structural forms of racial and xenophobic discrimination. UNHCR, 'Guidance on Racism and Xenophobia' (2020) <https://www.unhcr.org/protection/operations/5f7c860f4/unhcr-guidance-on-racism-and-xenophobia.html> accessed 18 October 2020.

[77] Achiume (n 21) 337. [78] ibid 337–44. [79] ibid 361–6.

[80] For a recent example focusing on the customary international law prohibition of No, I've added the "of" that was missing. racial discrimination in the context of nationality laws, see Michelle Foster and Timnah Baker, 'Racial Discrimination in Nationality Laws: A Doctrinal Blindspot I fixed it of International Law?' (2020) 11 Columbia Journal of Race and Law (forthcoming). Looks like this is still forthcoming. Also, I think the citation should be for 11 Columbia Journal, not 10 (this would be more consistent with previous issues of the journal, plus see here where the article is cited as 11(1): https://law.unimelb.edu.au/centres/statelessness/research/research-projects/minorities-and-statelessness).

[81] See eg Hathaway (n 59). No, 59.

immigration with the reality of forced migrations of people at risk'.[82] Furthermore, this body of law is, at its core, shaped in accordance with the interests of States.[83] Hathaway's geopolitical account of the history and present of international refugee law detailed the legal and policy of non-entrée regimes through which European countries, North American countries, and Australia achieved the exclusion of refugees from former European colonies, and their containment beyond the Global North. The 'highly selective' definition of refugee States and the allocation of direct control over refugee determination processes had the cumulative effect of producing 'a two-tiered protection scheme that shields Western States from most Third World asylum seekers'.[84] He highlighted, amongst other things, how the race-based migration regimes of the settler colonies influenced the trajectory of the refugee regime to restrict international protection and burden-sharing of refugees to European refugees.[85] The regime excluded Third World, non-white refugees. The confluence of First World State interest meant that the Refugee Convention definition of a refugee, which restricted status to those fleeing events in Europe, by design and effect racialized the very first international legal definition of a refugee.[86] As Oberoi has shown, even at the time of the negotiation and adoption of the Refugee Convention, Third World States protested the discriminatory and exclusionary nature of the scope of the refugee definition.[87] Hathaway argues that the 1967 Protocol, which formally universalized the refugee definition, did not remedy the two-tier system, but instead aided in sustaining it because it retained a limited, Eurocentric definition of the conditions that would qualify individuals for refugee status, and failed to include the forms of hardship Third World involuntary migrants were likely to be fleeing.[88]

To Hathaway's realist geopolitical analysis, Chimni added, amongst other things, an emphasis on the salience of *empire* as one of the factors that have shaped the development of international refugee law and the field of refugee studies. Chimni's canonical 'The Geopolitics of Refugee Studies: A View From the South'[89] highlighted the role of hegemonic States in shaping both the international refugee regime and knowledge production regarding that regime within the field of refugee studies. He joined others in noting that international refugee law and policy following the Cold War shifted from a more permissive exilic basis to one targeted at repatriation, and, as a consequence, restrictive regional containment for which the term 'global apartheid' might

82 ibid 174. 83 ibid 133. 84 ibid 144.

85 ibid 154.

86 For an example of Third World State opposition to the definition adopted in the Refugee Convention on grounds of its discriminatory nature, see Pia Oberoi, 'South Asia and the Creation of the International Refugee Regime' (2001) 19(5) Refuge36, 41.

87 ibid. Third World States were not the only ones to oppose the geographic restrictions built into the refugee definition. For a discussion of the debate amongst 'universalists' and 'Europeanist' State positions, see Irial Glynn, 'The Genesis and Development of Article 1 of the 1951 Refugee Convention' (2012) 25 JRS 134, 138–44; See Chapter 22 in this volume.

88 Hathaway (n 58) 164. 89 Chimni (n 10).

be fit.[90] In this way, the regime treated Third World refugees in an inferior, discriminatory manner when compared to those from Europe. He argued that international refugee scholars, even while critiquing the rise of the non-entrée regime, had also participated in its legitimation by peddling what he called 'the myth of difference', according to which 'the nature and character of refugee flows in the Third World were represented as being radically different from refugee flows in Europe since the end of the First World War. Thereby, an image of a 'normal refugee' was constructed—white, male and anti-communist—which clashed sharply with individuals fleeing the Third World.'[91] In public discourse, Third World refugees were presented as opportunistic migrants intent on abusing a system designed only for worthy refugees. At the same time, First World States pushed away from the refugee resettlement emphasis deployed for First World refugees before and during the Cold War, and towards repatriation of those from the Third World. In Chimni's words, 'as the movement of refugees from the south to the north became the primary preoccupation, and when the cold war ended, the colonial logic of humanitarianism took over'.[92]

In *Asylum and Empire*, Mayblin rightly notes that despite Chimni's fundamental insights, the field of the legal study of refugees seems not to have internalized the implications of his imperial critique of refugee law and policy. Mayblin's own work expands Chimni's analysis by considering the colonial legacy of Third World refugee exclusion still operating through international law's application in national asylum law and policy. She argues that the demonization of Third World persons under colonialism persists in contemporary asylum law and requires legal remediation.[93] She insists that a racial critique of contemporary asylum regimes is incomplete if it cannot reckon with legacies of empire, and how these legacies shape contemporary refugee discourse and practice. Shah's book similarly contributes important analysis to the literature. He carefully charts the racially discriminatory evolution of asylum law, including at the international level, also marking the salience of colonial influences.[94] In an important recent article, Shahabuddin explains how through post-colonial boundaries, international law has contributed to producing the crisis of Rohingya persecution and displacement.[95]

[90] ibid 363, quoting Anthony H Richmond, *Global Apartheid: Refugees, Racism, and the New World Order* (OUP 1994).

[91] Chimni (n 10) 351. This 'myth of difference' was accompanied in refugee policy and studies by analysis that treated the root causes of refugee flows as completely internal to the Third World, thereby ignoring the role of external forces such as neo-colonial dynamics and international financial institutional policy. See also Chapter 22 in this volume.

Nessel has shown how the contemporary non-entrée asylum regimes of the US and the European Union racially discriminate against black refugees and asylum seekers.[96] And finally, in relation to xenophobic discrimination, I have argued how gaps in the refugee regime—including many that are intentional—function as levers that exacerbate xenophobic anxiety, increasing the chaos and backlash against refugees, rendering international law part of the very problem of xenophobia.[97]

Whereas Chimni, Hathaway, and others have analysed the geopolitical, and, to an extent, the racial dimensions of the non-entrée regime, Ghezelbash explicitly connects the contemporary transnational legal transfer of these mechanisms to analogous historical legal transfers of mechanisms for race-based immigration that did not directly rely on race in the colonial era.[98] In the latter period, the shared settler colonial interest of the US, Canada, Australia, New Zealand, and South Africa to exclude certain migrants on a racial or ethnic basis fuelled the transnational legal transfer of mechanisms that could achieve this goal in the absence of any reference to race.[99] These mechanisms were landing taxes, passenger-per-ship restrictions, and literacy tests. Ghezelbash argues that a contemporary shared interest amongst Global North countries in excluding asylum seekers and undocumented migrants more generally is similarly fuelling legal transfer of mechanisms that allow these countries to circumvent the obligations of international refugee law.

5. Conclusions: Charting a Research Agenda

In sum, study of race and refugees in international law requires a structural and intersectional conception of race and discrimination. The range of the requisite research agenda for scholarship in international refugee law must include more sustained conceptual, theoretical, and doctrinal engagement with how this law mediates racial equality for refugees. For example, the non-entrée border externalization processes have been critiqued using the human rights and refugee law frameworks mostly on the basis of due process and other grounds, but less so from a racial equality perspective. The two-tier system of refugee protection sustained by the non-entrée regime enforces a racial hierarchy. And while some might quibble about whether or not the First World has an explicit or intentional geopolitical interest in racial hierarchy in refugee protection and admission, the *de facto* outcome of the pursuit of its interests remains the

continuing enforcement of exactly such a hierarchy. Can the prohibitions on racial discrimination (in international refugee law and international human rights law) be used to challenge the various pillars of the non-entrée regime, including practices that sustain it, such as racial profiling in border enforcement? Maybe, but maybe not. The answer depends in part on the ways in which existing equality and non-discrimination law is animated in the context of refugees—a process in which scholars have a key role.

As Chimni has noted, method matters considerably where refugee studies is concerned. A purely positivist approach to international refugee law often stands in the way of the worthy ideal he has described as 'legal scholarship which is committed to an inclusionary politics as an integral part of its efforts to state and expound the law'.[100] By way of example, two scholarly traditions stand to contribute significantly to the study of race and refugees from an international legal perspective, although other methods and perspectives should, of course, also be brought to bear. The first is Third World Approaches to International Law (TWAIL), which, amongst other things, engages international law from the perspective of the lived history and present of the Third World.[101] The vast majority of refugees today are from the Third World. A TWAIL approach lends itself to analysis of race as a structure that operates transnationally and according to imperial logics—allocating benefits and privileges while facilitating forms of exploitation on terms set by hegemonic States and their transnational corporations. Critical Race Theory (CRT) is a second tradition that offers scholars the tools to engage with law as itself implicated in the social construction of race, and as an artefact that can compound racial subordination, including through facially neutral institutions and mechanisms.[102] The point is not that all refugee scholars must adopt a TWAIL or CRT perspective, but rather that these two approaches offer useful methodological resources for scholarship on race, refugees, and international law.

CHAPTER 3

A FEMINIST APPRAISAL OF INTERNATIONAL REFUGEE LAW

ADRIENNE ANDERSON
AND MICHELLE FOSTER*

1. Introduction

Due in large part to feminist advocacy and scholarship, the Refugee Convention now reflects gender concerns. Feminist critique of the original male bias inherent in refugee frameworks, together with the receptiveness of UNHCR, certain courts, and legislatures to these efforts, has resulted in important normative movement.[1] However, as will be explored, the precise meaning and content of gender is arguably less understood, and the full implications of a gendered approach have not been implemented.

This chapter appraises the gendering of refugee law, examining both feminist scholarship on cases involving persecution of people for their non-conformity to stereotypical gender roles, and wider questions related to refugee experiences. Accordingly, it is concerned with women and men who act outside patriarchal and gender-stereotypical bounds, including genderqueer, lesbian, gay, bisexual, transgender[2] and intersex (LGBTIQ+) people.

[2] Transgender persons may be persecuted as a result of non-conformity with gender norms/identities because they challenge the expected modes of behaviour of their biological sex and associated socially constructed roles: Nicole LaViolette, 'Sexual Orientation, Gender Identity and the Refugee Determination

While there is an evident link between gender and sexual orientation/gender identity (SOGI),[3] this chapter primarily focuses on the experiences of women, though the overlap with the experiences of transgender and genderqueer persons, explored thoroughly in other chapters, is noted throughout.[4]

Taking a dynamic approach, the chapter tracks both normative movement and physical/geographical movement of refugees. In Section 2 we evaluate scholarship, policy, and law to assess whether refugee law has continued to interrogate and update its understanding of 'gender'. Given the rich scholarship on the topic, this section focuses on the refugee definition in individual refugee status determination (RSD).[5] Section 3 then broadens our focus, examining gender through the stages of the imagined refugee journey, from flight, to reception, to durable solutions. We ask in particular whether this process has been the subject of a gendered legal enquiry. We conclude with directions for gendered legal scholarship, across all aspects of the refugee cycle.

a. Gender Defined

UNHCR and other international bodies emphasize the socially constructed nature of gender, which 'refers to the relationship between women and men based on socially or culturally constructed and defined identities, status, roles and responsibilities that are assigned to one sex or another'[6] and which is historically and culturally contingent.[7] Gender-related persecution is not only persecution on account of being a woman,

Process in Canada' (2017) 18(1) Annals of Spiru Haret University Journalism Studies 5, 14–15. There is some limited scholarship that has considered the particular challenges for transgender refugees in establishing refugee status: see eg Jhana Bach, 'Assessing Transgender Asylum Claims' (2013) 42 Forced Migration Review 34; Victoria Neilson, 'Unchartered Territory: Choosing an Effective Approach in Transgender-Based Asylum Claims' (2005) 32 Fordham Urban Law Journal 265.

[4] See Chapters 4 and 42 in this volume.

[5] There is, however, little feminist analysis of the expanded definitions in regional instruments. Nor has there been significant scholarship on the gendered implications of *procedural* aspects of RSD, including of derivative refugee status, which female applicants often receive by virtue of a male family member's claim. See n 42.

[6] UNHCR, 'Guidelines on International Protection: Gender-Related Persecution within the context of Article 1A(2) of the 1951 Convention and/or its 1967 Protocol relating to the Status of Refugees', HCR/GIP/02/01 (7 May 2002) para 3. See further Committee on the Elimination of Discrimination against Women, 'General Recommendation No 28 on the Core Obligations of States Parties under Article 2 of the Convention on the Elimination of All Forms of Discrimination against Women', UN doc CEDAW/C/GC/28 (16 December 2010) para 5.

[7] UNHCR (n 6).

a man, or an intersex person,[8] but also includes harm to 'persons who refuse to conform to social criteria specific to men and women'.[9] Institutional and sociocultural systems of power determine gender norms and roles. These gendered lines are often policed with violence. Those who fall outside the gender binary, change gender, or do not conform to culturally-determined masculine and feminine roles are often targets of discrimination and violence. Therefore, gendered persecution must entail a 'contextual analysis of gender, gender relations and gender equality'.[10]

Gender is thus defined by contradistinction to sex.[11] However, the two concepts have been often conflated, particularly in the jurisprudence,[12] to deleterious effect. This conceptual confusion, coupled with the fact that women more commonly experience gender-related persecution, has led to an emphasis on *women* (and any risk arising from biological attributes) in gender claims. However, 'gender' is not to be equated 'solely with women's activities, beliefs, goals, or needs';[13] nor is it about women's (or men's, or transgender person's) experiences *per se*, but rather 'experiences *arising from* gendered power relations'.[14] Taking gender to be synonymous with women[15] has thus at times obscured the proper focus of these claims and prevented the application of gender-sensitive approaches to a broader range of cases including cases not involving gender-specific forms of harm.[16] As identified by feminist scholars, and elaborated below, the reading of 'gender' *qua* women has resulted in an overemphasis on the particular social group (PSG) ground (with its attendant conceptual challenges).[17] This has, in turn, contributed to the treatment of women as a homogeneous group of passive

[8] Intersex 'refers to a condition in which an individual is born with reproductive or sexual anatomy and/or chromosome patterns that do not seem to fit typical biological notions of being male or female': UNHCR (n 3) para 10.

[17] ibid.

victims of (often sexual) violence, and the failure to appreciate fully the gendered aspects of men's and transgender persons' claims.

From the late 1980s, literature on gender and refugee law has proliferated,[18] so much so that it has been assumed that 'gender in refugee law "has been done"'.[19] But the concept of gender itself needs interrogation, particularly in light of new scholarship in fields such as gender and masculinity studies. We turn now to the historical treatment of gender in refugee law before returning to consider these questions in more detail.

2. Normative Movement(s)

a. Refugee Arrangements Pre-1951

The Refugee Convention definition's omission of sex or gender reflects its historical antecedents. Throughout the 1920s and 1930s, various League of Nations' instruments relating to refugees provided for specific ethnic or national groups, including Russian, Armenian, Assyrian, German, and Austrian refugees.[20] Inter- and post-war instruments continued to define 'refugee' by reference to certain demographic categories. From 1943 a more open yet still categorical approach appeared.[21]

While women and LGBTIQ+ persons certainly numbered among the post-Second World War displaced, the omission of sex/gender might be partially attributable to the focus on post-war political circumstances, particularly the group of refugees who were unable or unwilling to return for political reasons.[22] Like its precursors, article 1A(2) adopted category-based criteria, initially tied to events in a particular place and time. As Firth and Mauthe have observed, the definition reflected the situation of those in need of protection at the time the Convention was formulated; it 'was drafted with the situation

of male refugees in mind'.[23] This much is indicated by the Convention's *travaux préparatoires* which reveal the drafters' doubts that there would be any cases of sex-based persecution.[24] Subsequent regional refugee instruments similarly omit references to sex or gender.[25]

In the present day, it is not disputed that questions of gender, gender identity, and sexuality can be addressed within the Refugee Convention framework and that a gender perspective infuses all aspects of the refugee definition. There has been, then, a profound normative shift from the Convention's gender-blind origins. The following section outlines the contributions of feminist scholarship to this normative movement, as well as feminist critiques that query its depth and endurance.[26]

b. Normative Progress

From the late 1980s, feminist academics and advocates began identifying the gendered nature of the international law system. The critique was both structural and normative: a seminal piece by Charlesworth, Chinkin, and Wright argued that 'both the structures of international lawmaking and the content of the rules of international law privilege men'.[27] Early feminist critiques of refugee law mirrored their international law precursors. It was argued that women's experiences of persecution often took place in the 'private' sphere,[28] placing them outside the reach of refugee law at the time. Advocacy during the 1980s centred on the addition of sex or gender to the refugee definition as counter-measure.

While at times appeals to rework the refugee definition resurface,[29] pragmatic and principled reasons have weighed against this becoming the dominant theoretical approach. As early as 1985, UNHCR's Executive Committee, in combination with civil

society, spearheaded an interpretative approach,[30] advocating that the Convention encompassed gender-related persecution when construed in a gender-sensitive manner. This inclusive interpretation is consistent with the human rights object and purpose of the Convention.[31] The push to recognize that 'women's rights are human rights' translated as a deliberate decision to interpret aspects of the refugee definition through the prism of international human rights law given its (relative) gains in recognizing gender inequality.[32] By arguing that gender-specific harms such as rape, female genital mutilation (FGM), and domestic violence were human rights violations, feminists 'sought to mitigate th[e] bias in the interpretation of the refugee definition by making women's experiences of persecution in the "private" sphere more visible'.[33]

The principal success of this strategy has been the gendered interpretation of 'being persecuted'. There is now recognition that forms of harm disproportionately affecting women (and in relation to some forms of harm, sexual minorities) such as rape and sexual violence, trafficking, FGM, and domestic violence are serious forms of harm amounting to persecution; and, due to jurisprudential developments, that States have responsibility for failures to protect against these forms of harm.[34]

Moreover, there has been recognition, particularly among higher levels of the judiciary that, for the purposes of a PSG claim, sex/gender is an innate characteristic and that individuals who transgress gendered social mores, including women and members of sexual minorities, might be considered part of a particular social group.[35] Together these represent important shifts in understanding that have allowed women and men[36] in individual cases to bring themselves within the Refugee Convention's protection when they might have otherwise been excluded. The proliferation of State guidelines in some parts of the world illustrates the extent of this achievement.[37] Some States have entrenched sex/gender as an additional ground of persecution in national legislation while in others it is a relevant factor in determining membership of a PSG.[38]

These gains have led to a sense that gender concerns have been adequately conceptualized in policy and practice. However, as highlighted in the scholarship canvassed below, consistently producing a gender-sensitive interpretation of the refugee definition, particularly at primary levels of decision-making, and on matters other than the meaning of 'being persecuted' and the PSG ground, remains more elusive.[39]

c. Progress Stalled

A substantial body of scholarship has identified inadequate and incomplete implementation of a gender perspective in practice. There is both a concern that gender gains have not been adequately implemented in jurisprudence and that ongoing theoretical gaps and misconceptions about gender exist which affect decision-making. For example, despite the increase in literature on SOGI claims and acknowledgement in key quarters of the relevance of gender to these cases,[40] scholarship and decision-making in this area has been 'insufficiently *gendered*' in that the connection between gender and sexuality has been rarely explored and women and men's different experiences of persecution on the basis of sexuality neglected.[41]

In addition, there are substantial gaps in our knowledge of the extent to which gender is adequately addressed in RSD undertaken by UNHCR—itself a significant actor in the field, due to its adjudicator role across the globe. This is an issue ripe for research and analysis, particularly from the perspective of post-colonial feminism given that the UNHCR's RSD work mainly takes place in the Global South.

In terms of the scholarship that has examined RSD, focusing mainly in the Global North, it is widely acknowledged that the implementation of existing policy guidance—as well as of leading common law decisions—has been inconsistent. Barriers to the successful recognition of many gender claims remain, including in relation to issues of access to RSD procedures;[42] the establishment of credibility;[43] satisfaction of the nexus requirement, that is, whether the harm feared was 'for reasons' of gender; the assessment of State protection particularly in cases involving persecution by a non-State

[42] For example, in individualized RSD processes, the principal applicant for refugee status in many cases is the male head-of-household, with female applicants receiving derivative status, Jane Freedman, *Gendering the International Asylum and Refugee Debate* (2nd edn, Palgrave MacMillan 2015) 27, 86–7.

[43] See eg Debora Singer, 'Falling at Each Hurdle: Assessing the Credibility of Women's Asylum Claims in Europe' in Arbel, Dauvergne, and Millbank (n 1) 98. See further Chapter 40 in this volume.

actor;[44] the gender-sensitive interpretation of race, religion, nationality, and political opinion grounds; and significantly, given the reliance on it, the proper application of the PSG ground.

Another issue is the almost automatic default to using PSG in gender cases, further distancing gender claimants from the 'mainstream' claimant who can benefit from the application of any or all of the Convention grounds and consequently, in many cases, a more straightforward analysis of the nexus clause. As has been identified in relation to women's claims, for example, the failure to recognize the political nature of gender persecution,[45] or the relevance of other overlapping grounds of persecution, has contributed to a focus on gender to the exclusion of other aspects of identity and experiences.[46] Gender is not the only form of discrimination that may be relevant to the assessment of risk; it is often linked with, or compounded by, discrimination on the basis of other factors such as age, race/ethnicity, class, caste, religion, or sexual orientation.

As indicated at the outset, misconceptions of the meaning of 'gender' have contributed to difficulties in assessing gender claims. For example, equating 'gender' exclusively or largely with being a woman—as opposed to contingent on power relations and non-conformity to gender norms—has engendered a particular construction of women, particularly women from the Global South, as innately vulnerable. This has been roundly criticized,[47] and constitutes a barrier to bringing claims within the refugee definition, whereby women have had to conform to a particular narrative of submissiveness in order to be successful.[48] The gendered and racialized nature of RSD has contributed to the one-dimensional, problematic portrayal of women in some cases. It has been observed that these harmful narratives have permitted and reinforced the tendency of decision-makers to privilege claims involving 'exotic' forms of harm (such as FGM) over pervasive forms of violence which are present in decision-makers' own societies (in the Global North), such as domestic violence.[49]

Post-colonial scholars have argued that exploring forms of oppression which intersect with gender, such as race and poverty, would counteract the framing of women as a homogeneous group because it would allow for recognition of the differences among women and the varying levels of power that different groups of women may hold in particular contexts.[50] In refugee law, it has been identified that an intersectional

approach would enable a more contextualized analysis of the causes of gender-related persecution, with the impact of colonialism, racism, and other country-specific factors on the perpetration of, and vulnerability to, harm able to be assessed. In this way, the simplistic portrayal of certain religions, cultures, or States as particularly violent and patriarchal, and the women from these countries as inherently vulnerable, may be avoided.[51]

There has been a lack of focus, particularly in the jurisprudence, on others (ie male, transgender, lesbian, gay, and bisexual claimants) affected by both gender and other types of power relations, including those reflecting additional structures of discrimination such as heterosexism which might compound claimants' risk, affect their experiences of harm, and their ability to seek protection.[52]

In response, some scholars have long advocated for a shift away from PSG as the default ground and towards the political opinion ground by focusing on the political aspects of gendered harm through analyses of gender relations and other structural causes of inequality[53] rather than assumptions based on fixed notions of 'traditional' politics and sex/gender.

Some commentators have discussed the reframing of gender claims to include the experiences of men as victims of stereotypical constructions of masculinity.[54] It has been accepted in policy, scholarship and—in a more limited way—jurisprudence, that men are also the subject of gender-based persecution in some circumstances. In jurisprudence, this is most often recognized in relation to sexuality claims;[55] however, there is more to be done to recognize the gendered discrimination suffered by transgender and genderqueer people, as well as the fact that men may be punished when they challenge, or do not conform to, gender norms.[56] Examples of forms of gendered harm identified in the literature as affecting men include the imposition

Review 61. Intersectionality 'refers to particular forms of intersecting oppressions, for example intersections of race and gender, or of sexuality and nation' and that 'oppressions work together in producing injustice': Patricia Hill Collins, *Black Feminist Thought: Knowledge, Consciousness, and the Politics of Empowerment* (Routledge Classics 2008) 6. of compulsory military service, honour crimes,[57] forced sterilization, human trafficking, and forced labour.[58]

Others have suggested applying feminist and gender scholarship to a broader range of topics within refugee law than those which have obvious gender implications, such as exclusion,[59] or, in the analogous human rights context, for the use of queer theory in conjunction with feminist advocacy to move beyond male–female binary thinking and better reflect developments in the construction of gender and sex.[60]

Given the dissonances between academic commentary, policy guidance, and implementation, we might conclude that the normative shift within RSD—while significant—has not been as revolutionary as perhaps perceived. Nevertheless, the refugee definition has been the subject of a (partial) gendering project with relative success. It is equally important, however, to consider other aspects of the refugee cycle in an assessment of gender reform, given that those who reach formalized status determination mechanisms are only a percentage of the refugee population.

3. Physical Movement

In this section we widen our gaze to examine the extent to which refugee law and scholarship have engaged a gendered analysis of the stages in refugee movement, focusing on three key sites: 'flight', refugee reception, and resettlement. While RSD has been (perhaps inevitably) dominated by feminist *legal* scholarship, such analysis is much less prevalent, even largely absent, in some aspects of the wider refugee experience. The refugee 'journey' is characterized by containment, with the ability to flee, to move onwards in search of adequate protection, and to experience freedom on arrival in a putative country of 'refuge', constrained in many respects. Yet, the extent to which this containment has been subjected to a feminist analysis varies across issues and disciplinary perspectives.

We acknowledge that most refugees do not leave their home country, remaining *in situ* often as internally displaced persons, and that this is gendered, as is widely accepted in scholarship.[61]

We note that the capacity to leave may also be gendered, and also reflect intersectional disadvantage, as in the case of the feminization of Algerian forced migration in which 'highly skilled women' fled during the so-called 'Black Decade': see Latefa Guemar, 'The Feminization of Forced Migration during Conflict: The Complex Experiences of Algerian Women who Fled in the "Black Decade"' (2018) 32 JRS 482.

a. Transit

The increasing securitization of borders—especially by countries in the Global North—is a well-documented and analysed phenomenon, given the significant impact of such policies on access to refugee protection over recent decades.[62] However, until recently, there has been very little scholarship on the gendered nature or impact of transit and border crossings.

Over the past decade scholars from disciplines including criminology, political science, and social science have begun to rectify the lacuna in knowledge of the gendered nature of border crossings.[63] Research has been conducted in relation to specific important border sites, for example in Europe, the United States, and Australia, and has concluded that 'extra-legal border crossing has significant gendered dimensions'.[64] While it is acknowledged that there is insufficient data on the prevalence and proportion of women in the overall number of border crossings,[65] as well as inadequate accounting for 'border deaths',[66] recent qualitative research has provided important insight into the particular experiences and risks entailed in irregular movement for women.[67]

Such research has revealed that women as a group 'face a higher risk of death at the physical frontier than at internal border sites during illegalized travel',[68] that pregnancy is 'a feature of women who die by drowning while attempting to cross a border irregularly',[69] and that of the known deaths (in the case of the EU and Australia) the proportion of women who drowned was larger than the proportion of men who drowned.[70] Research focused on those who survived the journey has revealed the significantly heightened vulnerability of women to violence, especially sexualized violence, during the journey.[71] Research conducted of women in transit in Greece revealed that the lack of access to basic facilities and services, while presenting a source of insecurity for all migrants, had a particularly severe impact on women given their heightened risk of

See also Gerard and Pickering (n 67) 346.

sexual violence.[72] The impact of irregular migration on families, and specifically changes in relations of power and gender relations within families, has been found to manifest in increased risk of domestic violence.[73]

Some scholarship has explicitly recognized the causal connection between tightening securitization policies of developed States and increased irregular border crossings by women, for example in the US and Australia.[74] In the context of the EU, Gerard and Pickering conclude that there 'is a strong relationship between the sites of women's experiences of violence and the efforts of the EU to secure its external borders to exclude illegalized travellers'.[75]

Notwithstanding these insights offered by a variety of scholarly disciplines, there are two important limitations. First, the scholarship that has been produced is largely limited to examining the plight of women in transit rather than gendering transit, which would entail a more structural critique.[76] Secondly, there has been little analysis of the significance of these findings in legal discourse. While there is a wealth of scholarship analysing the legality of the myriad practices employed by developed States such as boat pushbacks, offshore processing, concepts such as 'country of first arrival' and 'safe third country', and immigration detention, very little attention has been paid to the impact of gender on States' legal obligations under international and regional refugee and human rights law in this context. One notable exception is the scholarship pertaining to the Safe Third Country Agreement (STCA) between the US and Canada, in relation to which many legal scholars pointed at its inception to the potentially disproportionate impact on women of the implementation of this agreement.[77] Yet, even in that context, Arbel notes that, nine years after the STCA's implementation, the 'adverse gender consequences . . . are so difficult to identify'.[78] Accordingly she opines that in mapping a future agenda for refugee scholarship and advocacy in relation to the STCA the question is not so much 'what about gender' but rather 'where is gender?'.[79]

The question 'where is gender?' is in our view one that must be posed in relation to legal scholarship on transit and border crossings more broadly. It is an area in which gender has most certainly not 'been done',[80] but rather is ripe for considered analysis.

b. Refugee Reception

For a range of reasons, including the effectiveness of the so-called non-entrée measures of developed States, most refugees remain in their own region, often in situations of severely constrained freedom, including in refugee camps. Very large numbers of refugees are hosted by States that are not party to the Refugee Convention but permit the presence of UNHCR and other agencies to protect and deliver humanitarian aid.

While most refugees today do not live in camps,[81] their role as a conspicuous, accessible and long-standing feature of the refugee system has enabled much research on their nature and the lived experience of those within camps, including from a gendered perspective. In this scholarship, the particular vulnerability of women and girls to sexual violence and exploitation is explored, perpetrated often by the very agencies vested with the obligation to protect them.[82] Other research has explored the particular needs of refugee women living in camps in specific contexts.[83] Some scholarship expanded its focus beyond women and girls to undertake a truly gendered analysis. Fiddian-Qasmiyeh's important work, for example, challenges 'idealized depictions' of Sahrawi camps as characterized by gender equality, encouraging a critique of the accepted discourse and an examination of its motivations and implications.[84]

Legal analysis of the refugee camps has emerged more recently, with the work of leading scholars such as Janmyr rapidly addressing the previous lacuna in legal analysis.[85] In terms of a specific gendered legal analysis, Donnelly and Muthiah's recent study on States' obligations under international law to protect women and girls in camps offers an important contribution.[86]

Scholars from a range of disciplines have also examined the gendered nature of reception, identifying, for example, the gendered nature of vulnerability to sexual and

[81] Rosenberg explained in 2016 that 'nearly 60% of all refugees now live in cities, a trend that will continue as camps increasingly become an option of last resort': Jennifer S Rosenberg, '"This Group is Essential to Our Survival": Urban Refugees and Community-based Protection' (2016) 53 Forced Migration Review 14.

gender-based violence in European reception centres.[87] Studies of the gendered experience of urban refugees and asylum seekers have similarly predominantly focused on gender-based violence,[88] although compelling work of Fassin, Wilhelm-Solomon, and Segatti on 'asylum as a form of life' in South Africa highlights that gender is an 'essential element' in terms of 'migration patterns, increased vulnerabilities, specific opportunities and particular experiences'.[89] Recent scholarship has also begun to examine the particular reception and integration challenges for transgender refugees.[90] Turner's important work is unique in highlighting the assumptions of many humanitarian actors that refugee men can 'perform versions of masculinity that endow them with power, agency and independence', rendering their position as 'objects of humanitarian care' uncertain.[91]

Yet, as in the case of camps, refugee law scholars have tended to overlook the implications of gendered experiences of reception for international law. However, Ogg's innovative work on 'protection from refuge' examines domestic jurisprudence that has begun to explore the constraints under international law on State discretion to deport refugees back to camps and other reception conditions that fall short of minimum standards. While such jurisprudence has not primarily focused on women, Ogg has noted the ramifications for this reasoning in the context of women.[92]

c. Resettlement

Resettlement has long served an important function as one of the core durable solutions for refugees, as well as historically one of the only methods (albeit very limited) of

[87] See eg Ines Keygnaert and others, 'Sexual and Gender-based Violence in the European Asylum and Reception Sector: A Perpetuum Mobile?' (2014) 25(1) European Journal of Public Health 90. rebalancing the disproportionate distribution of refugees as between the Global South and Global North.[93] Given its long history, it is not surprising that there is a wealth of scholarship exploring various aspects of resettlement, particularly in the key resettlement countries of the US, Canada, and Australia.

The rich and varied research explores particular populations within a resettlement country,[94] or compares experiences of similar groups of refugees in different resettlement countries,[95] analyses and identifies the risk factors for ongoing trauma or obstacles to resettlement,[96] and conversely identifies positive integration practices.[97] Within this scholarship, much attention has been focused on the particular needs, susceptibilities, and appropriate integration support for resettled female refugees. There is also important work on assessing the success of the UNHCR's women-at-risk scheme, which is specifically incorporated into the programmes of some resettlement countries.[98] This wide range of research emerges from a variety of disciplines, spanning both the social sciences and humanities through to medical fields including psychiatry and psychology.[99]

A notable exception, however, is legal analysis of resettlement schemes, whether generally or from a feminist perspective. There is a lack of legal research on how resettlement decisions are undertaken, both in terms of process and legitimacy, or the basis on

[93] See Chapter 60 in this volume. For an excellent analysis of the gendered nature of durable solutions, see Elena Fiddian-Qasmiyeh, 'Gender and Forced Migration' in Elena Fiddian-Qasmiyeh, Gil Loescher, Katy Long, and Nando Sigona (eds), *Oxford Handbook of Refugees and Forced Migration Studies* (OUP 2014).

[99] For an excellent overview of the state of scholarship on resettlement, see Adèle Garnier, Lilian Lyra Jubilut, and Kristin Bergtora Sandvik, 'Introduction: Refugee Resettlement as Humanitarian Governance: Power Dynamics' in Adèle Garnier, Lilian Lyra Jubilut, and Kristin Bergtora Sandvik (eds), *Refugee Resettlement : Power, Politics, and Humanitarian Governance* (Berghahn Books 2018) 3. It is important to note, however, that little research has studied those left behind, or the burdens on the resettled to provide for them. For an exception, see Cindy Horst, 'Connected Lives: Somalis in Minneapolis, Family Responsibilities and the Migration Dreams of Relatives', UNHCR New Issues in Refugee Research, Research Paper 124 (2006).

which they are made.[100] In many respects this is due to the absence of either a clear legal obligation or governing criteria regarding resettlement in the Refugee Convention or in international law more broadly. It is often thus viewed as a discretionary programme that is not strictly trammelled by international law. Extensive guidance is provided in the UNHCR Resettlement Handbook, which draws on international refugee and human rights law, UNHCR guidelines, and State practice. Yet, there is little critique of the Handbook, nor research that explores compliance with the Handbook of resettlement decision-making in practice, or that brings a feminist lens to the legal issues at the foundation of resettlement schemes.

On the other hand, there is an increasingly significant body of legal scholarship on international responsibility-sharing, solidarity, and international cooperation—concepts that underpin the foundation of resettlement schemes. While some of this scholarship pertains to the deterrence-based measures discussed above, more recent scholarship attempts to scope out a vision for a positive, truly cooperative model of responsibility-sharing.

The most significant development in decades in terms of international cooperation is the New York Declaration on Refugees, whose principles are now embodied in the Global Compact on Refugees, which establishes, *inter alia*, a three-year plan for settlement. While women and girls are mentioned throughout the Global Compact, there has been virtually no legal analysis of this significant development from a gendered perspective.[101] On the other hand, the Global Compact for Migration has been the subject of feminist critique, which questions its protective framing,[102] repeated references to women's vulnerability to sexual violence and human trafficking,[103] and lack of focus and development of women's rights.[104] These and other significant questions, including how the Global Compact on Refugees comports with international legal frameworks particularly relevant to women, might be examined in a considered feminist analysis of the Global Compacts.[105]

[100] A rare exception is Tom de Boer and Marjoleine Zieck, 'The Legal Abyss of Discretion in the Resettlement of Refugees: Cherry-Picking and the Lack of Due Process in the EU' (2020) 32 IJRL 1.

[101] The IJRL's 2018 special issue on the Global Compacts on Refugees and Migration (vol 30(4)), has 25 articles and an editorial dedicated to the Global Compact on Refugees, none of which are dedicated to gender or mention gender in any significant way. We note, however, that there is an important developing project on women and the Global Compact underway at the University of New South Wales.

[102] Including multiple references to 'women-and-children' and women's 'special needs', see Jenna L Hennebry, 'The Global Compact for Migration: From Gender-rhetoric to Gender-responsive?' (2018) 18 Global Social Policy 332.

[103] ibid. See also Carolina Gottardo and Paola Cyment, 'The Global Compact for Migration: What Could It Mean for Women and Gender Relations?' (2019) 27 Gender and Development 67.

4. Directions for Future Normative Movement

Much feminist scholarship examines gender-inclusive interpretations of the refugee definition. However, practice lags behind, as reflected in out-dated gender guidance. The US's gender guidelines were issued in 1995, and Canada's last updated in 1996. UNHCR's Gender Guidelines date back to 2002 and are focused on gender-related persecution alone. Even more recent State guidelines continue the trend of largely focusing on women and girls. Australia's 2015 guidelines are largely procedural[106] while the UK's 2018 guidelines embody a retreat from a prior, more progressive stance.[107] This stagnation perhaps reflects an institutional complacency, in spite of scholarly developments in feminist and gender scholarship.

Gendered knowledge gaps persist. Although States are obliged to provide UNHCR with implementation information,[108] as Arbel, Dauvergne, and Millbank observe, very few provide gender disaggregated data.[109] UNHCR reveals that 48 per cent of refugees are women,[110] but little else is known. How can we adequately and seriously address an issue if we do not understand its scope? Research and advocacy around the gendered collection and interpretation of data is an appropriate starting point, particularly given calls in the Global Compact on Refugees for States and other stakeholders to collect and analyse gender disaggregated data.[111]

The main challenge is how 'women and men [are] represented and analytically characterized',[112] how, rather than whether, a full range of experiences is included. To meet this challenge, we must engage in research and advocacy with new and innovative methods and seek out neglected narratives to allow better appreciation of gendered harms and persecution involving women, men, and transgender people. The endeavour should engage not only with legal scholarship, but more broadly with feminist theories,

[106] Administrative Appeals Tribunal, 'Migration and Refugee Division: Guidelines on Gender' (July 2015) <https://www.aat.gov.au/AAT/media/AAT/Files/MRD%20documents/Legislation%20Policies%20Guidelines/Guidelines-on-Gender.pdf> access 31 March 2020.

[112] Heaven Crawley, 'Women and Refugee Status: Beyond the Public/Private Dichotomy in UK Asylum Policy' in Indra (n 13) 309, citing Indra (n 28) 4 (emphasis omitted).

masculinity studies, and queer theory. A gendered interpretation of refugee law must revisit the concept of gender, and its relation to sex. There is more work to be done to apply intersectional theory to refugee law[113] and to understand men and transgender/genderqueer persons as victims of stereotypical gender norms, while being conscious of the need to continue to improve on the assessment of gender in women's claims.

While much scholarly attention is focused on the pressing concerns of refugee containment,[114] these topics offer the opportunity to reinvigorate gender scholarship and advocacy to counter State conservatism and the effects of a wider anti-feminist backlash. It is not a question of prioritizing *either* gender concerns *or* responses to anti-immigration policies. They do not exist in isolation from each other.[115] Moreover, a gendered approach to the broader refugee framework, in particular responsibility-sharing, alternatives to resettlement, and State accountability for wrongdoing, is urgently needed. As the Global Compact on Refugees acknowledges in relation to alternatives to resettlement, 'there is a need to ensure that such pathways are made available on a more systematic, organized, sustainable and *gender-responsive basis*'.[116]

In sum, further normative movement across the refugee law framework is needed; we are not yet at the end of the journey. This renewed effort requires greater empirical and interdisciplinary engagement.

CHAPTER 4

QUEERING INTERNATIONAL REFUGEE LAW

NUNO FERREIRA AND CARMELO DANISI*

1. Setting the Scene

Asylum law and policy, sexual orientation, and gender identity are nowadays intrinsically interwoven. Queer migration scholars have explored how sexuality and gender relate with several other characteristics in constituting the scope and nature of migration,[1] and refugees are no exception to this.[2] Although human rights have been increasingly recognized irrespective of one's sexual orientation and gender identity (SOGI) at international, regional, and domestic levels,[3] legal frameworks do not yet tackle violations of such rights effectively. As a result, members of SOGI minorities may be forced to flee their countries of origin, often making SOGI-based asylum claims in host countries.

* This contribution was produced within the project 'Sexual Orientation and Gender Identity Claims of Asylum: A European Human Rights Challenge—SOGICA' <www.sogica.org> accessed 28 April 2020. This project has received funding from the European Research Council (ERC) under the European Union's Horizon 2020 research and innovation programme (grant agreement No 677693). Although this contribution is a collective work, each co-author took the lead in producing the first draft of a selection of sections, as follows: Nuno Ferreira led on Sections 1–3 and Carmelo Danisi led on Sections 4–6. The authors wish to thank the editors of this *Handbook*, Moira Dustin, and Christian Henderson for their constructive feedback on earlier drafts.

[2] For a thorough collection of wide-ranging sources on SOGI asylum and refugees, see 'Database' (*SOGICA* 2020) <http://www.sogica.org/en/sogica-database/> accessed 13 October 2020.

[3] Human Rights Council, 'Human Rights, Sexual Orientation and Gender Identity,' UN doc A/HRC/RES/17/19 (14 July 2011); 'The Yogyakarta Principles. The Application of International Human Rights Law in Relation to Sexual Orientation and Gender Identity' (March 2007) <http://yogyakartaprinciples.org/wp-content/uploads/2016/08/principles_en.pdf> accessed 13 October 2020.

Since the inception of the Refugee Convention, there has been a continuous battle for recognition of SOGI claims within a system that was not designed with SOGI minorities in mind.

SOGI asylum claims raise particular issues in the context of any legal system, including the role of private actors and widespread social stigma, the role of legislation criminalizing same-sex conduct in the country of origin, the assessment of credibility, and the assessment of internal relocation alternatives.[4] Moreover, some evidence suggests these claims are disproportionately refused.[5] Scholars from various disciplines have explored how SOGI claims are often treated in an inappropriate and stereotyped way in several jurisdictions, at legal, cultural, and social levels, with particular repercussions in relation to claimants' proof of membership of a particular social group (PSG), risk of persecution, and credibility.[6]

Geographical location, political context, and internal governance structures all considerably influence the way domestic systems construct their asylum frameworks, including SOGI asylum claims. Several elements of the international refugee and human rights legal frameworks have progressively been used as the basis of SOGI claims, including the Refugee Convention, the ICCPR, the ECHR, and the EU Common European Asylum System (CEAS).[7] Even if not always at the speed or standard desired, human rights instruments and bodies have been instrumental in developing a stronger line of argument for SOGI asylum claims, which reinforces the need to read international refugee law (IRL) in the light of (SOGI-relevant) human rights.[8]

There are no reliable statistics on the global number of SOGI claimants, but it is clear, based on numerous media and NGO reports and estimates, that thousands of SOGI claimants seek international protection every year.[9] This occurs both through claimants submitting to the refugee status determination (RSD) process in host countries, and through resettlement.[10] The great majority of these individuals, however, are forced to take the asylum route, making journeys that are often very dangerous in their search for a safe(r) destination.[11]

[10] Jennifer Rumbach, 'Towards Inclusive Resettlement for LGBTI Refugees' (2013) 42 Forced Migration Review 40.

[11] Danisi, Dustin, Ferreira, and Held (n 4) ch 5.

While popular perception is that people escape to countries in the Global North from homophobia and transphobia in countries in the Global South, that perception has increasingly been contested. It is now better understood that members of SOGI minorities in the Global South flee to other countries in the region, on the same continent—also within the Global South. In the African context, refugees from Uganda, for example, often escape to Kenya;[12] South Africa, in particular Cape Town, has become the destination of many SOGI refugees from across the African continent,[13] including gender identity refugees.[14] In the Middle East, Syrian, Iraqi, and Iranian SOGI refugees often find refuge in Lebanon and Jordan.[15] In the Eastern Asian context, where countries have historically been less compliant with international refugee obligations, some countries such as South Korea have also gradually opened their doors to SOGI refugees.[16] Finally, in the Americas, Mexico and Costa Rica have become key destinations of Salvadoran, Guatemalan, and Honduran SOGI claimants,[17] and Brazil has a large community of African and Latin American SOGI refugees.[18] Without disregarding the homophobia, transphobia, and xenophobia that SOGI refugees face in these countries—including within the RSD process—it is undeniable that such movements implode the vision of the Global North welcoming and protecting SOGI minorities persecuted in the Global South.

No matter where in the globe, in the process of adjudicating SOGI claims, asylum authorities engage in the 'biopolitical practice of classifying asylum seekers, rendering sexual identities visible and thus amenable to the State's regulatory oversight'.[19] We thus witness a two-way process: the asylum system simultaneously incorporates and excludes SOGI claimants and refugees, thus harbouring strong tensions between queering and

de-queering asylum law and policy. To analyse these processes, we need to call and build on the body of queer literature that explores the socio-cultural nature, diversity, and fluidity of gender and sexuality,[20] and uses 'queer' as a tool of critique in the field of migration.[21] Although there are considerable differences between queer scholars, the key message in this theoretical field is that sex, gender, and sexuality—and the relationship between these—are not natural or biologically determined, but rather socially, legally and historically produced, thus being the product of social processes that are constantly changing. Simultaneously, queer theorists destabilize hetero/homo, male/female and masculine/feminine binaries by decoupling sex, gender, and sexual desire, and assert that one's sexual orientation is fluid and may change throughout one's lifetime. Applying a queer lens allows us to see 'the fundamental ways in which sexuality undergirds the organization and boundaries of nation-state, citizenship and national identity projects' and how 'migration and sexuality [are connected] to transnational capitalism and neo-imperialism'.[22] This approach is further strengthened by an awareness that SOGI interacts with a range of other characteristics such as ethnicity, age, religion, and social class, to shape one's experiences, as queer intersectional studies rightly point out.[23] Drawing from queer literature insights, we can better understand where SOGI asylum law and policy is failing queer refugees, identify scope for improvement, and set out future avenues. A queer theoretical lens will also support our analysis of whether human rights frameworks sufficiently protect SOGI refugees, namely by moving beyond the right to privacy and vindicating a thorough application of the right to equality.

In this contribution, we use a queer lens to explore key aspects of SOGI asylum that ultimately question the heteronormative relations of power in asylum law and to highlight how legal and policy frameworks may be reformed. In Section 2, we consider how refugee law has been progressively queered. In Section 3, we expand on the range of legal and policy instruments that play a role in this queering process, and, in Section 4, we analyse the key actors that have contributed to the development of SOGI refugee law. In Section 5, we concentrate on the specific needs of SOGI asylum claimants and refugees, and in Section 6, we explore future avenues of reform.

Before proceeding, a few notes on terminological choices. First, we opted for 'asylum claimant' as opposed to 'asylum seeker' owing to the increasingly negative charge the latter expression has gained in popular discourses. Secondly, we favour 'SOGI asylum claim' to 'LGBTIQ+ asylum claim', in order to focus on characteristics rather than

Western-biased identities and identifiers.[24] Thirdly, although sexual orientation and gender identity are separate characteristics, they raise connected issues,[25] namely in relation to individuals 'failing to conform to gender-prescribed social norms and mores or for claiming their rights'.[26]

2. Integrating SOGI into Refugee Law

The Refugee Convention was produced mainly to address the plight of (male) political activists and members of religious/ethnic minorities victimized by European mid-twentieth-century fascist regimes.[27] Although SOGI minorities were persecuted by the Nazi regime,[28] SOGI minorities were not the object of explicit consideration during the *travaux préparatoires* of the Refugee Convention,[29] an omission that has been critiqued by commentators.[30] SOGI minorities waited three decades to see their claims for international protection acknowledged by legal systems. It has slowly become legal dogma that SOGI minorities fall within a PSG,[31] with only very rare instances of decision-makers finding it difficult to connect SOGI to one of the Refugee Convention grounds.[32] Nonetheless, the dominance of the PSG ground in SOGI asylum claims has the cost of neglecting other aspects of the lives of SOGI minorities—their political activism, religious beliefs, ethnicity, etc—and the very political nature of their non-conforming identities and expressions, thus reducing SOGI claimants to unidimensional individuals, defined only by their SOGI.[33]

[24] Characteristics such as sexual characteristics (or intersex variations) and gender expression are also relevant in this context, so it would also have been appropriate to use the acronym SOGIESC (sexual orientation, gender identity and expression, and sexual characteristics), but we have opted for SOGI for being a more widely used—but still encompassing—acronym.

It was not until the 1980s that national jurisdictions started granting international protection—including refugee status—to SOGI minorities under the PSG ground. The gradual but steady acknowledgement of SOGI as a ground for asylum that followed is the consequence of a combination of elements, including sociocultural factors (growing movements on 'gay rights' and the fight against AIDS); institutional and personnel changes in asylum systems; incremental progress in asylum authorities' procedures and policies; theoretical breakthroughs (especially feminist and queer theories); international and supranational legal and policy advancements; as well as the growing recognition of SOGI-related rights claims.[34] Yet, this trajectory has been full of challenges and moments of regression, owing to increasingly vocal movements of a political and religious reactionary nature fostering an environment hostile to migrants (including refugees) and SOGI minorities.[35]

Furthermore, asylum systems may be willing to protect the 'gay refugee', but only to a certain extent: the conception of 'gay refugee' adopted is deeply impregnated by Western gay culture, shaped by white middle classes in urban areas, thus severely constrained socially, temporally, and spatially.[36] Domestic asylum systems become power apparatuses aimed at sorting and sanctioning sexual identities, thus claiming the right to determine which gender and sexuality performances are legitimate.[37] This authentication exercise obscures emotion, desire, and feeling, which fall victim to 'a largely ethnocentric administrative method of verification'.[38] In clear tension with the insights of queer scholarship that SOGI are anything but immutable, these systems determine that sexuality is 'fixed, deep-rooted, hidden but visualizable and narratable'.[39]

Moreover, SOGI asylum adjudication tends to prioritize identity (through a Western lens) over conduct, which clashes with the way many claimants experience and express their SOGI in light of their socio-cultural background and personal preferences. In this process, 'the legal system both reflects the dynamics of sexual stratification within our culture and influences them through its own internal developments'.[40] Simultaneously, asylum systems determine who are the 'real' queer refugees, and 'this privileged configuration of sexual orientation reflects a particular historical configuration of gendered, raced and classed interests and experiences',[41] necessarily intertwined with

hetero-normative and homo-normative legal and social experiences.[42] Consequently, many SOGI asylum decisions betray a neo-liberal, capitalist, consumeristic, and individualistic mind-set, which expects claimants to engage with public social spaces and LGBTIQ+ venues, and erases or fetishizes cultural, social, economic, and individual differences.[43] If certain sexualities or gender identities are not legible to the decision-maker according to the dominant social and cultural register they follow, then claimants are quickly labelled as undeserving.

Considering the different experiences within the cohort of SOGI claimants also underscores that we should not homogenize them. It is increasingly recognized that all 'categories' included within the LGBTIQ+ acronym have very different experiences in general, but also of the asylum system. While the variety of their experiences are an obvious consequence of the richness of queer lives and the fluid and uncategorizable nature of their sexuality and gender, asylum systems have clearly not yet come to grips with such variety. Bisexual and lesbian claimants are the greatest victims of this inability to deal with non-normative sexualities and gender non-conforming identities, obsessed as asylum systems are with 'sexual veracity', the 'facticity of sexuality', and visible performances of one's SOGI recognizable to a Western spectator.[44] In short, 'the rhetoric of gayness used by courts does not provide ample discursive maneuverability for a range of experiences of sexual desire and practice'.[45] Consequently, the essentialist discourses used by the asylum system on what truly constitutes 'queer' fail many SOGI claimants.

Both progress and failures in this journey of queering refugee law and policy depend to a considerable extent on the legal tools available, to which we now turn.

3. Ensuring Protection

While the Refugee Convention has laid the necessary foundations for SOGI claims by including a ground—PSG—that can accommodate such claims, several other legal tools are available to SOGI claimants to strengthen international protection claims. At an international level, the UNHCR SOGI Guidelines on International Protection No 9 stand out as a lever with significant global reach.[46] The SOGI Guidelines have been crucial in empowering decision-makers and support organizations, sensitizing them to the specificities of SOGI asylum claims. That does not make the Guidelines exempt from

criticism from a queer perspective, as, for example, the terminology adopted ('LGBTI') could be more inclusive and culturally neutral, and evidentiary matters could be more thoroughly addressed to offer queer-sensitive guidance. Other tools subsequently developed by UNHCR have contributed further to addressing SOGI claims in a more effective and adequate manner, including staff operational guidance, risk identification tools, and resettlement assessment tools.[47]

The specific instruments developed by UNHCR are complemented by more general legal instruments at the UN level, such as the ICCPR (in particular article 7 on prohibition of inhuman and degrading treatment) and the CAT (in particular article 3 on prohibition of return in case of danger of subjection to torture, also known as the principle of *non-refoulement*).[48] Yet, although UNHCR and UN bodies have increasingly added references to SOGI asylum claimants to their recommendations and reports since the late 1990s,[49] these improvements have not always been accompanied by greater recognition of claims at international level.[50]

The more recent Global Compacts on Migration and on Refugees might have been a positive development for SOGI refugees and migrants generally. Yet, neither Compact includes any actionable commitments in relation to SOGI minorities, instead merely incorporating references to 'gender', 'equality', 'empowerment', and 'sexual and gender-based violence', thus providing no specific protection to SOGI minorities fleeing persecution. The international community thus resisted further queering IRL and missed a crucial opportunity to raise awareness of the needs and rights of SOGI refugees.

Regional human rights mechanisms such as the ECHR also play an important role in enhancing—even if not always securing—respect for the right to *non-refoulement*. The European Court of Human Rights (ECtHR) offers asylum claimants protection mostly on the basis of article 3 ECHR (prohibition of torture),[51] and, to a lesser extent, article 2 ECHR (right to life).[52] The limited protection offered by the ECHR is compounded by an excessively high threshold for finding a violation of these articles by requiring that they be 'systematically' violated, thus limiting the Convention's potential for SOGI (and all other) asylum claimants and contributing to the dehumanization of queer foreign bodies.[53] Similarly, in the Inter-American human rights

system, there is some acknowledgement of the issues affecting SOGI asylum claimants,[54] but the full potential of the Inter-American Convention on Human Rights in relation to SOGI asylum has not yet been realized, either for lack of opportunity or willingness of enforcement bodies.

Broader regional integration efforts also have an impact on SOGI refugees. In the context of the EU, for example, the CEAS has slowly developed a body of statutory instruments, complemented by jurisprudence of the Court of Justice of the EU (CJEU), that has enhanced protection of SOGI refugees mainly by asserting the membership of SOGI minorities to a PSG and scrutinizing the assessment of credibility of SOGI claimants and the evidence required of them.[55] Despite some positive features, however, there is much scope to further queer CEAS, namely in relation to the use of accelerated procedures and country of origin information, the deployment of the notion of 'safe country of origin', the distribution of the burden of proof, the insufficient emphasis on the principle of benefit of the doubt, as well as the restrictive definitions of a PSG and persecution in the context of SOGI.[56]

Finally, at a national level, we often find SOGI-specific guidelines that support the work of decision-makers and legal representatives in SOGI asylum claims. In the UK, for example, the Home Office 2011 guidance on gender identity and 2016 guidance on sexual orientation,[57] complemented by SOGI-specific Country Policy Information Notes,[58] have been commended for their awareness of the particular issues that affect SOGI claimants.[59] Nonetheless, these tools require improvements, including in their use of the 'discretion argument',[60] and their failure to fully grasp the non-externally visible nature of SOGI.[61] The main issue, however, remains the fact that these guidance tools are not respected by decision-makers or applied in a consistent manner by all decision-makers.[62] Similarly, in

Canada, 'Guideline 9: Proceedings before the IRB Involving Sexual Orientation and Gender Identity and Expression' (SOGIE Guideline) constitutes a positive tool for claimants and legal representatives alike, but falls short of prohibiting the submission of sexualized evidence and uses odd language such as 'diverse SOGIE'.[63] In other countries, in the absence of domestic SOGI-specific guidance, domestic decision-makers often refer to the UNHCR SOGI guidelines,[64] which, as seen above, also have scope for improvement.

Although many of these instruments offer useful and generally appropriate guidance, it is clear that human rights frameworks at domestic, regional, and international level are very much resistant to being queered, favouring an interpretation and application of human rights that restrict the range and scope of rights of SOGI minorities.[65]

4. Shaping a Queer International Refugee Law

The variety of legal and policy tools ensuring protection of SOGI claimants sheds light on the multiplicity of 'actors'—individuals and organizations—that shape what we describe as the queering of IRL. These actors include regional, supranational, and domestic courts, as well as civil society. When these actors have based their activity on the equal enjoyment of human rights by SOGI minorities, IRL and international human rights law (IHRL) have developed so as to benefit SOGI claimants.[66] Where, instead, domestic and regional courts have resisted queer theoretical influences and equality claims, raising doubts about human rights as a truly 'liberating process',[67] there have been significant setbacks and a revival of the privacy/equality divide that permeates SOGI asylum.

To start with, domestic courts have strongly contributed to the queering of asylum law by embracing progressive interpretations of the Refugee Convention's key concepts. Besides the seminal judgment of the High Court of Australia in *S395/2002*,[68] which set the path for rejecting the 'discretion requirement', a queer reading of the Refugee Convention's

[68] High Court of Australia, *Appellant S395/2002 v Minister for Immigration and Multicultural Affairs* (2003) 216 CLR 473, paras 40 ff.

notion of persecution was advanced, albeit unconsciously sometimes, in Europe. In 2012, the Italian Supreme Court found that maintaining criminal sanctions against homosexuality or same-sex activity prevents an individual from enjoying the 'fundamental right to live freely their sexual and emotional life',[69] and may accordingly constitute a risk of persecution even if such sanctions are not enforced.[70] This recognizes—at least implicitly—the power relations in heteronormative societies that are reflected in criminalizing and discriminatory laws, as queer theories suggest.

Even more significant in shaping IRL are judgments such as those adopted in the Netherlands[71] and in France[72] which have insisted on a qualitative assessment of the *effective* availability of protection in the claimants' country of origin, and in particular whether legislative measures have led to a change in society. Consequently, 'social discrimination', instead of legal discrimination, may become the central feature in determining a well-founded fear of persecution.

Finally, an increasing number of domestic courts have also espoused the idea that a decision-maker is not required to prove that claimants are 'truly' LGBTIQ+, but only whether they may be persecuted on SOGI grounds.[73] Whether or not inspired by queer theories, this position also rejects the idea of static identities to move the focus to the perpetrators' willingness to reproduce through persecution an unequal system of power dominated by a heterosexual majority.[74]

European courts' decisions illustrate some persisting dilemmas. The interpretation of the CEAS by the CJEU is a case in point. In two preliminary rulings, the court made it clear that, when assessing SOGI claims, decision-makers cannot rely 'exclusively' on stereotypes, request claimants to explain their sexual practices or to undergo medical exams,[75] or use projective personality tests.[76] These decisions reinforce the idea that self-identification should be the starting point of any assessment. Yet, in such cases, the CJEU still operated within the realm of the right to privacy along Western and white expectations and understandings. Statements like 'it must be stated at the outset that the fundamental rights *specifically linked* to the sexual orientation (…) as the right to respect for private and family life'[77] are symptomatic of the inherent tensions around the true understanding of SOGI. The limitations of the privacy approach were clear when the CJEU found that the mere existence of legislation criminalizing homosexual acts could

not amount to persecution.[78] Despite affirming that 'a person's sexual orientation is a characteristic so fundamental to his identity that he should not be forced to renounce it',[79] the CJEU denied the detrimental effect of such laws on a person's identity, signalling a lack of understanding of the challenges that refugee law faces with SOGI. As Hathaway and Pobjoy argued, SOGI claims bring to the fore new forms of harms that originate from the 'intimate modification' of oneself imposed by the surrounding society and the laws in force therein.[80]

Surprisingly, the lowest point in this ambivalent approach to SOGI asylum was reached in the context of a human rights system, the ECHR. In fact, the first time the ECtHR decided on the merits of a case involving a person fearing persecution on sexual orientation grounds, it espoused the idea that SOGI claimants can be sent back to their countries of origin in a continuous attempt to confine SOGI within one's private life.[81] This approach reflected a worrying detachment from the realities of sexual minorities in many countries around the world and from their experiences when claiming international protection in Europe.[82] Moreover, by maintaining the claim within the scope of private life (article 8 ECHR), the ECtHR's position obscures the discriminatory relations of power in countries of origin. Further, such international interpretations may contribute to the revival or reinforcement of questionable domestic positions that perpetuate the privacy/equality divide in SOGI asylum.[83] In this context, it is therefore remarkable to find national courts that instead, by adopting decisions inspired by queer and intersectional approaches, resist these setbacks. For instance, the Italian Supreme Court has clearly rejected the 'private dimension' of SOGI as a reason for denying international protection, on the grounds that 'socialization' is a fundamental aspect for individuals to enjoy the full spectrum of human rights.[84] Significantly, the 'public dimension' thus becomes relevant for the fulfilment of the individual, and hence relevant to a risk of being persecuted.[85]

The role of civil society in queering IRL, at least indirectly, should also be recognized. From a macro-perspective, a remarkable example is provided by a group of academics and activists who, in 2007, adopted the so-called Yogyakarta Principles on the Application of International Human Rights Law in relation to Sexual Orientation and Gender Identity,[86] which included a specific principle on asylum (Principle 23). Not only have the Yogyakarta Principles informed international and local campaigns for

SOGI equality,[87] but they also influenced the drafting of the subsequent UNHCR SOGI Guidelines on International Protection No 9 for an inclusive human rights-based IRL.[88] Ten years after their adoption, Principle 23 was updated in light of the intersection between developments in IHRL and, as the authors explained, 'the emerging understanding of violations' suffered on SOGI grounds, as well as 'the recognition of the distinct and intersectional grounds of gender expression and sex characteristics'. Evoking queer theories, it was recognized that analysis of SOGI alone fails to cover the range of violations suffered by SOGI minorities, that grounds including gender expression and sex characteristics need to be autonomously incorporated in the refugee discourse and, as we will explore in the next section, that the RSD process is only a limited part of the process of queering IRL.

From a micro-perspective, the essential role played by LGBTIQ+ or refugee organizations, or a combination of both, is a case in point. Along with their lobbying activity, transnational organizations like the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA) or Organization for Refuge, Asylum & Migration (ORAM) and local associations operate to promote a queer IRL by offering training to decision-makers and people working with SOGI claimants. Empirical research shows that these actors not only fill an existing gap in training, but are also essential in raising awareness amongst SOGI claimants themselves about their rights under IHRL and IRL and in their respective domestic orders, besides supporting their asylum claims by—for instance—gathering appropriate country of origin information (COI) or requesting procedural arrangements.[89] When the 'culture of disbelief' in asylum bodies is contested rather than encouraged,[90] these micro-efforts also discourage stereotypical views of SOGI minorities. When this role is further strengthened by the involvement of UNHCR in national asylum decision-making, thus influencing directly the national adjudication system through a consistent reference to its SOGI Guidelines,[91] there are greater chances of developing from the very bottom an international environment favourable to the queering process of IRL.

Given the relative paucity of studies on aspects of SOGI asylum beyond RSD, a (non-exhaustive) analysis of SOGI claimants' needs is necessary.

5. Addressing Specific Needs

Queering IRL entails understanding the specific needs of SOGI claimants. Exploring the rationale behind States' obligation to address those needs is essential. There is an

increasing international consensus that people who claim asylum on SOGI grounds are 'vulnerable', as demonstrated by the UN reports that highlight the 'unique vulnerability and specific needs of lesbian, gay, bisexual, trans, intersex and gender diverse (LGBTI) asylum-seekers and refugees'.[92] Marginalization and exclusion in their country, as well as lack of support within their community of origin and/or of other refugees after fleeing persecution, are the primary reasons for this identification. Although the resulting increased visibility of SOGI claimants should be generally welcomed, this identification may also lead to stigmatization and stereotyping,[93] and to the homogenization of people belonging to SOGI minorities. In fact, the 'vulnerability label' risks replicating victimizing notions of refugees by focusing attention on harm and violence, while neglecting asylum claimants' agency and unique personhood.[94] In short, only if framed through a queer and intersectional lens can the notion of 'vulnerability' avoid reproducing unequal relations of power within refugee law and the broader asylum system.[95] When applying this principled approach to IRL and IHRL, the use of 'vulnerability' has the advantage of signalling a greater exposure of SOGI claimants to human rights violations that may be replicated in the process of accessing, requesting, and enjoying asylum, if the surrounding environments fail to identify their specific needs. Therefore, from a positive perspective, 'vulnerability' may call upon States and other involved actors to elaborate specific solutions following *individual* assessments, owing to a presumption of a *collective* 'vulnerability'.

The contradictions around this concept may explain the, sometimes diverse, approaches of systems of protection. The developments within the European human rights and asylum frameworks are a case in point. On the one hand, in deciding the case of a gay claimant who alleged a violation of his right to liberty and security (article 5 ECHR) after entering Hungarian territory, the ECtHR identified the applicant as a 'vulnerable individual' and 'part of a vulnerable group in the country which he had to leave'.[96] Placed in the wider context of the ECtHR's migration jurisprudence, it is noticeable that the court has attempted to differentiate between migrants and asylum claimants and, within asylum claimants, specific groups of claimants, in order to tailor the degree of protection offered.[97] Yet, the 'vulnerability label' seemed essential here to allow the court's finding that national authorities should exercise particular care 'to avoid situations which may reproduce the plight that forced these persons to flee in the first place'.[98] Consequently, an increasing range of positive obligations, either substantial or procedural, has emerged to reduce the condition of 'vulnerability' experienced by asylum claimants belonging to SOGI minorities. Ideally, such identification would not

only require the individual assessment of each claimant's needs, but also lower the threshold for finding a serious risk of exposure to inhuman or degrading treatment if such claimants were returned to their country of origin, with positive implications for recognition of refugee status.

On the other hand, the risk of stigmatization and stereotyping entailed by using the 'vulnerability label' has prompted the EU to depart from its current reading of IRL embedded in the CEAS. Both the Qualification Directive (article 20(3)) and the Reception Directive (article 21) identify some groups of claimants as vulnerable, such as minors, victims of human trafficking, or persons who have been subjected to torture, rape, or other serious forms of psychological, physical, or sexual violence.[99] In light of the lived experience of many SOGI claimants, often including accounts of psychological, physical and sexual abuse, including rape,[100] the more favourable provisions for 'vulnerable' people may apply to SOGI claimants, although SOGI minorities have not been labelled collectively as vulnerable under EU law. Significantly, in the context of the CEAS proposed reform, the notion of 'specific needs' has replaced that of 'vulnerability', in the broader attempt to tailor the asylum system to individual needs while avoiding stigmatization and stereotyping,[101] as a queer and intersectional approach suggests.

In short, the debate on SOGI claimants as a 'vulnerable group' signals, at the very least, that there is consensus around the fact that their needs, primarily as individuals, should also be addressed under IHRL, with vital implications for IRL. In practice, national authorities are required to assess each case, taking into account SOGI-related aspects and, as UNHCR's SOGI Guidelines on International Protection No 9 point out,[102] the intersections between SOGI and other characteristics. These include, for instance, sex, age, nationality, ethnicity/race, social/economic, and HIV status, and may add layers of discrimination and/or explain every person's unique experience of their SOGI, as well as their gender or their sex characteristics, as the revised Yogyakarta Principles remind us. While it is impossible to address the variety of SOGI refugees' needs here, it is worth noting that every aspect of the asylum process may raise specific concerns for SOGI claimants, including their life beyond that process. A few aspects, which also show how IRL and IHRL interact in this field expanding SOGI claimants' protection, are useful to illustrate these points.

First, leaving aside most RSD process-related issues,[103] a queer IRL calls for a revision of concepts like 'internal relocation alternative'[104] and practices related to COI.[105]

[99] Council Directive 2013/33/EU of 26 June 2013 Laying Down Standards for the Reception of Applicants for International Protection (recast) OJ L180/96.

[101] Ferreira (n 56).

[102] UNHCR (n 88) para 3.

[103] See Chapter 42 in this volume and Danisi, Dustin, Ferreira, and Held (n 4) ch 7.

[104] See Jessica Young, 'The Alternate Refuge Concept: A Source of Systematic Disadvantage to Sexual Minority Refugee Claimants' (2009) 60 University of New Brunswick Law Journal 294.

[105] Nicole LaViolette, 'Independent Human Rights Documentation and Sexual Minorities: An Ongoing Challenge for the Canadian Refugee Determination Process' (2009) 13 The International Journal of Human Rights 437; Danisi, Dustin, Ferreira, and Held (n 4) ch 6.

The former should not apply to SOGI claimants if it is considered that, even where no criminalization is in force, social discrimination and exclusion may play a significant role in finding that protection is not available in any part of the country of origin. Yet, where SOGI-specific COI is absent, including on the role of private actors in perpetuating persecution, asylum authorities may be inclined to deny refugee status on one or other of these grounds.[106] A queer reading of IRL would instead require avoiding 'generic' and 'stereotyped' references to the country of origin in question, and identifying 'specific' and 'up-to-date' COI for each case.[107]

Secondly, another turning point in the queering of IRL relates to the notion of 'safe country of origin'.[108] While this notion falls short of any consideration on the equal enjoyment of human rights by SOGI minorities, from a procedural perspective the use of 'safe countries' opens the door to the application of accelerated procedures with shorter timeframes for evaluating one's fear of persecution. In this respect, marking a significant step towards a queer IRL, a case examined by the High Court in England and Wales suggests that fast-track procedures are inherently unfair for those who claim asylum on SOGI grounds, owing to the longer timeframe needed to obtain relevant evidence in such cases.[109]

Thirdly, only a safe environment for SOGI claimants during asylum interviews is conducive to self-identification and better decision-making. A case of 'late disclosure' is particularly significant here. By reversing two previous judgments based on the lack of credibility of an Iraqi national, the Supreme Administrative Court of Finland found that the claimant had sufficiently explained why he had not disclosed his homosexuality during the asylum interview, namely because of the presence of an interpreter of a particular ethnic background and the fear of abuse in the reception centre.[110] IHRL may play a greater role here in creating a safe environment at least in two ways: (1) by requiring that States ensure an adequate number of trained staff, including interpreters;[111] (2) by demanding that national authorities promote a human rights culture, for example by ensuring that principles of non-discrimination of SOGI minorities are included in the training initiatives of all actors involved in the system, like asylum adjudicators and interpreters.

Fourthly, a queer approach to SOGI asylum requires us to look beyond RSD and address other needs that have been neglected in the literature.[112] The ECtHR has made it clear that national authorities have to identify reception conditions for SOGI

claimants by taking into account the possible presence in accommodation centres of people coming 'from countries with widespread cultural or religious prejudice against' SOGI minorities.[113] Consequently, the placement of SOGI claimants in large camps should be discouraged. Moreover, the revised version of the Yogyakarta Principle 23 adds, amongst other things, that SOGI claimants should also be granted access to medical care as appropriate for each specific case, thus including hormonal or other therapy and gender-affirming treatment. Similar considerations apply for life beyond asylum, when SOGI claimants' needs may overlap considerably with those of SOGI minorities in the host country. From a general perspective, in light of the different and intersecting layers of discrimination suffered by SOGI claimants, including SOGI and 'refugeeness', international, supranational, and domestic anti-discrimination law should, at a minimum, be applied in a way that protects against multiple and intersectional forms of discriminatory treatment in the enjoyment of the right to work, education, and health. Leading again the way, the ECtHR has found that a transgender refugee enjoys the right to have their gender identity recognized and have access to the name-change legal procedure in Hungary as any Hungarian citizen.[114] Although the case falls again within the realm of private life, the court has overall emphasised that, in implementing their positive obligations under the ECHR, States party should take into account the specific reasons for which refugees have fled their countries in order to ensure that the Convention rights are always practical and effective, rather than 'theoretical or illusory'. From a more specific point of view, considering family reunification as an essential tool for the integration of refugees, a queer IRL requires the contestation of the heteronormative reading of the relevant norms. While the notion of family should certainly include same-sex unions for the purpose of family reunification, the evaluation of SOGI claimants' requests should consider both their difficulty in having their relationships recognized in their countries of origin or transit and the connected struggle to provide evidence of such unions.

Fifthly, and finally, addressing SOGI claimants' needs requires the adoption of a holistic approach to asylum that also looks at new tools for facilitating access to asylum as well as to resettlement of people in need of international protection on SOGI grounds. In comparison to the extensive literature available on RSD, only a few studies have, for instance, investigated obligations under international law to provide resettlement options for, or ensure legal avenues to access asylum to, SOGI claimants[115] or examined the transit and resettlement experiences of SOGI claimants.[116] These studies make it clear that these people's destiny cannot be left to discretionary policies, such as the Pilot Project of Canada.[117] Further research is also required in relation to the responsibility of

UNHCR and the role it plays in resettlement schemes (which are often based on the above analysed notion of 'vulnerability'[118] and the debatable inclusion of SOGI claims) and in the management of large camps (especially in the Global South, where accounts of attacks on SOGI claimants and refugees are increasingly reported).[119]

6. Looking to the Future

For many years, IRL has gone through a process of reinterpretation to respond to the challenges posed by the legal and social experiences of people persecuted on grounds of their SOGI. Despite the influence of the seminal studies of Millbank, Dauvergne, LaViolette, Spijkerboer, and Jansen, to name a few, and of developments within IHRL, the 'queering of IRL' is still far from complete. For this reason, new studies suggest an approach that, drawing from feminist studies, combines a human rights approach to IRL with a queer and intersectional lens, thus highlighting the need for more interdisciplinarity and the use of different theoretical frameworks to support this ongoing challenge. Relying only on a human rights-based reading of the Refugee Convention or on IHRL as 'surrogate' protection is insufficient to queer IRL.[120] Equality remains an ideal to be achieved in many societies and it is challenging to overcome resistance to uncover heteronormative relations of power, as the recurring revival of privacy arguments in IRL indicates. It is precisely this failure, as well as the rising levels of racism, xenophobia, homophobia, and transphobia in many countries, that can turn SOGI claimants' and refugees' search for a safer haven into a never-ending process, even after the recognition of refugee status. Given the relative paucity of work on aspects of SOGI asylum beyond RSD, including access to asylum and resettlement, the comparison between Global North and Global South countries' experiences, as well as specific groups within SOGI minorities (including bisexual, intersex, and asexual),[121] there is still much scope for further research and critique. In doing so, research should also pay more attention to claimants' agency and explore new frameworks to avoid the analysed 'vulnerability trap'.

The queering of IRL requires a 'cultural revolution' as well as the establishment of creative transnational networks. First, new queer theory-informed and culturally appropriate guidelines and transversal training of all actors involved in SOGI asylum are urgently required to address poor understanding of SOGI, and may include equal consideration of gender and sexual expression as the revised Yogyakarta Principles suggest. The effect of better training does not lie only in the consolidation of anti-stereotyping,

[118] ibid 4.

[120] For instance, *LC (Albania)* (n 83).

[121] For instance, see Dutch Council of State decision 201,703,038/1/V1, 21 March 2018.

non-heteronormative, and culturally unbiased attitudes. Improved understanding of the concepts at stake may help adjudicators question how queer foreign bodies have been constructed within asylum systems, to call into question the cultural pertinence of terminology commonly used, and to consider, through a new lens, every IRL concept. For instance, as suggested by Vogler in relation to persecution grounds,[122] mastering a queer intersectional approach to asylum would lead to recognition of marginalized queer identities, which may potentially allow unique identity claims in light of the fluidity of sexuality and gender. 'Thinking outside the box' could also result in interrogating heteronormative interpretations of human rights when these are used to shape refugee law. Family rights provide a good example owing to the continuous invisibility of same-sex couples' asylum claims, despite the potential implications in terms of resettlement.

Secondly, given the range of actors involved in the queering of IRL explored here, new connections should be established between decision-makers, NGOs in countries of origin/transit/destination of claimants, refugees, lawyers, policymakers, and academics with different backgrounds, to better inform this ongoing process. As Lewis argues, 'coalitions between feminist, queer, immigrant, and anti-racist advocates' are a matter of urgency to break down the unequal structures of power that still permeate asylum.[123] The positive effect of the queering of IRL may therefore benefit other claims when the suggested methodologies, concepts, and procedural arrangements are flexible enough to accommodate claims based on different grounds.

To conclude, IRL (as well as IHRL) is not structurally resistant to queer theories. The developments here scrutinized have shown that consideration of SOGI through queer lenses can effectively shape, both substantially and procedurally, fair asylum systems, even if that does not yet occur to a sufficient extent. By marking a persistent lack of consensus in this area of asylum, the failure of the international community to include considerations based on SOGI grounds in the Global Compacts risks slowing down this queering process. While a meaningful path has been certainly set, IRL still has a long way to go before fully accommodating SOGI claims.

CHAPTER 5

THE POLITICS OF INTERNATIONAL REFUGEE LAW AND PROTECTION

REBECCA HAMLIN

1. Introduction

Politics and power dynamics permeate the story of international refugee law and protection. Historically, however, scholars of politics have been more likely to study the *causes* of displacement: war, conflict, resistance, protest, authoritarianism, repression, corruption, and State failure. There have been fewer studies focused on the politics of reception, that is, how displaced people are treated, processed, and categorized when they flee. Part of the explanation for this puzzling feature of the scholarly literature is that the discipline of political science has tended to study immigration politics as part of domestic politics, assuming immigrants are economically motivated, and bracketing refugees as a niche foreign policy issue. A further explanation is that international refugee protection is often assumed to be simply a legal matter, not shaped by politics.

In contrast to those historic trends in the study of border crossing, the premise of this chapter is that the global refugee regime looks the particular way it does because powerful political forces and dynamics have shaped and constrained it. Further, this chapter argues that in order to understand the politics of international refugee law and protection we cannot just look at the law itself.[1] To understand what the law means in practice, we must examine protection law in the context of both international geopolitics

[1] On the importance of context and interpretation, see Ingo Venzke, *How Interpretation Makes International Law: On Semantic Change and Normative Twists* (OUP 2012). In particular, this book has a long chapter about the role of UNHCR.

and the domestic politics of border control, State formation, and ongoing nation-building. These politics are crucially important for understanding how, when, and why displaced people are likely to be protected.

To elaborate on this point, the following sections of this chapter outline seven key facets of the politics of international refugee law and protection, and highlights existing research on each. These seven categories naturally overlap and interact with one another. Nevertheless, they each raise distinct questions which suggest avenues where continued study may be fruitful.

2. The Politics of Refugee Construction

Politics is embedded in international refugee law and protection at the most basic level, because the concept of a refugee is itself a political construct. There is no essential quality of 'refugeeness' that clearly distinguishes some border crossers from others. Rather, the act of designating one group of border crossers as particularly vulnerable, needy, or deserving is political. Inherently, the process of refugee construction sets up dichotomies between forced and voluntary migration, and between political and economic motivations which privilege certain forms of suffering over others, and carves them out as a special exception to the generally accepted rule that sovereign States have the right to exclude people from entering their territories.[2]

As such, the concept of a refugee has a close relationship to the development of the modern State. Since the seventeenth century, the world has become more strictly organized into territorially bound States, and the expectation that people should be rooted to a place has intensified.[3] With these changes came greater expectations that States would be organized around 'imagined communities' of people with a shared ethno-national identity.[4] As empires gave way to newly independent post-colonial States, the borders of these States were set by colonial powers. Post-colonial transition gave rise to conflict and mass displacement in many instances.[5] The capacity of States to control borders and enforce the notion of territoriality was further enabled by the rise of the passport in the early twentieth century.[6] This period was also characterized by

[6] John Torpey, *The Invention of the Passport: Surveillance, Citizenship and the State* (CUP 2000).

extremely high levels of displacement, and subsequent efforts by the international community to create global governance structures designed to assist particular displaced people. Along with the notion of an international obligation to protect came the practice of defining who was a refugee, and therefore who was deserving of protection. Thus, the concept of refugee protection is deeply intertwined with the rise of the modern, often post-colonial, State.

While it was certainly not the first attempt, the most recent and longest-lasting iteration of an international definition of a refugee was created by a group of almost entirely European States in the aftermath of the Second World War. The Refugee Convention definition, created in 1951, was heavily influenced by the context of the Cold War, and has a clear liberal and 'exilic' bias, focused on protecting people who have been individually targeted and persecuted by their home country's government because of their identity or political beliefs.[7] Somewhat remarkably, this definition has lasted far longer than any other attempt to define a refugee, continuing decades past the end of the Cold War that birthed it.

Legal interpretation of the Refugee Convention definition has expanded over time, due largely to two avenues for change. First, domestic advocates in many liberal democratic host States have brought cases to court and made innovative legal arguments about which types of people should fall within the bounds of the definition. Precedent-setting cases have frequently allowed for broader interpretation of the definition in their particular jurisdiction, and have been referenced by courts in other jurisdictions when they consider similar questions. This judicial 'borrowing' has not always been consistent or expansive, and has sometimes misunderstood the domestic legal context from which concepts are borrowed, but it has nevertheless been an influential driver of expansion.[8] Secondly, UNHCR has worked as an expansive force, issuing regular soft law guidance which sometimes highlights the logic of a particular domestic decision that interprets the Convention definition in a way UNHCR endorses. Conversely, domestic courts sometimes reference UNHCR guidance in making their decisions.

Despite a generally expansive trajectory over decades, especially in the area of 'particular social group' to include gender and sexuality-based persecution, and in the area of persecution by non-State actors, the bare bones of the Refugee Convention definition remain limited. The definition does not explicitly include protection for people displaced by climate change[9] or desperate poverty, and its application to those fleeing generalized war or violence remains contested.[10] Yet, in this political moment, the Refugee Convention definition is unlikely to be revisited. Despite UNHCR's recognition of broader regional refugee definitions in Africa and Latin America,[11] at the global level, the Refugee Convention remains the dominant frame which must be stretched and strained if it is to accommodate other forms of border crossing.[12]

[9] See Chapter 46 in this volume. [10] See Chapter 45 in this volume.
[11] See Chapters 15, 17 and 34 in this volume. [12] See Chapter 34 in this volume.

Future research on international refugee law and protection should examine both the politically constructed nature of the concept of a refugee, and its heavily European origins. While the concept of a refugee is frequently viewed as an international or universal concept which is merely adopted into domestic legislation for implementation purposes, by its very nature, the determination of refugee status remains in the eye of the beholder/adjudicator. With each decision to admit or deny someone, receiving States are (re)constituting their sovereignty.

3. The Geopolitics of Responses to Displacement

Geopolitics, otherwise known as international power politics, significantly affects how major episodes of displacement are managed. The contemporary geopolitical framework of refugee protection is shaped by many factors, but two powerful ones are the enduring legacies of colonialism and the Cold War. The end of both of these world orders has had significant ramifications for international relations and border crossing.

The incentives of States to admit refugees have changed significantly since the Cold War, when 'Western' States strategically welcomed people who were displaced by Communism. Today, asylum seekers carry far less strategic value, and the geopolitical message to be sent by admitting an asylum seeker or resettling a refugee has significantly declined. Some observers have claimed that the so-called 'new asylum seekers' of the post-Cold War era are less likely to fit the Convention definition, and instead are more likely to be economically motivated.[13] Other scholars have reframed this point, highlighting the fact that the asylum seekers arriving in the Global North today tend to be black or brown and poor and are often coming from places that were colonized to places that were colonizers or settler States.[14] These dynamics are not ancillary to, but are a central feature of, the politics of contemporary refugee protection.

Today, States and regions in the Global North attempt to contain major episodes of displacement in the Global South. This arrangement is not a coincidence, but the product of a global power play designed to protect the sovereignty and privilege of Global North States. Events that are constructed as humanitarian crises are often the result of calculations that have been made by wealthy and powerful States to limit, contain, and keep at arm's-length the responsibility to assist people whose protection holds no political value. This reality is maintained by Global North States through massive border security spending and the

[13] David A Martin, *The New Asylum Seekers: Refugee Law in the 1980s* (Martinus Nijhoff 1988). For a critique of this concept, see Chimni (n 7).

[14] See Chapter 2 in this volume.

creation of new markets related to border control and deterrence. Global North States also pressure their less wealthy and powerful neighbours to engage in more draconian border control efforts on their behalf.[15]

Another dimension of the geopolitics of containment takes the form of the so-called 'grand compromise' through which Global North States provide aid to host States in the Global South, in part to keep large-scale episodes of displacement at arm's-length.[16] UNHCR plays a direct role in facilitating the compromise, by collecting funds from Global North donor States and using them to manage refugee populations within the territories of host States.[17] In response to these dynamics, Global South 'refugee rentier States' leverage their position as hosts for material gain, threatening to send hordes of refugees towards the Global North if resources do not keep coming their way.[18]

Many of the bilateral or regional State relationships that emerge around migration control are hierarchical and mirror colonial dynamics, such as the efforts of the EU to contain potential asylum seekers in Africa and the Middle East, or attempts of the United States to control migration from Central America by pressuring Mexico to police its southern border. However, the geopolitics of migration control has also led to more complex and counter-intuitive inter-State relations. For example, internal hierarchies have been exacerbated between EU Member States, as the Dublin system resulted in disproportionate numbers of asylum seekers lodging claims in Greece and Italy, creating incentives for such States to flout their EU obligations, as well as for asylum seekers to live in unauthorized status in other Member States.[19] While there are occasional examples of burden-sharing within the context of the EU, the predominant dynamic is one of the more powerful States pushing the burden of refugee protection onto less powerful actors.[20]

The role of Turkey as the world's largest refugee hosting State is fascinating and warrants further study. It is a former imperial power, and yet it has many features of a refugee rentier State. Thus, it does not fit neatly into the Global North/South dichotomy. In 2016, the EU and Turkey made a deal to collaborate in preventing the arrivals of people from the Syrian civil war into Europe. The deal essentially paid Turkey to take diverted asylum seekers who had attempted to enter Europe irregularly, even though conditions in Turkey for refugees are not comparable to Europe, and come with limited hope of full integration to Turkish citizenship. The deal has also weakened the EU in its

dealings with Turkey as President Erdogan routinely threatens to send refugees to Europe to further his political aims.[21]

Future research should consider the political incentives of various different types of States, not just the prototypical liberal democratic receiving State.[22] The shifting power dynamics between—but also within—the Global North and South deserve closer attention, especially as the Cold War recedes and colonial legacies morph into neo-colonial relations.[23]

4. The Politics of Compliance and Implementation

Despite the fact that the principle of *non-refoulement* is widely considered to have achieved the status of international customary law,[24] problems with compliance and implementation of international refugee law and protection standards are rampant. Notably, there is a wide gap between the formal ratification of international treaties and outcomes on the ground. Many of the major host States in the world have not actually ratified the Refugee Convention, yet still do provide some degree of protection. Meanwhile, many Contracting States actively engage in avoidance tactics designed to limit or circumvent their obligations under the Convention. There is an extensive political science literature on the diffusion of international law and compliance.[25] However, this literature has not focused on international refugee law, as much as human rights instruments and other international legal norms. Studies asking why States have not ratified the Refugee Convention have tended to examine particular States, rather than taking a systematic global approach to the question of compliance, and what difference ratification makes, if any.

The detailed regional chapters in this volume demonstrate unequivocally that political considerations often take precedence over legal commitments, and conversely,

that countries can protect refugees without signing onto treaties if their political interests drive them to do so. Formal law does matter to refugee protection, but the question of when it matters and how it matters varies based on political considerations.

There are currently 147 States that are Contracting States to the Refugee Convention or its 1967 Protocol. On its face, this looks like a very high level of commitment, especially when compared with other international human rights instruments protecting the rights of migrants who have not been classified as refugees.[26] Some Contracting States, such as Egypt, have only signed on with a list of reservations which limit its obligations to provide social benefits to refugees. However, most of the concerns raised by the international community about compliance have focused on the non-signatory States. In particular, the two regions of the world with the fewest Contracting States are the Middle East and Asia, with countries such as Lebanon, Jordan, Iraq, Saudi Arabia, India, Pakistan, Indonesia, Malaysia, and Thailand all remaining non-signatories.[27] As is obvious from this list, many of the States that host large numbers of refugees have not ratified the Refugee Convention. Nevertheless, many non-signatories still provide some protection for refugees via domestic legislation or practice, though they may choose to prioritize refugees who are geopolitically strategic or who share a religious affinity.[28] Further, UNHCR undertakes refugee status determination (RSD) and is engaged in humanitarian assistance, sometimes including formal camp management, in non-signatory States such as Thailand, Malaysia, and Lebanon.

Studies of State non-compliance frequently conclude with one of three explanations: reluctance to criticize or intervene in the sensitive issues of one's neighbours, fear of overly burdensome economic impact, and the desire to protect the particular ethnic balance of the State based on the assumption that refugee status entails the right to permanent settlement. Lebanon, for example, hosts proportionately more refugees per its population size than any other State, but has declined to ratify the Refugee Convention because of political calculations about what specific new obligations it would create, and because there is some benefit to having UNHCR bear the cost of refugee management.[29] Other studies have noted that reluctance in Asia is also reflective of a more general sense that international law is a European product, designed to serve European interests.[30] For Global South States more generally, the Refugee Convention can be seen as an unfunded mandate, and pressure from the international community can be interpreted as condescending.

[30] Sara E Davies, '"The Asian Rejection?": International Refugee Law in Asia' (2006) 52 Australian Journal of Politics and History 562.

Even in States that have ratified, implementation and compliance is not guaranteed. First, the Asian States that have ratified the Convention, such as China, South Korea, Japan, Cambodia, and the Philippines, simply recognize, host, and resettle few refugees, despite the formal commitment of the Convention. Further, scholars have found that despite fairly widespread commitments to both the Refugee Convention and the Organization of African Unity's expanded definition of a refugee across the continent of Africa, there are systematic problems with compliance and implementation in that region as well.[31] Some authors have argued that protection is inconsistent on the African continent because of variation in the domestic legislation that implements Convention obligations, and because UNHCR does not always view particular vulnerable groups as within its mandate.[32] Similarly, other authors have emphasized the fact that most displaced people in Africa live beyond the reaches of the international protection regime, or even formal domestic law. For these people, local social networks are the most important factor determining whether they will receive any kind of material assistance or base-level protection.[33]

In Global North States, which tend to be more geographically removed from mass displacement situations, non-compliance with the Refugee Convention often takes the form of externalization and deterrence policies which limit States' obligations by keeping people who might make claims for asylum away from their territories.[34] In recent years, these States have developed increasingly elaborate deterrence techniques in a 'cat and mouse' game of law and politics, where attempts at deterrence are met with a legal response, only to be redesigned in another form. Examples of these policies have included, but are not limited to: interdiction of boats at sea to prevent asylum seekers making territorially based claims; carrier sanctions for airlines that transport people using fraudulent documents; the development of 'Safe Third Country' agreements which purport to divert asylum seekers elsewhere; the transfer of people from one country to another; externalization of border control spending to focus on keeping people in 'transit' States; offshore or otherwise remote detention facilities that isolate and contain asylum seekers away from access to legal counsel; and stricter visa requirements to prevent potential asylum seekers from coming as a student, tourist, or businessperson. Some deterrence measures are specifically targeted at asylum seekers, while others take the form of generalized border control measures which aim to prevent all kinds of arrivals, including ones with protection needs. Measures such as the rapid growth of immigrant detention are also driven by political economies that are tied to

larger logics of the increasingly privatized carceral State. All of these practices raise pressing questions about sovereignty and its relationship to territoriality.[35]

A particular difficulty with this kind of non-compliance is that it is politically sensitive for UNHCR to push back on powerful donor States when they contravene their obligations. Often, UNHCR will restrict itself to back-channel diplomacy on these matters, avoiding public criticism when possible. UNHCR is only likely to raise public concerns when externalization and deterrence policies are particularly egregious, such as UNHCR's November 2019 statement on the US Trump administration's use of bilateral 'Asylum Cooperative Agreements' with the governments of Guatemala, Honduras, and El Salvador, which return asylum seekers to States where they may face extreme danger.[36]

In sum, the literature on the politics of compliance with international refugee law has not taken a systematic approach to tracing compliance trends. More research is needed that uses a geopolitical or post-colonial lens to explore the power dynamics of the international refugee regime and develop nuanced, contextual explanations for why States might resist formal declarations of commitment to international refugee protection instruments, or why they might make formal declarations and then avoid the obligations they create. It is clear that non-compliance can take many forms and needs to be explored in the particular political context in which it arises. Very frequently, implementation of the norms of refugee protection comes down to political will. However, sometimes it is a matter of State capacity. As a result of the combined lack of will and capacity, many vulnerable people live beyond the reach of international protection, either by law or in fact.

5. The Politics of Reputation

While politics are usually a force for exclusion, especially in democratic States,[37] there are also notable instances in which politics can be used to help enforce international refugee protection law. One of the political factors that can push States to be more generous towards refugees and asylum seekers is a concern about reputation. Very few States in the world have no regard for their international reputation. The vast majority have at least a putative desire to be viewed as part of the international community. Especially for States that are not amongst the biggest global power players, but who

aspire to have a seat at the table, honing a reputation for internationalism can bring visibility and legitimacy.

While realist scholars in the political science sub-field of international relations might predict that States would never act outside of their narrow national interests, so-called 'middle powers' frequently promote human rights as part of their foreign policy agenda.[38] These States, bolstered by active civil societies and compelling leaders, have developed international reputations and constructed identities around the promotion of international human rights norms. One example of this phenomenon is Canada, where middle power internationalism has been almost a 'religion' in Canadian politics.[39] In the realm of refugee protection, this commitment to international human rights norms has resulted in Canada resettling a very large number of refugees over the years in proportion to its relatively small population. In 1986, it also led Canada to be awarded the Nansen medal, the UN distinction granted each year for exemplary action in promoting refugee protection. In 2017, when US President Trump unveiled his executive order proposing to ban people from a list of predominantly Muslim countries, Canadian Prime Minister Justin Trudeau tweeted: 'To those fleeing persecution, terror & war, Canadians will welcome you, regardless of your faith. Diversity is our strength #WelcomeToCanada'. The timing of such public statements was clearly designed to distinguish Canada from the actions of its neighbour to the south by promoting and continuing its reputation as a country committed to refugee protection.

While Ecuador does not qualify in the global arena as a middle power, a similar set of factors seems to explain the reputation Ecuador has carved out for itself for welcoming displaced people from around its region of Latin America. Notably, over the years Ecuador has publicly prided itself on openness to refugees, and has frequently drawn attention to this fact on the international stage.[40] Ecuador's choice to position itself in this way is particularly notable given that it is nowhere near as wealthy or powerful as Canada.

A third variation of the role of internationalism in promoting refugee protection is Japan. In that case, in the decades after the Second World War, advocates for immigrants and refugees within Japan used international norms to push for the protection of non-citizens by leveraging Japan's desire to raise its international profile. They successfully convinced the Japanese government to ratify several treaties, including the Refugee Convention in 1982, in part by arguing that it would make Japan look like a regional leader to openly support the post-war liberal international human rights regime.[41]

In all three of these cases, government officials believed that taking a public stand in favour of refugees would raise the international profile and increase the legitimacy of

the State in the eyes of the world. But there are also some key differences worth exploring. While reputational concerns are a factor in each place, Ecuador and Canada actually take in a lot of people, and Japan does not. Future research could explore the mechanisms of the politics of reputation in more detail, especially in cases beyond the classic middle power States. In particular, more work is needed on the ways in which law is harnessed by activists and NGOs for greater political leverage as they push for compliance with international refugee protection norms.

6. The Politics of Categorization

While the international legal definition of a refugee suggests that there is a distinct category of border crossers called refugees, the distinction between forced and voluntary migration that underlies the concept is far less clear-cut in practice than in theory. Ethnographic studies reveal that the vast majority of people decide to leave home for a combination of complicated factors, making it difficult to sort people into distinct groups.[42] While some people feel compelled to leave their homes due to a pressing threat, they still exhibit some agency regarding precisely when to leave, how to leave, and where to go.[43] Since refugees are migrants until and unless they are labelled otherwise, the politics of categorization can be a life or death matter for many people who cross borders.[44]

Beyond any practical and conceptual challenges to legal categorization, there are also political factors that affect how receiving States apply the definition of a refugee. One piece of evidence that can be used to measure the political factor in categorization is the degree of cross-national variation in RSD rates for people from the same country of origin. For example, within the EU, recognition rates for asylum seekers vary tremendously by Member State, even for applicants from places like Syria, where one might expect to see uniformly high acceptance rates.[45] Similarly, the United States,

[45] Nick Gill and Anthony Good, *Asylum Determination in Europe: Ethnographic Perspectives* (Palgrave Macmillan 2019) 12.

Canada, and Australia have very different RSD grant rates, even for people coming from the same country of origin. Comparative institutional analyses have suggested that even amongst liberal democracies with strong, independent judiciaries, cross-national variation in RSD rates can be attributed to the degree to which States have designed their administrative RSD processes to insulate them from the exclusionary politics of immigration control.[46] The intensity of these politics can also vary over time, as the political salience of a particular asylum situation can influence the degree to which politicians get involved to influence RSD outcomes.[47]

Drawing to some degree on these kinds of empirical studies, some scholars have convincingly argued that the RSD practices of receiving States in the Global North are transparently political. These scholars have pointed to the hypocrisy of how geopolitics, not law, ultimately determines who gets classified as a refugee.[48] In contrast, other scholars have emphasized and explicitly defended the political value of granting refugee status to someone fleeing a repressive or enemy regime, because it sends a strong message of condemnation to the origin State.[49] Scholars on both sides of this debate acknowledge the fact that the dynamics of using RSD as a political tool have changed dramatically since the end of the Cold War.

Given that the vast majority of displaced people remain in their region of origin, too much scholarly discussion of categorization is focused on the Global North. There has been far less academic study of State responses to arrivals in the Global South. Yet, variation in State response also occurs in the Global South, though perhaps for slightly different reasons. A comparative study of six African States found a great degree of variation in response to arrivals, and concluded that responses had little to do with the needs of the people seeking help, and a great deal to do with the capacity and willingness of the States to devote substantial resources to assistance.[50] Similarly, in-depth comparative case studies of Egypt, Turkey, and Kenya's refugee politics found that State responses to asylum seekers can be predicted by a combination of the relations between the sending and receiving State, and whether the ethnic make-up of the people seeing refuge matches that of the government in power in the host State.[51] Global South States are also more likely to have UNHCR conduct RSD within their territories, or to engage in what is known as *prima facie*, or group-based recognition, rather than individualized RSD.

[51] Lamis Abdelaaty, *Discrimination and Delegation: Explaining State Responses to Refugees* (OUP 2021).

The politics of categorization have also been affected by the ongoing so-called 'war on terror'. Article 1f of the Refugee Convention, which outlines situations in which someone who might otherwise qualify for refugee status can be excluded from protection, has gained much more prominence in the past two decades as it has come to be viewed as a potential tool for preventing the admission of undesirable people.[52] Receiving States in the Global North increasingly cooperate and collaborate on international evidence collection in order to better screen people out who have some association with atrocity, and deny them refugee status. The process of categorizing some people as human rights violators and war criminals involves a complex new blend of domestic criminal and international criminal law, domestic immigration law, and international refugee law.[53]

In sum, across the globe, the question of whether border crossers are categorized as refugees often has more to do with the politics of the receiving State than the individual characteristics of the person seeking protection. This fact is perhaps ironic, given the highly individualized nature of the definition outlined in the Refugee Convention. Thus, understanding the politics of categorization is an important area of research within the study of international refugee law and protection. The way in which international legal definitions are interpreted within domestic contexts, and the ways that politics might shape those interpretations, is a ripe area for future research. Existing studies have shown that it is overly simplistic to argue that receiving States resist granting people refugee status. Exclusionary and inclusionary factors are both at play, and have different levels of influence in particular institutional contexts and political moments. More research is needed to understand how politics affects categorization, particularly in destinations beyond the Global North.

7. The Politics of Public Opinion and Domestic Electoral Politics

Decisions about how to categorize, and whether to protect, people who arrive at a State's borders are shaped by politics, which (at least in democracies) is closely linked to public opinion. Politicians must contend with the fact that public reactions to border crossers are rarely enthusiastic. Spontaneous arrivals can be viewed as an economic threat, an expensive burden whose costs will have to be balanced against the needs of the local population. Reactions are also frequently linked to racialized beliefs about who the arriving people are, what their values are, and how they will change or impact the ethno-religious culture of the host State. Host State publics also frequently worry that refugees and asylum seekers are a threat to national security, because terrorists or war criminals might embed themselves amongst refugee populations in order to gain access to host

[52] See Chapter 39 in this volume.

[53] Rebecca Hamlin and Jamie Rowen, 'From Redress to Prevention: How the International Politics of "No Safe Haven" Became the Politics of "Not in My Backyard"' (2020) 42 Human Rights Quarterly 623.

States. Concerns about economic impact, xenophobia, and national security are common in host States across the globe; they are not limited to States under extreme economic and political strain. Aware of these dynamics, politicians often invoke the language of 'crisis' to perpetuate anxiety about arrivals and shore up political support for strong border control measures.[54]

Historically, public opinion research has focused on attitudes towards immigrants as a much broader category, and has not disaggregated attitudes towards specific groups, such as refugees and asylum seekers. A relatively recent but growing body of survey research is focused on understanding public attitudes about refugees specifically. These studies have attempted to discern whether host States with more internal ethnic diversity are more or less open to welcoming refugees, with mixed results depending on how scholars measure diversity.[55] Other studies have found that public opinion about arriving refugees is shaped by beliefs about the potential economic contribution of the group, beliefs about the group's humanitarian need, and in many cases, anti-Muslim bias.[56]

Other studies have found particularly negative attitudes towards asylum seekers who enter host States irregularly, even though the Refugee Convention protects their right to do just that. Narratives about 'queue jumpers' can pit some humanitarian migrants against others in the public mind.[57] Further, publics frequently imagine asylum seekers to be a larger proportion of the immigrant population than they actually are, which drives overall attitudes about immigration in a negative direction.[58]

Media coverage of refugees and asylum seekers also shapes public perceptions of these groups, but not in the same ways in each host State. Contexts of reception, that is, a combination of the media culture of the State, the ways in which immigrants are incorporated into each society, and the historic associations that particular immigrant

statuses carry, can affect both the tone and rate of media coverage.[59] Even the concept of a refugee differs by national reception context, which is reflected in the tone of media coverage about refugees. For example, in the United States, refugees have historically been portrayed in a more positive light, which focused on their deservingness in contrast to the more politically unpopular framing of 'illegal immigrants'.[60] In contrast, European media coverage of refugees has historically been relatively more negative.[61] More recent studies of European media have found that news outlets vary substantially in terms of the words they use to describe people coming across the Mediterranean. Media in some countries tends to refer to such people as 'migrants' whereas the media in other countries calls the same people 'refugees'.[62] More research is needed to unpack the degree to which such terminological differences might affect public attitudes.

In the past several decades, concerns about security and terrorism have been deeply entangled with public opinion about refugees and asylum seekers. Politicians have capitalized on public fears about terrorism for political gain, and to justify harsh border control measures and crackdowns on refugee resettlement.[63] Public fears about the link between refugees and terrorism can put refugee communities at risk. A recent study found that refugees are particularly vulnerable to physical attack in the aftermath of terrorist attacks in their host State, as they are scapegoated for the event.[64]

Much more research is needed on public opinion about refugees and asylum seekers in countries beyond the liberal democratic receiving States of the Global North. More analysis of how the new media landscape, and in particular social media, affects public opinion about refugees and asylum seekers, would be useful. Finally, as a right-wing populist backlash sweeps the globe, future studies should examine the ways in which politicians of all political ideologies feel compelled to scapegoat and demonize immigrants and refugees, or to invoke crisis narratives in order to gain political power.

8. The Politics of Data and Statistics

Both scholars and practitioners of international refugee law deploy statistics frequently, to emphasize the scale of a problem, to suggest that global displacement is at an all-time high, and as a hook to grab the attention of funders and the general public. Very rarely are the origins and reliability of these data questioned or even elaborated upon when they are presented. The confidence with which refugee statistics are presented is surprising, given how many obstacles exist to collecting accurate and reliable information about exactly how many refugees there are in the world. It is also surprising how few scholarly analyses there have been of this topic, when such data is centrally important to refugee protection and advocacy.[65]

The first challenge to data collection is definitional. While most States in the world rely on the Refugee Convention definition, some do not. They use their own statutory definition, or a broader regional definition. Some non-governmental organizations which collect refugee statistics also use definitions other than the one outlined in the Refugee Convention. This variation can lead to non-comparable cross-national or cross-regional data being aggregated.

It is also hugely logistically difficult to count people who are moving. Refugees can be intermingled with local populations, who may themselves be internally displaced, or who may have incentives to blend in with refugee groups in order to access international aid. A really thorough registration and record-keeping programme may not always be a priority for States or aid organizations in unfolding situations of displacement, and may not be worth the cost, which could otherwise be spent on providing direct aid.

Beyond these logistical and definitional hurdles, politics can play a direct role in shaping how refugees are counted and how statistics are reported.[66] Numbers are often linked to resources and humanitarian assistance. So, aid organizations and receiving States may have incentives to inflate numbers in order to increase international sympathy and assistance. In other circumstances, host States may have incentives to downplay numbers so as not to alarm their own citizens, or antagonize neighbouring sending States and exacerbate diplomatic tensions. There is no hard and fast rule that determines in which direction these incentives point. It is highly dependent on the particular political context.

Large-scale refugee numbers have been used by Global North powers to justify military intervention, or at the very least to level criticism against the State of origin. No State wants to be viewed as a 'refugee producing country', so sending States often have an

[65] For a detailed discussion of the challenges of collecting accurate refugee statistics, with many specific examples, see Jeff Crisp, 'Who Has Counted the Refugees? UNHCR and the Politics of Numbers', UNHCR New Issues in Refugee Research Series Working Paper No 12 (1999).

[66] Peter Andreas, 'The Politics of Measuring Illicit Flows and Policy Effectiveness' in Peter Andreas and Kelly M Greenhill (eds), *Sex, Drugs, and Body Counts: The Politics of Numbers in Global Crime and Conflict* (Cornell University Press 2010).

incentive to downplay the numbers of people leaving their country. There have been instances of countries of origin actively challenging statistics claiming that their State had produced large numbers of refugees. In an extreme recent example, the State of Myanmar has disavowed accusations that it drove Rohingya people out of its territory, claiming that the residents of camps in the disputed Bangladesh–Myanmar border region are foreigners. These actions are now part of a pending case with the International Criminal Court (ICC).[67]

When faced with large-scale direct arrivals, Global North asylum States rarely count those people as refugees. Instead, they often label the asylum seekers as irregular or illegal migrants, with no legitimate claim to access their territories. Later, these States have strong political incentives to frame their reporting of RSD statistics to show how low acceptance rates support the claim that many asylum seekers are not 'genuine refugees'. In this sense, the politics of statistics is directly linked to the politics of categorization.

This overview of the politics of refugee statistics should serve as a sobering reminder that critical analysis of how numbers are presented and framed is advisable, since data is rarely, if ever, neutral. Even well-meaning advocates can slip into the habit of deploying refugee statistics in ways that inadvertently further a crisis narrative. More research is sorely needed to better understand the particular dynamics of refugee data production on the ground in both Global North and Global South receiving States, and to critically analyse the use of statistics in public debate about refugee policy.

9. Conclusion

This chapter provided a brief overview with the aim of orienting the reader to an awareness of the politics of refugee law and protection. It also flagged some gaps in the literature where future research would be most welcome. Many political dynamics were doubtless overlooked. Many others are elaborated much more fully in later chapters of this *Handbook*. But, the overarching goal of the chapter was simply to persuade readers of the centrality of politics to outcomes that affect the lives of people seeking protection. Because refugee protection implicates politics at the global, national, and local levels, there are many political variables at play. These politics fundamentally shape how law is developed, how law is interpreted, and whether law is implemented and enforced. In other words, politics is the key variable that can explain why 'law in books' is not always translated into 'law in action' that protects refugees' lives.[68]

CHAPTER 6

THE ETHICS OF INTERNATIONAL REFUGEE PROTECTION

SEYLA BENHABIB AND NISHIN NATHWANI

1. Introduction

The normative foundations of refugee admission and protection are contested. On the one hand, the human rights origins and orientation of the international refugee protection regime ushered in by the Refugee Convention and its 1967 Protocol are firmly established. Most recently, the Global Compact on Refugees reaffirms that international refugee protection 'emanates from fundamental principles of humanity and international solidarity', as guided *inter alia* by 'relevant international human rights instruments'.[1] In this sense, refugee law and the protections it affords are instances of the operationalization of international human rights law, insofar as we understand the varieties of persecution suffered by refugees to be a subset of serious human rights violations and the remedies offered by refugee law as a form of international human rights protection.[2]

On the other hand, the Global Compact equally maintains that international refugee protection operates within a framework rooted in 'the principle of sovereign equality of States'[3] that recognizes the 'primary responsibility and sovereignty of States'.[4] The document reasserts 'the primacy of national ownership and leadership'[5] of refugee protection programmes and the importance of proceeding in 'consultation with national authorities and in respect of relevant [national and local] legal frameworks'.[6] If, as Hathaway argues, 'international human rights law is fundamentally a means of delimiting

[6] ibid para 37.

state sovereignty',[7] then this dual emphasis on international human rights and the priority of State sovereignty reflects a conceptual and practical tension. This tension frames the various ethics of refugee protection explored in this chapter.

The Global Compact carefully but irresolutely negotiates between the cosmopolitan lexicon of 'responsibility-sharing', 'burden-sharing', 'human rights', and 'dignity',[8] and the more sovereigntist language of 'generosity', 'national security', 'limited resources', and 'national legislation, policies, and priorities'.[9] Several disjunctive logics are thus at play in the text of the Global Compact: cosmopolitanism versus State sovereignty, charity versus legal obligation, national security versus humanitarian necessity, international versus national law.

In this chapter, we outline two diverging strands in the literature on the ethics of refugee protection: first, what we call the 'statist ethics of refugee protection', of which the positions of liberal nationalists and liberal internationalists are paradigmatic; and second, what we call the 'cosmopolitan ethics of refugee protection', which we subdivide into three dominant positions: the agency-centric view, the power-centric view, and the postcolonial view. Our aim is to outline each of these positions, and then to sketch briefly the contours of a sixth position based on Benhabib's concept of jurisgenerativity.[10]

2. Statist Ethics of Refugee Protection

The English term 'refugee' in its current usage originated to describe the roughly 400,000 French Huguenot *réfugiés* who fled to England in 1685 following Louis XIV's revocation of the Edict of Nantes that had granted religious liberty to French Calvinists almost a century earlier in 1598.[11] While some scholars argue that the concept of the 'refugee' is thus endogenous to the modern nation-State system,[12] the experience that prompted the Huguenots' flight from France—what we now call 'persecution'—is transhistorical and transcultural. The nascent field of refugee history has started to map how migratory populations fleeing harm have been variously constituted across time and space.[13] Broadly understood, the refugee is in fact a much older figure than the citizen.[14]

[14] See eg Anne Dufourmantelle, 'Hospitality under Compassion and Violence' in Thomas Claviez (ed), *The Conditions of Hospitality* (Fordham University Press 2013) 14. Dufourmantelle argues that hospitality has been at the root of primitive societies because 'you could immediately become the very stranger that you opened your door to'. The term 'hospitality' derives from the Latin terms *hospitalia* or *hospitia*, which were dwellings specifically for foreigners (*hospites*), a practice also found amongst the ancient Greeks. cf James A Chamberlain, 'Responsibility for Migrants: From Hospitality to Solidarity' (2019) Political Theory 1.

The protection of the most vulnerable escaping targeted harm and natural disaster has long been central to the predominant ethical systems of the world—both ancient and modern, religious and secular.[15] Of course, the parameters of these ethical, as opposed to legal, obligations have traditionally depended not only upon whom we recognize as the most vulnerable, but also on how we understand the causes of their vulnerability. It is widely accepted that those who cause refugees to flee may have remedial obligations to them, as reflected, for example, in the financial compensation that successive German governments pay to Jews and other minorities persecuted in the Holocaust.[16]

In what we call the 'statist ethics of refugee protection', such ethical obligations are assessed in relation to the proper 'balancing' between the moral rights of the vulnerable and the ethical obligations of those who are in a position to offer them protection. Importantly, these duties are not 'perfect',[17] in that they do not oblige unconditionally, but depend on the circumstances underlying the vulnerability in question and past ethical relations between the implicated parties. From this standpoint, refugee protection becomes an act of beneficence and of compensatory or remedial justice. In contemporary debates, two versions of this view are dominant—what we call the 'liberal nationalist' and the 'liberal internationalist' positions.

a. Liberal Nationalism

Liberal nationalists subscribe to the view that assessing responsibilities towards refugees requires weighing the interests of 'people who are liable to be severely harmed as a result of the persecution they are undergoing with those of bounded political communities that are able to sustain democracy and achieve a modicum of social justice but need closure to do this'.[18]

Underpinning this view is the notion that democratic self-governance is predicated on well-protected territorial borders. According to liberal nationalists, a centralized agent is required to assume responsibility for protecting a country's natural and material assets and to ensure continuity of its public culture and democratic values. Immigration is permitted, but it remains a privilege regulated through the sovereign determinations of a State's legislature.

[15] See eg Kleist (n 13) 162–3. For an overview of the biblical conception of the 'cities of refuge', see Moshe Greenberg, 'The Biblical Conception of Asylum' (1959) 78 Journal of Biblical Literature 125.

[16] 'Summary of Major Holocaust Compensation Programs' (Claims Conference: The Conference on Jewish Material Claims against Germany 2000).

[17] Henry Sidgwick outlines a distinction between *imperfect* moral duties—that is, conditional duties subject to exceptions and limitations based on legitimate grounds of self-preservation—and *perfect* moral duties—that is, duties that oblige unconditionally without exceptions or limitations. For Sidgwick, obligations towards refugees are imperfect duties of charity rather than perfect duties of justice. For a longer discussion, see Benhabib (n 10) 36–7.

[18] David Miller, *Strangers in Our Midst: The Political Philosophy of Immigration* (Harvard University Press 2016) 93.

Although liberal nationalists consider it desirable that legislatures should act in accordance with international law, what counts in the first place, is 'our' law, 'our' precedents, and 'our' values. The liberal nationalist position has a formidable array of adherents, including, amongst others, Rawls, Walzer, Nagel, and Miller.[19] For the purposes of this discussion, we briefly sketch Miller's and Rawls' versions of this argument, which we take to be paradigmatic.

Miller and Rawls both underline the priority of democratic self-determination in assessing States' duties towards immigrants and refugees. For Miller, this entails the twofold right of a population with a shared national identity to (a) occupy a territory that it has 'transformed' over time and endowed with 'material and symbolic value',[20] and (b) to determine policy in that territory via a representative State within the limits prescribed by human rights.[21]

Rawls similarly emphasizes territorial sovereignty as a precondition of self-determination, but offers a more Lockean justification in arguing that a territory is ultimately an 'asset' that, like other forms of property, would deteriorate unless a defined agent, namely a 'people', assumes responsibility for its maintenance.[22] However arbitrary a given border regime might appear from a transhistorical viewpoint, Rawls maintains that control of human flows across borders is therefore necessary (in the absence of a world State) to secure 'in perpetuity'[23] the fundamental asset on which the existence of a 'people' depends—its territory.[24]

Nonetheless, for Rawls and Miller alike, the right of territorially predicated self-determination is subject to constraints. For Rawls, self-determination cannot entail the subjugation of another people;[25] but this constraint means equally that another people cannot be compensated for their 'irresponsibility in caring for their land and its natural resources by…migrating into other people's territory without their consent'.[26] For Miller, the right of self-determination is restricted insofar as States are committed to human rights. This commitment generates both ethical obligations towards displaced persons in general—irrespective of whether their claims stem from 'state persecution, state collapse, or natural disaster'[27]—and more particular obligations to refugees when the receiving State is at least partly responsible for the factors leading to their displacement.

Still, both agree that these limitations to territorial sovereignty do not *ipso facto* obligate States to admit refugees. Miller argues that the right of self-determination justifies substitutive measures by States to fulfil their duties towards refugees without offering full admission. These measures include refugee-trading schemes between receiving States (including cash transfers agreements),[28] skills-based admission

[19] John Rawls, *The Law of Peoples* (Harvard University Press 1999) 38–9; Michael Walzer, *Spheres of Justice: A Defense of Pluralism and Equality* (Basic Books 1983) 51; Thomas Nagel, 'The Problem of Global Justice' (2005) 33 Philosophy and Public Affairs 113. policies,[29] national admission quotas,[30] and, in certain instances, 'outside intervention' in States of origin (such as humanitarian aid, investments, or support to create 'safe havens').[31] Rawls, by contrast, emphasizes that liberal-democratic peoples have a 'duty of assistance' to support 'burdened societies' 'to manage their own affairs reasonably and rationally and eventually to become members of the Society of well-ordered Peoples',[32] principally by establishing 'just basic institutions for a free constitutional democratic society'.[33] He does not, however, extend this duty of assistance to protect those who seek asylum at a State's border. Similarly, Miller asserts that when a State 'sincerely and reasonably believes it has done enough, taking into account the cost of accepting refugees', it is 'better to say honestly that not every one [sic] can be rescued'.[34]

Undergirding Miller's and Rawls' shared commitment to territorial sovereignty as a 'trump card' against obligatory refugee admission is a common concern for cultural self-preservation. For Miller, immigrants in significant numbers change the 'self' in 'self-determination' by altering the composition of the *body politic*, and therefore also the public culture of a society. Miller thus reasons that political self-determination entails a right on the part of the representative State to limit immigration to serve this end.[35]

Rawls likewise invokes the protection of liberal-democratic culture as a justification for discretionary immigration control, citing Michael Walzer.[36] But he goes a step further in implying that the ills facing individuals in 'burdened societies' stem from certain 'religious, philosophical, and moral traditions', rather than from material constraints or inequalities in global distributive justice.[37] Accordingly, he insists that while the causes of migration are multifaceted, including the 'persecution of religious and ethnic minorities, the denial of their human rights', migration would cease to be of concern once 'religious freedom and liberty of conscience, political freedom and constitutional liberties, and equal justice for women' are instituted globally.[38]

Rawls' and Miller's accounts reflect the broader liberal nationalist position that the right of territorial self-determination means that any ascertainable State obligations to protect refugees can be subsumed under a broader duty of care to remedy the causes of displacement in various 'burdened' countries of origin. Admission is not the *sine qua non* of ethical standard through which States must fulfil such duties towards refugees. As we later discuss in the context of power-centric and postcolonial critiques of refugee protection, some iterations of the liberal nationalists' prescription for 'outside assistance' are worryingly conducive to justifications of cultural, economic, and perhaps even military imperialism, however inadvertently.

[29] ibid 91. Miller maintains that skills-based or other economic admissions considerations are only defensible at the second stage of assessment, namely, in determining whether a recognized refugee should be admitted with a form of permanent residence to the country of asylum or transferred to another safe State, and not at the first stage of assessment, namely, adjudicating claims for refugee status as claims about 'the necessity of escaping a serious threat to human rights'.

b. Liberal Internationalism

Liberal internationalists interrogate the treatment of territorial sovereignty as the preponderant consideration in assessing our duties towards refugees. They highlight that sovereignty is not an intrinsic property or 'first principle' of isolated States, but emerges from an international system of mutual recognition whereby States reciprocally recognize territory and other aspects of sovereignty according to shared norms. In Haddad's words, 'sovereignty is never absolute and international society could not exist without an element of concession on the part of individual states'.[39] Because territorial sovereignty emerges endogenously to international legal-political norms and processes, it cannot ground an ethical or political limitation to international legal duties towards refugees in the way suggested by liberal nationalists.

To be clear, liberal internationalists do not claim that territorial sovereignty is meaningless, but rather that the Westphalian model of the absolute jurisdiction of a central authority over all persons within a State's territory is a myth of the past. Liberal international sovereignty is structured by the principles and commitments outlined in international law, including the UN Charter (1945), the UDHR (1948), and the regimes of human rights created in the aftermath of the Second World War, including the ICCPR (1966) and the ICESCR (1966). In the protection of their borders, States must not derogate from these international commitments.

Immigration policies that privilege 'meritocratic' assessments, or that prioritize immigrants with family affiliations, may be acceptable from a liberal international perspective if they are adopted by national legislatures in compliance with international human rights norms. But the rights of the strangers amongst us are not at the discretion of States alone; they must be in conformity with national, regional, as well as international norms. Prominent liberal internationalists include, amongst others, Henkin, Doyle, Koh, Hathaway, and Slaughter.[40]

Some liberal nationalists argue that obligations towards refugees stem only from States' voluntary accession to the Refugee Convention and the 1967 Protocol. However, there is a crucial normative link between State sovereignty and the protection of human rights, including refugee rights, that is not exhausted by States' commitment (or lack thereof) to the primary instruments of refugee law. As Hathaway argues, international human rights are essential to State sovereignty insofar as they 'establish a benchmark of a government's

[39] Emma Haddad, 'Refugee Protection: A Clash of Values' (2003) 7(3) The International Journal of Human Rights 1, 10.

right to claim sovereign authority over a people'.[41] States that violate international human rights norms fail to achieve the minimum standard for international legitimacy and delegitimize their claim to 'autonomous authority'.[42] Henkin elaborates that although the Refugee Convention and its Protocol were largely distinct from international human rights law in their inception, serving as 'a small concession by compassionate states addicted to and fearful for their "sovereignty"',[43] the situation over the past six decades has changed this relationship substantially. International human rights law has since grown from a series of non-binding declarations to 'binding covenants and conventions'; and accordingly, international refugee law has become inextricably enmeshed with international human rights law insofar as 'massive flows of refugees result from massive human rights violations'.[44]

According to Costello and Foster, this entanglement is reflected in part through the fact that the norm of *non-refoulement* is gradually attaining the status of a *jus cogens* norm.[45] This places *non-refoulement* alongside other universal, non-derogable norms in international law, such as the prohibitions on genocide and torture. For Henkin, an updated reading of international refugee law must thus recognize 'not only the Refugee Convention but the International Covenants and the UN Charter; not only UNHCR, but the Human Rights Committee and, if necessary, the UN Security Council'.[46]

For Hathaway, the increasing entanglement of refugee and human rights law means reorienting the concept of 'persecution' at the centre of the Refugee Convention. Since international human rights serve principally to define the basic duties that States owe to their citizens and those within their jurisdiction, understanding persecution specifically as a failure of State protection resituates refugee protection within the purview of human rights law.[47] In particular, Hathaway claims that a human rights-focused conception of persecution re-centres the fact that the distinctive feature of persecution is a form of harm that entails a coercive separation between the refugee and his or her home, and thereby a rupture in the State–citizen relationship.[48] Thus understood, refugee law *qua* human rights law becomes a means to enable 'persons to disengage from states which have forfeited their claim to international legitimacy by failure to adhere to basic standards of human rights law'.[49]

Hathaway recognizes that the Refugee Convention's requirement to demonstrate a nexus between serious harm feared and one of five enumerated grounds—race, religion, nationality, membership of a particular social group, or political opinion—precludes

[49] Hathaway (n 40) 120.

other categories of persons fleeing human rights violations from accessing international protection; the Convention could even be accused of elitism for privileging dissidents and government opponents. Still, he defends the Refugee Convention's nexus requirement in part as a mechanism to identify 'the most deserving as among the deserving'[50] in a world with insufficient capacity to accommodate all those with legitimate claims to fearing serious harm.[51]

Souter adds that within this prioritized group are those who are '*doubly* deserving' of asylum because they also have claims to 'reparative asylum specifically from a *particular* state'.[52] In reconceiving of asylum as reparation for historical harm, Souter offers an ethic of refugee protection based on diachronic, rather than only synchronic, notions of justice. Souter contends that under certain conditions, asylum can serve as an appropriate remedy by States that are causally responsible for harm leading to displacement. He admits that discerning causation and assigning State responsibility require a scalar approach, in which, for instance, 'an Iraqi refugee claiming asylum in the United States since its invasion appears to have a stronger reparative claim than a Rwandan seeking asylum in Belgium on account of its past colonial rule'.[53] But he posits nonetheless that reparative justice should be one amongst several considerations in prioritizing claims for refugee status.[54]

Despite their divergences in emphasis, these various accounts encapsulate the broader liberal internationalist view that claims to State sovereignty cannot pre-empt obligations deriving from ratified treaties, *jus cogens* norms, or international human rights law. But as Parekh highlights, discussion about the legal and ethical obligations of receiving States at their borders should not occlude an equally important aspect of refugee protection: upholding their dignity and autonomy.[55] In this vein, we turn to other perspectives that situate ethical obligations towards refugees as matters of respect for their human dignity and agency, and not only as forms of beneficence, remedial duty, or legal obligation on the part of States. We call these views the 'cosmopolitan ethics of refugee protection'.

[51] ibid 85.

[52] James Souter, 'Towards a Theory of Asylum as Reparation for Past Injustice' (2014) 62 Political Studies 326, 340.

[53] ibid 339.

[54] See Section 3.c of this chapter for further discussion. Note that postcolonial approaches to the ethics of refugee protection are not uniformly liberal internationalist. While Souter treats reparative justice as a mechanism to prioritize amongst those who meet the Refugee Convention's eligibility criteria for refugee status, other postcolonially oriented scholars deploy reparative justice to reject the legal distinction between refugees and other migrants entirely. See eg Tendayi E Achiume, 'Migration as Decolonization' (2019) 71 Stanford Law Review 1509.

[55] Serena Parekh, *Refugees and the Ethics of Forced Displacement* (Routledge 2017) 52.

3. Cosmopolitan Ethics of Refugee Protection

The cosmopolitan position pushes liberal internationalists beyond the perspective of the State, which, whether liberal or not, privileges an 'ontology of containment' that occludes the radical fluidity, historical variability, and interdependence of peoples, histories, cultures, and territories across borders. Cosmopolitanism proceeds from the premise that mobility is an anthropologically deep-seated drive of the human species, and that the regulation of human mobility through national borders is relatively recent in human history.[56]

The cosmopolitan view is not, however, a plea for a world without borders. To the contrary, cosmopolitans generally recognize that republics and democracies require jurisdictional boundaries.[57] In this aspect, cosmopolitanism in fact converges with liberal nationalists' emphasis on democratic self-determination, that is, to know in whose name the law is enacted and who is accountable for its enactment. But for cosmopolitans, these jurisdictional boundaries need not be coterminous with violently guarded territorial border regimes. If we shift our gaze below and above the level of the State, we begin to recognize various forms of interdependence amongst citizens and strangers at the level of municipalities, regions, borderlands, and transnational alliances.

While both liberal nationalists and internationalists treat migratory movements as matters to be regulated and governed, cosmopolitans seek to identify how, at the causal level, such movements express forms of structural dependence and interdependence amongst peoples. Cosmopolitans situate the roots of the ethical responsibilities we bear towards each other in the economic and political systems in which we are mutually implicated. Three versions of the cosmopolitan position have achieved prominence in the political–theoretic literature on refugee protection—what we call the 'agency-centric view', the 'power-centric view', and the 'postcolonial view'.

a. Agency-centric Views

Drawing on Arendt's insights, the 'agency-centric views' can be attributed to the work of several scholars, including Benhabib,[58] Gündoğdu, and Mann, amongst others. These views are grounded upon two interrelated claims. First, agency-oriented theorists argue

[56] For a political-theoretical discussion on the long-range history of migration, see eg Thomas Nail, *The Figure of the Migrant* (Stanford University Press 2015); Thomas Nail, *Theory of the Border* (OUP 2016).

[57] See Immanuel Kant, 'Perpetual Peace' in Hans Reiss (ed), Lewis White Beck (tr), *On History* (Library of Liberal Arts 1957). Kant criticizes the idea of a 'world State' and unbounded political communities.

[58] See Section 4 for a discussion of Benhabib's views on agency-centric cosmopolitanism.

that the tribulations suffered by refugees are irreducible to the specific harms that determine eligibility for refugee status. Rather, at the core of refugeehood is the loss of a 'world'—that is, following Arendt, the loss of membership in a political community where one is 'judged by one's actions and one's opinions'.[59] In deploying a conception of human personhood and dignity that is explicitly political, rather than legal–formal, agency-centric theorists emphasize the importance of restoring some form of political membership through the realization of the 'right to have rights'. Ethical obligations towards refugees are not exhausted by temporary protection but extend towards their integration into civil and political society.

Secondly, the agency-centric account holds that ethical responsibilities towards refugees are reducible neither to the legal obligations between States generated by international law, as asserted by legal positivists, nor to any obligations towards 'humanity as such', implied by an ontological account of human rights as pre-political and inalienable, as understood in natural rights theory.[60] While States and international institutions might be the formal adjudicators of rights claims, such claims are justified with reference to moral and political obligations amongst human beings that are irreducible to statist terms. The encounter between those who have rights and those who lack them is thus at the core of the ethics of refugee protection.

The agency-centric account is oriented around Arendt's insight that the legal-political institutionalization of international human rights has failed to meaningfully challenge the equation of the 'rights-bearer' with the citizen. As Gündoğdu elaborates, it is precisely when certain categories of migrants become *de facto* stateless—that is, when they can no longer fully avail themselves of the benefits of citizenship—that we can yet discern the degree to which the guarantee of human rights remains contingent upon citizenship. For Gündoğdu, however, this continued disjunction between 'man' and 'citizen'—traceable to the 1789 Declaration of the Rights of Man and Citizen—does not lead to the cynical view that human rights ought simply to be dismissed as 'logical inconsistencies, hypocritical gestures, or deceptive ploys'.[61] Rather, the political core of human rights becomes apparent and actionable only when we realize that specific human rights presuppose the more foundational 'right to have rights'—that is, the right to membership in a polity in which one's deeds and actions have significance. Because the predicament of the rightlessness of refugees reveals that human rights are not entailed in 'bare life', that is, in the *factum brutum* of human living, we begin to understand that rights must be enacted and demanded; and thus they must be understood as intrinsically political.

Gündoğdu characterizes politics as encompassing 'practices of enacting freedom understood as the capacity to begin something new and interrupt processes that were

[61] Ayten Gündoğdu, *Rightlessness in an Age of Rights: Hannah Arendt and the Contemporary Struggles of Migrants* (OUP 2015) 13.

taken to be automatic'.[62] Such practices build a shared world of understanding and establish a community of equals amongst 'human beings who are otherwise "different and unequal" '.[63] These politicizing practices that endow subjects with the 'right to have rights' lie in tension with anti-political impulses within the domain of what Arendt calls the 'social' and which 'reduce politics to an administration of life's necessities'.[64] Such anti-political impulses predominate in certain humanitarian approaches that treat refugees as speechless subjects[65] or destitute victims[66] and limit remedies to the temporary provision of their basic needs for survival.

At the same time, the language of human rights is deployed by migrants and refugees who paradoxically 'claim and exercise the rights that they are not fully authorized to claim and exercise'.[67] Through her account of the *sans-papiers* movement of undocumented migrants in France, Gündoğdu argues that migrants and refugees do not passively receive juridical determinations of the scope of their rights, but rather participate in 'political practices of founding human rights' through which they 'render their speech audible and intelligible, position themselves as political subjects capable of making rights claims, and establish the validity of these claims by wooing the consent of their interlocutors'.[68]

While Mann shares Gündoğdu's broadly Arendtian goal to recover refugee agency in the shaping of international law, he argues that the ethical core of human rights stems 'not from inclusion in particular communities but from the bare life of humans as such, as experienced by those of us who are bound by human rights law'.[69] The action of 'demanding consideration'[70] for oneself by 'putting oneself in the hands of'[71] an authority—of thrusting oneself upon sovereignty[72]—constitutes what Mann calls the fundamental 'right of encounter'.

Mann symbolizes the right of encounter through the figure of the 'universal boatperson'—that is, the refugee in distress who seeks assistance from a coastguard or navy agent at high seas outside of sovereign jurisdiction.[73] Mann treats the boatperson's encounter with the State as a 'litmus test for law' in determining whether any rights stem from bare life as such, beyond State authority, contractual obligation, and sovereign consent.[74] His answer is clear: even where sovereignty has no dominion, this encounter generates an obligation experienced existentially by both the boatperson and the State agent as an ethical imperative to protect. He argues that this imperative is the ontogenesis of international human rights law insofar as it generates rights and duties that cannot be derived from a positivist account that treats sovereignty as the cornerstone of

[62] ibid 56. [63] ibid. [64] ibid 58. [65] ibid 116.

[73] ibid 42. For Mann, the high seas serve as a 'global, ever-present state of nature' insofar as they are 'outside of all sovereign territories and free for the navigation of all'. The figure of the 'universal boatperson' is analogously tied to the image of the 'flagless vessel', which lies beyond the customary legal obligation of rescue.
[74] ibid 71–2.

international law.[75] Because refugees impose duties on States and citizens in exercising the right of encounter, 'making human rights claims remains a political action even if not engaged from a position of reason but responds to need, necessity, and fear'.[76]

For agency-centric theorists, the tension between the political and the anti-political potentialities of human rights law remains the site of hope: for Gündoğdu, because refugees do not take the denial of their rights as a limit on possibilities for political action, and for Mann, because refugees deploy novel means, including emerging technologies, to facilitate face-to-face encounters with 'rights-bearing' others despite deterrence efforts. Most importantly, for agency-centric theorists, the meaning of the law is always predicated on the broader political world. In this insight, there is both fragility and possibility.

b. Power-centric Views

The 'power-centric views' focus on a critique of governmentality[77] in the ethics of protection. While accepting the critique of legal-formalistic interpretations of human rights advanced by agency-centric theorists, the power-centric position assumes a much more cynical view of the insight that the meaning of human rights is fundamentally political. In this account, human rights become an instrument to further occlude the voices and actions of the vulnerable, rather than to engender new possibilities for the exercise of their agency. In refiguring refugees as mere victims, humanitarian programmes, drawing on the language of human rights, produce docile subjects whose inclusion is predicated on their depoliticization.

Power-oriented critics of human rights and humanitarian protection include, to name a few, Agamben, Moyn, Fassin, Rancière, and Ticktin. We briefly reconstruct the positions of Rancière and Fassin as representative of the broader power-centric view.

For Rancière, the discourse of human rights took a contradictory turn at the end of the twentieth century. While announcing themselves as the universal premise of global democracy following the collapse of the Soviet Union, human rights are increasingly revealed as the rights of victims, of 'those who were unable to enact any rights or even any claim in their name, so that eventually their rights had to be upheld by others'.[78] The universal rights of the human are transformed into the particular rights of the 'humanitarian' to intercede on behalf of the dispossessed. For Rancière,

[75] ibid 44–5. [76] ibid 101.

[77] See Michel Foucault, *Security, Territory, Population: Lectures at the Collège de France, 1977–1978* (Michel Senellart, François Ewald, and Alessandro Fontana eds, Graham Burchell tr, Picador 2009) 108. Foucault defines 'governmentality' in part as the 'ensemble formed by the institutions, procedures, analyses and reflections, calculations, and tactics that allow the exercise of this very specific, albeit very complex, power that has the population as its target, political economy as its major form of knowledge, and apparatuses of security as its essential technical instrument'.

[78] Jacques Rancière, 'Who Is the Subject of the Rights of Man?' (2004) 103 *South Atlantic Quarterly* 297, 298.

international human rights thus ushered in a new right of invasion through 'humanitarian interference'.[79]

While certain elements of Rancière's critique resemble the more political aspects of the agency-centric position, he departs from them in his account of what human rights have become in practice. For Rancière, instead of following a path of dissensus,[80] the institutionalization of human rights seeks *consensus*—that is, 'closing the spaces of dissensus by plugging the intervals and patching over the possible gaps between appearance and reality or law and fact'.[81] He claims that the turn towards 'consensus' in human rights law seeks to reify rights as attributes of 'real groups, attached to their identity and to the recognition of their place in the global population'.[82] In the guise of universalizing rights, consensus aims to legally formalize human rights, or to achieve the semblance of the 'identity of law and fact'.[83] For Rancière, refugees and others without effective State protection possess human rights only to the degree that they use them to resist their reduction to 'bare life'. There is no fundamental 'right to have rights' other than the one erected in oppositional struggle.

Fassin offers a related but more ethnographically rooted account of the perils of what he calls 'humanitarian reason', or the logic of power that 'governs precarious lives . . . that humanitarian government brings into existence by protecting and revealing them'.[84] At the broadest level, he claims that there has been a shift in State discourses from the political rights of precarious populations to their pain and misfortune, resulting in new requirements to expose 'suffering' to gain access to recognition and services.

Applying his critique to the asylum regime in France, Fassin argues that asylum authorities have progressively altered the 'site of veracity' of asylum adjudication since the 1970s. Although asylum seekers' narrative accounts of their flight were 'long the only evidence testifying to their story and justifying their request', the new regime casts suspicion on the evidentiary value of narrative testimony, instead focusing on claimants' bodies as the vehicles on which the veracity of their narratives is inscribed.[85] This change in the asylum system's 'truth regime' creates a new purview for medical-technocratic expert authority in the adjudication process to ascertain 'the scars left by the violence suffered'.[86] The truth of the expert supplants the truth of the claimant.

For Fassin, this increasing focus on the corporeality of asylum seekers both betrays the possibility anchored in the Refugee Convention of securing refugee status on the

[85] ibid 110. [86] ibid.

basis of a well-founded *fear* of persecution (even where actual persecution has not occurred) and neglects the formal characteristics of many instances of modern State-sponsored violence. '[B]y an ironic turn', he notes, 'it is at a moment when the practice of torture is developing toward increasingly invisible forms that a visibility of marks on the body is demanded to confirm that persecution did indeed take place'.[87] But the body often has little to say because expert 'torturers silence it'.[88]

Fassin's argument parallels Rancière's in suggesting that the recent technocratization of adjudicating refugees' claims masks new modalities of State power that aim to depoliticize the experiences of 'precarious subjects' (borrowing from Butler)[89] as a precondition for recognition. If Rancière highlights that the body is already political, and never simply 'bare life', then Fassin elaborates the tactics deployed by States to *actually* depoliticize the bodies of precarious subjects by refiguring them as independent sites of truth to be decoded by experts. While remaining deeply sceptical of institutional remedies and other programmatic solutions, adherents of the power-centric position hint at an oppositional potential for human rights as a language of political mobilization and resistance.

c. Postcolonial Views

Drawing on the experiences of formerly colonized nations in the Global South, postcolonial theorists rewrite the history of international humanitarian and human rights law to expose how these ostensibly universalistic frameworks reflect the partial interests of former colonial powers in Europe and North America.[90] Some postcolonial theorists argue that key concepts underlying international law, including the notion of 'humanity', as formulated by European Enlightenment thinkers such as Immanuel Kant, cannot be detached from the history of Western imperial expansion in Asia, Africa, and Latin America.[91]

In bringing these theoretical claims to bear on international refugee law, postcolonial theorists argue that the 1967 Protocol's universalization of refugee status beyond Europe, and more importantly, the removal of its temporal limitation, was insufficient to mitigate the deep Eurocentrism in the nexus requirements attached to the concept of persecution in the original Refugee Convention.[92] Even proponents of the universal relevance of the Refugee Convention, such as Hathaway, often concede that defending the treaty requires assuming States' willingness to continually stretch the scope of the five

enumerated forms of civil–political status to match 'contemporary realities' beyond Europe, such as the prevalance of generalized conflict without specific targets of individualized harm.[93] It is clear, however, that States of asylum in the Global North do not universally accept such interpretive flexibility.

In recognition of the limited scope of the Refugee Convention, several States have adopted supplementary legal instruments to broaden the scope of the refugee definition, such as the OAU Convention in Africa and the Cartagena Declaration covering Central America, Mexico, and Panama. Despite these legal advances, the fact that 84 per cent of refugees are hosted in developing countries[94] reveals that the globalization of refugee law has not been accompanied by a corresponding globalization of responsibilities for the fate of the world's refugees. While neighbouring countries in the Global South bear a disproportionate responsibility for accommodating the vast majority of refugees,[95] the territorial lines between these countries were in many cases drawn by former colonial powers with little regard for the daily existence and well-being of the populations concerned.[96] In these regions, it is frequently difficult to distinguish State failure, official corruption, and grinding poverty, from a well-founded fear of persecution.

In view of these ironies, some postcolonial scholars engage in a more radical critique, interrogating the distinction between refugees and migrants altogether. Achiume, for instance, argues that the treatment of refugees as an exceptional group worthy of admission in an otherwise closed-border State system is undergirded by a 'neocolonial' conception of State sovereignty as the 'right to exclude foreigners and nonnationals'.[97]

For Achiume, the notion of sovereignty as the 'right to exclude' occludes the fact that the forms of globalization structuring the contemporary world stem from nineteenth-century colonial institutions designed to afford political and economic advantages, such as freedom of movement, to colonizing nations, while systematically denying such advantages to colonized populations.[98] These asymmetrical global associations were not only 'in significant part condoned by the European international law in force at the time', but were further ossified by international law at the end of empire through the pairing of 'formal political independence with structural political and economic subordination to First World nation-states'.[99]

Against this regime of 'quasi-sovereignty', Achiume contends that '[p]olitical self-determination requires economic agency',[100] and that such agency is predicated on

[93] Hathaway (n 50) 87. Hathaway also acknowledges that his defence of the Refugee Convention assumes the malleability of the membership of a particular social group category to track non-enumerated forms of disenfranchisement 'on such bases as sex, sexual orientation, age, and disability'.

having an equal say in the 'effective collective vehicles of self-determination presiding over the field of neocolonial empire'.[101] According to Achiume, because neocolonial dynamics ensure that these 'vehicles' of self-determination remain 'First World' nation-States, she claims that States in the Global North have 'no right to exclude Third World persons',[102] including migrants of all forms, insofar as they are committed to universal political equality.

Echoing other postcolonial critics, Achiume's call for 'migration as decolonization' advocates a radical departure from theories of sovereignty that authorize migration only as occasional deviations from a territorial conception of sovereign self-determination premised on the 'right to exclude'.

4. Towards an Ethical Reorientation

Counterposing the positions discussed in this chapter—liberal nationalism, liberal internationalism, and the three varieties of cosmopolitanism—reveals divergences along several key axes, such as territorial sovereignty versus international obligation, legal formalism versus political action, and victimhood versus agency. These various commitments compete for preponderance in defining the source and scope of our obligations towards those displaced across international borders. One overarching tension, however, encapsulates the rest: *the legal versus the political*.

Liberal nationalists argue that positive domestic law represents the political will of a bounded *demos*, and that international law lacks legitimacy when it is unchained from mechanisms of democratic accountability. We must therefore look first and foremost to our legislatures to define our responsibilities towards non-citizen 'others'. Liberal internationalists, in contrast, contend that respect for the territoriality underlying democratic self-determination has always been premised on mutual recognition of sovereignty in an international system. As such, international positive law is equally a precondition for democratic politics. Our obligations towards refugees must thus be situated in the context of international treaties.

Agency-oriented cosmopolitans shift the register of discussion, arguing that law at all levels—local, national, and international—is always supervenient on a broader political world that provides the hermeneutic horizon for legal interpretation. In this view, we must turn towards refugees themselves to enact the obligations that we owe them, and not to the law alone, although we are jointly responsible for their institutionalization. While power-centric cosmopolitans loosely share the premise that duties stem from political encounters, they add the major caveat that the law mirrors and further entrenches the power structures that configure the larger political world,

[101] ibid 1548. [102] ibid 1549.

despite its purported neutrality and universalism. They join postcolonial theorists in arguing that the obligation to protect the 'other' cannot be cleanly separated from the impulse to dominate that 'other'. Protection must be wrested through political struggle.

Above all, what is at stake in this debate is whether the source of our responsibilities towards 'strangers among us' ought to be derived from *positive law*, as defined either by a State or by international declarations and treaties, or from *political praxis*—that is, from the declarations, actions, and demands of refugees themselves. Of course, these are not mutually exclusive possibilities. Indeed, our main contention is that the duality between the legal and the political is much more porous than each of these positions, taken in isolation, presupposes. Drawing on Benhabib's concept of 'jurisgenerative politics', we argue that a responsible ethics of refugee protection must look both to the law and to political praxis to elaborate our obligations towards those forcibly displaced across borders without effective State protection.

As Cover contends, there is a fundamental disjunction between law as *power* and law as *meaning*. While law as power flattens competing normativities into a singular authoritative interpretation backed by coercive force, the 'uncontrolled character' of law as meaning 'exercises a destabilizing influence upon power. Precepts must "have meaning", but they necessarily borrow it from materials created by social activity that is not subject to the strictures of provenance that characterize what we call formal law-making'.[103] Benhabib elaborates that the:

> [l]aw's normativity does not consist in the grounds of its formal validity, i.e. legality, alone. Law can also structure an extra-legal normative universe by developing new vocabularies for public claim-making, by encouraging new forms of subjectivity to engage with the public sphere, and by interjecting existing relations of power with forms of justice to come—*à venir*, in Derrida's terms.[104]

The *validity* of the law is not limited to its *facticity* alone as determined in juridical interpretation and enforced by coercive agencies. Just as the law is amenable to the tactics of humanitarian reason that depoliticize the asylum claim-making process, it can equally serve as a modality of 'dissensus' for the mobilization of the *sans papiers* in France, as Gündoğdu demonstrates.[105] Formal legal institutions alone provide no ' "originary" source of meaning, or an "original" to which all subsequent forms must conform'.[106] Legal norms transcend their own formalism as they are adopted in political struggles.

We can conceptualize this bivalence of the law through the notion of *democratic iterations*. If we accept the premise that the law has no monopoly on the spectrum of its

[103] Robert Cover, 'Forward: *Nomos* and Narrative' (1983) 97 Harvard Law Review 4, 18.

[106] Seyla Benhabib, 'Democratic Iterations: The Local, the National, and the Global' in Seyla Benhabib and Robert Post (eds), *Another Cosmopolitanism* (OUP 2006) 48.

own possible meanings in the social world, then we begin to discern that every invocation of a legal norm in a political struggle is a modification of that norm in view of its contextual function. In other words, each iteration serves to resignify the norm in light of the situation in which it is deployed.[107] Such iterations are not mere deviations from an originary meaning, but rather enhance and transform the content of the norm to the point that 'when the creative appropriation of that authoritative original ceases or stops making sense, then the original loses its authority on us as well'.[108] Each iteration is thus at the 'same time its dissolution as the original and its preservation through its continuous deployment'.[109]

As Gündoğdu and Mann warn as well, because the law's meaning is contingent and ever-shifting, it is also fragile. If we can envision a politics of meaning-making that seizes the language of the law to expand protection and political agency to the rightless amongst us—that is, a *jurisgenerative politics*—then we can equally discern, with Rancière and Fassin, how democratic iterations can also be used to yield 'sterile, legalistic, or populistic'[110] readings of the law that curtail these emancipatory possibilities. Following Cover, we refer to these possibilities as *jurispathic*. There are no guarantees in the iterative process; the possibility of jurisgenerativity offers no sure trajectory towards a human rights utopia.

If power-centric cosmopolitans neglect to conceptualize fully the mediated relationship between law and politics, then liberal nationalists fail to acknowledge that a similar mediation can take place between international law and conceptions of territorial sovereignty. To the extent that States convert their commitments in ratified treaties into domestic law, they undertake an iterative process that interprets and contextualizes these commitments. In such democratic iterations, cosmopolitan norms are reconfigured through the pre-existing body of law, modifying the content of the norms themselves. This recursivity forces cosmopolitan imperatives into mediation with the will of democratic majorities in a mutually reconstitutive process.

Of course, the possibility of jurispathic outcomes looms ever large in this process. As the recent populist turn towards a 'new sovereigntism' in the Global North makes clear, there are many possibilities for States to exploit the gaps between national and international law to justify refugee containment, deportation, and non-entrée policies that fall only trivially short of *refoulement*—as we have witnessed with the recent EU deals with Turkey and Libya.[111] In recent years, the United States has even directly abrogated the norm of *non-refoulement* by criminalizing the entry of refugees through 'non-designated ports', by pushing them back into Mexican territory, and by asserting

[107] ibid. [108] ibid. [109] ibid. [110] ibid 50.

[111] See eg Liz Fekete, 'Migrants, Borders and the Criminalisation of Solidarity in the EU' (2018) 59 Race & Class 65. See also the texts of the EU agreement with Turkey and the EU-endorsed bilateral agreement between Italy and Libya: 'EU–Turkey Statement' (*European Council*, 18 March 2016); 'Memorandum of Understanding on Cooperation in the Fields of Development, the Fight against Illegal Immigration, Human Trafficking and Fuel Smuggling and on Reinforcing the Security of Borders between the State of Libya and the Italian Republic' (2 February 2017).

that refugees passing through 'safe third countries' have no right to seek asylum in the US—a claim contradicted by the Refugee Convention.[112]

Locating our obligations towards refugees in a jurisgenerative politics—between the legal and political—is also important for another reason. As Benhabib argues, a purely political conception of human rights 'runs the risk of burdening the most vulnerable with their own defense as well as being voluntaristic in making the entitlement to rights dependent upon the capacity to assert them as well as to have them recognized'.[113] The claim to rights, in other words, 'cannot rest on the *ability* to make others recognize them who may or may not be inclined to do so'.[114] This critique applies equally to strong versions of the agency-centric position and the power-centric cosmopolitan position.

At the same time, a purely juridical conception of rights, as reflected in highly formalistic versions of both the liberal nationalist and internationalist positions, neglects that:

> legal regimes create further differentiations and distinctions that trap individuals in conditions of *administrative dependency*. This aspect of *legal governmentality*, which generates such distinctions as among displaced persons, refugees in protracted situations, and stateless persons, is a double-edged sword, often robbing individuals of the autonomy, dignity, and initiative that their protection of human rights was intended to guarantee in the first place.[115]

In defining our duty to offer protection to refugees and others without effective State protection, we must therefore balance the *specificity* of the law with the *generality* of political praxis. We must recognize that international refugee and human rights law alone provide no remedy for the victims of global neoliberalism, including those fleeing abject poverty and natural disasters. Likewise, we must remain attentive to the perverse incentives that refugee law generates for States to keep refugees in protracted or permanent precarity, to disincentivize flight on the part of others, and to prevent extending citizenship to those on their territory.

We must also acknowledge that in broadening the scope of what might be a legitimate claim for protection, certain cosmopolitan views, including those rooted in postcolonial theory, risk creating a framework in which normative questions about immigration policy writ large are elided with questions about the treatment of displaced persons more specifically. In doing so, these positions risk inadvertently producing an ethic of responsibility towards a unitary migrant 'other' that might ultimately erode, rather than expand, States' obligations towards refugees. We must be equally wary of the dangers of

[112] See eg Andrea Silva and Maura I Toro-Morn, 'The Paradox of State Control in the Global Age of Migrations: The 2018 Central American Immigrant Caravan' in Cara E Rabe-Hemp and Nancy S Lind (eds), *Political Authority, Social Control and Public Policy* (Emerald Publishing Limited 2019). For an extended discussion, see Seyla Benhabib, 'The End of the 1951 Convention? Dilemmas of Sovereignty, Territoriality and Human Rights' (2020) 2 Jus Cogens: A Critical Journal of Philosophy of Law and Politics 75 (forthcoming).

[113] Benhabib (n 79) 120. [114] ibid. [115] ibid 114.

making our duties towards refugees contingent on their ability to compel us to uphold their rights.

Our contention, at its core, is that we must resist dichotomous approaches to the ethics of refugee protection. The notion of jurisgenerativity offers one strategy to negotiate the line between the critique of humanitarian reason and the institutionalization of rights, between the refugee as an 'abject subject of compassion and administrative logic'[116] and as a subject capable of agentic action, between international law and political mobilization in solidarity with refugees. There are, no doubt, other such possibilities. Above all, we must give up neither on law nor on politics in defining the scope of refugee protection.

[116] ibid 121.

CHAPTER 7

REFUGEES AS MIGRANTS

IDIL ATAK AND FRANÇOIS CRÉPEAU*

There is no universally agreed definition of an 'international migrant'. According to the UN's Recommendations on Statistics of International Migration of 1998, a 'long-term migrant'[1] is a person who is outside the territory of the State of which they are nationals or citizens and who has resided in a foreign country for more than one year, irrespective of the causes, voluntary or involuntary, and the means, regular or irregular, used to migrate.[2] Similarly, Eurostat's definition emphasizes the length of at least 12 months' residence in Europe.[3]

The International Organization for Migration suggests a more open working definition, which seems nowadays more appropriate:

> An umbrella term, not defined under international law, reflecting the common lay understanding of a person who moves away from his or her place of usual residence, whether within a country or across an international border, temporarily or permanently, and for a variety of reasons. The term includes a number of well-defined legal categories of people, such as migrant workers; persons whose particular types of movements are legally defined, such as smuggled migrants; as well as those whose status or means of movement are not specifically defined under international law, such as international students.[4]

* The authors thank Lorielle Giffin for her research assistance.

1 This article deals with international migrants who have crossed an international border, as opposed to domestic migrants or internally displaced persons. However, for practical reasons, the article uses the generic term 'migrant'. 4 International Organization for Migration, 'Glossary on Migration', IML Series No 34 (2019) 130.

Many other organizations accept a similarly broad definition. According to the International Labour Office's Department of Statistics, international migrants are 'persons who are usual residents of that country and who are citizens of another country (foreign population) or whose place of birth is located in another country (foreign born population)'.[5] The International Federation of Red Cross and Red Crescent Societies underlines that migration can be forced or voluntary, but most of the time a combination of choices and constraints is involved.[6] Interestingly, it notes an intent to live abroad for an extended period of time, whereas the motivation or length of stay are not considered defining elements of migration in most other contexts. For instance, in the International Convention on the Protection of All Migrant Workers and Members of their Families, 'the term "migrant worker" refers to a person who is to be engaged, is engaged or has been engaged in a remunerated activity in a State of which he or she is not a national'.[7]

Indeed, the term 'migrant' covers a broad spectrum of people, from the tourist to the survivor of human trafficking. On this spectrum, a refugee is a migrant. However, there has been a long-standing debate as to whether refugees should be portrayed as migrants.[8] Several organizations, refugee advocates, and scholars argue for a clear line between 'migrants' and 'refugees', as a means of protecting the refugee regime.[9] They point to the inherently distinct motivations driving refugee movements compared to other types of migration, as well as to the specific normative and institutional framework for refugee protection.[10] Thus, former Assistant High Commissioner for Refugees (Protection), Erika Feller, argued that it was dangerous, and detrimental to refugee protection, to confuse the two groups, and that as the line between 'migrant' and 'refugee' blurs, so does the distinction between migration *control* and refugee *protection*.[11]

[11] Erika Feller, 'Refugees Are Not Migrants' (2005) 24(4) RSQ 27, 28.

More recently, the topic sparked a public controversy at the peak of the so-called European 'migration crisis' in 2015, when more than a million asylum seekers, mostly from war-torn Syria, reached Europe. It began with the announcement by the news website *Al Jazeera* that it would no longer refer to 'migrants' in the Mediterranean, but to 'refugees', where appropriate.[12] It was contended that 'migrant' is a term that strips suffering people of their voice and undermines the rights of those fleeing violence and conflict.[13] This was followed by a heated media discussion about the use of appropriate terminology and the potential impact on public responses to refugees.[14] UNHCR warned against 'conflating refugees and migrants', noting that this could 'have serious consequences for the lives and safety of refugees . . . [by] politiciz[ing] the debate and undermin[ing] public support for refugees and the institution of asylum'.[15] Efforts to keep refugees distinct from migrants were also prominent in the discussions leading to the adoption in 2018 of the Global Compact on Refugees and the Global Compact for Migration.

We argue that refugees are indeed migrants. We underscore the overlap between these two categories in a global context that is characterized by restricted avenues for legal migration, limited durable solutions for refugees, and punitive policies towards asylum seekers. In so doing, we do not deny that refugees are special, nor do we question the international refugee protection regime. On the contrary, the current institutional and normative refugee protection framework should be supported and the specific rights and entitlements for refugees set forth in the Refugee Convention and Protocol should be implemented and reinforced.

Our aim is to show why the forced/voluntary and political/economic binaries that underlie the refugee/migrant distinction are questionable. We contend that conceptualizing refugees as migrants does not undermine the specific normative and institutional framework for refugee protection. Rather, it further promotes refugees' access to asylum and safety.

Refugees, like all migrants, are already protected by international human rights law, which has proven effective in addressing many intersecting factors (such as age, gender, religion, ethnicity, and nationality) that exacerbate refugees' vulnerability. As well, insisting on a migrant/refugee dichotomy leads many to believe that refugees need protection while migrants do not, a belief that is false: refugees may singularly need 'international protection' as conceptualized in the Refugee Convention, but all migrants—indeed all human beings—need the protection of States against violations of their human rights.

[15] Edwards (n 9).

Our goal is to plead for a global mobility regime that would ultimately lead to the better protection of rights for all those on the move, including refugees. International migration law is still nascent and fragmented, but the Global Compact for Migration constitutes a major political step towards structuring States' responses more coherently. One could cautiously suggest that, just as the UDHR created the post-1948 momentum for numerous subsequent human rights instruments and institutions, so might the Global Compact have a similarly catalytic role over the coming decades.

The first section of this chapter examines the literature on the refugee/migrant distinction, and whether upholding it is accurate and justifiable. It highlights the increasingly overlapping and interconnected motivations and contexts driving forced migration. Section 2 focuses on the mounting barriers refugees face to reach safety, noting that difficulties in finding durable solutions may result in secondary movements, in turn further blurring the distinction between migrants and refugees in political and media discourse. Section 3 explores the avenues to safeguarding and promoting access to asylum and refugee rights. It explains why the special status of refugees in international law does not guarantee their effective protection (given the absence of durable solutions for so many). Section 4 contends that migrants (including refugees) benefit from the international human rights regime, which sometimes offers a more robust protection to refugees than the international refugee regime. Section 5 articulates the role that freedom of movement should play in protecting the rights of all migrants (including refugees). The chapter concludes with a plea for increased facilitated mobility for all, as championed by the Global Compact for Migration.

1. The Problematic Refugee/ Migrant Binary

There are several reasons why refugees are special compared to other categories of migrants. First, the refugee protection regime is premised on forced,[16] rather than voluntary,[17] movement: a refugee is someone with a well-founded fear of being persecuted for at least one of five enumerated grounds. Secondly, as Carens argues,—from an ethical perspective, democratic States should admit refugees on the basis of 'causal connection, humanitarian concerns and the normative supposition of the state system', in the sense that 'because the state system assigns people to states, states collectively have a responsibility to help those for whom this assignment is disastrous'.[18]

[18] Joseph H Carens, *The Ethics of Immigration* (OUP 2013) 195–6.

Gibney suggests that refugees have a stronger moral claim than economic migrants because '[i]f economic migrants are refused entry, they are forced to remain in a situation of poverty; if refugees are turned away, their very lives may well be on the line'.[19] Moore agrees that concern for basic rights justifies the obligations that different political communities have to refugees. If people's lives and liberties are threatened, they should be entitled to a safe haven.[20]

The distinctive conceptual features of the refugee have been debated and sometimes revised and contested. An example is the additional grounds for protection in certain regional refugee protection instruments, such as the OAU Convention and the Cartagena Declaration.[21] The former was adopted during a period of violent struggle for self-determination and national development in Africa,[22] and as a result, its refugee definition includes people fleeing 'external aggression, occupation, foreign domination or events seriously disturbing public order'.[23] In a similar vein, the Central American political situation in the 1980s informed the extension of the refugee definition in the Cartagena Declaration to people 'fleeing generalized violence, foreign aggression, internal conflicts, massive violation of human rights or other circumstances which have seriously disturbed public order'.[24] Shacknove notes that the OAU definition of refugee '[r]ecognizes, as the UN [Refugee Convention] definition does not, that the normal bond between the citizen and the state can be severed in diverse ways, persecution being but one'.[25]

Similarly, the categorical distinction between forced and voluntary migration has been widely contested. De Genova, Mezzadra, and Pickles hold that this clear-cut distinction is empirically untenable, as the motivations for movement are always mixed and cannot be encapsulated in such simple dichotomies.[26] In particular, it has been argued that all migration involves both choices and constraints. Even refugees may have a degree of control over their destination and the means they choose to reach it.[27] As well, it may at times be very difficult to distinguish between voluntary and forced migrants:

> voluntary migrants may feel compelled to seek new homes because of pressing problems at home; forced migrants may choose a particular refuge because of family and community ties or economic opportunities. Moreover, one form of migration often leads to another. Forced migrants who settle in a new country may then bring family members to join them.[28]

This difficulty was acknowledged in the 2016 New York Declaration for Refugees and Migrants[29]—a not insignificant point given that the Declaration was, in part, spurred on by the dramatic movement of refugees across Europe in 2015–16, which encouraged States to seek greater coordination on migration and asylum.[30]

It is noteworthy that the current global context differs greatly from that which gave rise to the contemporary refugee regime and the Refugee Convention, in particular, which arguably conceived of refugees as 'products of oppressive, totalitarian regimes in which the normal responsibilities of a State to its citizens were deliberately and directly violated'.[31] Today, often interrelated factors compound the blurring of the line between the economic and political motivations to leave one's country. Forced migration linked to armed conflicts, political unrest, and undemocratic societies has increased considerably in the past few decades, further exacerbated by climate change and struggles for scarce resources.[32] According to UNHCR, 70.8 million people were forcibly displaced in 2018 compared to 42 million a decade ago.[33] While persecution, conflict, violence, and human rights violations continue to uproot people from their homes, conflicts (such as those in Syria and Afghanistan), which have caused large refugee outflows, are lasting longer, pushing the number of refugees in the world steadily upward.

Castles underlines that forced migration is linked to the globalization that created 'a system of selective inclusion and exclusion of specific areas and groups'.[34] Bivand and Oeppen likewise stress the interconnectedness of factors such as poverty, corruption, and political violence.[35] Betts suggests that 'so-called slow-onset environmental displacement is generally based on the complex interaction of the environment with other factors notably, livelihoods and state fragility',[36] and McAdam remarks that although international refugee law may apply to people displaced by the impacts of climate change, it is generally an inappropriate normative framework for responding to the needs of such people.[37]

Thus, voluntary/forced and economic/political binaries that underlie the Refugee Convention do not offer adequate explanatory frameworks for those who leave their homes on account of extreme poverty created by protracted conflict or oppressive governments or because of environmental or climate-related factors—and nor do they reflect migrants' personal experiences of constraints and choices.[38] Against this background, some scholars question the ethical permissibility of treating refugees as a distinct category from migrants. Kukathas, for instance, contends that 'making refugees special neither makes sense conceptually, nor looks possible practically on the evidence we have to date'.[39]

The controversy about voluntary/forced migration shows how these categories are malleable. Some States' refugee jurisprudence has been liberal. As noted by Hathaway, decision-makers in some Global North countries have increasingly recognized that threats to core social and economic rights constitute persecution, in the sense that they amount to 'sustained or systemic violation of basic human rights demonstrative of a failure of state protection'.[40] Despite UNHCR's objection to conflating migrants with refugees, its own mandate has shown remarkable adaptability in the face of this reality. As the number of forced migrants has steadily increased globally, so have the persons of concern to UNHCR whose mandate now comprises, in addition to refugees, groups such as returnees, stateless persons, internally displaced persons, and people displaced by disasters. These changes have also impacted the terminology employed by UNHCR. Crisp noted in 2009 that, from the mid-1990s to the mid-2000s, the refugee concept was progressively replaced by the notion of 'persons of concern to UNHCR'. UNHCR's website now refers to 'refugees, stateless persons, IDPs and other persons of concern'.[41]

States have instrumentalized the refugee/migrant dichotomy to stem unwanted migration. Many have rhetorically recognized their obligations towards refugees, while denying any rights to 'illegal aliens', a category in which asylum seekers are too often included. Moreover, refugees in comparable situations may receive radically different treatment in different contexts. For example, hundreds of thousands of North Korean asylum seekers who fled into China since 1995 have been labelled 'illegal economic migrants' by the Chinese government, which has refused to assess their refugee claims and forcibly repatriated many to North Korea.[42] By contrast, millions of Venezuelans

who have fled their country for similar reasons have been welcomed in neighbouring Latin American countries, with Colombia accounting for some 1.3 million, followed by Peru with 768,000 in 2019.[43] Interestingly, Latin American countries welcomed all persons fleeing Venezuela, irrespective of their eventual status as refugee or migrant. The so-called Quito Process includes mechanisms for coordinating their response and facilitating the legal, social, and economic inclusion of these Venezuelan citizens, refugees and migrants alike.[44] This exemplifies how in some cases States may overlook the refugee/migrant binary. After all, they have a sovereign right to decide who can enter and reside on their territory.

In other cases, States simply choose to ignore the special treatment owed to refugees. The travel bans issued by US President Donald Trump is an example of an arbitrary political decision that indiscriminately targets all migrants (including refugees).[45] Overall, then, the binary distinguishing voluntary/economic migration from forced/political displacement is very unsatisfactory at a conceptual level, and probably not an effective practical tool to best advance refugee rights.

2. The Voluntary/Forced Migration Binary and the Mounting Barriers Refugees Face to Reach Safety

Since the 1980s, a defining feature of the global migration context has been States' efforts to stem unwanted migration. Not only has legal immigration become more difficult and increasingly limited to the privileged few,[46] but States have also implemented a containment strategy through a range of preventative and deterrent policies.[47]

Facilitated mobility was the trend until the oil crises of the late 1970s, when many States in the Global North attempted to close their borders to labour migration, thus spurring a considerable increase in asylum applications and the appearance of the

expression 'asylum seeker'.[48] Until then, many of those who would have qualified as refugees instead came as workers and settled in their host country with their family, thanks to a residence visa and a work permit.[49]

States often consider undocumented people on the move to be 'irregular economic migrants' and a threat to their sovereignty and security.[50] This approach has been used to justify the tightening of the criteria for granting refugee status in many destination countries with the pretext of deterring 'abuse' and reducing the 'burden' of 'manifestly unfounded' asylum claims.[51] For instance, under the Dublin regime, asylum seekers must have their application for refugee status processed by the State that is responsible for their entry into the European Union (EU). In most cases, this is the country responsible for the external European border crossed by the asylum seeker. During the 'migration crisis' of 2015–16, the Dublin system was completely overwhelmed, and, given the reticence of EU States to accept refugees for resettlement from the main EU entry points (Italy and Greece), neither of these two countries had any incentive to ensure the efficient operation of the Dublin system.[52]

Considering the administrative difficulties, financial cost, and political repercussions of detecting, detaining, and deporting undocumented migrants (including asylum seekers), the phenomenon of externalization of migration control has become widespread.[53] What's more, destination countries increasingly cooperate with source and transit countries to enable the latter to efficiently control their borders and contain asylum seekers. As Hathaway has noted, 'if there has been a single overarching trend in refugee protection over the last decade or so, it has been the official drive to rein-in, to control, to constrain, to render orderly and hence manageable the arrival of refugees. The goal has been to render the refugee as much a migrant as possible.'[54]

The concept of 'precarious migrants', developed by Goldring and Landolt in the Canadian context,[55] refers to authorized and unauthorized forms of migration that are

legally produced. Precarious migrants, including asylum seekers, share a precarity[56] rooted in conditionality of presence in the host country and access to entitlements. The concept underscores the non-linear and unpredictable migration trajectory experienced by some migrants, such as asylum seekers, making their vulnerability to rights violations and exploitation pervasive. De Genova, Mezzadra, and Pickles suggest that the present refugee protection regime produces more rejected refugees than ones with 'status', and effectively intensifies the precarious existence for many, while offering protection to only a few.[57]

As stated above, some of these policies have proven to be counterproductive. It should not come as a surprise that the number of asylum seekers has increased steadily in the past decades: worldwide, there were 827,000 people awaiting a decision on their application for asylum in 2008, and this number reached 3.5 million in 2018.[58] There is evidence that many refugees choose to remain in an undocumented status rather than risk applying for asylum in those countries where recognition rates are particularly low.[59] Similarly, obstacles like truncated timelines to lodge and/or examine refugee claims may create a disincentive for asylum seekers to make their claim upon arrival in the country of asylum: this can result in individuals preferring to remain undocumented until they compile evidence needed to support their claim, although, in some States, this may mean that they are precluded from applying for asylum at a later stage.[60]

3. The Limits of Durable Solutions for Refugees and their Consequences

Another defining feature of the global migration regime has been the limited nature of durable solutions for refugees. Voluntary repatriation to the country of origin has been constrained considerably by the lack of safety and ongoing political instability in major refugee-producing countries like Afghanistan, Syria, and South Sudan.[61] Similarly,

[56] Contemporary scholarship has developed a distinction between precarity and precariousness, see eg Sharryn Kasmir, 'Precarity', *The Cambridge Encyclopedia of Anthropology* <https://www.anthroencyclopedia.com/entry/precarity> accessed 30 October 2019.

resettlement places for refugees remain few compared to need.[62] Acts of leadership, such as Germany taking in more than a million refugees during the 2015–16 'migration crisis', and Canada's special intake of more than 45,000 (mostly Syrian) refugees in 2015–17, have been the exception rather than the rule.

Against this backdrop, there has been mounting pressure on so-called first countries of asylum and transit countries to redouble efforts to locally integrate the refugees they are already hosting. Today, developing regions host 85 per cent of the refugees under UNHCR's mandate.[63]

Unsurprisingly, many refugees do not see a future for themselves in first countries of asylum or transit countries, given scarce livelihood opportunities, political and economic pressures, discrimination, and a lack of access to rights or to citizenship. This is why some move onwards in search of protection.[64] Whether such secondary movement should be seen as a continuation of the original journey or a separate migration experience is debatable. Crawley and Skleparis see it as 'a separate process driven by its own motivations, decision-making, planning and aspirations'.[65] In contrast, UNHCR emphasizes 'the wider factors at play' that push refugees to move onward, such as lack of comprehensive solutions, and barriers to access to asylum procedures in host countries.[66] Interviews with refugees in Greece and Turkey led Crawley and Skleparis to note that 'at times in their lives, some of our Afghan respondents were 'refugees' fleeing conflict, at others they were 'migrants' looking to improve their economic situation, albeit in the context of discrimination'.[67] This provides a perfect illustration of how individuals can move between various legal and administrative categories of migrants (including refugees) over space and time, in particular due to complex and conflicting State policies.

Secondary movements have become a major concern for policymakers in the Global North. The Comprehensive Refugee Response Framework (CRRF), annexed to the 2016 New York Declaration and reiterated in the Global Compact on Refugees, encourages States to regulate refugees' onward movement and explore complementary pathways to protection. These include humanitarian visas or corridors, and other humanitarian

[62] UNHCR, 'Global Trends. Forced Displacement in 2017' (2018) <https://www.unhcr.org/globaltrends2017/> accessed 1 November 2019. admission programmes, such as labour mobility opportunities for refugees.[68] As scholars have noted, (temporary) labour migration is a possible fourth 'durable solution', which can enable refugees to lead more dignified and self-sustained lives, particularly in situations of protracted forced displacement.[69]

The CRRF emphasizes the importance of refugees' economic and social inclusion in their host countries as an essential step towards long-term solutions. The focus is on empowering refugees through building human capital and transferable skills, with the involvement of the private sector and the World Bank, as well as new innovative financial mechanisms.[70] This echoes calls by researchers and international organizations in favour of a 'bottom-up' approach whereby refugees, as social innovators, engage in problem-solving and create opportunities for themselves and their communities. Key elements of a positive enabling environment include the right to work, freedom of movement, access to education, good infrastructure, banking and credit facilities, and transnational networks.[71]

Historical precedents inform these discussions and illuminate how mobility is central to durable solutions. When the international refugee protection regime was first established in the 1920s, refugees were considered migrants. The Nansen Passport, a refugee travel document first introduced in 1922, was intended to facilitate refugees' onward movement and through this, their access to labour markets. Long contends that the approach to refugee protection in the 1920s was centred on facilitating individual freedom of movement as a form of burden-sharing.[72] Bivand and Oeppen remark that some Pakistani participants in their research refused to be classified as either refugees or economic migrants.[73] Likewise, McAdam's empirical research reveals that those who may be displaced due to environmental or climate-related factors in Tuvalu and Kiribati do not want to be categorized as 'refugees fleeing from their own government, perceiving them as passive victims, waiting helplessly in camps and relying on handouts, with no prospects for the future'.[74] In this sense, conceptualizing refugees as migrants may acknowledge the desire of most refugees to establish themselves in a country where they can create a future for themselves and their family, and where they may thrive thanks to their economic and other skills—a desire which they share with all migrants.

The downside of treating refugees as migrants is that it may lead State authorities and opinion makers to downplay the distinctive tenets of the Refugee Convention, and thus the States' specific obligations to refugees. A focus on refugees as agents of economic development, rather than as individuals in need of international protection, may also push States to curtail their responsibilities to address the specific needs of vulnerable groups. In the past, some States have screened out 'non-preferred' classes of refugees or refrained from resettling those who are sick, old, or impaired.[75] Unless accompanied by the effective enforcement of civil, social, and economic rights, there is also a risk that refugees could be turned into a cheap workforce. International human rights law, more than the Refugee Convention, plays an important role in this respect.

4. International Human Rights Law and the Protection of all Migrants (including Refugees)

The Refugee Convention sets out a range of fundamental rights and freedoms in articles 2 to 34, and 'refugees become entitled to an expanding array of rights as their relationship with the asylum State deepens'.[76] However, it has been criticized for being State-centric in the sense that it represents undertakings and obligations, accepted between the Contracting States, to respect, protect, or accord certain rights and benefits,[77] and it does not impose requirements to establish refugee status determination procedures or minimum procedural standards.[78] Consequently, the criteria for refugee status determination vary considerably between countries and are inconsistently applied, as do procedural rights, such as access to legal aid and the right to appeal.[79]

The Refugee Convention also lacks an oversight or treaty-monitoring body.[80] While article 38 enables disputes pertaining to interpretation to be referred to the International Court of Justice, this inter-State procedure has never been activated. Under article 35,

UNHCR has supervisory responsibilities, including taking steps to ensure the consistent and correct interpretation of the Convention. However, this has been criticized for providing no legal 'teeth'.[81] In addition, States have consistently sought to undermine the two major entitlements of refugees in articles 31 and 33 of the Refugee Convention by criminalizing undocumented arrivals, arbitrarily detaining asylum seekers, and deporting people to life-threatening situations.

As noted by Chetail, 'human rights law provides a universal and uniform set of standards which represents a particularly persuasive device for harmonizing the unilateral and frequently diverging interpretations of states parties'.[82] The ICCPR and the ICESCR set out fundamental rights available to 'all' persons, regardless of their legal status. Both instruments are the base line common to all, including all migrants (including refugees). The Refugee Convention provides refugees with specific, supplementary rights. Additional human rights treaties on racial discrimination, torture, children, women, persons with disabilities, and so on, are all core universal human rights instruments, which again apply to all migrants (including refugees). All States have ratified at least one of these treaties and, owing to the non-discrimination principle, are thus obliged to respect the human rights of all.

Unlike the Refugee Convention, universal (and regional) human rights treaties are supported by their own treaty bodies specifically mandated to monitor State compliance with their treaty obligations. Although the UN treaty bodies' recommendations are not legally binding as such, they point to protection gaps and exert pressure for action. Moreover, a number of the universal treaties have optional communications mechanisms that allow anyone, including migrants, to make individual complaints to the relevant UN treaty body.[83] At the regional level, the European Court of Human Rights, the Inter-American Commission on Human Rights, and the Inter-American Court of Human Rights have played important roles in the protection of migrants' (including refugees') human rights, through a reinforcement of the principle of *non-refoulement*, the prohibition of inhuman and degrading treatment and arbitrary detention, and the right to an effective remedy.[84]

In some cases, international human rights law offers a stronger protection to refugees than the Refugee Convention. The principle of *non-refoulement* contains an exception in article 33(2) of the Convention (on security grounds), whereas it is absolute under the ICCPR and CAT.[85] As noted above, it also enlarges the scope of rights available to refugees: for instance, refugee children have better access to education under the CRC

than under the Refugee Convention. As Goodwin-Gill rightly notes, the Refugee Convention's approach differs markedly from that of the human rights instruments, where the individual is identified 'as the point of departure—whether simply by virtue of being human, or a child, a woman, a worker, or someone with a disability'.[86] As a woman, a child, a person with disability, the refugee benefits *cumulatively* from all the international human rights instruments protecting those particular groups, as well from all other generally applicable human rights instruments benefiting all human beings. As do all migrants.

5. Freedom of Movement as a Fundamental Right

This section highlights the key role of freedom of movement as a fundamental right, arguing that, in a context characterized by repetitive 'migration crises' and limited durable solutions for refugees, enhancing migrants' (including refugees') mobility would also ensure more effective protection of their human rights.

The right to freedom of movement set out in article 13 of the UDHR and article 12 of the ICCPR, includes an individual's right to leave any country, including their own, and to return to their country. Juss describes it as 'half' a right because migrants generally do not have the right to enter another country without that country's permission.[87] By contrast, for Guild and Stoyanova, the absence of a right to enter another country may be one of the most important strengths of article 12 in the sense that the right to leave is a right in and of itself; it is not dependent on any right to enter a specific country of destination (or, indeed, any country at all).[88]

For refugees, freedom of movement is a vital part of securing protection.[89] Yet, it has been dramatically curtailed by a range of measures, including restrictions on the right to leave by some countries of origin, border controls by transit countries, and deterrence policies by destination States, such as interception measures beyond their borders.[90] Zieck argues that restricting the right to leave in order to assist other States in controlling undocumented movement, even if carried out pursuant to relevant international

obligations, cannot be justified on the basis of public order.[91] Indeed, as stated by Goodwin-Gill and McAdam, '[T]he right to seek asylum, when read in conjunction with the right to freedom of movement and the totality of rights protected by the UDHR and ICCPR, implies an obligation on States to respect the individual's right to leave his or her country in search of protection'.[92] Likewise, drawing on the international and European human rights case law, Guild and Stoyanova contend that 'demonstrating that an individual has the possibility or right to enter another country is not a ground on the basis of which States are permitted to interfere with the free-standing right of that person to leave their territory'.[93]

International refugee law does not address mobility for refugees. Article 26 of the Refugee Convention relates only to the right of refugees who are lawfully present in the host country to choose their place of residence and to move freely within that country. For instance, the Refugee Convention does not determine where a refugee's international mobility must end, and refugees are under no obligation to apply for asylum in any particular State. By contrast, facilitating human mobility for all is an integrated policy objective of the 2015 Sustainable Development Goals[94] and has been included in the Global Compact for Migration,[95] which provides a list of the changes in both policy and practice that need to occur for international mobility to be liberalized.

As the first global (albeit soft-law) instrument on migration to synthesize negotiated norms and mesh them with State obligations under international human rights law, the Global Compact for Migration details the many human rights, including labour rights, guarantees that generally apply to all people—regardless of status.[96] There is a clear rule-based governance approach, which brings the treatment of migrants closer to that of citizens and reduces the administrative discretion of government authorities towards foreigners. The Global Compact draws on various principles and standards deriving from State sovereignty, international human rights law, and international refugee law, and it sets forth rules and principles for cooperation amongst States to govern the international movement of people. As such, it has strong potential to contribute to the consolidation of a still fragmented and nascent 'international migration law'.[97] This could, in turn, facilitate constructive responses to 'migration crises', such as financial and technical support for transit countries and an increase in resettlement options. If most migrants were offered legal pathways for easier mobility, undocumented migration would considerably decrease (and with it, a number of people requesting asylum who

do not, in fact, need international protection, but whose claims choke refugee determination mechanisms). Greater mobility for all would mean enhanced protection for refugees.

6. Conclusion

This chapter contended that refugees are, indeed, one category of migrants. This does not negate the fact that refugees are special. The normative and institutional framework for the recognition and protection of refugees must be safeguarded and supported. However, the voluntary (economic) versus forced (political) binary that underlies many of the concerns about conceptualizing refugees as migrants is not an effective approach to advance refugee rights, especially in the current context of forced migration.

Some of the basic premises of the Refugee Convention have the effect of excluding large numbers of forced migrants from its protection. To some extent, international and regional human rights law has helped to fill the gap. Human rights law takes better account of the intersecting elements of vulnerability that may precipitate flight (such as gender, age, religion, and so on) and has been instrumental in shaping and expanding refugee rights.

Unsurprisingly, deterrence strategies by States have fuelled illicit activities. Underground labour markets in transit or destination countries allow undocumented migrants, including refugees, to survive in the margins. Smuggling rings provide migrants with mobility options, at a cost. Unscrupulous recruiters, landlords, employers, and others take advantage of this precarity to exploit migrants under the threat of denouncing them to the authorities. This threat silences most undocumented migrants, who do not dare denounce the exploitation. Restricting mobility thus pushes many migrants (including refugees), underground and ultimately subsidizes criminal rings.

This chapter argued that, by contrast, States need to govern mobility, that is, to legalize, regulate, and tax mobility. This will avoid creating an increasingly unmanageable and costly 'fortress', and will progressively allow more people to come and go in the pursuit of their own goals, and to make their own choices about their lives—one of the core elements of human dignity.

The final part of the chapter pleaded for the effective facilitation of international mobility for all, as a solution to 'migration crises'. This does not mean diminishing border controls. On the contrary, it would make them more effective by offering foreigners easier access to appropriate travel documents which can be checked by border guards, and allowing security agencies to screen them openly and target their efforts on the dangerous few.

Thriving economies have the capacity to integrate millions of migrants (including refugees). Business communities are constantly calling for more workers. Cities around the world have absorbed millions of migrants from the countryside or from abroad, mostly without erecting barriers. Migrants themselves, including refugees, have shown agency, resilience, courage, and creativity, and have positively influenced their host communities.

However, there remains a collective crisis of moral and political leadership. The present 'migration crisis' cannot be tackled until politicians adhere to a long-term, sustainable vision in which human rights-based strategic mobility and diversity policies and practices are championed. Despite contemporary nationalist, populist narratives, one can envision a different, peaceful, more productive approach whereby migrants are empowered to defend their rights, just like anyone else.

CHAPTER 8

THE INTERSECTION OF INTERNATIONAL REFUGEE LAW AND INTERNATIONAL STATELESSNESS LAW

LAURA VAN WAAS

We recognize that statelessness can be a root cause of forced displacement and that forced displacement, in turn, can lead to statelessness.

New York Declaration for Refugees and Migrants[1]

1. Introduction

International refugee law and international statelessness law share common roots. To determine how to deal with the situation of the millions of people who were left displaced and denationalized in the wake of the Second World War, the Economic and Social Council of the newly formed United Nations ordered a study to be undertaken to inform 'interim measures to afford protection to stateless persons [and] action by Member nations in co-operation with the United Nations to ensure that everyone shall have an effective right to a nationality'.[2] The resulting *Study of Statelessness*[3] provided the foundation for the development of the Refugee Convention and the 1954 Convention

relating to the Status of Stateless Persons (followed later by the 1961 Convention on the Reduction of Statelessness).[4] Born of the same process, yet distinct in their scope and aims, these UN treaties went on to take very different paths in the half-century that followed. While refugee law, policy, doctrine, and research evolved, 'in a litter of two offspring, statelessness was the metaphorical runt'.[5] It was not until after the turn of the twenty-first century that international statelessness law started to draw much attention and to begin to emerge as a field of its own.

As global interest in (tackling) statelessness grows, the interaction between statelessness and forced displacement has also come back under the spotlight. Today, for those working in either field, it is not only important to have knowledge of the scope and application of that area of the law, but also to understand the relationship between these two sub-domains of international law. This entails, in particular, the ability to critically reflect on the challenges that arise out of the separation, yet interaction, between refugee law and statelessness law. Indeed, at the nexus of these two sub-fields, a number of important conceptual questions arise as well as some very practical difficulties in ensuring an appropriate and effective response to situations in which statelessness and displacement occur together.

This chapter provides an insight into the relationship between statelessness and forced displacement, and between statelessness law and refugee law. It starts by unpacking how statelessness can manifest itself as a cause or consequence of displacement, as well as how statelessness can be a complicating factor for refugee protection and durable solutions. The chapter then offers a brief overview of key norms relating to the protection of stateless persons and the prevention and resolution of statelessness, setting out the contours of international statelessness law for readers who are less familiar with this area. Thereafter, the chapter looks at the implications of the statelessness–displacement nexus by exploring the conceptual and practical questions that arise when a refugee is also stateless, and when a stateless person is also a refugee. It draws to a close with some reflections on the importance of forging a stronger dialogue between international refugee and statelessness law scholars and practitioners.

2. The Interaction between Statelessness and Forced Displacement

A stateless person is defined under international law as someone 'who is not considered as a national by any state under the operation of its law'.[6] Whether a person is stateless or

[4] Convention relating to the Status of Stateless Persons (adopted 28 September 1954, entered into force 6 June 1960) 360 UNTS 117 (1954 Statelessness Convention); Convention on the reduction of Statelessness (adopted 30 August 1961, entered into force 13 December 1975) 989 UNTS 175 (1961 Statelessness Convention).

[6] 1954 Statelessness Convention (n 4) art 1.

not therefore hinges solely on whether the person enjoys a nationality or not[7]—a 'mixed question of law and fact' which turns on an assessment of 'how a State applies its nationality laws in an individual's case in practice'.[8] For the purposes of the application of this definition, it is irrelevant whether they have ever crossed an international border, whether they once did have a nationality (that is now lost) or might again in the future. The definition of a refugee encompasses an element of cross-border movement (ie departure from the country of nationality or habitual residence) against a context of persecution, conflict, or violence. The possession or absence of a nationality is not the defining factor—a refugee can be,[9] but does not need to be, stateless—although this can and sometimes should weigh into the assessment.[10] The upshot is that it is possible to meet both the definition of a *refugee* under the 1951 Refugee Convention and be a *stateless person* according to the 1954 Convention relating to the Status of Stateless Persons (1954 Statelessness Convention).

As illustrated by the quote from the New York Declaration for Refugees and Migrants at the opening of this chapter, statelessness is in fact recognized to be both a root cause and a potential consequence of forced displacement.[11] A stateless person may also be(come) a refugee and a refugee may also be(come) stateless. To explain why statelessness is so often accompanied by displacement requires looking more closely at the function and regulation of nationality, as well as the impact of statelessness.

Statelessness is a *root cause* of forced displacement because the removal of, or refusal to grant, citizenship may be one element of—and an indicator to identify—the severe marginalization of an individual or community: so severe that it encompasses the wholesale denial of their place in society. Indeed, historically and today, the production of statelessness and the production of refugeehood can be intrinsically connected to one and the same underlying project of statecraft. The universalization of the nation-State model combined with the arbitrary drawing of borders resulted in the mass generation of refugees—but also of statelessness, where the belonging of communities perceived as being in the 'wrong' place is contested.[12]

[7] Nationality here referring to a particular type of legal bond between a person and a State, commonly also referred to as citizenship. See further Alice Edwards, 'The Meaning of Nationality' in Edwards and van Waas (n 5) 12–14.

[8] UNHCR, 'Handbook on Protection of Stateless Persons: Under the 1954 Convention relating to the Status of Stateless Persons' (2014) 12 <https://www.unhcr.org/dach/wp-content/uploads/sites/27/2017/04/CH-UNHCR_Handbook-on-Protection-of-Stateless-Persons.pdf> accessed 23 May 2019.

[9] This is also explicit in art 1A(2) of the Refugee Convention.

[10] See Chapter 44 in this volume. See also Eric Fripp, *Nationality and Statelessness in the International Law of Refugee Status* (Bloomsbury 2016); Michelle Foster and Hélène Lambert, *International Refugee Law and the Protection of Stateless Persons* (OUP 2019).

[11] For a discussion of the wider interaction between statelessness and migration, see eg Sophie Nonnenmacher and Ryszard Cholewinski, 'The Nexus between Statelessness and Migration' in Edwards and van Waas (n 5) 247–63; Jyothi Kanics, 'Migration, Forced Displacement, and Childhood Statelessness' in *The World's Stateless: Children* (Institute on Statelessness and Inclusion 2017) 209–22.

[12] Consider, for instance, the examples of statelessness produced following decolonization in East Africa as discussed in Bronwen Manby, 'Statelessness and Citizenship in the East African Community' (UNHCR 2018) <https://www.refworld.org/docid/5bee966d4.html> accessed 30 September 2019.

Moreover, as Achiume observes, nationality has been used as a tool to facilitate racial exclusion[13] and so where racial discrimination operates as a root cause for refugee movements, the denial or deprivation of citizenship may be one of the ways in which this discrimination also manifests. 'Nation-building and nationalist ideology privileging certain racial, ethnic or religious groups' as well as 'unresolved historical ethno-nationalist legacies' have led to the construction of national identities to the exclusion of minorities and indigenous peoples,[14] taking its toll in terms of access to citizenship and in some cases precipitating forced displacement.[15] Statelessness has even been described as 'a form of forced displacement in situ',[16] further reinforcing the potentially close relationship between the production processes of statelessness and refugeehood.

The lack of the legal bond of membership to a State also entails the absence, or more often the deliberate denial, of government protection. Although States are today required to respect the human rights of everyone under their jurisdiction, in most cases regardless of nationality or statelessness, some rights can still be granted exclusively to nationals or more easily limited in the case of non-nationals.[17] In reality, stateless persons are commonly exposed to much wider, structural discrimination and their basic human rights are violated in many States with worrying impunity. Many studies document the detrimental impact of statelessness on the enjoyment of the right to education, health, work, an adequate standard of living, free movement, legal personhood, property, a family, access to justice, and other rights.[18] The insecurity and vulnerability that statelessness perpetuates can trigger forced displacement. In some cases, the denial or deprivation of nationality has been accompanied with, or followed by, widespread violence, persecution, or enforced deportation, precipitating mass refugee movements. The decades-long oppression of the stateless Rohingya in Myanmar,

[13] See Chapter 2 in this volume.

[15] Consider the examples of the Lhotshampas of Bhutan following 1985 changes to the citizenship law, as discussed in Michael Hutt, *Unbecoming Citizens: Culture, Nationhood, and the Flight of Refugees from Bhutan* (OUP 2005); and Black Mauritanians who were forcibly deported and stripped of their citizenship in 1989, as discussed in Bronwen Manby, *Citizenship in Africa: The Law of Belonging* (Hart 2018) ch 7.6.

[16] Kristy A Belton, *Statelessness in the Caribbean: The Paradox of Belonging in a Postnational World* (Penn Press 2017) 14.

[17] The right to participate in government, protected under art 25 of the ICCPR is affirmed for *citizens*. For further details of permissible distinctions between nationals and non-nationals under human rights law, Office of the High Commissioner for Human Rights, *The Rights of Non-Citizens* (2006) <https://www.ohchr.org/Documents/Publications/noncitizensen.pdf> accessed 23 May 2019.

[18] One example is the 2014 UNHCR report released to coincide with the launch of its Global Action Plan to End Statelessness, UNHCR, 'A Special Report: Ending Statelessness Within 10 years' (2014) <https://www.unhcr.org/protection/statelessness/546217229/special-report-ending-statelessness-10-years.html> accessed 23 May 2019.

which has forced as much as three-quarters of the population to flee, is one of the most heinous examples of this,[19] but there are others.[20]

Statelessness can also be a *result* of forced displacement because the way that nationality is regulated does not always accommodate the situation of people who have had to flee their country, especially if their exile is protracted and extends across multiple generations. One of the challenges is that, because nationality is understood to be the legal expression of a 'genuine link', when a person or group is forced into exile, then over time the link may be seen as growing more tenuous and this can lead to situations in which the bond of nationality is no longer recognized.[21] The legislation of some States allows for the loss or withdrawal of nationality if a person resides outside the country for an extended period—even if they have not naturalized in the country of refuge.[22] Other laws place conditions on or limit the conferral of nationality to children via *jus sanguinis* (through descent from a parent who is a national) if the child is born abroad or if they are the second generation to be born outside the country. Yet birth on the territory is not sufficient in most countries to secure that State's nationality.[23] This negative conflict of nationality laws can lead to statelessness if neither of the States concerned provides safeguards to ensure the child's right to nationality.[24] The context of forced displacement can also hamper the full application of safeguards where they do exist.[25]

Refugee families can also struggle to access birth registration, which makes it difficult to establish the link that a child born in exile has to the country of birth and the country of his or her parents, generating a risk that neither State will recognize the child as a

[19] Data is incomplete, but the Rohingya community is estimated to number between 2 and 2.5 million people in total, of whom in early 2019 only in the region of 600,000 remain in Myanmar, the rest having been forcibly displaced from the country. See statistics collated in European Network on Statelessness and Institute on Statelessness and Inclusion, 'Country Position Paper: Myanmar' (2019) <https://statelessjourneys.org/wp-content/uploads/StatelessJourneys-Myanmar-final.pdf> accessed 28 May 2019. See on the treatment of the Rohingya, among others, UN Human Rights Council, 'Report of the Independent International Fact-Finding Mission on Myanmar,' UN doc A/HRC/39/64 (12 September 2018) <https://www.ohchr.org/EN/HRBodies/HRC/Pages/NewsDetail.aspx?NewsID=23575&LangID=E> accessed 28 May 2019.

[20] Including the Kurds in Al-Hasakeh in Syria and the Faili Kurds in Iraq, deprived of nationality *en masse* in 1962 and 1980 respectively, as discussed in Zahra Al Barazi and Jason Tucker, 'Challenging the Disunity of Statelessness in the Middle East and North Africa' in Tendayi Bloom, Katherine Tonkiss, and Philip Cole (eds), *Understanding Statelessness* (Routledge 2017) 91–3.

national.[26] Where there is an intergenerational problem of lack of documents, this can heighten the risk of statelessness because it becomes ever more difficult to establish the facts that are determinative of nationality (place and date of birth, identity and nationality of the parents).[27] If displacement was precipitated by conflict that ultimately leads to the fracturing of States, then people may find themselves living on the other side of a new border from where they or their ancestors originated, which may cause them not to be recognized as nationals of either state.[28]

Finally, it is important to note that statelessness can also be a complicating factor in a situation of displacement and may give rise to additional obstacles in the pursuit of durable solutions.[29] Research into the experience of *stateless* refugees from Syria has demonstrated this, showing that their lack of nationality in some cases made it harder to flee and to cross international borders in search of protection, that it affected some refugees' access to international protection and assistance, and that being stateless could obstruct access to naturalization or resettlement and raise questions about prospects of future voluntary return.[30]

The manifold ways in which situations of statelessness and forced displacement can intersect raise a number of challenges when it comes to ensuring that the response to such cases is adequately tailored to give effect to the protection offered by refugee law and statelessness law—respectively, but also collectively. This means building a stronger understanding of how the two sub-domains interact.

3. International Statelessness Law

When it comes to addressing statelessness, the international community has long pursued two broad goals. The first is to offer international protection to stateless persons who have been left 'unprotected' as a result of their lack of any nationality.

[26] This issue has been flagged as a major concern in the Syria displacement context, including in Norwegian Refugee Council (NRC) and Institute on Statelessness and Inclusion (ISI), 'Understanding Statelessness in the Syria Refugee context' (2016) <http://www.syrianationality.org/pdf/report.pdf> accessed 29 May 2019.

This is an objective that is familiar to refugee lawyers because it also underpins the Refugee Convention; indeed the 1954 Statelessness Convention shares a common drafting history that has left the two instruments almost identical in approach and substance.[31] As is the case with refugee law, the protection framework offered by the 1954 Statelessness Convention is also reinforced and complemented by the body of human rights law that applies to all people, regardless of nationality or statelessness.[32]

The second—and ultimate[33]—goal is the avoidance and reduction of the occurrence of statelessness, for which the fundamental right to a nationality has become a central norm. This focus on *preventative* action sets international statelessness law apart from international refugee law, which does not, strictly speaking, concern itself with stemming the *production* of refugeehood.[34] The goal of avoiding and reducing statelessness achieved its first significant milestone in 1930 with the adoption of the League of Nations' Hague Convention on Certain Questions relating to the Conflict of Nationality Laws, along with a Protocol Relating to a Certain Case of Statelessness. These instruments reflected a shared understanding among States that it was in their own interests to ensure that everyone has a nationality, prompting the elaboration of some common standards for regulating acquisition or loss of nationality in situations where statelessness might otherwise arise.[35] In the 1950s, following affirmation of the right to a nationality as a human right in the UDHR (article 15), the International Law Commission began work on a draft convention to codify standards for the avoidance of statelessness. After a difficult series of negotiations and compromises, States agreed to proceed with the less ambitious of the two alternative texts that had been prepared, namely on the *reduction*—rather than *elimination*—of statelessness.[36] The adoption of the 1961 Convention on the Reduction of Statelessness (1961 Statelessness Convention) marked the completion of UN efforts to put in place a dedicated international law regime to tackle the problem of statelessness.[37]

[31] Where art 1 of the 1951 Refugee Convention contains the definition of a *refugee*, art 1 of the 1954 convention defines a *stateless person* and thereafter there are no more than a handful of differences. See Chapter 44 in this volume. See further on the shared drafting history Guy Goodwin-Gill, '1954 Convention relating to the Status of Stateless Persons' (*UN Audiovisual Library of International Law* 2010) 1 <http://legal.un.org/avl/pdf/ha/cssp/cssp_e.pdf> accessed 23 May 2019; Foster and Lambert (n 10) ch 2.

[37] See further Paul Weis, *Nationality and Statelessness in International Law* (Kluwer Academic Publishers Group 1979).

The main contours of international statelessness law are thus established by the 1954 and 1961 Statelessness Conventions. The first of these defines statelessness and establishes a protection regime for (non-refugee) stateless persons, as well as urging naturalization to be facilitated so that a person's statelessness can be resolved through the acquisition of nationality. The second concentrates on prescribing safeguards to avoid situations of statelessness from arising, focusing on three different contexts: acquisition of a nationality at birth; renunciation, loss, or deprivation of nationality in later life; and change of nationality upon State succession.[38]

Over time, international norms relating to statelessness continued to evolve—as refugee law did in parallel—through the progressive development of human rights law in particular. This included the articulation of such norms as the right of every child to a nationality in the CRC[39] and the emergence of jurisprudence affirming the justiciability of the right to a nationality within the UN, African, European, and Inter-American human rights systems.[40] The 1997 European Convention on Nationality and 2006 Council of Europe Convention on the Avoidance of Statelessness in relation to State Succession[41] complement the 1961 Statelessness Convention with a more elaborate regional framework for Europe; and a Protocol to the African Charter on Human and Peoples Rights on the Specific Aspects of the Right to a Nationality and the Eradication of Statelessness in Africa had reached advanced stages of negotiations at the time of writing.[42] The issue of statelessness has been receiving significant attention within the

UN Human Rights Council's Universal Periodic Review process,[43] and has been flagged as an issue of concern in relation to the UN's Sustainable Development Agenda 2015–2030.[44] In 2014, the profile of international statelessness law also received a significant boost with the launch of the UNHCR-led #IBelong campaign to end statelessness by 2024.[45]

Today, international statelessness law is a rich field composed of a multitude of treaties, jurisprudence, and soft law instruments, complemented by other international frameworks and initiatives that are helping to place the issue higher on the agenda of States and the international community. As this occurs, a question that is increasingly being asked is how the strong relationship between statelessness and forced displacement should shape the application of international statelessness—and refugee—law.

4. When a Refugee is also Stateless, or a Stateless Person is also a Refugee

In situations where a refugee is also stateless, the traditional understanding has been that he or she be treated first and foremost as a *refugee*—with statelessness generally seen as a secondary consideration that only really becomes relevant when refugee status ceases. In its *Handbook on Protection of Stateless Persons*, UNHCR explains:

> When an applicant raises both a refugee and a statelessness claim, it is important that each claim is assessed and that both types of status are explicitly recognised. This is because protection under the 1951 Convention generally gives rise to a greater set of rights at the national level than that under the 1954 Convention. Nevertheless, there may be instances where refugee status ceases without the person having acquired a nationality, necessitating then international protection as a stateless person.[46]

UNHCR's guidance goes on to elaborate that 'although an individual can be both stateless as per the 1954 Convention and a refugee as per the Refugee Convention, at a minimum, a stateless refugee must benefit from the protection of the Refugee Convention and international refugee law'.[47]

[45] For example, 15 States acceded to one or both of these instruments in the first five years of the #IBelong campaign.

[46] UNHCR (n 8) 31.

[47] UNHCR (n 8) 7.

This means that statelessness has received relatively little attention in situations of forced displacement.[48] Stateless refugees are dealt with as refugees and included as such in the data published by UNHCR, without differentiation. When it began to report statistics on the number of *stateless persons* under its mandate, from 2004 onwards, UNHCR included only non-refugee stateless persons in this dataset, to avoid double counting.[49] One implication of this is that it is difficult to quantify the number of stateless refugees globally and, by extension, accrue a comprehensive picture of the number of people living without a nationality in the world (refugee and non-refugee stateless combined).[50] This is notwithstanding the already distinctly challenging task of measuring the magnitude of statelessness in any context, due to the complexities of data gathering and reporting on this issue.[51] In a survey of publicly available statistics carried out in 2014, the Institute on Statelessness and Inclusion estimated that at least 1.5 million people included in UNHCR's refugee statistics, as well as some 3.5 million Palestinian refugees who are reported in separate data compiled by UNRWA and not (also) included in UNHCR's datasets, are likely also to be stateless—suggesting that approximately one in three stateless persons is a refugee.[52] Yet this is obscured by the emphasis on the separation of these issues and the manner in which global data reporting is organized.

Meanwhile, as international attention on statelessness grew, it was at first deliberately presented as an issue distinct from refugeehood, in order to raise awareness and build up knowledge and capacity to more effectively implement international statelessness law. When UNHCR published expert guidance under its statelessness mandate, it spelled out explicitly that:

> Most stateless persons [. . .] have never crossed borders and find themselves in their 'own country'. Their predicament exists in situ, that is in the country of their long-term residence, in many cases the country of their birth.[53]

[48] Indeed, statelessness has received relatively little attention *per se*, as 'a prioritized focus on refugees has dominated, or even eclipsed, the plight and protection needs of refugees' Michelle Foster and Hélène Lambert, 'Statelessness as a Human Rights Issue: A Concept Whose Time Has Come' (2016) 28 IJRL 564, 564.

[49] UNHCR's data can be explored in its Population Statistics database online, UNHCR, 'Population Statistics' <http://popstats.unhcr.org/en/overview> accessed 23 May 2019. For a summary of the statistical reporting methodology and this policy of avoiding 'double counting', see UNHCR, 'Global Trends: Forced Displacement in 2017' (2018) 53 <https://www.unhcr.org/globaltrends2017/> accessed 29 May 2019.

[53] UNHCR (n 8) 3.

The UNHCR *Global Action Plan to End Statelessness 2014–2024*, similarly reminds readers that 'while some stateless people are also refugees, most are not' and explains that this Action Plan 'focuses primarily on *non-refugee* stateless populations'.[54] Likewise, as statelessness started to evolve as its own field of scholarship, interest has also been predominantly in statelessness as a phenomenon that may be related to, but is to be distinguished from, refugee situations.[55] When civil society organizations and networks dedicated to statelessness first started to emerge, it was in part a response to the fact that the distinct problem of statelessness had been overshadowed (and left behind) as the refugee field developed. This meant that their work also initially concentrated on understanding the challenges in the implementation of international statelessness law in non-refugee settings and promoting better adherence to this overlooked set of norms.

However, this two-way effort to keep separate questions of refugee law and statelessness law has started to change, for broadly two reasons. First, scholars and organizations engaged in statelessness started to question the validity and wisdom of (over)emphasizing the separation from refugee law and refugee contexts, because the commonplace interaction between them in practice was so evident.[56] Secondly, those in the refugee field started to take notice of the work being done on statelessness, because this was a problem they regularly encountered in their work, even if it was not one to which they had devoted much attention. In fact, to progress the understanding on both sides and benefit optimally from the respective knowledge and tools produced, the nexus between statelessness and forced displacement needed to be acknowledged and explored. A greater urgency was also felt in this regard as the interaction between statelessness and displacement became hard to ignore in the context of Syria's humanitarian crisis and the plight of the Rohingya from Myanmar.

One of the specific questions that demanded a response following the 2017 wave of displacement of Rohingya from Myanmar was how to account for this in global statistical reporting. The exodus of more than 650,000 Rohingya to Bangladesh in late 2017, swelling the numbers there to close to a million stateless refugees, prompted UNHCR to reflect on whether it could continue to report on stateless persons and refugees separately, with stateless *refugees* only counted in the refugee numbers. This would have meant a drastic reduction in the number of stateless persons reported in Myanmar and, by extension, globally—a change in data that may inadvertently and incorrectly

[54] Emphasis added. UNHCR, 'Global Action Plan to End Statelessness 2014–2024' (2014) 6 <https://www.unhcr.org/protection/statelessness/54621bf49/global-action-plan-end-statelessness-2014-2024.html> accessed 29 May 2019.

[55] A brief overview of the developing research agenda on statelessness, from the early 2000s to 2014 is given in Mark Manly and Laura van Waas, 'The State of Statelessness Research: A Human Rights Imperative' (2014) 19 Tilburg Law Review 3.

[56] See for instance Jason Tucker, 'Recognising the Importance of the Statelessness of Refugees: Are we Witnessing a Shift to Evidence Based Policies?' in Lindsey Kingston and Tendayi Bloom (eds), *Statelessness and Governance* (Manchester University Press, forthcoming) See further Foster and Lambert (n 10).

have been interpreted as a success in efforts to reduce statelessness, while in fact their statelessness remained unresolved and their situation deteriorated.[57] Against this backdrop, UNHCR approached Myanmar as a special case in the updated Global Trends data released mid-2018. Acknowledging that 'reporting on stateless populations is a particular challenge for UNHCR as many displaced people are also stateless', UNHCR explains that 'in 2017, it was decided to report the displaced Rohingya population as stateless' and thereby break with its previous policy of avoiding double counting.[58] The report goes on to recognize that 'this approach is inconsistent with the methodology applied for other displaced stateless populations' and indicate that UNHCR is 'currently reviewing its statistical reporting for stateless populations'.[59] How to reconcile, within global datasets, the overlap between the categories of *stateless* and *refugee*—as well as potentially with other groups which are reported separately by UNHCR in IDP data or as Palestine Refugees by UNRWA under its mandate—is one of the unsettled questions at the nexus of statelessness and forced displacement.

In situations where a refugee is also stateless, there are also fundamental conceptual and practical challenges to be considered. As discussed in Chapter 44 in this volume, a person's statelessness and the circumstances surrounding this may be relevant to whether they meet the definition of a refugee and qualify for protection as such. Even if their statelessness is not a constitutive element of the refugee claim, identifying a refugee to *also* be stateless can be critical. On the one hand, this is needed to avoid inadvertently discriminating against stateless refugees in relevant procedures because due consideration is not given to their lack of nationality—that is, in order to ensure *the full operation of international refugee law in a statelessness context*. On the other hand, identification of statelessness is necessary to ensure *the full operation of international statelessness law in a refugee context*—for instance to apply the safeguards prescribed by the 1961 Statelessness Convention, as relevant, to avoid new cases of statelessness from emerging. As mentioned above, the experience of some stateless refugees has been that their lack of nationality impedes their ability to access international protection or durable solutions and that not enough is done to address the risk of statelessness among refugees with possible nationality problems.[60]

A study of the relationship between statelessness and forced displacement in Europe, published in 2019, found that the failure to identify and suitably account for statelessness in asylum procedures was indeed the cause of an array of problems encountered by

[57] A similar dilemma also arose in relation to statistical reporting on IDPs, with many Rohingya who remained in Myanmar displaced internally and as such potentially also being removed from the statelessness statistics (while added to the IDP numbers).

[58] UNHCR 2018 (n 49) 51.

[60] ibid 30.

stateless refugees—in registration, refugee status determination, family reunification, naturalization, and other procedures.[61] An underlying issue, according to this research is the 'fundamental lack of knowledge and limited interaction between stakeholder groups' on how statelessness interacts with forced displacement.[62] The report makes a number of practical recommendations to address this, but even if the knowledge and capacity gaps were to be overcome, the modalities for the establishment of refugee status and of statelessness are different, and combining the two will not always be straightforward or even feasible. As Gyulai explains:

> Given that the most common procedural act in statelessness determination (contact with and information gathering from foreign authorities) is strictly prohibited in asylum procedures, the regulatory framework ought to clarify the relationship between these two.[63]

If contacting foreign authorities to seek clarity on the interpretation and application of their nationality rules in the case at hand would 'compromise the confidentiality to which refugees and asylum seekers are entitled' and without this there 'is insufficient information to conclude that an individual is stateless', then the determination of statelessness will have to be suspended.[64] In such instances, the necessary prioritization of refugee protection may therefore impact on the recognition of statelessness and application of international statelessness law standards.

A concrete scenario that arises is as follows: due to the failure—or inability—to determine a refugee to be stateless, a child born to that refugee is not identified as a beneficiary of the safeguard prescribed in article 1 of the 1961 Statelessness Convention to confer nationality *jus soli* where the child would otherwise be stateless.[65] International refugee law does not contain an equivalent obligation with regards to children of refugees born on the territory of the host State more generally, but if the child of a refugee *would otherwise be stateless*, then the statelessness-related safeguard applies—regardless of the refugee context. States that 'have deliberate policies not to confer nationality to children born to refugees, especially when a parent is unable to confirm their identity',[66] would be in breach of international statelessness law if no special accommodation is made where the child would be left stateless. Guidelines

[65] The same safeguard is recommended by the UN Committee on the Rights of the Child to ensure the right to a nationality under CRC art 7. Laura van Waas, 'Stateless Children' in Jacqueline Bhabha, Jyothi Kanics, and Daniel Senovilla Hernández (eds), *Research Handbook on Child Migration* (Edward Elgar 2018) 217.

[66] Kanics (n 11) 215.

issued by UNHCR under its statelessness mandate on how to apply this safeguard against childhood statelessness recognize the challenge and ask States to adopt a child-rights-based approach. In making the 'determination of the non-possession of any foreign nationality' the guidelines indicate that States are required to 'take into account Articles 3 [*best interests of the child*] and 7 [*right to nationality*] of the CRC and adopt an appropriate standard of proof' and not to leave a child in a prolonged situation of undetermined nationality.[67] It is therefore not necessary to make a (formal) determination that the child's parent is stateless, but rather the focus should be on assessing all relevant evidence of the nationality status of the child. This means that it should be possible to secure the operation of this safeguard in a refugee context. The same UNHCR guidelines also address the situation of refugee children who would be entitled to the nationality of their parent(s) but are precluded from completing the necessary procedures to effect this claim, owing to their status as refugees, making clear that the same safeguard against statelessness should apply.[68] In short, States must protect the child's right to a nationality and ensure the operation of safeguards to prevent children from being left stateless, whether this is in a refugee context or not. The application of international statelessness law is not limited by the presence of a claim under international refugee law (and vice versa), demonstrating how important it is for those working in either field to have at least a baseline understanding of both areas of law.

This example also hints at a deeper dilemma at the nexus of these two fields—that of the (relative) attribution of State responsibility. If the above approach to the fulfilment of the child's right to a nationality were to be scrupulously applied in situations of large-scale displacement of a stateless community across an international border—such as the case of the Rohingya—this would lead stateless refugee children born in exile to receive the nationality of the host State. Childhood statelessness would thereby be avoided and through securing the child's right to a nationality, access to and enjoyment of other (child) rights would be strengthened.[69] Moreover, this approach would disrupt an existing problem of statelessness, breaking what has likely been an intergenerational cycle of denial of nationality. However, such a solution

[67] UNHCR, 'Guidelines on Statelessness No. 4: Ensuring Every Child's Right to Acquire a Nationality through Articles 1–4 of the 1961 Convention on the Reduction of Statelessness', HCR/GS/12/04 (21 December 2012) 5–6 <https://www.refworld.org/docid/50d460c72.html> accessed 29 May 2019.

[68] ibid 7. This specific guidance relates to situations of non-automatic conferral of nationality at birth, that is, where a registration procedure must be completed to activate the entitlement to nationality. Less conceptually and normatively clear-cut is the position of children of refugees who automatically acquire nationality *jus sanguinis* under the law of their parents' country of nationality but whose existence is not known or legally established—for instance due to lack of access to birth registration procedures. See Gábor Gyulai, 'The Long-Overlooked Mystery of Refugee Children's Nationality' in *The World's Stateless: Children* (n 11) 242–7.

[69] The right to a nationality operates as an 'enabling right' for children with respect to the other rights contained in the CRC. See Maria Jose Recalde Vela, 'An Interview with Benyam Dawit Mezmur, Chairperson of the United Nations Committee on the Rights of the Child' in *The World's Stateless: Children* (n 11) 131.

would be effected in a way that neglects the genuine link of the stateless refugee population to their 'own country'[70]—the State that has denied or stripped them of nationality in violation of international law and from which they have been forcibly displaced.[71] The international statelessness law-compliant, and child rights-sensitive, action of the host State could have the inadvertent impact of absolving the home State of responsibility and, where deprivation of nationality has been utilized to purge a community from its own country, may contribute to effectuating ethnic cleansing. Moreover, the expectation that any stateless child of a refugee must be able to access the nationality of the State in which they are born would likely lead to a further shrinking of international protection space, with States being reluctant to provide safe haven specifically to *stateless* refugees. Yet, in situations of protracted displacement, determining which State is the stateless refugee's 'own country' becomes more complex. The Human Rights Committee has indicated that the language of article 12, paragraph 4 [of the ICCPR] 'permits a broader interpretation that might embrace other categories of long-term residents, including but not limited to stateless persons arbitrarily deprived of the right to acquire the nationality of the country of such residence'.[72] In this light, it would seem very difficult for a host State to justify allowing statelessness to persist across several generations of refugees born in exile—which is in practice the case for Rohingya refugees in many countries and other stateless refugee groups as well.

As this chapter has discussed, the definition of a stateless person under international law 'applies in both migration and non-migration contexts'.[73] This definition is widely understood, including on the basis of commentary by the International Law Commission, to have attained the status of customary international law.[74] As such, international norms directed at the avoidance of statelessness and the realization of the right to a nationality employ a similarly unqualified understanding of statelessness as a phenomenon that may be either migratory or *in situ*. Yet, this dichotomy is widely used, in some contexts specifically to distinguish different courses of action that would be appropriate. As Vlieks explains in her survey of the use of the terms 'migratory' and '*in situ*' statelessness:

[70] The scope of 'his own country', as contained in art 12(4) of the ICCPR (protecting the right to enter one's 'own country') is 'broader than the concept "country of his nationality". It is not limited to nationality in a formal sense, that is, nationality acquired at birth or by conferral; it embraces, at the very least, an individual who, because of his or her special ties to or claims in relation to a given country, cannot be considered to be a mere alien.' Human Rights Committee, 'General Comment No 27: Article 12 (Freedom of Movement)', UN doc CCPR/C/21/Rev.1/Add.9 (2 November 1999) 20–1.

[71] In the specific case of the Rohingya, the race-based denial of nationality to the Rohingya community amounts to discrimination and violates the prohibition of arbitrary deprivation of nationality. See United Nations High Commissioner for Human Rights, 'Situation of Human Rights of Rohingya Muslims and other Minorities in Myanmar,' UN doc A/HRC/32/18 (28 June 2016) 26.

[74] International Law Commission, 'Draft Articles on Diplomatic Protection with Commentaries' (2006) II(2) International Law Commission Yearbook 49.

> the main reason for making a distinction […] is the difference in response that the distinct situations represented by these two concepts require. […] there are two ways of responding to statelessness from a legal perspective: (1) statelessness determination and a protection status (as well as access to facilitated naturalization) […] for persons who are stateless in the migratory context—or (2) recognition of statelessness—for persons who are stateless *in situ*.[75]

However, as Vlieks goes on to expose, drawing a line between these two purportedly distinct contexts is extremely challenging. A situation of intergenerational statelessness in a protracted refugee setting would be one example of a very blurred line. There is a tension, in such contexts, between international norms and respective State responsibilities that is difficult to reconcile. International statelessness law prescribes both the (re)acquisition of the nationality of the country of origin that has denied nationality in violation of requisite norms, and a pathway to nationality in the host country to reduce statelessness, especially for children born in exile who thereby enjoy a genuine fact of attachment to that State. Understanding such difficulties helps to contextualize why UNHCR has focused primarily on non-refugee statelessness under its statelessness mandate, including in the *Global Action Plan to End Statelessness 2014–2024*: 'the Global Action Plan focuses primarily on non-refugee stateless populations but also complements UNHCR's efforts to resolve protracted refugee situations'.[76] Given the strong and enduring interaction between statelessness and forced displacement, however, digging deeper into the nexus of statelessness and refugee law to identify, unpack, and perhaps find ways to constructively resolve areas of potential tension is critical.

5. Final Observations: The Need for Stronger Dialogue between Two (Sub-)Fields

As any account of the 'origin story' of international refugee and statelessness law must acknowledge, the two fields sprung from the same roots. As efforts to protect refugees became separated from efforts to protect those without nationality, the journey taken by these two areas of law considerably diverged. The revival of interest in statelessness in the early 2000s initially spurred an array of efforts to generate a better understanding of the content and scope of international statelessness law and to improve its

[76] UNHCR (n 54) 6. Under this Global Action Plan, for example, in respect of Action 1 to 'Resolve existing major situations of statelessness', the goal by 2024 is 'all major non-refugee statelessness situations resolved'.

implementation—with a particular focus on non-refugee settings. But it was not long before these efforts led scholars and international actors alike back to the relationship between statelessness and forced displacement, and with it the nexus between refugee and statelessness law.

As work continues to bring these two fields (back) together, there are some important questions to be answered. This chapter raises a number of them, from the practicalities of strengthening the mutual understanding of statelessness law among refugee specialists and vice versa so as to ensure the effectiveness of both sets of standards in situations where statelessness and forced displacement intersect, to the normative difficulties inherent in asserting and protecting the right to a nationality in a situation of (protracted) displacement and reconciling respective State responsibilities. Raising, investigating, and debating these questions can also help to tease out areas of international statelessness law that must operate in a *non-refugee* setting, including, for instance: the obligations owed in terms of *international* protection to non-refugee stateless persons inside their own country, especially in intergenerational situations, as well as to stateless persons in a migratory but *non-refugee* context; how to deal with situations of cessation of refugee status where the person concerned remains stateless and voluntary return is impeded by this; and the scope for, and appropriateness of, the use of resettlement as a durable solution for non-refugee stateless persons.[77] Perhaps the study and debate of statelessness law can assist those working in the refugee field to generate new insights of refugee law in the same way. Maintaining a transparent, reflective and critical dialogue between these two fields will ultimately be of great value to both.

[77] UNHCR resettlement guidance includes a section on 'Resettlement of non-refugee stateless persons', acknowledging that resettlement may be considered for non-refugee stateless persons with acute protection needs. However, this area of policy remains underdeveloped. UNHCR, 'Resettlement Handbook' (2011) 306 <https://www.unhcr.org/46f7c0ee2.pdf> accessed 29 May 2019.

CHAPTER 9

THE ARCHITECTURE OF THE UN REFUGEE CONVENTION AND PROTOCOL

JAMES C HATHAWAY*

The heart of international refugee law is the 1951 Convention relating to the Status of Refugees and the 1967 Protocol relating to the Status of Refugees, with some three-quarters of the world's governments having bound themselves to respect the standards set by these treaties. Contracting States may—and often have—accepted additional refugee protection responsibilities under national or regional law. But, as a matter of international law, these additional duties complement rather than supplant the fundamental commitments made under the Refugee Convention and Protocol.

The architecture of this core normative standard is in many ways unusual. As a formal matter, it derives from two interlocking UN treaties—the Refugee Convention and the Protocol—rather than from a single treaty.[1] Perhaps the regime's best-known feature is a definition of refugee status that must be accepted without any qualification or variation by States, and which embraces persons on the basis of the facts of their situation rather than only as a function of legal adjudication or official declaration. Any persons so qualifying must be granted the benefit of an extraordinary array of refugee rights—rights that must be respected in addition to, not instead of, other entitlements including those that have been codified in international human rights law. The duty to respect refugee rights is not, moreover, conditional on the sufficiency of resources and may be derogated from in only relatively limited circumstances.

* The analysis here draws on the more detailed examination of these issues in *The Rights of Refugees under International Law* (2nd edn, CUP 2021). Jamila Odeh (JD, Michigan, 2019) provided outstanding research assistance for this chapter.

[1] See generally Stefanie Schmahl, 'General Provision' in Andreas Zimmermann (ed), *The 1951 Convention relating to the Status of Refugees and Its 1967 Protocol: A Commentary* (OUP 2011).

However, and in contrast to most other human rights treaties, refugee rights are not all owed immediately to a refugee coming under a Contracting State's jurisdiction, but rather arise on the basis of a sophisticated structure of levels of attachment. Nor is the nature of refugee rights generally defined in absolute terms; the content of most entitlements is instead contingent on what a particular host State provides to a specified group of non-refugees under its jurisdiction. These two features—the incremental acquisition of rights and the definition of many rights on the basis of contingent standards of compliance—are critical means of taking account of legitimate host State concerns that might otherwise arise from the core obligation to protect all persons coming under their jurisdiction who meet the international refugee definition. The continuing viability of this careful compromise embedded in the architecture of the Convention and Protocol is, however, increasingly threatened by the failure to establish an independent mechanism to supervise compliance with obligations or to ensure the fair distribution of protection burdens and responsibilities arising thereunder.

1. The Refugee Convention and Protocol as Interlocking Sources of Obligation

The Refugee Convention was drafted between 1948 and 1951 by a combination of United Nations organs, *ad hoc* committees, and a conference of plenipotentiaries.[2] Its orientation was decidedly Eurocentric: while most Contracting States opted to apply its provisions to non-European refugees, the mandatory scope of protection was limited to refugees whose flight was prompted by a pre-1951 event within Europe. It was not until the adoption in 1967 of the Protocol that the duty to protect refugees was prospectively made both global and temporally inclusive. In the result, Contracting States to the Refugee Convention that have gone on to adopt the Protocol—as nearly all have done[3]—

[2] See Terje Einarsen, 'Drafting History of the 1951 Convention and the 1967 Protocol' in Zimmermann (n 1); James C Hathaway, 'The Evolution of Refugee Status in International Law: 1920–1950' (1984) 33 ICLQ 348.

[3] Two States—Madagascar and Saint Kitts and Nevis—acceded to the Refugee Convention but have not gone on to adopt the Protocol. These two States are therefore not formally bound to protect the rights of modern refugees. While the option under the Convention to protect only European refugees is in most cases denied to States that sign the Protocol, one Contracting State, Madagascar, exercised the 'European refugee only' option when it acceded to the Convention and it has not yet become a party to the Protocol—meaning that it is still formally entitled to refuse to protect non-European refugees. In addition, the Protocol includes a 'grandfathering' provision that allows Contracting States that were parties to the Convention before 1967 to maintain any pre-existing geographical restriction even upon ratifying or acceding to the Protocol. Congo and Turkey fall into this category: having ratified the Convention with a geographical limitation and not having elected to withdraw that limitation (as, for example, Malta did in 2002), these countries are also exempted from obligations towards non-European refugees.

must now grant all Convention rights to all refugees, including those in flight from contemporary phenomena in any part of the world.

Whether the Protocol truly updated and universalized the scope of international refugee protection is, however, debatable. While the explicit temporal and geographical limitations were eliminated, the substantive test for refugee status—a well-founded fear of being persecuted for reason of one of five forms of civil or political status—was not changed by the Protocol.[4] This raises the spectre of persons in flight from natural disasters, war, or broadly based political or economic turmoil—arguably the dominant causes of flight in most of the less-developed world today—being thought to fall outside the scope of internationally protected refugee status.[5] This has led some scholars, including most recently Betts and Collier,[6] to call for a new understanding of refugee status. Yet other voices[7] recognize the continuing value of the definition, in particular as expanded at the regional level[8] and taking into account the adoption of complementary or subsidiary protection regimes.[9] Indeed, even in the absence of such formal initiatives, the creative reinterpretation of the refugee definition by scholars and judges has in many cases succeeded in broadening understandings of a risk of 'being persecuted', so that at-risk minorities in flight from war or other broadly based forms of harm are recognized as refugees entitled to the protection of the Convention and Protocol.[10] As framed by Justice Kirby of the High Court of Australia:

> Because the Convention is universal, it does not speak only of the grounds of persecution that have been most familiar to Western countries . . . [I]n other societies,

[9] See generally Chapter 36 in this volume; Jane McAdam, *Complementary Protection in International Refugee Law* (OUP 2007). A generous and evolving interpretation of refugee status also aligns with Recommendation E of the Conference of Plenipotentiaries that adopted the Refugee Convention: Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007) 36.

[10] See Chapter 45 in this volume; Matthew Scott, *Climate Change, Disasters and the Refugee Convention* (CUP 2020).

> and in modern times, different cultural norms and social imperatives may give rise to different sources of persecution.... The concept is not a static one. Nor is it fixed by historical appreciation.[11]

2. Refugee Status as a Non-reservable International Norm

As in the case of most treaties, States acceding to the Convention and Protocol may generally enter a reservation to avoid particular obligations. The Refugee Convention, however, insulates five core norms from any possibility of reservation or qualification—including the Convention's definition of a refugee entitled to international protection.[12]

Because the refugee definition in article 1A(2) may not be altered by Contracting States, it is, for example, not lawful for a country to protect as refugees only those fleeing risk on account of religion but not for reason of their particular social group; to decide that only persons who have already experienced persecution (rather than all who have a 'well-founded fear' of being persecuted) are to be treated as refugees; nor to exclude stateless persons from refugee status. And because the Convention stipulates in great detail both the circumstances under which refugee status comes to an end and the scope of permissible exclusion from refugee status, Contracting States may not, for example, simply end refugee status because of economic or political pressure or summarily bar persons from protection on the basis of vague allegations that they present a 'terrorist' or other threat.[13]

It is of course true, as both Sztucki[14] and Chetail[15] have insisted, that Contracting States enjoy significant latitude to interpret and apply the common refugee definition. Courts have nonetheless recognized the importance of giving a common meaning to the Convention, including to its definition of who is a refugee. As the Supreme Court of the United Kingdom made clear, the refugee definition 'must be interpreted as an international instrument, not a domestic statute. It should not be given a narrow or restricted interpretation'.[16] Because there is a single refugee definition that binds all

[16] *R (ST, Eritrea) v Secretary of State for the Home Department* [2012] UKSC 12, [2012] 2 AC 135 para 30.

Contracting States, each State is required to promote the effectiveness of the Convention as a treaty with a common standard of entitlement to protection:

> As in the case of other multilateral treaties, the Refugee Convention must be given an independent meaning . . . without taking colour from distinctive features of the legal system of any individual contracting state. In principle therefore there can only be one true interpretation of a treaty . . . . In practice it is left to national courts, faced with the material disagreement on an issue of interpretation, to resolve it. But in doing so it must search, untrammelled by notions of its national legal culture, for the true autonomous and international meaning of the treaty.[17]

3. Refugee Status as Declaratory

While it is common to speak of Contracting States 'granting' refugee status, this framing is not in fact accurate. As detailed below,[18] rights under the Convention and Protocol actually accrue incrementally over time, with two important 'bundles' of rights explicitly owed to persons who are not yet 'lawfully present' (much less 'lawfully staying' or durably residing) in an asylum country. This innovative approach to the attribution of rights to refugees reflects the sensible concern of the Convention's drafters that some basic entitlements had to be provisionally extended to all persons claiming refugee status, or recognizable as refugees even before status adjudication, in order to safeguard the very purpose of the regime.[19] Put simply, if a Contracting State had no refugee protection obligations unless and until an individual is affirmatively found to satisfy the criteria of the refugee definition, a poorly intentioned State might opt to delay that

[17] *R v Secretary of State for the Home Department, ex parte Adan and Aitseguer* [2000] UKHL 67, [2001] 2 AC 477, 516–17 (Lord Steyn).

[18] See Section 6.

[19] For example, '[g]iven that a person is a refugee within the meaning of the 1951 Convention as soon as he or she fulfills the criteria contained in the refugee definition . . . the principle of *non-refoulement* applies not only to recognized refugees, but also to those who have not had their status formally declared': UNHCR, 'Advisory Opinion on the Extraterritorial Application of *Non-Refoulement* Obligations under the 1951 Convention relating to the Status of Refugees and its 1967 Protocol' (26 January 2007) para 6. 'While [the declaratory nature of refugee status] may sound like a technicality, it is the reason why asylum-seekers should not be returned to their countries of origin until their claims have been examined': Frances Nicholson and Judith Kumin, *A Guide to International Refugee Protection and Building State Asylum Systems: Handbook for Parliamentarians No 27, 2017* (Inter-Parliamentary Union and UNHCR 2017) 18. See also Abdul Ghafur Hamid and Shaban Phiri, 'Protecting Asylum-Seekers Prior to Determination of Refugee Status: Reinterpreting the Refugee Convention and Assessing Contemporary State Practice on *Non-Refoulement*' (2017) 25 International Islamic University of Malaysia Law Journal 29, 37–8. Importantly, all rights provisionally respected can be immediately withdrawn in the event an applicant is found not to be a Convention refugee.

inquiry or even to avoid it altogether.[20] If, on the other hand, core rights are provisionally guaranteed to those arriving to seek protection unless and until found *not* to qualify as refugees, the Contracting State has an incentive to inquire into the need for protection even as the basic interests of the person claiming refugee status are safeguarded in the interim.[21] The UNHCR Handbook thus eloquently observes that:

> A person is a refugee within the meaning of the 1951 Convention as soon as he fulfils the criteria contained in the definition. This would necessarily occur prior to the time at which his refugee status is formally determined. Recognition of his refugee status does not therefore make him a refugee but declares him to be one. He does not become a refugee because of recognition, but is recognized because he is a refugee.[22]

This understanding that refugee status recognition is declaratory has been recognized by the Inter-American Court of Human Rights,[23] as well as by several senior national courts.[24] European Union law also expressly provides that '[t]he recognition of refugee status is a declaratory act', as do the laws of a number of countries.[25]

This importance of the declaratory nature of refugee status truly cannot be overstated:[26] perhaps most importantly, this principle provides a critical means to

[20] A critique of the declaratory status doctrine based on speech theory is advanced in Trish Luker, 'Performance Anxieties: Interpellation of the Refugee Subject in Law' (2015) 30 Canadian Journal of Law and Society 91, arguing that, in advance of recognition, refugee status is not stable.

[21] The declaratory nature of refugee status thus sits comfortably with the implied duty to investigate refugee claims. See eg UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019) paras 24, 189, 194; Chetail (n 15) 51. The innovative attachment system of the Convention (see Section 6) nonetheless ensures that, if a State fails or refuses to assess refugee status, the full catalogue of refugee rights will still accrue over time. James C Hathaway, *The Rights of Refugees under International Law* (CUP 2005) 183–4, 189–91. See also Hathaway and Foster (n 7) 25–6.

[22] UNHCR (n 21) para 28.

[23] 'Given the declarative nature of the determination of refugee status … the States parties to the 1951 Convention … must recognize this status, based on the respective fair and competent proceedings': *Pacheco Tineo Family v Bolivia*, Inter-American Court of Human Rights Series C No 272 (25 November 2013) para 147.

[24] 'True it is … as para 28 of the Handbook neatly points out, that someone recognised to be a refugee must by definition have been one before his refugee status has been determined': *R (Hoxha) v Special Adjudicator* [2005] UKHL 19, [2005] 1 WLR 1063 para 60; see also *R (ST, Eritrea)* (n 16) para 21. 'Under the Refugee Convention, refugee status depends on the circumstances at the time the inquiry is made; it is not dependent on formal findings': *Németh v Canada* 2010 SCC 56, [2010] 3 SCR 281 para 50; see also *Kenya National Commission on Human Rights v Attorney General* [2017] eKLR para 17.

[25] See eg Ley No 26.165, Ley General de reconocimiento y protección al refugiado Argentina, Boletín oficial (2006) art 2 (Argentina); Lei No 9.474 (1997) art 26 (Brazil); Decreto No 36831-G, Reglamento de personas refugiadas (2011) arts 14 and 107 (Costa Rica); Ley sobre Refugiados, Protección Complementaria y Asilo Político (2014) arts 12 and 47 (Mexico).

[26] It is nonetheless fair to observe that, under national law, '[f]or the asylum seeker there is little comfort in this otherwise perfect logic, since unless recognized he or she will be treated, rightly or wrongly, as a non-refugee with all the consequences (perhaps sometimes tragic) of non-recognition': Sztucki (n 6) 70–1; see also Goodwin-Gill and McAdam (n 9) 51. This concern, though, derives less from the declaratory nature of refugee status than from the tragic failure to establish an effective system for oversight of duties under the Convention. See Section 8.

contest the legality of *non-entrée* policies under which Contracting States have attempted to avoid even access to their courts or protection from *refoulement* to persons arriving at their jurisdiction to seek protection.[27]

4. Non-exclusive Catalogue of Rights

A critical attribute of the Convention and Protocol is that they contain a continuing affirmation of the propriety of Contracting States legislating domestically beyond the standards of the Refugee Convention and, particularly, of them continuing to accord refugees all advantages that accrue to them by virtue of other agreements, such as bilateral treaties with the refugee's country of origin. Most important, article 5 should be read as establishing how duties under refugee law are to be reconciled with the requirements of the array of important accords negotiated since the advent of the Refugee Convention—including expansions and interpretations of international refugee law itself, the advent of regional refugee regimes, and especially the evolution of a dynamic system of international human rights law.[28] International human rights law generally grants rights to all persons subject to a State's jurisdiction, and is therefore a critical source of enhanced protection for refugees. Article 5 of the Refugee Convention ensures that refugee rights are not seen as limited to those set by the refugee treaty itself,[29] but rather makes clear that refugees are entitled to the benefit of more general human rights principles. As Chetail explains:

> the Geneva Convention itself provides the means for resolving any potential conflicts of norms [between refugee law and human rights law], for its Article 5 preserves the continuing applicability of more favourable standards granted apart from [the Refugee] Convention without regard to the so-called specialty of the norms.[30]

[27] The implications of the duty of *non-refoulement* in the context of extraterritorial deterrence are developed in Thomas Gammeltoft-Hansen and James C Hathaway, '*Non-Refoulement* in a World of Cooperative Deterrence' (2015) 53 Columbia Journal of Transnational Law 235.

[28] Ziegler notes that rights in the Refugee Convention and Protocol were 'carefully framed to define minimum standards': Ruvi Ziegler, *Voting Rights of Refugees* (CUP 2017) 41, citing UNHCR, 'Note on International Protection', UN doc A/AC.96/951 (13 September 2001) paras 4 and 107.

[29] Skordas, in contrast, contends that it is 'more appropriate to examine the relationship between refugee law and human rights law in Art 7, which establishes a clear obligation of the contracting parties to afford refugees the same treatment as that accorded to aliens generally': Achilles Skordas, 'Article 5: Rights Granted Apart from this Convention' in Zimmermann (n 1) 675; see also at 677, 698. Art 7, which establishes the general standard of treatment for refugees, does indeed reinforce the right of refugees to benefit from general norms of human rights law. But it is art 5 that most clearly resolves the potentially thorny question of how the two bodies of law should be reconciled, requiring that refugees receive the benefit of the cognate rights set by international human rights law.

[30] Chetail (n 15) 22 (fn omitted). It does not, however, follow that 'the terms of the debate should be inversed: human rights law is the primary source of refugee protection, while the [Refugee] Convention is bound to play a complementary and secondary role'. Such an assertion of hierarchy is not only at odds with the complementary and mutually reinforcing nature of refugee and general human rights law, but misstates the relative strength of refugee-specific norms in various contexts. See generally Hathaway (n 21).

Edwards takes much the same position, noting that 'Article 5 of the [Refugee] Convention [may be] read as a "successive clause" or "conflict clause" '.[31] Article 5, in other words, ensures that, in the event of any normative dissonance between the Refugee Convention and simultaneously applicable general human rights standards, refugees are entitled to the benefit of the higher standard.

5. Exceptions and Derogation

Another strength of the Refugee Convention and Protocol—in addition to the non-reservable core definitional norm, the declaratory nature of refugee status, and the non-exclusive catalogue of rights—is that refugee rights are less susceptible to exceptions and derogation than are the rights set by some other core human rights treaties, including, in particular, the two international human rights covenants.

While the rights set by the ICESCR explicitly inhere in 'everyone',[32] they are not framed as obligations of result.[33] States parties agree instead 'to take steps, individually and through international assistance and co-operation . . . to the maximum of [their] available resources, with a view to achieving progressively the full realization of the rights recognized in the present Covenant'.[34] Critically, this formulation 'does not mean that States parties may indefinitely postpone taking action':[35] to the contrary, there is a duty to give priority to the realization of economic, social, and cultural rights, and to ensure that their realization is subject to meaningful legal accountability and respect

[31] Alice Edwards, 'Human Rights, Refugees, and the Right "to Enjoy" Asylum' (2005) 17 IJRL 293, 306. She continues that this understanding leads to a result that is consistent with the more general approach taken under paragraphs 30(3)–(4) of the Vienna Convention on the Law of Treaties (opened for signature 23 May 1969, entered into force 27 January 1980) 1155 UNTS 331. Edwards writes that those sub-paragraphs 'provide that where an earlier treaty is not terminated or suspended, the former applies only to the extent that its provisions are compatible with the latter treaty. While there is no refugee-specific replacement for the 1951 Convention, there is an overlap in relation to particular provisions . . . and application of sub-Articles 30(3) and (4) of the Vienna Convention would mean that all the provisions of the 1951 Convention and/or 1967 Protocol remain on foot apart from those which are incompatible with [international human rights law] instruments subsequently ratified'.

[32] See eg Committee on Economic, Social and Cultural Rights, 'General Comment No 4: The Right to Adequate Housing (Art 11(1) of the Covenant)', UN doc E/1992/23 (13 December 1991) para 6; Committee on Economic, Social and Cultural Rights, 'General Comment No 12: The Right to Adequate Food (Art 11)', UN doc E/C.12/1999/5 (12 May 1999) para 1.

[33] As Saul, Kinley, and Mowbray observe, '[t]he tone and nature of the demands made of states are quite different from the equivalent Article 2(1) in the ICCPR, being more exhortatory than mandatory, more progressive than immediate': Ben Saul, David Kinley, and Jacqueline Mowbray, *The International Covenant on Economic, Social and Cultural Rights: Commentary, Cases, and Materials* (OUP 2014) 134.

[34] ICESCR, art 2(1). 'The term "progressive realization" is often used to describe the intent of this phrase. The concept of progressive realization constitutes a recognition of the fact that full realization of all economic, social and cultural rights will generally not be able to be achieved in a short period of time': Committee on Economic, Social and Cultural Rights, 'General Comment No 3: The Nature of States Parties' Obligations (Art 2, Para 1, of the Covenant)', UN doc E/1991/23 (14 December 1999) para 9.

[35] Committee on Economic, Social and Cultural Rights, 'The Duties of States towards Refugees and Migrants under the International Covenant on Economic, Social and Cultural Rights', UN doc E/C.12/2017/1 (13 March 2017) para 4.

towards other requirements of human rights law, in particular the duty of non-discrimination. But it remains that general economic rights are subject to a more fungible standard of implementation than are cognate rights under the Refugee Convention, which grant Contracting States no discretion whatsoever to delay implementation on the basis of insufficient resources.

Similarly, article 2(3) of the ICESCR authorizes '[d]eveloping countries, with due regard to human rights and their national economy, [to] determine to what extent they [will] guarantee the economic rights recognized in the present Covenant to non-nationals'. As Saul, Kinley, and Mowbray note, this provision contemplates not just the maintenance of existing restrictions, but also 'the introduction of new measures designed to limit the rights which non-nationals had previously enjoyed'[36]—a potentially fatal concern for the overwhelming majority of refugees who live in the less-developed world. The Refugee Convention, in contrast, requires that a wide range of critical economic rights be granted to refugees by all Contracting States.

While general civil and political rights must be immediately implemented, including by less developed countries, most rights under the ICCPR are nonetheless subject to relatively broad derogation authority in the context of a 'public emergency which threatens the life of the nation'.[37] In contrast, article 9 of the Refugee Convention does not allow Contracting States to derogate from their obligations on an ongoing basis, even in time of war or other serious national emergency. As Grahl-Madsen concluded, 'the Convention is to be applied not only in normal time, but also in time of war or national emergency, and ... States may only derogate from the provisions within the limits of [article 9]'.[38]

Specifically, article 9 allows for derogation only as a provisional measure 'pending a determination by the Contracting State that that person is in fact a refugee'.[39] A Contracting State that wishes to avail itself of the provisional measures authority must therefore proceed to verify the claims to refugee status of all persons whose rights are

[36] Saul, Kinley, and Mowbray (n 33) 215. Invoking the drafting history, the authors nonetheless constrain the implications of this understanding somewhat, arguing that 'Article 2(3) was ... intended to allow developing countries to address structural inequalities in their economies *which resulted from colonialism*' and that 'Article 2(3) would therefore seem to refer to countries which are economically weak and which were formerly subject to colonial rule': 215–16 (emphasis added).

[37] ICCPR, art 4(1).

[38] Atle Grahl-Madsen, *Commentary on the Refugee Convention 1951* (UNHCR 1963) 42.

[39] Refugee Convention, art 9. Despite the clear language of this provision, it has been suggested that a 'determination ... that that person is in fact a refugee' does not mean what it says. Rather, '[t]he ultimate aim of the determination under Art 9 is not to clarify refugee status according to the criteria in Art 1, but to find out whether the individuals concerned—bound via their nationality to a country engaged in severe hostilities against their host country—are (still) loyal to their country of nationality and, hence, a security risk for their host country': Ulrike Davy, 'Article 9' in Zimmermann (n 1) 800. This approach is not only contrary to the plain language and drafting history of the article, but would allow a State effectively to suspend its obligations in perpetuity. Yet even the Australian representative—who argued perhaps most strenuously for a wide-ranging power of derogation—made clear 'that it was never his delegation's intention to open the way to an indefinite extension of the circumstances in which states could take exceptional measures': Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons, Summary Record of the Sixth Meeting (4 July 1951), UN doc A/CONF.2/SR.6, 14 (statement by Mr Shaw, Australia).

thereby suspended.[40] If a particular person[41] is found not to be a Convention refugee, including on the basis of criminal or other exclusion provisions, no rights under the Refugee Convention accrue, and removal from the territory or the imposition of other restrictions is allowed.[42] If, on the other hand, an individual is found to satisfy the Convention refugee definition, article 9 establishes a presumption that the provisional measures must come to an end.[43]

6. Rights Acquisition by Attachment

To this point, the architecture of the Refugee Convention and Protocol may seem skewed in a way that is unrelentingly attuned to the needs of the refugee: refugee status (a) must be based on the international definition of a refugee interpreted in a geographically and temporally inclusive way; (b) accrues by virtue of facts on the ground rather than simply as a function of formal status assessment; (c) is non-exclusive; and (d) is less amenable to exceptions or derogation than are cognate norms under general international human rights law. But these pro-refugee attributes are neatly balanced by two important features that safeguard the legitimate concerns of the Contracting States to which the protection request is addressed.

First, and in contrast to the usual approach in international human rights law, it is not the case that all of the rights set out in the Convention are immediately owed to every presumptive refugee arriving at a State's territory. Refugees are instead entitled to an expanding array of rights as their relationship with the asylum State deepens.[44] At the

[40] 'The purpose of Art 9 is to permit the wholesale provisional internment of refugees in time of war, followed by a screening process': Nehemiah Robinson, *Convention relating to the Status of Refugees: Its History, Contents and Interpretation* (Institute of Jewish Affairs 1953) 95.

[41] 'The words "in his case" indicate that such measures may not be taken against all or certain categories of refugees but may only be taken on the merits of the individual case'. Paul Weis, *The Refugee Convention, 1951: The Travaux Préparatoires Analysed with a Commentary by the Late Dr Paul Weis* (CUP 1995) 75.

[42] Countervailing domestic or international legal obligations, for example duties to avoid removal under the CAT, may operate independently to prevent removal from the asylum country.

[43] Contrary to both the express language and drafting history of art 9, Davy argues that provisional measures may be applied not only to refugees who have not yet been recognized, but also to 'individuals who have—on the basis of a formal determination or just informally—been admitted as refugees. They might all be subjected to provisional measures': Davy (n 39) 801.

[44] As observed by the Supreme Court of the United Kingdom, '[t]he rights that attach to the status of refugee under the Convention depend in each case on the possession of some degree of attachment to the contracting State in which asylum is sought.... An examination of the Convention shows that it contemplates five levels of attachment to the contracting states': *R (ST, Eritrea)* (n 16) para 21. The first level of attachment (being simply subject to a State's jurisdiction) is not included in the attachment typology proposed in Goodwin-Gill and McAdam, though the writers acknowledge that '[s]ome benefits extend to refugees by virtue of their status alone as refugees': Goodwin-Gill and McAdam (n 9) 524. Another writer omits the notion of durable residence. See Rosa da Costa, 'Rights of Refugees in the Context of Integration: Legal Standards and Recommendations', UNHCR Legal and Protection Policy Research Series, POLAS/2006/02 (2006) 17–19.

lowest level of attachment, some refugees are simply subject to a State's *jurisdiction*, in the sense of being under its control or authority. A greater attachment is manifest when the refugee is physically present *within a State's territory*. A still more significant attachment is inherent when the refugee is deemed to be *lawfully or habitually present* within the State. The attachment is greater still when the refugee is *lawfully staying* in the country. Finally, a small number of rights are reserved for refugees who can demonstrate *durable residence* in the asylum State.[45] As the refugee's relationship to the asylum State is solidified over the course of this five-part assimilative path,[46] the Convention requires that a more inclusive range of needs and aspirations be met.

The drafters' decision to grant refugee rights on an incremental basis reflected the experience of States confronted with the unplanned arrival of refugees at their frontiers. While States outside Europe continued mainly to receive refugees preselected for resettlement, several European countries were already faced with what has today become the dominant pattern of refugee flows, namely the unplanned and domestically unauthorized arrival of refugees at a State's borders.[47] The drafters of the Convention explicitly considered how best to align the refugee rights regime with this transition from an essentially managed system of refugee migration to a mixed system in which at least some refugees would move independently:

> the initial reception countries were obliged to give shelter to refugees who had not, in fact, been properly admitted but who had, so to speak, imposed themselves upon the hospitality of those countries. As the definition of refugee made no distinction between those who had been properly admitted and the others, however, the question arose whether the initial reception countries would be required under the convention to grant the same protection to refugees who had entered the country legally and those who had done so without prior authorization.[48]

The compromise reached was that any unauthorized refugee, whether already inside or seeking entry into a Contracting State's territory, would benefit from the protections of the Refugee Convention.[49] Such refugees would not, however, immediately acquire all the rights of 'regularly admitted' refugees, that is, those pre-authorized to enter and to

[45] See generally Hathaway (n 21) 156–91.

[46] 'The Convention is characterized by a gradual improvement of standards over time, reflecting the refugee's assimilation into the host State': McAdam 2007 (n 9) 214.

[47] Art 31 of the Refugee Convention prohibits the penalization of most refugees for unlawful entry or presence: see Hathaway (n 21) 370–412.

[48] Ad Hoc Committee on Statelessness and Related Problems, First Session, Summary Record of the Seventh Meeting Held at Lake Success, New York (23 January 1950), UN doc E/AC.32/SR.7, 12 (statement by Mr Cuvelier, Belgium).

[49] 'It did not, however, follow that the convention would not apply to persons fleeing from persecution who asked to enter the territory of the contracting parties ... [W]hether or not the refugee was in a *regular position*, he must not be turned back to a country where his life or freedom could be threatened': Ad Hoc Committee on Statelessness and Related Problems, First Session, Summary Record of the Twentieth Meeting Held at Lake Success, New York (1 February 1950), UN doc E/AC.32/SR.20, 11–12 (emphasis added) (statement by Mr Henkin, United States).

reside in an asylum State. Instead, as under then-prevailing French law, basic rights would be granted to all refugees, with additional rights following as the legal status of the refugee was consolidated.[50]

This staggered approach to the attribution of refugee rights is a critical answer to the concern that it would be unreasonable simply to demand that all of the Convention's rights—which provide an unusually strong arsenal of, in particular, rights of economic participation—be instantly provided to each and every refugee arriving, whatever the numbers concerned or the circumstances of the receiving State. Yes, some critical refugee rights must be guaranteed immediately and to all under a Contracting State's jurisdiction[51]—to do otherwise would be fundamentally unjust to refugees. But the Convention's more sophisticated rights may be lawfully delayed, ideally allowing time for burden- and responsibility-sharing mechanisms to attenuate the hardship for overtaxed receiving countries, even as the refugee's assimilation demands deeper enfranchisement over time.

7. Rights Defined by a Mix of Absolute and Contingent Standards

In addition to the fact that refugee rights are owed only incrementally rather than immediately, the Convention normally calibrates the nature of a Contracting State's duties with what it provides to other persons under its jurisdiction.[52] While a few rights are guaranteed absolutely to refugees, the standard for compliance normally varies as a function of the relevant treatment afforded another group under the laws and practices of the receiving country. The general idea is that most refugee rights are framed as contingent standards, with the exception of a core group of rights that are owed in

[50] '[T]he problem would be seen more clearly if it were divided into three different aspects: the first concerned the treatment of refugees before they had reached an understanding with the authorities of the recipient countries; the second referred to their right to have their situation regularized and the conditions in which that was to be done; the third dealt with their rights after they had been lawfully authorized to reside in the country, which meant, in the case of France, after they were in possession of a residence card and a work card': Ad Hoc Committee on Statelessness and Related Problems, First Session, Summary Record of the Fifteenth Meeting Held at Lake Success, New York (27 January 1950), UN doc E/AC.32/SR.15, 15 (statement by Mr Rain, France).

[51] The relevant substantive rights are arts 3 (non-discrimination), 13 (movable and immovable property), 16(1) (access to the courts), 20 (rationing), 22 (education), 29 (tax liability), 33 (prohibition of *refoulement*), and 34 (good faith consideration for naturalization). In addition, certain contextual rights also apply at this stage, including arts 5 (respect for other rights), 6 (exemption from insurmountable requirements), 7(1) ('aliens generally' default), 8 (exemption from exceptional measures), and 12 (respect for personal status). Additional rights accruing with mere physical presence include arts 4 (religious freedom), 27 (identity documents), 31(1) (non-penalization for illegal entry or presence), and 31(2) (only necessary and justifiable constraints on freedom of movement).

[52] See Goodwin-Gill and McAdam (n 9) 512 for an examination of the historical foundations of the contingent rights structure.

absolute terms because they are either refugee-specific (such as the duty of *non-refoulement* and the right not to be penalized for illegal entry or presence) or deemed of consummate importance (such as the rights to non-discrimination and to freedom of religion). Under these contingent rights standards, refugees are assimilated to citizens of the asylum country, to nationals of a most-favoured State, or non-citizens generally in the asylum State.[53] But, in any case, refugees must be exempted from any criteria which a refugee is inherently unable to fulfil,[54] and may not be subjected to any exceptional measures applied against the citizens of their State of origin.[55]

The frequent reliance of the Convention and Protocol on contingent standards of treatment helps to ensure that asylum countries are not asked to do more than is demonstrably within their capacity. It also guards against the prospect of refugees being said to be 'privileged' vis-à-vis citizens and others living in the asylum State, since normally refugees are entitled to no more than what others already receive. Like the notion of incremental acquisition of rights, the Convention's reliance on a mix of absolute and contingent rights thus attenuates the otherwise seemingly absolute duty of protection arising from the simple fact of a refugee arriving at a Contracting State's jurisdiction.

8. State-by-State Implementation

The Refugee Convention and Protocol can thus be seen to embody a sensible compromise. On the one hand, their architecture is hugely attentive to the needs of refugees—including by the attribution of rights on the basis of a non-reservable and flexible definition, a commitment to declaratory rather than constitutive status assessment, non-exclusivity of rights accrual, and no more than constrained exceptions and derogation authority. On the other hand, the real needs of host countries are catered for by the structure of incremental rights acquisition through attachment and by the conceptualization of most rights on a contingent basis.

Despite the wisdom of this balance, the Refugee Convention and Protocol are today less influential on the ground than they should be, due in no small measure to the fact that they are implemented on an *ad hoc*, State-by-State basis rather than in a coordinated manner.[56] In part, this concern mirrors the critique noted above that both the refugee

[53] Even the baseline standard of compliance must, of course, meet the requirements of international human rights law, in particular the overarching duty of non-discrimination: Marina Sharpe, 'The 1951 Refugee Convention's Contingent Rights Framework and Article 26 of the ICCPR: A Fundamental Incompatibility?' (2014) 30(2) Refuge 5; Skordas (n 29) 719–20.

[54] Refugee Convention, art 6. See generally Hathaway (n 21) 205–8; Reinhard Marx and Felix Machts, 'Article 6' in Zimmermann (n 1).

[55] Refugee Convention, art 8. See generally Hathaway (n 21) 270–7; Davy (n 39).

[56] '[T]he [Refugee] Convention draws a clear cut distinction between the international norms enshrined therein and their national implementation entrusted to each individual state party': Chetail (n 15) 51.

definition and refugee rights are interpreted in varying ways by Contracting States in a manner that erodes the intended commonality of protection standards.[57] With no more than a never-used right of Contracting States to challenge another Contracting State's interpretation before the International Court of Justice,[58] the refugee regime is today the only widely subscribed UN human rights regime that lacks an independent supervisory mechanism capable of defining its terms in an authoritative way.[59] While this is both historically explicable (the Convention came into force before independent supervision was routine[60]) and mitigated both by UNHCR's role under article 35 of the Convention (though the agency cannot enforce compliance,[61] lacks autonomy from the Contracting States that fund it,[62] and takes on roles that arguably suggest that it should itself be supervised[63]) and the existence of a vibrant transnational conversation amongst refugee law judges (who often draw on international and comparative norms when enforcing law at the domestic level[64]), the ability to sustain the Convention's vitality without truly independent and authoritative oversight is increasingly doubtful.[65]

Yet, as real as the threat from interpretive inconsistency is, the most profound challenge to the longevity of the Convention and Protocol comes from the fundamentally uncoordinated way in which they are implemented. Simply put, neither refugee rights

[57] See Section 2.

[58] See Karin Oellers-Frahm, 'Article 38 of the 1951 Convention/Article IV of the 1967 Protocol' in Zimmermann (n 1) 1551, noting that '[i]t has been argued that the mere existence of a compromissory clause can have a positive effect on the attitude of State parties to a particular convention'.

[59] The contemporaneously drafted Convention relating to the Status of Stateless Persons (adopted 28 September 1954, entered into force 6 June 1960) 189 UNTS 117, and the Convention on the Reduction of Statelessness (adopted 4 December 1954, entered into force 30 August 1961) 989 UNTS 175, also lack independent enforcement mechanisms. Neither treaty has, however, thus far been acceded to by the majority of States (94 and 75 ratifications respectively).

[60] See Walter Kälin, 'Supervising the 1951 Convention on the Status of Refugees: Article 35 and Beyond' in Erika Feller, Volker Türk, and Frances Nicholson (eds), *Refugee Protection in International Law: UNHCR's Global Consultations on International Protection* (CUP 2003) 617, explaining the historical basis for the weak supervisory system designed by the drafters of the Convention.

[61] '[T]here is no proper procedure implementing the UNHCR's supervisory responsibility. Nor has an international enforcement mechanism as such been established in this area.' Volker Türk, 'UNHCR's Supervisory Responsibility', UNHCR New Issues in Refugee Research, Working Paper No 67 (2002) 2–3.

[62] Chetail (n 15) 65.

[63] 'Supervision ceases to be the natural and exclusive preserve of the UNHCR when it assumes responsibilities that are properly those of states and require supervision themselves': Marjoleine Zieck, 'Article 35 of the 1951 Convention/Article II of the 1967 Protocol' in Zimmermann (n 1) 1507–8.

[64] James C Hathaway, 'A Forum for the Transnational Development of Refugee Law: The IARLJ's Advanced Refugee Law Workshop' (2003) 15 IJRL 418.

[65] Proposals to remedy the current supervisory gap have been advanced by Kälin (n 60) 657–9; Anthony North and Joyce Chia, 'Towards Convergence in the Interpretation of the Refugee Convention: A Proposal for the Establishment of an International Judicial Commission for Refugees' (2006) 25 Australian Year Book of International Law 105; and James C Hathaway, Anthony M North, and Jason Pobjoy, 'Supervising the Refugee Convention' (2013) 26 JRS 323. The latter proposal was based on three preparatory studies: Katie O'Byrne, 'Is There a Need for Better Supervision of the Refugee Convention?' (2013) 26 JRS 330; Joanna Whiteman and Claire Nielsen, 'Lessons from Supervisory Mechanisms in International and Regional Law' (2013) 26 JRS 360; and Alysia Blackham, 'A Proposal for Enhanced Supervision of the Refugee Convention' (2013) 26 JRS 392.

nor the protection of legitimate host State interests can be guaranteed under the current 'accidents of geography' mechanism for the allocation of protection burdens and responsibilities.

Despite the recognition in the preamble of the Convention that 'the grant of asylum may place heavy burdens on certain countries, and that a satisfactory resolution of a problem of which the United Nations has recognized the international scope and nature cannot therefore be achieved without international co-operation',[66] the Convention and Protocol are today implemented on a State-by-State basis, the default position being that refugees are the sole legal responsibility of whatever country they arrive at. This is not only grotesquely unfair to States—with only 10, mostly poor, countries hosting roughly half of the global refugee population[67]—but at least as important is a huge threat to the vindication of refugee rights, with more than three-quarters of the world's refugees consigned to long-term indeterminate status in protracted refugee situations.[68] The most recent response[69] of the United Nations to this predicament has been to offer only general principles and a multiplicity of fora in which to discuss voluntary coordination of protection efforts, with no hard commitments to share burdens and responsibilities, much less to establish a true oversight mechanism that would ensure a fair and dependable global implementation of the Convention and Protocol.[70]

We thus stand at a precipice. The thoughtful compromises built into the architecture of the Refugee Convention and Protocol are important, but clearly insufficient to withstand the pressures of continuous large-scale refugee flows in the absence of significantly enhanced oversight and coordination. This poses the very real risk that, despite the smart compromises at the heart of this normative regime, the Refugee Convention and Protocol will founder—leaving both refugees, and the poorer countries that receive most of them, in the lurch.

[66] Refugee Convention, preamble, para 4.

[67] UNHCR, 'Global Trends: Forced Displacement in 2018' (2019) 13–23 <https://www.unhcr.org/5d08d7ee7.pdf> accessed 2 October 2019 (noting that the top 10 receiving countries host nearly 13 million refugees out of a total refugee population of just under 26 million).

[68] ibid 22 (noting that 15.9 million refugees, some 78 per cent of the total refugee population, were living in protracted refugee situations).

[69] An earlier initiative, 'Convention Plus', is thoughtfully analysed in Alexander Betts and Jean-François Durieux, 'Convention Plus as a Norm-Setting Exercise' (2007) 20 JRS 509, noting that despite its often creative engagement with the challenges of protection, the initiative 'fell far short of expectation and it has failed to provide a significant normative basis for global burden sharing' (510). Academic proposals to establish a mechanism to share out refugee burdens and responsibilities include T Alexander Aleinikoff and Leah Zamore, *The Arc of Protection: Reforming the International Protection Regime* (Stanford University Press 2019); Joseph Blocher and Mitu Gulati, 'Competing for Refugees: A Market-Based Solution to a Humanitarian Crisis' (2016) 48 Columbia Human Rights Law Review 53; Peter Schuck, 'Refugee Burden-Sharing: A Modest Proposal' (1997) 22 Yale Journal of International Law 243; and James C Hathaway and Alexander Neve, 'Making International Refugee Law Relevant Again: A Proposal for Collectivized and Solution-Oriented Protection' (1997) 10 Harvard Human Rights Journal 115.

[70] See the Global Compact on Refugees, which is analysed in depth in a collection of articles found in (2018) 30 IJRL 571.

CHAPTER 10

THE OFFICE OF THE UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES

JAMES MILNER AND JAY RAMASUBRAMANYAM

1. Introduction

The Office of the United Nations High Commissioner for Refugees (UNHCR) has played an active and discernible role in the making and implementation of international refugee law since its creation in 1950. For seven decades, UNHCR has employed various tools of influence to develop and promote new interpretations and applications of refugee law at the global, regional, and domestic levels. It has also socialized new States to incorporate international refugee protection norms into domestic law, and used its moral and expert authority to expand the interpretation and application of international refugee protection instruments. Conversely, UNHCR's history also includes examples of the organization acting in ways that contradict core principles of international refugee protection, including *non-refoulement* and other core refugee rights, such as freedom of movement and access to employment. How do we make sense of these apparent contradictions when understanding the role of UNHCR in international refugee law?

In examining UNHCR's role in international refugee law, this chapter employs Barnett and Finnemore's understanding of the *power* and *pathologies* of international organizations.[1] In terms of *power*, UNHCR has used its moral and expert authority to influence the actions of States. It has also used forms of *material power* to implement programmes, primarily in the Global South, that have sometimes served to promote

[1] See Michael Barnett and Martha Finnemore, 'The Politics, Power and Pathologies of International Organizations' (1999) 53 International Organization 699.

progressive interpretations of international refugee law, such as the promotion of the protection needs of refugee women.[2] However, this power has also sometimes served to constrain refugee rights, for instance through the establishment of large refugee camps that furthered the interests of States to contain refugees in regions of origin and insulate the host State from the presence of refugees.[3] More generally, UNHCR has employed *productive power*, defined as the 'production of subjects through . . . social relations'.[4] This type of power relates to the production of subjectivities and the relationship between power and knowledge. At the core of this form of power is the ability of actors to create and enforce new realities through the use of knowledge, discourse, and claims to legitimacy.

Simultaneously, UNHCR has demonstrated *pathologies*, especially through instances where it has acted in its perceived best interests as an organization but in ways that contradict the core principles of refugee protection. When States created UNHCR, they intentionally created an organization that had structural limitations that would make it reliant on the cooperation of States, both donor States to provide funding and host States to provide access to its territory.[5] As argued by Loescher, these constraints have meant that UNHCR has had to navigate a 'perilous path' throughout its history to demonstrate its continued relevance and to secure the support of a diverse range of States.[6] These constraints help explain, although arguably do not justify, UNHCR's role in prominent violations of international refugee law, such as the *refoulement* of Rwandan and Rohingya refugees in the 1990s.[7]

In examining UNHCR's role in international refugee law, this chapter begins by considering UNHCR's mandate responsibilities and operational functions to better understand the structures that condition the scope of UNHCR's engagement with the functioning of international law. By examining the details of UNHCR's mandate and its supervisory responsibilities in relation to the Refugee Convention the chapter establishes what expectations can be placed on UNHCR as an actor in the international refugee protection regime. While UNHCR's 1950 Statute and the Refugee Convention both mandate UNHCR to serve particular functions, such as its supervisory responsibility relating to the Refugee Convention, its Statute also places particular constraints on UNHCR, especially in terms of the scope of its activities and its reliance on voluntary contributions from States to perform its mandated functions. The chapter

then considers how the parameters of its mandate responsibilities affect UNHCR's operational functions. On the basis of this understanding, the chapter then considers the roles UNHCR has played in the making and implementation of refugee law at the global, regional, and national levels, through its operations, and how these functions have evolved over time. By illustrating the various instances where UNHCR has demonstrated power, along with those instances where the organization has exhibited pathologies and has been constrained by the interests of States, the chapter points to the importance of understanding international refugee law within the political environment in which it functions.

2. UNHCR's Mandate Responsibilities

The introductory note of the Statute of the United Nations High Commissioner for Refugees outlines that as per 'Resolution 319 (IV), of 3 December 1949, the United Nations General Assembly decided to establish a High Commissioner's Office for Refugees as of 1 January 1951'.[8] As per the General Provisions of the Statute

> [t]he United Nations High Commissioner for Refugees, acting under the authority of the General Assembly, shall assume the function of providing international protection, under the auspices of the United Nations, to refugees . . . and of seeking permanent solutions for the problem of refugees by assisting Governments . . . to facilitate the voluntary repatriation of such refugees, or their assimilation within new national communities.[9]

It is from this section of UNHCR's Statute that we derive the organization's core mandate functions: refugee protection and the pursuit of solutions. But its Statute also makes clear that UNHCR was not intended to be able to fulfil this mandate on its own. Instead, from its origins, UNHCR has needed to rely on the cooperation of States and the continued support of the United Nations General Assembly to undertake its work.

The reliance of UNHCR on States is further reinforced by the organization's reliance on voluntary contributions to undertake its work. Paragraph 20 of UNHCR's Statute specifies that 'no expenditures other than the administrative expenditures relating to the functioning of the Office of the High Commissioner shall be borne on the budget of the United Nations and all other expenditures relating to the activities of the High Commissioner shall be financed by voluntary contributions'. Today, this means that roughly 97 per cent of UNHCR's funding comes from voluntary contributions, primarily from a limited number of States in the Global North. Many of these States 'earmark' their contributions, thereby limiting where and how those funds may be used. For example,

[8] 'Statute of the Office of the United Nations High Commissioner for Refugees,' UNGA Res 428(V) (14 December 1950) (UNHCR Statute).

[9] ibid ch 1.

the United States has consistently remained the largest donor to UNHCR, typically accounting for a third of all State contributions to UNHCR, 100 per cent of which are earmarked. This provision has been used by States to exercise considerable influence over UNHCR's activities since its inception.[10]

The General Provisions further stipulate that '[t]he work of the High Commissioner shall be of an entirely non-political character'.[11] As noted by Goodwin-Gill and McAdam, questions have been raised about the significance of UNHCR's 'non-political' mandate and the scope of its work since its creation.[12] They highlight how the organization's original mandate has evolved significantly, and that UNHCR's independent roles and responsibilities have been reinforced by a series of UN General Assembly (UNGA) resolutions.[13] These resolutions indicate that States have authorized an evolution in UNHCR's role in the functioning of the international refugee protection regime over time.

Juxtaposed against UNHCR's reliance on States to fulfil its mandate is the organization's supervisory responsibilities in relation to the application of the Refugee Convention.[14] Specifically, article 35 of the Refugee Convention outlines that 'Contracting States undertake to co-operate with the Office of the United Nations High Commissioner for Refugees . . . in the exercise of its functions, and shall in particular facilitate its duty of supervising the application of the provisions of this Convention'. As Kälin discusses, UNHCR's supervisory role under article 35 ranges from its field operations and related protection work, to scrutinizing State practice in implementing the provisions of the Convention. UNHCR's interventions in domestic jurisdictions with the help of *amicus curiae* briefs can be viewed as a part of the organization's supervisory responsibilities.[15]

As Kälin notes, the primary purpose of the provisions in article 35 is 'to link the duty of States Parties to apply the Convention and the Protocol with UNHCR's task of supervising their application' and by extension imposing an obligation on Contracting States to respect this supervisory power and actively cooperate in such activities.[16] As we note throughout this chapter, the role of UNHCR within the domain of international refugee law is not static and has shown a great deal of dynamism. This evolutive character is noticeable in the States parties' willingness to cooperate with UNHCR 'in the exercise of its functions'.[17]

UNHCR's ability to exercise its supervisory function can be constrained by the provisions of its mandate that make it reliant on the very States it may need to supervise, especially in the context of exercising its supervisory responsibilities in response to the actions of its largest donors. For example, this constraint has been clear from UNHCR's

[15] Ibid 668. [16] Ibid 617. [17] ibid.

intervention on the applicability and effectiveness of the Safe Third Country Agreement between the United States and Canada in light of growing concerns of the treatment of asylum seekers by the US. With the flight of thousands of asylum seekers from Central America, Canada's response to this crisis and adherence to the Safe Third Country Agreement has been questioned by UNHCR, albeit in an insufficiently robust manner. The Safe Third Country Agreement mandates that asylum seekers' claims must be assessed in their first point of entry. However derogatory statements made by the US President in 2017–18 negatively characterizing Central American asylum seekers, coupled with Executive Orders that barred their entry, have raised concerns about the suitability of this Agreement for asylum seekers who wish to enter Canada from the US. Further, with the establishment of detention centres on the US–Mexico border, it can be questioned to what extent the US is considered to be 'safe', yet UNHCR has been reluctant to make public statements to this effect.[18]

In this case, UNHCR's reliance on US funding appears to have constrained the organization's ability to fully exercise its responsibility to supervise the implementation of the Refugee Convention. This raises a critical question about the organization, namely: To what extent is UNHCR non-political? Forsythe argues that although UNHCR has positioned itself in the international protection regime as a non-political agency, it has not stood by the initial precepts of the mandate of being non-political in nature.[19] The overall mandate requires UNHCR to be political by attempting to influence States to protect refugees and implement international protection principles. However, despite clearly laid out responsibilities on paper, UNHCR is hampered in its ability to carry out its responsibilities due to its reliance on States.[20] UNHCR's behaviour stems from the pathologies of international organizations, namely from the reliance of international organizations on States for access to territory and funding. The lack of autonomous power has meant that the interests of States have frequently conditioned UNHCR's ability to fulfil its responsibilities, detailed in the Refugee Convention and its Statute.

Loescher has argued that UNHCR's reliance on voluntary contributions from the affluent States of the Global North has historically contributed to constraints on UNHCR's willingness or ability to fully exercise its mandate. For example, Loescher outlines how UNHCR's reliance on voluntary contributions affected its response to the actions of European States in the 1980s following the arrival of 1.3 million asylum seekers fleeing political crises and armed conflicts in Africa, Asia, and the Middle East.[21] Although many were unable to return to their countries of origin due to fears for their safety, many did not meet the criteria of the Refugee Convention's refugee definition. Loescher argues that this growing number of arrivals into Europe 'severely jolted

[18] See 'CARL Calls for Suspension of Safe Third Country Agreement, Increased Refugee Re-Settlement, in Wake of Trump Executive Orders' (*Canadian Association of Refugee Lawyers (CARL)*, 30 January 2017) <http://www.carl-acaadr.ca/articles/139> accessed 5 October 2019.

[20] ibid. [21] Loescher (n 6) 235.

existing practices and overtaxed the procedural systems for handling refugee determinations'.[22] Amid such crises, UNHCR urged European States to broaden the protection mandate with a more flexible interpretation of the Refugee Convention. But, as Loescher notes, 'with the upsurge in asylum claims, European governments were not as willing to submit to the UNHCR's authority and leadership as they had been previously' and 'governments began to build barriers' and adopted restrictive policies to deter more people from arriving in Europe and toughened access to asylum procedures.[23]

One of the more noteworthy moves by European governments came when States refused to improve protection for Tamil asylum seekers.[24] Despite UNHCR claiming that the Tamils' predicament was of legitimate concern, governments 'accused the UNHCR of "taking over the sovereign state's function of deciding whether or not asylum outside the Convention should be granted" '.[25] Loescher argues that by the mid-1980s, the relationship between European governments and UNHCR had reached an impasse attributed to the lack of 'converging interests'. Several States in the region were concerned that UNHCR's articulation of such issues reduced the autonomy and power of States over immigration policy. This resulted in UNHCR not being 'perceived by governments to be the sole authority and source of legitimacy on refugee and asylum matters'.[26]

The practice of States, especially in the Global North, since the mid-1980s, has created new challenges for UNHCR and increased the organization's engagement in domestic courts. Given the absence of an international body that oversees and adjudicates asylum cases, domestic courts have become an important forum within which a State's asylum policies have been challenged. These proceedings have increased UNHCR's engagement in national and regional courts through *amicus curiae* briefs.[27] This is quite significant in UNHCR's role in the application and advancement of international refugee law. For instance, apart from UNHCR's direct involvement in carrying out refugee status determination (RSD) in some non-signatory States (as discussed below), the organization might engage with domestic cases by submitting an *amicus curiae* brief in cases where the State has refused asylum to individuals or if inadmissibility clauses are triggered due to individual circumstances. This form of engagement is very different from the appeals structure built into the mandate RSD system, wherein UNHCR engages directly with an individual case. This engagement with courts involves States and UNHCR's 'deliberative function vis à vis the interpretation of the 1951 Convention'.[28] As Gilbert argues, despite UNHCR's *amicus curiae* interventions, States have the leeway to disregard such interventions, which 'reflects the very nature of judicial interpretation within any legal system'.[29]

In response, UNHCR has been contributing to the advancement and interpretation of international protection norms, albeit with limited applicability due in part to States'

discretion. For instance, most recently UNHCR submitted a brief in the aftermath of the US rule 'Aliens Subject to a Bar on Entry Under Certain Presidential Proclamations' (Interim Asylum Rule),[30] which UNHCR characterized as a significant change in US asylum policy.[31] UNHCR's brief was presented in an attempt to ensure that US asylum policy remained consistent with US obligations as a Contracting State to the 1967 Protocol. UNHCR's brief provided guidance to the court on those obligations, and ensured that concerns were raised when the Interim Asylum Rule was considered and implemented alongside the 'Presidential Proclamation Addressing Mass Migration Through the Southern Border of the United States' (Proclamation).[32] This revised policy, in addition to running contrary to international legal obligations, also 'effectively denies the right to seek asylum to any refugee who crosses into the United States from Mexico outside of a designated port of entry'.[33] This blanket denial of asylum goes further than denying those crossing the border with a right to due process; it also contradicts the well-established customary international law obligation of *non-refoulement*.[34]

While it would be premature to draw conclusions from this example, it is important to note that this submission from UNHCR represents a very public critique of the domestic policies of the organization's single largest donor. Likewise, UNHCR's decision to critique US asylum policy in 2018 was in contrast to its reluctance to join opposition to the Canada–US Safe Third Country Agreement in 2017. To this end, it will be important to see if this results in changes in the relationship between UNHCR and the US, and if this represents a point at which UNHCR is able to assert its legal responsibilities as guardian of the legal foundations of the global refugee regime, even in the face of opposition by arguably the most powerful State within that regime. This example also illustrates the paradox of UNHCR's mandate responsibilities as being simultaneously expansive in scope and authority, yet constrained by its non-political mandate and the organization's reliance on cooperation from the very States it is mandated to supervise.

3. UNHCR's Operational Functions

The scope of UNHCR's operational functions can be described as equally constrained yet expansive. First, UNHCR's operational functions are *constrained* by its Statute, which makes it reliant on voluntary contributions to function, subject to the permission of States to access their territory, and dependent on cooperation with States to

[30] Aliens Subject to a Bar on Entry Under Certain Presidential Proclamations (Interim Asylum Rule), 83 Fed Reg 55,934 (9 November 2018).

[32] ibid. [33] ibid 3. [34] ibid.

find solutions for refugees. As detailed above, UNHCR's Statute specifies that its funding must come from voluntary contributions. Through this provision, 'UNHCR was made financially dependent on donor governments', which 'continues to be among the most significant means through which states are able to control the scope of UNHCR's work'.[35] Simply put, the major donors to UNHCR hold particular sway over the scope of the organization's work as they can prevent UNHCR from undertaking certain tasks simply by specifying that their funds cannot be used to undertake that task.

Secondly, UNHCR's scope of operations is also constrained by the politics of refugee-hosting States. Given the principle of sovereignty and the lack of mechanisms to enforce international refugee law, States have ultimate control over their borders and the quantity and quality of asylum they afford to refugees.[36] Since the 1980s, the shifting interests of States has contributed to the containment of the majority of the world's refugees in the Global South. In response, many refugee-hosting States in the Global South have responded to this dynamic by either seeking to restrict the number of refugees on their territory or limiting the rights of those refugees who are allowed to remain. Over time, UNHCR has been found to be either unwilling or unable independently to reverse this trend.[37]

Thirdly, as outlined above, UNHCR relies on cooperation with States to find solutions for refugees. UNHCR is consequently unable to realize any of the three durable solutions for refugees—voluntary repatriation, local integration, or third-country resettlement—if opposed by States and without the support of States. For example, States in the Global South have been increasingly resistant to suggestions that they naturalize refugees as a means of providing a solution, while the resettlement of refugees to a third country remains at the discretion of States. While UNHCR has worked to develop guidelines to facilitate refugee resettlement since the late-1990s, and while it provides annual guidance on the number of refugees in need of resettlement, the decision to admit refugees through resettlement is a decision taken by States, not UNHCR. In fact, while UNHCR reported that some 1.4 million refugees were in need of resettlement in 2019, States were only collectively willing to make available some 90,000 resettlement spaces—responding to just 6.4 per cent of the need identified by UNHCR.[38]

These constraints experienced by UNHCR need to be understood in stark contrast to the history of the expanding scope of UNHCR's operational functions. UNHCR's activities have evolved considerably over its history, from its origins as a relatively small and temporary international organization based in Geneva and focusing primarily on

[36] For a discussion of this dynamic in the African context, see James Milner, *Refugees, the State and the Politics of Asylum in Africa* (Palgrave MacMillan 2009).

[37] For a discussion of UNHCR's complicity in the long-term encampment of refugees, see Slaughter and Crisp (n 3) 123–40.

[38] UNHCR, 'UNHCR Projected Global Resettlement Needs 2019' (June 2018) <https://www.unhcr.org/5b28a7df4.pdf> accessed 24 June 2019.

issues of legal protection, to its current status as a global actor, with a permanent mandate, responsibility for programmes in more than 130 countries, a global staff of more than 16,000 and annual budget of US$7.7 billion in 2017.[39] Through this evolution, the scope of UNHCR's activities has expanded to now include the provision of material assistance and working with a much wider range of 'populations of concern', in addition to their mandated responsibility for refugees and stateless persons. As argued by Loescher, this evolution has been the result of both the interests of States, especially donor States, and the institutional interests of UNHCR itself to demonstrate its continued relevance in changing geopolitical contexts.[40]

From this expanded scope of activity UNHCR derives both moral and expert authority that gives the organization considerable influence in the making and implementation of refugee protection standards. For example, in considering UNHCR's role in refugee repatriation activities, Barnett outlines how UNHCR draws on expert authority—'when an actor's voice is given credibility because of his or her specialized training, knowledge, or experience'—and moral authority—'when an actor is perceived to be speaking and acting on behalf of the community's values and interests and defending the lives of the weak and vulnerable'—to exert dominance over refugees and other actors.[41] In this way, UNHCR is able to employ 'productive power', defined as the 'production of subjects through diffuse social relations',[42] to create realities and categories that serve its interests, even at the expense of the interests of others and the needs of refugees. Recent work on UNHCR's role in the repatriation of Mozambican refugees in the early 1990s illustrates how UNHCR's interests in maintaining its visibility in the aftermath of the Cold War and enhancing its relations with donors significantly influenced its actions in this case, sometimes at the expense of refugee protection.[43]

In other instances, however, UNHCR has employed its moral and expert authority to advance progressive interpretations of international refugee law, especially in relation to the meaning of 'membership in a particular social group' as grounds for persecution, according to the Refugee Convention. This is arguably evident in advancing an understanding of gender-based persecution and persecution on the grounds of gender identity and sexual orientation, although UNHCR's guidelines in these areas are not without critique.[44] In fact, since UNHCR first issued its *Handbook on Refugee Status*

Determination in 1979, one of UNHCR's most prominent roles in international refugee law has been in issuing guidelines on the interpretation of provisions of the Refugee Convention, including how the refugee definition should be applied in particular circumstances.[45]

4. UNHCR and the Making and Implementation of International Refugee Law

The scope of UNHCR's mandate responsibilities, combined with its operational functions, determine the agency's impact on the making and implementation of international refugee law in global, regional, and national contexts. This is evident both in the making and implementation of hard law, in the form of international treaties, regional conventions and domestic law, and soft law, in the form of guidelines, declarations, compacts, and policies. In many instances, UNHCR has employed productive power and its moral and expert authority to promote progressive understandings of refugee law. In many other instances, however, UNHCR has been unwilling or unable to oppose or reverse more restrictive expressions of refugee law—ranging from its inability to oppose the expansion of laws, policies, and practices by States in the Global North that have sought to contain refugees in their regions of origin, to its complicity in the implementation of restrictive laws, policies, and practices in the Global South that have placed restrictions on the rights afforded to refugees.

How can we understand this contradiction between UNHCR's role as sometimes promoter of progressive refugee protection principles and at other times complicit partner in the denial of refugee rights? Much of this contradiction can be explained by the nature of the organization, the structures within which it functions, the role of individuals within the organization, and UNHCR's own shifting institutional interests. For example, many of UNHCR's limitations have been explained by the asymmetrical relationship between UNHCR and States—both donor and refugee-hosting States where the interests of States prevail over the interests of UNHCR. The importance of these imbalances is amplified, given the structures within which UNHCR functions, especially its reliance on voluntary contributions and UNHCR's need to respond to the shifting contour of world politics. In responding to external factors, individuals within UNHCR—especially individual High Commissioners—play important roles in determining how UNHCR will navigate particular situations. UNHCR's senior leadership will also

[45] For a useful discussion of this role and a critique of how the role has evolved, see Guy S Goodwin-Gill, *UNHCR's Protection Guidelines: What Role for External Voices?* (Refugee Studies Centre seminar, 20 May 2015) <https://www.rsc.ox.ac.uk/news/unhcr2019s-protection-guidelines-what-role-for-external-voices-guy-goodwin-gill> accessed 7 June 2019.

play a central role in promoting UNHCR's own institutional interests—especially the organization's survival—when responding to particular moments of conflict and crisis.[46] These interests and constraints are also influential in explaining UNHCR's role in the making and implementation of refugee law in global, regional, and national contexts.

a. International Contexts

UNHCR has been explicitly assigned to the development of international refugee law. Paragraph 8(a) of UNHCR's Statute stipulates that UNHCR shall provide for the protection of refugees falling under the competence of its office by promoting the conclusion of international conventions relating to protection of refugees, promoting the ratification of such conventions, supervising the application of such conventions, and proposing amendments to such conventions. In the early stages of UNHCR's history, this authority was employed by UNHCR to lead processes that resulted in the 1957 Agreement on Refugee Seamen[47] and the 1967 Protocol. While UNHCR more recently contributed to the 2000 Protocol to Prevent, Suppress and Punish Trafficking in Persons[48] and the 2000 Protocol against the Smuggling of Migrants by Land, Sea and Air,[49] its more recent emphasis has been the development of international soft law agreements, such as the 2001 Agenda for Protection[50] and the 2018 Global Compact on Refugees, both of which were developed under UNHCR's auspices but later affirmed by the UNGA.

Despite this role, UNHCR has also been criticized for both failing to enforce international refugee agreements and, more recently, for not promoting more binding agreements that respond to gaps in the international refugee protection regime. While international refugee law contains few, if any, enforcement mechanisms beyond the moral authority of the High Commissioner for Refugees condemning the actions of States, and while UNHCR does play an important role in the supervision of international refugee law in permissive contexts,[51] UNHCR has been found to be frequently muted in its condemnation of States that violate the principles of international refugee law. These criticisms are especially significant in cases where States violate the principle of *non-refoulement*. More generally, UNHCR has been critiqued for not being more forceful in seeking to extract binding obligations from States to address perennial gaps in the

[46] For a detailed consideration of how UNHCR navigated these constraints during its first 50 years, see Loescher (n 6).

refugee protection regime. Most recently, this was notable in UNHCR's approach to consultations with States leading to the Global Compact on Refugees. While the Compact was intended to 'provide a basis for predictable and equitable burden- and responsibility-sharing among all United Nations Member States',[52] many commentators critiqued UNHCR for not encouraging States to work towards an agreement that would secure binding commitments for this kind of international cooperation.[53]

While UNHCR's frequent hesitancy to condemn State practice and to pursue more binding obligations from States may be, at least in part, explained by the structures within which UNHCR functions, these same functions have enabled UNHCR to play a seemingly paradoxical role as the moral 'guardian' of the Refugee Convention, as outlined above, and expert in the interpretation of the spirit of the Convention in light of changing circumstances. This is especially evident in UNHCR's use of doctrine.[54] UNHCR doctrine—the organization's articulation of its position on specific issues of international refugee law—has been an evolving area of practice for UNHCR since its inception. Drawing on its moral and expert authority, UNHCR doctrine is intended to offer general expressions of guidance to States in their implementation of the Refugee Convention. Here, the most notable form of doctrine has been UNHCR's guidelines on the determination of refugee status. More recently, however, UNHCR has employed doctrine as a means of expanding its mandate over a wider range of 'populations of concern', such as stateless persons[55] and those displaced as a result of natural disasters,[56] or in offering interpretations of the conditions under which refugees may be returned to their country of origin in conditions that fall short of voluntary repatriation. Again, while these actions reflect UNHCR's ability to influence the functioning of international refugee law in certain circumstances through its moral and expert authority, the fact that UNHCR sometimes issues doctrine that contradicts refugee protection principles can often be explained by the structures within which the organization functions and the interests of more powerful actors in the international system.

b. Regional Contexts

There are also important differentiations in UNHCR's ability to promote the development and implementation of international refugee law in regional contexts. In the

African context,[57] for example, UNHCR played an important role working with newly independent African States in the 1960s to develop a regional understanding of refugees that remains more expansive than the definition found in the Refugee Convention. Specifically, the 1969 OAU Convention defines a refugee not only as an individual fleeing a well-founded fear of persecution, as defined in article 1A(2) of the Refugee Convention, but also

> every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.[58]

This definition, along with the wider provisions of the OAU Convention, including a binding commitment to inter-African burden-sharing, is the result of UNHCR's ability to respond to the political priorities of newly independent African States and to promote the incorporation of international refugee law as a means of being socialized as a new member of the international community of States.[59]

In stark contrast, UNHCR has been very limited in its ability to convince South Asian States to become parties to the Refugee Convention.[60] Though larger South Asian States such as India and Pakistan were a part of the initial discussions that galvanized the establishment of the Refugee Convention, the drafters' preoccupation with post-war disenfranchisement in Europe, and their failure to view the Partition of India of 1947, which caused widespread involuntary migration as a cause for concern, led the region to distance itself from debates on accession to the Convention. The relegation of South Asia's contextual specificities by a hegemonic refugee framework has resulted in the establishment of *ad hoc* solutions to respond to human mobility in the region.

India has acted as the regional hegemon in South Asia and has often mandated the policies of other States in the region. Some of these *ad hoc* developments, which run parallel to the global refugee regime, are particularly helpful in demonstrating defiance. Despite India's non-accession to international refugee law instruments, the State has continued to provide protection in a way that is different from Western notions. It is also clear that a defiant or alternative voice has existed on the world stage for the last seven decades. Such a defiant voice has emerged in response to the nature of international institutions in charge of refugee protection, which are intrinsically Eurocentric, a quality that is deeply entrenched in mechanisms and procedures adopted in their approach to their mandate. The refugee regime's aspirations of universalism present an illusory picture of accessible protection and humanitarianism in the context of South Asia.

A few examples from the archives on India's place in the rhetoric on forced migration provide a small window into its demonstrable defiance of the global refugee regime. In

[57] See also Chapter 15 in this volume.
[58] OAU Convention, art 1(2).
[59] See Milner (n 36).
[60] See also Chapter 22 in this volume.

the 1960s, when the Tibetan refugee influx in India was at its peak, an Interoffice Memorandum from November 1961, from Gilbert Jaeger, the then Deputy Director of UNHCR in Geneva, referred to the visit of a representative Mr PN Sharma from an India-based NGO Lok Kalyan Samiti. The memorandum indicated that Mr Sharma had asserted that UNHCR 'could not and should not impose its assistance upon the Indian government and could not start collecting aid for Tibetan refugees in India in the present circumstances'.[61]

Given India's non-accession to international refugee instruments, it has been left to the courts to lead the way and consider what, if any, obligations the Constitution of India impose on the State to accord refugee protection.[62] The Supreme Court of India has considered article 14 of the UDHR and article 13 of the ICCPR to uphold the obligation of refugee protection. Though the principle of *non-refoulement* marks the foundation of the Refugee Convention, in *National Human Rights Commission v State of Arunachal Pradesh*[63] the Supreme Court of India relied on the Indian Constitution, rather than international law, to hold that Chakma refugees who had escaped persecution in Bangladesh cannot be forcibly sent back as the conditions they would face upon return could result in the deprivation of their right to life, and thus a violation of article 21 of the Constitution of India.[64] The court stated:

> We are a country governed by the Rule of Law. Our Constitution confers certain rights on every human being and certain other rights on citizens. Every person is entitled to equality before the law and equal protection of the laws. So also, no person can be deprived of his life or personal liberty except according to procedure established by law. Thus the State is bound to protect the life and liberty of every human being, be he a citizen or otherwise, and it cannot permit any body or group of persons … to threaten the Chakmas to leave the State.[65]

This illustrates how South Asian States, like India, have been much more heavily influenced by domestic politics, law, and jurisprudence in pursuing their own approach to refugee protection, independent from UNHCR, and the instruments of the international refugee protection regime.

c. National Contexts

Arguably, the most tangible manifestation of UNHCR's role in international refugee law has been its implementation of international refugee law in national contexts. Given

[61] Interoffice Memorandum from Gilbert Jaeger to the High Commissioner, 'Tibetan Refugees in India—Visit of Shri PN Sharma', 15/72 (6 November 1961) (Official Records).

that more than 80 per cent of the world's refugees are in low- and middle-income countries, and that many of these States are either unable or unwilling to assume full responsibility for responding to the needs of refugees, UNHCR's history since the late 1980s has been marked by its ever-increasing role as an operational organization running refugee protection and assistance programmes in countries around the world. This takes the form of activities ranging from RSD to the management of refugee camps and settlements. UNHCR also frequently plays a prominent operational role in the provision of solutions for refugees, especially through repatriation and resettlement. Given that these activities are undertaken on the territories of States and require financial contributions from States, and given that these States have particular interests, it may not be surprising that it is the interests of States that ultimately influence these activities.

For example, in a State like Egypt, UNHCR has lead responsibility for determining refugee status. Given the policies of Egypt on the admission and recognition of refugees, coupled with an increasing demand for refugee status and declining resources to perform this function, UNHCR's RSD activities in Egypt—and elsewhere[66]—have been critiqued as falling short of the international standards set by UNHCR.[67] Likewise, as a growing number of States in the Global South made the containment of refugees in camps a condition for the continued hosting of refugees, UNHCR became increasingly involved in the management of large refugee camps from the early 1990s. For some two decades, UNHCR acted as a 'surrogate state' in managing isolated and insecure camps in many regions of the world.[68] While UNHCR argued that life in these camps was preferable to early and unsustainable return to the country of origin, the organization was criticized for managing spaces that routinely undermined the rights of refugees, such as the right to work and freedom of movement.[69]

Recent developments, including UNHCR's role in encouraging changes in practice in countries such as Kenya and Ethiopia, however, illustrate that this outcome is not inevitable for UNHCR. In fact, UNHCR has been most effective in domestic contexts as a catalyst for innovative approaches that promote international refugee protection principles and the pursuit of solutions for refugees. For example, UNHCR played a central role in supporting Tanzania's decision to offer naturalization as a solution for some 162,000 Burundian refugees in 2008.[70] More generally, UNHCR's role has been critical in providing technical support and leveraging donor commitments in countries that have expressed a desire to pilot innovative and rights-based solutions for refugees, while translating elements of international refugee law into domestic practice.

5. Conclusion

UNHCR clearly plays a prominent role in international refugee law, but its role can often be replete with contradictions. Since 1950, UNHCR has had a mandate from the UNGA to ensure protection for refugees and to find a solution to their plight. This mandate has provided UNHCR with moral authority to promote refugee protection principles, provide guidance on the implementation of international refugee law, and support the progressive evolution of refugee law in global, regional, and national contexts. At the same time, UNHCR has been constrained by its 1950 Statute, which gave it a non-political mandate, made it reliant on voluntary contributions from States, and required UNHCR to cooperate with governments in pursuit of solutions for refugees. As illustrated by the analysis in this chapter, the result has meant that UNHCR has operated as a leading actor in the development and implementation of international refugee law and been critiqued for being complicit in some of the most significant violations of the spirit and the letter of the international refugee protection regime.

These contradictions point to the need to understand the meaning and functioning of international refugee law within specific political contexts.[71] In permissive political contexts, UNHCR has been able to play a transformative and catalytic role in advancing protection and solutions with and for refugees. In restrictive political contexts, UNHCR has been constrained by limited resources and eroding support from those actors upon whom it is reliant to realize its mandate. In turn, this has led UNHCR to pursue actions that it perceives as being in its institutional interest in order to remain relevant in the eyes of States, but which lead to criticisms that it is acting in ways that violate core principles of international refugee law. As such, we need to understand the sources of UNHCR's power and the causes of its pathologies. Such an understanding helps explain UNHCR's actions over time and suggests important ways in which UNHCR can more consistently employ its moral and expert authority to advance protection and solutions for refugees. Given the current state of the international refugee protection regime, such an understanding could not be more timely.

CHAPTER 11

MOVING TOWARDS AN INTEGRATED APPROACH OF REFUGEE LAW AND HUMAN RIGHTS LAW

VINCENT CHETAIL

1. Introduction

Although sharing the same purpose of protecting individuals against abuses, refugee law and human rights law were initially conceived as two different branches of international law and evolved following their own sources, institutions, and ethos. As a side effect of the specialization of international law, refugee lawyers have traditionally apprehended their field within the confines of the Refugee Convention, whereas human rights lawyers have long neglected the relevance of their discipline to protecting displaced persons.

As a result of this professional ethos, the interconnections between refugee law and human rights law were acknowledged quite late following a piecemeal process. Their relationship is conceptualized in successive narratives that unveil a threefold approach: preventive, interactive, and integrated. Originally, their relations were regarded as causal, the violations of human rights being acknowledged as the primary cause of refugee movements.[1] This preventive approach was later enriched by a more interactive one with a focus on the specific linkages between human rights law and the distinctive

[1] Paul Weis, 'Refugees and Human Rights' (1971) 1 Israel Yearbook on Human Rights 35; Michel Moussalli, 'Human Rights and Refugees' [1984] Yearbook of the International Institute of Humanitarian Law 13.

tenets of refugee law, such as the refugee definition[2] and the prohibition of *refoulement*.[3] More recently, this interactive approach has paved the way for a more integrated one. This new impetus focuses on complementary protection[4] and the rights of refugees under human rights law[5] as a supplement to refugee status.[6]

This integrated approach to refugee protection is still a work in progress and deserves further consideration from the broader perspective of international law. While acknowledging refugee law as a subset of human rights law, most commentators do not draw the systemic implications of this evolution by relegating the latter to a secondary source of the former. This professional posture is no longer tenable for two main reasons. First, human rights law provides a unique and vital source of protection in the 43 UN Member States that have not ratified the Refugee Convention. This basic account is frequently overlooked by specialists, despite the fact that many non-parties, like Lebanon, and Pakistan, are amongst the largest countries of asylum. Second, no one contests today that, in States parties, refugees are simultaneously protected by refugee law treaties as a specific category of international concern, as well as by generalist human rights treaties as a result of their applicability to all human beings.

Against this normative background, moving towards an integrated approach to refugee protection calls for acknowledging the plurality of legal sources and articulating them within a comprehensive and coherent framework of analysis. As developed in previous publications,[7] the interface between refugee law and human rights law not only mirrors the evolution of international law but also provides a fertile ground for revisiting the reach and potential of refugee protection.

Some Unorthodox Questioning on the Relations between International Refugee Law and International Human Rights Law' in R Rubio Marin (ed), *Migrations and Human Rights* (OUP 2014) 19–72; Vincent Chetail, 'Armed Conflict and Forced Migration: A Systemic Approach to International Humanitarian Law, Refugee Law and Human Rights Law' in Andrew Clapham and Paula Gaeta (eds), *The Oxford Handbook of International Law in Armed Conflict* (OUP 2014) 700–34.

Following this holistic and de-compartmentalized approach, the broader evolution of international law reflects the changing pattern of refugee protection as initially grounded in the Refugee Convention and subsequently informed by human rights treaties (Section 2). As a result of a gradual process of pollination, human rights law has shaped, updated, and enlarged refugee law. While revamping the basic tenets of the Refugee Convention, it has become the normative frame of reference. The centrality of human rights law does not mean that the Refugee Convention is redundant. On the contrary, its continuing relevance has been possible precisely because it has been reframed and enhanced by human rights law.

Refugee law and human rights law are now so interdependent that they are bound to work in tandem. Their intermingling paves the way for a human rights-based approach to refugee protection (Section 3). Instead of regarding the two branches of international law as silos, this new perspective offers a broader vision of refugee protection. This comprehensive design acknowledges that refugee law and human rights law complement and reinforce each other within one single continuum of protection. Its conceptual foundation relies on the complementarity model as an alternative to the dogma of *lex specialis*. This normative continuum of international protection is further tested by a comparative assessment between the rules of the Refugee Convention and those of human rights treaties. As a result of their close imbrication, human rights law supplements and upgrades refugee law to such an extent that the latter has become an integral component of the former.

2. The Changing Pattern of Refugee Protection under Public International Law

The changing pattern of refugee protection and its continuing resilience cannot be understood in isolation from the broader evolution of international law. Modern refugee law was designed at a time when human rights law was in its infancy. This historical context and the subsequent development of international law explain the specificities of refugee law and the decisive influence of human rights law to shape and inform its content and rationale. Although the Refugee Convention was not conceived as a human rights treaty, human rights law has radically transformed its distinctive tenets and has become the benchmark of refugee protection.

a. The Original Design of Refugee Protection

Refugee law predates human rights law. The former emerged during the inter-war period and was primarily framed by the traditional law of aliens, whereas the latter was endorsed at the international level after the Second World War. Promoting and encouraging respect for human rights was first recognized by the Charter of the United Nations (article 1(3)) (UN Charter),[8] but it was only in 1966 that the UN Covenants were adopted to determine the content of human rights law in universal conventions. It took 10 more years before they came into force in 1976.

Because of this historical disjuncture, the Refugee Convention inevitably reflects the conception of international law at the time of its drafting. Refugee law is accordingly more State-centric than human rights law. Formally speaking, the Refugee Convention is a duty-driven instrument rather than a human rights-based one. Although its preamble acknowledges 'the principle' of the UN Charter and the UDHR that 'human beings shall enjoy fundamental rights and freedoms without discrimination', the binding content of the Convention is framed as duties of States, not as rights of individuals.[9] This normative digression was inevitable at the time: in 1951, individuals did not have human rights that were conventionally binding on the universal plane.[10]

Although one should not overestimate the practical difference between individual rights and States obligations, this highlights the distinctive premise of the Refugee Convention: the refugee was not conceived as a subject of law but as a beneficiary of common standards regulating the conduct of Contracting States. The historical context further explains why the reach of the Refugee Convention was narrow and backward-looking. This post-war instrument was initially limited to refugees having fled before 1951. It only became a universal instrument for current and future refugees in 1967 when the Protocol removed the early restrictions on the refugee definition without updating further the substance of the Convention.

The original design of the Convention and its historical context have heavily shaped the idiosyncratic features of refugee law and exacerbated its differences from subsequent human rights treaties. In schematic terms, refugee law is selective, contingent, and decentralized, whereas human rights law is inclusive, categorical, and control-oriented. Each of these characteristics unveils their distinctive legal nature but also the potential of their interaction.

The selective nature of refugee law is inherent in the personal scope of the Refugee Convention. Whereas human rights are applicable to everyone because of the dignity inherent in every human being, the benefit of the Refugee Convention depends on the identification of a predetermined category of persons. The refugee definition therefore represents both the entry point of the Convention and its main limitation.

The selectivity of the refugee definition is intrinsic in its very structure, which is composed of three layers of requirements: inclusion, exclusion, and cessation. In short, article 1A(2) requires a well-founded fear of persecution to be recognized as a refugee.

[8] Charter of the United Nations (adopted 26 June 1945, entered into force 24 October 1945) 1 UNTS XVI (UN Charter).

[9] Guy S Goodwin-Gill, 'Refugees and their Human Rights' (2004) Refugee Studies Centre Working Paper No 17, 7.

[10] The UDHR was adopted in 1948 as a non-binding resolution of the General Assembly and only specific treaties focusing on some particular aspects were adopted at the time, mainly under the auspices of the International Labour Organisation with regard, for instance, to the prohibition of forced labour.

Even in such a case, a refugee may be excluded from the Convention due primarily to having committed serious crimes[11] and, once granted, the refugee status is terminated as soon as the need for protection is no longer justified.[12] The notion of persecution represents another significant limitation that excludes many other drivers of forced migration (disasters, famine, pandemics, or extreme poverty). This restrictive stance was intentional. The Conference of Plenipotentiaries recommended in its Final Act that Contracting parties should apply the Convention beyond 'its contractual scope' to other refugees 'who would not be covered by the terms of the Convention'.[13]

The conditionality of refugee law represents another significant distinction with human rights law. Unlike human rights treaties, the Refugee Convention does not enumerate rights without distinction as to their beneficiaries. With some exceptions,[14] the benefit of refugee status is contingent upon two cumulative requirements governing the criteria of entitlement (the applicability of the norm) and the standard of treatment (the content of the norm). The first set of conditions requires a presence or a residence that is further qualified as lawful or physical depending on the relevant provision. Once these entitlement criteria are fulfilled, the content of refugee status is structured and determined by the traditional distinction between nationals and non-nationals. The standards of treatment owed to refugees are identified by analogy with three categories of persons: nationals, most-favoured foreigners, and ordinary aliens. The resulting framework remains extremely complex.

The decentralized nature of refugee law represents another dividing line with human rights law. Echoing the traditional conception of international law at the time, the Refugee Convention sharply distinguishes between the content of protection as detailed therein and a decentralized implementation entrusted to each individual State party. It does not contain any specific provision on domestic asylum procedures. States accordingly recapture, at the implementation level, a portion of the sovereignty they have alienated, at the normative level, by agreeing to a detailed regime of refugee protection.

This decentralized scheme of implementation is aggravated by the lack of a treaty body in charge of monitoring the Convention. Although UNHCR is mandated to supervise its application, the agency has failed to establish a proper reporting procedure for assessing States' compliance.[15] The lack of an independent monitoring mechanism represents 'an historical anomaly'[16] that starkly contrasts with the control-oriented approach of human rights law. In this area, as in many others, the Refugee Convention paid the price for being the forerunner of subsequent human rights treaties.

b. The Evolution of Refugee Protection

The primary design of refugee protection has dramatically evolved as a result of the subsequent expansion of human rights law. The normative implications of this development are threefold: human rights law has revamped the content of the Refugee Convention, transformed its very rationale, and enlarged the scope of international protection.

Firstly, human rights law has updated the refugee definition and mitigated its restrictive stance. Amongst well-known instances, it has played a vital role in defining the traditional notion of persecution as any serious violations of human rights, including those committed by non-State actors in line with the human rights theory of *Drittwirkung*, and in developing a gender-sensitive approach to the refugee definition.[17] Apart from having instilled a dynamic and inclusive meaning of the refugee definition, human rights law has also provided a persuasive device for harmonizing the unilateral interpretations of Contracting States to the Refugee Convention.

Human rights law has also impacted on the content of refugee status. The traditional distinction between nationals and non-nationals which conditions the standards of treatment applicable to refugees has largely been marginalized and superseded by the general applicability of human rights and the principle of non-discrimination. Hence, human rights law requires assimilation with nationals in relation to rights that are determined by reference to the treatment accorded to non-nationals under the Refugee Convention.[18] Inversely, when refugees are assimilated with nationals under the Refugee Convention, this standard of treatment cannot be below the minimum assigned by human rights treaties.[19] A similar influence can be observed with regard to the prerequisites of lawful or physical presence/residence. In particular, the requirements of lawful stay and habitual residence to benefit from the right to association and legal assistance are neutralized by human rights law, because such rights are recognized by the latter without regards to residence or lawful status.

Secondly, while revamping its content, the distillation of human rights norms within refugee law has drastically informed the very rationale of the Refugee Convention. The Convention has been revisited and reconstructed as a human rights treaty. The symbolic reference to human rights in its preamble has been retrospectively viewed as

[17] For further discussion about the impact of human rights on the refugee definition, see James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014); Andreas Zimmermann and Claudia Mahler, 'Article 1A, Para 2' in Andreas Zimmermann (ed), *The 1951 Convention Relating to the Status of Refugees and Its 1967 Protocol: A Commentary* (OUP 2011) 282, 345–58; Michelle Foster, *International Refugee Law and Socioeconomic Rights: Refuge from Deprivation* (CUP 2007); Jean-Yves Carlier, 'Droit d'asile et des réfugiés: de la protection aux droits' (2008) 332 Recueil des Cours Académie de Droit International 9.

[18] This includes freedom of association and the right to form and join trade unions (art 15) and the right to property (art 13).

[19] This concerns freedom of religion (art 4), legal assistance (art 16(2)), education (art 22(1)), public relief (art 23), labour legislation and social security (art 24).

underpinning the cardinal purpose of the Convention and its *raison d'être*: '[u]nderlying the Convention is the international community's commitment to the assurance of basic human rights without discrimination.'[20] As acknowledged in the landmark case *Horvath* of the UK Supreme Court, 'the purpose of the Convention is to secure that a refugee may in the surrogate state enjoy the rights and freedoms to which all are entitled without discrimination and which he cannot enjoy in his own state'.[21]

Refugee law thus constitutes a right to have rights when victims of human rights violations have no other option than to leave their own country and seek protection of another State. As Hathaway observes, it has become 'a remedial or palliative branch of human rights law'.[22] Nonetheless, the systemic function assigned to international protection collides with the specific ethos of the Refugee Convention and the limits inherent in its content. This highlights the significance of human rights law in enlarging the scope of refugee protection designed in 1951.

The third normative impact of human rights law has been to broaden international protection beyond the confines of the Refugee Convention. As restated by their treaty bodies, the two Covenants (ICCPR and ICESCR) plainly apply to refugees, asylum seekers, and other vulnerable migrants who might face similar risks in their own country.[23] When compared with the Refugee Convention, this enlargement of international protection is both personal and material. As detailed in Section 3 of this chapter, human rights law not only grants refugees an extensive panoply of additional rights, it also provides a unique source of rights for asylum seekers who are excluded from most guarantees of the Refugee Convention due to a restrictive and disputable interpretation of Contracting parties.[24]

The most ground-breaking development initiated by human rights law lies in a new ground of protection derived from the principle of *non-refoulement*. This cornerstone of refugee protection has been expressly endorsed in a broad range of universal and regional conventions, including the CAT (article 3), the Convention for the Protection of All Persons from Enforced Disappearance (article 16),[25] the American Convention on Human Rights (article 22(8)),[26] and the EU Charter of Fundamental Rights (article

19(2)). Besides these explicit endorsements, most general human rights treaties are construed by their monitoring bodies as comprising an implicit prohibition of *refoulement*. While being anchored in the human rights theory of positive obligations, this implicit duty has been recognized in a broad variety of contexts, where a person faces a real risk of torture, inhuman or degrading treatment, arbitrary deprivation of life, and other irreparable harms.[27]

Although the human rights principle of *non-refoulement* largely coincides in substance with its refugee law counterpart, the former provides a broader protection than the latter in three significant regards. Firstly, its benefit is not subordinated to the five limitative grounds of persecution under the Refugee Convention. Secondly, contrary to the refugee definition, the human rights principle of *non-refoulement* does not require one to be outside the country of origin: it applies as soon as an individual is under the effective control of a State. Thirdly, the human rights prohibition of *refoulement* is absolute where there is a real risk of torture, inhuman, or degrading treatment.[28] It thus applies to asylum seekers and refugees who are excluded from the Refugee Convention under the exceptions to *non-refoulement* (article 33(2)) or the exclusion clauses to the refugee definition (article 1F). This last feature is emblematic of the impact of human rights law on refugee law: the former is universal and inclusive in essence, whereas the latter is bound to grant protection only to those who deserve it.

3. A Human Rights-based Approach to Refugee Protection

As a result of a gradual process of impregnation, human rights law has become the yardstick of refugee law. It has reframed the basic tenets of the Refugee Convention and expanded the scope of international protection. Following this evolution, the very notion of international protection is no longer the province of the Refugee Convention. It is an integral part of the broader framework of human rights law. The ultimate purpose of refugee protection is to ensure effective respect for human rights and this objective is realized through a broad range of general and specific conventions that are located at the intersection of refugee law and human rights law.

The interface between the two branches of international law calls for a human rights-based approach to refugee protection, whereby the broad variety of applicable

[28] See further Chapter 50 in this volume.

rules are articulated within a comprehensive and coherent framework. This integrative approach is conceptualized through the complementarity model, as an alternative to *lex specialis*. The complementarity model means in substance that human rights law and refugee law are not exclusive but mutually reinforcing. While sharing the common underlying purpose of protecting human dignity, their cumulative application determines, in turn, the very content of this human rights-based approach to refugee protection.

a. The Conceptual Foundation of the Human Rights-based Approach to Refugee Protection: The Complementarity Model

The interactions between refugee law and human rights law are traditionally conceptualized through either the maxim *lex specialis derogat lex generalis* or the complementarity approach. Although these models mean different things for different people, they rely on two opposite premises: *lex specialis* posits a hierarchical and exclusive relationship between human rights law and refugee law, whereas the complementarity approach promotes a horizontal and cumulative articulation amongst them.

The *lex specialis* principle is frequently invoked by refugee lawyers who postulate the primacy of their Convention as a specialized instrument, in opposition to general human rights conventions. However, this approach fails to provide a cogent and predictable framework of analysis for conceptualizing the subtle interactions between refugee law and human rights law. The *lex specialis* principle suffers from two main drawbacks.

Firstly, it says nothing about what should be considered 'general' or 'special', and how to interpret these vague terms. Whether a norm is more special than another relies on a value judgment, for both tribunals and scholars have been unable to provide an authoritative meaning. Furthermore, even assuming that the Refugee Convention is more detailed, human rights norms cannot be dissociated from their subsequent interpretation by treaty bodies. They thus appear more precise and even clearer than their refugee law counterparts.

Secondly, *lex specialis* presupposes a conflict of norms between human rights law and refugee law. Such conflicts are extremely rare and never resolved through *lex specialis*. The most emblematic case concerns the absolute character of the *non-refoulement* principle under human rights treaties, which contrasts with the exceptions in the Refugee Convention. This conflict has been resolved in favour of the former, thereby discarding the exceptions of the latter.[29] Human rights law thus prevails over refugee law without regard to the alleged speciality of their rules.

[29] See eg *Saadi v Italy* (2008) 49 EHRR 30, paras 138–41; *Chahal v United Kingdom* (1996) 23 EHRR 413, para 80; *Tapia Paez v Sweden*, UN doc CAT/C/18/D/39/1996 (28 April 1997) para 14.5.

Given the weaknesses of the *lex specialis* principle, the normative interactions between refugee law and human rights law are better appraised and conceptualized through the complementarity model. Initially developed with regard to the relations between humanitarian law and human rights law, this approach acknowledges that 'both spheres of law are complementary, not mutually exclusive'.[30] The complementarity model thus posits the simultaneous application of overlapping norms on the same subject matter, instead of the exclusive application of one specific norm overriding another.

The relevance of this approach has been acknowledged in the field of refugee protection on several occasions. Amongst other instances, the Security Council, the General Assembly, and the Human Rights Council have reaffirmed the simultaneous application of refugee law, human rights law, and humanitarian law.[31] As further confirmed by the African Commission of People and Human Rights, 'the provisions [of human rights law and refugee law] are at most complementary to each other and not mutually exclusive'.[32]

While preserving the simultaneous applicability of human rights law and refugee law, the complementarity model promotes their cross-pollination and synergies into one single normative continuum of protection. It prioritizes convergence over conflict through a contextualized interpretation of applicable rules. In other words, refugee law must be construed in light of human rights law and reciprocally.

This method of interpretation relies on the principle of systemic integration and, unlike *lex specialis*, is grounded in the Vienna Convention on the Law of Treaties,[33] with article 31(3)(c) requiring that a treaty be interpreted by taking into account 'any relevant rules of international law applicable in the relations between the parties'.[34] As further restated by the International Court of Justice, 'an international instrument has to be interpreted and applied within the framework of the entire legal system prevailing at the time of the interpretation'.[35] This principle of systemic interpretation has been instrumental in construing and adapting the refugee definition in line with human rights law.

When there is a genuine conflict of norms that cannot be resolved by interpretation, the cumulative application of human rights law and refugee law requires the most protective rule to be implemented. The most favourable treatment constitutes a

common feature of both fields (article 5 of the Refugee Convention, the ICCPR, and the ICESCR). Human rights law and refugee law are thus bound to work hand-in-hand to offer a broader protection for refugees and asylum seekers.

b. The Normative Content of the Human Rights-based Approach to Refugee Protection: The Acid Test of the Cumulative Application of Refugee Law and Human Rights Law

While being framed by the complementarity model, the content of the human rights-based approach to refugee protection is determined by the cumulative application of refugee law and human rights law. Their respective rules not only coexist and overlap in substance, they are also mutually reinforcing following an incremental continuum of protection.

Human rights law and refugee law are so imbricated that they make sense only when understood in relation to one another. When they are approached as two distinct albeit complementary fields of international law, their interactions may be systematized into three scenarios: (1) human rights law supplements refugee law in filling its gaps; (2) reciprocally, refugee law complements human rights law in providing some additional guarantees; (3) when their respective rules govern the same subject matter, human rights law upgrades refugee law.

i) *Human Rights Law Supplements Refugee Law in Filling the Gaps of the Refugee Convention*

Human rights law complements refugee law in a broad range of areas. The most obvious instances relate to the procedural gaps of the Refugee Conventions. The lack of provision for asylum procedures is compensated by the procedural guarantees endorsed in human rights treaties. When combined with the prohibition of *refoulement*, the right to an effective remedy requires an 'access to a remedy with automatic suspensive effect', as well as 'an independent and rigorous scrutiny'.[36] Access to asylum procedures and the right to an individual assessment are reinforced by two interrelated guarantees: the right to seek asylum and the prohibition of collective expulsion under regional human rights treaties.[37]

[36] *Jabari v Turkey*, App No 40035/98 (ECtHR, 11 July 2000) para 50; *Gebremedhin v France* (2010) 50 EHHR 29, para 66.

[37] For further discussion: Vincent Chetail, *International Migration Law* (OUP 2019) 138–42; Chetail, 'Are Refugee Rights Human Rights?' (n 7) 51–4.

Human rights law also addresses the conspicuous lack of a complaint mechanism in the Refugee Convention. Once domestic remedies are exhausted, asylum seekers may bring their case before a regional court of human rights or one of the seven UN treaty bodies.[38] This possibility is far from being trivial given the restrictive application of the refugee definition. To give one example, between 80 and 90 per cent of all individual complaints submitted to the Committee against Torture concern the principle of *non-refoulement*.[39]

While filling the procedural cracks of refugee law, human rights law also supplements it in a very substantive way. It represents a unique source of rights for asylum seekers during and after the asylum procedure. The added value of human rights law stretches far beyond the legal status of asylum seekers. It retains its centrality for asserting the rights of refugees formally recognized under the Convention. Indeed human rights law considerably enriches the material scope of international protection by granting a broad range of supplementary rights that are not guaranteed by refugee status.

These additional rights are both extensive and fundamental. As far as the ICCPR is concerned, they include the right to life, the prohibition of torture, cruel, inhuman, or degrading treatment, freedom from slavery and forced labour, the right to hold opinions, freedom of expression and peaceful assembly, the right to return, the right to private and family life, equality before the law, equality between men and women, the right to an effective remedy, the right of detainees to be treated with humanity, the prohibition of detention for inability to fulfil a contract, the prohibition of retroactive application of criminal law, the right to recognition as a person before the law, the protection of children, and the cultural rights of ethnic, religious, or linguistic minorities.

Amongst this long list of additional rights, the contextualized interpretation of human rights law has been instrumental in asserting the right to family unity that is not guaranteed by the Refugee Convention. The general obligation to protect the family under article 23 of the ICCPR entails 'the unity or reunification of families, particularly when their members are separated for political, economic or similar reasons'.[40] A refusal of family reunification may also amount to an arbitrary or unlawful interference in the right to family life, for refugees have no alternative of enjoying family life in their own country.

[38] For further discussion: special issue of RSQ 'The Role of International Organizations and Human Rights Monitoring Bodies in Refugee Protection' (2015) 34(1); Chaloka Beyani, 'The Role of Human Rights Bodies in Protecting Refugees' in Anne F Bayefsky (ed), *Human Rights and Refugees, Internally Displaced Persons and Migrant Workers* (Martinus Nijhoff 2006) 270; Nick Poynder, '"Mind the Gap": Seeking Alternative Protection under the Convention against Torture and the International Covenant on Civil and Political Rights' in Susan Kneebone (ed), *The Refugees Convention 50 Years On* (Ashgate 2003) 173.

[39] Vincent Chetail, 'Le Comité des Nations Unies contre la torture et l'expulsion des étrangers: dix ans de jurisprudence (1994–2004)' (2006) 26 Revue suisse de droit international et de droit européen 63, 66.

[40] HRC, 'General Comment No 19: Article 23 Protection of the Family, the Right to Marriage and Equality of the Spouses,' UN doc HRI/GEN/1/Rev. 5 (26 April 2001) 138, para 5.

The same contextualized interpretation of human rights law has filled the vacuum of the Refugee Convention with regard to the right to return. The right to enter one's own country under article 12(4) of the ICCPR clearly 'includes… the right to return after having left one's own country' which 'is of the utmost importance for refugees seeking voluntary repatriation'.[41] As restated by the UN Committee on the Elimination of Racial Discrimination, 'all such refugees and displaced persons have the right freely to return to their homes of origin under conditions of safety'.[42]

By contrast, the added value of human rights law is less apparent for economic and social rights because the Refugee Convention grants an extensive range of such rights to facilitate local integration in asylum States. Nonetheless, the importance of the ICESCR shall not be underestimated as a source of refugee protection. On the one hand, even though refugee status already covers in substance most rights of the ICESCR, the Covenant enriches it with several additional guarantees: equality between men and women, protection of the family and children, right to strike, and right to cultural identity.

On the other hand, the ICESCR fills a substantive gap of protection for asylum seekers and other persons at risk in their own countries who are not recognized as refugees. Although the full realization of the Covenant is progressive, this obligation of conduct depends on available resources of States parties and cannot be invoked by wealthy countries as a pretext for non-compliance. Despite the frequent misunderstandings about its exact scope and meaning, the notion of progressive realization also implies for all States parties that any retrogressive measures, such as those targeting asylum seekers or refugees, are *prima facie* incompatible with the Covenant.[43]

In addition to this general safeguard, several Covenant rights are of immediate effect.[44] The most persuasive duty of immediate application is the principle of non-discrimination under article 2(2) of the ICESCR. As restated by the Committee on Economic, Social and Cultural Rights, non-discrimination is 'an immediate and cross-cutting obligation'.[45] Hence, '[t]he Covenant rights apply to everyone including non-nationals, such as refugees, asylum seekers, stateless persons, migrant workers and victims of international trafficking, regardless of legal status and documentation'.[46]

Economic, social, and cultural rights are thus presumably applicable to all refugees and asylum seekers. Nonetheless, this presumption of entitlement is without prejudice to lawful differences of treatment. While States retain a significant margin of appreciation,

[44] They include equality between men and women, fair wages and equal remuneration, the right to form trade unions, the right to strike, protection of minors, and primary education.

[45] CESCR (n 23) para 7.

[46] ibid para 30.

any differential treatments shall be reasonable, objective, proportionate, compatible with the nature of the Covenant rights, and solely for the purpose of promoting the general welfare in a democratic society.[47]

Furthermore, any differences of treatment shall not derogate from the minimum standards spelt out in the refugee status and the core obligations of the ICESCR. As reaffirmed by the CESCR, a minimum content of Covenant rights is guaranteed in any circumstances to all refugees and asylum seekers.[48] This duty of immediate application binds all States parties without regard to their level of development.[49] As a result of this minimum core obligation, denying economic and social entitlements to asylum seekers who have no other means of subsistence is prohibited. This primary duty of international law finds an additional support in the interdependent and interrelated nature of human rights: denying a minimum of subsistence rights to asylum seekers has been held as a violation of the prohibition of inhuman and degrading treatment.[50]

ii) *Refugee Law Complements Human Rights Law in Specifying some Additional Guarantees*

While human rights law ensures an impressive range of additional rights for both refugees and asylum seekers, the rights exclusively governed by the Refugee Convention remain comparatively rare. Amongst few instances, the prohibition of penalties for irregular entry under article 31(1) constitutes a distinctive feature of refugee law. This provision is aimed at exempting asylum seekers from the entry requirements generally imposed on other migrants. As underlined during its drafting, 'a refugee whose departure from his country of origin is usually a flight, is rarely in a position to comply with the requirements for legal entry'.[51] While heralding the specificity of refugee law, the concrete added value of article 31(1) remains relative, for its benefit requires an individual to come directly from a country of persecution. This leaves aside those who have crossed a third country before seeking asylum. In any event, however, the principle of *non-refoulement* under both refugee law and human rights law applies regardless of irregular entry.

[47] ibid para 13. Article 2(3) establishes another limited exception to non-discrimination on the ground of nationality. It only applies to 'developing countries' and for 'economic rights', excluding social and cultural rights. Article 2(3) remains a virtual exception for no developing States have invoked it: Chetail (n 37) 157–60.

[50] *MSS v Belgium and Greece* (2011) 53 EHRR 2, paras 251–63.

[51] Ad Hoc Committee on Statelessness and Related Problems, 'Status of Refugees and Stateless Persons: Memorandum by the Secretary General,' UN doc E/AC.32/2 (3 January 1950) para 3.

Besides article 31(1), the Refugee Convention supplements human rights treaties on very technical and specific matters, such as equality in fiscal charges (article 29) and transfer of assets (article 30). In accordance with the principle of systemic integration, one could still argue that these provisions are practical manifestations of the general principle of equality before the law and the right to property. The same contextualized interpretation applies to identity papers (article 27) and travel documents (article 28), which are frequently heralded as the distinctive advantages of refugee status. Although there are no explicit equivalents in human rights treaties, delivering travel documents and identity papers to refugees is a positive obligations deriving respectively from the right to leave any country and the right to recognition as a person before the law.[52]

Overall, when compared to human rights law, the truly distinctive provision of refugee status is confined to article 25 on administrative assistance. Contracting parties must provide administrative assistance to refugees who are, by definition, unable to avail themselves of the protection of their own States. This highlights the unique nature of refugeehood. The consular function to deliver official certificates that are necessary in the daily life of refugees (marriage, birth, succession etc.), which is normally assigned to States of nationality, is carried out by asylum countries.

While allowing them to build a new life in States of asylum, article 25 ensures the effective enjoyment of the Refugee Convention and strengthens the concrete application of both refugee law and human rights law in a mutually reinforcing way. Indeed, the duty endorsed in article 25 is particularly broad, 'when the exercise of a right by a refugee would normally require the assistance of [public] authorities'. This accordingly encompasses the guarantees attached to refugee status, as well as any other rights under human rights conventions.

iii) *Human Rights Law Upgrades Refugee Law when the Two Fields Govern the Same Subject Matter*

Human rights law and refugee law interact in a mutually supportive manner when they address the same right. The complementarity between the two operates within the content of their overlapping rules. When their respective rules significantly diverge in substance, their cumulative application requires the implementation of the most protective one. From this perspective, human rights law considerably enhances refugee law, even when the rights are common to both of them, because it is more extensive in scope and more detailed in content. Hence, the minimum standards prescribed by the refugee status is increased and, in many instances, superseded by human rights law.

The most salient case concerns the detention of asylum seekers. The Refugee Convention addresses this important issue in a minimalist and oblique way. Article

52 On the right to travel documents as inherent to freedom to leave: HRC (n 41) para 9.

31(2) merely allows States to restrict freedom of movement provided that restrictions are 'necessary' and 'applied until their status in the country is regularized or they obtain admission into another country'. This vague guidance is considerably enhanced by human rights law. In a nutshell, the prohibition of arbitrary detention requires that (1) any deprivation of liberty remains an exception and shall be reasonable, necessary, and proportionate; (2) the grounds and procedures governing detention are in accordance with, and authorized by, law; (3) any person deprived of liberty is informed of the reasons for detention; (4) there is a right to challenge the lawfulness of detention before a court; and (5) any victim of arbitrary detention has an enforceable right to compensation (article 9 of ICCPR).

As confirmed by the Human Rights Committee, any automatic detention of asylum seekers for illegal entry or for an indefinite period is arbitrary.[53] Instead, every deprivation of liberty must be justified and proportionate with due regard to the particular circumstances of each case and, as a result of the proportionality test, States shall provide alternatives to detention.[54] The ICCPR further supplements the Refugee Convention in ensuring that all asylum seekers deprived of their liberty shall be treated with humanity and with respect for human dignity (article 10(1)).

The prevalence of human rights law over refugee law in matters of common interest is further attested by the principle of non-discrimination. Article 3 of the Refugee Convention is limited by three substantial qualifications: (1) it only prohibits discrimination between and amongst refugees (thereby excluding discrimination between refugees and other foreigners or nationals); (2) the prohibited grounds of discrimination are restricted to race, religion, or country of origin; and (3) the scope of article 3 is confined to the application of the Refugee Convention.

By contrast, the principle of equality before the law, as endorsed in article 26 of the ICCPR, provides a free-standing and autonomous protection which extends beyond the rights provided by that treaty. This far-reaching principle 'prohibits discrimination in law or in fact in any field regulated and protected by public authorities'.[55] Furthermore, the prohibited grounds of discrimination are particularly extensive. In addition to race, religion, and national origin as equally mentioned in the Refugee Convention, they encompass colour, sex, language, political or other opinion, social origin, property, or birth. More fundamentally, these grounds are not exhaustive but merely illustrative. They extend to any 'other status', including thus refugee status or nationality.[56] The principle of equality before the law accordingly covers any form of discrimination both in law and practice, whether amongst refugees, between the lat-

ter and other non-nationals, or between refugees and nationals. As a result of its broad scope, article 26 of the Covenant neutralizes and supersedes article 3 of the Refugee Convention.

Nonetheless, refugee law retains its relevance for consolidating and refining the principle of equality on more specific issues related to economic and social rights. According to articles 23 and 24 of the Refugee Convention, equality with nationals applies to refugees lawfully staying in the territory of Contracting parties with regard to public relief, labour legislation and social security. This assimilation with nationals clarifies and reinforces the protection deriving from the minimum core obligations of the ICESCR and the principle of equality before the law under the ICCPR.[57]

Conversely, human rights law retains its centrality for asserting the right to work for refugees. In addition to the principle of equality before the law, the core content of the right to work under the ICESCR 'encompasses the obligation to ensure non-discrimination and equal protection of employment'.[58] This includes the direct and immediate duty of States parties 'to ensure the right of access to employment, especially for disadvantaged and marginalized individuals and groups'.[59] Human rights law accordingly upgrades the minimum standards contained in the Refugee Convention: the former guarantees access to employment for all recognized refugees,[60] without regard to the rather demanding requirements of the latter.[61] In sum, while both branches of international law converge in granting the right to work, human rights law strengthens refugee law and increases its level of protection.

A similar pattern of convergence and complementarity can be found in the right to a fair trial. Article 16(1) of the Refugee Convention provides free access to domestic courts but says nothing about judicial proceedings and due process guarantees. While equal access to courts is inherent in the right to a fair trial,[62] human rights law enriches and upgrades refugee law by granting a significant set of due process guarantees. Article 14 of the ICCPR ensures the principle of equality before courts, the right to a fair hearing by an independent tribunal established by law, the presumption of innocence, the right to judicial review by a higher tribunal, and the right to compensation for a miscarriage of justice.

The added value of human rights law is sometimes much more subtle and operates within the interstices of its refugee law counterpart. A typical instance is provided by the

right to liberty of movement and freedom to choose his residence.[63] This right is acknowledged in similar terms by the Refugee Convention (article 26) and the ICCPR (article 12(1)) for those who are lawfully within the territory of States. Despite this convergence, human rights law still remains more inclusive (its benefit being not limited to recognized refugees) and more protective with regards to permissible restrictions. The Refugee Convention allows extensive restrictions under 'any regulations applicable to aliens generally'. By contrast, the ICCPR is more demanding. Article 12(3) requires three cumulative conditions: restrictions are provided by law, necessary to protect national security or public order, and consistent with the other rights of the Covenant. The central purpose is to ensure that 'the restrictions must not impair the essence of the right',[64] as may be the case under the vague and permissive provision of the Refugee Convention.

4. Conclusion

Refugee protection is part and parcel of the broader international human rights framework. It stands out as a practical and powerful means to guarantee due respect for fundamental rights. Reciprocally, human rights law upgrades and reinforces refugee law within a normative continuum of protection. The gravitational force of human rights law has attracted the Refugee Convention into its orbit and anchored it as a satellite within the vast constellation of the other human rights treaties. As a result of this centrifugal force, human rights law has become the new orthodoxy of refugee law with the overall result of encapsulating it within its ambit. However, the evolution of international law collides with a powerful force of inertia: domestic law is still imbued by the Refugee Convention following a compartmentalized approach to protection.

Isolating the Refugee Convention from other human rights treaties offers the perfect excuse for States to undermine their duties under international law. Refugee law is increasingly implemented as a tool of migration control rather than a means for protecting victims of human rights violations. The alleged primacy of the Refugee Convention provides, in turn, a powerful rhetorical device for justifying a bias that has no rationale under international law. The ghettoization of the principle of *non-refoulement* under human rights law offers a paradigmatic illustration. It has been primarily confined to a mere obstacle to removal, whereas its counterpart under the Refugee Convention is associated with international protection *tout court*, notwithstanding the absence of any provision on asylum. Despite, and because the human rights principle of *non-refoulement* is wider than that provided in the Refugee

Convention, States have not yet drawn all the consequences of human rights law as a vehicle of international protection. This double standard fails to acknowledge that, when compared with human rights law, refugee law has much more to receive than to give.

International law is not a *menu à la carte*. It is binding as a whole and its overall design makes sense only when its rules are understood and applied in their totality. Following this stance, an integrated approach to refugee protection reflects the unity and diversity of international law, whereby States are bound by a plurality of legal commitments within the same international legal system. This holistic approach opens up new perspectives to rethink and revisit the reach of refugee protection. From this angle, acknowledging the pervasiveness of human rights law goes beyond the range of States parties to the Refugee Convention. It provides an authoritative framework of international protection for non-States parties and it addresses the responsibility of States of origin.

CHAPTER 12

INTERNATIONAL HUMANITARIAN LAW AND REFUGEE PROTECTION

REUVEN (RUVI) ZIEGLER

1. IHL and Displacement—An (Un)Easy Relationship?

Conflicts are prevalent,[1] displacement from conflict is rampant,[2] and the image of a person fleeing conflict is commonly associated in our collective psyche with the notion of human displacement. Yet international humanitarian law (IHL),[3] the body of law

[1] The Heidelberg Institute for International Conflict Research, 'Conflict Barometer' (2019) <https://hiik.de/conflict-barometer/current-version/?lang=en> accessed 13 October 2020, observed 358 conflicts worldwide in 2019. According to the Barometer 55 per cent of conflicts (196) were violent and 162 were non-violent. Of the violent conflicts, there were 15 full-scale wars, 23 limited wars, and 158 violent crises. Of non-violent conflicts, 91 were non-violent crises and 71 were disputes.

[2] Helen Obrego'n Gieseken, 'The Protection of Migrants under International Humanitarian Law' (2017) 99 International Review of the Red Cross 121, 122.

[3] In scholarship, IHL is sometimes referred to as 'Law(s) of Armed Conflict'. This chapter considers the following IHL instruments: The Four 1949 Geneva Conventions (referred to as the GCs) and the first two Additional Protocols to the GCs (APs). GCs: Convention (I) for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field (adopted 12 August 1949, entered into force 21 October 1950) 75 UNTS 31 (GCI); Convention (II) for the Amelioration of the Condition of Wounded, Sick and Shipwrecked Members of Armed Forces at Sea (adopted 12 August 1949, entered into force 21 October 1950) 75 UNTS 85 (GCII); Convention (III) relative to the Treatment of Prisoners of War (adopted 12 August 1949, entered into force 21 October 1950) 75 UNTS 135 (GCIII); Convention (IV) relative to the Protection of Civilian Persons in Time of War (adopted 12 August 1949, entered into force 21 October 1950) 75 UNTS 287 (GCIV). APs: Protocol Additional to the Geneva Conventions of 12 August 1949 and relating to the Protection of Victims of International Armed Conflicts (adopted 8 June 1977,

regulating the conduct of hostilities, explicitly offers rather limited protections to persons fleeing conflict *qua* displaced persons. Its status-based distinctions entail selective application, depending *inter alia* on whether persons find themselves in the territory of a State party to the conflict or of a non-belligerent State.

The IHL legal framework represents a compromise between two principles, military necessity (permitting the degree and kind of force required to achieve legitimate purposes of a conflict) and humanity (prohibiting the infliction of all suffering, injury, or destruction deemed unnecessary for achieving such purposes).[4] IHL's underlying assumption is that conflicts will occur, and so they should be regulated; and that while indiscriminate attacks should be prohibited, some destruction and death is inevitable. IHL shares the concerns of international refugee law (IRL) and, indeed, international human rights law (IHRL) for vulnerable individuals, but unlike other regimes, its frame of reference is minimization of harm.

This chapter considers interrelations between IHL and IRL in armed conflict situations. The two regimes have evolved at different times and with their own specific sources, institutions, and ethos.[5] Despite their divergent points of departure, the regimes share several normative features. First, they are generally framed as obligations of States rather than individual rights. Secondly, the traditional distinction between nationals and non-nationals is a foundation stone for identifying and framing the applicable norms. Thirdly, both regimes rely on a decentralized scheme of implementation absent robust international supervisory mechanisms.[6]

Yet there are at least six ways in which IHL can be distinguished from other protection regimes.

First, the application of IHL norms is contingent on the existence of an armed conflict as understood in IHL. IHL regulates two types of conflicts: International Armed Conflicts (IACs)[7] and Non-international Armed Conflicts (NIACs).[8] IHL norms do not apply to a conflict that does not meet either an IAC or a NIAC threshold. Hence, whereas the 1967 Protocol removed the temporal restriction on the applicability of the Refugee Convention, IHL treaties—and associated Customary International Law (CIL) norms—are temporally constrained.[9] While it could be argued that IHL and IRL are similar in that their applicability is triggered by circumstances that are viewed as being exceptional in character,[10] the

entered into force 7 December 1978) 1125 UNTS 3 (API); Protocol Additional to the Geneva Conventions of 12 August 1949 and relating to the Protection of Victims of Non-International Armed Conflicts (adopted 8 June 1977, entered into force 7 December 1978) 1125 UNTS 609 (APII).

[4] International Committee of the Red Cross (ICRC), 'What is IHL' (18 September 2015) <https://www.icrc.org/en/document/what-ihl> accessed 13 October 2020.

[5] Vincent Chetail, 'Armed Conflict and Forced Migration: A Systemic Approach to International Humanitarian Law, Refugee Law and Human Rights Law' in Andrew Clapham and Paola Gaeta (eds), *The Oxford Handbook of International Law in Armed Conflict* (OUP 2014) 702.

[6] ibid 733. [7] GCs (n 3) common art 2 (CA2). [8] ibid common art 3 (CA3).

[9] Nevertheless, certain IHL obligations apply after the end of an armed conflict: Gieseken (n 2) 123.

[10] David J Cantor and Jean-François Durieux, 'Refuge from Inhumanity? Canvassing the Issues' in David J Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity? War Refugees and International Humanitarian Law* (Brill 2014) 10.

triggers are different. Given that IHL applies in exceptional (conflict) situations only, its norms cannot be derogated from.

Secondly, IHL classifies individuals and apportions corresponding obligations. It distinguishes between civilians and combatants, protecting the former from attack and the latter from subjection to penal sanctions for participation in hostilities ('combatant immunity'). Certain protections are accorded to those 'no longer taking direct part in hostilities' (persons *hors de combat*). IHL offers heightened protection, including from displacement, to those who qualify as 'protected persons'. In turn, IHL's explicit offering to persons deemed particularly vulnerable, including 'refugees' and those in refugee-like situations, is rather limited.

Thirdly, whereas violations of IHL norms are relevant to IRL exclusion from refugee status as per article 1F(a) of the Refugee Convention, pursuant to their designation as 'war crimes' in the Rome Statute of the International Criminal Court Statute (Rome Statute),[11] individuals are not 'excluded' from status-based protection under IHL, though the above-mentioned combatant immunity does not extend to IHL violations.

Fourthly, whereas a failure of State protection is a constitutive element of the Refugee Convention definition,[12] IHL operates on a (rebuttable) assumption that individuals can and will enjoy their State's protection during an armed conflict: nationals of a State held by that State are ineligible for 'protected persons' status,[13] and, when held by other States, they are considered to bear allegiance to their State, absent exceptional circumstances.

Fifthly, IHL norms bind all parties to an armed conflict and thus establish an equality of rights and obligations between State and non-State actors for the benefit of those who may be affected by their conduct. Hence, armed groups that participate in an IHL-regulated armed conflict have treaty and CIL-based obligations. This chapter centres on the obligations of *States*, both parties to a conflict and non-belligerent, whereas Chapter 63 in this volume appraises responsibilities of armed groups.

Sixthly, whereas the scope and extent of the extraterritorial application of other protection regimes is the subject of ongoing debate,[14] it is uncontentious that IHL governing IACs applies extraterritorially, given its purpose is to regulate the conduct of one or more States involved in an armed conflict on the territory of another. This reasoning applies *mutatis mutandis* in NIACs with an extraterritorial element: parties to such conflict are not absolved of their IHL obligations when the conflict reaches beyond the territory of a single State.

[11] Article 1F(a) stipulates that the Refugee Convention shall not apply where there are serious reasons for considering that a person has committed 'a war crime … as defined in the international instruments drawn up to make provision in respect of such crimes'. In turn, 'grave breaches' of the GCs constitute 'war crimes' in IACs as per art 8 of the Rome Statute of the International Criminal Court (adopted 17 July 1998, entered into force 1 July 2000) 2187 UNTS 90 (Rome Statute). See also arts 8(2)(c), 8(2)(d), and 8(2)(e). Jean-Marie Henckaerts and Louise Doswald-Beck, *Customary International Humanitarian Law* (CUP 2005) rules 156–8 (CIHL Study). [14] See eg re IHRL, Marko Milanovic, *Extraterritorial Application of Human Rights Treaties: Law, Principles, and Policy* (OUP 2011); re IRL see Chapter 50 in this volume.

Section 2 considers questions of 'regime interaction'[15] between IHL and the (global and regional) refugee protection regimes which continue to apply during conflict. It queries whether the IHL threshold of application and references to IHL terms-of-art, such as 'civilian', should guide the interpretation of IRL. The chapter thus converses with IRL analysis of 'Conflict Refugees'[16] and with chapters considering regional protection regimes in Latin America,[17] Africa,[18] and the EU.[19]

Section 3 considers the scope of application of IHL norms. It appraises the significance of IHL classification, including the question who classifies conflicts. Given that, globally, most armed conflicts are NIACs, the scope of IHL norms that apply to such conflicts depends on the extent to which IAC norms apply in NIACs as CIL.[20]

Section 4 appraises IHL displacement-related norms and the extent to which IRL interpretations affect them. It considers three perspectives: first, prevention of displacement in conflict through placing restrictions on means and methods of warfare, and through the fundamental principle of distinction which, if observed, would minimize harming civilians and causing their displacement;[21] secondly, treatment of displaced persons in conflict;[22] thirdly, *non-refoulement*[23] including repatriation during and post-conflict.[24] Section 5 concludes.

2. Effects of IHL on Global and Regional Refugee Protection Regimes

a. Regime Interaction

That global and regional refugee protection regimes continue to apply during armed conflict is uncontroversial.[25] It is less clear whether the IHL threshold and IHL terms-of-art should affect interpretation of norms of such regimes. The Vienna Convention on the Law of Treaties (VCLT)[26] stipulates that a treaty be 'interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose'.[27] In its study on fragmentation of international law, the International Law Commission (ILC) noted the *lex specialis derogat legi*

generali interpretive principle, namely that 'whenever two or more norms deal with the same subject matter, priority should be given to the norm that is more specific'.[28] Given that both IHL and IRL arguably qualify as '[s]pecial ("self-contained") regimes' as per the ILC fragmentation study,[29] it is not clear whether IHL norms should be prioritized in interpreting refugee protection regimes or whether IRL norms should be given a 'truly autonomous meaning' and, indeed, dominate IHL interpretation. Chetail proposes resolving interpretive challenges in displacement contexts by adopting a complementarity approach: overlapping IHL, IRL, and IHRL norms are applied cumulatively, with a view to implementing the most protective norm.[30] Yet, we should remember that, precisely because of the regimes' divergent objectives, it is not obvious that, for instance, using a wider definition of 'civilian' than its IHL equivalent to interpret an IRL norm would be considered a more protective outcome *in IHL terms*.

A different interpretive approach builds on the VCLT stipulation that, in addition to the context, 'any relevant rules of international law applicable in the relations between the parties' should be 'taken into account'.[31] Peters suggests that, in respect of 'relations between the parties', the better (and prevailing) view is that it is not necessary that all States in the organization/treaty are also parties to the other treaty to make the latter usable, if the other States are not involved in the dispute.[32] Even on a more restrictive view, taking IHL norms into account in interpreting global and regional refugee law treaties would not ordinarily be contentious, given the wide ratification of IHL treaties and the CIL status of many of its norms.[33] In the same vein, the ILC study advocated 'harmonization' such that 'when several norms bear on a single issue they should, to the extent possible, be interpreted so as to give rise to a single set of compatible obligations'.[34] Yet, whereas aspiring to achieve harmonious interpretation is desirable, it is not always obtainable: when treaty norms are clearly designed to achieve different objectives, relying on an external norm risks undermining the treaty's object and purpose.

b. The Refugee Convention

Section 3 considers IHL's scope of application. Should it affect the application of the Refugee Convention? The UNHCR Handbook (still) stipulates that 'persons compelled to leave their country of origin as a result of international or national armed conflicts are

not normally considered refugees under the 1951 Convention or 1967 Protocol'.[35] Yet, UNHCR's contemporary interpretive position is that it is neither necessary nor sufficient for an 'armed conflict' in the IHL sense to take place for a person to be recognized as a refugee pursuant to the Refugee Convention, though it may assist in contextualizing the claim.[36]

Storey contends that IHL should be the starting interpretive point for considering applicability of the Refugee Convention in an armed conflict context, to be departed from wherever norms from other regimes are more protective.[37] Durieux, however, argues that the existence of an armed conflict is more aptly conceived as contextual or 'neutral', given that none of the constituent conditions of the 'inclusion' clause in article 1A(2) of the Refugee Convention refers to conflict, and that its focus is on *persecution*.[38]

I would respectfully posit that crossing an IHL threshold *as such* does not significantly alter the interpretation of constitutive elements of the refugee definition, and it would therefore be misguided to treat an asylum application differently merely because it is submitted prior to or after the commencement of an armed conflict as construed in IHL. There can be 'riots, isolated and sporadic acts of violence' (as per article 1(2) of Additional Protocol II (APII)) that fall short of the IHL threshold and yet give rise to a well-founded fear of persecution; and, conversely, not all persons displaced by IHL conflicts are 'unwilling' or 'unable' to avail themselves of the protection of their country of nationality or habitual residence, due to a well-founded fear of persecution for a convention reason. An IHL threshold should not therefore be the primary reference, let alone a decisive factor, in determining the assessment of an asylum claim.[39]

Whereas the article 1A(2) definition arguably does not include references to IHL terms-of-art, the article 1F(a) exclusion clause manifestly requires engagement with the notion of 'war crimes' in IACs and NIACs.[40] The only other direct reference in the Refugee Convention to an IHL term-of-art appears in article 9, which notes 'war' as a justificatory base for a State taking 'provisionally measures which it considers to be essential to the national security in the case of a particular person'. The drafters may have sought to rely on this provision to justify internment of enemy nationals 'masquerading

as refugees',[41] the risk of so-called 'fifth columnists'. Yet, as noted above, the occurrence of 'war' is not an IHL threshold in either IACs or NIACs, and so the provision's application does not depend on an IHL-defined conflict, not least because its alternative basis for operation is 'other grave and exceptional circumstances'. Moreover, article 9 does not affect eligibility for protection: provisional measures, which must be necessary 'in the interests of national security', can only last until refugee status determination is finalized.

c. Regional Refugee Definitions: OAU and Cartagena

Refugee definitions in Africa and Latin America identify conditions when refugee status is delinked from the Refugee Convention's persecution requirement. Do some of their added contextual circumstances merit interpretive recourse to IHL?

The OAU Convention definition includes four refugee-producing events arguably relating to conflict situations: 'external aggression', 'foreign domination', 'occupation', and 'events seriously disturbing public order'. Yet, in international law, the term 'aggression' is associated with *jus ad bellum* (related to the use of force) rather than *jus in bello* (IHL); 'foreign domination' is not an IHL term-of-art; and the existence of an IAC or a NIAC is neither necessary nor sufficient to define an event as 'seriously disturbing public order'.[42] In contradistinction, it may be justifiable to give 'occupation' similar meaning in OAU interpretation as per IHL.

In Latin America, the Cartagena Declaration refers to 'generalized violence', 'foreign aggression' and 'internal conflicts'. The abovementioned reservations about the application of IHL to 'aggression' apply here, too, whereas 'generalized violence' is not an IHL term-of-art. One may also question whether it is desirable to read 'internal conflict' to mean NIACs, given that conflicts which fall short of an IHL threshold could cause displacement.[43]

d. Subsidiary Protection in EU Law

Unlike the OAU Convention and the Cartagena Declaration, the EU Qualification Directive does not expand the applicable refugee definition in its region beyond that in the Refugee Convention. Rather, it creates a 'subsidiary protection' status based on three alternative protection grounds. Article 15 protects persons where there is a serious risk

that they would suffer serious harm elsewhere, which it defines *inter alia* as (c) a 'serious and individual threat to a civilian's life or person by reason of indiscriminate violence in situations of international or internal armed conflict'. The provision uses several terms that borrow *inexactly* from IHL: 'civilian', 'indiscriminate violence', and 'international or internal armed conflict'.[44] Should they be given an 'IHL' meaning when interpreted in a (regional) refugee protection context?

Balouz warns against adopting a pure IHL approach to article 15(c).[45] An IHL interpretation of 'indiscriminate violence' would be limited to attacks that violate IHL, yet IHL permits 'incidental harm' to civilians. In contrast, attacking civilian areas where the population is suspected of siding with an armed opposition group is prohibited under IHL as 'indiscriminate'[46] in failing to distinguish between combatants and civilians. However, in an IRL context, it is unhelpful to describe such an attack as 'indiscriminate' since it implies the attack does not have the persecutory character required for recognition as a refugee under the Refugee Convention definition.[47] Balouz therefore claims that 'indiscriminate violence' should be understood as referring to the *effects* of the violence on civilians.[48] A similar challenge arises in interpreting the term 'civilian', rooted in the IHL principle of distinction. As previously noted, a military deserter would not necessarily be considered a civilian under IHL and would therefore be denied subsidiary protection (though they may enjoy IHL protections). Moreno-Lax cogently argues that the fact that violations of IHL *may* be persecutory in an IRL sense does not, in the reverse, reduce persecution for the purposes of qualification as a refugee to conduct contrary to IHL. In her view, IHL may be 'a factor' aiding interpretation but it cannot replace a construction of article 15(c) in light of its object and purpose, with the Refugee Convention and the EU Charter of Fundamental Rights as the primary reference framework.[49] Notably, the European Court of Justice (CJEU) in *Elgafaji* accorded an autonomous meaning to the terms 'indiscriminate violence' and 'civilian' in article 15(c).[50]

Given that article 15(c) applies only in stations of 'international or internal armed conflict', the interpretive question is whether to apply an IHL meaning to both these terms. In *Diakité*, the CJEU held that

> an internal armed conflict exists, for the purposes of applying [article 15(c)], if a State's armed forces confront one or more armed groups or if two or more armed groups confront each other . . . it is not necessary for that conflict to be categorised as 'armed conflict not of an international character' under international humanitarian law; nor is it necessary to carry out, in addition to an appraisal of the level of violence

[44] There is also a crossover effect of IHL on article 3 of the ECHR. See eg *Sufi v United Kingdom* (2012) 54 EHHR 9. See also Chapter 11 in this volume.

> present in the territory concerned, a separate assessment of the intensity of the armed confrontations, the level of organisation of the armed forces involved or the duration of the conflict.[51]

The CJEU cited approvingly the Advocate General's opinion, which proposed assessing whether there is a *de facto* situation of armed conflict.[52] Clearly, confining article 15(c)'s application to conflicts that meet an IHL threshold will deny subsidiary protection to persons detrimentally affected by such conflicts.

Having considered indirect effects of IHL on global and regional protection regimes, Section 3 turns to IHL's scope of application, setting the scene for Section 4's appraisal of IHL's regulation of displacement in conflict.

3. The Scope of Application of IHL

a. International Armed Conflicts and Non-international Armed Conflicts

IHL protections for displaced persons are dependent on the (current or previous) existence of an IAC or a NIAC. As per CA2 of the GCs, IAC norms apply to 'all cases of declared war or of any other armed conflict which may arise between two or more' High Contracting Parties as well as to 'partial or total occupation of the territory of a High Contracting Party'. The test is therefore *factual*: formal declaration of war, warning, ultimatum, or recognition of the state of conflict are not necessary; neither the length nor the intensity of the conflict matters. Additional Protocol I (API) article 1(4) stipulates that IACs include 'armed conflicts in which peoples are fighting against colonial domination and alien occupation and against racist régimes in the exercise of their right of self-determination'.

IACs are far more thoroughly regulated than NIACs, to which CA3 technically refers as 'armed conflicts not of an international character occurring in the territory of one of the High Contracting Parties'. NIACs may occur between State armed forces and non-State organized armed groups (OAGs) or between such groups. Whereas CA3 does not spell out applicability conditions, the International Criminal Tribunal for the former Yugoslavia (ICTY) in *Tadić* held NIACs require *protracted armed violence*.[53] NIACs which meet the higher APII article 1(1) threshold are also subject to CA3's stipulations. Such conflicts must take place

[52] ibid para 66.

[53] Judgment, *Tadic* (IT-94-1-A ICTY) Appeals Chamber, 15 July 1999, para 70.

> in the territory of a High Contracting Party between its armed forces and dissident armed forces or other organized armed groups which, under responsible command, exercise such control over a part of its territory as to enable them to carry out sustained and concerted military operations and to implement this Protocol.

One can therefore consider four types of armed conflicts (though in complex conflicts, two or more of these prototypes may apply simultaneously).[54] First, there are conflicts 'not of an international character' that do not meet the CA3 threshold. Displacement in and from such conflicts is not regulated by IHL. Secondly, there are IACs that meet the CA2 threshold. Such conflicts are subject to the full scope of the GCs, including CA3 (which was recognized as having CIL status), and to the full scope of API for the 174 States parties thereto.[55] API norms that have crystallized into CIL norms bind non-signatory States as well as OAGs in 'internationalized' armed conflicts. Thirdly, there are NIACs that meet the CA3 threshold but fall short of the APII threshold. Formally, they are only regulated by CA3, though many IAC norms apply to such conflicts as CIL. Fourthly, there are NIACs that meet the APII threshold[56] and are subject, in respect of the territory of the 169 States parties thereto, to APII norms.[57] APII norms that have crystallized into CIL norms bind non-signatory States as well as OAGs.

b. Who Classifies Conflicts, and does Classification Matter?

As a practical matter, States must classify conflicts as IACs, NIACs or indeed as an 'internationalized' NIAC between a State and an OAG. For States parties, conflict classification and consequent application of IHL norms pose a challenge: while certain means and methods are permissible only in armed conflict, there are also protections and obligations that accrue. For non-belligerent States, international relations considerations may enter, including political implications of a determination that the

[54] Not all armed conflicts can be neatly classified as IACs or NIACs: some conflicts may commence as NIACs and subsequently 'internationalize'. Mačák describes four such modalities: Kubo Mačák, *Internationalized Armed Conflicts in International Law* (OUP 2018) 241–3. See further ICRC, *Commentary on the First Geneva Convention: Convention (I) for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field* (2nd edn CUP 2016) paras 237 and 262, and Andrew Clapham, 'Defining Armed Conflicts under the Additional Protocols: Is there a Need for Further Clarification?' in Fausto Pocar (ed), 'The Additional Protocols 40 Years Later: New Conflicts, New Actors, New Perspectives' (International Institute of Humanitarian Law 2018) 33.

[57] ICRC, 'States Parties to the Protocol Additional to the Geneva Conventions on 12 August 1949, and relating to the Protection of Victims of Non-International Armed Conflicts (Protocol II), 8 June 1977' <https://ihl-databases.icrc.org/applic/ihl/ihl.nsf/States.xsp?xp_viewStates=XPages_NORMStatesParties&xp_treatySelected=475> accessed 13 October 2020.

situation in a neighbouring State amounts to an IAC or a NIAC. Given the diffused nature of IHL application, it is conceivable that a conflict situation would be treated by certain States or indeed by international bodies as an armed conflict but that some or all parties to the conflict would resist that classification.

Internationally, an International Committee of the Red Cross (ICRC) classification of a situation as IAC or NIAC allows it to commence its activities pursuant to the GCs, but it is not binding on the parties concerned or, indeed, on other treaty bodies. Similarly, while a UN Security Council resolution determining the existence of a 'threat to the peace, breach of the peace, or act of aggression'[58] can trigger enforcement measures, it is not a legally binding finding that an armed conflict exists (though if a resolution calls upon parties to a conflict to respect the GCs, whose application presupposes the existence of an IAC or a NIAC, it may have persuasive force). International and/or domestic courts may be required to make determination of the existence of a conflict *ex post facto* when they try individuals for alleged violations of IHL. Depending on the approach taken to interpreting refugee protection, they may (choose to) make determinations while conflicts are ongoing.

The ICRC Customary International Humanitarian Law study suggests that many customary rules derived from IAC treaties apply in NIACs, including general rules or principles designed to protect the civilian population as well as rules governing means and methods of warfare. Nevertheless, for appraisal of States' displacement-related obligations, it (still) matters not only *whether* an armed conflict exists, but also the conflict's *classification*. As the analysis in Section 4 demonstrates, NIACs remain less regulated—and protective—than IACs.

4. Displacement in IHL

a. Context

The question whether displacement took place from a territory experiencing an armed conflict and, if so, which type of conflict is applicable, is critical to determining whether (and which) IHL norms apply. If so, alongside the reason for displacement, an individual's personal status, as a civilian (which may or may not be a 'protected person') or combatant, and the status of the State to which they were displaced (belligerent, co-belligerent, or non-belligerent) determines the scope and content of IHL obligations. Whereas IHL differs from other (protection) regimes, some treaty provisions reference IRL terms-of-art: should those provisions be given IRL-compatible interpretations, or should it be autonomous?

[58] Charter of the United Nations (adopted 26 June 1945, entered into force 24 October 1945) 1 UNTS XVI (UN Charter), art 39.

b. Adherence to IHL, the Principle of Distinction, and Prevention of Displacement

No IHL provision generally prohibits displacement *as such* in all conflict situations:[59] IHL envisages destruction, death, and ultimately displacement. Nevertheless, adherence to, and respect for, IHL rules, not least those protecting civilians against the effects of hostilities, can minimize displacement of civilians either across international borders or within a country *for reasons related to the armed conflict*. Indeed, displacement of the civilian population for reasons related to the conflict that are *not* required for the security of the civilians involved, or are an imperative military necessity, may be part of an overt or covert 'ethnic cleansing' policy.

Parties to a conflict do not have an unrestricted right to choose methods or means of warfare and are prohibited from using them if they are 'indiscriminate' or are likely to cause superfluous injury or unnecessary suffering. In conducting hostilities, the fundamental principle is that 'parties to a conflict must, at all times, distinguish between civilians and combatants and between civilian objectives and military objects'.[60] Civilians are protected from attack 'unless and for such time as they take a direct part in hostilities'[61] and neither the civilian population as a whole nor individual civilians may be directly attacked. There is a duty to take precautions in attack and against the effect of attacks on the civilian population,[62] a prohibition on the destruction of objects indispensable to the population's survival,[63] a prohibition on reprisals against the civilian population and its property,[64] and a requirement to allow unhindered passage of relief supplies and assistance necessary for the survival of the civilian population.[65] Nevertheless, adherence to the prohibition on use of civilians as 'human shields', protection of women,[66] and protection of children[67] may require civilian evacuation.[68]

In order to protect the civilian population, attacks are only permitted on military objectives that 'by their nature, location and purpose or use make an effective contribution to military action and whose total or partial destruction, capture or neutralization, in the circumstances ruling at the time, offers a definite military advantage'.[69] Refugee camps are presumed not to be used for military purposes, even when a refugee camp is located in places where military activities are carried out and notwithstanding the presence of armed elements therein: the onus lies with those claiming that a civilian object has been turned into a military one, given that 'the presence within the civilian population of individuals' who are not civilians 'does not deprive the population of its civilian character'. The clear intention is to preserve the safety of displaced populations on the territory of a party to the conflict.

[65] ibid art 70. [66] ibid art 76. [67] ibid arts 77–8. [68] ibid arts 57–8.
[69] ibid art 52(2).

c. Individual Status in Conflict

IHL protections in conflict flow from individual status. API article 50 defines a 'civilian' in an IAC as a person who does not belong to one of the categories of persons referred to in GCIII article 4A(1), (2), (3), and (6) and in API article 43. It stipulates that 'in case of doubt whether a person is a civilian, that person shall be considered to be a civilian'.[70] Conversely, 'combatants' are targetable; however, if captured, they are entitled to Prisoner of War (PoW) status: the so-called 'combatant privilege'.[71] That the GCIII combatant category in IACs has been substantially extended by API is at the core of certain States' unwillingness to ratify it; the consequence is that PoW protections, including in respect of *refoulement*, do not universally apply.[72] Meanwhile, in NIACs, there is no 'combatant' status, and no PoW status: members of OAGs participating in conflict may be prosecuted under domestic law for doing so.

Civilian protections apply in both IACs and NIACs. However, in IACs, some civilians are 'protected persons': as subsequent sections demonstrate, they enjoy special IHL protections, including in respect of prevention of displacement and treatment *qua* displaced persons. 'Protected persons' are those who, 'at a given moment and in any manner whatsoever, find themselves, in case of a conflict or occupation, in the hands of a Party to the conflict or Occupying Power of which they are not nationals'.[73] Nationals of the capturing State, of a co-belligerent State, or of a neutral State are excluded, unless the neutral State and the concerned national's State do not enjoy 'normal diplomatic relations'.[74] Given their universal ratification, the stipulation that nationals of a State that has not ratified the GCs cannot be 'protected persons' is moot.[75]

IHL operates on a rebuttable assumption that a person can enjoy their State's protection.[76] 'Protected persons' are presumed to *no longer* enjoy an effective protection of their State, either because there is a conflict between their State and the State in whose power they are held, or because their State has no diplomatic relations with that State.

IHL offers limited protections to a broader category, of 'persons who are not or are no longer taking an active part in hostilities' which includes, alongside 'civilians', non-combatant members of the armed forces (ie medical and religious personnel, members of the armed forces who have laid down their arms, and those placed *hors de combat* (out of action)). They are entitled to respect for their lives and for their physical and mental integrity and must in all circumstances be protected and treated with humanity.[77]

[77] CIHL Study (n 11).

d. Prevention of Displacement from Conflict

Whereas IHL does not prohibit displacement as such, in IAC situations of occupation, individual or mass forcible transfers of protected persons, both within the occupied territory and beyond its borders, is prohibited.[78] Unless they are nationals of the occupying State, migrants are similarly protected. The deportation or transfer of all or parts of the population of the occupied territory within or outside this territory is a war crime.[79]

A limited exception permits an occupying power to evacuate the inhabitants of an area if this is necessary for the security of the civilian population or for imperative military reasons that are hampered by the presence of the civilian population; such evacuations should not involve displacement of civilians outside the occupied territory unless this is impossible for material reasons, and displaced persons must be transferred back to their homes as soon as the hostilities in the area in question have ceased.[80] A parallel prohibition in NIACs (whether or not they meet the APII threshold) prevents parties to the conflict from 'ordering the displacement of the civilian population for reasons related to the conflict, unless the security of the civilians involved or imperative military reasons so demand';[81] breaching this prohibition constitutes a war crime.[82]

e. Displaced Persons in Conflict

i. *'Refugees'*

'Protected persons', including non-nationals, have a right to leave a State's territory at the outset of or during a conflict, unless their departure is contrary to the national interests of that State.[83] The right to leave an occupied territory extends to 'protected persons' who are not nationals of the Power whose territory is occupied.[84]

Some of those fleeing their State during conflict may seek refuge in a State where they are considered 'enemy aliens'; yet, *de facto*, they do not bear allegiance to their State of nationality and should thus not be considered as a potential threat to the host country. Hence, inspired by the plight of German Jews in the Second World War,[85] IHL instructs States not to treat 'refugees' 'who do not, in fact, enjoy the protection of any government' as 'enemy aliens exclusively on the basis of their nationality *de jure* of an enemy State'.[86] The provision invites States parties to take into consideration what might be called the 'spiritual affinity' or 'ideological allegiance' of a protected person. 'Refugees' are not exempt from being subject to security measures, including internment.

[83] GCIV (n 3) art 35(1).
[84] ibid art 48.
[85] Cantor (n 59) 357.
[86] ibid 345.

Despite the provision's title ('refugees'), the (1958) Commentary rejects interpretive references to refugee definitions that 'are valid for the particular purposes of law for which they were formulated, but are too technical and too limited in scope to meet the requirements of the Geneva Convention'.[87] Instead, it suggests that the provision 'should be applied in the broadest humanitarian spirit'[88] and has been interpreted to mean *de facto* absence of protection by any government.[89] Non-reliance on IRL definitions means States parties to a conflict are not required to treat such persons as *ipso facto* refugees within the meaning of those instruments.[90]

ii. *Persons in Refugee-like Situations in Occupied Territory*

Nationals of the occupying power are not generally considered 'protected persons', given the rebuttable presumption that their relations with their State of nationality are not severed during conflict. GCIV article 70(2), entitled 'offences committed before occupation', shields 'nationals of the occupying power who, before the outbreak of hostilities, have sought refuge in the territory of the occupied State' from arrest, prosecution, conviction, or deportation from the occupied territory 'except for offences committed after the outbreak of hostilities, or for offences under common law committed before the outbreak of hostilities which, according to the law of the occupied state, would have justified extradition in time of peace'.

The provision intends to ensure that those who have sought 'refuge' (a term which the treaty does not define) are not punished for acts, such as political offences, which may have been the cause of their flight or for the mere fact of having sought refuge in a State that has subsequently been occupied. The *status quo ante* (before the outbreak of hostilities) is thus preserved; an important exception, which can perhaps be analogized to exclusion pursuant to article 1F(b) of the Refugee Convention, pertains to pre-occupation extraditable offences, which can be prosecuted.

iii. *Pre-conflict Refugees*

In IACs, API stipulates that refugees 'considered as such under the relevant international instruments accepted by the Parties concerned or under the national legislation of the State of refuge or State of residence…before the beginning of hostilities' should be considered 'protected persons' in all circumstances and without any adverse distinction,[91] and acts 'qualified as grave breaches' in the Conventions constitute 'grave breaches of the Protocol' if they are committed against such persons.[92] Consequently, each party to the conflict is obliged to *respect* decisions taken by another party granting

refugee status whether such decisions are taken on the basis of an international instrument, on the basis of national legislation, or on the basis of both.[93]

Thus, the provision extends 'protected person' status to refugees who are nationals of co-belligerent and neutral States and, in occupied territory, to refugees who are nationals of the occupying State. Relatedly and importantly, States have a duty to preserve the humanitarian and civilian character of asylum,[94] to address security threats posed by armed elements, and to prevent subversive acts directed at other States.[95]

f. (*Non-*)*Refoulement* and Repatriation During and Post Conflict

i. *Obligations of Parties to the Conflict*

A PRESUMPTION OF RETURN?

IHL's rebuttable presumption that nationals enjoy the protection of their State of nationality also presumes their wish to return thereto as soon as reasons for displacement cease to exist, and their right to do so, which does not generally extend to lawfully expelled migrants.[96] In turn, States may wish to repatriate, expel, or deport non-nationals during hostilities or upon their cessation. Such States may seek to return persons to an area of the State that is arguably unaffected by the conflict.[97] Yet, some nationals do not wish to return to their State of nationality, be it during conflict or upon cessation of hostilities; the extent to which IHL explicitly respects their preferences depends on whether they qualify as 'protected persons' or PoWs at the hands of the party to the conflict.

'TRANSFER TO ANOTHER POWER' OF PROTECTED PERSONS

The clearest IHL articulation of the IRL principle of *non-refoulement* is found in GCIV article 45(4): protected persons should 'in no circumstances be transferred to a country where [they] may have reason to fear persecution for [their] political opinion or religious beliefs'.[98] The prohibition applies to any type of transfer, such as expulsion, deportation, extradition, or return, regardless of its formal designation. Transfer of individuals is prohibited irrespective of whether the danger of fundamental rights violations emanates from State or non-State actors: in latter cases, it must be shown

[98] GCIV (n 3) art 45(4).

that authorities in the State of return were unable or unwilling to protect that person. Yet, despite referencing persecution for 'political opinions or religious beliefs', two of the five convention reasons under article 1A(2) of the Refugee Convention, the Commentary does not engage IRL standards in interpreting these terms; rather, it notes that 'the term persecution is not defined [in IHL] but refers, at a minimum, to serious violations of human rights (right to life, freedom, and security)' on the enumerated grounds.[99]

The provision appears to prohibit indirect or secondary *refoulement*, namely transfers where the receiving State is unwilling or unable to apply GCIV's humanitarian provisions;[100] and if a receiving State fails to observe GCIV 'in any important respect', the transferring State is required to take effective measures to correct the situation, or request the return of the transferees, a request with which the receiving State must comply. Prohibition on indirect *refoulement* arguably also follows from the transferring State's CA1 duty to 'ensure respect' for the GCs.[101]

POWS *DURING* CONFLICT AND *AFTER CESSATION* OF ACTIVE HOSTILITIES

PoWs are ordinarily interned as a way of preventing them from resuming their hostile activities. IHL's assumption is that a PoW's allegiance lies with their State. Yet, GCIII stipulates that, while sick or injured PoWs are eligible for repatriation, they may not be repatriated against [their] will during hostilities'. This is a rare textual recognition in IHL that the presumption of national allegiance is rebuttable, and an articulation of *non-refoulement*.[102]

GCIII is *prima facie* unequivocal about release and repatriation of able-bodied PoWs after 'cessation of active hostilities': they shall take place 'without delay'.[103] This duty is premised on the assumption that, ordinarily, a PoW would wish to be repatriated, and that giving PoWs a 'right of option' would enable detaining powers to delay repatriation, given PoWs may not be able to freely express themselves.[104] An IRL-sensitive interpretation would, however, require reading-in a 'free choice whether or not to return … exercised in such objective conditions … that there cannot be any doubt as to the free exercise of that choice'[105] as was done regarding repatriation after the 1991 Gulf War.[106] Indeed, whereas some repatriated PoWs may be viewed as heroes, others may wish to avoid returning to a State where they could be seen as collaborators or as 'cowards' who had been captured rather than endure a courageous death. So long as there is no obligation to release them, PoWs are protected by GCIII.[107] When repatriation obligation arises,

[107] GCIII (n 3) art 12.

that State is no longer a detaining power but instead takes on new responsibilities deriving from refugee instruments and principles including *non-refoulement*.

RETURN OF INTERNEES TO THEIR LAST PLACE OF RESIDENCE OR FACILITATION OF REPATRIATION 'UPON THE CLOSE OF HOSTILITIES OR OCCUPATION'

All parties shall 'endeavour upon the close of hostilities or occupation, to ensure the return of all internees to their last place of residence, or to facilitate their repatriation'. The Commentary notes that this entails enabling those wishing to travel to other countries to do so and providing them with passports or equivalent documents.[108] An IRL-mindful interpretation of the obligation to repatriate would require States to give internees an effective opportunity to apply for asylum. For instance, nationals of a party to the conflict may evade military service in order to avoid committing IHL violations and be interned during conflict: upon the close of hostilities, they may seek protection from persecution-like punishment.

ii. *Obligations of all High Contracting Parties*

Parties to the GCs undertake to 'respect and to ensure respect' for them in all circumstances.[109] The Commentary notes that such obligations go beyond the general international law principle of *pacta sunt servanda*[110] and that they do not depend on reciprocity.[111] States may neither encourage, nor aid or assist in violations of the Conventions by parties to a conflict; and they must do everything reasonably in their power to prevent and bring such violations to an end, including through reaching out to parties to an armed conflict to try to facilitate the carrying out of their obligations.[112] Most obviously, this means non-belligerent States should not encourage or assist displacement.

Elsewhere, I argued that CA1 imposes a duty on all High Contracting Parties, including non-belligerent States, to refrain from returning persons 'not taking an active part in hostilities' to territories in which an armed conflict is taking place if there are reasons to believe that there is a real risk of CA3 violations: they would thus be preventing further IHL violations by separating potential victims from potential perpetrators.[113] By refraining from *refoulement*, States would also be taking measures 'necessary for the suppression of acts contrary to the provisions of the present Convention'.[114] Whereas CA3 does not contain an explicit prohibition of *refoulement*, its 'categorical prohibitions would also prohibit a transfer of persons to places or authorities where there are substantial grounds for believing that they will be in danger of being subjected to violence to life and person, such as murder or torture and other forms of

ill-treatment'.[115] The *non-refoulement* obligation of non-belligerent States, derived from CA1, could close an IRL protection gap during IHL conflicts, given that not all violations of CA3 are persecutory within the meaning of the Refugee Convention definition.[116] The proposed framework bears some conceptual similarities to contemporary understanding of *non-refoulement* obligations derived from IHRL instruments such as 'the inherent right to life' and the prohibition on 'torture or . . . cruel, inhuman or degrading treatment or punishment'.[117]

5. Concluding Thoughts

The chapter sought to illustrate that, in displacement contexts, interactions between IHL and (global and regional) refugee protection regimes are both inevitable and challenging, due to terminological, institutional, and structural divergences, and to their being specialized regimes designed to be invoked in (divergent) exceptional circumstances. The healthy scepticism with which scholars and decision-makers approach references to IHL terms-of-art in refugee protection contexts is justified; half-way-house drafting, such as article 15(c) of the EU Qualification Directive, and contextual references to 'external aggression' (in the OAU Convention) and to 'internal conflicts' (in the Cartagena Declaration) renders their interpretive task harder—and calls for further scholarly inquiry.

As complex and protracted conflicts proliferate, so will refugee scholars and courts' engagement with IHL to determine inclusion and exclusion from protection status. Meanwhile, direct references to displacement *in* and *from* IACs and NIACs in IHL, the regime which regulates such conflicts, are limited and chequered. Further probing is called for in respect of the extent to which other, newer, protection regimes (should) affect IHL interpretation of IRL terms-of-art and indeed of the role of non-belligerent States in addressing displacement.

CHAPTER 13

CUSTOMARY REFUGEE LAW

HÉLÈNE LAMBERT*

1. Introduction

Refugee law is primarily treaty law. However, many of the major refugee-receiving countries are not parties to either the Refugee Convention or the Refugee Protocol, for example Bangladesh, Pakistan, India, Iran, Jordan, Lebanon. Hence, customary international refugee law can be 'critically important' in the identification of key principles of refugee protection and as an indication of what is permitted (or not).[1]

a. Customary International Law: A Disputed but Powerful Rule of Law

Customary international law is notoriously difficult to identify as a source of international law, or more accurately as a rule of law (validated by its source), which the International Court of Justice (ICJ) can apply when deciding a dispute.[2] International custom emerges from 'evidence of a general practice accepted as law'.[3] Each element (practice and *opinio juris*) must be ascertained individually, with due regard to context, circumstances, and nature of the rule in question.[4] In the present state of international

law, the actors of practice and *opinio juris* are primarily State organs.[5] It has been suggested that State practice and *opinio juris* exist 'on a spectrum'[6] or a 'sliding scale',[7] such that the more evidence there is of one element, the less is required of the other. However, in other instances, international custom 'is simply asserted'.[8] Added to these uncertainties, Greenman observes 'how flexible the material is' and how it can be 'marshalled to support various different, even dramatically opposed, positions'.[9]

Despite such challenges, customary law is a powerful tool for legal argument.[10] Through this process 'the way things *have* been done becomes the way things *must* be done'.[11] Once established, it is 'a general rule of international law applicable to every State, subject only to the exception of persistent objector'.[12] International custom is therefore both a process of lawmaking and the end result of that process.[13]

b. The Restricted Role of International Custom in Refugee Law

Perhaps more so than elsewhere, contention and incertitude dominate the debate on which practices of refugee protection constitute customary law. Some possible explanations might be, first, that while the ICJ is competent to settle disputes or give an advisory opinion relating to the interpretation or application of the Refugee Convention under article 38 of its Statute, in practice it has never been called upon to do so.[14] To be sure, regional courts have played an important role in the interpretation and application of regional instruments on refugee protection, which in some instances incorporate provisions of the Refugee Convention, but that is not the same as the world court identifying a particular practice as international custom. A second explanation may be

Statute of the International Court of Justice (adopted 26 June 1945, entered into force 24 October 1945) 3 Bevans 1179, 59 Stat 1055, TS No 993 (ICJ Statute), art 38.

the 'politics of refugee protection', as States believe they retain the right to admit or to exclude aliens from their territory, with 'little clear sense of the refugee as an individual *entitled* to international protection'.[15] Thirdly, the absence of reciprocity in this particular area of international law arguably makes it better suited to the emergence of general principles of law than international custom.[16] Fourthly, there is a limited appreciation of the role of UNHCR in 'identifying the source and confirming its content and binding nature'.[17]

Refugee law nevertheless overlaps with other areas of international law in which customary law plays a significant role as a source of law. For instance, the prohibitions of torture, racial discrimination, and genocide are customary law;[18] so too the prohibition of arbitrary deprivation of liberty,[19] the right to leave any country,[20] and the right to family reunification (by derivation from the right to respect for family life).[21] Other areas of international law overlapping with refugee law, such as the law of the sea and international humanitarian law, also recognize the customary character of some of its rules, for example, the obligation to assist persons in danger at sea;[22] the basic rules of international humanitarian law,[23] including the prohibition of child recruitment;[24] and the 'elementary considerations of humanity'.[25] Depending on context and facts, these rules can interact with principles and standards of refugee protection and contribute to the emergence of a particular rule of customary refugee law.

Thus, it is fair to say that customary international law may not play as significant a role in refugee law as it does in other areas of international law. However, there are at least three practices of refugee protection aimed at safeguarding access and admission to refugee protection for which varying degrees of agreement exist in favour of a rule (or emerging rule) of customary law: *non-refoulement*, temporary refuge, and the right to

be granted (to receive) asylum. These practices are deeply intertwined in their humanitarian purpose,[26] although they are discussed separately below for the sake of clarity.

2. *Non-refoulement*

Protection against *refoulement* is the cornerstone of international refugee law and a cardinal principle of international human rights law.[27] The principle of *non-refoulement* prohibits the removal, in any manner whatsoever, of a person to a territory where she or he could face persecution or be at risk of torture or other cruel, inhuman or degrading treatment or punishment.[28] It is strongly related to asylum[29] (though the two are distinct),[30] and the protection of human life and dignity.[31] Mansfield describes it as a prohibition with two strands: persecution and torture.[32] While the torture strand of the prohibition against *refoulement* under international human rights law is generally accepted as customary law,[33] the customary character of the persecution strand under refugee law requires deeper examination.

a. *Non-refoulement* in Article 33(1) of the Refugee Convention

As a core principle of refugee law, *non-refoulement* is enshrined in treaty law. According to article 33(1) of the Refugee Convention:

[33] ibid 37; Lauterpacht and Bethlehem (n 27) 153–6.

> No Contracting State shall expel or return ('refouler') a refugee in any manner whatsoever to the frontiers of territories where his life or freedom would be threatened on account of his race, religion, nationality, membership of a particular social group or political opinion.[34]

The provision applies without territorial restriction to 'the conduct of State officials or those acting on behalf of the State wherever this occurs, whether beyond the national territory of the State in question, at border posts or other points of entry, in international zones, at transit points etc'.[35] It is concerned with acts of expulsion, deportation, return, rejection or non-admittance at the frontier, and extradition, and applies to 'refugees' in the declaratory sense, that is, whether or not they have been formally recognized as refugees, hence it applies to all asylum seekers.[36] The prohibition is concerned with both direct and indirect *refoulement*. It protects individuals (whether the person in question is part of a mass influx or not) against threats to their life or freedom, which include a well-founded fear of being persecuted, generalized violence, threat to physical integrity or liberty, threat to safety, a real risk of torture or cruel, inhuman, or degrading treatment or punishment;[37] the threat in question must be for reason of race, religion, nationality, membership of a particular social group, or political opinion.

b. An International Custom of *Non-refoulement*

Considering the centrality of article 33(1) in refugee law, a key issue is whether this provision has crystallized into custom and hence developed into a separate, independent legally binding customary norm, as both treaty and custom can coexist alongside each other.[38]

In the *North Sea Continental Shelf* case, the ICJ identified three necessary elements before one could say that such crystallization had happened.[39] First, the provision is of a fundamentally norm-creating character. Secondly, participation of States most affected in the treaty is widespread and representative. Thirdly, conforming State practice is both extensive and virtually uniform (in the sense of generally consistent)[40] and indicates a sense of legal obligation.[41] Provided these elements are met, time is not an essential requirement.[42]

[34] According to art 1 para 1 of the 1967 Protocol, a State party to the Protocol but not the Refugee Convention will also be bound 'to apply Articles 2 to 34 inclusive of the Convention'.

[35] Lauterpacht and Bethlehem (n 27) 111. See also UNHCR, 'Submission of the Officer of the United Nations High Commissioner for Refugees: Seeking Leave to Intervene as Amicus Curiae', Submission in *CPCF v Minister for Immigration and Border Protection*, No 169 of 2014, NO S169 of 2014, 15 September 2014, para 38.

[42] *North Sea Continental Shelf* (n 2) para 74.

Conclusions of the Executive Committee (ExCom) of the UNHCR[43] and various other binding and non-binding instruments of refugee law[44] are often cited in support of the fundamentally norm-creating character of the prohibition of *refoulement*. These share in common the recognition of *non-refoulement* as a cardinal principle, the cornerstone of refugee law, and a fundamental rule of law.[45] Goodwin-Gill emphasizes the importance of ExCom Conclusions as evidence of *opinio juris*, adding to those the often-overlooked UNHCR's Guidelines on International Protection issued since 2002.[46] Further significant support to the argument that *non-refoulement* is of a fundamentally norm-creating character can be found in human rights law, where *refoulement* is prohibited explicitly in the CAT and article 16 of the 2006 International Convention for the Protection of All Persons from Enforced Disappearance, and implicitly, through interpretation, in the ICCPR (article 7), and the ECHR (article 3).[47] International humanitarian law provides further explicit, albeit more limited, protection against *refoulement* in articles 45 and 49(5) of the Fourth Geneva Convention, and possibly also Common articles 1 and 3 of the 1949 Geneva Conventions.[48]

[48] Costello and Foster (n 43) 283–5; Reuven (Ruvi) Ziegler, 'Non-Refoulement Between "Common Article 1" and "Common Article 3"' in David Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity? War Refugees and International Humanitarian Law* (Brill 2014).

Addressing the element of widespread and representative State support, there are currently 148 States parties to either the Refugee Convention and/or the Protocol.[49] Although a significant slice of the international community of States, Mansfield observes that this is not quite the 186 States parties to the four Geneva Conventions of 1949, the basic rules of which are regarded by the ICJ as customary international law (CIL).[50] Hence doubts may be raised as to whether 'state participation is widespread and representative enough on its own to justify concluding a CIL rule exists'; a concern shared with Hathaway.[51] However, since the prohibition against *refoulement* in human rights law is sufficiently similar to that in refugee law, Costello and Foster argue that the 'wide range of [human rights] treaties ha[ving] the same fundamental core' can be relied on towards identifying widespread and representative State support.[52]

It may be noted that despite Lauterpacht and Bethlehem showing *non-refoulement* to be 'near universal, including by States whose interests are specially affected',[53] the notion of 'specially affected states'[54] has been discredited for being 'of limited value' in the area of human rights, including refugee law.[55] Similarly, the idea that non-accession to the Refugee Convention or Protocol by some States in Asia and the Middle East is an indication of the unwillingness of these States to be bound by the duty of *non-refoulement* has been criticized.[56] One simply needs to look at the current practices of States such as Jordan and Lebanon but also Pakistan, India, and Bangladesh, which host a significant proportion of the global refugee population without being a party to the Refugee Convention or Protocol, to realize the weakness of the argument.[57]

Finally, State practice must be generally consistent, and the rule must be generally recognized as law (*opinio juris*). Mansfield submits that the practice of 148 States parties to the Refugee Convention and/or Protocol, while not universal, nevertheless constitutes 'probative weight'.[58] Indeed, uniformity of practice is not required by the ICJ.[59] Costello and Foster argue that 'what is significant in this context is not whether there is state practice that is inconsistent with the putative norm, but rather the reaction of both the international community and the offending state in question to such action'.[60] Here, they see it as significant that

> where the UNHCR has reported instances of refoulement to the General Assembly, the General Assembly has repeatedly responded by 'deplor[ing] the refoulement and unlawful expulsion of refugees and asylum-seekers'. The UNHCR Executive Committee has reacted in a similar manner.[61]

Accordingly, occurrences of *refoulement* (including instances where a State party to the Refugee Convention deliberately legislates to restrict protection against *refoulement*)[62] should generally be treated as breaches of the rule, thereby reinforcing the existence of the rule rather than weakening it, as stated by the ICJ in Nicaragua.[63]

Furthermore, there are instances where a State opposes the existence of a customary norm from its inception and argues that it is therefore not bound by it (the persistent objector). For instance, in 2008, the High Court of the Hong Kong Special Administrative Region Court of First Instance accepted the existence of 'a universal rule of customary international law which prohibits the *refoulment* of refugees' but concluded that 'by consistent and long-standing objection', the Director of Immigration of Hong Kong was under no obligation to apply it.[64] It seems difficult to reconcile this view with the *jus cogens* character of *non-refoulement* or, if this is disputed, the *jus cogens* character of the prohibitions of torture and racial discrimination. It has also been observed that 'the actual practice of the "persistent objector" is seldom sufficient to protect a dissenting state from the compulsory effect of some rules' particularly 'when the rest of the international community is largely in agreement about the binding nature of the rule in question'.[65] With the exception of a very small number of scholars,[66] the overwhelming view is that *non-refoulement* has attained the status of customary international

law.[67] This is further supported by UNHCR and the Office of the High Commissioner for Human Rights, unequivocally.[68]

c. *Non-refoulement* as *Jus Cogens*?

An increasing number of courts and scholars also argue that *non-refoulement* has gained the heightened status of (or emerging) *jus cogens*[69] from which no derogation is permitted.[70] In their article, Costello and Foster explain that '[w]hile non-derogability is a defining feature of jus cogens, it is a necessary but insufficient one'.[71] The norm also needs to be universal and peremptory in character for *jus cogens* to exist. Contrary to Allain,[72] they argue that non-derogability and *jus cogens* are not 'functional equivalents'.[73]

However, not everyone agrees that *non-refoulement* is *jus cogens*.[74] Costello and Foster explain that amongst the scholars who have expressed doubt, none have really

put the customary rule of *non-refoulement* to the test and examined in depth whether it meets the characteristics of *jus cogens*. They conclude that *non-refoulement* is universal, non-derogable (highlighting that derogations and exceptions are distinct concepts),[75] and peremptory, making it ripe for recognition as *jus cogens*.[76] Perhaps prematurely, UNHCR presented the principle of *non-refoulement* as a peremptory norm of international law (*jus cogens*) to the General Assembly in 1982.[77]

The remainder of this chapter examines two further practices of refugee protection whose character as customary law has emerged or is emerging.

3. Temporary Refuge

a. '*Non-refoulement* through Time'

The 'leap from *non-refoulement* to asylum' (to be discussed in section 4.below) is not the only way to protect refugees as a matter of obligation, there are other avenues, including temporary refuge.[78] Temporary refuge (or temporary protection) describes the State practice of admission and finding solutions in situations of large-scale cross-border displacement caused by conflict, violence, climate change, or disaster.[79] It is based on the expectation that failing prompt voluntary return, permanent resettlement in a developed country would follow.[80] It is a 'pragmatic tool for meeting the need for international protection of refugees' when necessity requires it,[81] 'particularly

[75] Refugee Convention art 33 para 2 contemplates limited exceptions to *non-refoulement* based on the individual conduct of a refugee and the danger that this conduct poses to the security of the host country or the community of that country. This provision has no effect on the *jus cogens* status of art 33 para 1; see also Chapter 39 in this volume.

[where] many of the States of potential first refuge [are] not parties to th[e] Convention'.[82] Temporary refuge therefore triggers a two-pronged approach: an obligation on all States to admit large numbers of persons fleeing for their lives and grant rights commensurate with human dignity, *and* an obligation on all States and international organizations to cooperate and take concrete steps towards a durable solution.[83]

On the one hand, temporary refuge has been praised for linking admission of refugees and a durable solution. On the other hand, it has been criticized for offering 'a diluted substitute protection for Convention refugees'.[84] Since beneficiaries of temporary refuge are provided with basic rights including admission,[85] their initial treatment might be considered consistent with the Refugee Convention, which envisages progressive implementation of rights linked to attachment to the state of asylum. However, Durieux and McAdam submit that as time passes, these refugees should be given the full benefits of the Refugee Convention as a durable solution.[86] Temporary refuge has also been criticized for relying on a duty of responsibility-sharing which is still missing.[87] The Global Compact on Refugees, which arguably draws on practices of temporary refuge amongst others, 'may help to put cooperation in the search for permanent solutions to the problem of refugees on a more predictable and equitable base'.[88]

No one disputes the desirability of a treaty regime that would provide protection to refugees arriving *en masse*, with clear rights and obligations. However, most refugee emergencies continue to be seen *internationally* as a state of exception '[w]ith saving lives [as] the overriding imperative'[89] and the protection of other human rights as secondary. The increasingly prolonged feature of armed conflicts, climate change, and natural disasters means that local integration is often the only solution, 'the practical consequence of non-refoulement through time'.[90]

Temporary refuge has its roots in the protection against *refoulement* in that it entails 'an obligation of states to *permit entry*'.[91] This standard of *non-refoulement*

'is both peremptory *and* immediate'.[92] However, temporary refuge goes beyond *non-refoulement*; it is 'a dynamic concept'[93] that 'appears to impose additional obligations on receiving countries and is a more tangible step towards a durable solution'.[94] Consequently, scholars have begun to interrogate the origin of this legal obligation and its relationship with refugee law.

b. An International Custom of Temporary Refuge

Extensive arguments have been made in favour of a customary international norm of temporary refuge, which is independent from refugee law treaties and *non-refoulement*. For example, Perluss and Hartman argue that the rule of temporary refuge 'has emerged out of the essential principle of humanitarian law: the balance between necessity and humanity' and that it 'resides within that portion of humanitarian law which remains uncodified', that is, the humanitarian law of rescue.[95] While advantages exist in conceiving temporary refuge as part of humanitarian law (as opposed to refugee law which focuses more on legal status and integration), temporary refuge is still most often identified as 'closely integrated into the international refugee regime'.[96] For instance, Mushkat describes the 'reluctance [of States] to institutionalise the phenomenon' as 'avoidance of self-conscious choice' so as not to undermine *non-refoulement* and permanent asylum.[97]

The normative character of temporary refuge can be found in numerous instruments of international law and national law, including the OAU Convention,[98] the Cartagena Declaration,[99] the Bangkok Principles,[100] the US Temporary Protected Status of 1990,[101] and the EU Temporary Protection regime.[102] This normative character finds further evidence in UN General Assembly resolutions,[103] UNHCR

ExCom Conclusions, and the Global Compact on Refugees.[104] These rules and statements amount to an affirmation of *opinio juris*.[105] Furthermore, State practice of temporary refuge exists in most parts of the world, including Europe, Africa, Asia, the Middle East, Latin America, and North America.[106] Of course, this same practice contains instances where countries have obstructed access to protection. Examples include, amongst others, push-back policies but also States' avoidance of the term 'refugee' when faced with an influx of people; opting instead for words such as boat people, illegal immigrants or displaced persons, so as to circumvent any developing international custom towards these people.[107] However, these examples may be seen as nothing more than mere examples of States evading meeting their obligations under the rule.[108]

It is the combination of 'statements and rules' and 'long-standing State practice' of temporary refuge that makes it a rule of 'modern' customary international law.[109] Notwithstanding a small number of sceptical views,[110] the majority of scholars today agree that temporary refuge is 'firmly rooted in customary international law'.[111]

4. Asylum

a. The Right to Grant Asylum as a Fettered Right of States

Asylum is a peaceful and humanitarian act with origins that can be traced to Antiquity.[112] It is a friendly act in the sense that it 'is not an internationally wrongful act against other states, including the state of nationality', so long as it is for humanitarian reasons.[113] It has been described as 'the protection which a State grants on its territory or in some other place under the control of certain of its organs, to a person who comes to seek it'.[114] Affirmation of its normative character can be found 'in its nature as a religious command' which 'subsequently found expression in the constitutional texts worldwide'.[115] Traditionally, asylum has always been a sovereign right of States.[116] This prerogative existed in favour of two groups of individuals, common criminals and freedom fighters. It was subsequently expanded to refugees thereby acquiring a new meaning: 'protection of refugees' (in a broad sense) or permanent residence as a durable solution (in a narrower sense).[117] Despite being stated as a general rule of customary international law,[118] the right of States to grant asylum is limited by the treaties they have signed (eg relating to extradition, particular alliance). Since 2001, the UN has also requested that States refrain from providing asylum (safe haven) to terrorists.[119] However, by far the most extensive limitations are contained in provisions of international human rights law which recognize a human right to seek and enjoy asylum, and which have expanded protection against *refoulement* to all individuals irrespective of conduct (or nationality).

b. Asylum and *Non-refoulement*

The interplay between asylum and *non-refoulement* is ambiguous and beyond the scope of this chapter. Suffice it to say that asylum is not included in the main text of the Refugee Convention (or Protocol), probably to 'preserv[e] the appearance of state sovereignty'.[120]

[120] Chetail (n 21) 192. But it is mentioned in the Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons, Final Act (25 July 1951) UN doc A/CONF.2/108/Rev.1, which adopted the Refugee Convention, and in the preamble to the Refugee Convention.

At the same time, article 33 enshrines one of the most important protections for refugees: the right to *non-refoulement*. Chetail links this 'constructive ambiguity' to article 14 UDHR, which fails to enshrine a right to receive asylum.[121]

With asylum absent from the Refugee Convention, the obligation of *non-refoulement* has played a key role in securing a 'right to asylum', in the sense that asylum seekers cannot be sent back without their application for protection (asylum) being individually assessed.[122] Whether this 'duty of inquiry'[123] includes a right to be granted asylum in a particular State 'remains one of the most controversial matters in refugee studies'.[124] Indeed, respect for *non-refoulement* in practice necessitates some kind of admission (asylum), even if only informally or on a temporary basis.[125] This has led some scholars to identify an implicit right to be granted (to receive) asylum in the Refugee Convention, derived from article 14 UDHR: 'for the right to have any meaning, a persecuted individual "would need to receive asylum, not merely the right of asylum" '.[126] Is this 'right' to receive asylum customary international law, is it law at all, or does it exist somewhere between *lex lata* and *lex ferenda*?

c. The Right to Seek, Enjoy, *and Receive* Asylum

It is generally accepted that a human right to asylum only extends to the right to seek and enjoy asylum, as per article 14 UDHR; that right is either a binding principle of customary international law[127] or an implicit treaty rule in the Refugee Convention.[128] However, the right to *receive* asylum is not as widely accepted. It is recognized in Latin America, where the right *to* asylum has been interpreted to include a subjective right of all persons to seek *and to receive* asylum based on article 22(7) of the American Convention on Human Rights; this interpretation is supported by UNHCR in this regional context.[129] It is also recognized in Africa based on article 12.3 of the African Charter on Human and Peoples Rights, and arguably in Europe based on the EU Charter.[130] The early writers of international law (Grotius, Suarez, and Wolff) too

[130] Worster (n 30).

understood asylum 'as a duty of the State or a natural right of the individual', and both Weis and Grahl-Madsen believed in a subjective right to asylum based on various domestic constitutional provisions (France, Germany, Italy, Portugal, and Spain).[131] However, such reading of international law has far fewer followers in the English-speaking world. [132] For instance, Goodwin-Gill and McAdam argue that 'the individual still has no right to be granted asylum'.[133] Emphasis is put instead on the legal obligations of States under refugee law, human rights law, and humanitarian law, in particular their duty of *non-refoulement*. Hence, the character of the right to receive asylum as a source of international law has been largely overlooked.

Two scholars nevertheless examine in depth the status of the right to receive asylum as a general principle of law (Gil-Bazo) or international custom (Worster).[134] It is unclear whether the emergence of customary international law and general principles of law follow identical[135] or 'distinct processes, with *opinio juris* and state practice required only in the case of custom'.[136] Suffice it to say that both categories are 'obscure'[137] and the ICJ has tended to refer to both as 'general international law' in a generic way.[138] Hence, evidence of a general principle of law to receive asylum, although not conclusive evidence of an international custom, may nevertheless 'serve as a standard of validity for [...] custom'.[139]

Worster locates evidence in support of general practice and *opinio juris* for a right to receive asylum in extensive State practice of providing asylum as a sense of legal obligation to persons recognized as refugees. He explains how '[m]any states assimilate the application for refugee status determination into the application for asylum, granting asylum as the automatic consequence for individuals determined to be refugees', with some States even articulating asylum as a right for refugees explicitly in their municipal law.[140] He finds further supporting evidence in the frequent and widespread 'commingling' of the notions of asylum and refugees by States and non-State actors (such as UNHCR) in both international and municipal fora.[141] Thus, he argues for the recognition of a customary right to receive asylum *for refugees*. Gil-Bazo takes a wider stand, finding evidence of an individual right to be granted asylum in 'the practice of states as reflected in their constitutional traditions',[142] thus not specifically limited to

[142] Gil-Bazo (n 115) 7.

refugees. Similar to Worster, she explains how 'the right to asylum is enshrined in most constitutions of countries across different legal traditions' and that while the wording may differ from one country to another, reference to international law is often present.[143] She concludes that 'asylum constitutes a general principle of international law', based amongst others on the case law of the Permanent Court of International Justice and of the ICJ that 'have made express reference to general principles existing in national legal orders as sources of general principles of international law'.[144]

In sum, the right of States to grant asylum is widely recognized to be customary international law. The same may be said of the right to seek and enjoy asylum in article 14 UDHR. However, a customary right to be granted/receive asylum remains contested, despite scholars beginning to test the norm against the requirements of State practice and *opinio juris*.

5. Conclusion

For all its difficulties and contestations, customary law has the potential to play a vital role in refugee protection because major receiving countries are by and large not parties to the Refugee Convention and/or Protocol.

This chapter indicates that extensive agreement exists in favour of a rule of customary law protecting refugees against *refoulement*, binding on all States regardless of whether they are parties to refugee treaties. Arguably, this rule may also have acquired the heightened status of *jus cogens*. The customary character of temporary refuge and the right to receive asylum is more uncertain as both operate outside the scope of treaty law and the practice of States is more nuanced. However, persuasive arguments have been made to the extent that temporary refuge may be regarded as international custom and the right to receive asylum as emerging custom.

All three practices, which are concerned with access and admission to refugee protection, are centuries-old traditions that will continue to evolve within the matrix of international law. But this too is evolving. States may still be 'at the heart of the international legal system'[145] but the potential for non-State actors, such as UNHCR, to develop international custom should not be overlooked. Indeed, UNHCR ExCom Conclusions can be evidence of *opinio juris*, as discussed in the case of *non-refoulement* and temporary refuge; these are taken by consensus and express opinion broadly representative of the views of the international community. The UNHCR *Handbook on Procedures and Criteria for Determining Refugee Status under the Refugee Convention*, together with UNHCR Guidelines on International Protection, further 'facilitates and enables courts to identify and validate customary law and interpretative norms'.[146] Amongst relevant non-State actors, UNHCR therefore is in a unique position of

[146] Goodwin-Gill (n 1) 24.

influencer of domestic courts whose decisions constitute subsidiary means for the determination of international custom.[147]

Finally, there is a further potential consequence of identifying certain refugee law practices as international custom, aside from their application to States non-parties to the Refugee Convention/Protocol. Such obligations would have *erga omnes* effect and hence have the potential to 'result in the invocation of international responsibility'[148] before the ICJ by States other than the injured State[149] or by any State party to the Refugee Convention/Protocol (*erga omnes partes*).[150] This is an issue warranting further research.

CHAPTER 14

NATIONAL CONSTITUTIONS AND REFUGEE PROTECTION

EVE LESTER*

1. Introduction

National constitutional frameworks add a critical dimension to refugee protection. Even so, with the exception of the right to asylum,[1] where constitutionally enshrined rights apply to non-citizens, they tend not to apply explicitly to refugees.[2] Furthermore, the availability and protective value of such rights vary enormously. These variations reflect one of the key methodological challenges of comparative constitutional law. That is, they underscore the reality that, in evaluating the quality of constitutional protection for non-citizens, including refugees and others in refugee-like situations, much depends on the purpose of the comparison, a State's constitutional and colonial history,[3] and geopolitical dynamics.[4] This means that case selection as well as the nature of the rights at stake will be critical to any analysis.[5]

In view of the global diversity of constitutional frameworks, the challenge of surveying the constitutions of the 148 Contracting States to the Refugee Convention

* My sincere thanks to Yoriko Otomo for stimulating discussions that helped this chapter take shape. I am also grateful to the editors and workshop participants for their helpful suggestions.

(or its 1967 Protocol) and those States providing refugee protection, but are yet to ratify one or other of these instruments, is immense. Impressive efforts have already been made by several scholars.[6] So, when reflecting on the value of national constitutions to refugee protection, what else might we usefully do? How might we bring a global perspective to the role that national constitutions play in ensuring or undermining refugee protection when we know that constitutions are unique and deeply complex expressions of a different relationship—that between a particular State and its citizenry?

Given that the protective value of national constitutions for refugees is so variable, it is important to understand *how* States draw strength from their constitutions in response to refugee movements and *why* they do so in particular ways. This knowledge will deepen our understanding of how national constitutions and constitutional courts can be engaged strategically as a tool to enhance refugee protection. That is, it can inform approaches by UNHCR and others to tackling pressing refugee protection questions in a particular State or region. It can help nuance litigation strategies by practitioners in the field at both national and regional levels. And it can shape research and advocacy initiatives to enhance protection and address the obstacles that refugees face in their quest for safety. If we are to do these things well, we need to be clear about the nature, scope, context, and limits of constitutional protections, the relationship between a State and its people to which its constitution gives expression, and to be attuned to the possibilities and pitfalls of constitutional comparison.

This chapter is divided into three substantive sections. Section 2 seeks to elucidate the complex nature of the relationship between constitutional law and international refugee law. As a way of assisting researchers and practitioners to unpack this relationship, Section 3 proposes a taxonomy of the relationship for differentiating its complexities. Following on from this, Section 4 applies this methodological framework to three case studies. The chapter then offers some concluding remarks reflecting on the potential and limits of this taxonomy.

2. A Complex Relationship

In this section, I begin by considering the relevance of constitutional text and context (Section 2.a). I then consider State perspectives on international law writ large and international refugee law in particular (Section 2.b). Finally, I offer some reflections on the relationship between constitutional law and international refugee law (Section 2.c).

[6] Michelle Foster and Jonathan Klaaren, 'Asylum and Refugees' in Mark Tushnet, Thomas Fleiner, and Cheryl Saunders (eds), *Routledge Handbook of Constitutional Law* (Routledge 2012) 415; Cassola, Raub, and Heymann (n 2).

a. The Text and Context of a National Constitution

Constitutions are products of the coming together of a people or peoples. Some represent profound societal turning points, the culmination of transformative ruptures (or, less dramatically, 'moments') in a State's power structures and political dynamics, and are often products of political upheaval, peace negotiations, or liberation or decolonization movements. Others perpetuate and entrench existing power dynamics.[7] Some are seen as foundational but living documents or—in the case of uncodified constitutional law—principles, adaptable rather than frozen in time. This may mean constitutions are readily and regularly amended.[8] Or it may mean procedures for doing so are theoretically possible but so cumbersome, or power structures so deeply entrenched, that constitutional amendment is almost as rare as constitutional protection.[9] Whatever the case, as its foundational document, the text and (historical and political) context of a State's national constitution provides insights into its values and its commitment to mediating the tension that inheres between State power and individual rights.

In essence, there are two separate but interrelated ways in which constitutional provisions affect refugee protection. In the first instance, people seeking international protection may enjoy status-related constitutional protection, most notably the right to/of asylum.[10] In this vein, judicial review rights enabling scrutiny of status-related administrative decisions have often been insistently impervious to legislative interference, even across some of the bleakest constitutional landscapes.[11] In the second instance, the question of rights-related constitutional protection for non-citizens covers a broader array of rights issues, which may or may not be protected. These include due process rights, the right to liberty and security of person,[12] rights to equality before the law[13] and to freedom of movement,[14] as well as other fundamental civil and political rights. It may also include economic, social, and cultural rights,[15] such as the right to work.[16] In some cases, States have exploited the absence of rights-related constitutional protections as a means to circumvent judicial review rights.[17]

b. State Perspectives on International Law

This section describes three drivers that shape State perspectives and practice in mediating their constitutional and international legal obligations: the nature of a State's

legal system; whether it has a (constitutional) bill of rights; and supranational governance and oversight. Each is critical to understanding whether and how States protect non-citizens.

i. *The Nature of Legal Systems*

A key variable in the approach States take to their obligations in international law is the nature of their legal system, particularly the legal tradition on which it is based: whether civil law, common law, or hybrid.[18] In the civil law tradition, for example, where monism is the dominant theory underpinning methodological approaches to the relationship between international law and domestic law, ratification of a treaty renders it binding under municipal law.[19] Although approaches to resolving normative conflicts in monist systems differ, the unity of the law that embodies monism aligns State practice with international law more readily because it becomes enforceable.[20] In contrast, the dualist approach of common law countries treats international law as a separate body of law; thus a second step of explicit integration into the State's domestic law is required for international law to be enforceable.[21]

ii. *Bills of Rights*

Bills of rights and judicial review safeguards have been described as 'crucial to nearly all successful transitions from authoritarian regimes to constitutional democracy' since the end of the Second World War.[22] In some common law countries, the incorporation of a bill of rights goes a considerable way to overcoming the problems of enforcement of international law created by dualism.[23] At the same time, however, the protective capacity of bills of rights, and therefore accountability of States for infractions, vary, especially with regard to non-citizens. Whether a State's constitutional framework includes a bill of rights and whether and how those rights extend to non-citizens has a significant impact on how the relationship between constitutional law and international law plays out. While some States extend constitutional protections to non-citizens,[24] of whom refugees are an important subset,[25] others accord the State plenary omnipotence to choose who it will protect and on what terms.[26]

[18] Most legal systems draw on the civil or common law tradition, or a hybrid. Many other social, religious, and chthonic legal traditions may also have a normative influence on State legal frameworks and practice: H Patrick Glenn, *Legal Traditions of the World* (5th edn, OUP 2014).

iii. *Supranational Frameworks*

The existence and strength of supranational constitutions and related oversight mechanisms also unquestionably shape how States mediate the relationship between constitutional law and international obligations. That is, the constitutional law of States interacts not only with international law, but also with regional treaties,[27] supranational regulatory frameworks,[28] and the jurisprudence of their courts.[29] In the case of *intra*-regional refugee movements, constitutional frameworks that are protective of non-citizens are often given supranational expression through economically motivated free movement agreements within regional or sub-regional economic blocs such as the (extended) Mercado Comun del Sur (MERCOSUR)[30] and Economic Community of West African States (ECOWAS).[31] In practice, such agreements appear to have a greater role in creating a protection-enabling environment for intra-regional refugees than supranational human rights governance and oversight mechanisms.[32] In particular, intra-regional mobility agreements can play an important role in facilitating refugee protection.[33] Indeed, in many ways this is the drafting history of the Refugee Convention itself, which was designed to provide protection only to European refugees, and in doing so wrote out of its terms large numbers of non-European refugees.[34]

c. Constitutional Law and International Refugee Law

To describe the dynamic relationship between national constitutions and refugee protection, this section considers three distinct but interrelated issues: the foundational influence of national constitutions on the making of international refugee law, their enduring influence in the shaping of international refugee law, and the rise of constitutional exceptionalism.

i. *Foundational Influence of National Constitutions*

The influence of national constitutions as foundational to the framing of international refugee law is unquestionable and helps to explain both international refugee law's

terms, as well as its limits and silences.[35] Even in dualist systems, which insist upon the independent character of international and national legal systems, the point of departure for delegates negotiating international legal text is usually to frame and delimit its scope in a way that does not contradict their internal constitutional order; in other words, States opt to 'pasteurize' international law now rather than attracting international opprobrium later.[36] So, for example, the preference of a powerful bloc of common law countries to treat matters of immigration law and policy as if they were solely within the constitutional remit of States influenced the terms (and silences) of the Charter of the United Nations (UN Charter) and the UDHR, including the framing of the right to seek asylum.[37] This background also affected the drafting of the Refugee Convention, which omits a binding right to seek asylum.[38] Indeed, the exclusion of the right to seek asylum from the Refugee Convention was seen at the time as reflecting the view that the right to/of asylum was a State's right rather than an individual one.[39] We therefore need to be mindful of the historical reality that the transnational mobility of constitutional ideas about the rights of refugees (and migrants), and notably about excluding and/or limiting such rights, has already permeated—or 'pasteurized'—the framing of international law.[40]

ii. *The Enduring Influence of Constitutional Law*

Undoubtedly, national constitutional frameworks—and the transnational judicial conversations that ensue—have an enduring influence in the ongoing enterprise of making international refugee law, particularly in the context of judicial review rights. Indeed, there are few areas of law where jurisprudence is shared between judiciaries more readily than in the determination of refugee status.[41] This cross-fertilization arises in significant part because of the absence of a judicial or even quasi-judicial international arbiter of refugee law and it plays out in two ways. First, regarding status-related or rights-related judicial review, constitutional frameworks have a central role. This is so, particularly in dualist legal systems or in the absence of (effective) supranational enforcement mechanisms, where the judicial power vested in constitutional courts render them a prime site for mediating international refugee law's scope and content, or

relevance. Secondly, younger constitutions are more likely to reflect—or at the very least gesture to—international legal standards, whether to safeguard specific rights, including economic, social, and cultural rights, or give constitutional authority to principles of customary international law.[42] In some States, the constitution specifically authorizes the judiciary to take account of international law,[43] even explicitly extending that obligation to principles of customary international law.[44] Thus, we can see that national constitutions are integral pieces in the international refugee law puzzle, particularly where they have embraced a rights (and indeed social and economic rights) constitutionalism.[45]

iii. *Constitutional Exceptionalism*

One of constitutional law's most damaging effects on the international refugee protection regime is the problem of constitutional exceptionalism and the authorization and normalization by constitutional courts of 'exceptional measures' affecting refugees, often as a response to (perceived) threats to national security and public order. In this situation, constitutional frameworks may be called upon as a way of resisting—or at least rendering peripheral—the central tenets of international refugee law.[46] Understanding and exploring ways to counteract this kind of constitutional exceptionalism and, in its name, failures to constrain excesses and misuses of power, is increasingly important as States 'face off' in the global protection 'crisis'. A combination of a highly racialized colonial legacy, dualism, and pervasive forms of constitutional exceptionalism has enabled some States to undermine international legal standards by gesturing to them through ratification and at the same time being unresponsive to them, or selectively so.[47] Indeed, this combination of factors has emboldened some States 'not merely to assert a difference . . . [but to] claim . . . a singular superiority or uniqueness that exempts the exceptional subject from the rules that apply to everyone else'.[48]

As the foregoing sections suggest, the relationship between constitutional law and international refugee law has many layers of complexity. However, as Hirschl has argued, despite 'intellectual interest in the international migration of constitutional ideas' having grown, 'the field of comparative constitutional law remains under-theorized and lacks a coherent methodology'.[49] This suggests that there are many possible ways of

characterizing, exploring, and unpacking the relationship between international refugee law and constitutional law. With this in mind, the following section outlines a methodology designed to assist researchers and practitioners in this endeavour.

3. A Taxonomy

The taxonomy proposed here suggests that the relationship between constitutional law and international refugee law might be understood in one of three ways: as symbiotic, ambivalent, or antagonistic.[50] This taxonomy seeks to clarify what is legally and politically possible in any given context, making visible the limits of comparative constitutional law and the inherent challenges of comparing the unique foundational documents of different States.[51] As an analytical approach it offers a method for thinking about whether and how national constitutional frameworks speak to each other and reinforce, coexist with, or undermine international refugee law's role in the global protection space. Within this framework, both constitutions and the central role played by the judiciary in navigating normative tensions between a State's international obligations and its constitutional framework are considered.

a. Symbiosis

A symbiotic relationship between constitutional law and international refugee law reinforces or strengthens both the national constitutional framework and the international refugee law on which it draws. In this instance, the national constitution will include human rights safeguards that extend to refugees (or, more likely, non-citizens more broadly), such as rights to due process, dignity, liberty, freedom of movement, and so on. In addition, it will also include provisions that authorize, indeed encourage, the judiciary to draw on international legal standards in order to inform interpretation of the constitutional framework. This relationship is mutually reinforcing, strengthening both the corpus of international refugee law jurisprudence as well as the national jurisprudence of the State in question. Each is important as we contemplate the transnational judicial dialogue that has shaped so much of international refugee law and its interpretation at a domestic level, particularly in the last three decades.[52]

This characterization does not necessarily mean that the symbiotic nature of the relationship will be favoured by a State's legislature or executive.[53] Nevertheless, structurally it is a relationship that functions symbiotically because the constitutional framework is

[52] Hathaway and Foster (n 41).

[53] See Section 4.a.

responsive to international refugee (and human rights) law and the international protection framework is enriched by the State-level jurisprudence.

b. Ambivalence

An ambivalent relationship between international refugee law and a national constitution accepts or tolerates, even respects, the other body of law. However, neither body of law necessarily finds a greater strength in the sum of their parts. Instead, they coexist in the protection space, compatible and to that extent useful to each other. At the same time, in line with their characterization as ambivalent, they tend to operate in parallel to each other, differently motivated but able to live with each other rather than being either synergetic or quarrelsome. Reasons for this ambivalence may be historical, political-economic, or geographical.

Ambivalence in the relationship between international refugee law and constitutional law is noticeable in the context of refugee movements within economic blocs, such as MERCOSUR[54] and ECOWAS,[55] the terms of which reflect in many instances a constitutional recognition of the rights of non-citizens amongst Member States. In these contexts, where regional cooperation is required, regional or sub-regional commitments to economic cooperation, and with them human mobility, operate as a buffer between the national framework and international refugee law. As discussed, States negotiate international agreements based on what they see as constitutionally possible (or desirable), but the strength and dominance of the relationship between constitutional law and the economic drivers behind regional mobility agreements reveal an ambivalence that positions international refugee law as relevant but peripheral. This positioning is suggestive of a pattern in which two legal systems operate compatibly but in tandem or parallel rather than symbiotically. In practical terms, therefore, this means that the non-citizen may benefit from constitutional protections without having to assert them and, equally, may not need to call on her rights under international refugee or human rights law.[56]

c. Antagonism

The factors that make the relationship between international refugee law and a national constitution antagonistic arise when the underlying interests of each body of law cannot—or cannot readily—be reconciled. An antagonistic relationship between these two bodies of law undermines refugee protection and can weaken both international refugee law and constitutional protection. Above all, it is inward-looking and

[54] Asunción Treaty (n 30) art 1. [55] Free Movement Protocol (n 31). [56] See Section 4.b.

isolationist,[57] even hostile towards international law. This damages refugee protection as international refugee law's overarching normative objective by disregarding the principle that human beings are entitled to fundamental rights and freedoms without discrimination.

An antagonistic relationship tends to be—or at the very least risks being—selective, exploitative, competitive, and even resentful. Proponents of a nativist, exceptionalist, unilateralist, or isolationist constitutional position can be aggressively resistant to the objectives of refugee protection.[58] Moreover, in an antagonistic relationship between international refugee law and constitutional law there is a high risk that the voice of resistance (whether of the outspoken refugee, the international refugee lawyer, or UNHCR) will become portrayed and pathologized as the antagonist. This pattern of engagement may be characterized as a form of 'structural gaslighting' in the sense that such critique functions to obscure the non-accidental connections between constitutional structures of oppression and exclusion and the refugee protection deficit that they generate and authorize.[59] Indeed, in this model those seeking to expose and remediate this type of relationship can be assigned responsibility for the injustices that it produces.[60] It may even seek to invert the power relation by constructing the State as victim.[61] This is particularly the case where this area of public policy bears an 'authoritarian rule of law' character.[62]

4. Applying the Taxonomy

Drawing on the foregoing methodology, this section considers three case studies. The 'symbiotic' case study in Section 4.a considers an appeal to the High Court of Kenya by the Kenyan Attorney-General in 2014, relating to a government policy curtailing refugees' right to freedom of movement.[63] The 'ambivalent' case study in Section 4.b considers constitutional protection of the right to work of non-citizens in Latin America, discussed in relation to the Venezuelan refugee crisis. Rather than examining a single constitution, this particular case study considers a situation where the main drivers behind protection of the right to work have been multiple constitutional frameworks and the interests of sub-regional economic blocs. The 'antagonistic' case study in Section 4.c considers Australia's policy of extraterritorial detention and processing,

focusing on Manus Island, Papua New Guinea (PNG), which was the subject of challenge in two constitutional courts.

The selection of these case studies is intended to offer 'prototypical' examples in the sense of being illustrative rather than perfect.[64] They provide a starting point for identifying pertinent characteristics that are reflective or symptomatic of the relationship between international refugee law and constitutional law as symbiotic, ambivalent, or antagonistic. In this sense, the methodology offers a framework of analysis or lens rather than an answer or solution to constitutionally relevant refugee protection challenges.

I have selected the case studies for their currency and enduring relevance. They span a new constitution with a bill of rights (Kenya), an old constitution with no bill of rights (Australia), and a regional constitutional dynamic that has implications for how refugee protection is practised, if not always adjudicated (Latin America). Each case study considers one of three rights widely regarded as central features of the refugee protection framework: the right to freedom of movement (Kenya);[65] the right to liberty (Australia);[66] and the right to work (Latin America).[67]

a. Symbiosis: Kenya and the Right to Freedom of Movement

The Kenyan Constitution, adopted in August 2010, is the country's third constitution since independence in 1963. It strengthens rights protections, relevantly the rights to freedom of movement and to dignity,[68] and also underscores the significance of general rules of international law.[69]

Kenya has long hosted a significant population of refugees in camps, notably Kakuma and Dadaab camps, as well as in urban areas, including Eldoret, Mombasa, Nairobi, and Nakuru. In December 2012, the government of Kenya's Department of Refugee Affairs issued a directive to stop reception and registration of refugees in urban areas, to close all urban registration centres, and to require all refugees and asylum seekers to be registered and hosted in refugee camps: Somalis in Dadaab; and all others in Kakuma. It requested UNHCR and others providing direct services in urban areas to cease doing so.[70] The government signalled its intention to move all refugees living in urban areas to the designated camps 'and ultimately, to their home countries after the necessary arrangements are put in place'.[71] It issued a further directive that some 18,000 refugees be rounded up and transported to Thika Municipal Stadium outside Nairobi as a holding ground before encampment.[72] The background to these announcements was a series of grenade attacks in urban areas, which led to an instruction to issue 'movement

passes' to refugees not already approved for resettlement to third countries,[73] even though there was no evidence that the attacks bore the imprimatur of refugees or asylum seekers.[74]

i. *Constitutional Rights and Freedom of Movement*

The directive was the subject of two challenges brought against the Attorney-General in the Kenyan High Court, one brought by Kenyan NGO, Kituo Cha Sheria, and the other by seven refugees and asylum seekers from Somalia, Ethiopia, Rwanda, and the Democratic Republic of Congo, who had been resident in Nairobi for up to 20 years.[75] UNHCR and the Katiba Institute, an independent institute helping to promote implementation of the Kenyan Constitution, were admitted to the case as *amici curiae*. In July 2015, Majanga J, hearing the case at first instance, held that the government directive was a violation of the constitutional rights to freedom of movement (article 39), dignity (article 28), and fair administrative action (article 47(1)). It was also found to violate the State's responsibility towards persons in vulnerable situations (article 21(3)), even though refugees were not expressly named as a vulnerable group. In addition, it was found to threaten the principle of *non-refoulement* provided for in Kenya's Refugee Act 2006.[76] On appeal against the decision, the Court of Appeal upheld the decision of Majanga J on substantially the same grounds.

Signalling a symbiotic disposition, the Court of Appeal observed that international law applies to Kenya, and, specifically in this instance, the right to freedom of movement in Refugee Convention article 26, ICCPR article 12, and General Comment No 27 of the UN Human Rights Committee.[77] Further, it emphasized that under Kenyan Constitution article 2(5), the general rules of international law are part of Kenyan law, including the principle of *non-refoulement*,[78] highlighted also that it is a principle of customary international law, and recognized its broader application in international human rights law.[79] It noted that restrictions on the right to freedom of movement and residence can only be limited by law, and then only to the extent that the limitation is reasonable and justifiable in an open and democratic society based on human dignity, equality, and freedom.[80] Finally, the court observed that considerations of national security still import requirements that there be both proportionality and a rational connection between the purpose of the policy and the rights limitation, concluding that there was neither proportionality nor rational connection in the instant case.[81]

b. Ambivalence: The Venezuelan Crisis and the Right Work

Latin America has a long history of immigration as well as emigration and latterly a generous tradition of asylum.[82] In the first part of the twentieth century, it was European migrants who were welcome as labourers, merchants, and entrepreneurs, with Arabs and Asians—and sometimes Jewish migrants—discriminated against, many of them remaining undocumented.[83] More recently, despite hosting refugees and asylum seekers from other regions,[84] Latin America has seen—and tolerated—higher levels of intra-regional movement and accorded attendant rights protection.[85] An integral part of this history is that many States in the region have included protections for non-citizens in their constitutions, including work rights.[86] Indeed, of the 100 national constitutions that protect rights to work, or rights at work, many are Latin American.[87]

In Latin America, most States are party to both the Refugee Convention and 1967 Protocol. The Cartagena Declaration of 1984, which focused on refugees in Central America, Mexico, and Panama,[88] is commonly cited for its expansive refugee definition. In 2004, the Mexico Plan of Action (MPA) was developed in the context of the Colombian refugee crisis.[89] Work rights provisions in the Refugee Convention notwithstanding,[90] we can see that these two region-specific instruments say little about such rights.[91] Thus the strength of work rights and other protections for those displaced in the region lies in national constitutional protections for non-citizens.

Latin America's long and complex constitutional history, with some States in the region having had more than 20 new constitutions,[92] has had a significant impact on how Latin American States have mediated and given constitutional expression to, the rights of non-citizens. Multiple historical, political-economic and geopolitical factors have impacted the development of such protections for non-citizens, making possible constitutional protection of important non-citizen rights, including work rights. Non-citizen suffrage has also been a significant constitutional feature, which means that the

voices of non-citizens, including refugees, can have political traction in ways that they rarely do elsewhere.[93] In practice, the experience in this region suggests that together constitutional protections and sub-regional common markets facilitating intra-regional commerce and mobility can be more influential than international refugee protection standards, or indeed refugee-specific regional agreements.[94]

i. *The Venezuelan Refugee Crisis*

Since 2015, more than 4.7 million Venezuelans have fled political persecution, repression, and an imploding economy, most since 2018.[95] It is currently the world's second largest refugee crisis, second only to Syria,[96] and the largest in Latin American history.[97] The vast majority of Venezuelans have moved intra-regionally, where they have been accorded access to basic social and economic rights, and importantly work rights. The crisis prompted 11 countries in the region to come together in a non-binding regional forum known as the Quito Process, through which they agreed to keep their borders as open as possible and to enable access to labour market opportunities and other social and economic rights (such as public health and education).[98] This reflected rather than expanded the scope of constitutional provisions safeguarding non-citizens' right to work.[99] As the departure point for this process, they signed a joint declaration agreeing, strikingly, to accept expired travel documents from Venezuelans as a form of identification, to the extent their domestic laws allowed it, in order to facilitate safe forced migration pathways.[100]

As a result, and protection challenges notwithstanding, at the time of writing most Venezuelan adults residing in other countries in the region reportedly enjoy work rights, are working, and enjoy fundamental rights such as freedom of movement. Although in some countries Venezuelans have been granted refugee status, protection of most Venezuelan refugees in the region has derived from more flexible approaches that provide temporary status and work rights and view them first and foremost as migrants. In the realm of work rights for refugees,[101] therefore, national constitutions can be more expansive than international law. Thus, the contribution of such constitutions to the

interpretation of international law may be seen as playing a secondary role,[102] as 'either negative . . . or merely neutral';[103] in other words, reflecting ambivalence.

Explanations for how and why Venezuelan refugees have been received in neighbouring countries vary. Some have described their reception as a gesture of solidarity not only as against Venezuela's current authoritarian regime, but also reflecting the protection Venezuela provided to other Latin American migrants and refugees in the past.[104] There also appears to be some evidence that responses to refugee movements are shaped by geopolitical and colonial legacies, and that the racial homogeneity of intra-regional refugee movements diminishes the likelihood that States will resort to measures that obstruct access to protection.[105]

c. Antagonism: Australia and the Rights to Liberty and Due Process

The Australian Constitution, which came into force in 1901, does not include a bill of rights and its drafters conspicuously excluded the right to liberty or due process.[106] Indeed, rejection of the right to due process was primarily motivated by a desire to be able to discriminate on the basis of race,[107] some delegates arguing that constitutional protection of the right to due process was superfluous in a civilized society.[108] It was a foundational element of the White Australia immigration policy empowering the Australian State to discriminate against and exclude foreigners, and specifically non-European foreigners. The absence of these rights, and conferral of the broadest possible powers to make laws with respect to aliens and naturalization, and immigration and emigration, constitutionally entrenched the highly racialized claim that there is an absolute sovereign right to exclude and condition the entry and stay of aliens.[109]

The Australian narrative of generosity and humanitarianism in the protection of refugees is underpinned by political and diplomatic priorities and interests rather than law, much less constitutional law. Indeed, it is a narrative that has been complicated by both utilitarian undertones[110] and a nativist antagonism that has long regarded international law as an intrusion on the nation's domestic affairs.[111] However, since the

introduction of legislation providing for the mandatory detention of unlawful non-citizens to which no (meaningful) judicial review rights attach, and which was first validated by the High Court in 1992,[112] Australia's High Court has continued to uphold the constitutional validity of increasingly brazen instruments of exclusion,[113] with only occasional (partial and 'curable') judicial admonition.[114] Openly contemptuous of international legal standards, such legislative measures have, for example, explicitly absolved officers of the Australian Commonwealth of the responsibility to comply with international human rights and refugee law obligations, including the principle of *non-refoulement*.[115] This has fuelled an authoritarianism that has long characterized this area of public policy, emboldening the Parliament to test the limits of what is constitutionally possible with policies widely condemned as being in violation of fundamental human rights standards.[116] Most controversially, the increasingly extreme patterns in this trajectory have included incommunicado detention on the high seas and extraterritorial detention and processing in Nauru and PNG; measures designed to thwart attempts to seek safe haven in Australia.

i. *Manus Island: A Tale of Two Constitutions*

Although not the first time Australia has used PNG as an extraterritorial place of detention,[117] in 2012 Australia revitalized its 'Pacific Solution' detention and processing policy after it attempted unsuccessfully to establish an offshore processing and resettlement refugee swap arrangement with Malaysia.[118] The 'Malaysia solution' was thwarted when the High Court of Australia held that the statutory power to make transfers of asylum seekers to 'a specified country' (here, Malaysia) required the Minister for Immigration first to declare in writing that that country would meet relevant human rights and refugee protection standards.[119] A majority of the court found the Minister had failed to do so.[120] Reflecting Australia's long-standing antagonism towards any

requirement to comply with international human rights and refugee protection standards, and in keeping with a now predictable pattern of legislative behaviour, the Parliament's response was to pass 'curative' amendments designed to insulate all offshore detention and processing from judicial scrutiny.[121] Under these amendments, all statutory requirements of rigour in the exercise of the Minister's powers were erased. No longer is the Minister required to make and table in Parliament a properly articulated, reasoned, and therefore scrutinizable decision. Instead, the Minister is required only to 'think' that it is in the 'national interest' to designate a country a 'regional processing country';[122] a power that is effectively unconstrained.[123]

Although the Minister is also required to have regard to assurances given by the proposed regional processing country as to compliance with refugee protection standards, the requirement is only one of consideration; assurances given need not be legally binding, and the rules of natural justice do not apply to designation decisions.[124] A constitutional challenge by an Iranian asylum seeker to the validity of the designation of PNG under the legislation was given short shrift by the High Court. The court unanimously dismissed the challenge as being without foundation on the basis that the 'national interest' was largely a question of politics rather than law.[125] The court held that, in designating a 'regional processing country' there was no requirement to take any other matter into account, including the international legal obligations of both PNG and Australia.[126] Thus, the constitutional validity of the Minister's power to pay lip service to basic principles of refugee protection was upheld.[127] Legal developments in PNG provide further insight into the antagonistic relationship between international refugee and human rights law on the one hand and Australian constitutional law on the other.

Prior to PNG's independence, Papua and New Guinea were Australian-administered territories. Unlike the Australian Constitution, the PNG Constitution, adopted at PNG's independence in 1975, includes a bill of rights.[128] It safeguards the right to liberty and security of person,[129] with the relevant exception of detention for the purpose of preventing unlawful entry or effecting expulsion, extradition, or removal.[130] It also provides that, in determining whether a law or act that seeks to limit a right protected under the PNG Constitution is 'reasonably justifiable in a democratic society having a proper regard for the rights and dignity of mankind', the Supreme Court may have regard to a range of international standards, including the UN Charter, the UDHR, and even the ECHR.[131]

In 2013, the leader of the Opposition in PNG, Belden Norman Namah, brought an action in the original interpretative jurisdiction of the PNG Supreme Court.[132] The case

concerned a group of asylum seekers who had arrived by boat in Australia and were subsequently transferred against their will to PNG, pursuant to two Memoranda of Understanding (MoUs), signed in September 2012 and August 2013. Although lawfully admitted to PNG,[133] the asylum seekers were detained, pending processing of their claims, on Manus Island in a guarded location secured by razor wire and bearing all the hallmarks of detention.[134] In 2014, the two governments (of PNG and Australia) sought to validate the arrangements under the MoUs by amending s 42 of the PNG Constitution to include an additional paragraph.[135] In a manner redolent of patterns of amendment in Australia by legislators accustomed to 'naked and uninhibited' power,[136] and antagonistic resistance to any requirement to comply with international human rights and refugee law standards, the constitutional amendment purported to accord PNG's Immigration Minister 'absolute discretion' to hold a foreign national 'under arrangements made . . . with another country'.[137] However, in an emphatic decision, consistent with fundamental principles of international law, the PNG Supreme Court unanimously held that the asylum seekers were detained on Manus Island in violation of their right to liberty and that the amendment to s 42 conferring 'absolute discretion' was unconstitutional. Attesting to the symbiotic nature of the relationship between international law and PNG constitutional law, the court also held that even if the amendment had been made validly, it would still need to be explicit about the right or freedom it was seeking to restrict (s 38(2)); be shown to be in the public interest and reasonably justifiable in a democratic society (s 38); and comply with the right to freedom from inhuman treatment (s 36). Indeed, in a stinging avowal of postcolonial independence, Kandakasi J intimated that Australia was a 'suppressive regime' that did not protect human rights or place on those rights only such limits as would be 'reasonably justifiable in a democratic society having a proper respect for the rights and duty of mankind' because it was yet to evolve from the 'stone ages' to a more modern democracy.[138]

In 2017, buoyed by the case in the PNG Supreme Court, a further attempt to challenge the constitutional validity of offshore detention on Manus Island was brought in the High Court of Australia.[139] The plaintiff argued that the Australian Constitution constrained the Commonwealth legislature and executive from authorizing an activity in another country that was unlawful as a matter of that country's domestic law; in other words, that the Australian legislature and executive could not lawfully enter into an agreement to detain asylum seekers when such detention was a constitutionally

prohibited violation of human rights in PNG. The case failed, the court again having no difficulty rejecting the plaintiff's argument. Reflecting the antagonism embedded in the Australian Constitution and that the court is yet to dislodge, it held that the relevant legislative powers could validly authorize Australia to engage in and procure activities in other countries that did not conform to international law or even that country's domestic law.[140]

5. Conclusion

As we have seen, the complexity of the relationship between constitutional law and international refugee and human rights law is multifaceted. The taxonomy and case studies presented in this chapter offer a way of critically engaging with the relationship between constitutional frameworks and international refugee law from a new angle. Technical, political-economic, historical, and geographical dimensions to, and dynamics in, the relationship all shape the extent to which it may be understood as symbiotic, ambivalent, or antagonistic. Although this taxonomy is not imagined as one promising watertight expression of the relationship between international refugee law and constitutional law, it may nevertheless enable us to reflect more deeply on how, why, when, and where the relationship works in a particular way.

This knowledge may help us to think more strategically about how to harness the protective possibilities of constitutional law and wrestle more productively with constitutional law's limitations. It may help UNHCR and others to shape strategic engagement when meeting refugee protection challenges in particular States or regions. It also reminds us that litigation strategies must be mindful of a constitution's text and context, and its possibilities and pitfalls. Finally, research and advocacy bringing comparative perspectives to nuances in the interaction of constitutional law and international human rights and refugee law is vital to charting a way forward for the refugee protection regime.

PART III

REGIONAL REGIMES

CHAPTER 15

REGIONAL REFUGEE REGIMES

Africa

MARINA SHARPE

1. Introduction

African States are both the source of, and hosts for, millions of the world's refugees. In 2018, there were almost 7.4 million refugees and asylum seekers in Africa, amounting to almost one-third of the world's 23.6 million refugees and asylum seekers.[1] Two of the five principal refugee-producing countries in the world are in Africa (South Sudan and Somalia) as are two of the five main countries of asylum (Uganda and Sudan).[2] Moreover, for decades, solidarity and hospitality were hallmarks of the African approach to refugees,[3] in East and the Horn of Africa, where the continent's top refugee-producing and hosting States are concentrated, and continent-wide, as evidenced by the adoption in 1969 of the world's first regional refugee instrument, the OAU Convention.

This chapter critically analyses the regional legal framework anchored by this treaty, as well as recent developments in the regional approach to refugees. It begins in Section 2 by articulating how the notion of Africa as a region is understood here. The regional legal regime for refugees includes treaty and institutional components. Section 3 covers the treaty framework, comprising the Refugee and Organization of African Unity (OAU) conventions and international and regional human rights law, including but not limited to the two covenants, the African Charter on Human and Peoples' Rights (the

African Charter)[4] and African instruments on the rights of women and children; however, only the regional instruments are addressed here. Section 4 addresses regional organizations with relevant mandates: African Union (AU) bodies and judicial organs including the AU Commission (AUC), the African Commission on Human and Peoples' Rights (African Commission or the Commission), the African Court on Human and Peoples' Rights (African Court) and the African Committee of Experts on the Rights and Welfare of the Child (ACERWC). Section 4 also addresses the role of civil society. Section 5 covers contemporary refugee protection achievements and challenges. These include the implementation, in terms of both refugee status determination (RSD) and rights, of the regional legal framework in national jurisdictions; the rise of displacement in the context of climate change and disasters; and the relationship between European Union (EU) policy responses to the so-called migration crisis and refugee protection in Africa.

International lawmaking on the continent occurs at the level of the AU, a political union of all 55 States on the African continent plus several island nations,[5] and at the level of Africa's regional economic (and political) communities (RECs), eight of which are officially recognized by the AU. While certain RECs have promulgated laws relevant to human rights generally and to refugees in particular,[6] due to constraints on length, RECs are not covered. Whether and how REC laws, policies, and mechanisms can contribute to refugee protection on the continent is an important avenue for further study.

2. Africa as a Region

How Africa is conceptualized as a region varies according to the geographical perspective of the observer. To observers outside of Africa, the continent is itself a region of the world, often divided into five sub-regions (North, East, Central, West, and Southern Africa). The AU, by contrast, has no concept of 'sub-region'. What are viewed internationally as 'sub-regions' are from the AU perspective 'regions', and these are typically defined in terms of the eight AU RECs mentioned above. By implication, from the AU perspective, Africa itself is not viewed as a 'region'. As this chapter is written from the international perspective, Africa is viewed here as a region, and its sub-regions are understood in the geographic—rather than the economic or political—sense.

Africa's conceptualization as a region is also often a function of the observer's disciplinary or professional perspective. Treaties promulgated by the AU are open to all AU Member States spanning the continent's geography. To a black-letter international

[4] African Charter on Human and Peoples' Rights (adopted 27 June 1981, entered into force 21 October 1986) 21 ILM 58 (African Charter).

[5] The Saharawi Arab Democratic Republic (SADR) is recognized as a State by the AU but does not enjoy this recognition internationally.

lawyer, there is thus no reason to distinguish between, for example, North Africa and sub-Saharan Africa. A political scientist, socio-legal scholar, journalist, or refugee practitioner, by contrast, will likely focus on how different sub-regions of the continent are marked by different histories and politics and will thus make logical distinctions between sub-regions. For example, until recently, UNHCR addressed Africa across two bureaux: one for Africa, focused on sub-Saharan Africa, and another for the Middle East and North Africa. The analysis here focuses on the regional legal regime established by treaties that have been adopted continent-wide.[7] Thus, for the most part, the region as analysed here aligns with the continent.

3. The Treaty Framework

The regional law of refugee protection in Africa is derived from two refugee treaties, the Refugee and OAU conventions,[8] and from five principal human rights instruments: the ICCPR, the ICESCR, the African Charter,[9] the Protocol to the African Charter on the Rights of Women in Africa (Women's Protocol)[10] and the African Charter on the Rights and Welfare of the Child (Children's Charter).[11] The refugee treaties are addressed first, beginning with the history of the OAU Convention. Because the Refugee Convention and international human rights law are analysed elsewhere,[12] the former is addressed only in terms of its relationship with the OAU Convention and the latter is not covered.

a. The History of the OAU Convention

This section draws on various sources to explain the OAU's impetus for a regional instrument and how this evolved in response to political and legal developments on the continent and beyond, in particular the five drafts of the OAU Convention produced

[7] The Refugee Convention has been ratified by 51 of the AU's 55 Member States. The OAU Convention has been ratified by 48 States. The African Charter is almost universal, having been ratified by 54 States.

[8] Most States in Africa are party to both the Refugee and OAU conventions. Eritrea, Madagascar, Mauritius, Namibia, SADR, São Tomé and Príncipe, and Somalia are not party to the OAU Convention. The Comoros, Eritrea, Libya, and Mauritius are not party to the Refugee Convention or its 1967 Protocol; Cape Verde is not party to the Refugee Convention but has ratified the 1967 Protocol. The States that are party to the Refugee Convention and its 1967 Protocol but not the OAU Convention are Namibia, São Tomé and Príncipe, and Somalia; Madagascar is party to the Refugee Convention only and recognizes its geographical limitation to Europe, while the Republic of the Congo is party to both the Refugee Convention and its 1967 Protocol but recognizes the European geographical limitation. The States that are party to the OAU Convention but not the Refugee Convention or its 1967 Protocol are the Comoros and Libya.

prior to its adoption,[13] and contemporaneous OAU Council of Ministers (CM) resolutions (discussed below), read in light of the political situation in Africa during the 1960s. In the early 1960s, many African States had only recently gained their independence, while others—particularly in Southern Africa— remained under colonial or minority rule, with freedom fighters waging decolonization campaigns. These struggles, continued oppression, and tensions or civil war in certain newly independent countries—notably Burundi, Congo-Léopoldville, and Rwanda—forced many to flee. This political situation gave rise to two principal issues. First, exiled individuals did not fall within the ambit of the Refugee Convention, as it then only applied to events before 1 January 1951. Secondly, newly independent regimes were concerned that their rule and international relations might be undermined by refugees using countries of asylum as bases from which to overthrow countries of origin. In response, in 1964 the CM formed a commission. It recommended that the OAU 'draft a special convention on the status of African refugees'.[14] The CM invited the commission to draft the instrument.[15]

The first draft was similar to the Refugee Convention, however it omitted the dateline and was less protective.[16] The CM established a committee of legal experts to revise it.[17] The OAU's Assistant Secretary-General suggested that the second draft should be 'much more concise and much more specifically relevant to Africa',[18] the first suggestion that the African convention should not duplicate its international counterpart. The second draft, however, still largely followed the Refugee Convention.[19] The OAU's Assembly of Heads of State and Government (the Assembly) sent the expert committee back to work and called on Member States to ratify the Refugee Convention,[20] 'the first clear indication that the African refugee convention should not cover the same ground as the Refugee Convention, the overriding character of which was implicitly recognised'.[21]

The expert committee's third draft remained like the Refugee Convention, though it was more liberal and contained provisions relating to Africa. This draft was not, however, adopted. In 1966, the CM handed drafting to the OAU Secretariat,[22] highlighting 'that the African instrument should govern the specifically African aspects

of the refugee problem and ... should ... be the effective regional complement of' the Refugee Convention.[23] This turning point was due in large part to impending adoption of the 1967 Protocol. The OAU Secretariat presented the fourth draft convention to the CM in September 1967, by which time the 1967 Protocol's entry into force was imminent. This led States to discuss whether a regional instrument remained necessary. The CM decided that it indeed was and asked the expert committee to produce a fifth draft.

The committee's work at this stage was informed by the October 1967 'Conference on the Legal, Economic and Social Aspects of African Refugee Problems'.[24] Delegates were concerned that freedom fighters combatting persistent colonialism might not qualify as refugees under the Refugee Convention. The conference's second recommendation thus advised African States to adopt a new refugee definition reflecting the continent's refugee situations. The expert committee met in June 1968 and worked with a second OAU Secretariat draft. Reflecting recommendation II, it included flight from 'external aggression and occupation, foreign domination or internal subversion' as an additional basis of refugee status; the committee viewed 'subversion' as 'ambiguous' so replaced it with 'disorder'.[25] It also replaced a conflict clause, which would have made the regional instrument hierarchically superior to the Refugee Convention, with article VIII(2)'s language of characterizing the OAU Convention as the Refugee Convention's 'effective regional complement', discussed at sub-section b below. This fifth draft won unanimous CM support and was adopted on 10 September 1969. It entered into force on 20 June 1974, which the OAU designated 'Africa Refugee Day'.[26] In 2001, this became World Refugee Day.[27]

This history demonstrates how the objectives of the OAU Convention evolved from making international refugee law *applicable in* Africa and addressing subversion into, following the 1967 Protocol, addressing refugee issues *specific to* Africa. Subversion in general remained amongst these specific issues, but around 1967 another concern about subversion emerged: States wanted to ensure that individuals actively resisting colonialism would qualify for refugee status.

b. The OAU Convention

The OAU Convention aims both to protect those displaced by wars of decolonization and address potential unrest and subversion by refugees. Recital 3 notes that 'refugee problems are a source of friction among many Member States' and highlights their desire to eliminate

'the source of such discord'. Article II(2) thus provides that the 'grant of asylum...is a peaceful and humanitarian act and shall not be regarded as an unfriendly act'. Recital 4 highlights a desire to 'make a distinction between a refugee who seeks a peaceful and normal life and a person fleeing his country for the sole purpose of fomenting subversion', while recital 5 goes on to note that 'the activities of such subversive elements should be discouraged'. In this connection, article III(1) prohibits refugees from 'any subversive activities', and under article III(2), States parties 'undertake to prohibit refugees...from attacking any State Member of the OAU'. Today, the article III prohibition of subversive activities must be read in light of international and regional human rights law, particularly their protections of expression, association, and assembly.[28]

Regarding freedom fighters, following a provision replicating the Refugee Convention definition without the dateline,[29] article I(2) provides that the 'term "refugee" shall also apply to every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality'.[30] The 'every person' language ensures that the article I(2) refugee definition is applicable to all refugees in Africa, whether from within or beyond the continent. While colonialism and minority rule no longer prevail, the definition remains relevant, in particular the 'events seriously disturbing public order' clause, which is used to recognize the refugee status of individuals in flight from conflict or violence,[31] often within the *prima facie* approach to RSD.[32] For example, in 2010–11, Ghana, Guinea, Liberia, and Togo each used the *prima facie* approach to recognize individuals in flight from post-election violence in Côte d'Ivoire. Kenya did the same in 2014 regarding people fleeing the civil war in South Sudan.

The African refugee definition is an emerging area of scholarship, due in no small part to the work of Tamara Wood, who has explored its interpretation,[33] implementation,[34]

[28] See Sharpe (n 13) 145–8. [29] Art I(1).

and application to climate-induced displacement.[35] Previous scholarship, in contrast, tended to analyse the regional refugee definition in isolation from its legal context as an instrument of public international law.[36] With some notable exceptions, in particular on South Africa,[37] the regional refugee definition and modalities of refugee recognition in Africa remain under-researched. Its implementation in particular is in need of deeper legal analysis, especially in light of the diversity of modes of refugee recognition in Africa.[38]

The OAU Convention, as its title indicates, addresses specific aspects of refugee problems in Africa. Recital 9 recognizes the Refugee Convention as 'the basic and universal instrument relating to the status of refugees' and article VIII(2) provides that the OAU Convention is 'the effective regional complement in Africa' of the Refugee Convention. Recital 10 thus calls on States to accede to the Refugee Convention and its 1967 Protocol. That the drafters envisaged that the two conventions would apply in parallel explains the omission of a rights framework from the OAU Convention, as this is contained in articles 3 to 34 of the Refugee Convention.[39] Refugees under the regional instrument can derive these from the Refugee Convention (as well as from human rights law). The OAU Convention thus supplements the Refugee Convention. Taken together, the effect of the article I(2) refugee definition and the OAU Convention's status as the Refugee Convention's 'effective regional complement' is to extend Refugee Convention protection to a broader class of individuals.[40]

The OAU Convention also includes provisions on exclusion and cessation,[41] which largely mirror the Refugee Convention.[42] They were presumably replicated within the OAU Convention to ensure their applicability to article I(2) refugees and to allow for minor regional variations. The OAU Convention includes a cessation clause similar to the Refugee Convention's article 1F(b) exclusion clause for serious non-political crimes

committed *after* admission to the host country.[43] It also provides for cessation in relation to refugees who have 'seriously infringed' the OAU Convention's purposes and objectives,[44] which effectively operationalizes its prohibition of subversive activities. Further, the OAU Convention excludes an individual from refugee status if 'the country of asylum has serious reasons for considering that…(c) he has been guilty of acts contrary to the purposes and principles of the' OAU.

The OAU Convention includes several provisions that were highly innovative for their time, the international regime having only recently caught up, and then only in certain respects. Article I(4)(g) mandates the 'contracting State of asylum' to determine refugee status. This allocation of responsibility for RSD is without parallel in the Refugee Convention and is relevant in the current global context, in which some States are going to extraordinary lengths to avoid responsibility in this regard. Article II, titled 'Asylum', requires that States parties 'use their best endeavours consistent with their respective legislations to receive refugees and to secure' their settlement.[45] This represents an incremental advance towards an individual right to asylum,[46] especially when read with the African Charter's guarantee of the right 'to seek and *obtain* asylum in other countries in accordance with the law of those countries and international conventions'.[47] Article II also contains the OAU Convention's *non-refoulement* provision, which explicitly forbids rejection at the frontier.[48] Article V provides that repatriation must be voluntary, which overlaps with—but is broader than—the *non-refoulement* guarantee. Finally, the article IV accessory non-discrimination provision overlaps with the Refugee Convention's article 4 and adds 'membership of a particular social group' and 'political opinion' as additional prohibited grounds of discrimination.

The OAU Convention also addresses international responsibility-sharing, something the broader international community has only addressed in non-binding terms, including in the preamble to the Refugee Convention and generally in the Global Compact on Refugees. Article II(4) provides that where 'a Member State finds difficulty in continuing to grant asylum to refugees', it 'may appeal directly to other Member States and through the OAU, and such other Member States shall in the spirit of African solidarity and international co-operation take appropriate measures to lighten the burden of the Member State granting asylum'. This is given a measure of operationalization by article II(5), which provides for 'temporary residence' in the host State requesting assistance until resettlement can be arranged in line with article II(4). These provisions have rarely been used in practice, the only known instance being during the 1970s and 1980s, when, under pressure from South Africa, Botswana, Lesotho, and Swaziland (now Eswatini) relied on article II(4) to resettle refugees to Tanzania, Zambia, and

[47] African Charter (n 4) art 12(3) (emphasis added).
[48] Art II(3); the Refugee Convention's article 33 is now understood as prohibiting rejection borders—see Chapter 50 in this volume.

Zimbabwe.[49] However, in September 2019, Rwanda, the AU and UNHCR signed a memorandum of understanding pursuant to which vulnerable refugees and asylum seekers are being evacuated from detention centres in Libya to Rwanda.[50] While not explicitly linked to article II(4), this arrangement is in line with its spirit.

In contrast to these innovative and progressive provisions, article II(6) provides that for 'reasons of security, countries of asylum shall, as far as possible, settle refugees at a reasonable distance from the frontier of their country of origin'. This suggests that enforced settlement, or refugee camps, are permissible, and State practice suggests the same. Some of the world's largest refugee camps are in Africa, including Ethiopia's Dollo Ado, Kenya's Dadaab and Kakuma and Uganda's Bidi Bidi. Nevertheless, article II(6) must be read in light of international and regional human rights law's free movement guarantees, as well as considering article 26 of the Refugee Convention.[51]

The OAU Convention does not create any supervisory regime like that established by article 35 of the Refugee Convention and UNHCR's Statute.[52] However, article VII does require States to provide the OAU Secretariat (now the AUC) with 'information and statistical data' concerning '(a) the condition of refugees; (b) the implementation of this Convention, and (c) laws, regulations and decrees which are, or may hereafter be, in force relating to refugees'. This provision's Refugee Convention analogue—article 35(2)—forms part of the article that endows UNHCR with supervisory responsibility over the Refugee Convention. Yet article VII of the OAU Convention is a stand-alone provision; it does not follow on from any paragraph endowing the OAU/AU with a supervisory duty in relation to the OAU Convention. Article VII gives the AUC the tools to conduct supervision but does not endow the regional organization with supervisory responsibility as such. This and the supervision of the OAU Convention more generally is an emerging area of research.[53]

c. Human Rights Law

In addition to the Refugee and OAU conventions, refugees in Africa also enjoy the protection of international and regional human rights law.[54] The most broadly applicable regional instrument is the African Charter, applying to '[e]very individual . . . without

distinction of any kind such as . . . national . . . origin . . . or any status'.[55] The African Commission has confirmed that refugees enjoy Charter rights.[56] Women refugees also enjoy the rights guaranteed by the Women's Protocol[57] and child refugees benefit from the Children's Charter.[58]

Focusing on *non-refoulement*, the African Charter prohibits torture and 'cruel, inhuman or degrading punishment and treatment',[59] as well as return to such treatment.[60] The African Charter's article 18 protection of family life, considered alongside the articles 18–19 of the Children's Charter provisions requiring States to protect and support families and guarantee the right of every child to reside with her parents, also prevents *refoulement* when this would separate families.[61] These guarantees establish a regional complementary protection regime.[62] However, article I(2) of the OAU Convention means that individuals in Africa rarely if ever resort to complementary protection; the protection gap filled elsewhere by complementary protection is in Africa addressed by the regional refugee definition.

Regarding asylum,[63] article 12(3) of the African Charter protects the right to 'seek and obtain' asylum,[64] subject to the domestic laws of the State where protection is sought, while article 12(4) prohibits the arbitrary expulsion of non-nationals and article 12(5) forbids their mass expulsion. Article 12(4) has been invoked in favour of refugees,[65] while article 12(5) has been applied to groups that likely included refugees.

On rights in exile, it is noteworthy that both the Children's Charter and the Women's Protocol include refugee-specific provisions. Article 23 of the former is very similar to the CRC's article 22,[66] requiring, amongst other things, that States provide refugee children with 'appropriate protection and humanitarian assistance in the enjoyment of the rights set out in this Charter and other international human rights and humanitarian instruments' and addresses the protection of separated children. The Women's Protocol speaks specifically to refugees in its article 4 on the right to life, integrity, and security of the person; article 10 on the right to peace; and article 11 on the protection of women in armed conflict.[67]

4. The Institutional Framework

The institutional architecture for refugee protection in Africa consists of a patchwork of AU bodies, as well as three AU judicial organs: the African Commission, the African Court, and the ACERWC.

The African Commission became operational in 1987, as the supervisory treaty body under the African Charter to 'promote human and peoples' rights and ensure their protection in Africa', with jurisdiction to hear individual and interstate complaints.[68] It thus has both promotional and protective mandates. Its sources of law are broadly construed as 'the provisions of various African instruments on Human and Peoples' Rights', the UN Charter, the AU's Constitutive Act, the Universal Declaration of Human Rights, other instruments adopted by the AU and African States in the field of human rights, and 'the provisions of various instruments adopted within the Specialised Agencies of the United Nations, of which the Parties to the present Charter are members'.[69] In addition to the African Charter and its Women's Protocol, the African Commission thus clearly also has jurisdiction in relation to the OAU and Refugee Conventions, making it a potentially important source of refugee norms. However, in practice, it primarily adjudicates the African Charter, and has invoked each of the OAU and Refugee Conventions only once,[70] in each case in little depth. While it has issued a limited number of decisions in complaints alleging violations of refugees' Charter rights—refugees clearly face significant financial and logistical barriers in accessing the Commission—its reasoning in these cases has been similarly superficial and has related for the most part to non-nationals in general rather than to refugees in particular.[71] The African Commission has thus done little within its protective mandate to elucidate how the African Charter protects refugees or to bolster protection in practice. Furthermore, its decisions are often viewed as not legally binding, an issue the African Court was created in part to address. However, States parties to the African Charter are, pursuant to article 1, bound to 'give effect' to the treaty, which has been interpreted as including an obligation to implement Commission decisions.[72] Yet, in practice, this often does not occur, with empirical studies finding low levels of compliance.[73]

[68] African Charter (n 4) art 30. [69] ibid art 60.

[70] The African Commission invoked the OAU Convention in *African Institute* (n 56). It applied the Refugee Convention in *Curtis Francis Doebbler v Sudan*, Comm No 235/00, 27th Annual Activity Report of the Af Cm HPR (2009).

[71] See eg *Rencontre Africaine pour la defence des droits de l'homme (RADDHO) v Zambia* Comm No 71/92, 10th Annual Activity Report of the Af Cm HPR (2000) and *Union interafricaine des droits de l'homme and others v Angola*, Comm No 159/96, 11th Annual Activity Report of the Af Cm HPR (1997). Refugee-related cases adjudicated by the African Commission are surveyed in Sharpe (n 13) ch 7.

[72] *Civil Liberties Organisation v Nigeria*, Comm No 129/94, 9th Annual Activity Report of the Af Cm HPR (1995) para 16.

[73] Frans Viljoen and Lirette Louw, 'State Compliance with the Recommendations of the African Commission on Human and Peoples' Rights 1994–2004' (2007) 101 AJIL 1, finding that only 14 per cent of the rulings examined were implemented.

Given the challenges of access and implementation, the African Commission's promotional mandate holds more promise of having a systemic refugee protection effect. This mandate consists primarily of examining biennial States party reports. This procedure has included refugee issues since 2004, however this has been of limited effect, since States' compliance with their reporting obligation is poor and the Commission's concluding observations are typically not made public.

Within the Commission, the Special Rapporteur on Refugees, Asylum Seekers, Internally Displaced Persons and Migrants in Africa (the Special Rapporteur) has significant potential for refugee protection. The previous four Special Rapporteurs have undertaken fact-finding missions, issued statements and reports, communicated with governments, and participated in relevant conferences. The current Special Rapporteur, Algerian Commissioner Sahli Fadel, has focused her mandate on nationality and statelessness, culminating in the drafting of the Protocol to the African Charter on Human and Peoples' Rights on the Specific Aspects of the Right to a Nationality and the Eradication of Statelessness in Africa (AU Nationality Protocol). It is likely to be adopted in 2021. This is a significant achievement and while refugees are particularly affected by statelessness,[74] it is noteworthy that nationality and statelessness are not mentioned in the resolution establishing the Special Rapporteur. Her work on statelessness may have been at the expense of core activities under the mandate, such as to 'raise awareness and promote the implementation of' the Refugee and OAU conventions.[75]

The African Court was created by a 1998 protocol to the African Charter (1998 Protocol)[76] and became operational in 2006. It has jurisdiction to hear contentious cases and issue advisory opinions concerning the African Charter, as well as any human rights instrument ratified by the States concerned.[77] While this jurisdiction is broad and includes the OAU Convention, direct access to the African Court in contentious cases is limited to the African Commission, States parties to the 1998 Protocol and African intergovernmental organizations.[78] Individuals and non-governmental organizations (NGOs) can only sue those few AU States that have accepted this jurisdiction.[79] Furthermore, a potential avenue for NGOs to request advisory opinions from the African Court was recently closed.[80] These access rules severely limit the African Court's

[79] Article 34(6) of the 1998 Protocol. As of 1 September 2019, only nine States had filed such declarations: Benin, Burkina Faso, Côte d'Ivoire, Gambia, Ghana, Malawi, Mali, Tanzania, and Tunisia; Rwanda withdrew its art 34(6) declaration in 2016.

[80] *Request for Advisory Opinion by the Centre for Human Rights of the University of Pretoria and the Coalition of African Lesbians*, App No 002/2015 Af Ct HPR (2017) paras 52–7.

refugee protection role. Indeed, the only refugee issue to ever come before the African Court was ruled inadmissible because the defendant State had not filed an article 34(6) declaration.[81]

The ACERWC, which supervises the Children's Charter, is similarly unengaged with refugee issues. Its promotional activities do not touch on refugees and none of its decisions or general comments have related to refugees, however these have addressed the related issues of internal displacement[82] and nationality and statelessness.[83]

Besides the judicial organs discussed above, there are three AU bodies with distinct technical, bureaucratic, and political roles relating to refugees. The AU Constitutive Act created seven specialized technical committees composed of Member State ministers and senior officials charged with the technical aspects of AU projects and programmes.[84] In 2009, the Assembly created seven new specialized technical committees, including one on Migration, Refugees, and Internally Displaced Persons. This specialized technical committee was not, however, operationalized until 2015, when it met for the first time in a session aimed at adopting the AU's Disaster Management Guidelines, Humanitarian Policy Framework, and Common African Position on Humanitarian Effectiveness. The specialized technical committee's second meeting in 2017 focused on ongoing work to draft the Protocol to the Treaty Establishing the African Economic Community relating to the Free Movement of Persons, Right of Residence and Right of Establishment (Free Movement Protocol).[85] At its most recent meeting in 2018, the specialized technical committee addressed the AU Nationality Protocol, technical issues related to the African passport contemplated by the Free Movement Protocol, and the operationalization of the African Humanitarian Agency (AHA), which the Assembly had in 2016 resolved to create.[86]

The themes of these three meetings mirror the main issues addressed over the same period by the bureaucratic AUC Department of Political Affairs' (DPA) Division of Humanitarian Affairs, Refugees, and Displaced Persons (HARDP), as well as by the political Permanent Representatives' Committee Sub-Committee on Refugees, Returnees and Internally Displaced Persons (PRC Sub-Committee). The latter is a committee of all Member States' permanent representatives to the AU. It has a mandate

to develop and coordinate AU policy on forced displacement. However, as its ambassador members are not refugee experts, the PRC Sub-Committee largely defers to HARDP, which serves as its secretariat.

Overall, there has been little focus by the AU's technical, political, and bureaucratic bodies on refugee issues. Rather, they have prioritized broader humanitarian issues and other matters: the creation of the AHA, disaster response, nationality and statelessness, and regional integration under the Free Movement Protocol. The latter is sometimes raised as a possible substitute for refugee protection. However, while an individual at risk can relocate under a free movement arrangement, such arrangements do not necessarily protect from *refoulement*. Furthermore, the Free Movement Protocol allows States to 'establish specific procedures for the movement of specific vulnerable groups including refugees, victims of human trafficking and smuggled migrants, asylum seekers and pastoralists'.[87] While such procedures must be 'consistent with' the Refugee and OAU conventions,[88] the possibility of specific procedures for refugees in the context of Free Movement Protocol implementation at least raises the spectre of divergent practice. Any specific procedures should clearly address *sur place* refugees, as the phenomenon of a need for refugee protection arising while away from home may increase as regional free movement leads to more people living outside their countries of citizenship.

A measure of focus on refugees returned in 2019, which the AU Assembly declared the 'Year of Refugees, Returnees and IDPs: Towards Durable Solutions to Forced Displacement in Africa'.[89] Activities for the theme of the year exhibit a clear concern with root causes, as evidenced by two launch events focused on this topic. However, the ongoing reform of the AU may preclude meaningful engagement of refugee professionals with prevention. Most forced displacement in Africa is caused primarily by conflict, which falls under the AU's Peace and Security Council (PSC) and under the DPA. As mentioned above, the DPA also covers refugees. However, when the mandate of the current Commissioner for Political Affairs expires, the humanitarian matters within her portfolio will move to the Department of Social Affairs, which will be renamed Department of Health, Humanitarian Affairs and Social Development (DHHS), while conflict prevention will be centralized under the PSC; the DPA will cease to exist. The AU reforms are thus institutionally separating prevention from protection, just as the wider international community is beginning to work towards more integrated approaches under the Global Compact on Refugees. Moreover, refugee issues may get ever more lost under DHHS, which will work on a gamut of issues.[90]

Civil society makes an important contribution to refugee protection in Africa. Humanitarian organizations, such as Médecins sans Frontières and the Norwegian Refugee Council, provide lifesaving and life-sustaining assistance in camp and out-of-camp contexts, often as UNHCR implementing partners. Legal organizations, such as the Katiba Institute, Kituo Cha Sheria, and the Refugee Consortium of Kenya, all in Kenya, as well as university-based legal clinics such as the Refugee Rights Unit at the University of Cape Town and Makerere University's Refugee Law Project in Uganda, provide individual representation and undertake strategic litigation.[91] Finally, scholarly doctrine promotes the progressive development of the law. As mentioned above, scholarship on refugee protection in Africa is currently developing at a rate unseen since the years immediately following the OAU Convention's adoption. This work is particularly important given the paucity of RSD decision reporting in Africa and the lack of an OAU Convention supervisory body. The law of refugee status typically develops through jurisprudence, as well as through guidance issued by a supervisory body, such as UNHCR in the case of the Refugee Convention. In the absence of these, scholarship is of even greater importance.

5. Contemporary Achievements and Challenges

Of the AU's 55 Member States, at least 47 have domestic refugee legislation. Thirty-one of these 47 acts, or 66 per cent, are largely in line with the Refugee and OAU conventions. Of the 16 States without domestic law compliant with international refugee law, law reform is ongoing in at least one, Morocco.[92] The international and regional refugee treaties are thus largely domesticated across Africa, including in innovative ways.[93] There is, however, a significant implementation gap between domestic law and national practice, in relation to both RSD and refugee rights.

While studies of RSD in Africa are limited, the research that does exist has found significant shortcomings in the refugee definitions' implementation, in particular in relation to how decision-makers apply, or rather fail to apply, article I(2) of the OAU Convention.[94] There are also major shortcomings regarding the extent to which refugees enjoy their rights,[95] particularly in relation to freedom of movement and livelihoods. Refugees' freedom of movement is protected by article 26 of the Refugee Convention,

[94] See n 37; Sharpe (n 31); Wood (n 34).

[95] See eg Guglielmo Verdirame and Barbara Harrell-Bond, *Rights in Exile: Janus-Faced Humanitarianism* (Berghahn Books 2005).

which, like all Refugee Convention rights, applies equally to refugees recognized under the regional definition,[96] and by article 12(1) common to both the African Charter and the ICCPR, as well as by cognate provisions in domestic laws, including national constitutions.[97] In practice, however, refugees in Africa are often confined to camps,[98] especially as they are increasingly viewed as threatening national security.[99] Refugees' rights to work, guaranteed by articles 17–19 of the Refugee Convention and by article 6 of the ICESCR, are often also not respected. There has, however, been recent progress. Kenya's Court of Appeal found in favour of refugees' freedom of movement,[100] and Ethiopia recently adopted a new refugee law that allows refugees to work and protects their freedom of movement.[101]

Displacement in the context of climate change and disasters is on the rise in Africa. Those forced to flee in such contexts are not generally refugees under the Refugee Convention, unless there is a nexus to a ground in the Refugee Convention.[102] Whether individuals displaced in the context of climate change and disasters can be recognized as refugees under article I(2) of the OAU Convention is contested.[103] If climate change and disasters bring about 'events seriously disturbing public order', then it would seem the OAU definition should be applied.[104] However, State practice on this issue is inconsistent. For example, Kenya recognized Somalis fleeing drought in 2011 as refugees under article I(2), but Uganda did not give refugee status to individuals who fled a volcano eruption in DRC in 2002. The issue of whether article I(2) can provide refugee protection to individuals fleeing climate change and disasters is in need of further doctrinal and empirical research, in particular by surveying State practice, building on Weerasinghe's work for UNHCR.[105]

Europe's abysmal response to the 'migration crisis' has had a significant impact on refugee protection in Africa. Rich European countries and the EU have gone to great lengths to keep refugees out,[106] in part as a result of rising populism, while much less well-off African States have kept their borders open. For example, Uganda welcomed more refugees on each day in 2016 than many European countries received all year.[107]

[96] Sharpe (n 13) 90–112.

[97] There is a nascent trend of courts applying constitutional provisions in favour of refugees. See eg *Kituo Cha Sheria* (n 91), which relied on the Kenyan constitution to protect refugees' freedom of movement.

[103] Wood and Viljoen find that article I(2) is applicable (Wood (n 35); Viljoen (n 6) 243). cf Alice Edwards, 'Refugee Status Determination in Africa' (2006) 14 African Journal of International and Comparative Law 204, 225–7; James C Hathaway, *The Law of Refugee Status* (Butterworths 1991) 19.

[104] Wood (n 35); Sharpe (n 13) 50–1.

[105] Weerasinghe (n 35).

[106] See Chapters 26 and 27 in this volume.

[107] Reuters, 'Uganda Welcomes More Refugees Daily than Some in Europe Annually, Charity Says' (*Voa News*, 25 January 2017) <https://www.voanews.com/africa/uganda-welcomes-more-refugees-daily-some-europe-annually-charity-says> accessed 27 June 2019.

This imbalance—which the Global Compact on Refugees aims to redress—may be contributing to recent moves by governments in Africa to limit their generosity to refugees, such as Kenya's attempt in 2016 to close its Dadaab camp. And tied EU aid to Niger has certainly influenced how that country responds to refugees in and transiting through its territory;[108] the same is almost certainly true of other African countries on the so-called route to Europe. Furthermore, EU and particularly Italian collaboration with Libya to prevent refugees there from reaching Europe is fuelling one of the most serious human rights crises today, which includes abuses in Libya such as arbitrary detention in inhuman conditions, severe sexual and gender-based violence, and even modern-day slave trading.[109]

6. Conclusion

This chapter has analysed the regional legal framework for refugee protection in Africa, including both treaty and institutional components, and recent achievements and challenges in protecting refugees. This revealed strong laws, regionally and in national jurisdictions, where the OAU Convention has been domesticated and sometimes even developed. However, domestication is not the same as implementation. The relatively limited literature on refugee protection in Africa has demonstrated poor implementation of article I(2) in RSD and violations of refugees' rights, including systemic violations in the areas of freedom of movement and livelihoods. Other challenges include a lack of clarity around the meaning of the regional definition, including uncertainty regarding whether individuals displaced by climate change and disasters can be refugees under article I(2), the modalities of RSD in Africa, and the role of EU policy in severe abuses in Africa, particularly in Libya. Relevant regional bodies have done little to resolve these challenges. Refugees do not receive specific attention within the AUC's more general humanitarian initiatives. The African Commission and African Court are often practically inaccessible to refugees and the NGOs that advocate on their behalf, and the current Special Rapporteur has focused her mandate on other matters. Regional institutions should lead States to deliver the practical benefits of a positive and protective regional legal framework. Refugee protection in Africa is in need of greater attention from legal scholars, in support of these institutional endeavours.

CHAPTER 16

REGIONAL REFUGEE REGIMES

North America

DEBORAH ANKER*

1. Introduction

This chapter analyses refugee protection in the North American region, which for the purposes of this chapter is treated as including Canada, the United States, and Mexico. The dynamics of the region, in particular the hegemonic role of the US, have often led to restrictive policies, reflecting the US's objective of keeping asylum seekers away from its borders. Such policies can be traced back to the US's support of violent regimes in the Northern Triangle of Central America during the 1980s and 1990s. US foreign policy contributed to the conflict and instability that generated a significant portion of the very refugees that it has since sought to keep away. But the dynamics in the region are complex, with Canada and Mexico not always aligning their policies to US interests. Canada in particular has at times played a leadership role in developing and exporting norms, adopting an international human rights-based approach, for instance with respect to gender-based claims to protection.

The chapter begins by discussing the various international and regional refugee and human rights regimes to which Canada, the US, and Mexico are parties (Section 2). Next, the chapter outlines the origin and evolution of specific refugee policies and practices in each of these three States (Canada in Section 3, the US in Section 4, and Mexico in Section 5). The chapter then outlines some of the most pressing current challenges facing the North American region in a time of sharply increasing refugee migrations (Section 6) and concludes by reflecting on the role of legal advocates,

* The author extends great thanks to Logan Seymour for outstanding research and editing support in the writing of this chapter. Thanks also to Zachary Albun for excellent research assistance.

activists, and non-governmental organizations (NGOs) in holding governments accountable and ensuring that international and constitutional refugee protections are realized (Section 7).

2. The North American Refugee Regime: Legal Framework

The US, Mexico, and Canada are Contracting States to the Refugee Convention and/or to the 1967 Protocol.[1] Each of these States has incorporated the key provisions into domestic legislation, providing both *non-refoulement* protection and procedures for the recognition of refugee or asylum status.[2] In addition, all three States have ratified the CAT, providing 'complementary' *non-refoulement* protection for those who can establish a reasonable possibility of return to torture.[3]

In terms of other human rights treaties, the US has been the most reluctant of the three States to ratify them,[4] having ratified only five of the 18 key human rights treaties.[5] In contrast, Mexico has ratified 16 treaties, Canada 13. Notably, the US is the only UN-member State that has not ratified the CRC.

Regional instruments and processes for the protection of refugees and other displaced persons in the Americas include (1) the Inter-American human rights system, which is organized under the auspices of the Organization of American States (OAS) and both its founding Charter, the American Declaration of the Rights and Duties of Man, as well as the American Convention on Human Rights (ACHR), and which is monitored by the Inter-American Commission on Human Rights (IACHR) and the Inter-American Court of Human Rights; and (2) the Cartagena Declaration and the subsequent Declarations issuing from Latin American States' decennial colloquia on refugee protection in the region.[6] In addition to these rights-based instruments and fora, other regional processes have been established to facilitate migration control, including the Regional Conference on Migration (also known as the Puebla Process), a Regional

[1] Canada and Mexico have ratified both the Refugee Convention and the Protocol. The US has ratified the Protocol.

Consultative Process managed by the International Organization for Migration. The Puebla Process convened for the first time in 1996, bringing together Canada, Mexico, the US, and several Central American countries. But although its meetings initially touted lofty goals, ultimately its decisions reflected the interests of specific northern States, particularly the US.[7] The Puebla Process thus reflects the general problem of such regional migration programmes' susceptibility to US influence, making them liable to co-optation, ie being used as a vehicle for sharing restrictive border control practices throughout the region.[8]

The three States' commitments to regional instruments vary. Neither Canada nor the US has ratified the ACHR, and while the IACHR has interpreted the Declaration as imposing legal obligations,[9] this interpretation has been flatly rejected by the US.[10] The US also has repeatedly rejected the mandate of the IACHR, in particular ignoring judgments that its immigration policies violated the ACHR.[11] Mexico, for its part, has wavered between embracing the more expansive Cartagena refugee definition, incorporating it into domestic law, and, in other contexts, rejecting this same document as 'soft law'.[12] Cartagena was developed as a framework for Latin American and Caribbean countries, and neither the US nor Canada has adopted its expanded refugee definition and related principles into domestic law.

3. Canada

In the early twentieth century, Canada and the US had similar immigration policies. Both countries prioritized the immigration of northern and western Europeans, while restricting 'undesirable' or 'unsuitable' peoples, including those of Asian, Jewish, and

African origin. Such formal biases lasted until the 1960s, when they were largely eliminated and replaced by immigration regimes with preference based on family reunification and economic utility. It was not until after the Second World War that Canada, like the US, first developed the legal category of 'refugee', admitting discrete groups of post-war and Cold War refugees fleeing communism.[13]

In the post-war period, Canada distinguished itself from its hegemonic neighbour, carving out an identity as an internationalist middle power and assuming a leadership role in the international human rights community.[14] Canada broke with the US over the assessment of asylum claims of Central Americans and, however tentatively, stood as a critic of US foreign policy regarding Central America. Over time, Canada developed a refugee determination system and a body of refugee law jurisprudence explicitly grounded in international human rights, a system considered by many as an international model. But in recent years, Canada has also retreated behind, and reinforced, the protectionist advantages conferred by its geography, seemingly abdicating its role as a leader in asylum policy, arguably just at a time when its leadership was most needed.

a. Birth of the Canadian Refugee System

The modernization of the Canadian migration and refugee regime commenced with the enactment of the 1976 Immigration Act, which officially recognized refugees as a special class, incorporating into Canadian law the Refugee Convention definition (Canada having ratified the Convention in 1969).[15] The Act created the Refugee Status Advisory Committee to undertake refugee status determinations (RSD), subject to an administrative appeal. The legislation was enacted in the year following the end of the Vietnam War, after which more than 1 million persons fled Southeast Asia. The refugees' plight was such that Canadians pressured their government to admit some of these refugees to Canada.[16] Consequently, Canada admitted 77,000 Southeast Asian refugees from 1978 to 1981, almost half of whom were resettled through a new private sponsorship programme.[17] Ultimately, Canada admitted more Southeast Asian refugees per capita than any other country in the world. In recognition of Canada's outstanding service to refugees—particularly through this private sponsorship programme—the United Nations awarded Canada the prestigious Nansen Medal in 1986, the first and only time a country has received that honour.[18]

b. Canada Forges Its Own Path: Central America and the *Singh* Decision

In the 1980s, as Canada continued to welcome refugees from Southeast Asia, escalating civil wars in Central America were displacing millions from their homes. Between 1981 and 1984, Canada nearly tripled its refugee resettlement quota for Latin America. Also in this period, the Canadian government established a moratorium on deportations of Salvadorans and, later, of Guatemalans, admitting 15,877 refugees from Central America between 1982 and 1987.[19]

Beginning with the election of Pierre Trudeau in 1968, Canada became increasingly involved in Latin America, though in doing so Canada walked a tightrope between criticizing US foreign policy towards Central America on the one hand, and, for fear of retaliation, refraining from outright condemnation.[20] Despite this political ambivalence, Canada diverged markedly from the US in its adjudication of asylum claims. As Hamlin explains, while foreign policy, domestic politics, and ideology strongly influenced the assessment of asylum claims in the US, Canadian law and practice developed on the basis of human rights-grounded criteria that were more detached from perceived foreign policy interests. Over time, Canada established a centralized administrative system formally insulated from politics, emphasizing expertise and institutional research support in the asylum adjudication process.[21] Consequently, while prior to 1990 the US granted asylum in fewer than 3 per cent of Salvadoran and Guatemalan cases, Canada accepted up to 80 per cent of similar applications.[22] During this period, Canada also began to recognize NGOs as stakeholders in the country's asylum system.

During its period of leadership in the treatment of Central American refugees, Canada also advanced a distinctive rights-based interpretation of refugee law. Most notably, in its landmark 1985 decision, *Singh v Minister of Employment and Immigration*, the Canadian Supreme Court held that the basic requirements of procedural justice enumerated in the newly adopted Charter of Rights and Freedoms applied to all persons

[21] Rebecca Hamlin, *Let Me Be a Refugee: Administrative Justice and the Politics of Asylum in the United States, Canada, and Australia* (OUP 2014) ch 5. Hamlin argues that it is in part the resources and independence given to the administrative process that distinguishes the Canadian system from the American one. Whereas the Canadians created one administrative process, with a great deal of resources and generally insulated from political interference, the American system is fragmented, with different actors and agencies involved in the determination process, including the Attorney General, a cabinet member and political appointee of the President. The result, in the American context, has been a lack of consistency in decision-making, resulting in individual cases often turning on the happenstance of the individual immigration adjudicator. See further Banks Miller, Linda Camp Keith, and Jennifer S Holmes, *Immigration Judges and US Asylum Policy* (University of Pennsylvania Press 2014); Jaya Ramji-Nogales, Andrew I Schoenholtz, and Philip G Schrag (eds), *Refugee Roulette: Disparities in Asylum Adjudication and Proposals for Reform* (New York University Press 2009).

[22] Epp (n 13) 19.

physically present in Canada, including foreign nationals. In the case of asylum seekers, procedural fairness mandated an oral hearing in which a claimant could present her case and meet the case against her.[23] The *Singh* court explicitly referenced human rights principles, an interpretation made possible in part because the Charter was so new and therefore not yet encrusted in domestic norms. Importantly, Canada took the lead internationally in the development of refugee and asylum jurisprudence, which, since *Singh*, is 'constituted as a complex web of refugee law and human rights law that is of both domestic and international origin'.[24] As Macklin notes, Canada's human rights approach to the interpretation of refugee law 'brings refugee law more explicitly into a discursive relationship with other developing loci of domestic and international human rights'.[25]

In the wake of *Singh*, and through the early 1990s, Canada served as a model and 'norm exporter', especially with respect to the US. In 1993, for example, Canada's Immigration and Refugee Board published its 'Guidelines on Women Refugee Claimants Fearing Gender-Related Persecution'.[26] Following advocacy by American NGOs, the US Immigration and Naturalization Service followed suit, adopting the 'Considerations for Asylum Officers Adjudicating Asylum Claims from Women' in 1995.[27]

c. A Retreat to Protectionism

In the second half of the 1980s, Canada's immigration system was restructured. In 1986, the US enacted the Immigration Reform and Control Act, which restricted employment opportunities for, and provided measures to reduce the entry of, undocumented immigrants.[28] Thereafter, many migrants—particularly Central Americans—started crossing the border into Canada. In January 1987 alone, for example, as many Salvadorans arrived in Canada as had claimed refugee status in the entire preceding year.[29] The new appeals procedures mandated by *Singh* contributed to the backlog of asylum cases, which increased from 8,300 in 1985 to 121,000 by the end of the decade.[30]

In the early 1980s, the Conservative government led by Brian Mulroney undertook to amend what it painted as a fragile asylum system being taken advantage of by 'illegitimate' immigrants. In February 1987, the Mulroney government implemented restrictive measures, including the elimination of employment authorization and various social services formerly provided to refugee claimants with pending applications, and it enabled Canadian officials to return refugee claimants travelling from the US until their Canadian hearing date approached.[31] Despite these setbacks, however, Canada's refugee acceptance rate continued to hover around 50 per cent through the late 1980s.[32]

In the summer of 1987, the arrival irregularly by boat of 174 Indian nationals in Nova Scotia prompted an emergency session of the Canadian Parliament to address 'abuses of Canada's refugee system'.[33] In that session—which, ironically, opened less than a year after Canada had received the Nansen Medal—two bills, C-84 and C-55, were introduced that would dramatically restructure the Canadian RSD process.[34] They contained several controversial provisions: for example, C-55 authorized the Canadian government to deny claims from 'safe third countries'.[35] Despite strong and broad-based opposition, the bills passed. Years later, in the aftermath of the 11 September 2001 attacks, Canada and the US signed a formal Safe Third Country (STC) Agreement.[36] In addition to Canada's STC Agreement with the US, Canada implemented a series of border measures under the rubric of the 'Multiple Borders Strategy' (MBS), erecting significant legal barriers for asylum seekers.[37] Through the institution of various screening measures at checkpoints along a potential asylum seeker's travel route, the MBS sought to 'push … the border out' and make it more difficult for asylum seekers to reach Canadian territory.[38]

One of these border measures has been Canada's imposition of strict visa requirements.[39] For example, in 2009, Canada imposed visa restrictions on Mexico and the Czech Republic which, as intended, precipitated a sharp decline in asylum claims from those two countries.[40] When the visa requirement for Mexican travellers was lifted in December 2016, Canada experienced a 2,500 per cent rise in monthly asylum claims in February 2017 as compared to February of the previous year.[41] From 2012 to 2018, the

rate of Canadian visa rejection nearly doubled (from 18 to 30 per cent), with the rejection rate for applications from refugee-producing countries such as Somalia, Yemen, Afghanistan, and Syria reaching nearly 75 per cent.[42]

In sum, when compared with the US or a number of other Western countries, Canada seemingly boasts an impressive asylum system. However, when measured in terms of its own evolution, Canada's asylum policies have become more restrictive over time.

4. United States

After the Second World War, the US was instrumental in the drafting of the Refugee Convention but did not ratify it. This abstention with respect to the Refugee Convention (as well as to other human rights treaties) reflects a deep tension in the US's national identity, waivering between cosmopolitan ideals and its own brand of populism or nativism.[43] Nevertheless, in the decades after the war, the US admitted hundreds of thousands of refugees, particularly those fleeing communist governments in Hungary, Cuba, Czechoslovakia, the Soviet Union, and later Indochina. Most were admitted through the executive's exercise of an open-ended 'parole' authority, which became part of domestic US law in 1952.[44]

a. 1965 Amendments and Ratification of the Protocol

The 1960s witnessed two significant developments in US immigration and refugee law. First, in 1965, Congress ended the national origins system for establishing general immigration quotas and substituted for it a system based largely on principles of family reunification.[45] Secondly, in 1968, the US joined UNHCR's efforts to universalize the Refugee Convention by ratifying the 1967 Protocol, which eliminated formal temporal and geographic restrictions. Ratification of the Protocol came at a critical time when many States were leaning towards exclusively regional approaches to refugee protection, rather than joining an international regime.[46] At the time that

the US ratified the Protocol, however, Congress did not also enact legislation implementing it domestically. Rather, the 1965 legislation established a quota for refugees and defined the term 'refugee' ideologically as a person fleeing a communist or communist-dominated country, or a country in the Middle East.[47] This definition created tensions between the legislative and executive branches, with the executive advancing more generous refugee admissions in support of broader foreign policy goals. During this period, the US was competing with the Soviet Union for worldwide influence, and the appearance of a fair and non-discriminatory refugee policy was part of its geopolitical strategy to win over the sympathies of newly emerging States in particular.

b. Refugee Act of 1980 and Subsequent Legislation

The Refugee Act of 1980 formally incorporated the Convention definition into US domestic law.[48] However, RSD continued to be based largely on Cold War politics. Throughout the 1980s, many refugees fled both communist Cuba and the pro-US Duvalier regime in Haiti. In this same period, hundreds of thousands of persons fled violent civil wars in Guatemala, El Salvador, and Nicaragua. The US played an active role in these conflicts, supporting highly repressive governments in both Guatemala and El Salvador. In Nicaragua, the US aided the Contra paramilitaries, who committed myriad human rights violations in the course of their rebellion against the Sandinista government. The US's response to refugees fleeing these conflicts reflected its ideological commitments in the region; thus, it accepted just 1.8 per cent of asylum applications by Guatemalans and 2.6 per cent of asylum applications by Salvadorans between June 1983 and September 1990.[49]

The disparate treatment of asylum seekers in the US and Canada prompted civil society actors in the US—including lawyers, NGOs, and a vigorous faith-based 'sanctuary' movement—to mobilize in opposition to the US's restrictive, politicized approach. In legal challenges, they argued that, with the Refugee Act, Congress had excised ideological criteria from the refugee definition. In these challenges, lawyers and advocates were sometimes successful in convincing the federal judiciary to depart from its stance of exceptional deference to the political branches in immigration matters. In the 1987 *Cardoza-Fonseca* decision,[50] for example, the US Supreme Court overruled the executive branch policy imposing a 'clear probability' standard of proof on people seeking asylum, establishing instead that the 'well-founded fear' standard, rooted in the

Refugee Convention, should be applied in asylum adjudications.[51] In *American Baptist Churches v Thornburgh*, a federal district court approved the settlement in a nationwide class action lawsuit that had challenged systemic discrimination against Salvadoran and Guatemalan asylum seekers.[52] In that settlement, the federal government acknowledged it had engaged in impermissibly politicized asylum decision-making and agreed to re-adjudicate the applications of a large class of Salvadoran and Guatemalan asylum seekers under a uniform, non-ideological standard, as required by international law.[53]

The Refugee Act of 1980 remains the US legislative framework. Asylum adjudications take place through two processes: an informal interview conducted by an asylum officer and a more formal hearing before an administrative judge. Through the separate overseas refugee resettlement programme, the US has since 1980 admitted more than three million people—in its initial years, mainly persons coming from the former Soviet Union or Indochinese refugees fleeing communist rule in the wake of wars in Vietnam, Laos, and Cambodia.[54]

While refugee advocates achieved important victories in the early to mid-1990s, for instance the adoption of the 1995 gender guidelines referenced above,[55] asylum still became a highly controversial issue in American politics. As Republican politicians embraced 'tough on crime' policies, they also framed unauthorized entrants as 'criminal aliens'.[56] Later, the Clinton administration and congressional Democrats increasingly appropriated such rhetoric, leading to the enactment of highly restrictive legislation, most notably the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRAIRA). IIRAIRA instituted fast-track deportation procedures, repealed various mechanisms providing relief from deportation, curtailed judicial review of immigration decisions, expanded the number of crimes making an immigrant eligible for deportation, and overhauled immigration enforcement and detention.[57] In short, IIRAIRA laid the groundwork for the vastly expanded deportation and detention bureaucracy existing in the US today.[58]

c. IIRAIRA: The Immigration Enforcement Model

IIRAIRA's effects on American immigration and asylum law and practice were immediate and dramatic. Combined federal legislative appropriations for immigration detention and removal operations increased immediately and significantly,[59] and annual deportations steadily increased from 69,680 in 1996 to 188,467 in 2000.[60] Post-IIRAIRA deportees included a large number of Central Americans (over 200,000 between 1998 and 2005), some of whom were members of organizations like MS-13 and Barrio 18, which had originally been founded in the US.[61] Fledgling criminal justice systems in El Salvador and Guatemala were unable to cope with such large-scale arrivals, and the gangs began rapidly to expand membership and activities, accumulating political and territorial control and increasingly exercising a form of de facto sovereignty.[62]

Following the 11 September 2001 terrorist attacks, immigration enforcement escalated further, a trend that continues today. Federal funding for immigration enforcement and the number of immigrants detained in prison-like conditions significantly increased under Presidents Bush and Obama, and daily detention rates continued to rise under the Trump administration.[63] In 2005, Congress enacted legislation significantly increasing the evidentiary burden asylum seekers must satisfy in order to qualify for protection.[64] Moreover, the executive branch has increasingly and unilaterally enacted both substantive and procedural changes to the asylum system. In what was seen by many as a highly politicized move, for example, Attorney General John Ashcroft removed one-third of the Board of Immigration Appeals members in 2002.[65]

Attorneys General in the Trump administration have been even more aggressive, frequently issuing precedential decisions that bind the quasi-judicial administrators deciding asylum cases and impose strict timelines that interfere with judicial independence.[66] The Trump administration also attempted to restrict asylum seekers' access to the protection regime entirely.[67] However, the American judiciary has shown willingness to limit the executive, in many cases finding its policies inconsistent with the language and purpose behind the Refugee Act and the Protocol on which the Act is based.[68]

5. Mexico

a. The Guatemalan Refugee Migration: Mexico Ratifies the Convention and Protocol

Mexico has a long history of receptivity to refugees, from accepting persons fleeing the Spanish Civil War in the 1930s to welcoming survivors of South American military dictatorships in the 1970s. Through the 1980s and 1990s, Mexico served both as a country of transit and, in some cases, a country of first asylum for Central Americans fleeing civil wars in their region.[69] By 1990, there were approximately half a million Salvadorans and 200,000 Guatemalans in Mexico, largely without any secure status.[70] As the number of Central Americans coming to Mexico rose, NGOs and others accused the Mexican government of perpetrating and countenancing human rights violations (including large-scale *refoulement*) against this refugee population.

Mexico was the last country in the Americas to ratify either the Refugee Convention or the 1967 Protocol, except for Cuba and Guyana, which are still abstaining. Mexico's delay is attributable, to a significant extent, to the challenges it faced accepting indigenous Guatemalan refugees who fled *en masse* to Mexico following the Guatemalan genocide and civil war.[71] Throughout this period, Mexico had no asylum determination system,

relying instead on its restrictive General Law of Population of 1974, which criminalized undocumented immigration. Like the Immigration Act of 1924 in the US and the Immigration Acts of 1906 and 1910 in Canada, Mexico's early immigration enactments emphasized a preference for racial homogeneity. Mexico, however, held on to such restrictive provisions longer than its northern neighbours, with consequences for its treatment of Central American migrants throughout the second half of the twentieth century.

In order to respond to the large number of Guatemalans who were then arriving at Mexico's southern border, in July 1980, President José López Portillo created the *Comisión Mexicana de Ayuda a Refugiados* (Mexican Committee for Refugee Assistance, or COMAR).[72] COMAR was charged with providing Guatemalans who were fleeing to Mexico emergency assistance and possibilities of employment. COMAR also oversaw the refugee camps that had sprung up, primarily in the southern border State of Chiapas, resulting in the creation of 92 camps housing 46,000 refugees by 1984.[73] Mexico did not, however, provide these Guatemalans with long-term protection, but rather issued them 90-day renewable 'border visitor' visas, subject to their not leaving a 150-kilometre-wide 'refugee zone'. Eventually, the Mexican government adopted a policy of expulsion, deporting 2,000 Guatemalans in 1981 and up to 1,000 per week by 1984.

Explaining its reluctance to ratify the Refugee Convention, Mexico took the position that its Constitution already protected refugee rights, but, in fact, neither the Mexican Constitution nor the country's General Law of Population provided for any formal refugee status. Mexico's reluctance was based mainly on the government's desire to retain the flexibility of relying on article 33 of its Constitution, which it viewed as affording it the power of expulsion without judicial oversight. The Mexican government feared that the concentration of Guatemalan refugees in Chiapas might disrupt the economy of that State, which, notwithstanding the general poverty of its residents, contributed critically to Mexico's broader agricultural and petrochemical sectors. Nevertheless, in 1982, Mexico permitted the opening of a UNHCR office in Mexico City, and UNHCR commenced mandated RSD. Mexico remained ambivalent about UNHCR's role, however.[74]

Responding to pressure from the US, Mexico in the late 1980s began to cooperate with the Guatemalan government to establish a repatriation programme for the thousands of Guatemalans living in Mexico. After years of negotiations, the first organized repatriation commenced in 1993,[75] running until 2000. It was after the official ending of this programme that Mexico finally ratified the Refugee Convention, but with a sweeping reservation, asserting Mexico's right to act under the authority of article 33 of its Constitution, a reservation maintained until 2014.[76]

b. Mexico's Asylum System: Weak Processes, Lack of Resources, and Escalating Violence

In 2000, Vincente Fox became president of Mexico, ending 71 years of one-party rule by the *Partido Revolucionario Institucional*. Fox's election enabled a series of significant political reforms and opened a political space for revisiting issues related to immigration and asylum. From the outset of his tenure, Fox began expressing concern for the protection of the rights of Mexican migrants living in the US.[77] One perhaps unintended consequence was an increased focus in the media and amonst stakeholders on Mexico's own restrictive laws, with many pointing to inconsistencies between Mexico's demands for the protection of its migrants abroad and its own treatment of migrants at home. Renewed pressure from US officials was, according to some Mexican congresspersons, motivation to reform Mexico's immigration system.[78] In April 2008, the Mexican Congress unanimously approved legislation to reform specific articles of the General Law of Population, eliminating the felony criminal penalty for entering Mexico without travel documents. In parliamentary debates, members of Congress emphasized the importance of protecting 'the human rights of immigrants entering our country'.[79]

In 2011, Mexico passed the *Ley sobre Refugiados, Protección Complementaria y Asilo Politico*,[80] embracing the Refugee Convention and Cartagena definitions of 'refugee', complementary protection based on the principle of *non-refoulement*, and a form of discretionary asylum grounded in Latin American legal tradition. Mexico also amended article 11 of its Constitution to include the right to asylum. In 2016, article 11 was again revised to require that this right to asylum be interpreted according to Mexico's obligations under international law.[81] Following these changes, the number of asylum petitions filed annually in Mexico increased significantly, from just 752 in 2011, to over 14,500 in 2017.[82] This increase corresponds to deteriorating conditions in the Northern Triangle region and Venezuela, as well as to an increase in the number of asylum seekers arriving in Mexico from outside of the Americas.[83]

But despite Mexico's constitutionalization of international obligations to protect refugees and its human rights-based asylum legislation, Mexico's practices have included increased immigration enforcement, militarization, detention, and deportation.[84] While COMAR functions as an administrative agency adjudicating

asylum claims in a non-adversarial manner, migrants are often left to contend with the Instituto Nacional de Migración (INM), Mexico's immigration law enforcement agency, which primarily apprehends, detains, and deports non-citizens and rarely advises detainees of their asylum rights or refers asylum claims to COMAR, as is required.[85] Even when asylum seekers are referred to COMAR, they face a range of structural and procedural challenges. Many migrants are detained in poor conditions while awaiting decisions.[86] COMAR is also severely understaffed and under-resourced, contributing to observably inadequate hearing and appeals processes.[87]

Over the past several years, there have been extensive reports of violence perpetrated against asylum seekers in Mexico.[88] The IACHR has documented crimes committed against asylum seekers and migrants by criminal organizations,[89] who appear to enjoy impunity.[90] Moreover, the intensification of infighting amongst cartels, resulting in part from Mexico's US-supported war on drugs, has produced high levels of out-migration from Mexico.[91] Overall since 2007, the number of asylum applications filed in the US by Mexican citizens has increased almost 18-fold.

In recent decades, Mexico's increased cooperation with the US to secure Mexico's northern and southern borders has undermined Mexico's commitment on paper to vanguard principles like an expanded refugee definition and the constitutionalization of refugee protection.[92] In 2004, the same year that Mexico and 19 other Latin American countries signed the Mexico Declaration (as part of the Cartagena process) to strengthen the protection of refugees throughout the region, Mexico also signed a cooperative 'security' agreement with the US called the Mérida Initiative, or Plan Mexico. Plan Mexico supplied US$400 million to Mexico, with millions going 'directly to providing police and military weapons and training' and to 'an immigration institute responsible for tightening Mexico's southern borders through monitoring, bio-data collection and a Guatemalan guest-worker program'.[93] In 2014, just a few years after the enactment of Mexico's landmark immigration and refugee law reforms, President Enrique Peña Nieto, responding to pressure from the US, announced the *Programa Frontera Sur*

(Southern Border Program), a border plan aimed at increasing security along 12 points of entry with Guatemala and Belize and along several popular migration routes running across Mexico to the US.[94] In the years immediately following the implementation of *Programa Frontera Sur*, apprehensions and deportations skyrocketed, contributing to many of the negative consequences previously discussed.

6. Contemporary Challenges in the Region

a. Externalization of Borders and Containment Practices

Amongst the challenges refugees in North America currently face is States' reliance on restrictive 'externalization' migration control policies. FitzGerald characterizes such actions as comprising a kind of 'remote control', whereby States effectively push borders out in order 'to keep the unwanted'—in this case, asylum seekers—'at arm's length'.[95] An overview of such externalization measures, which range from high-seas interdiction to the enactment of STC Agreements, reveals both their prevalence across North America and their common aim of containing asylum seekers outside of the country implementing them.

US externalization programmes date back at least to the early 1980s with the inception of its policy interdicting Haitian asylum seekers.[96] While it was apparent that this policy violated *non-refoulement* obligations, the US Supreme Court ruled that international and domestic protections did not apply extraterritorially.[97] The US and Canada also employ various overseas screening systems (eg Canada's 'Multiple Borders Strategy', previously discussed), including carrier sanctions and restrictive visa requirements, as a means of controlling migration.[98]

In an effort to prevent refugees from reaching its border, the US has, over the years, funded States' containment of asylum seekers and refugees to its south. Through programmes like Operation Coyote, *Programa Frontera Sur*, and the Mérida Initiative,

the US has provided money, equipment, and intelligence services in an effort to induce Mexico to secure its southern and northern borders. This exchange has included hundreds of millions of dollars of funding to support the deportation of fleeing Central Americans back to their home countries.[99] Similarly, the US has provided funds to refugee-producing Northern Triangle States in order to enlist their aid in keeping potential asylum seekers from fleeing in the first place.[100]

Asylum seekers in Mexico are often exposed to squalid conditions and extreme violence, including documented instances of kidnapping, murder, and *refoulement*. Nonetheless, the US has adopted policies designed to keep refugees waiting in Mexico, unable to cross into the US to pursue their claims. For example, US authorities have engaged in 'metering', that is, limiting the number of asylum seekers who may present themselves at southern border crossings, leaving many thousands waiting.[101] In 2018, the Trump administration began to implement the Migration Protection Protocol, popularly known as 'Remain in Mexico', further increasing waiting periods in Mexico and restricting asylum seekers' access to legal counsel and evidence.[102] Subsequently, the Trump administration attempted to close the border altogether, leaving even more refugees stranded in Mexico.[103]

STC practices, including the Safe Third Country Agreement between the US and Canada, as well as US treatment of Mexico and even Guatemala as 'safe countries', also contribute to the containment of asylum seekers and refugees, as is discussed extensively elsewhere.[104] These externalization measures generally reflect what Kahn, in his analysis of Haitian interdiction, described as 'a modular paradigm for extraterritorial migration control', whereby States craft policies that extend their sovereignty beyond their physical borders so as to control refugee migrations.[105] The more prevalent use of such measures threatens to undermine a core principle of the refugee protection scheme—by forestalling the arrival of refugees at a State's physical border, externalization policies seek to prevent refugees from making a protection claim altogether.

b. Procedural Erosions

As described above, in spite of its impressive legal commitments, Mexico's asylum system is weak and underfunded. In Canada, the protection of asylum seekers' right to an oral hearing, a foundational feature of the Canadian asylum determination system since the 1985 *Singh* decision, has come under attack.[106] In 2019, new Canadian legislation limited access to the ordinary asylum process,[107] instead only affording some applicants access to so-called Pre-Removal Risk Assessment (PRRA), a highly limited process. PRRA proceedings differ starkly from the normal asylum process, which was designed to comply with *Singh*, and have lower recognition rates.[108] There are similar developments in the US, where the right to a hearing is less firmly grounded than it is in Canada. A 2013 US Board of Immigration Appeals decision, *Matter of E-F-H-L-*, affirmed an asylum claimant's right to an oral hearing,[109] but this precedent was withdrawn by the US Attorney General in 2018.[110] Since that ruling, there have been reports of immigration judges denying claims without an oral hearing, based entirely on written records, in some cases without any warning to the asylum applicant.[111]

The erosion of procedural protections, in conjunction with the externalization practices discussed above, has resulted in an increasingly fragile protection regime in North America. Even asylum seekers who are able to circumvent the numerous externalization measures must still navigate a procedural framework that seems less and less likely to ensure a fair hearing on protection claims.

7. Conclusion

The regional dynamics explored in this chapter reflect continent-wide practices to contain and deflect refugees from States with 'rights-sensitive standards and procedures for assessing protection claims'[112] to those less willing and able to protect them. As the northern terminus of today's expanded refugee migrations, Canada deflects migrants to the US, the US deflects them to Mexico, and the US and Mexico both deflect them to the countries of the Northern Triangle. In signing onto the STC Agreement, Canada partici-

[112] Frelick, Kysel, and Podkul (n 100) 191.

pates in a 'race to the bottom', a position that sits uneasily with its role as 'norm exporter'. The US treatment of Mexico as a 'safe country' is dubious, given the high levels of violence against migrants and refugees in Mexico, along with Mexico's underfunded and inaccessible asylum system. However, Mexico's development of an asylum system has provided justification for US policies of turnbacks and returns at the US–Mexico border.

As commentators have noted, and as is evident in the development of gender asylum law, it may at times fall on legal advocates as well as low-level bureaucrats and decision-makers to pressure States to bring refugee protection in line with international and regional refugee protection regimes.[113] Those who challenge these policies include lawyers, law clinics, and NGOs representing individual clients and those bringing systemic challenges in an effort to hold governments accountable.[114] NGOs generally have been growing in number and strength—in all three countries.[115] In this hostile political climate, ensuring refugee protection may increasingly depend on activists, lawyers, and federal judges to ensure that international and constitutional protections are realized.

[113] Hamlin (n 21) 189.

[114] For example, NGOs have twice challenged the safe third country agreement between the US and Canada, arguing that the US's treatment of refugees disqualifies it from designation as a safe country of asylum.

[115] FitzGerald (n 95) 153 notes that in Mexico '[a]n increasingly robust group of national organizations monitors buffering policies [. . .]'. Further, these organizations work closely with UNHCR in Mexico, and receive support from civil society foundations based in the US, such as Ford, MacArthur, and Open Society which 'help fund national and transnational rights organizations and boost their reports up to an international level'. 'Within government, autonomous agencies, such as the *Comisión Nacional de los Derechos Humanos*, uncover information about abuses of people in transit. The work of these networks and the publicity they have generated about how the buffer works in practice make it more difficult for states to operate with a free hand and for their publics to pretend that they do not know what happens in their name'. In Canada, the eight-year-old Canadian Association of Refugee Lawyers has been increasingly active, as is the older Canadian Council for Refugees, the Canadian Council of Churches, and Amnesty International. In the US, a plethora of national and local NGOs provide individual representation, issue reports, and engage in systemic challenges. See eg Justine Coleman 'Lawsuit Challenges Trump Administration Policy Deporting Asylum-Seekers to Central American Countries', *The Hill* (15 January 2020) <https://thehill.com/regulation/court-battles/478504-lawsuit-challenges-trump-administration-policy-deporting-asylum> accessed 28 June 2020.

CHAPTER 17

REGIONAL REFUGEE REGIMES

Latin America

JOSÉ H FISCHEL DE ANDRADE*

1. Introduction

At the end of 2019, there were 20,444,819 refugees and 4,148,010 asylum seekers worldwide, but just 255,361 (1.25 per cent) and 935,251 (22.55 per cent), respectively, were in Latin American countries.[1] Despite its relatively small number of refugees, and inefficient refugee status determination (RSD) procedures, Latin America has played a rather innovative and creative role in the development of regional political asylum and refugee sub-regimes, and faces momentous challenges.

This chapter reviews both the historical contribution of Latin America's political asylee and refugee sub-regimes, and the region's protection situation and key challenges. It aims to answer the following questions: what is the concept of the prevailing asylum regime in Latin America and what are its sub-regimes? What is the current protection legal framework in the region? What is the institutional framework and its contribution to the protection of asylum seekers, political asylees, and refugees in Latin America? What are the major protection challenges currently faced by the region?

In terms of its regional coverage, the chapter considers that, of the 35 independent States of the Americas that are members of the Organization of American States (OAS), 20 may be regarded as Latin American States—that is, bearers of Spanish, Portuguese, or French cultural and linguistic heritage. These encompass three Caribbean States (Cuba, the Dominican Republic, and Haiti); seven Central American States (Costa Rica, El

* The views expressed in this chapter are those of the author and do not necessarily reflect those of UNHCR.

[1] See UNHCR Population Statistics Database <http://popstats.unhcr.org> accessed 15 October 2020.

Salvador, Guatemala, Honduras, Mexico, Nicaragua, and Panama); and 10 South American States (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela). Thus, the chapter excludes one Caribbean unincorporated territory of the United States (Puerto Rico), one non-Latin Central American State (Belize), one non-Latin South American State (Suriname), the overseas department of France in South America (French Guyana), and the remaining Caribbean States and British, Dutch, and French territories.

2. The Asylum Regime and Sub-regimes in Latin America

The concept of 'asylum regime' may—and indeed does—vary. This chapter adopts the following working definition of 'asylum regime':

> the ensemble of norms and practices that States and other relevant actors use when coordinating and/or cooperating in the adoption and/or implementation of the international and/or national actions aimed at regulating the protection which a State grants on its territory, or in some other place under the control of its organs, in the exercise of its sovereignty, to a person who seeks it.[2]

The asylum regime embraces sub-regimes—regarded by some experts as exotic and highly specialized[3]—and is wider than their sum. Its sub-regimes encompass not only the protection of those with refugee status,[4] but also of those who enjoy another sort of protective status, such as political asylee status, humanitarian protection, subsidiary or complementary protection, temporary protection, or any other legal status accorded by a State intended to protect the person from *refoulement* and accompanied by a set of rights and duties. The asylum regime is accordingly both a genus of which there are several species (sub-regimes) and a special regime, in the sense that it is a special branch of international law with its own principles, institutions, teleology, and set of rules.[5]

[2] See also Stephen D Krasner, 'Structural Causes and Regimes Consequences: Regimes as Intervening Variables' in Stephen D Krasner (ed), *International Regimes* (Cornell University Press 1983) 2; Institute of International Law, 'Résolutions adoptées par l'Institut à la Session de Bath, septembre 1950—I. L'asile en droit international public (à l'exclusion de l'asile neutre)' (1950) 43 (II) *Annuaire de l'Institut de droit international* 376 (author's translation).

[4] In other words, those persons whose 'refugeehood' (*la qualité de réfugié* or *la condición de refugiado*) has been recognized through a declaratory act by a State's authorities and a corresponding legal status has been granted through a constitutive act.

[5] ILC Report (n 3) 252.

In Latin America,[6] the asylum regime has two main sub-regimes, which are analysed in this chapter—political asylee (*asilado político*) and refugee (*refugiado*).[7] The central difference between these sub-regimes lies in the fundamentally distinct 'ensemble of norms and practices' they use, through the available legal and institutional frameworks, to define and protect those seeking asylum. The choice of the sub-regime to be used determines whether the asylum seeker is eligible for political asylee status or refugee status. The norms and practices regulating the political asylee sub-regime derive from the long-standing Latin American practice of both diplomatic and territorial political asylum, and have been codified in various legally binding regional instruments (discussed below). In turn, the norms and practices regulating the refugee sub-regime derive mostly from the Refugee Convention, its Protocol, and UNHCR's protection advocacy work (such as its guidelines, statements, and so on). Human rights legal instruments,[8] institutions, and practice also play a role, though limited, in both the political asylum and refugee sub-regimes.

3. The Legal Framework for the Protection of Political Asylees and Refugees in Latin America

a. Differences and Similarities between Political Asylees and Refugees

As defined by the Institute of International Law in 1950, asylum may be granted by a State on its territory. This form of protection is known as territorial asylum. The other variant, diplomatic asylum, is granted by a State in some other place under the control of its organs: 'outside its territory, particularly in its diplomatic missions (diplomatic asylum in the strict sense), in its consulates, on board its ships . . . and also on board its aircraft and of its military or para-military installations in foreign territory'.[9]

Those persons who seek protection against extradition, prosecution, or the consequences of prosecution by a State in which they are wanted for political reasons,

[6] In Europe, for instance, in addition to the refugee sub-regime there is the subsidiary protection sub-regime and the temporary protection sub-regime (see Chapter 19 in this volume).

[7] This author prefers 'regime' and 'sub-regime' to the use of 'institute' or 'institution', which is sometimes to be found in the Latin American literature ('*instituto del refugio*', '*instituto del asilo político*'). A legal institute or institution is a juridical notion that misses important constitutive elements of the definition of 'regime', such as the practices (in addition to the norms), the role of non-State relevant actors, and the means used (cooperation and/or coordination, as opposed to law-enforcement).

[8] See further Chapter 36 in this volume.

[9] UNGA, 'Question of Diplomatic Asylum: Report of the Secretary-General', UN doc A/10139 (Part II) (22 September 1975) para 1.1.

offences, or crimes, are 'political asylees'. Political asylees may also be refugees if the reasons for the protection satisfy the refugee definition. Notwithstanding the possibilities of overlap between the definitions of political asylee and refugee,[10] there are a number of conceptual differences. For instance:

- Refugees find themselves outside the territory of their country of nationality. This is not always the case for political asylees, who may enjoy diplomatic asylum in a consulate or embassy within the territory of his or her own country;
- For a person to be recognized as a refugee and granted refugee status, he or she must demonstrate a well-founded fear of persecution. This persecution may not have materialized at the time the refugee claim is lodged. By contrast, political asylees base their need for protection upon actual persecution, hot pursuit, and thus upon a sense of 'urgency';
- Refugees must demonstrate a fear of persecution for at least one of five grounds: race, religion, nationality, membership of a particular social group, or political opinion (although definitions in regional refugee instruments, and in UNHCR practice, are broader). The grounds for protecting political asylees, in contrast, are limited to political offences, political reasons, or political crimes;
- Refugees' enjoyment of their legal status may be supervised by UNHCR, which is the central institutional component of the global refugee regime. By contrast, political asylees do not benefit from an institutional supervisory mechanism (and the role of the Inter-American human rights mechanisms is rather limited);
- The procedure to protect a refugee is comprised of two parts (even though in most cases these occur simultaneously). First, a declaratory act by a State authority recognizes the asylum seeker's 'refugeehood' (namely, the fact that the person is a refugee because he or she satisfies the criteria of a refugee definition). This declaratory act, which recognizes a *de facto* situation, is then followed by a constitutive act, which grants refugee status (namely, the rights and duties that allow refugees to enjoy protection in the country of asylum). The procedure to protect a political asylee has, in turn, only one, constitutive part: the asylum seeker is granted protection by being given political asylee status.

Notwithstanding the differences between refugees and political asylees, the concepts are nonetheless complementary and share the common purpose of protecting them. However, the global refugee regime is generally regarded as being much more precise and progressive than the regional political asylee regime, which is narrower and inadequate to respond to the major forced migration challenges today.

[10] See further José H Fischel de Andrade, 'Regional Policy Approaches and Harmonization: A Latin American Perspective' (1998) 10 IJRL 389, 399; José H Fischel de Andrade, 'Forced Migration in South America' in Elena Fiddian-Qasmiyeh, Gil Loescher, Katy Long, and Nando Sigona (eds), *The Oxford Handbook of Refugee and Forced Migration Studies* (OUP 2014) 654–5.

b. Political Asylees

The political asylee sub-regime in Latin America is based on seven regional treaties that date from the late nineteenth to the mid-twentieth centuries. A first (and unsuccessful) attempt to regulate and define the concept of asylum in South America was made during a congress in 1867.[11] But the initial codification of the practice that progressively developed in Latin America—to grant territorial and diplomatic asylum to those politically persecuted in the region—only came to fruition during the 1889 First South American Congress on Private International Law. One of the treaties adopted in the congress, the 1889 Montevideo Treaty on International Penal Law,[12] deals with both territorial asylum (articles 15 and 16) and diplomatic asylum (article 17), and includes an exclusion clause for navy deserters (article 18). Only five South American States are parties to the 1889 Montevideo Treaty, namely Argentina, Bolivia, Paraguay, Peru, and Uruguay.

The ensuing treaty codifying regional practice was the 1928 Havana Convention on Asylum.[13] It also regulates matters pertaining both to territorial and diplomatic asylum, including the granting of asylum to political offenders in legations, warships, military camps, or military aircraft; and the exclusion of persons accused or convicted of common crimes, as well as deserters from the army or navy. Given that Haiti and the Dominican Republic denounced the 1928 Havana Convention, there are currently 14 parties to it: Brazil, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, and Uruguay.

Subsequently, in 1933, the Montevideo Convention on Political Asylum was adopted, containing only three substantive articles on asylum.[14] Article 1 replaced its counterpart in the 1928 Havana Convention with regard to the exclusion of asylum seekers accused of common crimes who seek asylum in legations, warships, military camps, or airships, and withdrew the reference to territorial asylum. Article 2 provides that the State competent to decide on the non-political nature of crimes that may have been committed prior to the asylum request is the State that offers asylum. Article 3, for the first time, notes the humanitarian character of political asylum and that it is not subject to reciprocity. The 14 States parties to the 1933 Montevideo Convention are those of the 1928 Havana Convention, with the exception of Uruguay, which is only party to the latter, and Chile, which is party only to the former.

In 1939, the Montevideo Treaty on Asylum and Political Refuge was adopted.[15] Once again, it dealt with both territorial and diplomatic asylum, but for the first time the

[13] Convention on Asylum (adopted 20 February 1928, entered into force 21 May 1929) OAS Official Records, OEA/Ser.X/I, Treaty Series 34.

[14] Convention on Political Asylum (adopted 26 December 1933, entered into force 28 March 1935) OAS Official Records, OEA/Ser.X/I, Treaty Series 34.

[15] Treaty on Political Asylum and Refuge (adopted 4 August 1939) OAS Official Records, OEA/Ser.X/1, Treaty Series 34.

provisions (15 substantive articles) comprehensively codified most aspects of political asylum. However, only Paraguay became a party to it and the treaty therefore never entered into force.

A year later, during the Second South American Congress on Private International Law, the 1940 Montevideo Treaty on International Penal Law was adopted.[16] Unlike its 1889 predecessor, it does not make any direct reference to asylum. Nevertheless, several provisions of Title II (On Extradition) are relevant to asylum and may, therefore, guide its seven States parties (Argentina, Bolivia, Brazil, Colombia, Paraguay, Peru, and Uruguay).

Of the five then extant treaties, only two, the 1928 Havana and 1933 Montevideo Conventions, were entirely devoted to regulating asylum—and in force. Their provisions, however, were not comprehensive either in codifying the region's longstanding practice, or in their application to a variety of potential scenarios. For instance, in January 1949 the Colombian Ambassador in Lima granted diplomatic asylum to Victor Raúl Haya de la Torre, head of a political party in Peru. The ensuing dispute between Colombia and Peru was brought to the International Court of Justice (ICJ). When the ICJ delivered its decisions on the *Asylum* case in 1950 and the *Haya de la Torre* case in 1951, it was clear that the legal framework for the protection of political asylees in Latin America was unsatisfactory. In fact, in analysing the 1928 and 1933 conventions and the region's customary law, the ICJ stated that the existence, either regionally or locally, of a constant and uniform practice on various asylum-related issues had not been proven; that an obligation upon the territorial State to issue a *sauf-conduit*[17] existed only in certain conditions; that the facts disclosed too much uncertainty, contradiction, and fluctuation to make it possible to discern a usage of diplomatic asylum peculiar to Latin America and accepted as law; and that asylum in Latin America was an institution that owed its development largely to extra-legal factors.[18]

Following these cases, the Latin American States decided to codify, and to a certain extent, progressively develop the regional norms pertaining to political asylum. They did so by adopting the 1954 Caracas Conventions on Diplomatic Asylum and on Territorial Asylum,[19] both of which are more concerned with States' rights than with an asylum seeker's right to apply for asylum. The latter has 11 States parties (Brazil, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Mexico, Panama, Paraguay, Uruguay, and Venezuela), while the former has 13 (as above, apart from Colombia, plus Argentina, Peru, and the Dominican Republic).

[16] Treaty on International Penal Law (adopted 19 March 1940) OAS Official Records, OEA/Ser.X/1, Treaty Series 34.

[17] A *sauf-conduit* is a pass or document that an authority issues to a person allow them to traverse the territory under its jurisdiction without harassment, bodily harm, or detention.

[18] *Colombian-Peruvian Asylum Case* (Merits) [1950] ICJ Rep 266, 277–9, 286.

[19] Convention on Diplomatic Asylum (adopted 28 March 1954, entered into force 29 December 1954) 1438 UNTS 101; Convention on Territorial Asylum (adopted 28 March 1954, entered into force 29 December 1954) 1438 UNTS 129.

Notwithstanding the existence of various regional treaties regulating distinct aspects of territorial and diplomatic political asylum, Latin America's most comprehensive legal framework on the subject today is the 1954 Caracas Conventions.

c. Refugees

With respect to the global refugee regime, 18 of the 20 Latin American States are parties to both the Refugee Convention and its Protocol. Venezuela is a party only to the Protocol; Cuba is not a party to either. Although the global refugee regime is virtually the same for all States that are parties to the Refugee Convention and/or its Protocol, the refugee definitions that are to be found in domestic legislation vary considerably between Latin American States. This is a result of a decades-long and uncoordinated process whereby Latin American States have broadened the definition of a 'refugee', as explained below. In so doing, they changed the normative structure of the refugee regime, producing a change *of*—as opposed merely to *within* a—regime.[20]

The change of regime began in the 1960s in Africa and continued into the 1980s as millions of people sought asylum across Africa, Asia, and the Americas. At the global level there were attempts to recognize that those in need of protection as refugees went beyond those who met the 'refugee' definition of the 1951 Convention, and this was captured in expanded 'refugee' definitions.[21]

Within Latin America, the need for a broader refugee definition stemmed from the development and diversification of conflict in Nicaragua, El Salvador, Guatemala, and Honduras, which resulted in the displacement of large sections of populations (particularly between 1981 and 1985).[22] Those in need of protection were forcibly displaced *en masse*, mostly by the consequences of civil war and foreign aggression, and fled in their hundreds of thousands to neighbouring States.[23] Expanded regional refugee definitions were drafted at a UNHCR-sponsored 1981 Mexico Colloquium[24] and subsequent 1983 La Paz seminar[25] to address the challenges affecting the region. A third

regional event, also sponsored by UNHCR, was held in 1984 in Cartagena de Indias, Colombia.[26] The 1984 Cartagena colloquium aimed at 'studying the legal and humanitarian aspects of the refugee situation in Central America'[27] and never intended to create binding law, attended as it was by a combination of State and unofficial delegations from the region and UNHCR. Nevertheless, like the previous colloquia,[28] it adopted a conclusion concerning the definition of 'refugee', namely:

> the definition or concept of a refugee *recommended* for use in the region is one that, in addition to containing the elements of the 1951 Convention and the 1967 Protocol, also considers refugees persons who have fled their country because their lives, safety or freedom have been threatened by *generalized violence, foreign aggression, internal conflicts, massive violation of human rights or other circumstances which have seriously disturbed public order*.[29]

The early 1980s' need of a regime change in Latin America was not missed by UNHCR. It was in those days that it started playing a significant and decisive role in the region as a norm entrepreneur,[30] acknowledging both the factual need of a change of regime that would allow for the protection of forced migrants who would otherwise not be protected as refugees, and Central American States' self-serving interests in addressing the geopolitical situation linked to thousands of forced migrants on their territories. As a norm entrepreneur, UNHCR directly contributed to the creation, endorsement, dissemination, and implementation of the principles and norms espoused in the 1984 Cartagena Declaration, in particular its expanded definition of 'refugee'. It did so by persuading States to both use the Cartagena Declaration in a sensible and realistic fashion based on practical considerations, and to regard it not as a legal document, which it is not, but rather as a 'conceptual framework for refugee protection policy'.[31] In essence,

In the Spanish language original: 'la definición o concepto de refugiado *recomendable* para su utilización en la región es aquella que además de contener los elementos de la Convención de 1951 y el Protocolo de 1967, considere también como refugiados a las personas que han huido de sus países porque su vida, seguridad o libertad han sido amenazadas por *la violencia generalizada, la agresión extranjera, los conflictos internos, la violación masiva de los derechos humanos u otras circunstancias que hayan perturbado gravemente el orden público*' (emphasis added).

[30] In the theory of international relations literature 'norm entrepreneur' is defined as an individual or organization that sets out to change the behaviour of others; see Ann Florini, 'The Evolution of International Norms' (1996) 40 International Studies Quarterly 363, 375.

[31] UNHCR, 'Note on International Protection', UN doc A/AC.96/830 (7 September 1994) para 36.

it was a highly pragmatic instrument designed to accord a legal status to foreigners in need of protection who did not fall under the refugee definition in the Refugee Convention.

The Cartagena Declaration's broad definition of 'refugee' was not innovative: its wording did not differ substantially from definitions adopted by previous colloquia (or reflected in other regional instruments, such as in Africa). However, unlike the documents produced by previous seminars and colloquia, the Cartagena Declaration had an unprecedented impact in Latin America, both on policy, legal developments, and the conduct of protection policy advocacy. Yet, with the passage of time, its practical, political, and legal relevance has become obsolete. The area in which the Cartagena Declaration remains relevant is its role as an advocacy instrument and an effective advocacy model.[32]

The multiplying effect resulting from the Cartagena Declaration's tangible achievements, both in the area of policy and legal development and the conduct of protection policy advocacy, led to a tradition of *ad hoc* and *sui generis* UNHCR-led events, regional fora, and programmes in Latin America.[33] These resulted in the adoption, *inter alia*, of the 1994 San José Declaration on Refugees and Displaced Persons, the 2000 Rio de Janeiro Declaration on the Institution of Refuge, the 2004 Mexico Declaration and Plan of Action to Strengthen the International Protection of Refugees in Latin America, the 2010 Brasília Declaration on the Protection of Refugees and Stateless Persons in the Americas, the 2012 Fortaleza Mercosul Declaration of Principles on International Refugee Protection, and the 2014 Brazil Declaration 'A Framework for Cooperation and Regional Solidarity to Strengthen the International Protection of Refugees, Displaced and Stateless Persons in Latin America and the Caribbean' and respective Plan of Action.[34]

d. Human Rights

The legal framework in Latin America for the protection of political asylees and refugees also draws on the regional human rights regime, the two most relevant instruments being the 1948 American Declaration of the Rights and Duties of Man and the 1969 American Convention on Human Rights.[35]

[34] All listed declarations are available at <https://www.refworld.org>.

[35] American Declaration of the Rights and Duties of Man, OAS Res XXX adopted by the Ninth International Conference of American States (1948) reprinted in Basic Documents Pertaining to Human Rights in the Inter-American System OEA/Ser L V/II.82 Doc 6 Rev 1, 17 (1992); American Convention on Human Rights (adopted 22 November 1969, entered into force 18 July 1978) 1144 UNTS 123.

The 1948 American Declaration preceded the adoption of the UDHR by eight months (which contained the first global provision on the right to seek and enjoy asylum, in article 14). Article XXVII of the American Declaration states that: 'Every person has the right, in case of pursuit not resulting from ordinary crimes, to seek and receive asylum in foreign territory, in accordance with the laws of each country and with international agreements'. Even though non-binding, the provision nevertheless constitutes a recommendation to States to base their legal practices on its principles. To some extent, State practice did come to reflect these principles, given that this provision was a mere codification of a regional practice in the region.

The 1969 American Convention enshrines two provisions that are directly relevant to the regional refugee sub-regime: article 22(7) (on the right to seek and be granted asylum) and article 22(8) (reflecting the principle of *non-refoulement*). The impact of these two provisions is discussed below. Furthermore, articles 1 (obligation to respect rights), 2 (domestic legal effects), 8 (right to a fair trial), and 25 (right to judicial protection) may, when read together with articles 22(7) and 22(8), give rise to a series of obligations in the context of RSD procedures. Of the 20 Latin American States, only Cuba and Venezuela are not parties to this treaty.

e. National Legislation

In addition to the global and regional instruments, protection for asylees is generally found within national constitutions,[36] while the legal framework for the protection of political asylees and refugees in Latin America is usually found in domestic legislation.[37]

Most national legislation on the regional political asylee sub-regime is based on the 1954 Caracas Conventions. By contrast, the vast majority of Latin American States have been inspired by the Refugee Convention and its definition of 'refugee', as well as by the Cartagena Declaration, when it comes to their domestic laws and practices on the regional refugee sub-regime. While some States have directly imported the definition adopted in the Cartagena Declaration in their national legislation, others use different wording; only a few have not incorporated a broad definition in their domestic law.[38]

[36] For a list of the provisions in the Latin American constitutions on 'asylum', see 'Table 9: The Right to Asylum Is Included in the Constitution (*Protección/Buenas prácticas*)' <https://acnur.org> accessed 15 October 2020.

Latin American States that Have Incorporated It in Their National Legislation (*Protección/Buenas prácticas*)' <https://acnur.org> accessed 15 October 2020.

4. Institutional Framework

a. Political Asylee Sub-regime

There is no institutional framework at the Latin American regional level mandated with the direct supervision or implementation of the norms and practices that States and other relevant actors use when coordinating and/or cooperating in the adoption and implementation of regional actions aimed at regulating the protection of political asylees. None of the binding instruments on political asylum (noted above) contemplates such a body.

As such, any institutional frameworks for the political asylee sub-regime exist only at the national level. As a rule, the Ministry of the Interior or the Ministry of Justice is responsible for adjudicating political asylee claims and granting political asylee status. Their decisions are, more often than not, linked to political considerations rather than to an objective, legal analysis.

b. Refugee Sub-regime

Just like the political asylee sub-regime, the refugee sub-regime in Latin America also lacks a regional framework to directly supervise or implement the norms and practices that States and other relevant actors use when coordinating and/or cooperating in the adoption and implementation of regional actions aimed at regulating the protection of refugees. Thus, the refugee sub-regime's institutional framework also only exists at the national level.

Regional initiatives by UNHCR have been instrumental in shaping the domestic institutional framework. The most relevant of these is UNHCR's *Guidelines for the Harmonization of Legislation and National Procedures with the Norms and Principles of International Refugee Law*, which were presented during a UNHCR-run workshop in 1995 in Buenos Aires, attended by government representatives from Argentina, Bolivia, Brazil, Chile, Paraguay, Peru, and Uruguay, as well as NGO representatives, experts, and UNHCR staff.[39] The 1995 Guidelines recommended that national committees or commissions on refugees be created with responsibility for both refugee policy and eligibility determination, and be comprised of members from various ministries and also civil society. When Latin American States did start to develop domestic legislation on refugees, mostly in the late 1990s and 2000s, the majority of the committees or commissions were inspired by the 1995 Guidelines. They were estab-

[39] UNHCR, 'Guidelines for the Harmonization of Legislation and National Procedures with the Norms and Principles of International Refugee Law' (1995), reproduced in Irigoin Barrene (ed), *Derecho de Refugiados en el Sur de América del Sur* (1996).

lished within the Ministries of the Interior, Justice, or Foreign Affairs and were composed, to a varying degree, of representatives from the Ministries of the Interior, Justice, Foreign Affairs, Defence, Labour, Health, Education, Family, and Religion, as well as other actors such as the migration authority, the General Attorney's Office, NGOs, the Catholic Church, the Evangelical Church, and UNHCR—the latter often as an observer without the right to vote.[40] The structure and functioning of these committees and commissions are a major challenge in Latin America, as discussed in Section 5.a below.

c. Human Rights Sub-regime

In the absence of an institutional framework at the Latin American regional level, mandated with the direct supervision or implementation of the norms and practices that States and other relevant actors use when coordinating and/or cooperating in the adoption and implementation of regional actions aimed at regulating the protection of asylees in general, and political asylees and refugees, in particular, the institutional framework made available by the Inter-American human rights sub-regime has acquired some relevance.

The organs and human rights machinery established regionally by the OAS are meant to implement the legal framework of the regional human rights sub-regime, of which the two most relevant instruments are the 1948 American Declaration and the 1969 American Convention. In turn, the two most relevant institutions of the Inter-American human rights sub-regime are the Inter-American Commission on Human Rights (based in Washington, DC) and the Inter-American Court of Human Rights (based in San José in Costa Rica).[41]

The Commission was created in 1959. It first inspected the human rights situation in an OAS Member State in 1961, and in 1965 its seven commissioners were expressly authorized to examine specific cases of human rights violations. In 1969, the guiding principles enshrined in the 1948 American Declaration were taken, reshaped, and restated in the legally binding 1969 American Convention, which established the Court.

In its early years, in the mid-1960s, the Commission identified as a major challenge the lack of domestic legislation that adequately recognized and defined the situation of 'political refugees', the non-existence of an Inter-American convention that contemplated and regulated their situation, and the absence of an organization in the

[40] cf 'Cuadro 12: Mecanismos Nacionales para la Determinación de la Condición de Refugiado (*Protección/Buenas prácticas*)' <https://acnur.org> accessed 15 October 2020.

[41] These are described here as Commission and Court, respectively. The former may make decisions on cases and precautionary measures and issue annual, country, and thematic reports; the latter has contentious and consultative jurisdiction.

Inter-American system empowered to coordinate their protection and assistance.[42] Despite recommendations by the Commission to address this, a lack of political will within Latin American States meant that domestic legislation was not adopted, and no organization was established to coordinate protection and assistance work.[43]

In the early 1980s, and as a result of the problems raised by large-scale influxes of refugees in Central America, there was some momentary interest in exploring the potential role that the Inter-American human rights sub-regime could play in the refugee regime in Latin America. This interest surfaced in the UNHCR-sponsored 1981 Mexico Colloquium 'Asylum and International Protection of Refugees in Latin America', whose recommendations 3, 4, 5, and 7 addressed the relevance of using and involving the OAS, the Commission,[44] and the Court in refugee matters.[45] These recommendations were well received by the regional human rights mechanisms and the Commission, in particular, which for the first (and only) time devoted an entire sub-chapter to 'Refugees and the Inter-American System' in its annual report.[46] It referred not only to the 1981 Mexico Colloquium and its recommendations, but also proposed to the OAS General Assembly that the definition of 'refugee' applied in the region should be broadened to encompass the grounds mentioned in the colloquium.[47]

However, it was only in the late 1990s that the Commission—whose reports and recommendations enjoy moral force but are not legally binding—advanced the analysis

[42] Inter-American Commission on Human Rights, 'Informe sobre Refugiados Políticos en América', OEA/Ser.L/V/II.11, doc 7 rev.2 (2 November 1965) 75–6. When referring to 'political refugees' the Commission introduced a misconceived idea, based on a false understanding that endured for decades, that 'refugees', as opposed to 'political asylees', move in large numbers and are destitute; cf ibid 75. *A contrario sensu*, two relevant examples of large-scale granting of political asylee status were when in late 1973, early 1974 in Chile over 2,000 persons enjoyed diplomatic asylum as political asylees (cf Comisión Internacional de Juristas, *Aplicación de las Declaraciones y Convenciones Internacionales referentes al Asilo en América Latina* (Ginebra 1975) 149) and when in 1980 over 10,000 Cubans enjoyed diplomatic asylum in Havana's Peruvian Embassy. For further criticism of the pseudo-difference between political asylees and refugees based on the latter's rural origin, limited economic resources, low level of education, and political irrelevance, cf Jaime Ruiz de Santiago, 'Contribución de Héctor Gros Espiell al desarrollo del Derecho Internacional de los Refugiados' in *Héctor Gros Espiell—Amicorum Lieber*, vol 2 (Bruylant 1997) 1370.

[43] A member of the Inter-American Juridical Committee (CJI) recommended that the Commission itself assume the role of protection and assistance coordination but this did not occur (see CJI, 'Anteproyecto de Convención Interamericana sobre Refugiados' in *Trabajos Realizados por el Comité Jurídico Interamericano durante su Periodo Extraordinario de Sesiones (Abril 1966)*, OEA/Ser.I VI.2—CIJ-85 (Unión Panamericana/OEA1966) 47), and a draft Convention on Refugees proposed by the CJI in 1966 was stillborn.

[44] The only Commission member who attended the 1981 Mexico Colloquium mentioned clearly, in his conclusion no. 14, the Commission's competence to write up reports on the situation of asylees and refugees in the Americas; cf Carlos A Dunshee de Abranches, 'Conclusiones y Recomendaciones' in *Asilo y Protección Internacional de Refugiados en América Latina* (Memorias del Coloquio de Ciudad de México, 11–15 May 1981) (Universidad Nacional Autónoma de México 1982) 202.

[45] *Asilo y Protección Internacional de Refugiados en América Latina* (Memorias del Coloquio de Ciudad de México, 11–15 May 1981) (Universidad Nacional Autónoma de México 1982) 207–8.

[46] Inter-American Commission on Human Rights, 'Informe Anual de la Comisión Interamericana de Derechos Humanos 1981–1982', OEA/Ser.L/V/II.57, doc 6 rev.1 (20 September 1982) Chapter VI, B.

[47] ibid Chapter VI, B, 11, d.

of the right to seek and receive asylum, particularly in contentious cases and precautionary measures. From 1997 onwards, with the *Haitian Interdiction case*, and in light of article XXVII of the 1948 American Declaration, the Commission set an important benchmark in the extra-territorial application of the principle of *non-refoulement* in holding that it has 'no geographical limitations'.[48] It also interpreted the content of the right to asylum as the 'right of a person seeking refuge to a hearing in order to determine whether that person meets the criteria' to qualify as a refugee.[49] The Commission has held that, in order to facilitate the interpretation of the right to seek and receive asylum established in the Inter-American human rights instruments, the latter must have as their main reference point the treaties on the protection of refugees and asylum seekers,[50] thereby establishing a clear link between the asylum and human rights (sub-) regimes.

The Commission's reports have also covered a number of matters relating to asylum and refugees.[51] For instance, in a report on the human rights of asylum seekers in the Canadian RSD system, the Commission stated that the right to asylum entails the procedural right of the claimant to be heard in presenting the application, thus setting an important procedural benchmark.[52] More recently, the Commission has reported on the human rights of refugee and migrant families and unaccompanied children in the United States.[53] Despite their focus on North American States, both reports are relevant to Latin American States—indeed, to all States from the Americas—since there are more members of the Commission (36) than of the OAS itself (35), or even States parties to the 1969 American Convention (24).

The Court has only twice had occasion to address the interpretation and application of articles 22(7) and 22(8) of the 1969 American Convention, respectively concerning the right to seek and be granted asylum, and the principle of *non-refoulement*. The first was the *Case of the Pacheco Tineo Family v Plurinational State of Bolivia*, concerning a family of asylum seekers from Peru who were removed by Bolivia before their refugee claim was properly determined.[54] In considering the obligation of a State to give proper consideration to asylum requests and to respect the principle of *non-refoulement*, the Court established a series of minimum guarantees with respect to asylum, deportation,

expulsion, and extradition proceedings, which it derived from the 1969 American Convention. The importance of this decision goes beyond the *cas d'espèce* as it is the result of a well sought-after 'universality' of solutions, which harmonizes the 1969 American Convention not only with various regional but also with global norms and standards, including UNHCR guidelines. The Court's furtherance of third-party effectiveness of the determination of refugeehood and granting of refugee status by one State, of the application of the *pro homine* principle, and of the search for the application of the most protective legal instrument, can serve as an example to other regions and to the international community.[55]

The second time the Court considered articles 22(7) and 22(8) of the 1969 American Convention, as well as article XXVII of the 1948 American Declaration, was in its *Advisory Opinion OC-25/18* on 'The Institution of Asylum and Its Recognition as a Human Right in the Inter-American System of Protection' in 2018. The Court, referring to the scope of article 22(7) of the 1969 American Convention and article XXVII of the 1948 American Declaration, stated that the human right to seek and receive asylum can be enjoyed only in a 'foreign territory', thus excluding a human right to seek and be granted diplomatic asylum.[56] According to the Court, the right to seek and receive asylum includes refugee status and territorial asylum, as if these existed in parallel.[57] As for article 22(8) of the 1969 American Convention, the Court stated that the principle of *non-refoulement* is not exclusive to the refugee sub-regime and is therefore enforceable in respect of any foreigner over whom the State concerned exercises authority or has effective control. The Court further stated that the principle of *non-refoulement* not only requires that a person not be removed, but also imposes positive obligations on States, such as taking diplomatic measures to request the territorial State to issue a laissez-passer (*salvoconducto*), or to take other measures under its authority.[58] Finally, the Court advised that, in accordance with international law, States must ensure that the human rights enshrined in the 1969 American Convention and other human rights instruments are guaranteed to refugees and asylum seekers.[59]

Aside from these specific matters, the Court has considered some other cases relevant to the broader issue of forced migration, such as the 1998 *Case of Castillo-Páez v Peru*,[60]

[55] Fernando M Mariño Menéndez, 'A propósito del caso *Familia Pacheco Tineo* ante la Corte Interamericana de Derechos Humanos' in Luciano J Parejo Alfonso and others (eds), *Los retos del Estado y la Administración en el siglo XXI: libro homenaje al profesor Tomás de la Quadra-Salcedo Fernández del Castillo*, vol 1 (Ed Tirant lo Blanch 2017) 338.

[56] *The Institution of Asylum and Its Recognition as a Human Right in the Inter-American System of Protection (Interpretation and Scope of Articles 5, 22.7 and 22.8 in relation to Article 1(1) of the American Convention on Human Rights)*, Advisory Opinion OC-25/18 (30 May 2018) 52.

[57] ibid 68. This view is disputed throughout this chapter, whose author considers that territorial asylum includes political asylee status and refugee status, in addition to other protective statuses, such as subsidiary protection status, temporary protection, and humanitarian protection.

[58] ibid 67. [59] ibid 51, 63. See further Chapter 36 in this volume.

[60] *Castillo-Páez v Peru* (Reparations and Costs), Inter-American Court of Human Rights Series C No 43 (27 November 1998).

the 2005 *Case of the Mapiripán Massacre v Colombia*,[61] and the 2006 *Case of the Ituango Massacres v Colombia*.[62] In *Advisory Opinion OC-18/03* on 'Juridical Condition and Rights of Undocumented Migrants', the Court established that the right to due process is one of the minimum guarantees that should be offered to any migrant, irrespective of their migratory status, and—most importantly—that the migratory status of a person cannot constitute a justification for depriving them of the enjoyment and exercise of human rights.[63] This rationale has also been used in RSD procedures.[64]

5. Selected Contemporary Challenges

a. National Commissions and Committees on Refugees

The national commissions and committees on refugees of most Latin American States face two major challenges. The first is structural and has to do with its functioning; the second pertains to the use of broader 'refugee' definitions reflected in domestic law.

With regard to the structural challenge, the current eligibility procedures in most Latin American States allow for representatives from various ministries and other entities to be involved in the adjudication of asylum seekers' protection claims.[65] Most members are not experts in refugee law, however, and many are poorly trained, lack independence, and are not readily available for eligibility meetings. Furthermore, even though some commissions and committees meet periodically (but not as often as necessary to clear the frequently large backlog), they are rarely efficient or sufficiently funded and staffed. They also use accelerated procedures that do not comply with internationally established due process guarantees, and some RSD procedures are not regulated by domestic law.[66]

One reform that could make these national committees or commissions more agile and efficient would be to distinguish more clearly between their policy and operational mandates. For instance, plenary meetings, to be attended by all members, should be convened only to discuss and determine policy decisions that require the view and involvement of various actors from the government and civil society. By contrast, the determination of asylum seekers' eligibility for refugee status should be conducted by a smaller group of professional and trained case officers whose eligibility interviews and opinions would be reviewed and decided by a senior eligibility officer or the committee's

or commission's chairperson. The assessment of refugee status is a highly technical matter that should not be adjudicated by a forum of inexpert, untrained, and sometimes politically biased individuals.

The second major challenge concerns the use of broad 'refugee' definitions in national law. An unfortunate aspect of the national legislation in the majority of Latin American States is that even though most already contain a broader definition than the Refugee Convention, it rarely replicates the one in the Cartagena Declaration—contrary to the assumptions of many scholars and even practitioners. This is why the Cartagena Declaration has far greater rhetorical than practical influence.[67] There is therefore a need for country-specific interpretive guidelines on the range of language used in national legislation across the region.[68] Inter-American human rights institutions, such as the Commission, the Inter-American Juridical Committee (CJI), or the Inter-American Institute of Human Rights, could work jointly with UNHCR and universities in Latin America to draft such guidelines.

b. Venezuela

For the first time in 40 years, Latin America is experiencing a major displacement crisis. On 31 December 2019 there were over four million Venezuelan asylum seekers, refugees, and 'displaced abroad'. The vast majority of them are hosted by Latin American countries, in particular Colombia (1,780,486), Peru (861,665), Chile (455,494), Ecuador (388,861), Brazil (248,105), and Argentina (176,370).[69] As in many contexts, it is increasingly difficult to distinguish between voluntary and forced migrants.[70] Venezuelans have left their homes for multiple reasons, including lack of access to food and medicine, loss of income, and the absence of effective national protection systems, and the situation has been politicized by many actors. However, the calamitous political and economic situation prevailing in Venezuela means that most who have left are asylees in search of protection (*non-refoulement* and a 'protective' legal status).

The problem is that, for various reasons, Latin American States apply different asylum regime norms and use different practices in relation to Venezuelan asylum seekers.[71] With regard to the refugee regime norms, very few Venezuelans meet the refugee definition of the Refugee Convention, and Latin American States have rarely used the

[70] See Chapter 7 in this volume.

[71] See Chapter 19 in this volume.

broad definitions adopted in their domestic legislation. UNHCR issued a Guidance Note to encourage States in the region to use the broad definition of 'refugee' when processing the protection claims of Venezuelans,[72] and, furthermore, to do so through group-based determination.[73] UNHCR also recommended that States bypass the generally recommended sequential approach that requires a preliminary assessment of the applicability of the Refugee Convention, and instead directly examine the applicability of the broader refugee definition.[74] As for the different asylum regime practices applicable to Venezuelans, UNHCR surveyed 12 Latin American States and found huge differences between the rights accorded to asylees (which depend on the legal status they are granted), the duration of the various legal statuses, and the costs with which asylum seekers are encumbered.[75]

In September 2018, a Joint UNHCR–IOM Special Representative for Venezuelan Refugees and Migrants was appointed by the UN Secretary-General to promote a coherent and harmonized regional approach to the Venezuela situation in coordination with national governments, international organizations, and other relevant stakeholders. Furthermore, since Venezuelan movements have affected many States due to the sheer numbers, governments in the region have established mechanisms for coordinating their responses and facilitating the legal, social, and economic inclusion of Venezuelans. Chief amongst them is the Quito Process, a multilateral initiative of initially 11 Latin American States (Argentina, Brazil, Chile, Colombia, Costa Rica, Ecuador, Mexico, Panama, Paraguay, Peru, and Uruguay), plus IOM and UNHCR, which aims to harmonize domestic policies in receiving States.[76]

6. Conclusion

Latin America has played a rather innovative and creative role in the development of regional political asylum and refugee regimes, but much remains to be done to ensure their effective implementation. Furthermore, the legal frameworks are deficient. First, the 1954 Caracas Conventions regulating political asylum are concerned more with the rights of States than with those of asylum seekers and political asylees. Secondly, the 'broad' refugee definitions contained in the legislation of most Latin American States rarely replicate the refugee definition in the Cartagena Declaration (contrary to

[72] According to UNHCR, 'the majority of Venezuelan nationals are in need of international protection under the criteria contained in the Cartagena Declaration on the basis of threats to their lives, security or freedom resulting from the events that are currently seriously disturbing public order in Venezuela': UNHCR, 'Guidance Note on International Protection Considerations for Venezuelans—Update I' (May 2019) para 5 <https://www.refworld.org/docid/5cd1950f4.html> accessed 15 October 2020.

the assumptions of many scholars and even practitioners), thus giving the latter rhetorical rather than practical influence. Thirdly, the institutional protection framework could be improved at the national level. For instance, the adjudication of claims by asylum seekers applying for political asylee status could be more objective and less subject to political considerations, and structural reforms and investment in professional and technical staff could improve the efficiency of the national committees or commissions processing applications for refugee status. Finally, situations such as the Venezuela crisis highlight the need to streamline the region's asylum regime norms and avoid the use of different practices. Harmonized approaches, therefore, should be agreed upon and implemented.

CHAPTER 18

REGIONAL REFUGEE REGIMES

Middle East

MAJA JANMYR AND DALLAL STEVENS*

1. Introduction

This chapter focuses on the Middle East as a region. While it is important to acknowledge at the outset that the Middle East (and Near East) is a Western and contested construct, for the purposes of the discussion, the following States are included in the analysis: Bahrain, Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Palestine, Qatar, Saudi Arabia, Syrian Arab Republic (Syria), Turkey, United Arab Emirates (UAE), and Yemen. UNHCR's definition excludes Egypt, Iran, Palestine, and Turkey, but these are addressed here to provide a broader understanding and comparison. In addition, there is limited analysis of refugee law and policy in Iran, while Turkey, a country that is described alternatively as in Western Asia, the Middle East, and Europe, provides a very useful comparison in its approach to refugees, particularly in relation to Syrians.

In this chapter, it is not possible to cover all States in detail. The aim is to provide an overview of some key issues and highlight developments to assist the reader in understanding the refugee and human rights contexts of the Middle East.

2. Legal Framework

a. International Refugee Law

The Middle East provides a fascinating arena for the examination of international law and its application due to the range of States and varied approaches adopted towards

* The authors thank Martin Jones, Ben Thomas White, Samar Muhareb, workshop participants, and the editors for feedback on earlier drafts of this chapter.

refugee and human rights law. Geographically, it can be described as a region, but historically, nationally, culturally, religiously, the area is diverse and such diversity is reflected in the treatment of asylum seekers and refugees. Broadly speaking, most Arab States are not party to the Refugee Convention or Protocol, except for Yemen and Egypt.

Yemen acceded to the Refugee Convention and Protocol on 18 January 1980. Egypt acceded to the Refugee Convention and Protocol on 22 May 1968 and entered reservations in respect of articles 12(1), 20, 22(1), 23, and 24.[1] Iran, Israel, and Turkey are also Contracting States, but all have entered reservations. Iran acceded to the Refugee Convention and Protocol on 28 July 1976. It considers the stipulations in articles 17, 23, 24, and 26 to be recommendations only and has limitations on the most favourable treatment provisions of the Convention. Israel signed the Refugee Convention on 1 August 1951 and ratified it on 1 October 1954. It acceded to the Protocol on 14 June 1968. Israel entered statements and reservations to the Refugee Convention, such that articles 8 and 12 do not apply; article 28 is limited by national law; and permits issued under article 30 are discretionary.[2] Turkey signed the Refugee Convention on 24 August 1951 and ratified it on 30 March 1962. It acceded to the Protocol on 31 July 1968. Turkey also entered a reservation to the effect that 'no provision of this Convention may be interpreted as granting to refugees greater rights than those accorded to Turkish citizens in Turkey'. Significantly, Turkey maintains its geographical limitation under article 1B of the Convention, according to which it applies the Convention only to persons who have become refugees as a result of events occurring in Europe.

While this chapter has adopted a definition of 'the Middle East' that excludes North African States (except for Egypt), it should be noted that most Arabic-speaking States of Africa are parties to the Refugee Convention and/or Protocol: Algeria, Djibouti, Egypt, Morocco, Somalia, Sudan, and Tunisia. They (including Libya) have mostly ratified the OAU Convention; Djibouti and Somalia have signed but not ratified it.

The reluctance of many Arab States to accede to international refugee and human rights law treaties is contentious and requires explanation. Various reasons have been proffered over the years. The most common is that Arab States do not wish to offer permanent residence, despite their willingness to host large numbers of refugees.[3] Linked to this is the Palestinian issue. Countries—such as Lebanon and Jordan—which are home to hundreds of thousands of Palestinians, are fearful that ratification of the Convention/Protocol would encourage local integration and potentially 'upset the sensitive demographic and socio-economic balance'.[4] In addition, there is the view that 'the political situation in the region especially in relation to the situation for Palestinian

[1] There is some uncertainty regarding the validity of Egypt's reservations due to its failure to include the reservations in the Official Gazette, which is required for legal enforcement: see US Committee for Refugees and Immigrants, 'World Refugee Survey 2005—Egypt' (20 June 2005).

[2] Article 28 applies with the limitations resulting from section 6 of the Entry into Israel Law, Law No 5712-1952.

refugees is not yet conducive to achieve [the] goal [of accession]';[5] in other words, an obligation to integrate is contrary to the Palestinian right to return. A more nuanced standpoint is that, while most North African Arab States are parties to the Convention/Protocol, only one Arab country in Western Asia is a party (Yemen), while many Asian countries are not. Since Arab States of Asia have participated in the Bangkok Principles on the Status and Treatment of Refugees,[6] which contains similar principles to the international instruments on refugees (see Section 2.c), 'the problem is due, not to the essence of the principles but to procedural and formal difficulties'.[7]

It should also be noted that several States of the Middle East participated in the Refugee Convention's drafting in 1950 and 1951: Egypt, Iran, Iraq, Israel, Lebanon, Saudi Arabia, and Turkey. Furthermore, insofar as refugee protection is concerned, some are members of UNHCR's governing Executive Committee (ExCom), which, *inter alia*, advises on international protection. Currently, this includes both non-Contracting States in the Middle East (Jordan and Lebanon) and Contracting States (Egypt, Iran, Israel, Turkey, and Yemen). Membership and participation in ExCom, especially by non-Contracting States, does suggest that they accept ExCom's Conclusions on the International Protection of Refugees as having 'strong political authority as consensus resolutions of a formal body of government representatives', and should be afforded real deference, notwithstanding their legally non-binding status.[8]

The States of the region voted to adopt the UN's New York Declaration for Refugees and Migrants in September 2016,[9] which included a 'vision for a more predictable and more comprehensive response' to large-scale refugee movements via the Comprehensive Refugee Response Framework.[10] Pursuant to the Declaration, Member States also agreed to work towards the adoption of a Global Compact on Refugees, which was affirmed by the UN General Assembly on 17 December 2018.[11] Middle Eastern States appear to have embraced the process. Akram argues that '[t]he Global Compacts have generated a much-needed renewed focus on the protracted and interconnected nature of refugee, statelessness, and other displacement concerns across the region'.[12] Certainly, Arab States have engaged in high-level conferences and discussions to address issues on

[11] In tandem with the refugee process, discussions took place on the Global Compact for Migration, which was adopted by the UN General Assembly on 19 December 2018 (although not all States voted in favour).

[12] Susan Akram, 'Assessing the Impact of the Global Compacts on Refugees and Migration in the Middle East' (2018) 30 IJRL 691.

refugees and statelessness. One noteworthy outcome is the Memorandum of Understanding (MoU) signed between UNHCR and the League of Arab States (LAS) in September 2017 to establish a cooperation framework on refugee and stateless matters.

b. International Human Rights Law

All Middle Eastern States have ratified or acceded to some international human rights instruments, but none has ratified or acceded to all. For example, Jordan has a relatively good record amongst Arab States in the region, having ratified the ICCPR, ICESCR, CAT, CERD, CRC, CEDAW, and the Convention on the Rights of Persons with Disabilities.[13] It has also agreed to two of three Optional Protocols to the CRC (but not Optional Protocols to other instruments).[14] By contrast, Saudi Arabia has only acceded to the CAT, CERD, CEDAW, and CRC, including two CRC Optional Protocols. Turkey's ratification of human rights treaties is almost complete with one exception—the Convention for the Protection of All Persons from Enforced Disappearance (CED);[15] similarly, Iraq and Israel have a good accession record although Israel has signed neither the CED nor the International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families (CMW).[16]

There is a lack of consistency in the region about the universality of some fundamental rights, especially amongst the Arab States. Furthermore, many States have entered significant reservations, often stated to be due to conflict between international law and national and/or Shari'a Law.[17] Of course, signatures and ratification are not indicative of States' willingness to enforce international human rights treaties and the reputation of Middle Eastern States in this regard is not good.

c. Regional Law

The differences between States of the Middle East are further evidenced when considering regional law. There is a clear bifurcation between Arab States, when acting as the LAS, and the three non-Arab States of Israel, Iran, and Turkey. Unlike Israel, though,

[13] Convention on the Rights of Persons with Disabilities (adopted 13 December 2006, entered into force 3 May 2008) 2515 UNTS 3.

[16] Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families (adopted 18 December 1990, entered into force 1 July 2003) 2220 UNTS 3.

[17] Mervat Rishmawi, *The League of Arab States Human Rights Standards and Mechanisms—Towards Further Civil Engagement: A Manual for Practitioners* (Open Society Foundations/Cairo Institute for Human Rights Studies 2015) 76.

Iran and Turkey are members of the Organisation of Islamic Cooperation and participate in its deliberations over refugees (see Section 2.c.i). Arguably, Arab States have revealed a preference for inter-Arab State instruments and regional principles, as opposed to international refugee law, although these, too, have long suffered from a reluctance by States to implement them fully.

i. *Regional Refugee and Asylum Law*

The regional law applicable to Middle Eastern States relates to international treaties of the Arab States, of the African Union and of the Council of Europe. Arab States have agreed a range of instruments relating to refugees, both Palestinian and non-Palestinian, and to human rights law, for example, the Casablanca Protocol on the Treatment of Palestinian Refugees 1965, the Declaration on the Protection of Refugees and Displaced Persons in the Arab World 1992, the Arab Convention Regulating the Status of Refugees in the Arab Countries 1994, and the Arab Charter on Human Rights 2004.[18]

The Casablanca Protocol is one of the first regional agreements to address refugee issues in the Middle East, and concerns Palestinians in Arab States.[19] A brief document, it calls on Arab States to ensure that Palestinians residing in their lands have the same right of employment as citizens,[20] are permitted to leave and return to the State of residence,[21] and are provided with travel documents if requested.[22] Reference in the Casablanca Protocol is to 'Palestinians' rather than 'refugees'.[23] Seven Member States signed without reservations,[24] while three others entered reservations.[25] Lebanon imposed the greatest number of restrictions, especially in relation to employment and entry. The Protocol was poorly implemented and applied and, thus, the 1991 Conference of Supervisors of Palestinians provided an opportunity for change. However, at the request of Kuwait and Saudi Arabia, a resolution was amended 'in such a way as to compromise the force of the Casablanca Protocol' and 'essentially release[e] the signatories from their obligations under the Casablanca Protocol' leaving the treatment of the Palestinians 'up to their discretion'.[26] Certainly, the consequence was that the Casablanca Protocol was severely weakened.[27]

[18] League of Arab States (LAS), Protocol for the Treatment of Palestinians in Arab States ('Casablanca Protocol'), 11 September 1965; Declaration on the Protection of Refugees and Displaced Persons in the Arab World ('Cairo Declaration'), 19 November 1992; LAS, Arab Convention on Regulating Status of Refugees in the Arab Countries 27 March 1994 (not in force); LAS, Arab Charter on Human Rights (adopted 22 May 2004, entered into force 15 March 2008).

In 1991, at the Third Seminar of Arab Experts on 'Asylum and Refugee Law' held in Amman, participants—mainly from Arab States—arrived at several pro-refugee law conclusions that extended beyond the Palestinian issue.[28] These conclusions supported the significance of international and national refugee law for those in need of protection in Arab States. Yet, two years later, at the 1993 Fourth Seminar of Arab Experts on 'Asylum and Refugee Law' held in Cairo, a different approach was adopted.[29] Though it was reiterated that asylum and refugee law were inherent parts of human rights law, there was no expression of regret that Arab States had failed to accede to international refugee law or enact national refugee law;[30] rather, there was simple recognition 'that the United Nations Convention of 28 July 1951 and the Protocol of 31 January 1967 constitute the basic universal instruments governing the status of refugees'.[31] The seminar did, however, go on to adopt a Declaration on the Protection of Refugees and Displaced Persons in the Arab World, in which a hope was expressed that Arab States that had not yet acceded to the Refugee Convention or the Protocol would do so.[32] The Declaration is inclusive and far-reaching. Thus, for example, it recommends that:

> pending the elaboration of an Arab Convention relating to refugees, Arab States adopt a broad concept of 'refugee' and 'displaced person' as well as minimum standard for their treatment, guided by the provisions of the United Nations instruments relating to human rights and refugees as well as relevant regional instruments.[33]

The LAS was not long in fulfilling the avowed ambition of drafting an Arab Convention: in 1994, the Arab Convention on Regulating Status of Refugees in the Arab Countries was adopted.[34] The definition of a 'refugee' is similar to that of the Refugee Convention,[35] but is also broader, encompassing:

> Any person who unwillingly takes refuge in a country other than his country of origin or his habitual place of residence because of sustained aggression against, occupation and foreign domination of such country or because of the occurrence of natural disasters or grave events resulting in major disruption of public order in the whole country or any part thereof.[36]

[32] ibid art 4. [33] ibid art 6.

[34] Arab Convention on Regulating Status of Refugees in the Arab Countries (n 18).

[35] 'Any person who is outside the country of his nationality or outside his habitual place of residence in case of not having a nationality and owing to well-grounded [sic] fear of being persecuted on account of his race, religion, nationality, membership of a particular social group or political opinion, unable or unwilling to avail himself of the protection of or return to such country' (art 1).

[36] Arab Convention on Regulating Status of Refugees in the Arab Countries (n 18) art 1.

The inclusion of 'natural disasters' is certainly an advance on the traditional definition of a 'refugee' and to be commended.[37] The Convention also includes *non-refoulement*, non-discrimination obligations, and an expectation that treatment of refugees would be no less than for other foreign residents. However, its silence on education, housing, employment, welfare and access to courts means that it was a mixed bag of commitments. Ultimately, its main flaw is the failure of States to accede and, consequently, it has never entered into force.

Despite this apparent failure, the Arab Convention provided a template for further discussion. In 2010, prompted by the enormity of displacement in the Middle East, the Arab Parliament initiated its revision and, in 2012, adopted a revised text that was circulated to the Arab League General Secretariat and League bodies for further consideration.[38] Redrafting has continued in collaboration with UNHCR and, in 2018, the LAS announced that a final version should be adopted in the near future.[39] UNHCR has reported that the proposed Arab Convention adopts the extended refugee definition contained in the OAU Refugee Convention, but goes beyond it to include persons fleeing disasters or grave events disrupting public order.[40]

African, Asian, and Middle Eastern States[41] have also agreed to the 1966 Bangkok Principles.[42] Two addenda—on the right to return and on principles of burden-sharing—were added in 1970 and 1987 and a revised text incorporating these changes was adopted in June 2001.[43] The definition of 'refugee' is similar to that of the Refugee Convention but extends the grounds of persecution to 'colour', 'ethnic origin', and 'gender';[44] the OAU Refugee Convention definition is also incorporated.[45] The Principles include familiar rights, such as the right to seek and to enjoy asylum from persecution,[46] *non-refoulement* and non-expulsion,[47] and minimum standards of treatment;[48] there is also a right of return to the country of nationality or habitual residence;[49] a right to compensation from the State of departure under certain circumstances;[50] and recognition of the need for burden-sharing.[51] While the revised Bangkok Principles are only declaratory, some Arab States still entered reservations against the principal articles, undermining the instrument's effectiveness.

Some Middle Eastern States have participated in other non-binding discussions and arrangements. For example, Turkey and Iran (observer status) are part of the Almaty

Process on Refugee Protection and International Migration[52] from which the Almaty Declaration emerged.[53] Iraq, Jordan, Syria, Turkey, and the United Arab Emirates are members of the Bali Process on People Smuggling, Trafficking in Persons and Related Transnational Crime (Bali Process). While the focus is evidently not on asylum or refuge, the Declarations often reflect the tenet of other Middle Eastern instruments. The 2016 Bali Declaration encourages Member States 'to explore potential temporary protection and local stay arrangements for asylum seekers and refugees, subject to domestic laws and policies of member states'.[54] Turkey is the most notable example of a State having vigorously pursued this approach, with its unique temporary protection regime (TPR) for Syrians (as discussed below), which pre-dated the 2016 Declaration. Interestingly, the 2018 Bali Declaration makes no reference to asylum and simply notes the development of the Global Compacts on Refugees and Migration 'as frameworks for international cooperation, seeking to address displacement and promote well-managed migration'.[55]

There is growing recognition of the role of Islam in refugee protection, and the Ashgabat Declaration of 2012, adopted by Member States of the Organisation of Islamic Cooperation (OIC), is an example of an alternative approach to refugee issues. It opens with a recognition that 'Islam laid down the bases for granting refuge, which is now deeply ingrained in Islamic faith, heritage and tradition' and noted that the Refugee Convention and Protocol 'have enduring value and relevance in the twenty-first century' and 'the importance of respecting the principles and values' underlying the instruments.[56] The Declaration is a useful reminder of the pressing issues and challenges posed by refugee movements and calls on the international community to address root causes of 'the problem of refugees' and to improve the global availability of resettlement. Yet, again, it is only a non-binding declaration.

ii. *Regional Human Rights Law*

There is a significant number of inter-Arab treaties on human rights, but, like their international equivalents, many suffer from either a low number of ratifications, weak enforcement, or both.[57] The Arab Charter on Human Rights is one such example. Initially

[52] The objective of the Almaty Process is to promote sustained dialogue and exchange of information on migration issues and on refugee protection challenges in Central Asia and the wider region.

adopted in 1994, it never entered into force due to lack of ratifications and was, in any event, criticized for failing to meet basic international human rights standards.[58] In 2004, the Charter was revised, and it was adopted and entered into force in 2008.[59] Its implementation is overseen by the Arab Human Rights Committee. While it continues to have its limitations, the 2004 Charter is regarded as an improvement on its forebear.[60] However, there are areas of concern. While article 28 protects the right to seek political asylum, and prohibits the extradition of political refugees, it excludes those 'facing prosecution for an offense under ordinary criminal law'. Several rights are dependent on State legislation and a number only benefit the citizen.[61] Finally, not all States have ratified it—for example, Egypt, Morocco, and Tunisia all signed in 2004, but have failed to ratify.

There are several other examples of inter-Arab human rights instruments that might appear to have a bearing on the rights of asylum seekers and refugees. However, there is no consistency in ratifications and many instruments are only applicable either to Arabs or to citizens. For example, the Charter on the Rights of the Arab Child 1983 and the Convention on Citizenship for Arab Residents of Arab States Other than their Native Countries 1952 are, as the titles state, restricted to the Arab child or resident;[62] they will therefore not apply to non-Arab asylum seekers or refugees in Arab States. In the case of the Arab Child Charter, there are only seven signatories to date[63] and this Charter has been criticized for inconsistency with its international counterpart, the CRC.[64]

While the clear direction of regional asylum and refugee law principles in the Middle East is to favour non-binding agreements and declarations, there is one country that is part of a binding regional human rights instrument: Turkey. Turkey stands alone in having ratified the European Convention on Human Rights (ECHR) and is therefore bound by the European Court of Human Rights' judgments, many of which impact State treatment of asylum seekers and refugees.[65] However, in 2017 it was reported that Turkey was the worst rights violator in the 58-year history of the ECHR, and therefore its commitment to upholding the rights of asylum seekers and refugees is somewhat questionable.[66]

d. Domestic Law

With the extant inter-State differences at international and regional levels, it is unsurprising that domestic law and policy on asylum seekers and refugees is also varied. Egypt, for example, though party to the Refugee Convention, has no domestic legislation on the treatment of refugees.[67] As Jones notes:

> Both the constitution of 1971 (amended in 1980) and the more recently adopted constitution of 2014 recognize the right to 'political asylum' (in Articles 53 and 91, respectively) and the direct enforceability of international treaties (in Article 151 in both constitutions). The latter article unhelpfully, due to the lack of domestic legislation, requires the exercise of this right 'according to the Law'.[68]

In line with the norm in the region, Egypt applies several laws and decrees on foreigners to refugees and asylum seekers, but permits UNHCR to conduct refugee status determination (RSD) on its territory, though not for Palestinians (see Section 3a).

Israel, another State party and one of the first States to sign the Refugee Convention,[69] was also the first country to develop a national asylum determination system in 2001.[70] Initial screening and substantive interviews were conducted by UNHCR with the final decision taken by the Ministry of Interior. In July 2009, full transfer of the responsibility for RSD commenced, and, in January 2011, the 2001 Regulations were revised.[71] Israel was, consequently, the first Middle Eastern country to establish an RSD process.[72] However, these regulations are administrative instruments, focusing on process, rather than primary legislation.[73] There is a very low acceptance rate of refugees in Israel (for example, since 2009, there has been a 0.01 per cent acceptance rate for Eritreans in Israel compared to 85–90 per cent in Canada).[74]

Turkey, as a Contracting State to the Convention, also provides an interesting case study. In the mid-1980s, UNHCR commenced RSD in Turkey for non-European asylum seekers.[75] In 1994, Turkey adopted a Regulation on Asylum.[76] The system was complicated and the outcomes uncertain, with the possibility of *refoulement* or removal notwithstanding a positive UNHCR refugee determination.[77] In 2013, the Law on Foreigners and International Protection (LFIP)[78] and Temporary Protection Regulation were passed.[79] The Directorate General of Migration Management (DGMM) was established and the sole power for RSD was transferred to Turkey in September 2018.[80]

States that are not parties to the Refugee Convention and/or Protocol tend to apply immigration law/law on foreigners to those who enter, irrespective of whether they are asylum seekers or refugees.[81] The Gulf Cooperation Council (GCC) States and Lebanon routinely use the kafala system in which a migrant worker's immigration status is bound to an individual employer or sponsor (the kafil); this often leads to serious exploitation and vulnerability of the individual.[82] While migrant workers in Jordan are not formally bound to sponsors, they are often vulnerable due to poor application of Jordanian employment laws.[83]

3. Institutional Framework

a. UNHCR

Many States of the Middle East, including those that have not ratified the Refugee Convention, have long been heavily reliant on UNHCR (and the UN Relief Works Agency (UNRWA))[84] to help cope with large numbers of refugees. UNHCR expanded its operations into the region in the 1960s, when it emerged from being a largely European organization.[85] It began operations in Turkey in 1960, and in 1963 it

established a regional office in Lebanon. Today, UNHCR has a presence in most States of the region, including a regional representation in Saudi Arabia, catering for the GCC States, and a Syria Regional Refugee Coordination Office in Amman, Jordan. Since 1987, UNHCR has also worked in Yemen, while in Israel UNHCR's honorary correspondent was replaced by an official representative office in 2007.[86]

Characteristic of UNHCR's operations in the region is that it has adopted a pragmatic approach largely focusing on establishing what it considers an acceptable 'protection space' for refugees. This includes strengthening institutional support for protection and community-based protection, rather than (merely) promoting ratification of the Convention.[87] Stevens has noted how, 'to a large extent, UNHCR has considerable latitude, within its mandate to orient policy in a direction of its own choosing'.[88] UNHCR notably produces a 'multi-dimensional protection regime' by drawing on a range of instruments, including its own Statute as well as any MoU, to inform action on the ground.[89] At the same time, UNHCR's ability to execute its international protection mandate is heavily affected by Middle Eastern host State policies, leading to a constant negotiation and re-negotiation of refugee protection.[90]

Currently, the largest groups of refugees falling under UNHCR's mandate in this region are refugees from Syria and Iraq, but its mandate has also been extended to internally displaced persons in, for example, Syria, Iraq, and Yemen, who outnumber refugees. Given that the States of the GCC are outside UNRWA's areas of operation, Palestinians are under international protection and covered by UNHCR's mandate.[91] UNHCR therefore also monitors the situation of the estimated 300,000 Palestinians living in Saudi Arabia and the other Gulf States.[92] They have generally first resided in one of the neighbouring States of Palestine and are believed to have been initially registered with UNRWA in their first country of asylum. Egypt, too, is outside UNRWA's areas of operation, but those Palestinians based there are excluded from UNHCR's mandate.[93]

i. *Memoranda of Understanding*

UNHCR's presence in the region is often formalized through the negotiation of MoUs with the host authorities. For example, UNHCR negotiated an MoU with Saudi Arabia in 1988, an agreement that also laid the basis for a close working relationship between UNHCR and the OIC.[94] Today, UNHCR operates in Saudi Arabia under a 1993 MoU (as amended in 2010), when the country hosted roughly 35,000 Iraqi refugees in the Rafha camp.[95] Following the closure of this camp in 2006, UNHCR negotiated alternative protection solutions with Saudi authorities to allow the remaining 363 persons to leave the camp and settle in urban areas in Saudi Arabia. These refugees were provided with refugee identification cards issued by the Saudi Ministry of Interior as well as residence permits. They could work and access medical and education facilities.[96]

MoUs can be viewed as alternative protection regimes to the Refugee Convention providing a legal framework to regulate the status of refugees in many Middle Eastern States. For example, UNHCR's 1998 MoU with Jordan adopts a refugee definition similar to that of the Refugee Convention (article 1) and declares Jordan's commitment to international standards of refugee protection (article 5), including the principle of *non-refoulement* (article 2). UNHCR's 2003 MoU with Lebanon, on the other hand, makes no mention of key refugee protection norms, and, rather, affirms that 'Lebanon does not consider itself an asylum country', and that an 'asylum seeker' means a 'person seeking asylum in a country other than Lebanon'.[97]

The main purpose of several of UNHCR's MoUs with Middle Eastern governments appears to be to shift the responsibility of refugee protection from States to UNHCR, with host States' obligations frequently being 'limited to tolerating refugees' presence temporarily on condition that they be resettled to a third country'.[98] UNHCR's respective agreements with Lebanon and Jordan, for example, establish that residence in these States is intended to be temporary and there is no long-term governmental responsibility

for refugee protection. The MoU with Lebanon only accepts UNHCR's protection role for specific cases and it is expected that UNHCR-recognized refugees will be resettled within 12 months. The agreements thus impose a responsibility for resettlement on UNHCR, even though it is resettlement States, not UNHCR, that have absolute discretion as to which refugees to accept. This approach has garnered much criticism and the MoU was disused shortly after its negotiation.[99]

GCC governments have similarly been reluctant to apply UNHCR's extended mandate to refugees other than Iraqis in the Rafha camp. Many individuals falling under UNHCR's mandate in the GCC States have uncertain status due to irregular entry or an expired residence permit or visa, and, as UNHCR has explained, on occasion this challenging situation left it with 'no other choice than to obtain from the concerned Governments clearance for a temporary stay of recognized refugees against a commitment to find durable solutions for them'.[100] Thus, through UNHCR intervention, refugees without residence permits in States such as Oman and Kuwait have managed to secure temporary residence permits pending the finalization of resettlement procedures to a third country.[101]

UNHCR's 1996 MoU with Kuwait, for example, limits Kuwait's duties to facilitating access of UNHCR to refugees and other persons falling within UNHCR's mandate. At the same time, it defines UNHCR's tasks to include providing international protection to refugees and other persons who fall within the scope of its mandate, organizing and providing humanitarian assistance for refugees, and to 'seek permanent solutions to their problems by facilitating their voluntary return to their States of origin, or their assimilation within new national communities'.[102]

ii. *Registration, RSD, and Resettlement*

While the MoUs are one clear example of a shift of responsibility in this region from the sovereign State to UNHCR, UNHCR's role for RSD, registration, healthcare, education, and livelihood assistance for refugees appears so substantial that some scholars classify UNHCR as a form of 'surrogate State'.[103] Indeed, host States in the Middle

East—including Contracting States to the Convention, such as Egypt and Yemen—have either partially or wholly handed over registration procedures and RSD to UNHCR.

Recently, however, several States have moved towards a nationalization of these procedures. While Israel historically outsourced the RSD process to UNHCR, in 2009 it assumed control via the newly established RSD unit within the Authority of Immigration at the Office of the Interior.[104] UNHCR reported in 2018 that since Israel took over RSD from UNHCR in 2009, only 10 Eritreans and one Sudanese had been recognized as refugees.[105] Turkey similarly allowed UNHCR to take charge of all asylum issues until 2013, when it established a State agency tasked to take over gradually from UNHCR and become the sole decision-maker on asylum.[106] The development of a national registration and RSD process was also the stated objective of Lebanon's decision in 2015 to suspend UNHCR's registration of Syrian refugees.[107]

In many States, UNHCR furthermore assumes responsibility for RSD processes for certain refugee groups, while other groups are under the purview of national authorities. Yemen has recognized *prima facie* Somali refugees and certain groups of Ethiopian and Eritrean refugees, but requests that UNHCR conduct individual status determination for all other asylum seekers.[108] Since the first Syrian arrivals, Turkish authorities have been exclusively in charge with respect to Syrians, but both UNHCR and Turkish authorities conduct registration and RSD for refugees with other national backgrounds.[109]

While UNHCR has provided *prima facie* refugee status for several groups of refugees in the region, it has occasionally also developed alternative procedures. In 2003, it attempted to introduce a TPR for Iraqi refugees in Lebanon and Jordan, for example.[110] The TPR sought to protect Iraqis from *refoulement* to Iraq and enable UNHCR to avoid processing asylum claims. Notably, the TPR in Jordan would 'reduce the burden on UNHCR by absolving it of the obligation to seek resettlement for the beneficiaries within six months, as demanded by the MOU for UNHCR recognized refugees'.[111] As the TPR was rejected by the Jordanian government, UNHCR started to apply *prima*

[111] ibid.

facie refugee status for certain categories of Iraqi nationals, even though the status was not fully respected by some host States.[112]

As for refugees from Syria, UNHCR has adopted regional standard operating procedures for use in Lebanon, Iraq, Egypt, Jordan, and Turkey.[113] These procedures provide that Syrians generally do not undergo RSD unless they are selected for resettlement screening. While resettlement screening and RSD are normally considered to be separate processes, UNHCR applies a 'merged procedure' that combines the resettlement procedure with an expedited RSD procedure. This alternative protection procedure was initiated in 2014, when UNHCR found individual status determination not to be feasible following the large scale of displacement, and aims to ensure that resources are deployed only where completely necessary.[114]

Characteristic of the pragmatism demonstrated by both UNHCR and host States towards refugees in this region is the differential treatment of refugees depending on their country of origin and time of arrival in the host country. In States hosting large numbers of Syrian refugees, including Lebanon and Jordan, UNHCR has adopted one approach for Syrians with respect to registration, RSD and resettlement, and another for 'non-Syrians' such as Sudanese and Somali asylum seekers and refugees. UNHCR has been criticized for failing to align its protection and assistance policies across the various nationalities, leading UNHCR Jordan to develop a 'One Refugee' policy for all groups under its protection.[115]

In many Middle Eastern States, refugee recognition by way of registration is a contentious issue, and governments have sometimes sought to control UNHCR's registration activities. While Jordan considers registered Syrian refugees to have legal stay, in Lebanon the UNHCR registration certificate has not normally conferred formal status or exempted refugees from penalties associated with irregular entry or a lack of residency in the country. Thus, the certificate has predominantly entitled refugees to international protection and humanitarian assistance.[116] In 2014, Jordan requested that UNHCR stop issuing certificates for those who left the designated refugee camps without government approval, namely, without providing a sponsor as per the bailout programme.[117]

In a similar attempt to reduce the official number of refugees in the country, the Lebanese government suspended UNHCR's registration of Syrian refugees in 2015. It

also adopted restrictive regulations that resulted in a loss of legal status for more than two-thirds of Syrian refugees. Some refugees were nevertheless granted legal stay based on UNHCR registration certificates in return for a pledge not to work, and this was the first time that UNHCR registration granted refugees the right to stay in the country outside the scope of the 2003 MoU.

b. Courts and Civil Society

Over the last two decades, refugee legal aid organizations have been established in a wide range of Middle Eastern States, including Turkey, Lebanon, Jordan, and Egypt.[118] There is a degree of legal aid in Egyptian national courts, and the country has also seen some of the most well-developed programmes seeking to enforce refugee protection through legal mechanisms, such as African and Middle East Refugee Assistance (AMERA), which has provided direct representation of individuals undergoing RSD with UNHCR. St Andrews Refugee Services (StARS) similarly provides resettlement-focused legal aid to all refugee communities.[119]

The increasingly hostile environment for civil society in many Middle Eastern States has negatively impacted refugee access to rights. In Egypt, growing xenophobia and State security concerns about the politics of certain refugee communities has been coupled with the shrinking operational space of legal advocacy organizations since 2011.[120] In Turkey, the government has since 2015 taken a much stricter approach against international NGOs.[121]

There is limited research focusing on the role of local courts in providing protection for refugees and asylum seekers in this region. Civil society organizations in Lebanon (including Frontiers Ruwad and Legal Agenda) and Israel (such as the African Refugee Development Centre (ARDC), the Refugee Law Clinic and the Hotline for Migrant Workers) have notably represented asylum seekers and refugees in national courts.[122] UNHCR has also intervened before Israeli courts, for example in relation to Israel's application of the Anti-Infiltration Law to asylum seekers and refugees.[123]

In utilizing international human rights obligations and constitutional provisions, national courts have been instrumental in preventing detention and deportation of asylum seekers and refugees. In Lebanon, for instance, a series of court judgments removed irregular entry charges for several Syrian refugees with reference to the right to

seek asylum as set out in article 14 of the UDHR.[124] Throughout the last decade, Israeli Supreme Court rulings have similarly protected asylum seekers from forced deportation to third States.[125]

4. Contemporary Challenges and Conclusions

Ratification of international law instruments does not necessarily provide enhanced protection or greater individual rights in the Middle East. Most States in the region are party to some instruments of international human rights law, but implementation, enforcement, and access to justice are major issues in the majority. Few of them can be said to be (positive) international norm exporters and few are legal norm importers. Many States in the region turn to domestic law when dealing with migration issues—including refugees—with a tendency towards using laws on immigration, foreigners, or migrant workers, rather than asylum or refugee law, to control entry and migration (of all forms). This is the case in many States despite constitutional rights to political asylum.

Turkey has ratified the greatest number of international human rights instruments in the region and has undergone significant developments in its handling of displacement. While some regard its TPR as a model for other States, and thus as a possible norm exporter within and beyond the region, there is now a clear body of evidence that many of those who have sought sanctuary in Turkey face increasing precarity and uncertain futures, contesting the appropriateness of TPR where assumed temporality extends into the long-term or even permanence.

The legal context in the Middle East is heavily influenced by political and economic considerations and, as shown in this chapter, there is no single approach to cross-border displacement or refugee protection that is widely accepted and applied. Perhaps the one constant is the pervasive regional claim to 'hospitality' as the underlying rationale for generous treatment of 'guests';[126] but this discourse is no longer universally accepted and, as with many of the region's refugee policies, can be critiqued for 'boosting the political value of receiving States' and dividing social groups rather than unifying them.[127]

CHAPTER 19

REGIONAL REFUGEE REGIMES

Europe

EVANGELIA (LILIAN) TSOURDI*

1. Introduction

This chapter examines refugee protection in Europe, defining Europe based on its two distinct legal regimes, the European Union[1] and Council of Europe (CoE).[2] The EU and its Member States have developed a regional asylum framework, encompassing legislative, responsibility-allocation, and practical components. In parallel, EU border control, visa, and migration measures impact asylum by deflecting protection obligations to non-EU countries. Section 2 analyses the EU's ambivalent asylum system. Section 3 turns to the CoE, focusing on both the ECHR and soft law adopted in the CoE framework. EU asylum law has an expansive impact beyond the EU, including in neighbouring non-EU countries. To illustrate these expansive trends, I focus on refugee protection in Turkey and Ukraine (Section 4).

* This work was supported by a Veni programme grant (project Nr VI.Veni.191R.040), which is financed by the Dutch Research Council (NWO). The author would like to thank the editors, and especially Professor Cathryn Costello, for their useful comments on earlier versions. All errors remain my own.

[1] In April 2020, the EU had 27 Member States. All EU Member States are also States parties to the CoE.

[2] In April 2020, the CoE had 47 Member States. According to its Statute its membership is open to 'any European state' that is able and willing to 'accept the principles of the rule of law and of the enjoyment by all persons within its jurisdiction of human rights and fundamental freedoms'. See Statute of the Council of Europe (adopted 5 May 1949) 87 UNTS 103, arts 3, 4. The concept of 'European' has been interpreted freely to include geographically transcontinental States, such as Turkey, or States beyond the European continent.

2. Asylum in the European Union: Torn between Protection and Deflection

a. Origins and Development of EU Asylum Cooperation

European coordination of asylum policy began outside the framework of EU law. A group of Member States established the so-called Schengen system,[3] mainly aiming to abolish internal border controls between the Member States. In addition, a number of Conventions were agreed between Member States, an early but enduring example being the 1990 Dublin Convention,[4] designed to allocate responsibility amongst EU countries for examining asylum applications. Although the 1992 Maastricht Treaty formalized EU cooperation on asylum, few binding measures were adopted.[5] Early initiatives were largely conceived as flanking measures to the completion of the internal market and the abolition of internal border controls.[6]

The EU's approach to refugee protection has entailed protection hand in hand with deflection. Deflection measures include carriers' sanctions, the visa 'black list', and extraterritorial border controls. As early as 2001, Noll identified the 'common market of deflection',[7] while both Moreno-Lax[8] and Gammeltoft-Hansen[9] have provided insightful accounts on how the EU's external border control, visa, and migration policies impede access to protection and deflect protection obligations to non-EU States. The critiques of containment and deterrence measures are many. Critics argue that these measures overestimate the capacity of borders to bar irregular entry; generate humanitarian crises at external borders; and, that their operation inevitably entails human rights violations.[10] Nevertheless, the EU and its Member States continue to

rely on containment, so the EU remains torn between the imperatives of protection and deflection.

The 1999 Treaty of Amsterdam[11] and the Tampere Conclusions of the European Council[12] marked greater ambition and a new *telos* for European asylum policy, calling for a 'common EU policy on asylum and migration'[13] and specifically a Common European Asylum System (CEAS).[14] In spite of this language, asylum policy in the Treaty of Amsterdam was ambivalent. Although still framed as a corollary to the establishment of an internal market, the mobility of asylum seekers was excluded. Despite the aim being 'common' policies, in reality the Treaty envisaged only 'minimum standards', by definition allowing Member States to adopt more favourable standards.[15]

Formally, minimum harmonization does not connote a low level of protection.[16] Yet, in practice, the dynamics of EU harmonization led to mixed outcomes. The Council of the EU adopted the first generation of asylum instruments acting unanimously.[17] Although this does not mean that asylum harmonization necessarily led to a 'race to the bottom',[18] States generally sought to maintain their own domestic standards. As poignantly argued by Zaun, strong regulators (a term she uses to describe States with effective government and refugee protection, such as Germany and France) have an interest in harmonizing asylum policies to reflect their pre-existing domestic policies.[19] These Member States with developed asylum systems would often remain bound by higher standards under national, sometimes constitutional, law, so they had no interest in inserting minimal guarantees in EU law. At the same time, strong regulators wanted to see their own national administrative traditions reflected in EU legislation, including their various national asylum procedures, in particular accelerated, admissibility, and border procedures. This led, for example, to the establishment of highly differentiated standards in the 2005 Asylum Procedures Directive, prompting Costello to conclude that through this instrument exceptional procedures were normalized.[20]

The Treaty of Lisbon reflected in law the ambition to create a CEAS that had up to that point only been expressed in EU policy documents.[21] In addition, it confirmed notable changes in the decision-making processes, requiring the significant involvement of the European Parliament and the Council, now acting through qualified majority.[22]

b. A Common European Asylum System: What's in a Name?

Member States' international refugee and human rights law obligations underpin the EU's asylum policy. The EU Treaties,[23] legislation adopted to realize the policy,[24] and the Court of Justice of the European Union (CJEU) affirm this.[25] The EU Charter of Fundamental Rights contains a right to asylum in article 18, viewed as creating an individual right,[26] although the CJEU has not yet clarified its scope.[27] The EU Treaties establish an overarching aim of developing 'a common policy on asylum, subsidiary protection and temporary protection'[28] and stipulate that the policy should be a CEAS.[29] They then set out the details of the different measures on asylum that comprise such a system, nuancing the notion of asylum under EU law as compared to international law.[30] The resultant CEAS legislation comprises the EU Qualification Directive on the definition of, and the standards of treatment for, refugees and beneficiaries of subsidiary protection.[31] Other Directives cover temporary protection,[32] asylum procedures,[33] and reception conditions for asylum seekers, including several socio-economic rights.[34]

[34] Council Directive 2013/33/EU of 26 June 2013 Laying Down Standards for the Reception of Applicants for International Protection [2013] OJ L180/96.

Finally, an EU Regulation assigns responsibility for asylum claims.[35] In 2016, the European Commission introduced proposals to amend all legal instruments apart from the Temporary Protection Directive. In summer 2020, those negotiations were ongoing.

The Treaties frame the external dimension of the CEAS[36] broadly, enabling a diverse range of actions, from providing funding to organizing extraterritorial processing. To date, two main types of actions have been operationalized, namely EU-supported refugee resettlement,[37] and 'regional protection programmes' in the form of projects implemented primarily by UNHCR, together with local non-governmental organisations.[38] The EU also seeks to 'externalize' and deflect protection obligations through its other policies. Under the guise of migration management, it integrates deflection into its external relations.[39]

Legislative harmonization is not the only element of a CEAS. The actors that are meant to implement these rules equally form part of the asylum system. The CEAS is both the rules and their implementation. In view of this understanding, the goal in article 78(2) TFEU to establish a 'common system' arguably creates a legal obligation to institutionalize deeper integration, not merely through legislation but also through institutional cooperation.[40]

The initial implementation design of the CEAS was underpinned by the theory of executive federalism[41] whereby, in general, EU law implementation is left to national authorities.[42] The CEAS, according to this orthodox view, was conceptualized as a 'common system of national variants'.[43] EU legislation on asylum is also explicit on this point: these instruments impose specific duties on Member States to establish functioning and well-resourced national asylum systems.[44] Nevertheless, Member States have different

levels of economic development and conceptualizations of welfare, and so diverse protection capacity. Executive federalism, in particular when combined with the Dublin System (a responsibility assignation system that disregards fair sharing)[45] has contributed to widely divergent recognition rates for asylum seekers,[46] quality of asylum procedures, and reception conditions.[47] Moreover, the theory of executive federalism, increasingly fails to capture the reality of implementation.

c. EU Asylum Law and the Refugee Convention: Convergence and Divergence

In many respects, EU law reflects and further develops international refugee law. The Qualification Directive defines the concept of persecution,[48] includes a non-exhaustive list of acts of persecution,[49] and adds precisions to the five Convention grounds.[50] These legal precisions are generally in line with the Refugee Convention. However, there are divergences. Most notably, the Directive excludes EU citizens from its scope,[51] in contravention of article 42 of the Refugee Convention.[52] It cumulates the 'social perception' and the 'sharing innate characteristics' tests to define 'membership of a particular social group', thus narrowing the scope of the term in the Refugee Convention, an interpretation that has led to a restrictive turn in some national courts.[53] The Directive also contains problematic exclusion grounds. For instance, article 14(5) states that where there are reasonable reasons to consider a person a danger to security, or where they have been convicted by a final judgment of a particularly serious crime, Member States may decide not to grant status. This goes beyond the Refugee Convention's exhaustive list. Further problematic features include the introduction of the concept of non-State actors of protection,[54] and the further development of the internal protection alternative concept.[55]

[54] EU Qualification Directive (n 24) art 7.

[55] ibid art 8.

On the other hand, EU law expands protection by introducing an additional protection status—subsidiary protection. This status is 'subsidiary' to refugee status, which must be given precedence.[56] In brief, subsidiary protection encompasses categories that go beyond the refugee definition, based on Member States' obligations under international and European human rights law.[57] As McAdam observes, however, the Directive has not reflected all the protection obligations under international law.[58] Member States continue to operate divergent national protection statuses, alongside the harmonized EU ones.[59] These statuses are often weak, and typically offer minimal levels of socio-economic rights.

Another way EU law expands protection is by, at least potentially, introducing the status of temporary protection.[60] The Temporary Protection Directive stipulates conditions for the grant of a protection status—a maximum two-year duration in cases of 'mass influx' or 'imminent mass influx'.[61] It guarantees a minimum level of rights;[62] contains arrangements for accessing an asylum determination procedure;[63] and incorporates provisions on solidarity and balancing of efforts.[64] It has not been activated once. There are various reasons for the Directive's non-implementation, including the procedure for the institution of a temporary protection scheme; the indeterminacy of the concept of 'mass influx'; and the political fear that its instatement would create a so-called pull factor, 'inviting' to the EU refugees and displaced persons qualifying for its protection. To this, one must add the visa facilitation obligations for the protected groups that are included in the Directive.[65] These are the closest to formalized legal entry obligations towards protection seekers that exist to date in the CEAS.

The Asylum Procedures Directive seeks to harmonize, in a detailed manner, rules around asylum procedures at national level, including the right to an effective remedy. This is an ambitious aspect of the EU asylum policy, given that the Refugee Convention does not include relevant norms.[66] However, aspects of that Directive undermine protection, including through the adoption of a safe third country concept.[67]

d. Intra-EU Responsibility-sharing: In Search of Solidarity

Another innovative, but highly controversial, feature of CEAS is responsibility assignation for asylum claims under the Dublin III Regulation. Its basic premise is that a single Member State is responsible for each application.[68] The Regulation provides a hierarchy of criteria for identifying the responsible State.[69] Apart from limited cases related to unaccompanied minors and safeguarding family unity, this is the State primarily responsible for the person's presence in the EU.[70] In practice, this usually means the State of first irregular entry to the EU territory. Where asylum seekers are not present in the territory of the 'responsible' Member State, they are to be transferred there. However, as a matter of EU law, Member States must abstain from such a transfer, at least when there is a real risk of a breach of the prohibition of inhuman or degrading treatment.[71] In addition, they may abstain from a transfer for any other reasons, including on humanitarian and compassionate grounds.[72] Finally, they retain the right to return the applicant to a safe third country outside the EU territory, provided the rules and safeguards contained in the Asylum Procedures Directive are ensured.[73]

This system does not lead to fair sharing of responsibility between the Member States, a legal requirement according to EU law.[74] More deeply, it fails to reflect asylum provision as a regional public good. Instead, once responsibility is assigned, it is for the individual Member State alone to provide for the refugee. EU support measures, such as EU funding, are limited. The CEAS does not generally incorporate people-sharing measures, such as further redistribution of asylum seekers or recognized beneficiaries of international protection.[75] Even once recognized, refugees and subsidiary protection beneficiaries do not enjoy free movement across the EU, unless they fulfil the conditions of the Long-Term Residents Directive, which include a five-year residence requirement and stable and regular resources.[76]

The problems created by the system long predated the surge of asylum seeker arrivals in 2015–16, as noted by most academic commentators,[77] as may be illustrated by

examining the situation relating to asylum in Greece. As early as 2011, the European Court of Human Rights (ECtHR) identified structural deficiencies in the country's asylum procedures and reception conditions.[78] These were arguably due to both Greece's inability (the country was hard hit by the financial crisis) and unwillingness to protect asylum seekers and refugees. Arguably, the Dublin System incentivized these breaches of the CEAS, in order to shirk off responsibilities imposed by the Dublin System, which Greece perceived as unfairly imposed. Greece has been slowly improving its national asylum system, for example through the establishment of a dedicated national administrative authority.[79] Supported by EU funding, it has implemented programmes to provide urban accommodation and cash assistance to growing numbers of asylum seekers.[80] Nevertheless, deficiencies in asylum processing, and most notably in reception conditions, persist throughout the country.

No lasting change has been made to the EU's responsibility-allocation system. A temporary shift took place in 2015–17. Emergency relocation, meaning intra-EU transfer of asylum seekers between Member States, was established to benefit Italy and Greece.[81] It was undercut through several factors, including its own legislative and administrative set up.[82] In addition, certain Member States simply refused to relocate asylum applicants. The CJEU found this refusal to violate EU law.[83] Despite these failings, that time-limited scheme included binding obligations for Member States, in the form of relocation quotas, and led to the relocation of around 35,000 asylum seekers from Greece and Italy to other Member States.[84]

e. Practical Cooperation: From Information Exchange to the Joint Processing of Applications

As mentioned above, the EU generally leaves implementation to the national level. However, over time, the CEAS has come to include a greater role for EU bodies in the implementation of EU asylum policy, in particular as seen with the creation of the European Asylum Support Office (EASO) in 2010.[85] One of EASO's roles was to offer operational support to national asylum systems, at the request of the Member State concerned,[86] in relation to the initial analysis of asylum applications and reception facilities, including by deploying Asylum Support Teams.[87] These teams are made up of seconded national experts, including interpreters.[88] However, EASO was originally not granted a role in asylum decision-making, with its governing regulation excluding even indirect powers in this area,[89] or adopting any binding instructions about the granting or refusal of individual asylum applications.[90]

In spite of these limitations, in practice EASO engages in joint implementation with national authorities.[91] For example, based on Greek national law, EASO experts conduct interviews and issue non-binding opinions on the admissibility of claims and in the merits stage.[92] While the final decision formally remains with the Greek Asylum Service, evidently EASO has a significant, if not decisive, impact on the outcome of applications. EASO officials increasingly work in non-EU countries, based on bilateral or multilateral arrangements, becoming an actor in the EU externalization of migration control. They are currently involved in capacity-building (eg training and study visits), information exchange (eg on resettlement to assist implementation), and operational support through targeted presence (eg currently there is a resettlement expert deployed at the European Union Delegation in Ankara).[93]

An increasingly 'integrated European administration'[94] is emerging in asylum and might be the precursor to more radical shifts in the implementation modes of EU

asylum policy.[95] The exercise of executive powers and discretion by EU agency (deployed) staff has a direct impact on the fundamental rights of migrants and asylum seekers. This brings to sharp relief the need for appropriate accountability arrangements.[96]

3. European Refugee Protection and the Council of Europe: Of Human Rights Law and Soft Law

The ECHR is the cornerstone of the CoE system. The Convention does not regulate the situation of refugees directly, nor does it contain a right to asylum. Nevertheless, it contains several asylum-relevant rights. The most notable is the prohibition of torture, inhuman, or degrading treatment or punishment (article 3), which the ECtHR has interpreted to include a *non-refoulement* component. In this Section, I critically assess ECtHR case law, finding the court to be deferential to States' migration management prerogatives. Beyond the ECHR and the court, the CoE influences refugee protection through the practice of its decision-making bodies and non-judicial institutions. They complement the court, impacting refugee protection through their powers of soft enforcement.

a. The ECtHR and Asylum: An Appraisal

The court's interpretation of ECHR rights has arguably bolstered and expanded protection against *refoulement* under the Refugee Convention. In the *Soering* case, the ECtHR underlined that while Contracting Parties may remove individuals to States where ECHR safeguards are not fully met,[97] there are (at least) two exceptions to this general rule. First, because of the absolute and non-derogable nature of article 3 of the ECHR, which prohibits torture and inhuman or degrading treatment or punishment, individuals may not be sent to countries where they face real risks of being subjected to such treatment.[98] Given the reasoning of the ECtHR in *Soering*, this prohibition of *refoulement* also applies to violations of other non-derogable rights.[99] Secondly, an

[98] ibid para 88. See also *Saadi v Italy* (2008) 47 EHRR 17.

[99] Cornelis W Wouters, *International Legal Standards for the Protection from Refoulement* (Intersentia 2009) 345. See eg *Bader and Kanbor v Sweden*, App No 13284/04 (ECtHR, 8 November 2005) para 42.

extradition 'might exceptionally' be prohibited under the ECHR if there is a risk that the individual would face a 'flagrant denial of justice' (in the sense of a breach of article 6 ECHR) during his trial in the receiving country.[100] The content of that 'flagrant denial test' and its implications for derogable rights, other than the right to fair trial, remain controversial.[101]

Apart from the prohibition of *refoulement*, the ECtHR held in *MSS* that the situation of an asylum seeker who, due to the inaction of the State, '[f]ound himself for several months, living in the street, with no resources or access to sanitary facilities, and without any means of providing for his essential needs'[102] attained the level of severity required to fall within the scope of article 3 of the Convention. The ECtHR has scrutinized asylum seeker detention through the prohibition of arbitrary deprivation of liberty.[103] Asylum seekers have utilized the right to an effective remedy, a corollary to the prohibition of *refoulement*, to challenge the adequacy of national procedural guarantees.[104] These are but few examples to illustrate ECHR rights' invocation by asylum seekers. The *Soering* case was a landmark for *non-refoulement*, especially in countries that have not adopted national asylum legislation and related guarantees. The *MSS* case, later confirmed by the CJEU,[105] shook the EU, influencing policy and legislative change on the EU's responsibility-allocation system.[106]

Some Contracting Parties and commentators have criticized the ECtHR for 'judicial activism'.[107] While these criticisms are not specifically geared to the ECtHR's asylum-relevant case law, they reflect the political backdrop against which the court operates. In reality, the ECtHR has not always provided an interpretation of Convention rights that is protective of refugees. The ECtHR is deferential to States' migration management prerogatives. According to the settled case law, the right to a fair trial does not apply to proceedings on entry, stay, and deportation of foreigners including migrants, asylum seekers, and refugees.[108] The ECtHR does not impose a necessity requirement to limit immigration-related detention (instead requiring that it not be arbitrary, a lower standard), essentially permitting the deprivation of liberty of asylum seekers for

[102] *MSS v Belgium and Greece* (n 78) para 253.

[103] See eg *Ilias and Ahmed v Hungary*, App No 47287/15 (ECtHR, Grand Chamber, 21 November 2019).

[104] See eg *MA v Cyprus*, App No 41872/10 (ECtHR, 23 July 2013) para 133; *Jabari v Turkey* ECHR 2000-VIII, para 50.

[105] See *NS* (n 71). The CJEU's reasoning in *NS* initially resulted in confusion regarding the establishment of a higher threshold of 'systemic deficiencies' in national asylum procedures and reception conditions for invoking the *non-refoulement* principle to prevent a transfer to another Member State. The court later clarified its approach, eg *CK* (n 71).

[106] See Violeta Moreno-Lax, 'Dismantling the Dublin System: MSS v Belgium and Greece' (2012) 14 EJML 1.

[108] See *Maaouia v France* (2000) 33 EHRR 42 para 40.

administrative convenience.[109] As regards derogable rights, its 'flagrant denial' test, analysed above, presents limitations. This means that the scope of the notion of persecution, as understood under EU asylum law, is more extensive.[110]

Recent case law of the ECtHR has even prompted commentators to observe that the court's deferential approach to States' migration control imperatives risks a loss of 'credibility as an effective defender of human rights in times of crisis'.[111] These observations have merit. A panoramic view of the court's case law reveals tensions between protection and deference to be constant. Costello has argued that the ECtHR has always been in a weaker position than its EU counterpart and that it 'tends to operate in an incrementalist, minimalist, fact-specific mode, as it faces more extensive threats of non-compliance, particularly in the greater Europe it services'.[112]

b. Refugee Protection beyond the ECHR

The European Committee on Social Rights (ECSR), the Committee of Ministers (CM), the Parliamentary Assembly of the Council Europe (PACE), and the Council of Europe Commissioner for Human Rights (Commissioner) also have an impact on refugee protection. The ECSR is responsible for hearing complaints regarding the violation of the CoE's European Social Charter.[113] It found, for example, systemic flaws in Greek law, policy, and practice, which deprive unaccompanied children of rights to housing, health, and education.[114] The CM is the CoE's statutory decision-making body. It has issued recommendations on the concept of 'membership of a particular social group' in the framework of the Refugee Convention and on 'life projects for unaccompanied migrant minors', including those seeking asylum.[115] The CM is also tasked with supervising the execution of ECtHR judgments.[116] For example, the execution of the *MSS* case remains pending and in 2019 the CM addressed recommendations

[116] ECHR, art 46.

to Greece on its asylum procedures and detention conditions.[117] PACE is a political accountability forum, which issues non-binding but influential pronouncements. Its committee on migration, refugees and displaced persons has engaged with topics spanning from refugees' right to work to the responsibility for lives lost in the Mediterranean.[118] As part of her mandate,[119] the Commissioner engaged with asylum, for example issuing a position on the right to seek and enjoy asylum,[120] and intervening as a third party before the ECtHR in a case relating to returns from Austria to Hungary under the EU's responsibility-allocation system.[121]

4. The Regional Reach of European Refugee Law: Turkey and Ukraine

Scholars have explored the global reach of EU asylum law, in the sense that EU practices and norms are often shared across the globe, particularly those that deflect responsibility for asylum seekers and refugees.[122] The EU's expansive regional reach is even more pronounced as the EU directly engages with its neighbours in developing their asylum systems. This engagement aims to enhance refugee protection elsewhere, so as to deflect and limit the EU's own protection obligations. In addition, the CoE human rights system influences refugee protection. To illustrate, I focus on two case studies: Turkey and Ukraine.

a. Turkey: From a Hesitant Participant to a Strategic Protection Actor

Turkey maintains a geographic limitation to the Refugee Convention, limiting its obligations to refugees from Europe,[123] interpreted in its national law as including all CoE

[117] CoE CM, 'Decision H46-9 on Supervision of the Execution of the European Court's Judgments MSS and Rahimi Groups v Greece (App No 30696/09)', CM/Del/Dec(2019)1348/H46-9 (6 June 2019).

[123] Refugee Convention, art 1B.

Member States.[124] The ECtHR has found violations concerning deportation, detention, and treatment of asylum seekers and refugees.[125] Cooperation with the EU has impacted refugee protection. Ineli-Ciger retraces the influence of European asylum law on Turkish national legislation currently including four main forms of protection: refugee status, conditional refugee status, subsidiary protection status mirroring the EU's homonymous status, and temporary protection status drawing from the EU's sister status.[126] In order to retain the geographic limitation to the Refugee Convention, while protecting Syrian refugees, Turkey activated temporary protection for the benefit of Syrians and Palestinian refugees and stateless persons fleeing Syria.[127] The status includes access to healthcare and education, and a limited right to work.[128] However, there are challenges on accessing these entitlements.[129] In addition, the situation remains fluid with instances of *refoulement* at the Syrian border and threats by Turkey to close its border.[130]

Nevertheless, in April 2020 there were about 3.6 million registered Syrian refugees in Turkey,[131] rendering it a crucial partner in the EU's externalization strategy. This was cemented through the 2016 so-called EU–Turkey deal.[132] Arguably a legally non-binding document based on its wording,[133] this agreement explicitly mentions commitments of the EU and its Member States towards Turkey as part of a cooperation 'bargain', whereby those newly arrived in the Greek islands after 18 March 2016, including asylum seekers, were to be returned to Turkey. In exchange, EU Member States undertook to resettle Syrian refugees from Turkey to the EU, provide funding for refugee protection there, and consider the exemption of Turkish nationals from visa requirements for short stays to the EU.

[131] Based on UNHCR data: UNHCR, 'Operational Portal: Refugee Situations' (18 May 2020) <https://data2.unhcr.org/en/situations/syria/location/113> accessed 19 May 2020.

[132] European Council, 'EU–Turkey Statement' (Press Release 144/16, 18 March 2016) <https://www.consilium.europa.eu/en/press/press-releases/2016/03/18/eu-turkey-statement/> accessed 19 May 2020.

[133] See for the opposite opinion, Maarten den Heijer and Thomas Spijkerboer, 'Is the EU–Turkey Refugee and Migration Deal a Treaty?' (*EU Law Analysis*, 7 April 2016) <http://eulawanalysis.blogspot.com/2016/04/is-eu-turkey-refugee-and-migration-deal.html.> accessed 19 May 2020.

The EU's General Court affirmed that it lacked jurisdiction to examine the legality of this statement, as it was not authored by the EU but rather by 'the Heads of State or Government of the Member States of the European Union and the Turkish Prime Minister'.[134] The CJEU dismissed an appeal against this decision as manifestly inadmissible.[135] The EU courts' conclusion that the EU did not author the agreement absolved them from scrutinizing its compatibility with EU law. This, however, does not mean that its *implementation* is also beyond scrutiny under EU law. The EU–Turkey 'deal' involves Member State action under the EU asylum and return *acquis*, and therefore the consequent applicability of the EU Charter of Fundamental Rights on those actions.[136]

Is Turkey a safe third country under the EU's own definition? While this is analysed on a case-by-case basis, the answer is arguably no. The functioning of the temporary protection regime (ie the practical hurdles to access rights mentioned above), its limitation to Syrian refugees, and the documented instances of *refoulement* in Turkey's borders with Syria, also referred to above, point to the conclusion that Turkey does not meet the criteria of safety established under the Procedures Directive for qualifying as a 'safe third country'.[137] The CJEU has not yet pronounced on this matter. From the Turkish side, the EU–Turkey readmission agreement[138] is used to give effect to the 'deal'. In addition, it involves actions such as the imposition of restrictions to the freedom of movement of protected persons and strict border controls at exit points.

b. Ukraine: A Nascent Refugee Protection Regime

Ukraine acceded without reservations to the Refugee Convention and the 1967 Protocol in 2002. As of March 2020, the country hosts a modest number of refugees (close to 2,200 persons), asylum seekers (close to 2,450 persons), and a more significant

[134] Joined Case T-192/16, T-193/16 and T-257/15 *NF, NG and NM v European Council* (CJEU, 28 February 2017) para 73.

[135] Joined Cases C-208/17 P to C-120/17 P *NF, NG and NM v European Council* (CJEU, 12 September 2018).

[136] See EU Charter of Fundamental Rights, art 51(1).

[137] See 2013 Asylum Procedures Directive (n 33) art 38(1). See Chapter 28 in this volume. There is a legal debate on whether the term 'in accordance with' refers to ratification of the Refugee Convention itself, or merely to 'equivalent protection' to the Refugee Convention, see eg Daniel Thym, 'Why the EU–Turkey Deal Can Be Legal and a Step in the Right Direction' (*EU Migration Law Blog* 11 March 2016) <http://eumigrationlawblog.eu/why-the-eu-turkey-deal-can-be-legal-and-a-step-in-the-right-direction/> accessed 28 May 2020, supporting the equivalence standard, while Steve Peers and Emanuela Roman, 'The EU, Turkey and the Refugee Crisis: What Could Possibly Go Wrong?' (*EU Law Analysis*, 5 February 2016) <http://eulawanalysis.blogspot.com/2016/02/the-eu-turkey-and-refugee-crisis-what.html> accessed 28 May 2020, support the ratification standard. In any case, it is arguable that currently protection in Turkey, even for Syrians benefiting from the temporary protection status, does not fulfil even the equivalence standard given the practical difficulties in accessing rights.

[138] Agreement between the European Union and the Republic of Turkey on the Readmission of Persons Residing without Authorisation [2014] OJ L 134/3.

population of internally displaced persons (734,000 persons).[139] It is a nascent refugee protection regime. Although it adopted its first national refugee law in 1993, it only granted protection to 6,147 persons in the period 1996–2012,[140] with diminishing numbers of asylum applications in recent years.[141]

There is asylum-relevant ECtHR case law, for example on extradition, or lack of an effective remedy,[142] and CoE membership has influenced human rights protection in the country.[143] In refugee protection, though, the impact of the EU is more decisive. Ukraine was one of the countries targeted by the EU's first regional protection programme launched in 2007.[144] A readmission agreement with the EU entered into force the same year.[145] Since 2011, Ukraine's asylum law includes both refugee status and subsidiary protection, even if the scope of the latter is more restrictive than its EU counterpart.[146] The development of the country's asylum system has been linked with visa liberalization plans. Launched in 2008, they bore fruit for Ukraine in 2017, when its nationals were exempt from visa requirements for short stays in the Schengen zone.[147] Migration management, asylum, and ensuring *non-refoulement* form part of the EU's association agreement with Ukraine.[148] The case of Ukraine illustrates how the EU streamlines asylum capacity-building in its relations with its neighbours, even when they do not (yet) constitute major transit countries. This has arguably a dual aim: enhancing refugee protection, but also making them potential candidates for the EU's future externalization projects.

5. Conclusion

The EU and the CoE have heavily influenced refugee protection in Europe. The EU's sophisticated asylum system encompasses legislative, responsibility-allocation, and practical cooperation components. It broadly adheres to the Refugee Convention in many respects, but undermines it in others, while expanding protection by introducing subsidiary protection. It contains elements of intra-State cooperation, such as responsibility assignation, and increasingly links the EU with national authorities in implementing the EU's asylum policy, for example through joint processing. Nevertheless, lack of fair intra-EU responsibility-sharing, implementation gaps, and an externalization impetus riddle the CEAS. The development of an armoury of deflection measures by means of its visa, external border control, migration, and international relations policies illustrates the EU's ambivalent stance towards refugee protection. The EU is constantly torn between protection and deflection. The evolving administrative governance of CEAS and the intersection of deflection and protection in the EU constitute areas of further study.

The CoE impacts regional refugee protection through the ECtHR jurisprudence and its other institutions' soft law. The ECHR has become seminal for refugee protection, mainly through the court's *non-refoulement* and effective remedy case law. Nonetheless, tensions between protection and deference to States' migration management imperatives are a constant in the court's case law. While not containing a regional refugee protection treaty, the CoE has streamlined asylum as an area of concern in its workings. Its institutions and bodies, such as the PACE and the Commissioner, are in dialogue with its Member States on protection matters. The impact of growing State scepticism on the ECtHR and its case law, as well as the (soft)-enforcement potential of CoE's other institutions, merit further research.

CoE human rights and EU asylum law and policy have impacted the protection systems of Turkey and Ukraine. Through its law and practice on temporary protection, Turkey has become a strategic regional protection actor. Those protected under this status, however, face barriers in accessing the rights formally attached to it. Despite these failings, the EU has increasingly sought to deflect its protection obligations to Turkey, making use of its external relations policy and funding. Ukraine remains a potential future externalization partner. The impact of EU externalization, and the evolving legal standards and practice in the EU's neighbourhood form topics of future scientific interest.

CHAPTER 20

REGIONAL REFUGEE REGIMES

Central Asia

KHALIDA AZHIGULOVA

1. Introduction

This chapter examines refugee protection laws and practices in the political region of Central Asia, which includes five post-Soviet States. Four of them—Kazakhstan, Kyrgyzstan, Tajikistan, and Turkmenistan—are parties to the Refugee Convention and its Protocol and have been at the crossroads of massive refugee movements since the 1990s. The fifth State, Uzbekistan, is not a party to either instrument. The chapter undertakes a comparative analysis of local legislation, refugee status determination (RSD) procedures, and jurisprudence in asylum cases between 2010–17, and draws on findings from fieldwork in Central Asian States in 2016–17.[1]

Section 2 establishes the 'region' under examination, explores who 'refugees' are in this region, and discusses the availability of protection (including in Uzbekistan, which has not ratified the refugee treaties). Next, it analyses the legal framework relating to RSD, and the content of refugee status, in the three Contracting States that have viable refugee protection regimes—Kazakhstan, Kyrgyzstan, and Tajikistan—to identify any gaps and inconsistencies vis-à-vis international protection standards. The chapter then explores the institutional refugee framework in each of the above-mentioned States and

[1] Fieldwork in Kazakhstan, Kyrgyzstan, and Tajikistan was carried out by the author in May–June 2016 and March–April 2017. Ethics approval for empirical research in Central Asia was granted by the University Ethics Sub-Committee for Science and Engineering and Arts Humanities, University of Leicester, Ethics Reference: 5627-ka243-leicesterlawschool (12 April 2016). All research participants consented to the use of their anonymized quotes in publications. The author would like to thank Cynthia Orchard for her input and suggestions on an earlier version of this chapter.

reflects on the role of UNHCR, refugee lawyers, and civil society in improving the effectiveness of refugee law in the region. The chapter concludes by examining common regional RSD practices in extradition and non-extradition asylum claims, demonstrating that, in practice, approaches are divergent.

The chapter advances two main arguments. The first argument is that refugee protection in the region is highly politicized and aligned with the self-interests of the States. To this end, although four of the Central Asian States have enacted the provisions of the Refugee Convention in their domestic legislation, the regional practice has been to avoid 'pull factors' to the region through various evasive strategies designed to limit the effectiveness of refugee law in favour of political considerations. The second argument is that, despite the lack of full compliance with refugee law in the region, over the past two decades, the ratification of the Refugee Convention and international pressure in landmark refugee cases and other efforts has led to noticeable improvements in refugee protection, and a reduction in *refoulement* in three States which care about their political image internationally (Kazakhstan, Kyrgyzstan, and Tajikistan).

2. Central Asia: What is the 'Region' and Who are Its 'Refugees'?

a. The 'Region'

Due to its geopolitical location, Central Asia has been historically a place of massive population movements. The region shares borders with Afghanistan, China, Iran, and Russia, some of which are amongst the top refugee-producing countries with 2.7 million, 212,000, 85,000, and 67,000 refugees, respectively.[2] Central Asian States' own conflicts and repression have at times resulted in mass refugee flows and internal population displacements. The most recent examples include the 1992–97 civil war in Tajikistan that resulted in the displacement of one million people, and the 2010 ethnic clashes in southern Kyrgyzstan that resulted in rapid displacement of 400,000 people, including 100,000 refugees to Uzbekistan.[3]

Analysis of refugee protection laws and practices in the region reveals that only three States (Kazakhstan, Kyrgyzstan, and Tajikistan) have detailed refugee laws and functioning asylum systems, accept asylum seekers, and grant refugee status. Despite being a party to the Refugee Convention and having a 2017 Refugee Law (which repealed the earlier 2012 Refugee Law), Turkmenistan does not have well-established asylum institutions and has not recognized any new refugees since the late 2000s,

[2] UNHCR, 'Global Trends: Forced Displacement 2018' (2019) annex table 2.

FIGURE 20.1 Map of Central Asia and Adjacent Countries.

which was one of the reasons that contributed to the closure of UNHCR's field office in 2016.[4] As for Uzbekistan, which is not a party to the Convention, there are no refugee laws, established refugee protection institutions, or recognized refugees in its territory. Indeed, despite Uzbekistan's presence amongst the four Contracting States to the Convention and Protocol, this has had no effect on the introduction of any national refugee protection mechanisms, nor on any refugee NGO activity in the State. Finally, there are no regional practices of temporary protection or hospitality that could provide for refugee protection outside the Convention regime in Turkmenistan or Uzbekistan.

There are numerous theories about why States ratify human rights treaties, including the Refugee Convention, with some duly complying in good faith and others choosing not to comply. Based on the various causal factors that drive States to ratify human rights treaties, Simmons developed a theory of 'sincere' ratifiers and 'strategic' ratifiers.[5] Sincere ratifiers do so because they believe that ratification of a human rights treaty is the right thing to do, and thus comply with these treaties in good faith.

By contrast, strategic ratifiers ratify treaties without a strong normative commitment to implement them or comply with them in good faith. Rather, they may pursue other interests instead. For example, strategic ratifiers may expect material and non-material benefits and rewards from ratification,[6] such as the positive publicity associated with

[4] Information provided by UNHCR Regional Representation in Central Asia (May 2016). The situation had not changed at the time of publication.

[6] Oona A Hathaway, 'Do Human Rights Treaties Make a Difference?' (2002) 111 Yale Law Journal 1935.

treaty ratification, which in turn may improve a State's image and reputation at home and in the international arena[7] and facilitate access to trade, foreign aid, and foreign investments.[8]

Next, through ratification, States may seek to validate the identity of a democratic or democratizing State. Specifically, Simmons notes that States' 'ratification is an act of emulation of values of the Western culture in an effort to identify themselves as members of good standing of the modern society of States'.[9] Thus, States may ratify to be deemed 'modern' and 'civilized' by Western States.[10] Once again, this may coincide with the aim to secure greater financial and political support from the West. Thus, ratification of human rights treaties, in general, may be symbolic for governments that want legitimacy and to be perceived as supportive of human rights.[11]

Fieldwork revealed that Uzbekistan's decision not to ratify the Convention or Protocol was a calculated one, especially since it is a party to all other universal human rights treaties. Uzbekistan has a 137km border with Afghanistan, but the State's president occasionally noted that they would keep the border closed for refugees.[12] Turkmenistan's lack of implementation and full compliance with the Refugee Convention is in line with its general approach to human rights treaties and its poor human rights record.[13]

The remaining discussion of refugee protection in Central Asia in this chapter is thus limited to Kazakhstan, Kyrgyzstan, and Tajikistan, and focuses on the period between 1992 (when these States started to accept refugees as newly independent States) and 2019.

b. 'Refugees' in the Region

There is no publicly available disaggregated data on refugee populations in any of the Central Asian States. The most recent statistics come from 2016–17 and were collected during fieldwork. At that time, the number of acknowledged refugees in the whole region was around 3,200, with roughly 700 in Kazakhstan, 200 in Kyrgyzstan, and 2,300 in Tajikistan.[14]

As can be observed from the data, since the late 1990s, all recognized refugees have arrived from States outside the region. It should be noted that there is no solidarity towards refugees from within the region and Central Asian governments do not recognize refugees from other Central Asian States. The main reason is that Central Asian governments consider the act of granting refugee status an unfriendly act and an affront to their regional neighbours. Also, all Central Asian States are parties to two main regional treaties on extradition and cooperation in criminal cases: the 1993 Minsk Convention together with Russia[15] and the 2001 Shanghai Convention with China.[16] Regional practice shows that in extradition cases involving asylum seekers from within the region, Central Asian States prioritize regional extradition treaties over the Refugee Convention. This is discussed further in Section 5.

3. The Legal Framework of Central Asian States

Following their independence in 1991, Kazakhstan, Kyrgyzstan, and Tajikistan engaged in the process of ratification of the universal human rights treaties, including ICCPR, CRC, CAT, and the Refugee Convention and Protocol. These new post-Soviet nations chose the route of democratization and throughout the 1990s ratified major human rights treaties in part as a means to identify with Western democratic States, on whose political and economic support they largely relied.[17]

The Central Asian States are not bound by any regional framework on refugee protection. In the 1990s, each individually ratified the Refugee Convention and Protocol without any reservations: Tajikistan in 1993, Kyrgyzstan in 1996, and Kazakhstan in 1999.[18] However, it took considerable time before these obligations were transposed into domestic legislation: Kyrgyzstan and Tajikistan adopted their domestic refugee laws in 2002; Kazakhstan delayed until 2010,[19] when it needed to demonstrate its commitment

[15] Convention on Legal Aid in Civil, Family and Criminal Cases (adopted 22 January 1993, entered into force 19 May 1994) (Minsk Convention).

[19] Law on Refugees No 50 of 10 May 2002 (Tajikistan); Law on Refugees No 54 of 25 March 2002 (Kyrgyzstan); Law on Refugees No 216-IV of 4 December 2009 (Kazakhstan).

to human rights before becoming chair of the Organization for Security and Co-operation in Europe (OSCE) that same year.[20] Also, amongst the three States, Tajikistan's 1994 Constitution and Kyrgyzstan's 2010 Constitution directly provide for asylum to be granted, respectively, to foreign nationals who have become victims of human rights abuse,[21] and to foreigners and stateless people persecuted for political reasons and whose civil rights and liberties have been violated by their country of origin.[22]

In each of the three States, domestic legislation includes provisions on the content of refugee status, the RSD process, and designated asylum institutions. As of 2019, Kazakhstan's refugee law framework is the most detailed and advanced. It includes a refugee act and separate by-laws on RSD, which appear to be the most detailed of the three countries.[23] Moreover, its national RSD regulations contain the largest number of UNHCR's 'soft law' guidelines and recommendations on the RSD process, including special provisions for female applicants and applicants who have experienced trauma. The inclusion of these soft law guidelines into domestic legislation makes them mandatory for administrative and judicial decision-makers in the RSD process.

In Kyrgyzstan, refugee legislation is also advanced and detailed, and includes both a refugee act and a by-law on RSD procedures.[24] Moreover, the refugee legislation is supplemented by internal and unofficial RSD guidelines for decision-makers, which were developed in cooperation with UNHCR's country office and closely follow a UNHCR RSD assessment form.

Tajikistan's refugee legislation is the least detailed of the three.[25] It contains only the minimum provisions reflected in the Refugee Convention and the minimum international RSD standards established by UNHCR Executive Committee (ExCom) Conclusion No 8.[26]

The content of refugee status in Kazakhstan, Kyrgyzstan, and Tajikistan shares certain commonalities. Refugees enjoy only a temporary residency status, with limited access to employment, healthcare, education, and other socio-economic and cultural rights, and no access to political rights on the terms that are generally applied to other foreigners. Refugees must renew their status every year in Kazakhstan and every three years in Tajikistan, and prove that the situation in the country of origin has not improved enough for them to return. By contrast, in Kyrgyzstan, refugees are not obliged to renew their status. Also, in all three States, refugee status incorporates the fundamental principles of protection including *non-refoulement*, non-discrimination, and non-penalization for

[26] UNHCR ExCom Conclusion No 8 (XXVIII) 'Determination of Refugee Status' (1977).

irregular entry, which distinguishes refugees from other foreigners in the region. However, the status does not go beyond the Refugee Convention regime to offer more favourable protection. In all three States, refugee status is not equated to permanent residency and does not automatically lead to its acquisition or to naturalization. In practice, due to cumbersome bureaucracy involved in the acquisition of permanent residency or citizenship, refugees who have decided to remain in Central Asian States have kept their temporary residency status, with limited access to socio-economic rights and no access to political rights.

An analysis of RSD by-laws in all three States shows that they comply with minimum RSD standards set out in ExCom Conclusion No 8,[27] including procedural rights to receive guidance about the procedure, access to a UNHCR representative, access to an interpreter and facilities to present a claim, the right to appeal a negative decision to a higher administrative authority, and the right to remain in the territory while the appeal is pending.

Finally, in all three States, refugee law-related norms are also found in other domestic legislation that is applicable to any person in the territory regardless of their status. In particular, the civil procedure legislation provides that refugees have a right to access courts, appeal RSD decisions and any other administrative decisions of the migration authorities, and receive free legal advice and representation.[28] Thus, the analysis of the domestic legislation in these three Central Asian States shows that the Refugee Convention and its minimum protection standards have been effectively transposed into domestic law, at least on paper.

4. Institutional Framework and the Effectiveness of International Refugee Law

In Kazakhstan, Kyrgyzstan, and Tajikistan, the legal framework is supplemented and supported by an institutional framework. In each country, there is a designated national institution that makes asylum decisions and courts that examine appeals. UNHCR country offices have been operating in the region since the 1990s, and a few refugee NGOs offer legal advice and socio-economic assistance to refugees. However, the contribution of each actor to the effectiveness of refugee law in protecting refugees from

[27] ibid.

refoulement and enabling them to access asylum varies by country. This section considers the role of each actor in improving or undermining the effectiveness of refugee law in each of the three States under discussion.

a. State Asylum Institutions

In Kazakhstan and Tajikistan, asylum applications are registered by local police departments, while RSD decisions are taken by a collegial body—an RSD Commission established in each regional police department, accountable to the Ministry of Interior.[29] Members of the Commission include representatives of various State bodies, such as the Ministry of the Interior, the Ministry of Labour, the Health Ministry, local government bodies, and national security bodies.[30] In Kyrgyzstan, asylum applications are registered by the State Migration Service, which is accountable directly to the Prime Minister. RSD decision-making is carried out by individual caseworkers, subject to the approval of the Head of the State Migration Service.[31]

As noted earlier, the RSD by-laws in all three States comply with minimum RSD standards, at least in theory. However, deeper research into the practice of refugee protection in the Central Asian region demonstrates that the existence of domestic refugee legislation and refugee institutions does not guarantee effective protection for refugees, because it is not accompanied by a good faith interpretation and application of the law in accordance with the Refugee Convention and other human rights instruments.

For example, although the Refugee Convention takes precedence over domestic legislation in the three examined Central Asian States, the administrative and judicial authorities in the region do not refer to the Refugee Convention and other ratified human rights treaties in their RSD analysis.[32] Rather, the State authorities apply only domestic refugee law, and interpret it to reach pre-defined outcomes expected by the central authorities. Moreover, there are no official instructions for migration officers about how to consider asylum claims. Rather, so-called informal unwritten instructions are reported to have more weight for decision-makers than international refugee law and RSD standards.[33] Finally administrative and judicial decisions across the Central Asian States routinely fail to provide a detailed explanation of the reasons for rejecting asylum claims, despite this being a requirement under domestic legislation. The most frequent explanation provided in court judgments is that the applicant failed to provide sufficient evidence to support the claim.[34] Experts interviewed during fieldwork noted that the absence of official internal instructions may encourage individual case workers to refer to informal instructions only. Finally, experts shared that during the

[34] Data from analysis of some 150 court judgments given in the examined States in 2010–17.

decision-making process, significant weight is given to national security considerations and recommendations from the State's security services.

This stark contradiction between the implementation of the Refugee Convention and soft law RSD standards into domestic legislation, on the one hand, and practices falling below international refugee protection standards, on the other, raises a concern about a potential attempt by the authorities to evade good faith compliance with international refugee law.[35]

b. UNHCR

UNHCR opened field offices in all Central Asian States in the early 1990s. As of 2019, UNHCR offices remained only in Kazakhstan, Kyrgyzstan, and Tajikistan. The role of UNHCR has been important in at least four areas. First, UNHCR provided considerable support and technical advice to governments on ratification of the Refugee Convention and adoption of domestic refugee legislation in line with the Convention's principles. Secondly, UNHCR contributed to the establishment and training of domestic asylum institutions. It also carried out mandate RSD when national asylum institutions were still nascent, and it still does so when refugees from particular countries of origin are denied access to national RSD processes (including refugees from Russia, China, and other neighbouring Central Asian States, with respect to whom government agencies seek to avoid any negative implications for friendly bilateral relations).[36] Thirdly, in selected cases, UNHCR funds refugee lawyers to represent asylum claims in court, where UNHCR considers the applicant is eligible for protection. UNHCR's fourth main contribution to refugee protection in the region is in its financial, legal, and social assistance to refugees through its NGO partners.

Undoubtedly, over the years, UNHCR's involvement has considerably influenced States' greater compliance with international refugee law. However, by 2019, UNHCR's role had become more limited and targeted. This was in part because of other global priorities, such as the ongoing refugee crises in the Middle East and North Africa, but also because certain Central Asian governments limited their cooperation with UNHCR and requested UNHCR to be less active in their countries.

In 2019, Kyrgyzstan had the highest level of cooperation with UNHCR in the region. The State Migration Service continuously participated in UNHCR capacity-building activities and, as noted, cooperated to develop an internal assessment form for eligibility officers that closely followed the UNHCR mandate RSD form and improved the quality of RSD decision-making. Moreover, until 2017, UNHCR funded the temporary accommodation centre for asylum seekers and refugees in Kyrgyzstan's capital city of Bishkek.

[35] See Zoltan Buzas, 'Evading International Law: How Agents Comply with the Letter of the Law but Violate its Purpose' (2017) 23(4) European Journal of International Relations 85, for more detailed discussion on evasion of good faith compliance with their international obligations.

[36] International Federation for Human Rights (FIDH), 'Kazakhstan/Kyrgyzstan: Exploitation of Migrant Workers, Protection Denied to Asylum Seekers and Refugees' (2009).

Arguably, in an attempt to limit the ‘pull factors’ for refugees to enter Kyrgyzstan, the government decided unilaterally to close the temporary accommodation centre in 2017—despite UNHCR’s funding offer. According to experts interviewed during fieldwork, UNHCR’s ability to strengthen the application of refugee law in Kyrgyzstan may also be limited by the government’s competing political interest to maintain cordial bilateral relations with neighbouring strategic partner States (with close economic and political ties) from which refugees to Kyrgyzstan originate.

In Kazakhstan, UNHCR’s influence on the development of refugee law has also been significantly curtailed since 2010. Until 2010, Kazakhstan had denied access to the RSD process to nationals of more powerful States in a wider region, such as Russia, China, and other neighbouring Central Asian countries. In 2010, under pressure from UNHCR, the Kazakhstani government started to register every refugee claim, but in return, officially forbade UNHCR to carry out mandate RSD. Eventually, UNHCR negotiated an agreement to carry out mandate RSD for refugees from neighbouring countries who would be denied access to national refugee status determination. Part of this agreement was that UNHCR prioritize such refugees for resettlement outside the region.[37] Ever since, the cooperation between the Kazakhstani government and UNHCR has remained limited. The government invited UNHCR to be an observer at its State RSD Commissions, but UNHCR was not allowed to vote and its recommendations were rarely taken into consideration (even when an applicant had a strong protection claim).[38] Expert interviewees noted that this type of ‘limited cooperation’ could be seen as sufficient by the authorities to demonstrate their compliance with only the letter of the Refugee Convention, according to which all Contracting States are obliged to cooperate with UNHCR.[39]

Finally, Tajikistan has the most limited cooperation between the government and UNHCR. During fieldwork there, the Tajikistani authorities did not share any statistics on numbers of refugees and asylum seekers in the country. Whereas UNHCR used to be an observer at the State RSD Commission, this ceased in 2013, arguably so that UNHCR would not have first-hand data with which to assess the quality of the RSD decision-making.[40] Nonetheless, despite these non-transparent practices, the authorities have been wary of ending all cooperation with UNHCR. They still ask UNHCR to continue funding capacity-building activities, donating to the State Refugee Department within the Ministry of Interior, and providing financial assistance to refugees. According to interviewed experts, this counterintuitive behaviour of the Tajikistani authorities may be explained by the country’s weak socio-economic development as well as its geographic location. As the poorest country in the region, which shares a 1,200km mostly porous border with Afghanistan—a major refugee-sending State—the government may

[37] Expert interviews (Kazakhstan, 2016–17).
[38] ibid.
[39] Refugee Convention, art 35.
[40] Expert interviews (Tajikistan, 2016).

be interested in maintaining limited compliance with international refugee law to justify the continued presence of UNHCR in the country and its support.[41]

In summary, as of 2019, UNHCR's main role in the region was advocacy to influence Central Asian States to reform or adopt new pieces of uniform legislation to widen protection space in the region as a whole. Some of this work was carried out through the Almaty Process,[42] which was launched in 2011 as a consultative process to coordinate the protection of refugees and migrants in regional mixed-migration flows to, from, and within Central Asia. However, the most recent piece of regional instrument adopted within the process was in 2016—'Regional Guidelines on how to Identify and Refer Refugees and Asylum Seekers at the Borders of Central Asia'[43]—and the Process has not seen much notable development since.

c. Civil Society and Courts

The contribution of civil society and local courts to the effectiveness of international refugee law in Central Asia has been minimal. Local populations in general are not supportive of promoting the rights of refugees or offering them permanent residence, although they have been positive about providing temporary asylum to refugees fleeing armed conflicts, such as following outbreaks of conflict in Afghanistan and Tajikistan in the 1990s.[44] Moreover, in Tajikistan and Kyrgyzstan, high poverty rates contribute to refugees being seen as rivals by the domestic population.[45] In all three States, host populations have biased perceptions of refugees as a source of instability and conflict, which the authorities do not try to dissuade.[46] As a result, there is no State funding for NGOs that assist refugees; they are all funded by UNHCR.

As for courts, despite their function in reviewing refused asylum claims, they have had no role in promoting greater compliance with international refugee law. In-depth research of judicial practices in the region found that domestic courts lacked impartiality and/or independence during the review of asylum claims and were subject to political whims.[47]

For example, contrary to the provisions of the national constitutions that established that ratified international treaties have precedence over domestic legislation, the judicial authorities rarely refer to the Refugee Convention or other human rights treaties in

[41] ibid.

their analysis. Moreover, judicial authorities do not apply the principle of purposeful interpretation of refugee law as demanded by the Vienna Convention, to which Kazakhstan, Kyrgyzstan, and Tajikistan are parties.[48] Rather, the courts apply a narrow, legalistic interpretation of the national law that incorporated the treaty provisions, ensuring that the courts' actions are compliant only with the letter of the domestic law.[49] In almost all decisions, courts uphold the decisions of State RSD authorities to deny asylum. The very few court decisions that found in favour of refugees were made not on the basis of international refugee law, but rather because the court found violations of the administrative procedural rules[50] or upheld the rights of children (whose rights had been violated).[51]

5. Regional Practices in Refugee Protection

Even though all Central Asian States comply with minimum RSD standards in theory, in practice, asylum is denied more often than not. In this respect, the following regional practices in application of refugee law have been observed in all three States.

First, there is a prevalence of heavy-handed political approaches to dealing with refugee matters—whether they are perceived by governments as sensitive (for potentially causing security risks, public tensions inside the country or political tensions with their key partners inside and outside the region—China, Russia, and Uzbekistan) or non-sensitive and low-risk. The empirical research data and analysis of court judgments demonstrate that Central Asian governments persistently apply an approach predicated on political convenience, rather than a strictly legal, apolitical approach. According to expert interviews, national security services have the final say on any asylum case. For example, in Kyrgyzstan, well-trained administrative decision-makers are allowed to apply their knowledge objectively and reach a conclusion based on a neutral and unbiased analysis in low-profile cases. However, if such cases are for any reason deemed 'dangerous' by security officers, even without any evidence, then the RSD officers are told to change their decisions and deny refugee status.

In Kazakhstan and Kyrgyzstan, the nationality of asylum applicants is a key issue. Years after ratifying the Convention, asylum seekers from neighbouring partner States

[48] Vienna Convention on the Law of the Treaties (adopted 22 May 1969, entered into force 27 January 1980) 1155 UNTS 331, art 31.

[49] Data from analysis of some 150 court judgments given in the examined States in 2010–17.

[50] *Case No 2-1095/2015* (Cassation Board of the Kostanay City Court, Kazakhstan, 18 November 2015): a first instance court repealed a RSD decision because it had been signed by an officer without such powers.

[51] *Case No AD-2029/13* (Supreme Court of the Kyrgyz Republic, 10 March 2015): a case involved a child, national of Kyrgyzstan, whose father was an asylum applicant from Morocco and was the only caregiver while the child's mother had moved to Russia as a working migrant.

were not allowed to enter the RSD process. When the practice of registration was enforced under pressure by UNHCR, migration authorities still found a way to reject their claims. For example, in Kyrgyzstan, the authorities shifted responsibility for sensitive cases on to UNHCR. In the case of Chinese and Uzbek asylum applicants, the migration authorities first referred them to UNHCR for an assessment of their claims, and then, if successful, agreed to keep them in the territory. Moreover, the fieldwork data show that Central Asian States keep a blacklist of countries mired by ongoing conflicts, whose nationals are not to be granted asylum under any circumstances. For example, in Kazakhstan, even in low-profile cases (such as people fleeing from Afghanistan and Syria), applicants are mostly denied asylum regardless of their various profiles and grounds for seeking asylum. At the same time, the expert interviews revealed that in rejected low-risk cases, Kazakhstani and Kyrgyzstani authorities do not forcibly remove refugees and instead allow them to stay in the country illegally, mostly because the authorities lack the financial means to deport them. It is not known to what extent the authorities monitor the situation of rejected low-risk refugees. Being 'illegal' and without access to healthcare, employment, or other socio-economic rights does not effectively or humanely resolve a refugee's plight and may push him or her to leave the country to seek asylum elsewhere.[52]

Analysis of successful asylum applications in Kazakhstan and Kyrgyzstan shows that recognized refugees invariably have a family connection to the asylum country or represent a very low security risk. If an applicant's partner or children are nationals of Kazakhstan, the applicant is granted asylum, albeit on the grounds of other domestic legislation such as the law on the rights of the child, which states that a child has a right to live with both parents.[53] Arguably, this is the only way in which local values of family unity can give way to greater compliance with refugee law, even if it is not on account of refugee law *per se* but rather other humanitarian reasons.

The second regional practice is for governments to give preference to compliance with regional extradition agreements over international human rights treaties and the Refugee Convention. Kazakhstan, Kyrgyzstan, and Tajikistan are parties to two regional extradition treaties which do not contain any safeguards against the extradition of asylum seekers and refugees: the 1992 Minsk Convention[54] for members of the Commonwealth of Independent States (CIS) and the 2001 Shanghai Convention[55] for members of the Shanghai Cooperation Organisation (SCO), which also includes Russia and China. Arguably, Central Asian authorities give precedence to regional treaties to avoid tensions with neighbouring countries, especially those that are more politically and economically powerful.[56] Under these regional extradition agreements, Kazakhstan and Kyrgyzstan regularly extradited nationals of neighbouring States, even if they

approached the local authorities for asylum.[57] The political approach to extradition cases is clear. However, in some extradition cases in Kazakhstan and Kyrgyzstan, international standards were observed, resulting in greater protection for asylum seekers and refugees. These cases and the aforementioned regional approaches to refugee law are discussed in the next section.

a. Kyrgyzstan: The Case of Andijan Refugees

In 2005, 450 Uzbek refugees fled to Kyrgyzstan after an armed conflict in the neighbouring Andijan province of Uzbekistan, two months after the Tulip Revolution that had overthrown the ex-president of Kyrgyzstan. The Kyrgyz government faced tremendous international pressure regarding the fate of these refugees. On the one hand, Uzbekistan labelled them as terrorists and criminals and demanded that Kyrgyzstan return them. Russia and China backed Uzbekistan's demands as well.[58] Also, Kyrgyz nationals living near the Uzbek refugees' camp feared an Uzbekistani invasion and demanded that the Kyrgyz authorities remove the Uzbek refugees. On the other hand, the international community, UNHCR, OSCE, and Western States pressured the Kyrgyz government to abide by its international refugee and human rights obligations, and register the refugees' claims and assess them according to international standards.[59]

Initially, Kyrgyzstan returned four of the refugees to Uzbekistan. However, subsequent reports confirmed that the returnees were tortured and one died. Kyrgyzstan was subjected to harsh criticism and pressure from the international community and local NGOs. As a result, the Kyrgyz government did not deport any more refugees, but nor did it register them, as domestic refugee law required. Instead, the State leadership agreed to UNHCR's assistance to help resettle refugees as the preferred solution.[60]

In August 2015, 439 refugees were resettled outside the Central Asian region. The Kyrgyz government was praised by international human rights organizations and Western States. Uzbekistan immediately reacted by cancelling a bilateral agreement on supplying natural gas to Kyrgyzstan, which caused an energy crisis in Kyrgyzstan. Despite this consequence, the Kyrgyz government was satisfied with its decision, because losing Uzbek gas was not as punishing as potential sanctions from the EU and NATO.[61]

To offset Uzbekistani retaliation, the US government and the European Commission assisted Kyrgyzstan in solving its energy crisis, and the EU and NATO imposed sanctions on Uzbekistan for grave violations of human rights. Uzbekistan then ceased its retributions against Kyrgyzstan and channelled its anger towards international organ-

izations, namely by closing the Tashkent office of UNHCR and withdrawing permission for other international human rights organizations to operate in Uzbekistan in April 2006.[62]

The Andijan refugee crisis is illustrative in several respects. First, it demonstrates how competing factors may influence a State's decision to comply with international refugee law. It suggests that, in the Central Asian context, compliance with international refugee law is more likely when it serves national interests, either by bringing financial benefits or by avoiding substantial financial and reputational losses.

Secondly, this example also shows that international organizations can affect States' behaviour in certain circumstances. The international community's pressure and offers of support overcame the fear of punitive measures by Uzbekistan. This indicates that compliance with international refugee law is also likely to be the greatest when there is support from powerful partners.

The final significance of the Andijan refugee crisis was the improvement, to some extent, in subsequent practice of extradition of asylum seekers from Kyrgyzstan under the regional extradition agreements. Unfortunately, forcible and secret returns of asylum seekers took place even after the Andijan events.[63] However, the Kyrgyz authorities have abstained from extraditing refugees and asylum seekers who enjoy UNHCR's protection,[64] while demanding that UNHCR resettle them.

b. Kazakhstan: Extradition of Uzbek and Chinese Mandate Refugees

Prior to adopting its Law on Refugees in 2009, Kazakhstan had never registered nor conducted RSD for applicants from China and Uzbekistan. There had been reports about deportations of Chinese Uyghurs and Uzbek refugees since the 1990s.[65]

[62] 'Uzbekistan Gives UN Refugee Agency 1 Month to End its Operations', *UN News* (20 March 2006) <http://www.un.org/apps/news/story.asp?NewsID=17860&Cr=&Cr1=#.WZLEVyiGPD4> accessed 20 September 2019.

After Kazakhstan adopted the Refugee Act it Law on Refugees, the situation changed markedly. The authorities began to register all asylum seekers, including existing UNHCR mandate refugees from China and Uzbekistan. Several months after the new Act took effect, Kazakhstan received an extradition request from China and 29 extradition requests from Uzbekistan, all related to terrorism charges under regional security and extradition treaties. All those whose extradition was requested had enjoyed protection from UNHCR between 2005 and 2009 and were awaiting resettlement to third countries. The Kazakhstani authorities reviewed UNHCR's assessments and decided that none of the applicants was a refugee. The applicants were extradited to China and Uzbekistan in June 2011.

However, these cases drew the attention of the international community to Kazakhstan's non-compliance with its international refugee and human rights obligations. Prior to their extradition, the applicants had applied to UN treaty bodies, to whose competence the Kazakhstani government had agreed (the UN Human Rights Committee[66] and the UN Committee against Torture[67]). The Kazakhstani authorities failed to comply with requests not to extradite the applicants while their cases were being considered by the treaty bodies and extradited the applicants after their applications for asylum were finally rejected by the Supreme Court of Kazakhstan.[68]

In the ensuing decisions, both Committees found grave violations by Kazakhstani authorities pertaining to disregarding requests to not extradite applicants while the Committees were still considering the complaints. Moreover, both Committees found Kazakhstan in violation of its international human rights obligations under the articles 6 and 7 of the ICCPR[69] and articles 3 and 22 of the CAT.[70]

These decisions were the first by UN treaty bodies formally to find Kazakhstan non-compliant with its international human rights obligations towards refugees and asylum seekers, and caused significant reputational damage to Kazakhstan as it was preparing for its 2013–15 membership on the UN Human Rights Council, to which it was elected in November 2012.[71]

To avoid any criticism for non-compliance with treaty obligations, Kazakhstan has subsequently observed international human rights obligations in similar extradition cases. For example, in 2012, Uzbekistan requested the extradition of an Uzbek national who enjoyed UNHCR mandate refugee status in Kazakhstan. On this occasion, Kazakhstani authorities arrested the applicant and refused him refugee status. However, they then cooperated with UNHCR and allowed it to resettle the applicant to a third country. Once the applicant's travel was arranged, Kazakhstani authorities released him and allowed UNHCR to oversee his departure from the airport.[72]

[72] Expert interviews (Kazakhstan, 2016).

More recently, in 2016, Turkey requested the extradition of numerous Turkish asylum seekers in Kazakhstan, accusing them of participating in an attempted coup.[73] Despite Turkey and Kazakhstan's close economic and cultural ties and a bilateral extradition agreement, Kazakhstan refused to extradite most of the Turkish nationals. It instead extradited only 11 individuals, claiming that their participation in the coup had been proven by the Turkish authorities. Kazakhstani authorities did not extradite the remaining 40 people because the Turkish authorities had failed to present sufficient evidence for extradition.[74] However, despite the refusal to extradite, the targeted individuals were refused asylum in Kazakhstan on the grounds that they failed to present objective evidence of an individuated risk of persecution.[75] Thus, Turkish nationals were implicitly pushed to seek asylum elsewhere. This inconsistency between the refusal to extradite asylum seekers and the refusal to grant them refugee status may imply an attempt by the Kazakhstani authorities to accomodate its competing political interests. As a result, Kazakhstan avoided being perceived as hostile by Turkey for giving refugee status to its nationals. Simultaneously, the Kazakhstani authorities avoided accusations of violating their international human rights obligations (especially while a member of the UN Security Council in 2017–18).[76]

These cases are significant in several respects. First, they show that decisions on asylum claims and extradition have always involved a balance between the competing self-interests of the ruling regime. Secondly, UN treaty bodies' decisions apparently influenced Kazakhstan's leadership to be more observant of its international refugee law obligations. Thirdly, after the decisions of the UN treaty bodies, Kazakhstan handled politically sensitive situations by complying with the principle of *non-refoulement* and invoking UNHCR's assistance. However, this approach is more political than legal and prioritizes the State's self-interests over the humanitarian needs of refugees.

Finally, the examples of extradition asylum cases in both Kazakhstan and Kyrgyzstan illustrate that although the States' treatment of such asylum claims historically violated international refugee law obligations, gradually the governments have been pressured to improve their compliance with international standards.

6. Conclusion

Compliance with international refugee law has been and remains limited in Central Asia and occurs within the confines of States' political self-interest. While domestic refugee legislation complies with the letter of Refugee Convention and minimum

[74] ibid. [75] ibid.

[76] 'Sweden, Bolivia, Ethiopia and Kazakhstan elected to Security Council', *UN News* (28 June 2016) <https://news.un.org/en/story/2016/06/533342-sweden-bolivia-ethiopia-and-kazakhstan-elected-security-council> accessed 2 April 2020.

RSD procedural standards in international law, the RSD process to a certain extent has been instrumentalized by the authorities so as not to identify every refugee eligible for international protection, but rather to legitimize State policy on limiting the number of recognized refugees. This strategy has helped States to keep compliance to the minimum required by international refugee law while not undermining other competing political interests, although at the expense of reducing the law's effectiveness in refugee protection.

Nonetheless, the ratification of the Refugee Convention and other efforts, including pressure from international organizations and other States, have contributed to gradual changes in the behaviour of Central Asian States and improvement in their compliance with international refugee law over the past two decades. While Central Asian States remain concerned about security risks to their political regimes, which motivates them to limit international refugee protection in favour of their self-interest, they equally care about keeping their international reputation and the benefits of being perceived as democracies, which they risk losing by explicitly violating international refugee law.

Thus, the limited value of the Refugee Convention in Central Asia is that, since the early 2000s, it has helped some asylum seekers to acquire legal refugee status and secure official protection from *refoulement*. Further, even when asylum claims have been refused at the final judicial stage, people have been allowed to stay in the country illegally (until they leave to seek asylum elsewhere). It is likely that refugees from Afghanistan, China, and across Central Asia will continue to come to the region because of porous borders, and/or simply not having any other place to flee. The logic is straightforward: even if the protection system is not perfect, some protection is better than none.

Another benefit of ratification of the Refugee Convention is that it has enabled States to withstand pressure from more powerful States demanding extradition of their nationals, confirming the prevalence of international legal norms over bilateral or regional agreements between States and States' political self-interest. Overall, States may prefer to be bound by ratified international law instruments, rather than submit themselves to pressures from bilateral relations with a more politically and economically powerful neighbour.

Despite numerous and serious challenges to achieving good faith compliance with international refugee law in Central Asia, there has been some progress towards this aim. Much more remains to be done, of course, and the progress to date could be extended with further contributions from UNHCR, international and domestic NGOs, and support (and pressure, when needed) from governments outside the region.

CHAPTER 21

REGIONAL REFUGEE REGIMES

East Asia

OSAMU ARAKAKI AND LILI SONG*

1. Introduction

The region of East Asia includes five States and eight jurisdictions: Japan, the Republic of Korea (Korea), the Democratic People's Republic of Korea (DPRK), Mongolia, and China (including the People's Republic of China (PRC),[1] Hong Kong Special Administrative Region (Hong Kong), Macau Special Administrative Region (Macau), and Taiwan).[2] The region is home to nearly 1.7 billion people and the world's second and third largest economies, China and Japan. With the exception of Mongolia, East Asian States/jurisdictions are densely populated, largely homogeneous, and culturally influenced by the philosophy of Confucianism.

East Asia is remarkably diverse in the sense that, despite the relatively small number of States/jurisdictions in the region, it includes both developed and developing economies, both civil law and common law models, and both capitalist and socialist systems. It also is a mix of refugee-receiving and refugee-producing States/jurisdictions. At one end of the spectrum are the developed, refugee-receiving States/jurisdictions of Japan, Korea, Hong Kong,[3] Macau, and Taiwan. At the other end of the spectrum is the

* The work of this chapter was financially supported by JSPS KAKENHI Grant Number 18K01479.

[1] For the purpose of this chapter, the PRC refers to Mainland China, excluding Hong Kong, Macau, and Taiwan.

[2] UN, 'Classification and Definition of Regions' <https://esa.un.org/MigFlows/Definition%20of%20regions.pdf> accessed 20 September 2019.

[3] But see Suzanne Sataline, 'In a Possible First for Hong Kong, Activists Wanted by Police Gain Protection in Germany', *The New York Times* (21 May 2019) <https://www.nytimes.com/2019/05/21/world/asia/hong-kong-china-germany-activists.html> accessed 26 May 2020.

DPRK, which produces large numbers of refugees and receives hardly any. In between are the PRC and Mongolia. The PRC has been a major source of refugees for decades,[4] but it has been emerging as a destination and transit State for refugees in recent years as its economy prospers. Mongolia receives and generates very few refugees.[5] As the DPRK and Mongolia receive very few refugees and lack legal frameworks addressing refugee issues, they are not discussed in detail in this chapter.

East Asia has not developed its own regional instrument relating to refugees or human rights. Indeed, even compared to Southeast Asia and South Asia, East Asia has neither the institutionalized regional framework of the Association of Southeast Asian Nations (ASEAN) (which provides a venue for regional dialogue on refugees) nor a civil society-driven initiative like the Model Law for Refugees in South Asia.[6] However, East Asian States/jurisdictions do engage in some intra-regional frameworks relating to refugees. For example, all five East Asian States are members of the Asian-African Legal Consultative Organization, and the PRC, Japan, and Korea contributed to the revision of the Bangkok Principles on Status and Treatment of Refugees in 2001.[7] All East Asian States/jurisdictions except Taiwan are members of the Bali Process on People Smuggling, Trafficking in Persons and Related Transnational Crime.[8]

The PRC, Macau, Japan, and Korea are bound by the Refugee Convention, whereas the DPRK, Mongolia, Hong Kong, and Taiwan are not. All East Asian States/jurisdictions (except Taiwan) are bound by at least five of the nine core human rights treaties.[9] Notably, none of the East Asian States/jurisdictions is bound by the Migrant Workers Convention[10] or the Convention on the Reduction of Statelessness.[11] This chapter identifies the convergences and divergences in refugee protection across the region.

2. China

a. A Brief History of Refugee Law

Refugee law in China involves four jurisdictions. First, there is the PRC, founded in October 1949 in Mainland China, whose legal system is generally based on the civil law model. Secondly, there is Hong Kong, a British colony from 1842 to 30 June 1997, which remains a common law jurisdiction. Thirdly, there is Macau, under Portuguese administration from 1557 to 19 December 1999, which has a civil law system. Finally, there is Taiwan (also known as the Republic of China), which the PRC claims as a province, but over which it does not exercise actual control. It also has a civil law system.

The PRC acceded to the Refugee Convention and its 1967 Protocol in 1982. Although the PRC received few refugees before the Indochinese arrivals in the late 1970s, all versions of the PRC Constitution empower the State to grant asylum to foreigners.[12] The 1985 Law on the Administration of Entry and Exit of Foreigners, which was superseded in 2012, also contained a similar asylum clause.[13] The Refugee Convention and Protocol were extended to Macau by Portugal in April 1999 and by the PRC in December 1999. Macau did not have any legal provisions specifically governing refugee status or treatment of refugees prior to 2004, although it received tens of thousands of Mainland Chinese escapees in the 1950s through to the 1970s, and about 40,000 Vietnamese refugees during the Indochinese refugee crisis. Although Hong Kong traditionally received more refugees than Macau, neither the Refugee Convention nor the Protocol was extended to Hong Kong (by the UK or the PRC). During the Indochinese refugee crisis, Hong Kong inserted Part IIIA into its Immigration Ordinance relating to Vietnamese refugees, but that part was effectively repealed in January 1998.[14]

Taiwan represented the State of China at the UN until 1971 and participated in the drafting of the Refugee Convention,[15] although Taiwan did not accede to the treaty when it was a member of the UN.[16] Since 1971, Taiwan has not been recognized as a sovereign State by the UN and is thus generally excluded from the UN treaty regime.

However, Taiwan has dealt with asylum seekers and stateless persons.[17] In 2006, the Taiwanese administration submitted a draft Refugee Act to the Legislature for deliberation, but it has never been enacted.[18]

b. Law and Practice

i. *Domestic Law*

The PRC has incorporated very few provisions of the Refugee Convention into its domestic law.[19] Article 32(2) of the PRC Constitution provides that the PRC 'may grant asylum to foreigners who request it for political reasons',[20] but people who carry out terrorist activities and members of terrorist organizations are excluded from refugee status according to the 2016 Counter-Terrorism Law.[21] Article 46 of the 2012 Law on Exit–Entry Administration (Exit–Entry Law), which is the first provision on the treatment of refugees and asylum seekers in Chinese law, allows refugees to stay in the PRC and to obtain Chinese identity documents.[22] It also allows asylum seekers, whose asylum application is being processed, to remain in the PRC. Additionally, article 31 of the Exit–Entry Law allows foreigners on short-term visas to apply for residence in the PRC on the basis of humanitarian reasons, thus seemingly leaving room for humanitarian protection for persons who are not refugees but are in need of protection.[23] At the time of writing, the PRC has not established a national refugee status determination (RSD) procedure, although Chinese government departments have been working on a draft national refugee law.[24]

In Macau, the 2004 Legal Regime on the Recognition and Loss of Refugee Status established a comprehensive RSD system, defining a refugee as a person who: (1) qualifies as a refugee according to the Refugee Convention, or (2) falls under the

mandate of UNHCR.[25] A Refugee Affairs Commission undertakes RSD, although the Head of the Macau government formally grants or refuses status,[26] subject to an appeal to the Macau Court of Second Instance.[27] Recognized refugees have the right to work and are treated as legal residents of Macau.[28] The Regime includes wide inadmissibility grounds, including the circumstances set out in article 1F of the Refugee Convention, and five other disqualifying circumstances, including where the claim is groundless, clearly fraudulent, or constitutes an abusive use of the procedure.[29] The Regime also provides that a decision on admissibility should be made within 48 hours of the date of application.[30] The broad inadmissibility grounds and the short time for decision-making may lead to arbitrary exclusion from protection.

Currently, refugees have no special status under Hong Kong law and are instead subject to general immigration law. In 2014, the Hong Kong government launched a policy known as the unified screening mechanism (USM), under which the Hong Kong immigration authority undertakes assessments of claims for *non-refoulement* protection, including those based on the Refugee Convention, the CAT, and the Hong Kong Bill of Rights.[31]

Taiwan currently has few legal provisions on refugees and no formal RSD mechanism, although the National Immigration Agency is empowered to determine refugee status,[32] and refugees are exempted from certain employment restrictions applicable to foreigners in general.[33] Asylum requests continue to be handled on an ad hoc case-by-case basis.[34]

ii. *Compliance and Gaps with International Refugee Law*

The PRC has been criticized for forcibly repatriating large numbers of displaced North Koreans and ethnic Kachins from Myanmar, despite evidence that many of them are

refugees.[35] Although the PRC admitted and settled nearly 300,000 Indochinese refugees in the late 1970s and 1980s,[36] since then it has not permitted any refugee identified by UNHCR to settle locally. It does not allow non-Indochinese refugees to work and has not issued Chinese identity documents to them, even though article 46 of the PRC Exit–Entry Law explicitly allows refugees to obtain Chinese identity documents.[37] It is notable that none of the asylum- and refugee-related provisions in PRC law has been litigated. As the PRC has not fully established a rule-of-law system, effective enforcement of refugee rights is likely to remain a long-term challenge.

In Macau, although the 2004 Regime provides that applications should be decided within a year, processing of applications may take as long as eight years.[38] According to UNHCR, Macau has processed less than 15 applications each year since 2009.[39] Nevertheless, that number does not include applications deemed inadmissible, for which no statistics are publicly available. The recognition rate is undoubtedly extremely low. As of June 2019, it was noted that Macau had not recognized any refugees since the 2004 Regime entered into force.[40] The acceptance rate under Hong Kong's USM has also been very low.[41]

As Taiwan is not recognized as a State by the UN, not bound by the Refugee Convention and has limited refugee law, and UNHCR does not currently operate there, refugee protection in Taiwan presents some unique challenges, which are illustrated by recent reports of Hong Kong asylum seekers in Taiwan, and of Taiwan's

agreement to allow Australia to fly asylum seekers from Nauru to Taiwan for medical treatment.[42]

c. Institutions

i. *Judiciary*

In the PRC, there has been no litigation based on any of the refugee- or asylum-related legal provisions. Thus, PRC courts have yet to play a role in refugee protection. In Macau, as mentioned above, the judiciary is empowered to review RSD-related decisions. As of September 2019, Macau's judiciary had considered only a very small number of RSD-related cases and did not appear to have quashed any RSD decision.[43] By contrast, in Hong Kong the judiciary has played an important role in shaping the procedures and standards for processing *non-refoulement* claims. It was in response to a series of judicial decisions that the Hong Kong government established the USM.[44] Judicial review is available to claimants who receive negative decisions under the USM.[45] Notably, the landmark case of *C v Director* was the first comprehensive recognition, by a common law court, of the *non-refoulement* principle as part of customary international law.[46] The Hong Kong judiciary's willingness to protect against *refoulement* and uphold some human rights standards is particularly valuable,[47] given that the Refugee Convention does not apply to Hong Kong, and the Hong Kong government has pursued a firm policy of not officially granting asylum.[48]

ii. *Civil Society and UNHCR*

UNHCR has maintained an office in Beijing since 1980 and has been the sole organization processing refugee status claims in the PRC since that time. The PRC government acknowledges the status of refugees recognized by UNHCR, but the PRC law is silent on the legal effect of such decisions, which are not subject to judicial review. A 1995 China–UNHCR Agreement states that UNHCR may, in consultation and cooperation with the PRC government, have unimpeded access to refugees at any time.[49] However, the PRC has barred UNHCR from accessing displaced North Koreans and displaced Kachins and Kokangs from Myanmar, so these groups have no access to UNHCR's RSD procedure. UNHCR is the main provider of financial support to non-Indochinese refugees in the PRC and arranges third country resettlement for them.[50] UNHCR has advocated for and facilitated the drafting of a national refugee law in the PRC.[51] UNHCR maintains a sub-office in Hong Kong, which conducted RSD for Hong Kong and Macau until March 2014 and 2004 respectively. UNHCR currently plays a monitoring role in Hong Kong and Macau and assists with third country resettlement in Hong Kong. UNHCR does not operate in Taiwan.

The role of civil society in the development of refugee law in the PRC has been limited. Few non-governmental organizations (NGOs) openly advocate for, or assist, refugees in the PRC. In comparison, civil society in Hong Kong, Macau, and Taiwan has played a more active advocacy role with respect to refugee rights. Most notably, through step-by-step strategic litigation, human rights lawyers in Hong Kong have successfully drawn upon human rights law and common law principles to push for better refugee protection.[52] NGOs in Hong Kong also provide free legal advice to refugees and asylum seekers and have advocated for their right to work.[53] In Macau and Taiwan, NGOs such as the Macau Refugee Welfare Association and the Taiwan Association for Human Rights are vocal advocates for refugee rights and supporters of refugees.

3. Japan

a. A Brief History of Refugee Law

Prior to its accession to the Refugee Convention in 1981 and the Protocol in 1982, Japan was often a mere stopover for asylum seekers wishing to seek protection elsewhere

(often the United States). The arrival of Indochinese boat people from the middle of the 1970s, and the intensive international pressure placed on Japan to accept them, partially pushed the then-Japanese government to accede to the Convention. In 1982, the Immigration Control Order[54] was renamed the Immigration Control and Refugee Recognition Act (ICRRA) and introduced provisions to respond to the requirements of the refugee treaties. In 2005, the ICRRA was amended, abolishing the controversial requirement to submit protection claims within 60 days, and reforming the RSD appeal procedure, incorporating experts who are not full-time employees of the Ministry of Justice into the procedure.[55]

b. Law and Practice

i. *Domestic Law*

Under article 98(2) of the Constitution of Japan,[56] treaties can be applied domestically without enacting legislation. The Constitution is superior to Japanese statutes, with laws enacted by the Diet and administrative ordinances following. In this hierarchy, treaties are commonly recognized as being below the Constitution but above statutes.[57]

The ICRRA governs RSD in general, and the Minister of Justice and the Director of a Regional Immigration Bureau have jurisdiction over RSD in practice.[58] The RSD procedure begins upon submission of an application[59] to the relevant Regional Immigration Bureau. A negative first-instance decision may be appealed.[60] According to the ICRRA, the Minister of Justice may appoint Refugee Examination Counsellors (RECs) from amongst those who have reputable character, can make fair decisions on refugee appeals, and hold experience or academic standing in legal or international affairs.[61] The duration of appointment is two years, and reappointment is possible.[62]

Recognized refugees are granted resident status, but there is no domestic law setting out the rights of asylum seekers comprehensively. The situation of their rights depends on their residence status and the policy of the government. In terms of humanitarian and human rights protection, those who are not recognized as refugees may be granted special permission to stay in Japan.[63] Decisions on special permission are made at the discretion of the Minister of Justice, and no reasons for the permission are provided. However, permission may also be granted to people who cannot return to their country

of origin on account of war or armed conflict.[64] In addition, people may not be removed to a State wherein there is a risk of torture as set out in CAT, or to a State where there are substantial grounds for believing that the person would be in danger of being subjected to enforced disappearance.[65]

ii. *Compliance and Gaps with International Refugee Law*

Over the five years from 2014 to 2018, 53,609 applicants for refugee status were recorded. During this period, 128 were recognized as refugees,[66] a refugee recognition rate was less than 1 per cent. States of origin of refugee applicants include Indonesia, the Philippines, Nepal, Myanmar, Iran, Nigeria, and Congo.[67] Various explanations for the low rate and number have been presented,[68] including the high evidential burden on applicants (who are often required to submit clear evidence of individual targeting by a persecutor,[69] which is an unreasonable burden).[70]

In practice, refugees recognized by the Minister of Justice and the Director of a Regional Immigration Bureau can receive a five-year residence permit, which is then reviewed and renewed. This resident status of refugees is a gateway to rights and benefits under law. Despite general convergence with the rights under the Refugee Convention, some gaps exist, in particular as regards public assistance, which the law only makes available for aliens, including refugees, on a discretionary basis.[71] Until 2015, all refugee applicants holding a valid visa were granted a work permit for a limited period. However, the Ministry of Justice then introduced a restrictive policy denying applicants in specific categories such permits, apparently to reduce or deter applicants, claiming that many immigrant workers had manipulated the RSD procedure. This new policy risks excluding refugees from the opportunity to support themselves during the RSD process.[72]

In terms of the right to liberty, Japan's use of detention has been controversial for years. In 2018, approximately 240 of the 342 people in the Higashi-Nihon Immigration

Centre were refugee applicants.[73] The ICRRA, which regulates detention,[74] does not exempt asylum seekers from being subject to it, nor does it set any objective criteria for detention. There is no time limit for pre-deportation detention and even asylum seekers may be detained indefinitely on this basis.

c. Institutions

i. *Judiciary*

Asylum decisions are subject to appeal to the District Court, High Court, and the Supreme Court. Although the Japanese judiciary was highly deferential towards administrative decisions for many years, more recently the courts have overturned more decisions. For instance, the Nagoya High Court has concluded in the Nepalese case that the burden and standard of proof generally applied in Japanese administrative law should be modified in RSD.[75] However, in Japanese judicial decisions, the interpretation of the Refugee Convention in light of international human rights law is generally absent.[76]

ii. *Civil Society and UNHCR*

Civil society groups have contributed to efforts to achieve Japanese compliance with international refugee law. In 2012, the Forum for Refugees Japan (FRJ), the Japan Federation of Bar Associations, and the Ministry of Justice signed a tripartite Memorandum of Understanding, agreeing to meet periodically to discuss refugee protection. The members of the FRJ generally work collaboratively on relevant cases. The Japan Association for Refugees (JAR) registers asylum seekers, providing basic counselling on the law and procedures for asylum, but also for daily survival. International Social Service Japan (ISSJ) facilitates social work and counselling on health, welfare, and social integration. Shelters are provided by the Japan Evangelical Lutheran Association, Catholic Tokyo International Centre, and JAR. Lawyers are networked well through the Japan Lawyers Network for Refugees, and a number of smaller lawyer's networks conduct work focusing around specific themes or populations.[77]

[73] JAR, 'Questions and Answers with the Higashi-Nihon Immigration Centre' (9 May 2018) <https://www.refugee.or.jp/jar/report/2018/05/09-0000.shtml> accessed 15 May 2019.

[76] Arakaki (n 55) ch 4.

[77] A number of lawyers networks exist around themes, including an LGBT lawyers group (see Lawyers for LGBT and Allies Network <http://llanjapan.org/en> accessed 29 May 2020), or around specific populations, such as a Burmese lawyers group, a Kurdish lawyers group, and a Falun Gong lawyers group, amongst others.

UNHCR's Representation in Japan provides recommendations on laws, policies, and practices for refugees. Its task for protection includes training and advocacy work. UNHCR provides funding and cooperates with partners to facilitate legal and social support going directly to refugees.[78] JAR and ISSJ, amongst others, are implementing partners of UNHCR.

4. Korea

a. A Brief History of Refugee Law

When Korea faced mass arrivals of Indochinese refugees from the late 1970s to the 1980s,[79] it granted them only temporary protection, seeking to resettle them without enacting any specific domestic refugee laws. Korea ratified the Refugee Convention in 1992, and the following year it joined the UN (along with the DPRK).

Korea commenced RSD in 1993, incorporating new provisions into the Immigration Control Act. This Act was criticized by lawyer groups and NGOs for its lack of detailed provisions on the RSD procedure and the legal status of asylum seekers and refugees.[80] As part of the campaign, the groups prepared a draft Refugee Act, to replace the Immigration Control Act. Remarkably, this draft provided the basis for the Refugee Act enacted by the National Assembly in 2011.[81] Drawing on the constitutional assertion regarding the territorial scope of the Republic of Korea,[82] and relevant Supreme Court decisions,[83] the Refugee Act does not apply to displaced North Koreans since they are considered nationals of South Korea. However, political tension between the two Koreas could bring about a scenario in which North Koreans, whose protection is subject to a separate regime,[84] would be at risk of 'repatriation' to the DPRK.

81 Republic of Korea: Law No 11298 of 2012 (Refugee Act). The backgound of enactment is explained in Lee (n 80).

82 Article 3 of the Constitution of the Republic of Korea 1987 (Korean Constitution) indicates that the 'territory of the Republic of Korea shall consist of the Korean peninsula and its adjacent islands'. Arguably, it recognizes the area of DPRK as territory of South Korea.

83 1996 [Nu]1221(Supreme Court).

84 The Protection of Defecting North Korean Residents and Support of Their Settlement Act (1997). Article 4 sets out a basic principle that the 'Republic of Korea shall provide protected persons with special care on the basis of humanitarianism'. However, there are many exclusions.

b. Law and Practice

i. *Domestic Law*

Under the Korean Constitution, ratified treaties are automatically part of domestic law and have the same legal effect.[85] The Refugee Act is the first domestic law in the East Asian region designed to be independent from the body of legislation controlling immigration. It covers relevant issues concretely and comprehensively, reflecting the requirements of the Refugee Convention, including provisions on the definitions of refugee and other terms (chapter one), RSD (chapter two), the Refugee Committee (chapter three), and treatment of refugees and others (chapter four).

The refugee definition in the Refugee Act reflects elements of the definition in article 1A(2) of the Refugee Convention.[86] The Refugee Act also defines a humanitarian status holder, namely an alien who is not a recognized refugee but for whom there are reasonable grounds to believe that her or his life or personal freedom may be egregiously violated by torture or other inhumane treatment or punishment or other circumstances, and who is given permission to stay by the Minister of Justice.[87]

The RSD procedure is comprised of two stages. At the initial stage, an asylum seeker in the territory of Korea may apply to the Minister of Justice for refugee status.[88] To this end, the relevant immigration officer interviews the applicant, investigates the facts, and reports to the Minister of Justice.[89] The Minister of Justice makes the decision.[90] A refugee status applicant whose application is denied may appeal, and the Minister of Justice is obliged to refer appeal cases to the Refugee Committee[91] within the Ministry of Justice.[92] This Committee consists of, at most, 15 members,[93] appointed by the Minister.[94] Legally, the Committee is a consultative body and the final decision rests with the Minister.[95] The Minister is obliged to cooperate with UNHCR, which may participate in interviews, for example.[96]

The Refugee Act aims to treat recognized refugees in accordance with the Refugee Convention, protecting them against *refoulement*[97] and providing them with the security of a basic livelihood, the guarantee of education, and so on.[98] A provision aims to secure family unity, that is to say, to permit entry into Korea for the spouse and minor

children of a recognized refugee.[99] Recognized refugees are given F-2 visas to secure their initial residence permits, which allow them to stay and work in Korea.[100]

The Refugee Act's definition of a refugee status applicant includes not only those who are undergoing RSD, but also those who are proceeding with an administrative appeal or administrative litigation.[101] In principle, they are permitted to reside in Korea for six months with a G-1 visa, and extensions of stay will be granted until the RSD procedure is completed. They are able to receive financial aid for living expenses if they are found to be eligible by the Ministry of Justice. They may be permitted to engage in wage-earning employment six months after the date on which the refugee application was received.[102] The Refugee Act provides them with the provision of residential facilities,[103] medical services support,[104] and so on.

ii. *Compliance and Gaps with International Refugee Law*

Since the enactment of the Refugee Act, the number of refugee status applicants has increased rapidly, yet the number of recognized refugees is low. From 1994 to May 2014, 151 Myanmarese, 75 Bangladeshi, and 15 Pakistani people were recognized as refugees.[105] In 2017, out of 9,942 applicants, 121 were recognized as refugees, while 318 were granted humanitarian status. In 2018, although there were 16,173 applicants, only 144 were recognized as refugees, while 514 were granted humanitarian status.[106]

The new legislation has improved Korean refugee law. However, in practice, there is a protection gap. The refugee definition is interpreted narrowly in the Korean RSD procedure, and the standard of proof and approach to credibility are problematic.[107] While the Refugee Act guarantees rights for recognized refugees and applicants for refugee status, there are significant barriers to accessing the RSD process, which in effect excludes many from accessing protection. Those who seek to apply for asylum at airports and ports of entry may be screened out of the RSD system altogether. Although article 6 of the Refugee Act apparently allows for refugee applications at ports of entry, the Minister of Justice decides 'whether to refer the application to the [RSD] procedure'. This power functions as a screening device. Between 2013 and 2016, 42.9 per cent of applications at ports of entry were not referred to the RSD procedure.[108] Those refused

access to RSD are thereby denied all procedural and substantive rights for asylum seekers and refugees.[109]

Another circumstance where refugees could be placed in peril is the 'simplified procedure'. Article 8(5) of the Refugee Act lists categories for which the 'Minister of Justice may omit part of the determination procedure'. These include cases when a refugee status applicant has concealed facts in the application through means that include the submission of false documents or statements.[110] The intention is to deter abusive applications or to eliminate them from the full RSD procedure. So far, there have not been any confirmed cases in which the 'simplified procedure' has been applied.[111] Nevertheless, it still has the potential to exclude refugees from Korea's protection system who may be compelled by their environment to submit false information to protect themselves, or who suffer from post-traumatic stress disorder.

Other concerns in practice include insufficient support for living expenses, practical difficulties in gaining work permits, and the lack of unemployment allowances. There is only limited accommodation for applicants at the refugee centre on Yeongjong Island, and its location is remote.[112] These factors undermine applicants' ability to prove their refugee status. Asylum seekers who have received a non-referral decision tend to be detained for deportation in small waiting rooms with insufficient utilities for weeks, or even months, waiting to be removed or to appeal the decision.[113] The absence of a maximum time limit on the detention of asylum seekers, and the lack of information on detention itself, are monitored by civil society.[114]

c. Institutions

i. *Judiciary*

Statistics show 423 refugee cases in 2014, 1,220 cases in 2015, and 3,161 cases in 2016,[115] such that Korea 'has the biggest volume of judgments made on refugee status in East Asia'.[116] The judiciary has played a role in rectifying the course of administrative actions

and filling the protection gaps in national legislation. For example, the courts have concluded that it is illegal for the authorities to ask applicants inappropriate questions during interviews, to deny applicants the opportunity to confirm or correct their interview records, and to conduct interviews with minor applicants.[117]

The Seoul High Court has also considered that non-referral decisions should be limited to situations where the applicant has been clearly found to fall within the category of a non-referral reason described in the relevant law, or in abusive cases. If there is any room for doubt, the application should be referred to the RSD process for close examination.[118] In another decision, the Incheon District Court considered a rights issue in which it held that the plaintiff's detention in a deportation waiting room was in conflict with the Habeas Corpus Act.[119]

ii. *Civil Society and UNHCR*

Civil society has played a significant role in promoting refugee protection. Remarkably, civil society led the preparation of the bill that became the Refugee Act 2013, with many elements of its proposal accepted by the Ministry of Justice. Lawyers also visit the refugee centre, giving talks on the RSD process to residents.[120]

Article 29 of the Refugee Act describes exchange and cooperation with UNHCR. It requires the Minister of Justice to cooperate when UNHCR makes requests for information on matters including compliance with the refugee treaties. UNHCR and the Refuge Rights Network, and Korean Bar Association jointly published the 'Report on the Situation of Refugee Status Applicants at Ports of Entry' in 2016.[121]

5. Conclusion: Comparative Summary

The refugee laws in the region of East Asia are diverse. The mode of incorporation of the Refugee Convention varies according to the jurisdictions' constitutional requirements, jurisdictional divisions, and so on. The PRC has incorporated few provisions of the Refugee Convention into its domestic law. Hong Kong and Taiwan are not bound by the Convention and have no or limited refugee law, yet the former has a process grounded in international human rights law for screening applicants. Japan has

121 Refugee Rights Network, Korean Bar Association, and UNHCR (n 113).

primary legislation reflecting much of the Refugee Convention. Korea and Macau have integrated provisions of refugee protection comprehensively into a refugee-specific legal framework.

The diversity of implementation in domestic law generates a gradation of forms of RSD procedures. On the one hand, reflecting the absence of primary legislation to deal with refugee matters, including RSD, the PRC has not set up an RSD mechanism. The PRC government leaves it to UNHCR to process asylum cases in principle. On the other hand, Macau, Japan, and Korea have each established an RSD body and process based in legislation. The main actor of the RSD procedure for these is the government, and the involvement of UNHCR is limited. Hong Kong is positioned somewhere in the middle of these two poles. Although Hong Kong law gives no special status to refugees, the Hong Kong government processes all *non-refoulement* claims under a policy and refers those who are granted protection on the ground of persecution to UNHCR, which assists with resettlement.

The PRC and Hong Kong do not accept people who are recognized as refugees for local settlement in their territory, and thus they are allowed to stay until resettlement in a third country is offered. By contrast, Macau, Japan, and Korea accept refugees in their jurisdiction, and their rights are generally protected by the application of relevant laws and grants of residence status. As to the rights of asylum seekers, both Japan and Korea have problematic detention practices.

Despite the diversity of refugee laws, a common feature of the region is extremely low refugee recognition rates. This is partially explained by narrow interpretations of the refugee definition. The relevant legal provisions in Japan and Korea reflect the requirements of the Refugee Convention definition, but their administrative authorities generally do not interpret refugee law within the broader context of international human rights law. Consequently, their systems remain formalistic measures which apparently justify restrictive practices. Similarly, Macau has a relatively comprehensive statutory RSD procedure, but it has not recognized a single refugee in the past 15 years.

Several jurisdictions share another tendency. Japan and Korea provide permission or status statutorily, based on humanitarian or human rights considerations other than protection required by the Refugee Convention. Hong Kong's USM covers *non-refoulement* claims based on the CAT and the Hong Kong Bill of Rights. The PRC legislation, if interpreted constructively, leaves room for humanitarian protection for people who are not refugees.

The potential for progress is also a common phenomenon in the East Asian States/jurisdictions. Judiciaries and civil society groups have gradually become driving forces in shaping the refugee framework, and determining the content of refugee law. The judiciaries of Hong Kong and Korea have played critical roles in filling gaps between their national practices and international refugee law. Korean civil society has been vigorous in highlighting human rights factors in refugee law, in their initiative to form the integrated legal framework and thereafter. NGOs in Hong Kong, Macao, Taiwan, and Japan have been active not only in the facilitation of support to refugees, but also in advocacy to improve government policies and the rights of refugees.

Despite the absence of a regional mechanism for refugee protection, it is intriguing that East Asian States and civil society actors have participated in regional initiatives in the wider Asia-Pacific region. Moreover, regional institutions such as the Asia Pacific Refugee Rights Network (APRRN) also collaborate with national civil society actors and advocate for effective implementation of refugee protection, stressing a rights-based approach. These institutions in the region have been key in vitalizing refugee law in their respective States and promoting the idea of human rights norms in refugee law.

Finally, there has been little dialogue between East Asian States/jurisdictions about the future design of refugee protection. With two significant sources of refugees in the region, the DPRK and the PRC, and the ideological, political, and economic differences between and amongst East Asian States/jurisdictions, it would seem naïve to expect them to have a shared approach to refugee protection. However, China, Korea, Mongolia, and Japan have been (or will be) affected to varying degrees as destination and/or transit States by the exodus of North Koreans. Although there seems to be no easy solution to this issue, starting a dialogue in good faith to understand close neighbours' positions would be a plausible first step to address this matter of shared concern.

CHAPTER 22

REGIONAL REFUGEE REGIMES

South Asia

JAY RAMASUBRAMANYAM

1. Introduction

Since the Partition of India in 1947, South Asia has witnessed periods of mass movement.[1] Yet, since none of the States in the region (defined here as India, Pakistan, Bangladesh, Sri Lanka, Nepal, and Bhutan) are parties to the Refugee Convention or its Protocol, this history is not always accounted for in international refugee law scholarship. In seeking to redress this gap, this chapter articulates some of the ongoing challenges in the region and demonstrates the lacunae that persist with respect to conceptualizing displacement there. It examines protection mechanisms that have been established in the region as *ad hoc* alternatives to hegemonic protection norms, given the lack of a formal institutional approach in the region. The chapter also provides some insights into whether a consistent and comprehensive regional approach to refugee protection can be identified based on past practices. As will be evident throughout, a South Asian regime for refugee protection can be conceived largely through individual State practice and through bilateral agreements. In fact, the South Asian Association for Regional Cooperation (SAARC) has construed refugee movement as a matter of bilateral or trilateral relations, and has regarded international agreements as constricting States' freedom of action.[2]

The chapter begins by providing some background of the region, a brief overview of refugee movements there, and some discussion of the 'Eurocentrism' of the global

refugee regime that led to the establishment of a *de facto* framework of subcontinental defiance. It then examines UNHCR's operational presence in South Asia and its impact on refugee protection. Finally, it considers how national constitutional provisions have been interpreted in a way that provides some protection to refugees.

2. Background

a. The Partition of India, Cartographic Divisions, and the Refugee Regime

The Partition of India, which divided British India into India and Pakistan, constituted a violent end to formal colonialism in South Asia and resulted in mass displacement across newly created international borders—Hindus and Sikhs to India, and Muslims to Pakistan.[3] Both States faced tremendous challenges in responding to the protection needs of the displaced, which led to 'extraordinary interventions'[4] and the groups being pitted against one another.[5] This coincided with the early deliberations for a post-war international refugee treaty. Reflecting on these deliberations during a visit to Europe in 1946, India's Defence Minister, VK Krishna Menon, stated that '[the] outstanding and overall impression left on my mind [is of] very limited reference to our internal problems and difficulties',[6] a matter that coloured both India and Pakistan's engagement with the formal drafting process of the Refugee Convention.

After the Partition, India and Pakistan attempted to engage constructively with the formal drafting process of what was to become the Refugee Convention.[7] A UN General Assembly resolution adopted in January 1946 stated that the 'main task concerning displaced persons [was] to encourage and assist in every way possible their early return to their countries of origin'.[8] At the 77th meeting of the Third Committee on Social, Humanitarian and Cultural Questions, the representative from Pakistan drew attention to that resolution and stated that '[to] avoid disturbing friendly relations between nations, refugees should not be settled in a region in which the majority of the inhabitants

were opposed to such resettlement'.[9] The representative noted that the resolution provided that States should be willing to encourage and assist in every possible way the early return of persons of concern to their country of nationality or habitual residence. However, given the unique circumstances of the Partition of India, which created new borders along ethno-religious lines, the idea of returning people to their place of habitual residence or country of nationality could not be considered. At a subsequent Economic and Social Council (ECOSOC) meeting in 1949, India sought to recognize its efforts in assisting refugees during the Second World War. However, from 1947 onwards it had been faced with its own refugee problem, post-Partition, and 'had been unable to give anything more than moral support to the International Refugee Organization'.[10] The Indian representative pointed out that this 'was not from lack of sympathy with its aims, but from lack of resources'.[11]

Despite their initial reluctance, India and Pakistan continued to engage with the formal drafting process of the Refugee Convention. However, both States expressed concerns on various issues, most importantly the definition of a refugee. Noting the option contained in article 1B of the Convention to limit the definition to people displaced on account of 'events occurring in Europe before 1 January 1951', the representative from Pakistan 'was of the opinion that the definition … should not be limited by any territorial boundaries', and furthermore expressed the hope 'that the scope of the definition would be extended by the General Assembly so as to cover unfortunate people both inside and outside the boundaries of Europe'.[12]

In separate meetings of the Third Committee, India and Pakistan's permanent representatives to the United Nations requested that the Convention address racial and religious discrimination directed towards some refugees.[13] They also expressly requested that displacement resulting from the Partition be addressed. However, they were met with resistance, resulting in their disillusionment with both the Convention and UNHCR's mandate.[14] India stated that the 'objections raised confirmed [their] belief that fundamental differences existed'.[15]

b. From the League of Nations to the United Nations

India's experience with refugee protection predated post-Partition displacement. A founding member of the League of Nations,[16] India had provided assistance, sanctuary, and identity certificates to Russian refugees[17] and refugees from the Saar.[18] As part of efforts to settle Jewish refugees in India, a Jewish colony was created in the suburbs of Delhi to aid those expelled from Germany.[19]

Despite India's engagement in these processes, it was with mixed sentiments. Some Indian nationalist leaders declared that 'the League of Nations was a fraud and was meant for the perpetuation of imperialism',[20] while a member of India's Council of State, Phiroz Sethna, argued that 'India cannot take her rightful place in international affairs unless she has her right place as a nation'.[21] India subsequently became a full member of the United Nations while it was still under British rule.[22]

c. A Myth of Difference

Refugee movements within South Asia post-Partition resulted both from the direct involvement of Western colonial powers, 'who were also among the founding members of the international refugee regime',[23] and Britain's sudden withdrawal from India, which was coupled with the creation of new international borders resulting in internal strife. In addition to this, South Asian States' disengagement with the global refugee regime can be viewed from the lens of the 'myth of difference'. This contributed to an understanding that 'the nature and character of refugee flows in the Third World

were . . . radically different from refugee flows in Europe since the end of the First World War',[24] and as such, there was 'an image of a "normal" refugee' who could be identified as 'white, male and anti-communist—which clashed sharply with individuals fleeing the Third World'.[25] The result was that the Third World developed a very different view of forced migration, premised on the idea that Western conceptions overlooked the role that colonialism played in creating instability and postcolonial anxieties for individuals.

The myth of difference, in addition to historically constrained notions of persecution, was foundational in conceptualizing specific practices of international protection in South Asia.[26] Both India and Pakistan were compelled to contend with millions who were dispossessed as a result of the Partition. They were also confronted with the new geopolitical realities and faced enormous challenges that came with nation-building. And despite their repeated attempts to draw attention to the protection concerns of those displaced as a result of the abrupt and violent end to formal colonialism, the scope of the Refugee Convention was not formally broadened. As a result, South Asian States had to re-examine their role in refugee protection and develop mechanisms that were more aligned with their regional concerns, and practices that were more pertinent to the specific needs of the displaced people they hosted.

3. Examination of Refugeehood in the Subcontinent and Post-Partition Evolution of the 'Refugee' Concept

Despite the 1967 Protocol removing the temporal and spatial constraints, South Asian States remained disillusioned with the Refugee Convention's core objectives. Perhaps for this reason, States in the region have instead chosen to regard refugee protection as matters between States and have reasserted their position that the Convention and Protocol fail to capture the experiences of displacement in the region by not ratifying these instruments. These interventions included, but were not limited to, the implementation of a unique legal and operational concept of refugeehood in some States, which allowed for the right of people to escape ethno-religious violence.[27] Pakistan, for instance, included *muhajir* or refugee as a category in its 1951 census. *Muhajirs* were those who had moved to Pakistan as 'a result of Partition or fear of disturbances connected therewith'.[28] The newly formed government of Pakistan

[28] ibid.

provided them settlement in urban areas in the province of Sindh. Similarly, India and Pakistan signed the 1950 Nehru-Liaquat Pact whereby the two governments agreed to protect people who had been displaced as a result of violence along religious lines.[29] The pact also guaranteed minorities 'complete equality of citizenship, irrespective of religion, a full sense of security in respect of life, culture, property and personal honour, freedom of movement within each country and freedom of occupation, speech and worship, subject to law and morality'.[30]

South Asian States' responses to mass exodus since the Partition of India show that, in essence, they have adhered to the core principle of *non-refoulement* set out in article 33 of the Convention.[31] A number of *ad hoc* mechanisms have been formulated to provide sanctuary, material assistance, and protection to refugees. Tibetan, Sri Lankan, and Bangladeshi refugees in India, Afghan refugees in Pakistan, Bhutanese refugees in Nepal, and Rohingya refugees in Bangladesh have all been provided with either temporary sanctuary or long-term protection.[32]

a. Relationship with UNHCR

Over time, States in the region have worked closely with UNHCR to extend protection to refugees, including by permitting UNHCR to operate in their territories and by actively participating in the deliberations of its Executive Committee (ExCom).[33] In some cases, on account of the absence of a formal legal framework governing the treatment of refugees and the lack of an administrative framework to determine refugee status, UNHCR undertakes refugee status determination (RSD) itself.[34] For instance, in India, UNHCR is actively engaged in protection activities including the registration of asylum seekers, RSD, and the provision of documentation facilitating their right to stay in India without the risk of deportation or detention.[35] It conducts RSD for certain groups of refugees, whereas others, such as Tibetan and Sri Lankan refugees, are assisted directly by the Indian government. This is an example of how, in India, different refugee groups enjoy different privileges.[36]

[36] Sen (n 34) 405.

At other times, there is a joint approach involving both the State and UNHCR. For instance, the reception and settlement of Tibetan refugees in Nepal and India has been facilitated by the Central Tibetan Administration (Tibet's government in exile), in collaboration with the governments of India and Nepal.[37] In 1989, Nepal signed a Gentleman's Agreement with UNHCR, which allowed the latter to manage and issue identity certificates to all new Tibetan arrivals.[38]

In yet other cases, UNHCR has undertaken RSD at the insistence of the judiciary.[39] For instance, in *Bogyi v Union of India*, the High Court of Assam stayed the deportation order of an asylum seeker from Burma and directed the UNHCR office in New Delhi to consider his application for political asylum.[40] Similarly, in *Malavika Karlekar v Union of India*, the Supreme Court of India stayed the deportation of 21 Burmese Nationals from the Andaman Islands, pending their RSD by UNHCR.[41]

The subcontinent's adherence to the spirit of international refugee protection norms is also evident from India, Pakistan, and Bangladesh's membership of ExCom. Sen suggests that India's involvement since it joined in 1995 can be attributed to its desire in obtaining successive terms on the UN Security Council: being seen as an active participant in a multilateral body like UNHCR may better its chances.[42] Sen also argues that, given Pakistan's membership of ExCom, India may be concerned that it might agitate against India's national interests.[43]

Chimni notes that despite India's membership of ExCom, the government has neither taken steps to ratify the Refugee Convention nor to pass comprehensive national legislation on refugee protection in India.[44] However, Chimni suggests that if India were to adopt national legislation on refugee protection, this could strengthen its reputation within ExCom and be interpreted as a sign that India takes its membership (and refugee law) seriously. He argues that by neither passing national legislation nor signing the Convention, India's involvement in ExCom hints at opportunism.[45]

b. Regional Initiatives

Given the scale of refugee movements in the subcontinent since the Partition of India, challenges have remained in developing nuanced individualized RSD procedures. As outlined below, States in the region have engaged in coordinated efforts to respond to

refugee movements throughout the last few decades. In many cases, States have engaged in group determination procedures 'whenever numbers [have made] individual status determination impossible'.[46]

There have been several regional initiatives formulated to respond to displacement, some resulting in the adoption of principles or guidelines (albeit not legally binding). These processes show that States in the region are committed to the core objectives of the refugee regime, even if they continue to refuse to ratify the Convention or Protocol.

i. *Asian-African Legal Consultative Organization (AALCO)*

The AALCO, an intergovernmental consultation group comprising 47 Member States in Asia and Africa, adopted the Bangkok Principles on Status and Treatment of Refugees in 1966.[47] Although the principles are not binding, they have provided important guidance on protection norms. This is particularly important in a region that, unlike many others, does not have extensive binding treaties or frameworks on refugee protection. The principles have been modified over time to reflect the experiences of refugees, and were revised in 2001 to reflect an expanded refugee definition, which included persecution based on colour, ethnic origin, and gender.[48]

ii. *Informal Consultations on Refugee and Migratory Movements*

The Informal Consultations on Refugee and Migratory Movements in South Asia were a series of meetings initiated by the former UN High Commissioner for Refugees, Sadako Ogata, in 1994, to discuss strategies and common approaches for strengthening refugee protection and finding durable solutions. An Eminent Persons Group (EPG) was established with representatives from Bangladesh, India, Nepal, Pakistan, and Sri Lanka. The core objective of the consultations was to find ways to reconcile the narrowness of States' power-political interests with their humanitarian and international law responsibilities.[49] The meetings were undertaken with the aim of developing 'a South Asian perspective on the pathways that would lead to a lasting solution'.[50] At the Fourth Informal Consultation, the need for a regional normative framework covering refugees, stateless persons, and the internally displaced was articulated.[51] The Seventh Informal Regional Consultation of the EPG, held in New Delhi in December 2002, concluded with the need for a declaration that would serve as a platform for reinforcing refugee

protection principles, reiterate the need for States to enact national refugee legislation, and provide a harmonized approach to refugee protection for the region. Accordingly, the South Asia Declaration on Refugees was adopted by the EPG in January 2004[52] (although there is no evidence that it is being applied in South Asian States). A further significant outcome of the consultations was the idea that such meetings enhanced the potential significance for the future direction of refugee policy in the region.[53]

iii. *Asia Pacific Consultation on Refugee Rights and the Asia Pacific Refugee Rights Network*

Regional initiatives have also been initiated by the Asia Pacific Refugee Rights Network (APRRN), which undertakes consultations on refugee rights on a biannual basis under the auspices of the Asia Pacific Consultation on Refugee Rights (APCRR). The APCRR has positioned itself as a regional network that 'capitalizes on the diversity of its members and the resources within the network to promote collaboration'.[54] Its biannual consultations provide a platform to explore innovative solutions to advance refugee rights and protection in the region. At its 2018 meeting, its South Asia working group identified the need for networking and collaboration with other organizations and agencies to better create viable solutions for refugee protection in the region.[55] The group also discussed the formation of a Rohingya Working Group and suggested a 'comprehensive mapping exercise of Rohingya people in their respective countries'.[56] The prospect of a Rohingya Working Group was followed by the Indian government's decision to begin the deportation and forced repatriation of Rohingya refugees. In August 2017, the government directed Indian authorities to identify 'illegal immigrants', including the Rohingya, and to deport them.[57] A petition was filed in the Supreme Court to stop this,[58] and an *amicus curia* brief by the UN Special Rapporteur on Contemporary Forms of Racism, Racial Discrimination, Xenophobia and Related Intolerance, E Tendayi Achiume, directed the court's attention to India's obligations under international law precluding such removals.[59] In light of India's anti-Muslim and anti-refugee sentiments, Achiume pointed out that this deportation order would violate India's obligations to

international human rights treaties. More importantly, the brief highlighted that India would violate the principle of *non-refoulement* and that such 'evaluations [should be] free from racial discrimination and that racial inequalities in these decisions do not arise directly or indirectly'.[60]

iv. *Summary*

While the regional initiatives above have not resulted in binding legal frameworks, they have helped to provide clarity on some of the core objectives of the global refugee regime by reaffirming the principles outlined in various international frameworks.[61] By bringing States together, they have helped to address 'convergent expectations' with respect to refugee protection.[62] While this may not seem like a high bar, it must be understood within the historical context of displacement in the region. These regional initiatives should therefore not be viewed as inconsistent with the international protection regime, but rather as steps in the right direction, given the region's tumultuous history.

c. State Practice: India

In addition to regional initiatives, individual States in the region have responded to mass refugee movements from neighbouring States and beyond. The next sections provide an overview of their practices.

While India has provided protection to different groups of refugees over time, its practice has not been consistent. As this section explains, while Tibetan refugees were provided with material assistance, land, residence permits, and even settlement areas, for instance, Sri Lankan Tamil refugees and Chakma refugees were settled in camps, with many subsequently repatriated. The following sub-sections illustrate this differential treatment in more detail.

i. *Tibetan Refugees in India*

Soon after the arrival of the Dalai Lama in 1959, India formally granted him asylum—and by extension, to any Tibetan fleeing violence. This policy was initially a response to public opinion and a feeling of kinship.[63] Subsequently, India initiated relief efforts to assist Tibetan refugees. At the peak of the Tibetan refugee movements into India in 1961, the Lok Kalyan Samiti (a Delhi-based NGO) and the Central Relief Committee for Tibetan Refugees were involved in providing aid.[64] The Indian government also welcomed aid from voluntary organizations, and the Central Relief Committee was respon-

[64] Interoffice Memorandum from Gilbert Jaeger to the High Commissioner on 'Tibetan Refugees in India—Visit of Shri PN Sharma' (6 November 1961), in Tibetan Refugees in India, File No 11/1-15/0/IND/TIB (UNHCR Archives, Geneva).

sible for receiving and coordinating it.[65] In addition to international aid, the Indian government provided Tibetan refugees with 'subsistence money, land to settle, and administrative support upon arrival'.[66] They were also issued with Indian Registration Certificates on a *prima facie* basis, which they could use as an identity document as well as a residence permit.[67]

ii. *Bangladeshi Refugees in India*

India and Pakistan went to war in 1971 over the right of East Pakistan to secede. These geopolitical instabilities were manifestations of postcolonial nation-building and the politics of newfound nationalism.[68] This prompted a mass forced migration into the neighbouring Indian states of West Bengal, Tripura, Meghalaya, and Assam. As Luthra explained at the time, in 'the brief span of seven months upto [sic] the end of October 1971, the influx from East Bengal has been of the order of 9.5 million'.[69] India's position on ensuring the provision of relief for millions of refugees from East Pakistan also reinforced the idea that refugees were 'a matter of bilateral not multilateral relations and that international agreements could constrict their freedom of action'.[70] In August 1973, India and Pakistan signed the Delhi Agreement, which outlined the repatriation of Bengalis from Pakistan to Bangladesh, and the repatriation of non-Bengalis from Bangladesh to Pakistan.[71] India's Ministry of External Affairs was steadfast in preventing refugees from returning, given that the change in regime in East Pakistan (which was now Bangladesh) had not been particularly hospitable to those who had fled deteriorating conditions.[72] The image of a refugee was of one who had the right to asylum and sanctuary solely due to the circumstances of flight, and whose ability to seek protection was not to be constrained by the restrictive elements of the Refugee Convention.[73]

iii. *Sri Lankan Refugees in India*

In 1983, soon after the anti-Tamil riots in Sri Lanka, several thousand refugees arrived in India.[74] By the mid-1980s, many Sri Lankan refugees were living in government-assisted refugee camps, most of which were situated in the southern Indian state of Tamil Nadu. While India's response to the exodus of Tamil refugees was positive initially, over time their presence began to be viewed as a threat to national security. This was the result of the assassination in 1991 of the former Prime Minister of India, Rajiv Gandhi. The state government of Tamil Nadu had imposed rigid restrictions on the movement of Sri

Lankan Tamil refugees after the assassination. The government also initiated repatriation procedures, and many Tamil refugees began to be settled in temporary transit camps in Sri Lanka. The programme was suspended after concerns were raised about their security. This led to UNHCR establishing an office in the southern Indian city of Madras (Chennai), based on a memorandum of understanding between the Indian government and UNHCR.[75] Today, there are still more than 62,000 Tamil refugees living in 107 camps in Tamil Nadu, and around 37,000 refugees living outside of the camps.[76] India has instituted a policy to grant them residence visas and work permits. However, little has been done to enable them to apply for citizenship and many continue to live in a state of limbo.[77]

iv. *Constitutional Provisions and Case Law*

Jurisprudential developments in India have also contributed to refugee protection, often drawing on constitutional law, and at times also on international legal principles. For instance, the case of *National Human Rights Commission (NHRC) v State of Arunachal Pradesh*[78] emerged from a public interest petition filed by the NHRC, seeking to enforce the provisions of article 21 of the Constitution (concerning the right to life and personal liberty). The court stated that the Constitution 'confers certain rights on every human being and certain other rights on citizens. Every person is entitled to equality before the law and equal protection of the laws.'[79] It held that India 'is bound to protect the life and personal liberty of every human being, be he a citizen or otherwise, and it cannot permit anybody or group of persons … to threaten the Chakmas to leave', noting also that the State's institutions must take steps to 'carry out its legal obligations to safeguard the life, health and well-being of Chakmas residing in the state without being inhibited by local politics'.[80]

The case of *Ktaer Abbas Habib Al Qutaifi v Union of India* originated from a special civil application to the High Court of Gujarat, which sought direction to release two Iraqi asylum seekers from detention in the western Indian state of Gujarat.[81] The petitioners sought a stay of deportation, based on the principle of *non-refoulement*, and release from detention. The court noted the Supreme Court's ruling in *NHRC* that the Constitution guarantees certain fundamental human rights to non-citizens,[82] and held that '[the principle of *non-refoulement*] prevents expulsion of a refugee where his life or freedom would be threatened on account of his race, religion, nationality, membership of a particular social group or political opinion'.[83] The court further stated that this aligned with 'Article 21 of the Constitution, so long as the presence of refugee [sic] is not

prejudicial to the law and order and security of India. All member nations of the United Nation [sic] including our country are expected to respect for [sic] international treaties and conventions concerning Humanitarian law.'[84]

d. State Practice: Pakistan

Like India, Pakistan was compelled to deal with post-Partition displacement and has hosted several groups of refugees over the years. Pakistan's disillusionment with the Refugee Convention was rooted in its inability to convince the drafters to expand the refugee definition to include Partition refugees. After the Liberation War of 1971 that saw the creation of the sovereign State of Bangladesh, the Delhi Agreement of 1973 was signed between India and Pakistan.[85] In the aftermath of the Liberation War, the agreement sought: (a) the repatriation of Bengalis from Pakistan to Bangladesh; (b) the repatriation of non-Bengalis from Bangladesh to Pakistan; (c) the repatriation of Pakistani prisoners of war and civilian internees held by India; (d) resolution of the issue of 195 Pakistani prisoners of war whom Bangladesh had charged with the commission of war crimes; and (e) recognition of Bangladesh by Pakistan.[86] Under this agreement, Pakistan received thousands of Bihari/non-Bengali refugees (who shared linguistic proximity to Urdu speaking Pakistanis) as a part of the repatriation effort coordinated by UNHCR.

Since 1979, Pakistan has also hosted millions of Afghan refugees fleeing regime changes.[87] Until 2001, they were recognized *prima facie* as refugees; in August 2001, individual RSD procedures were briefly introduced on account of the government's concern to distinguish those with an international protection need from 'economic migrants'.[88] Even those who were found to have an international protection need were no longer granted 'refugee' status, but were instead designated as 'persons of concern' and entitled only to temporary protection.[89]

After each major political change in Afghanistan, an agreement was concluded between the government of Pakistan and UNHCR (and sometimes also the government of Afghanistan) concerning the voluntary repatriation of Afghan refugees from Pakistan.[90] Zieck suggests that, of these, the 1993 Cooperation Agreement was crucial because

> on the basis of the cooperation it prescribes, in particular its substantive content, it could be argued that the host state is bound to observe a substantive body of refugee law, well beyond anything that could be derived from customary international law, with regard to those who qualify as refugees on the basis of UNHCR's extended mandate.[91]

UNHCR conducts RSD in Pakistan in accordance with that agreement, and those in search of asylum, as well as those recognized as refugees, are permitted to remain in Pakistan until a durable solution can be found for them.[92]

In 2007, Pakistan issued Afghan refugees with proof of registration cards, valid for 10 years, authorizing their temporary legal stay, freedom of movement, and an exemption from the application of the Foreigners Act 1946.[93]

e. State Practice: Bangladesh

Bangladesh, being the newest sovereign State in the subcontinent, has also had to deal with the ramifications of instability in neighbouring countries, in particular Myanmar. Soon after the formal end to colonialism in Myanmar in 1948, tensions between the government and the Rohingya population grew. Although there were efforts to integrate the Muslim population of Myanmar into East Bengal (present-day Bangladesh), this was rejected by both sides.[94] A 1977 census in Myanmar regarded the Rohingya as foreigners, which resulted in violence directed towards their communities in Rakhine state. By 1978, some 200,000 Rohingya had fled to Bangladesh.[95] Subsequently, the 1982 Citizenship Law of Burma categorically denied the Rohingya citizenship rights in that country.[96] With increasingly repressive measures and violence against the Rohingya, thousands more fled to Bangladesh. The government responded to this large-scale exodus by setting up refugee camps in Cox's Bazar and the Chittagong Hill Tracts, with assistance from UNHCR.[97]

However, such policies of encampment and denial of freedom of movement have been highly problematic.[98] Furthermore, many Rohingya have been forcibly repatriated despite expressing ongoing concerns about their safety, and notwithstanding Memoranda of Understanding between the Bangladeshi government and UNHCR.[99] The Rohingya's statelessness at home and their inability to access effective protection in Bangladesh reinforce their vulnerabilities.

Most recently, a series of boats carrying hundreds of Rohingya refugees have been denied entry into Bangladesh despite appeals from the international community.[100] The protracted nature of the Rohingya's displacement has been exacerbated by the

bureaucratic machinations of the governments of Bangladesh, Myanmar, and UNHCR. Internationally, Gambia instituted proceedings in the International Court of Justice against Myanmar for violations of the Convention on the Prevention and Punishment of the Crime of Genocide,[101] resulting in provisional measures that Myanmar shall 'take all measures within its power to prevent the commission of all [genocidal] acts within the scope of Article II of this Convention'.[102]

f. State Practice: Nepal

Nepal has predominantly hosted refugees from Tibet and Bhutan. Around 20,000 were Tibetans who arrived before 1990 and were permitted to remain in Nepal.[103] The largest group were the Lhotsampas, an ethnic minority from Bhutan, who mainly speak Nepali and practice Hinduism (in contrast to Bhutan's Buddhist majority).[104] The exodus of around 100,000 Lhotsampas to Nepal from 1990 onwards was a result of three interrelated factors, according to refugee leaders.[105] First, changes to Bhutan's citizenship law in 1985, followed by a census in 1988, characterized the Lhotsampas as non-citizens and 'illegal immigrants' who were 'a threat to the cultural autonomy and political order of the northern Bhutanese'.[106] Secondly, they were subjected to discriminatory laws and policies; and thirdly, they were denied the right to free expression and protest.[107]

Nepal initially accommodated the Lhotsampas in transit camps, but subsequently allocated land and established eight refugee camps in the Jhapa and Morang districts.[108] It also sought the assistance of UNHCR 'which provided emergency assistance to the swelling numbers of refugees'.[109] The World Food Programme provided basic food rations, while other UN agencies provided 'technical assistance to UNHCR'.[110]

Nepal pursued a three-pronged approach to try to resolve the situation: internationalization of the issue, engaging in bilateral talks with Bhutan, and seeking the involvement of India.[111] First, Nepal engaged in efforts to draw the international community's attention to the issue so that Bhutan might agree to negotiate a solution,

but interest was minimal.[112] Secondly, despite a series of joint ministerial meetings over a decade, Nepal and Bhutan were unable to reach an agreement.[113] Bilateral talks also took place on the side-lines of the SAARC summit in 1993, but Bhutan refused to acknowledge the Lhotsampas as citizens and the talks failed. Finally, India's intervention was minimal. This left only one option: third country resettlement.[114] In 2007, UNHCR and the International Organization for Migration commenced efforts to facilitate this resettlement process.[115] In conjunction with a number of States, the process of resettlement proved largely successful with over 113,500 Bhutanese refugees resettled in third countries by the end of 2019,[116]

4. Conclusion

The subcontinent's experience of displacement 'has largely gone unexamined because of its peripheral location to post-war international order'.[117] Yet, despite the fact that South Asian States have not ratified the key international treaties on refugees, nor established their own regional protection framework, State practice does reveal respect for the principle of *non-refoulement* and other protection norms. Indeed, each State in South Asia is formally bound by the core international human rights treaties, including the CAT and the ICCPR, which also impose *non-refoulement* obligations.[118] In addition, efforts have been made at both the regional and national levels to standardize protection norms, and States in the region have generally afforded temporary, and sometimes even permanent, sanctuary to groups of refugees over the years. This is why it is crucial to question the narrative of exclusivity that has developed within refugee studies, which has arguably marginalized protection experiences in States that are not parties to the Refugee Convention or Protocol. This chapter has sought to reorient the perspective by analysing the nature of forced migration in South Asia, and who can be identified as a refugee.

CHAPTER 23

REGIONAL REFUGEE REGIMES

Southeast Asia

VITIT MUNTARBHORN*

1. Introduction

This chapter focuses on the 10 States that form the Association of Southeast Asian Nations (ASEAN): Brunei Darussalam, Cambodia, Indonesia, Lao People's Democratic Republic (Laos), Malaysia, Myanmar, Singapore, Thailand, the Philippines, and the Socialist Republic of Vietnam.[1] Where relevant, the chapter also refers to neighbouring States of Bangladesh, China, and Timor Leste.

For UNHCR updates, see further UNHCR, 'Regional Office for South-East Asia: Factsheet' (September 2014) <www.unhcr.org/protection/operations/519f67fc9/south-east-asia-fact-sheet.html> accessed 15 November 2019. For recent ASEAN developments see ASEAN, *Annual Report 2017–18* (2018).

A large number of recent refugee influxes both from and within the region pose an *intra*-regional challenge, inviting both regional and international cooperation. There is also an *inter*-regional perspective: at times, there are influxes of refugees from other regions into Southeast Asia, and a concurrent movement of refugees from this region to other parts of the world.[2] The colonial past may complicate matters: minority groups have not always been well accommodated as new States have emerged, and such minorities often become refugees due to lack of societal inclusion.[3]

At the outset, it may be asked: to what extent does the notion of 'asylum' appear in the history of the region, and to what extent are the nomenclature and international concept of 'refugees' accepted by Southeast Asian countries? The practice of granting asylum is not alien to this part of the world; historical records attest to the outflows and influxes of persons seeking asylum dating back centuries.[4] Such practices also had religious and cultural underpinnings, such as the notion of kindness towards others advocated by Buddhism and hospitality for strangers voiced by Islam.[5] The door became less open with the advent of the Indochina War from the late 1950s onwards. The Cold War affected domestic responses towards people seeking asylum and the hospitality from Southeast Asian countries became more constrained.

There has been a tendency by Southeast Asian States to avoid using the term 'refugees' at the national level, even though they have to deal with the term in international fora. Most States in the region do not have specific laws on refugee protection; their legal structure tends to classify people who seek refuge as 'illegal immigrants' under national immigration law. Occasionally, policies allowing asylum seekers to reside temporarily in the country pending durable solutions help to exempt them from the strictures of such laws. Other terms used to describe 'refugees' include 'displaced persons' (referring to cross-border rather than internal cases),[6] 'asylum seekers', 'persons of concern', or 'persons in need of protection'.[7]

[2] Such as the influx of Afghans and Syrians into Southeast Asia and outflows from Southeast Asia to Australia and beyond. Another example of cross-regional links was the case of Hakeem al-Araibi, a Bahraini footballer granted refugee status in Australia and then arrested in Thailand with the threat of *refoulement* to Bahrain. After diplomatic interventions, he was returned to Australia: Helen Davidson and Hannah Ellis-Petersen, 'Hakeem al-Araibi on Flight to Australia after Release in Thailand', *The Guardian* (12 February 2019) <https://www.theguardian.com/world/2019/feb/11/thailand-to-free-bahraini-footballer-hakeem-al-araibi> accessed 26 November 2019.

[6] Official documents in Thailand, for instance, refer to displaced persons and illegal immigrants rather than refugees; see further Muntarbhorn 1992 (n 1) ch 12.

[7] Even so, they may still be seen as illegal immigrants under local immigration law.

The jigsaw of complexity and diversity is a core part of the history of forced migration in the region. From the 1950s until the late 1980s, the main refugee groups were Cambodians, Laotians, and Vietnamese. The situation of the Laotians and Vietnamese was largely resolved by a package of measures adopted by countries of origin, first asylum countries, and resettlement countries through the Comprehensive Plan of Action (CPA) agreed upon in 1989.[8] The Cambodian situation was then settled largely by the peace process in the early 1990s, with large-scale return of Cambodians to their homes.[9] In the latter part of the 1990s, ASEAN was expanded from six States (the original members—Indonesia, Malaysia, Philippines, Singapore, and Thailand—plus Brunei, which joined in 1984) to 10, including former foes Vietnam, Laos, Myanmar, and Cambodia.

There have also been forced movements of groups from Myanmar, a country under military rule for many decades since the end of the Second World War. Large numbers of minorities and other ethnic groups have sought refuge in neighbouring Thailand (with a spillover into China) and a sizeable number remain in the country, awaiting durable solutions. Outflows of Muslim groups from Rakhine State, particularly Rohingyas, have also sought refuge by sea and land in Southeast Asian countries, such as Thailand, Malaysia, and Indonesia. Despite the presence of a civilian government in Myanmar in recent times, a caustic situation has resulted in further massive outflows in the period leading up to 2017 and beyond.[10]

Meanwhile, in recent decades, diverse groups from other parts of the world have moved into (and from) the region (often as individuals or household groups, rather than *en masse*). A variety of people seeking refuge can now be noted in the region, with major caseloads in Malaysia, Thailand, and Indonesia respectively, ranging from people from Africa to West Asia, South Asia, North Asia, and even Europe.[11] They are often referred to as urban refugees, hiding or housed in urban areas, by contrast with large ethnic groups from Myanmar, for instance, situated in camps or encampments in rural areas. Some have sought to travel to other parts of the Asia-Pacific region, including Australia and New Zealand, but have been turned back as a result of deterrence measures.[12] In 2019, the biggest group in the region was the Rohingya in Bangladesh, with over 700,000 people arriving in 2017, on top of an unresolved prior caseload—around 900,000 people altogether.[13]

Two salient features emerge in the discussion below. First, most Southeast Asian countries are still not parties to the international refugee instruments. Secondly, however, there is an extensive practice within the region of affording temporary refuge to most people seeking asylum, even if local integration or settlement remains the exception rather than the rule.

2. Legal Perspectives

a. International

Only two ASEAN States have ratified the Refugee Convention and Protocol, namely Cambodia and the Philippines, both without reservations.[14] Is the reticence of other States to follow suit on account of the perceived Eurocentrism of those instruments? Or is it because, in keeping their distance from such instruments, those States are steeped in some form of exceptionalism?

The low level of ratification results from various factors, falling between those two stools. States in the region have been generally hesitant to commit to international human rights instruments, and those on refugee protection in particular, despite international encouragement. Several States are non-democratic and wary of human rights advocacy; several produce refugees and receive refugees, sometimes concurrently. They are much attached to the principle of 'non-interference in the internal affairs of the State' as a buffer against outside pressure (as seen below with respect to the evolution of ASEAN instruments and mechanisms). Most significantly, States faced with mass influxes place much emphasis on national security; they do not wish to be bound by international refugee law obligations, which they perceive as inhibiting their ability to exercise discretion. They tend to subsume migration issues—including forced migration—under policy considerations, very much from the angle of how they perceive the impact on the country's sovereignty and national interest (namely, embedded in a security paradigm).

Some of the core human rights treaties have provisions particularly pertinent to refugees and offer channels to raise protection issues in States that are parties to them (even if they are not parties to the Refugee Convention or its Protocol). In particular, article 13 of the ICCPR prohibits the expulsion of aliens without due process of law, which should encourage States in the region to set up a national refugee status determination process in order to avoid *refoulement*, while 6 and 7 prohibit removal to a real risk of being arbitrarily deprived of life or being subjected to cruel, inhuman, or degrading treatment or punishment. Article 3 of CAT precludes *refoulement* to places where an individual faces a real risk of torture. Meanwhile, the CRC contains a specific provision on refugee chil-

[14] See UN Treaty Collection, 'Convention relating to the Status of Refugees' 1–2 <https://treaties.un.org/doc/Publication/MTDSG/Volume%20I/Chapter%20V/V-2.en.pdf> accessed 15 November 2019.

dren (article 22), as well as principles of non-discrimination (article 2) and best interests of the child (article 3), which together bolster the rights to birth registration, education, humane treatment, and nationality acquisition.[15] All ASEAN States are parties to only three of the core human rights treaties: the CEDAW, the CRC, and the Convention on the Rights of Persons with Disabilities.[16]

Those instruments are complemented by the two statelessness treaties.[17] The 1954 Convention advocates non-discrimination for persons without a nationality, guaranteeing a range of human rights. The 1961 Convention opens the door to acquisition of the nationality of the country of birth by persons without a nationality. In the ASEAN region, only the Philippines is a party to the 1954 Convention, while no State is a party to the 1961 Convention.

On another front, under its Charter, the UN has set up various mechanisms that may also cover refugee protection, albeit more generally than under the Refugee Convention and its Protocol. One of the newest mechanisms is the Human Rights Council's Universal Periodic Review (UPR), which provides space for ventilating refugee-related issues in an interactive, dialogue-based process amongst peers.[18]

The rise of global policy 'frameworks' also influences refugee protection, despite not being 'hard law'. Importantly, commitments such as those in the Sustainable Development Goals (SDGs) have enjoyed great 'buy-in' from Southeast Asian States and can be important tools for advocacy, as well as for data systematization based upon UN and national indicators. The SDGs, which were preceded by various Millennium Development Goals, are a case in point.[19] Furthermore, in 2018, the two Global Compacts on Refugees and Migration were adopted by ASEAN States. The former underlines the Comprehensive Refugee Response Framework to uphold refugee right and assist host communities, opening the door to greater international solidarity and inviting more commitments from other actors, such as the World Bank. The Global Refugee Forum, to be held every four years at ministerial level, is a forum in which States and other stakeholders can announce pledges and contributions towards the Refugee Compact's objectives and to consider ways of enhancing responsibility-sharing. This may help to overcome the Refugee Convention and Protocol's lack of a monitoring mechanism and formal periodic review. Meanwhile, the Migration Compact tackles the issue of migration in general, countering such practices as smuggling and trafficking.

Importantly, it is the latter instrument that calls for an end to the detention of children on the move, particularly when it is interlinked with States' immigration laws.[20]

b. Regional

While Southeast Asia has no intergovernmental human rights or refugee protection system in the form of a systematic regional treaty, organization, or court, a variety of developments are of note.

Over the years, there have been efforts to concretize a regional approach and response to refugee movements. The most successful was the 1989 Comprehensive Plan of Action (CPA) between source, first asylum, and resettlement countries. Source countries, particularly Vietnam and Laos, undertook to address clandestine departures, including a dissemination campaign against irregular boat departures.[21] First asylum countries established a screening process (based on the refugee definition in international law) to allow those screened-in not only to stay temporarily, but also to resettle in third countries. Meanwhile, the latter, particularly developed countries, offered more guarantees of resettlement places. While this was an *ad hoc* arrangement, it exemplified a comprehensive regional arrangement for refugee protection which brought together source, transit, and destination countries.

Some Southeast Asian States have been involved in the drafting and adoption of various soft law guiding principles concerning refugees under the Asian–African Legal Consultative Organization (previously, the Asian–African Legal Consultative Committee). In 1966, it produced the Bangkok Principles on the Status and Treatment of Refugees, which were subsequently bolstered by the adoption of principles concerning the right to return (1970) and international solidarity and burden-sharing (1987). In 2001, the Organization officially adopted the final text of the 'Bangkok Principles'.[22]

The Bangkok Principles contain 13 articles, starting with the definition of 'refugee' (article I), which replicates article 1A(2) of the Refugee Convention and the expanded criteria of the OAU Convention.[23] Article II provides that everyone has the right to seek and enjoy asylum from persecution. Article III stipulates that the principle of *non-refoulement* covers non-rejection at the frontier, and notes that provisional asylum is a form of temporary refuge. This has no counterpart in the international refugee

[20] See further IOM, 'Global Compact for Migration' <https://www.iom.int/global-compact-migration> accessed 15 November 2019; Vitit Muntarbhorn, 'The Global Compacts and the Dilemma of Children in Immigration Detention' (2018) 30 IJRL 668.

[23] See Chapter 15 in this volume.

instruments, but reflects the region's long-standing practice. Article IV underlines the protection of women and children (also a lacuna in the Refugee Convention), while article VI states that those who seek asylum have an inherent right of return (to the country of origin). In stipulating the voluntary nature of repatriation, they advocate the non-penalization of returnees (article VII). In calling for international cooperation, they highlight the need to address the root causes of displacement (article VIII), with leeway for the right to compensation for the refugee vis-à-vis the country of origin (article IX). They integrate the principle of international solidarity and burden-sharing into the protection framework (article X).

On another front, ASEAN's Constitution, the ASEAN Charter 2007—passed after decades of evolving together as an organization—mandates the establishment of a human rights body.[24] The ASEAN Inter-governmental Commission on Human Rights (AICHR) and the ASEAN Commission on the Rights of Women and of Children (ACWC) were established in 2009. Neither body has the power to consider individual complaints, undertake investigations, or provide remedies geared to accountability. This limitation is greatly influenced by the region's attachment to national sovereignty and the non-interference principle.

The ASEAN Human Rights Declaration was drafted by the AICHR. While it contains some constructive elements, such as the call against discrimination concerning health (particularly HIV cases), parts of the Declaration contain lower standards than international law demands, indicating elements of exceptionalism. There is an ambiguous provision on asylum as follows: 'Every person has the right to seek and receive asylum in another State in accordance with the laws of such State and applicable international agreements.'[25] Given that most ASEAN States are not parties to the Refugee Convention or Protocol, the provision leaves much to be desired as it subjects people to national laws which may provide far less protection than international law. Indeed, the immigration law of most ASEAN States is unresponsive to refugees as a special category needing protection, which is again connected with an emphasis on national security and a suspicion of international refugee law.

There is also a regional treaty on human trafficking,[26] but, in contrast to its international counterpart, it has no saving clause for refugee protection.[27] Since 2002, the Bali Process on People Smuggling, Trafficking in Persons and Related Transnational Crime has provided another forum for regional cooperation.[28] It is a grouping of

some 50 States and agencies, chaired by Indonesia and Australia. Many Southeast Asian States are involved and are interlinked with States outside the region to tackle crimes impacting on migration flows, particularly human trafficking. While the Bali Process was initially focused on anti-crime measures, it has evolved into a forum more sensitive to refugee protection, although it is still much affected by national security considerations.

For instance, the 2016 Bali Declaration on People Smuggling, Trafficking in Persons and Related Transnational Crime integrated various elements of refugee protection, including: respect for the principle of *non-refoulement*; acknowledgement of the need for predictable disembarkation options (for those arriving at sea); temporary protection and local stay arrangements for asylum seekers and refugees; alternatives to detention of vulnerable groups; and civil registration to help establish people's identity. It set out a variety of durable solutions, such as resettlement and voluntary return, and also called for action to stem irregular flows, encouraging safety in migration, and collective responsibility and cooperation.[29]

c. National

The two ASEAN States that are parties to the Refugee Convention and Protocol—the Philippines and Cambodia—have some form of implementing law or regulation,[30] but substantive implementation, measured through consistency with universal standards, ranges from constructive to erratic. The Philippines' response is the most developed—in particular, the 2012 Department of Justice, Department Circular No 058, establishing the Refugee and Stateless Status Determination Procedure.[31] It aims to create a fair, speedy, and non-adversarial procedure to identify and protect refugees and stateless persons (who are defined in accordance with international law). It includes the right to counsel and is guided by the principles of family unity, non-detention on account of being stateless or a refugee, *non-refoulement*, and no punishment for illegal entry. There is a Refugees and Stateless Persons Protection Unit, and an administrative process to decide on such status, with access to UNHCR and the possibility to appeal to a court to review the administrative decision.

In Cambodia, the relevant instrument is the 2009 Sub-Decree on Procedure for Recognition as a Refugee or Providing Asylum Rights to Foreigners in the Kingdom of Cambodia.[32] It adopts the international definition of 'refugee' and establishes an

[29] Declaration of the Sixth Ministerial Conference of the Bali Process on People Smuggling, Trafficking in Persons and related Transnational Crime (adopted 23 March 2016) (Bali Declaration).

[30] In terms of neighbouring States, both China and Timor Leste are parties to those instruments.

[31] Department Circular No 058, Establishing the Stateless Status Determination Procedure <www.refworld.org/docid/5086932e2.html> accessed 13 October 2019.

[32] Sub-Decree No 224, on Procedure for Recognition as a Refugee or Providing Asylum Rights to Foreigners in the Kingdom of Cambodia <https://www.refworld.org/topic,50ffbce5220,50ffbce5247,4d81f0172,0,KHM.html> accessed 13 October 2019.

administrative procedure to assess refugee status under the Ministry of the Interior (MOI). Appeal is possible to another administrative panel under the umbrella of the Immigration Department. However, the decree itself contains provisions that could confer excessive discretion on the authorities to deny refugee status. For example, article 11 allows the MOI to reject an application for refugee status if 'the Applicant does not cooperate with the competent official in clarifying accurate information regarding the application'.[33] While the principle of *non-refoulement* is recognized in the text, article 22 provides considerable leeway for executive discretion to expel a refugee where their 'behavior and action endanger national security or public order'.[34]

This law has already been tested and has shown weak protection for persons seeking asylum. In particular, a number of Uighurs were returned to their country of origin, endangering their lives. The fate of a group of Montagnards from Vietnam has yet to be settled.[35] A Memorandum of Understanding between Cambodia and Australia, whereby the former would resettle refugees held by Australia on Nauru, also failed as Cambodia was unable to provide adequately for their protection.[36]

In Southeast Asian States, especially those not party to the Convention or Protocol, the law that confronts asylum seekers most directly on arrival is national immigration law.[37] Even if people have escaped from their country of origin due to persecution or conflict, they are likely to be classified as 'illegal immigrants' or similar when they seek refuge, particularly if they enter without passports, visas, or with false (or no) documents. The threat of detention and prosecution for breaching immigration law looms, although in reality, governments may adopt lenient policies to exempt asylum seekers from the strictures of the immigration law, since there is much discretion on whether to enforce it rigidly.

An interesting development is that, at times, various status determination procedures have been established, allowing screened-in persons to stay temporarily in the country, with the opportunity for resettlement elsewhere. From 1994, for instance, Thailand adopted an *ad hoc* screening procedure for people fleeing Myanmar (especially ethnic groups), using the criterion of 'those fleeing from warfare' as the test for status determination (avoiding the term 'refugee').[38] Those who qualified were allowed to stay

[38] The procedure is now dormant. See further Vitit Muntarbhorn, 'Refugee Law and Practice in the Asia and Pacific Region: Thailand as a Case Study' (2004) <www.refugeelawreader.org/en/en/english/section-v-asian-framework-for-refugee-protection/v1-protection-challenges-in-asia/core-readings-140/9456-muntarbhorn-refugee-law-and-practice-in-the-asia-and-pacific-region-thailand-as-a-case-study-1/file.html> accessed 19 November 2019.

temporarily, with the possibility of resettlement in third countries. This procedure later led to more emphasis on family reunion cases in potential resettlement countries. In 2019, Thailand drafted a regulation to create a national screening procedure more generally for people seeking protection. Initial drafts suggested that there was still a tendency to shun the term 'refugee', opting instead for the euphemism 'persons in need of protection'. The final text uses the term 'protected person'.[39]

A catalytic innovation comes from Indonesia: the 2016 Regulation of the President of the Republic of Indonesia No 125 of 2016 concerning Handling of Foreign Refugees.[40] The Regulation follows the international notion of refugee as a person fleeing from persecution (even though Indonesia is not party to the international refugee treaties) and establishes coordination between government agencies to help find, place, safeguard, and supervise such cases (in conjunction with UNHCR). A key outcome is to shift refugees to social welfare shelters rather than keep them detained in immigration detention centres. There is an emphasis on screening by UNHCR (since a person not considered to be a refugee could be placed in detention). Immigration supervision is linked with the need for refugees to report on a monthly basis to the authorities. Resettlement elsewhere is a possibility.

3. Institutional Framework

Within the region there are a number of constituents that are part of the institutional framework related to refugee protection.

UNHCR's presence is essential. In addition to its various country offices, such as in Thailand, Malaysia, Indonesia, and Myanmar, there is a regional office in Bangkok. This regional presence is important as it helps to advocate for refugee protection, especially to underline the importance of *non-refoulement* and the humane treatment of asylum seekers. Operationally, the fact that UNHCR's mandate is based on a UN General Assembly (UNGA) resolution has enabled it to be present in the region for many years.[41]

One of UNHCR's key roles is to determine refugee status in States without a national procedure. At times, even States that are parties to the international refugee instruments may invite UNHCR to undertake this process (or tolerate it). UNHCR's role in

registering asylum seekers and ascertaining their protection claims is most evident in 'persons of concern' (POC) cases—people who are not necessarily refugees but are otherwise in need of protection. In reality, however, even those with a letter stating that they are POC are at times arrested and detained.

The courts can also be a significant actor in securing protection for refugees, as discussed further below. NGOs, human rights defenders, and civil society, too, are critically important, and a vast range of local, national, and international organizations work in the region. For instance, the Committee for Coordination of Services for Displaced Persons in Thailand, dating back to 1975, is constituted by a large number of international and other NGOs helping refugees. Interestingly, there is almost no local Thai organization helping asylum seekers, indicating perhaps that their priority is to help local people instead. On the protection front, the Asia Pacific Refugee Rights Network is a forum for more than 350 civil society organizations and individuals from nearly 30 countries advocating for the rights of refugees and people seeking asylum, including through monitoring and capacity-building, such as by raising individual cases for protection and using media to help leverage governmental responses.[42]

A range of other actors also impacts on refugees in some positive and some less positive ways. Examples of negative relationships include those non-State actors (including armed groups) that persecute refugees, driving them from their homes. Some community groups and individuals (at times religious personnel) also fall into this category, enmeshed with media and social media inciting hatred and violence. By contrast, there are other non-State actors that assist refugees, inspired by a sense of humanitarianism and inclusion. There is also the potentially positive role of media and social media, which can counter discrimination and violence and promote cross-cultural understanding and empathy. Finally, National Human Rights Commissions have an explicit role in promoting and protecting human rights, and there is a global alliance of human rights institutions that acts as a forum for cooperation and peer pressure. They have been helpful in protecting minorities, indigenous peoples, and refugees, exemplified by an initiative to offer bail to those who are detained. The important role of educational and research institutions in information dissemination, education, training, and capacity-building should also be recognized in this context.

4. Challenges

As the foregoing illustrates, there are a number of challenges for refugee protection in Southeast Asia. The following section examines a number of key court cases from the region to demonstrate the need for human-rights responsive judiciaries.

[42] See further Asia Pacific Refugee Rights Network, 'Info' <https://aprrn.info/> accessed 19 November 2019.

a. The Relationship with the International Refugee Instruments and the Principle of *Non-refoulement*

Even if the Refugee Convention and Protocol are cited in litigation, national courts do not accept them as binding if the country is not party to them.[43] This was illustrated in a 2009 first instance decision in Malaysia (before the High Court), concerning a Sri Lankan asylum seeker.[44] The court held that because the Refugee Convention and Protocol were not binding on Malaysia, the asylum seeker's failure to report to the authorities could give rise to prosecution.

However, a number of Southeast Asian States are parties to human rights treaties that mandate the humane treatment of refugees and asylum seekers, and prohibit *refoulement*.[45] While it is almost universally accepted that the principle of *non-refoulement* is customary international law,[46] executive authorities in the region still retain a broad discretion to decide upon the fate of asylum seekers, which could result in *refoulement*. However, once in a while, there is a spark of enlightenment. In 2017, the High Court Division of the Bangladesh Supreme Court not only declared the detention of five Rohingyas unlawful, but also recognized the principle of *non-refoulement* as part of customary international law.[47] As such, 'though Bangladesh has not ratified the refugee convention … Bangladesh was obliged not to violate article 33 by forcing these detenues back to Myanmar'.[48]

In reality, Southeast Asian countries have generally abided by the principle of *non-refoulement*, although they have faltered periodically (as in the case of the Uighurs recently sent back from various first countries of asylum to their countries of origin).[49]

[43] A related issue is whether the State concerned takes a monistic or dualistic approach to the reception of international law.

b. Detention

In States that are not parties to the Refugee Convention or Protocol, asylum seekers who enter without the requisite papers are generally classified as 'illegals' and may be detained under domestic immigration law. For instance, in 2018, the Tangerang District Court of Indonesia used local immigration law to override the relatively liberal 2016 Presidential Decree, requiring that two Afghan asylum seekers who had travelled through India before reaching Indonesia be detained.[50] Even in Contracting States, asylum seekers found not to be refugees may be considered to be 'illegal immigrants' and liable to detention. This situation affects many innocent people, including families and children.

Recent judicial developments in Malaysia have shown the way to a more humane path, especially with respect to children in such situations. In 2018, the High Court of Malaya in the State of Kedah Darul Aman considered an application for habeas corpus by seven Rohingya children. The court held that their detention under the Immigration Act 1959/63 was illegal.[51] In referring to both the local child protection law and article 22 of the CRC, it ordered their release and transfer to a shelter, stating that:

> Without deliberating further, the Court is of the view that the continued detention of the Applicants at the Balantik Immigration Detention Centre is a direct violation of their rights as a child pursuant to the CRC and the Child Act 2001 which guarantees protection and assistance to be given to children in all circumstances without regard to race, colour, gender, language, religion or distinction of any kind.[52]

Thailand recently adopted a Memorandum of Understanding between government agencies to avoid detaining children (under 18) in the immigration context.[53] However, there remains a problem of family unity not being respected, since women and children are housed in welfare shelters while fathers are detained in immigration centres. Male children who reach the age of 18 might also be transferred into immigration detention.

c. Inhumane Treatment

Regrettably, people who seek refuge are often subjected to inhumane treatment, ranging from human trafficking to acts of discrimination and violence. Violence against women

and children, in particular, is a key concern and now integrated into UN and other programming in the region. In this context, good practices sometimes emerge that fortuitously also benefit refugees. For instance, in recent years there have been scores of cases in Thailand penalizing human traffickers, including those who prey on Rohingyas coming by land and sea into the Southeast Asian region.[54]

On another front, Malaysian courts have prohibited the flogging of asylum seekers for illegal entry into the country. In a 2009 case, an asylum seeker from Myanmar had been sentenced at first instance to 100 days' imprisonment and two strokes of whipping for breaches of the Immigration Act 1959/1963.[55] The High Court of Malaya overturned the decision on the whipping, although it retained the prison sentence, stating that:

> This court is therefore of the firm opinion that asylum-seekers and refugees, if they have not committed acts of violence or brutality, or are habitual offenders, or have threatened our public order, should not be punished with whipping. However, such persons can help themselves by giving documentary proof of their registration with their own community here or with the UNHCR Office in Kuala Lumpur to satisfy the subordinate courts that they are genuine asylum-seekers or refugees who are only waiting to be resettled. This would, hopefully, avert future cases of whipping being imposed as a sentence for similar offences.[56]

d. Birth Registration/Nationality/Statelessness

Under the CRC and the SDGs, children should have their birth registered. This is reflected in the law and policies of countries in Southeast Asia, even though implementation may leave much to be desired. However, the issues of acquisition of nationality and statelessness are more complicated.

In international law, there are several ways of acquiring a nationality. The three most common are by blood (*jus sanguinis*), by birth in a particular country (*jus soli*), or by naturalization. ASEAN States generally recognize acquisition of nationality by blood without discriminating between the father and mother, but there is the occasional exception. Brunei still follows the paternal line, not yet opening the door to acquisition from the mother. There are further complications when the parents are not married.[57] Malaysian courts treat the latter situation as one where the child's nationality follows that of the mother.[58] However, this can become complicated for the child if the mother is a foreigner and difficult to trace, and at times may even result in the child becoming *de facto* stateless.

There is still some hesitation in the ASEAN region about automatic acquisition of nationality by reason of birth in the country. For example, whereas Thailand's original nationality law recognized this, it was later undermined by other laws limiting such acquisition of nationality. This resulted in the children of illegal immigrants not acquiring Thai nationality automatically, even if they were born in Thailand.[59]

However, there has been some progressive legislation to overcome statelessness. An example is Vietnam's Decree No 78/2009/NC-CP of 2009, guiding the law on Vietnamese nationality. Article 17 opens the door to Vietnamese nationality for 'a child born in the Vietnamese territory whose parents are both stateless persons with a permanent residence in Vietnam', as well as for 'abandoned newborn and children found in the Vietnamese territory whose parents are unknown'.[60] Interestingly, Laos, China, and the Philippines have similar provisions concerning abandoned babies or 'foundlings'.[61]

Philippine courts have stepped in to deal with nationality and statelessness in a constructive manner. As early as 1948, the Supreme Court of the Philippines had to deal with the issue of a former Russian national who later became a stateless refugee and then applied for Philippine citizenship.[62] The court enabled his naturalization as a Philippine citizen.[63] Following the Philippines' accession to the Refugee Convention and Protocol, there were a number of cases concerning the nationality of Iranians who had sought refuge and who were married to Filipinas. In *Republic v Karbasi*, the Supreme Court confirmed the person's refugee status and cited articles 6 and 34 of the Refugee Convention as offering a gateway to naturalization, thus enabling the applicant to acquire Philippine nationality.[64] More recently, in 2016, the Supreme Court found that Senator Poe-Llamanzares—a foundling on the territory of the Philippines—was a natural-born citizen of the country and not a naturalized citizen.[65]

e. Other Rights

The linkage between refugee protection, temporary refuge, and human rights calls for further consolidation on the basis that rights should be afforded without distinction. For instance, families and children in detention, such as in urban areas, face more obstacles in accessing the basics of life, including education. Pursuant to the CRC, ASEAN States generally recognize the child's right to free and compulsory primary education, without distinguishing between refugee children and nationals. However, although education is available, its quality and outreach fluctuate.

With respect to the right to marry, decades ago, Thailand's Supreme Court recognized the right of all persons to marry, irrespective of their immigration status.[66] Thus, Thais and 'illegal immigrants'—alias refugees—should not be prevented from marrying.

A particularly challenging issue is that asylum seekers are generally not allowed to work, even where they benefit from temporary refuge and protection. There are some interesting exceptions, however. In Thailand, under the human trafficking law, victims of trafficking (including asylum seekers) can work.[67] Malaysia has experimented with allowing Rohingya refugees to work, but this is no longer the case. Nevertheless, labour laws in the region typically guarantee protection for all employees, irrespective of their immigration status. This was illustrated in the case of *Ali Salih Khalaf v Taj Mahal Hotel*, where the Industrial Court of Malaysia in 2014 found that the 1967 Industrial Relations Act benefited a UNHCR-recognized refugee who had been fired and was seeking relief under the law.[68]

f. Accountability

A key development in the past few years has been the issue of accountability. A case in point is the responsibility of those who were involved in causing the Rohingya outflows from Myanmar in recent years. The UN Fact Finding Commission and its extensive report called for accountability, directly naming a number of Myanmar Generals who should be prosecuted for genocide, crimes against humanity, and war crimes.[69] An investigation is now underway before the International Criminal Court (ICC).[70] At the end of 2018, the pre-trial Chamber of the ICC ruled that the court had jurisdiction to consider the case, as Bangladesh is a party to the Rome Statute of the ICC, even though

Myanmar is not.[71] 'Deportation' is an international crime in the ICC Statute; the court can thus examine the trans-frontier situation to cover misdeeds occurring originally in Myanmar, but then extending their reach and impact into Bangladesh.

g. Temporary or Longer Stay

Temporary stay in a country of first asylum can sometimes prove to be very long. This challenge is made more complicated by the fact that, in most cases, Southeast Asian States still reject long-term asylum or local settlement—notwithstanding the fact that such States are becoming more developed and economically stronger. Their reticence is due to a variety of factors, ranging from fear of the impact of mass influxes on national security, mistrust of minorities and cross-border migrants, compassion fatigue, the lack of finality to temporary stay, and fluctuating international solidarity in offering long-term solutions. Third country resettlement is dwindling, while voluntary repatriation also has to be dealt with carefully; there should be no repatriation unless there are sufficient guarantees for people's safe and dignified return, as well as for their effective reintegration, with monitoring and safeguards. This is currently the dilemma in the Rohingya situation. There is now a bilateral 2017 Memorandum of Understanding between Myanmar and Bangladesh concerning the group's potential return, but conditions remain precarious and uncertain.[72] The preferred arrangement should be of a trilateral nature, involving UNHCR as a monitoring body and a check and balance. In Myanmar itself, there is also a 2018 Memorandum of Understanding between the UN Development Programme, UNHCR, and the government to address the large number of internally displaced persons and others who need help in Rakhine State.[73]

5. Directions

What, then, is the preferred Southeast Asian way? While the call for a permanent, systematic, intergovernmental, regional framework in the form of a treaty, reflecting the experience of the CPA and perhaps based on the 'Bangkok Principles' above, may offer a key option for the region, the more realistic approach at this point in time is a multi-

pronged strategy with a range of components, linking the national, regional, and international levels. It should address conditions leading to the forced movement of people, effective protection of those who seek asylum (ensuring at least temporary refuge), responsive provision of assistance and remedies (while not forgetting the affected local populations of asylum countries), and facilitation of a range of solutions anchored in multistakeholder partnerships.

There remains the pervasive conundrum: how to encourage Southeast Asian States to become parties to the international refugee instruments? The answer lies in the need to sustain a patient dialogue, as well as networking and capacity-building, with key actors to underline the value that these treaties add, and their relevance today. Those instruments offer a degree of certainty in terms of who 'refugees' are, and their rights and duties. They offer predictability by opening the door to national screening mechanisms (respectful of the State's sovereignty to set up processes for refugee identification), providing justification for equitable measures, and entrenching checks and balances through international vigilance. Importantly, they provide an umbrella for international cooperation and solidarity and highlight refugee protection as a shared responsibility, circumventing perceptions of Eurocentrism and exceptionalism, while offering a pathway to universalism.

CHAPTER 24

REGIONAL REFUGEE REGIMES

Oceania

MICHELLE FOSTER AND ANNA HOOD*

1. Introduction

At first glance, the inclusion of a chapter on refugee law in Oceania might seem unusual. No regional refugee law system exists in Oceania and ratification rates of the key international refugee law instruments are low. Further, there has been very little academic attention paid to refugee law across the region. When refugee scholars have turned their minds to this part of the world, they have tended not to examine Oceania's approach to refugee law specifically, but rather the dynamics of refugee law in the Asia-Pacific region more generally.[1] Most have focused on the situation in Asia and Australia, with only a cursory nod to what happens in Pacific Island States.[2] Combined, these factors create the impression that the region has little to offer refugee law scholarship.

A closer examination, however, reveals that there is much to learn from studying refugee law and related displacement issues in this part of the world. To start with, the region's low level of engagement with the international refugee law regime provides insights into assumptions and limitations embedded in international refugee law treaties. Further, if Oceania's approach to displacement is considered on its own terms, a

* We are very grateful to Hannah Gordon (JD Melbourne Law School) and Elif Sekercioglu (JD Melbourne Law School) for their excellent research assistance.

[1] See eg Anja Klug, 'Enhancing Refugee Protection in the Asia-Pacific Region' [2013] Proceedings of the Annual Meeting (American Society of International Law) 107, 358; Guy S Goodwin-Gill, 'The Global Compacts and the Future of Refugee and Migrant Protection in the Asia Pacific Region' (2018) 30 IJRL 674.

[2] Klug (n 1); Goodwin-Gill (n 1).

number of other narratives emerge. These have the potential to shift the way that refugees and other displaced people are conceptualized, as well as the kinds of legal responses that may be developed as a result. Finally, paying attention to refugee law and displacement dynamics in Oceania may have effects beyond the parameters of refugee law. Specifically, they may generate new understandings of the region itself and the relations that exist between the State and civil society actors within it.

This chapter examines three of the most prominent approaches to refugee law and displacement issues in Oceania and analyses what they might reveal about the field of refugee law and the region of Oceania. None of the approaches has been adopted universally across the region, but each is significant in its own way. Section 2 analyses the role of international refugee law in the region. While adherence to international refugee law treaties is relatively low, it is not non-existent. Section 3 considers the approach to refugee law of the traditional regional hegemon: Australia. For decades, Australia has worked to encourage its regional neighbours to adopt policies that complement its own approach to refugee matters. Although Australia has had some success in obtaining support for its refugee policies from Pacific Island States, there have also been pockets of strong resistance. Section 4 considers some of the approaches to displacement adopted by Pacific Island States. The focus is on their resistance to the imposition of labels such as 'climate refugee' and concomitant assumptions about displacement as inevitable, as well as their determination to control future policy responses to the adverse impacts of climate change. The chapter concludes with some overall reflections.

Before commencing the substantive discussion, it is necessary to set out the key terms and temporal parameters of this chapter. Historically, the idea of Oceania as a 'region' was controversial, since the concept of Oceania was constructed in the nineteenth and twentieth centuries by European powers to serve their colonial interests.[3] Over time, however, the States, territories, and peoples of Oceania have come to own the idea that they are part of a regional bloc.[4] This change has been strengthened by research in recent decades that reveals a long, pre-European history of trans-Pacific links and relationships.[5] Consequently, today, the main controversy is not about whether Oceania is a region, but rather what its boundaries are.[6]

The key points of contention are whether Australia and New Zealand should be understood as part of the region, whether the dependent territories in the Pacific should be included in regional discussions, and what role civil society should have in conceptions of Oceania. For the purposes of this chapter, all States, dependent territories, and civil society actors that come within Polynesia, Micronesia, Melanesia,

[3] Greg Fry, *Framing the Islands* (ANU Press 2019) 1; Stephanie Lawson, 'Regionalism, Sub-Regionalism and the Politics of Identity in Oceania' (2016) 29 The Pacific Review 387, 387, 388.

[5] See eg Lana Lopesi, *False Divides* (Bridget Williams Books 2018).

[6] See eg Helen Lesli and Kirsty Wild, 'Post Hegemonic Regionalism in Oceania: Examining the Development Potential of the New Framework for Pacific Regionalism' (2018) 31 The Pacific Review 20, 22; Fry (n 3) 276.

Australia, and New Zealand are regarded as part of Oceania.[7] The rationale for including the States and dependent territories is that these groups make up one of the most significant and long-standing institutions in the region, the Pacific Islands Forum (PIF).

One significant limitation in relying on the PIF's membership to determine the scope of Oceania is that it does not encompass civil society organizations in the region. Recent literature in regional studies stresses the importance of including civil society actors in regional research, since policies and knowledge in a region are constructed by both State and non-State actors.[8] Additionally, Pacific leaders have emphasized the importance of encompassing all Pacific voices and not just those of government leaders.[9] In light of this, while the composition of the PIF is used to set the geographical bounds of Oceania in this chapter, the chapter examines the activities and practices of both State and non-State actors.

In this chapter, the term 'refugee' refers to those who meet the definition of a refugee in article 1A(2) of the Refugee Convention (read in conjunction with the 1967 Protocol). The term 'international refugee law regime' refers to the matrix of instruments that has developed over time to protect refugees and other persons of concern to UNHCR (such as stateless people), as well as UNHCR's role as the primary international institution vested with responsibility for their protection. 'Persons who have been displaced' refers to people who move from their homes involuntarily or because of coercion.

The temporal focus of the study is the twenty-first century. It is not possible in a chapter of this length to provide a fuller picture of refugee law in the region, but where a historical event, law, or practice is directly relevant to understanding something that has occurred since 2000, it is discussed.

Finally, we are conscious that we are two white, Western scholars writing about a region that contains an array of different racial, ethnic, national, and cultural groups. There are currently limited sources about refugee law matters written by Pacific scholars or practitioners. Consequently, we are acutely aware that there will be important perspectives, narratives, and ideas about refugee law in Oceania that we have not captured or appreciated. Our hope is that future scholars will have opportunities to address these in greater depth and draw on a wider variety of materials.

2. International Refugee Law in Oceania

At the heart of the modern international refugee law regime lies the Refugee Convention and its Protocol. The Convention sets out a range of rights that together constitute

[7] The States and dependent territories in the region are: Australia, the Cook Islands, the Federated States of Micronesia, Fiji, French Polynesia, Kiribati, Marshall Islands, Nauru, New Caledonia, New Zealand, Niue, Palau, Papua New Guinea, Samoa, the Solomon Islands, Tonga, Tuvalu, and Vanuatu. The term 'civil society actors' is used broadly in this chapter to refer to non-government and non-commercial groups, including community groups, non-government organizations, women's groups, faith-based organizations, professional associations, and advocacy groups.

[8] Fry (n 3) 29.

[9] ibid 276.

refugee status, the most fundamental being protection from *refoulement*.[10] Since the treaty's adoption in 1951, international legal instruments addressing displacement have evolved. The Convention relating to the Status of Stateless Persons accords almost identical rights to *de jure* stateless persons who are not also refugees.[11] Additionally, protection against *refoulement* is provided explicitly in the CAT[12] and has been read into certain provisions in the ICCPR so as to afford individuals protection from being removed to States where they face a real risk of torture,[13] cruel, inhuman, or degrading treatment or punishment,[14] or arbitrary deprivation of life.[15]

This section analyses the extent to which the international refugee law regime has been adopted in Oceania. It begins by considering which States have ratified and implemented the relevant treaties, before turning to consider whether, and if so how, civil society actors in the region have engaged with the regime.

a. Oceanic States and the International Refugee Law Regime

As noted in the Introduction to this chapter, the extent to which States in Oceania have engaged with the international refugee law regime is limited but not non-existent. Of the 16 States with treaty-making ability,[16] eight have ratified the Refugee Convention and Protocol.[17] With respect to the statelessness treaties, three States have ratified the 1954 Stateless Convention and three have ratified the 1961 Convention on the Reduction of Statelessness.[18] With regard to the ICCPR and CAT, until the first decade of the twenty-first century, the only Oceanic States that had ratified both treaties were Australia and New Zealand. Since 2008, however, several Pacific Island States have done so and today seven States are parties to the ICCPR[19] and eight to the CAT.[20]

In order to obtain a more complete picture of the extent to which Oceanic States have engaged with the international refugee law regime, it is useful to consider also the domestic legislative measures adopted. The picture that emerges is mixed. At one end of the spectrum, New Zealand has enacted substantive and procedural laws that align relatively closely with the obligations in the international system, with only a small

[20] Australia, Fiji, Kiribati, the Marshall Islands, Nauru, New Zealand, Samoa, and Vanuatu.

number of inconsistencies.[21] At the other end of the spectrum lie Samoa, the Solomon Islands, and Tuvalu, which have not passed any domestic implementing legislation or regulations.[22]

In between these extremes are four States—Australia, Fiji, Nauru, and Papua New Guinea (PNG)—which have taken some legislative steps to ensure that their domestic legal systems are consistent with their international obligations, but where some significant gaps or weaknesses remain. Australia provides strong legal protection to people who are found to be refugees after arriving lawfully.[23] Those, however, who arrive without prior authorization (generally by boat) are either sent to offshore processing centres (whose facilities and processes have given rise to significant human rights concerns)[24] or, if permitted to stay in Australia, are subjected to a range of deterrence measures, including immigration detention, processing through an inferior system of refugee status determination (RSD), and denial of permanent protection. Although Fiji has legislation establishing a RSD process, the grounds for exclusion go far beyond what the Refugee Convention permits, and there is no ability for decisions to be reviewed by a court.[25] Since 2012, Nauru has built a refugee law framework that, on paper, appears to satisfy international requirements.[26] However, UNHCR has expressed concern that it does not provide a 'fair, efficient and expeditious system for assessing refugee claims'.[27] PNG's legislation has very wide exclusion clauses, does not provide for judicial review, and does not provide express protection against *refoulement*.[28]

It is worth noting that even though it is not party to the Convention or Protocol, Vanuatu has enacted refugee legislation. It partially complies with international refugee law requirements: its refugee definition accords with that in the Refugee Convention, but its exclusion provisions are more extensive, and it allows for *refoulement* in circumstances which are not authorized by international law.[29]

In terms of institutional oversight, UNHCR's regional office is based in Canberra, Australia, with responsibility for 16 States. For those Pacific Island States without national RSD systems, UNHCR 'may assist to assess claims for refugee status' should they receive protection claims,[30] and UNHCR 'provides assistance to national officials to undertake refugee status determination procedures'[31] in Fiji, PNG, and Vanuatu. There is little academic examination of UNHCR's role in Oceania, although Glazebrook's research in PNG—where UNHCR devised and helped to implement policy in relation to West Papuan refugees from the mid-1990s—is a valuable exception.[32] In the early 2000s, UNHCR was involved in RSD in Nauru pursuant to the first incarnation of Australia's offshore processing scheme,[33] a scheme that also included PNG and was widely condemned as inconsistent with basic principles of refugee law.[34] Notably, UNHCR explicitly distanced itself from any involvement in the second phase of that scheme,[35] and has been highly critical of Australia's policy in that regard.[36] Much of UNHCR's regional focus in recent years has been on monitoring Australia's policies both onshore and offshore; indeed, its reporting and monitoring of conditions in PNG and Nauru have provided an important source of information and oversight of Australia's practices and an important counterpoint to the views of the Australian government.

b. Civil Society in Oceania and the International Refugee Law Regime

Looking at what States have done to comply with international refugee law provides only a partial view of the extent to which Oceania engages with the international refugee

[29] Section 73(2) of the Immigration Act 2010 (Vanuatu) provides that 'prohibited immigrants'—including people who have been deported from other countries and who breach conditions on their visas in Vanuatu (s 50)—may be removed.

law regime. In Oceania, there are a number of civil society organizations that observe and examine how States implement international law, and they seek to enhance States' compliance with it through their activism and advocacy. Almost all of them, however, are based in Australia and New Zealand, rather than Pacific Island States.

This is apparent if regard is had to the composition of the most prominent network of civil society organizations working on international refugee matters in the Asia-Pacific region: the Asia Pacific Refugee Rights Network (APRRN).[37] It is currently comprised of 434 civil society organizations and individuals.[38] Of those, 52 are based in Oceania: 36 organizations come from Australia, 15 from New Zealand, and only one from PNG.[39]

Further evidence of the dominance of Australian and New Zealand civil society organizations within Oceania is apparent if regard is had to the agenda of the APRRN's working group for Australia, New Zealand, and the Pacific. All of the goals set down by the working group are focused on initiatives that can be undertaken within Australia and New Zealand; none refers to activities or priorities for Pacific Island States.[40]

c. Reflections on the Extent to which States and Civil Society Engage with the International Refugee Law Regime

It is interesting to reflect on the fact that international refugee law principles have not been widely embraced across the region. One way of interpreting this is to see Oceania as a weak, unreliable link in the global refugee system. However, the picture begins to change if regard is had to the fact that very few people who meet the international refugee definition seek protection in Pacific Island States.[41] Where refugees have sought protection in the region it has generally constituted intra-regional flight rather than flight from further afield. For example, in the early 1980s thousands of West Papuans sought protection in PNG, where a significant number are reported to remain today.[42] However, even in relation to intra-regional flows, Australia is the more likely destination

[41] For example, UNHCR statistics show that in 2014 in Fiji there were only five refugees and nine asylum seekers: UNHCR (n 25) 1.

[42] Glazebrook (n 32). See also Diana Glazebrook, *Permissive Residents: West Papuan Refugees Living in Papua New Guinea* (ANU Press 2008). In 2006, Australia (controversially) granted refugee status to 42 West Papuans: David Palmer, 'Between a Rock and a Hard Place: The Case of Papuan Asylum-Seekers' (2006) 52 Australian Journal of Politics and History 576.

country. For example, tens of thousands of East Timorese fled persecution in the decades following Indonesia's invasion in 1975, primarily to Australia.[43] More recently, Australia has recognized a small number of women from PNG, fleeing domestic violence as refugees.[44]

Hence, despite some specific (and largely historical) examples of refugees seeking protection in Pacific Island States, it remains the case that the numbers today are extremely low. Moreover, the Refugee Convention definition fails to capture a large number of people who are at risk of displacement in the Pacific, considered further in section 4. In addition, since the Refugee Convention applies only to those who have crossed borders, it does not apply to internally displaced persons. This is despite the fact that in 2019, twelve disasters, most of them volcanic eruptions, triggered more than 31,000 new internal displacements in PNG alone.[45]

When these facts are coupled with the reality that many Oceanic States have very limited resources, the low levels of engagement with the international refugee law regime begin to make sense. Indeed, they suggest that instead of criticizing States and civil society organizations in the region for failing to engage with international refugee law instruments, we should be asking whether the refugee law regime is fit for purpose in the Pacific, and whether the conditions in Oceania reveal certain shortcomings in it.

3. The Refugee Laws and Policies of Oceania's Regional Hegemon: Australia

The second body of refugee law present in Oceania is the one that contains the approaches and practices of the region's traditional hegemon, Australia. Throughout most of the twentieth and twenty-first centuries, Australia has assumed this role, seeking to impose its will and views on many aspects of life in the region.[46] It is perhaps unsurprising, then, that in the last two decades, Australia has sought to encourage Pacific Island States to adopt laws and policies that conform with and support its own approach to asylum. This section begins by briefly setting out how Australia has sought to do this via the Bali Process and offshore detention and processing,[47] before reflecting on the broader implications.

a. Australian Influence in Oceania

Although Australia is a party to all the treaties that constitute the international refugee law regime, it has a history of securitizing refugees,[48] seeking to deter asylum seekers, and shifting the responsibility for protecting refugees on to other States. Efforts by Australian governments to securitize refugees began prior to the twenty-first century but became particularly prominent from 2001 onwards.[49] Since the policies have been well-documented and critiqued elsewhere,[50] the focus in this chapter is on offshore processing—an attempt both to deter asylum seekers and to transfer the obligation of providing refugee protection to other States by relocating them to Nauru and PNG for processing.[51]

Throughout the first two decades of the twenty-first century, Australia worked to encourage other States in Oceania to adopt policies that would complement, and assist with, its goals of securitizing and deterring refugees, as well as shifting its protection responsibilities on to others. To this end, it established the Bali Process in 2002, and offshore detention and processing programmes in Nauru and PNG from 2001–08 and then again from 2012 onwards. This section briefly analyses how these initiatives sought to further Australia's refugee policies, and assesses the extent to which they succeeded in instilling Australian approaches to refugee law and policy across Oceania.

i. *The Bali Process*

Australia established the Bali Process in 2002 to bring States together to address people smuggling, human trafficking, and irregular migration in the Asia-Pacific region.[52] It provides a forum for ministers and senior government officials to meet periodically to develop norms, share information, and participate in capacity-building measures.[53]

From the outset, the Bali Process served as a mechanism for Australia to disseminate its refugee policies across the region. In documents developed through the Bali Process, refugees have been cast as irregular migrants and securitized,[54] with States' international protection obligations given only perfunctory attention.[55] For example, while some Bali Process statements have contained cursory references to ideas such as 'the legitimate

[48] Securitization is 'a process wherein an issue becomes constructed as a security threat through discursive choices and is then adopted as the primary frame of reference by the audience': Melissa Curley and Khalia Vandyk, 'The Securitisation of Migrant Smuggling in Australia and its Consequences for the Bali Process' (2017) 71 Australian Journal of International Affairs 42, 47.

rights of genuine refugees to seek and enjoy asylum',[56] there has been no effort to put in place measures that would ensure these rights are protected. Further, there has been a strong emphasis on persuading States in the region to criminalize people smuggling and human trafficking, and to enact stronger border controls.[57] These initiatives aim not only to deter people from seeking asylum, but also to shift responsibility for them from Australia to the States from which they have originally come and through which they have transited en route to Australia.

While it is apparent that Australia views the Bali Process as a means to spread its approach to refugee issues, the extent to which it has succeeded in doing this in Oceania is open to question. Assessing the impact of the Bali Process is difficult since there is relatively little academic work on it, and amongst the work that does exist, most is focused on the significance of the Bali Process in Asia and Australia. There is a need for more work in this area before any firm conclusions can be drawn. However, it is worth observing that only 11 States in Oceania are part of the Bali Process,[58] and only two (Australia and New Zealand) are involved in the main leadership and operational groups.[59]

Further, it is unclear from the literature how many of the substantive ideas encouraged by the Bali Process have been implemented in practice in Oceania. One of the few achievements that is commonly touted in the literature is that 18 States in the Asia-Pacific region adopted model people smuggling legislation drafted by Australia and China in 2003.[60] It is unclear, however, how many (if any) of these States were in the Pacific region.

ii. *Offshore Detention, Processing, and 'Settlement'*

A second way in which Australia has sought to draw Pacific Island States into its refugee policies has been through the development of offshore detention and processing arrangements. Beginning in 2001, Australia entered into bilateral agreements with PNG and Nauru, which provided that each of them would accept asylum seekers who had attempted to reach Australia by boat, in exchange for significant monetary compensation. The asylum seekers were detained in camps until they were processed and then resettled in third States. The programmes were briefly suspended in 2007 but

reinstated in 2012.[61] In the second incarnation, however, the scheme was designed such that asylum seekers would ultimately settle in PNG and Nauru.

The programmes were an important part of Australia's efforts to shift responsibility for refugee protection on to other States, and central to deterring asylum seekers from making their way to Australia by boat. This deterrence strategy was bolstered by the fact that conditions in the detention facilities in PNG and Nauru were extremely harsh and the asylum seekers and refugees housed there were subject to a range of serious human rights abuses.[62]

There is no denying that by procuring bilateral agreements through the promise of a large amount of aid, and financially underwriting the offshore scheme, various Australian governments were able to implement controversial policies yet largely avoid legal responsibility by claiming that human rights violations were the responsibility of the sovereign nations of Nauru and PNG, and not Australia.[63] It is important to appreciate, however, that there has been strong resistance to Australia's offshore refugee scheme in certain parts of the region. For example, when Australia first started to search for possible States with which it could collaborate, Fiji refused to entertain the idea of participating in the programmes, declaring that Australia's actions were 'a shameful display of cheque book diplomacy'.[64] Further, the Supreme Court of PNG ruled in 2016 that PNG's detention facilities violated the constitutional right to personal liberty.[65] Additionally, many civil society organizations in Australia and New Zealand have repeatedly condemned the programmes in the strongest terms. Thus, similarly to the Bali Process, the offshore programmes can only be deemed to have been a partially successful mechanism for imposing Australia's refugee policy on the region.

iii. *Reflections on Australia's Efforts to Encourage Oceanic States to Adopt Laws and Policies Complementing Its Own Approach to Refugee Matters*

Australia's efforts to encourage other Oceanic States to support its refugee laws and policies raise a number of interesting points. First, there is a clear need for more information to be gathered about the role, views, and involvement of Pacific Island States in regional protection debates and policy. As detailed above, most studies of the Bali Process have

[61] Dastyari and O'Sullivan (n 36).

[62] Curley and Vandyk (n 48) 51–2; Larking (n 47). See Human Rights Council, *Report of the Special Rapporteur on the Human Rights of Migrants on his Mission to Australian and the Regional Processing Centre in Nauru*, UN doc A/HRC/35/25/Add.3 (24 April 2017).

[63] In *Plaintiff M68/2015 v Minister for Immigration and Border Protection* (2016) 257 CLR 42, the High Court of Australia rejected a challenge to the unlawful detention of refugees in Nauru on the basis that Australian officials were not responsible in Australian law. Australia remains responsible under international law, but the lack of enforcement (eg through a regional human rights mechanism) is absent.

[64] Senate of Australia, *Report of the Senate Select Committee on a Certain Maritime Incident* (23 October 2002) 294 <https://www.aph.gov.au/Parliamentary_Business/Committees/Senate/Former_Committees/maritimeincident/report/index> accessed 14 May 2020.

[65] *Namah v Pato* [2016] PGSC 13.

focused on the roles of Australia and Asian States, with little consideration of the involvement of Pacific Island States. This means there is a very limited picture of how the Pacific has responded to, and been affected by, an array of measures, and that picture has largely been constructed by non-Pacific Islanders. It is not possible to understand how refugee law operates in the region with such an impoverished account.

Beyond the relevance for how refugee law is studied, the refugee law issues discussed in this section have implications for how Australia's role as a regional hegemon is to be understood. Australia's approach to PNG and Nauru is clearly hegemonic in nature: it used its political and financial power to convince them to detain, process, and later settle asylum seekers. Scholars have also pointed to the neo-colonial elements of the bilateral agreements.[66] Historically, Australia was a colonial power in the Pacific and exercised a large degree of political control over both PNG and Nauru. Although both States are now independent, the money offered to the two governments in exchange for offshore processing was tied to particular projects and required officials to implement policies dictated by Australia, such as the privatization of numerous State-owned enterprises.[67] Indeed, PNG even amended its constitution in an (ultimately unsuccessful) attempt to ensure the constitutional validity of the detention of asylum seekers transferred from Australia.[68]

However, while in some respects Australia's actions appear to have reinforced its role as the regional hegemon, the fact that some States and civil society organizations have pushed back against its approach suggests that it may no longer enjoy unlimited power across the region. The existence of strong pockets of resistance fits into, and develops, work that is emerging around the idea that the Pacific may be entering a post-hegemonic phase in which Australia no longer has the ability to dictate the region's agenda.[69] Further work in this area may well generate greater insights into the changing scope and limits of Australia's role in Oceania.

4. Pacific Approaches to Displacement

Sections 2 and 3 of this chapter have established that the extent to which Pacific Island States have engaged with the international refugee law regime and the agenda of the regional hegemon is mixed. However, the Pacific Island States' relative lack of support for these approaches by no means tells the whole story of their participation in protection frameworks and agendas. If the international and Australian refugee law

[69] See generally Helen Leslie and Kirsty Wild, 'Post-Hegemonic Regionalism in Oceania: Examining the Development Potential of the New Framework for Pacific Regionalism' (2018) 31 The Pacific Review 20. See also Fry (n 3) 312.

lenses are removed, and regard is had instead to what Pacific leaders and peoples see as important in the displacement/protection space, a very different picture emerges.

a. Climate-related Displacement in the Pacific

The potential for the impacts of climate change to contribute to displacement, migration, and relocation has become a major policy and scholarly focus over the past decade.[70] While some scholarship has focused on the notion of 'sinking islands',[71] engaging case studies from the Pacific as prototypical (hypothetical) examples,[72] it is now well understood that the reality is far more complex. There is no question that, as the Intergovernmental Panel on Climate Change explains, people who live close to the ocean or depend directly on its resources for livelihoods 'are particularly exposed to climate change impacts and hazards'.[73] Yet, while such impacts may lead to movement—after all, migration has been an adaptive strategy for millennia[74]—to date there is 'limited evidence of [cross-border] migration occurring directly as a consequence of impacts associated with environmental change generally and [sea-level rise] specifically'.[75] Further, there are two key limitations on the simplistic 'sinking island nations' analysis. First, any future movement is likely to occur well before the 'disappearance' or 'sinking' of island States, given the nature of slow-onset degradation and the likelihood of resources being depleted before land becomes uninhabitable.[76] Secondly,

[70] See Nansen Initiative on Disaster-Induced Cross-Border Displacement (Nansen Initiative), 'Agenda for the Protection of Cross-Border Displaced Persons in the context of Disaster and Climate Change: Vol 1' (December 2015); Platform on Disaster Displacement <https://disasterdisplacement.org/> accessed 14 May 2020; see Chapter 46 in this volume. We note that displacement, migration, and relocation are different phenomena, yet much of the literature discussed in this section uses these terms somewhat interchangeably. We use 'movement' where possible in order to describe the broad phenomenon, although recognize that this encompasses a spectrum of voluntary/involuntary and planned/unplanned movement.

the causes of any such movement will always be mixed, since the impacts of climate change operate as a threat multiplier rather than a sole cause of movement.[77]

Concern about the impacts of environmental degradation, resource scarcity, and overpopulation has understandably been on the Pacific agenda since well before the start of the twenty-first century. In recent decades the focus has centred more specifically on the potential impact of climate change because of its particular threat to the habitability of parts of the Pacific. Yet, the extent to which existing international protection frameworks can and should apply to potential movement linked to the adverse impacts of climate change has been controversial. First, there is a question about the applicability of the Refugee Convention, and the appropriateness and feasibility of developing new frameworks to respond to the challenge. Secondly, and more fundamentally, the fact that many proposals for reform have been posited by developed States and/or scholars from the Global North has given rise to a neo-liberal critique in which the need for autonomy, agency, and self-determination of affected States and communities in the Pacific is emphasized.

b. Climate-related Movement and Traditional Refugee Frameworks

The extent to which the international refugee regime is capable of accommodating refugee claims based on harm linked to the adverse impacts of climate change has long been debated in the scholarship.[78] However, case law is relatively recent and is being driven by claims originating in the Pacific region.

The most prominent context in which such claims have arisen is a series of cases adjudicated in New Zealand, in which the Immigration and Protection Tribunal (IPT) considered both the refugee and complementary protection (human rights law-based) claims of individuals from Fiji,[79] Kiribati,[80] and Tuvalu.[81] In each of these cases, the protection claims were rejected.[82]

Importantly, however, in *AF (Kiribati)*, the IPT acknowledged the inappropriateness of categorically rejecting refugee claims involving climate-related harm on the basis that a nexus to a Convention ground could never be established, explaining instead that 'the

[82] See Chapter 46 in this volume.

relationship between natural disasters, environmental degradation, and human vulnerability to those disasters and degradation is complex'.[83] Yet, in *AF (Kiribati)*, the IPT found (*inter alia*) that any risk was 'faced by the Kiribati population generally'.[84] Likewise, the complementary protection claim was rejected on the basis that the applicant had not established that his return to Kiribati entailed a real risk of arbitrary deprivation of life, since any climate change-related harms were assessed as being insufficiently 'present'.[85]

The applicant in that case, having subsequently exhausted domestic remedies in New Zealand, brought an individual communication against New Zealand to the UN Human Rights Committee, claiming that New Zealand had violated his right to life by removing him to Kiribati. The decision by the Committee represents the first international 'judgment' on the protective potential of international human rights law in the context of climate change-related displacement. Indeed, while this particular claim was not successful, the Committee stated that:

> without robust national and international efforts, the effects of climate change in receiving states may expose individuals to a violation of their rights under articles 6 or 7 of the Covenant, thereby triggering the *non-refoulement* obligations of sending states.[86]

This case signals that the existing international protection framework may be capable of providing some protection to those who are displaced in the context of climate change, and that individuals fleeing Pacific Island States are pushing the normative boundaries of existing frameworks. However, as in the case of calls for new treaties or instruments to accommodate climate change-related movement,[87] the push to expand protective mechanisms has been critiqued as assuming that migration or relocation is inevitable and/or is a strategy that is desired by, or optimal for, Pacific peoples.

c. New Perspectives on Displacement in the Pacific

As foreshadowed above, the policy and scholarly debates concerning movement linked to the adverse impacts of climate change have been subjected to a neo-colonial analysis in recent years.

[83] *AF (Kiribati)* (n 80) para 57. [87] These are set out, and then critiqued, in McAdam (n 76).

Commenting on the predominance of scholars from the Global North in this field, Meyer, for example, opined that '[t]his combination of a concentration of research capacities in the north and a phenomenon concentrated in the south is a dangerous cocktail for othering and other post-colonial structures of thought'.[88] Barnett and Campbell's conclusion, following extensive empirical work in the Pacific Islands, is damning: they conclude that knowledge gaps are being filled by 'speculation and hyperbole', failing to recognize people's agency, and 'ignor[ing] the significant scope for adaptation to defer or avoid climate impacts'.[89]

However, there is now a growing body of scholarship that examines the phenomenon of climate-related movement from the perspective of Pacific Island States.[90] Such research has revealed that although there is not one homogeneous view within the Pacific,[91] that perspectives have waxed and waned, and that domestic politics is as integral to this debate as international politics, a number of Pacific Island States reject movement as a primary or sole adaptation strategy and prefer to prioritize the actions of developed States to reduce emissions and limit future climate change impacts. Important work by McNamara and Gibson surveyed and analysed documents from the UN, NGOs, and media that 'construct people from Pacific small island states as potential climate refugees', concluding that the subtext of this message is that 'the people of affected Pacific Island States are weak, passive victims with little internal resilience to fight for much more than relocation'.[92] By contrast, their empirical research revealed strong resistance to being categorized as 'climate refugees'; indeed it was in some cases 'considered offensive'.[93] Instead their interviewees asserted 'cultural and political arguments about identity, place and human rights to self-determination'.[94]

Subsequent academic research has drawn similar conclusions in relation to Tuvalu,[95] Vanuatu,[96] and the Marshall Islands.[97] The important work of the Nansen Initiative, which involved extensive consultation with governments and affected communities in the Pacific, likewise affirmed that Pacific leaders' perspective is that movement is the

'least preferred option',[98] with concerns that cross-border movement would impact negatively on 'nationhood, control over land and sea territory, sovereignty, culture and livelihoods'.[99] Participants instead expressed a preference for climate change mitigation and 'adaptation measures to prevent displacement and avoid the need for relocation'.[100]

These insights, in turn, have led to calls for 'enhanced international support for adaptation and capacity building' in States particularly vulnerable to the adverse effects of climate change,[101] in part based on obligations of international cooperation imposed by international human rights and climate change law.[102] Bordner argues that throughout Oceania, colonial legacies have 'induced climate vulnerability and impeded effective adaptation'.[103] Drawing on climate justice theory, she posits a novel approach whereby 'international human rights and decolonization norms vest colonial powers with moral and legal obligations to assist their former colonies with self-determination-preserving adaptation strategies'.[104]

In practice, Pacific Island States are defiantly resisting the imposition of extraneous labels and policy settings, instead formulating endogenous responses to the threat of climate change. They have roundly and emphatically rejected specific proposals emanating from Australia and New Zealand, labelling, for example, a former Australian Prime Minister's suggestion that Australia should offer citizenship to residents of Tuvalu, Kiribati, and Nauru in exchange for control of their seas, Exclusive Economic Zones, and fisheries as 'imperial thinking'.[105] Such proposals also need to be understood against the long history of colonial powers relocating populations in the Pacific in order to exploit resources. As McAdam's seminal work on this topic highlights, the relocation of whole island communities is not a 'novel, futuristic idea'.[106]

Strategies adopted in the region reflect an emphasis on self-determination and autonomy, such as the purchase of land by Kiribati in 2014 on Vanua Levu, the second largest island of Fiji, 'with the purpose of economic development and food security'.[107] Where relocation is becoming necessary, some Pacific nations are taking an active, pre-emptive approach by managing their own internal relocations.[108] In Fiji, for example, the government notes that it has taken 'the initiative of developing its own people-centred relocation guideline that advocates for and plans and pre-empts individual and community

needs' in order to ensure that any relocation 'protects and upholds the rights and dignities of the people involved'.[109] Vanuatu's new National Climate Change and Displacement Policy has been described as 'one of the world's most progressive policies on climate-driven displacement'.[110] In other words, the reality challenges the image of passive victims of climate change awaiting an externally devised (cross-border relocation) solution.

d. Reflections on Climate Change and Regionalism

Over the past decade, the PIF has had a concerted focus on strengthening and deepening regionalism in the Pacific.[111] However, the issue of climate change—and specifically the failure of the regional hegemon, Australia, to commit to international standards in relation to climate mitigation policy—is threatening to fracture the PIF's strategic vision of cementing and deepening regional frameworks for responding to current and future challenges. Yet, a lack of uniform commitment to the key challenges and priorities of the region, notably from the most economically dominant State, has not impeded progress. Indeed, following an annual meeting in which Australian interventions on climate issues were deemed 'neocolonial' and 'condescending',[112] Pacific leaders adopted the Kainaki II Declaration in which they 'reaffirmed climate change as the single greatest threat to the livelihoods, security and wellbeing of the peoples of the Pacific'.[113] The Declaration's focus is not on migration, but on the 'Forum's leadership and moral authority' to engage the UN on global responsibility to take action on climate change,[114] building climate disaster resilience in the Pacific,[115] and recognizing and strengthening Pacific Island States' rights in relation to maritime boundaries and zones.[116] A subset of Pacific Island States has exhibited a willingness to break away from Australia and New Zealand and advocate as a smaller bloc in the UN,[117] thus forging their own vision of regionalism that is dominated by their priorities, concerns, and best interests, marked by a strong sense of self-determination and autonomy.

5. Conclusion

This chapter has established that although there is little refugee law scholarship on Oceania as a region, analysis of emerging issues and trends has much to offer refugee law scholars. Oceania is a region that has undergone significant geopolitical change as many Pacific Island States have emerged relatively recently from colonialism, and have sought to redefine their relationship with the region's hegemon, Australia, and, to a lesser extent, with New Zealand. While Australia has sought to enlist its neighbours in the implementation of its highly controversial refugee policies, under the guise of regionalism, this has received strong resistance from certain quarters. An even more concerted resistance is evident in the rejection of labels and policy approaches that assume that movement away from the Pacific is an inevitable consequence of the adverse effects of climate change, with a strong preference instead for policies that enable self-determination and autonomy.

This chapter has highlighted the need for more research and scholarship into the policies and practices of refugee protection in Oceania, and, in particular, greater support for scholarship from States within the region that are most likely to be impacted by rising sea levels and other damaging consequences of climate change. While research that seeks to draw out the voices and perspectives of affected communities is important and should be welcomed, there is a need to support and facilitate academic work from *within* those communities in order to ensure that scholarship on refugee law and displacement is truly global.

PART IV

ACCESS TO PROTECTION AND INTERNATIONAL RESPONSIBILITY-SHARING

CHAPTER 25

THE SHARING OF RESPONSIBILITIES FOR THE INTERNATIONAL PROTECTION OF REFUGEES

MADELINE GARLICK*

1. Introduction

The question of how responsibility for the international protection of refugees should be distributed amongst States has been debated at international level since the inception of the modern refugee protection regime. It is arguably a more pressing question today than at any other point in history.

Throughout the twenty-first century, the vast majority of refugees have been hosted in the developing world, in countries with limited national resources to respond to refugees' needs. UNHCR reported that at the end of 2018, 84 per cent of the world's refugees were hosted in developing regions, including one-third in Least Developed Countries.[1] These imbalances are not redressed alone by the contributions that refugees can bring to their host societies, although these may be very significant in many cases.[2] Strains on the hosting capacity of less well-resourced countries can undermine the effectiveness of responses to refugees, reduce or preclude access to comprehensive durable solutions to

* The views in this chapter are those of the author, and do not necessarily reflect the position of UNHCR or the United Nations.

[2] Alexander Betts, Louise Bloom, Josiah Kaplan, and Naohiko Omata, *Refugee Economies: Forced Displacement and Development* (OUP 2016).

displacement, and create or exacerbate tensions between States. In such cases, the international legal order, relations between States and host communities' well-being risk being undermined by significant imbalances in the distribution of the costs and benefits associated with hosting refugees. The resulting gaps may also threaten the freedoms and futures of refugee individuals and families whose lives, liberty, and other basic rights may go unprotected.

Challenges associated with large refugee numbers, and the protracted nature of many refugee situations, have triggered renewed calls for strengthened responsibility-sharing arrangements amongst States. By providing more predictable and sustainable support to States with limited capacity, such arrangements would aim to ensure that protection, assistance, and solutions can be provided more effectively, equitably, and systematically to refugees. This imperative was clearly articulated by the UN General Assembly in the 2016 New York Declaration for Refugees and Migrants, adopted after intense political and media attention focused on challenges associated with significant refugee and migration movements in some parts of the world.

The need for a strong, clearly defined framework for more equitable sharing of responsibility has been referred to as the 'perennial gap' in the international refugee protection regime.[3] Although international, regional, and national legal instruments establish obligations for States to protect refugees in their territory or subject to their jurisdiction, they do not define explicitly the nature of the duties States owe to each other, or to refugees in the territory or under the jurisdiction of other States.

While many States contribute significantly to financial assistance and resettlement for refugees outside their territory on a voluntary basis, there is no clearly defined international mechanism to ensure responsibility-sharing on more equitable, predictable, and comprehensive terms. Initiatives in the past have sought to catalyse responsibility-sharing efforts, including at regional level and under UN coordination and leadership, yet they have tended to be *ad hoc*, situation-specific, and limited in duration and impact.[4] The Global Compact on Refugees, endorsed by the General Assembly in December 2018, sought to move beyond those limitations and establish a firmer basis for responsibility-sharing on an ongoing and global basis.

This chapter critically examines the principle and practice of responsibility-sharing amongst States, defined broadly as efforts to achieve a more equitable distribution of responsibilities to provide refugees with protection and solutions and of associated costs and benefits.[5] It analyses the legal and conceptual underpinnings of the concept, its

[4] The Comprehensive Plan of Action for refugees in South-East Asia in the 1970s to 1980s is amongst the best-known of these. See Penelope Mathew and Tristan Harley, *Refugees, Regionalism and Responsibility* (Edward Elgar 2016) 143–61.

[5] For different approaches to defining responsibility-sharing, see eg James C Hathaway and R Alexander Neve, 'Making International Refugee Law Relevant Again: A Proposal for Collectivized and Solution-Oriented Protection' (1997) 10 Harvard Human Rights Journal 115, 144–5; Alexander Betts, Cathryn Costello, and Natascha Zaun, *A Fair Share: Refugees and Responsibility-Sharing* (Delmi 2013) 19–22; Ann Vibeke Eggli, *Mass Refugee Influx and the Limits of Public International Law* (Brill 2002).

treatment in scholarship, and its increasing prominence in international declarations and discussions among States. It will consider several initiatives at international level which have aimed to give it practical effect in contemporary refugee situations, including in Africa and the Americas, based on the Global Compact on Refugees, and examine how this may provide a firmer normative and institutional basis for responsibility-sharing in the future.

There is increasing recognition that responsibility-sharing, involving more predictable, substantial, and systematic support to States hosting large refugee populations, is a necessary precondition to the continued effective functioning of the international protection system. This chapter maintains that in addition to strengthened action by States, recognition is required of the role of other actors, including civil society and private entities, faith-based and other actors, as well as refugees themselves, whose engagement has potential further to strengthen responses to the needs of refugees, notably in large and protracted situations.

2. Legal Foundations and Conceptual Basis

a. International Legal Sources

The Convention relating to the Status of Refugees explicitly acknowledges the need for international cooperation amongst States to address the collective challenges posed by refugee movements. Paragraph 4 of the preamble states 'that the grant of asylum may place unduly heavy burdens on certain countries, and that a satisfactory solution of the problem of which the UN has recognized the international scope and nature cannot be achieved without international cooperation'. Beyond this, however, the Convention does not indicate the form that such cooperation should take, or the circumstances that trigger the obligation for States to address this need.

While the concept of responsibility-sharing is not defined explicitly in international law, it is frequently associated with related concepts in international instruments, including international cooperation, solidarity, and burden-sharing. The duty of States to cooperate was expressed in article 1(3) of the Charter of the United Nations (UN Charter), indicating that international cooperation in solving 'international problems of an economic, social or humanitarian character' is among the UN's overarching purposes.[6] Articles 55 and 56 further commit UN Member States to 'take joint and separate action in cooperation' with the UN to solve international economic, social, and related problems.[7] Goodwin-Gill and McAdam note that these provisions

[6] Charter of the United Nations (adopted 24 October 1945) 1 UNTS XVI (UN Charter), art 1(3).
[7] ibid arts 55, 56.

establish a specific obligation of cooperation in the refugee context, given the inherently international character of flight across borders and of refugees' claims for protection by other States.[8]

Some regional refugee instruments refer to burden- and responsibility-sharing, international cooperation, and solidarity in more directive terms. The OAU Convention provides that 'where a Member State finds difficulties in continuing to grant asylum to refugees, [it] may appeal directly to other Member States and through the OAU, and such other Member States shall in the spirit of African solidarity and cooperation take appropriate measures to lighten the burden' of the Member State granting asylum.[9] In the EU, article 80 of the Treaty on the Functioning of the European Union requires that the EU's policies on asylum and their implementation 'shall be governed by the principle of solidarity and fair sharing of responsibility'.[10] These provisions, based on their plain wording, can be understood to require States in those regions to take positive steps to redress imbalances, and otherwise ensure that responsibility for refugee protection is not disproportionately borne by a few States unaided.[11]

The need for international responsibility-sharing and cooperation, including addressing the 'burdens' associated with the presence of refugees, is also recognized in over 30 conclusions of UNHCR's Executive Committee (ExCom). Amongst these, ExCom in 1978 '[r]eaffirmed the principle of international solidarity as a primary condition for the practice of liberal asylum policies and for the effective implementation of international protection in general',[12] while in 2005, it 'underline[d] the importance of burden and responsibility sharing at all stages of a refugee situation, including ensuring access to protection in responding to the assistance needs of refugees as well as in addressing and facilitating durable solutions'.[13] In 2016, ExCom 'reaffirm[ed] its commitment to international solidarity and responsibility- and burden-sharing involving all members of the international community, . . . recalling the importance of international cooperation, in particular to support communities and countries hosting large refugee populations, in ensuring protection and assistance and achieving solutions for refugees'.[14] In these pronouncements, States have unequivocally acknowledged the importance of responsibility-sharing, and have elaborated further on concrete measures which can and should be taken to achieve it.[15] The positive formulations in the ExCom conclusions have nevertheless concealed divisions between States over existing distributions of costs and demands. Representatives of India and Pakistan in 1997 argued in ExCom that

developing countries 'should not be left alone in bearing the burden of absorbing refugees' and that 'burden-sharing…implied that developed countries had to accept their responsibilities under international refugee law and refrain from unilateral practices…that could contribute to a complete collapse of the international regime'.[16]

The term 'burden-sharing' has often been preferred by countries hosting large refugee populations which have pointed to the very significant financial demands and perceived negative impacts associated with their presence. In 1983, Fonteyne posited that 'burden-sharing' was an emerging norm of international law, flowing from the UN Charter's obligation for States to maintain international peace and security, as one of the purposes of the UN. He argued that peace and security could be threatened by large-scale refugee arrivals in certain circumstances.[17] However, some commentators have taken issue with the negative connotations of refugees portrayed exclusively as a 'burden'. Vibeke Eggli argued that the term suggests asylum seekers have 'lost all human value and have become negotiable and transferable commodities, leaving the individual with no will or say'.[18] Consequently, the term 'responsibility-sharing' has gained wider acceptance, highlighting the legal obligations and responsibilities of States towards refugees as rights holders, and towards each other, under the Refugee Convention, regional refugee law instruments, and the international human rights framework. As a notion that implicitly looks beyond the negative costs or 'burdens' for States hosting refugees, and recognizes their agency, as well as their positive social, economic, and cultural contributions, responsibility-sharing is the preferred formulation for some States and writers, as well as UNHCR and civil society.[19] Nevertheless, some large host countries that emphasize the actual or perceived negative impact of refugees on their societies have continued to use and insist on 'burden-sharing' in international policy discussions, alongside 'responsibility-sharing' or alone.

b. Approaches to Responsibility-sharing

Responsibility- and burden-sharing practices have been critically analysed by numerous academic experts over time. Amongst these practices, Noll identified three broad categories: (1) harmonized norms or laws ('sharing norms'); (2) financial contributions ('sharing money'); and (3) physical responsibility-sharing ('sharing people').[20]

[16] Quoted in Agnès Hurwitz, *The Collective Responsibility of States to Protect Refugees* (OUP 2009) 162.

[17] JPL Fonteyne, 'Burden-Sharing: An Analysis of the Nature and Function of International Solidarity in Cases of Mass Influx of Refugees' (1983) 8 Australian Yearbook of International Law 162, 184.

[18] Vibeke Eggli (n 5) 36.

[19] Betts, Costello, and Zaun (n 5) 19; Martin Gottwald, 'Burden Sharing and Refugee Protection' in Elena Fiddian-Qasmiyeh, Gil Loescher, Katy Long, and Nando Sigona (eds), *The Oxford Handbook of Refugee and Forced Migration Studies* (OUP 2014) 525.

[20] Gregor Noll, *Negotiating Asylum, the EU Acquis, Extraterritorial Asylum and the Common Market of Deflection* (Kluwer 2000).

'Sharing norms' aims to reduce the unequal distribution amongst States of asylum seekers and refugees by harmonizing standards and thereby reducing the perceived incentive for people to move towards States with more favourable provisions. Common standards need to reflect international norms, including under the Refugee Convention and human rights law. However, as efforts to establish common asylum standards in the EU demonstrate, such harmonization may not of itself achieve an equitable geographical distribution of refugees across countries. This suggests that common norms may not be effective in redistributing responsibility, notably where their implementation is inconsistent and, in some cases, undermined by a lack of political will.[21]

'Sharing money' refers to the provision of financial assistance or other resources to States hosting large refugee populations. Donor States have contributed significantly to humanitarian aid and emergency assistance budgets for refugee situations over many decades. Multilateral funding mechanisms have developed in scale and complexity, enabling international cooperation between donor States through joint funding arrangements, such as regional funds, multi-donor trust funds or UN pooled funding, and joint appeals. However, providing funds is generally voluntary and difficult to predict. Some initiatives aimed at establishing structured mechanisms to achieve more dependable funding have had limited success. For example, the International Conferences on Assistance to Refugees in Africa (ICARA I and II)[22] and the International Conference on Central American Refugees (CIREFCA) process in Latin America[23] saw funding shortfalls and mismatched expectations on the part of donor States and host countries. Furthermore, Anker, Fitzpatrick, and Shacknove have pointed to the risk that financial support for countries in regions of origin could be motivated by 'containment' strategies, aimed at 'warehousing' refugees in region of origin.[24] This is seen to arise particularly where increased financial support coincides with the explicit aim of limiting refugee arrivals; or where it is linked to restrictive measures, which could effectively limit access to territory or asylum in donor countries.[25]

Nevertheless, the protection and well-being of millions of refugees continues to depend upon the provision of financial support to States that host large refugee populations. This is needed not only to ensure refugees' basic needs are met, but also to preserve asylum space by encouraging receiving countries to continue to welcome and host refugees. At the same time, refugee-hosting countries have argued that their non-financial contributions to refugee protection through accommodating large populations—

sometimes perceived to be at considerable social, infrastructural, and environmental cost—needs wider recognition at the international level.[26]

The 'sharing money' category also extends to resource provision, for example through technical assistance designed to enhance national capacity to receive and manage refugee arrivals, presence, and protection needs. Many States undertake capacity development or 'twinning', on a bilateral or regional basis, offering expert personnel or training to assist other States in building institutional and legal frameworks and capacity to receive and protect refugees. However, technical assistance may only contribute in limited ways to lasting solutions for refugees, which often depend on the willingness of host country political leadership or external factors, such as the improvement of conditions in countries of origin. Further, capacity development support may not always be welcomed by host countries that harbour reservations about being seen to signal openness to receiving more refugees.

Physically relocating refugees and asylum seekers—or 'sharing people', through resettlement, humanitarian admission, and other legal pathways—has been described as the 'most effective but controversial way to address disparities in refugee burdens'.[27] Resettlement, in particular, is widely seen as an important humanitarian gesture by receiving countries, which can provide solutions to particularly vulnerable refugees, including those with medical or other needs that may be costly for first host countries to address. Beyond exclusively State-supported resettlement, community sponsorship can increase the number of resettlement places for refugees who benefit from valuable community support and personal networks upon arrival.

Resettlement and other forms of physical redistribution undertaken with the consent of refugees are effective in building trust in responsibility-sharing amongst States, by demonstrating that wealthier States are not merely ready to pay for refugees to be protected elsewhere, but are also prepared to welcome them into their own territories. Yet resettlement has traditionally benefited only a fraction of the world's refugees, at less than 1 per cent of refugees under UNHCR's mandate.[28] Resettlement programmes thus offer important routes to international protection for individuals and symbolic contributions to global efforts, rather than a means to rebalance numerically the uneven distribution of refugees worldwide.

Furthermore, some arrangements for 'sharing people' may raise concerns about sustainability and respect for refugees' rights and agency, if they do not take account of individuals' intentions and links to family or otherwise in the countries concerned.[29] In

the 1990s, Hathaway and Neve called for the establishment of cooperation frameworks amongst States to share people, providing for distribution of refugees based on quotas, with places in the quota being 'tradeable' between States under UNHCR's supervision.[30] Other authors, including Anker, Fitzpatrick, and Shacknove,[31] emphasized the primary responsibilities of States towards refugees who claimed asylum in their territories, and advocated for greater account to be taken of refugees' choices as regards their countries of asylum.[32]

Responsibility-sharing through quotas and distribution arrangements, based on defined numerical and capacity-related criteria, including Gross Domestic Product and current refugee population, have been implemented in the EU context, in relocation measures endorsed by the European Council in 2015.[33] These saw limited success in practice, however, due in part to limited readiness by EU States to accept their allocated quotas and receive asylum seekers.[34]

Arrangements to reallocate responsibility for asylum seekers, which are not based on individuals' consent or preferences, have attracted significant critique. Based on the 'safe third country' concept, the EU's Dublin system has been criticized by commentators and asylum advocates for causing significant hardship for asylum seekers, while failing to ensure access to fair and effective asylum determinations. Its operation has also been held to violate human rights standards by European regional courts in several landmark cases.[35]

Notwithstanding these controversies, however, recent years have seen increasing recognition of the importance of the contributions made by a wide range of actors in supporting refugees. Beyond central State authorities, the place of municipalities, as actors called upon to respond directly to refugees' day-to-day needs, has received greater prominence in international fora, funding, and policy discussions. Faith leaders and communities also play important roles, including in encouraging States to admit refugees and to adopt humanitarian policies, but also in welcoming and offering direct support. The actions of these entities cannot replace the actions of States, nor in any way alter States' legal obligations towards refugees. However, they can and do in practice fill

gaps in States' responses, exert public pressure on States to maintain rights-compliant policies and laws, and achieve significant impact in human—and sometimes, material—terms. These contributions merit recognition where they serve to maintain or expand protection space and uphold standards of treatment for refugees.

c. Rationales and Disincentives to Engage in Responsibility-sharing

In considering the effectiveness and limits of arrangements on responsibility-sharing, it is important to examine States' perceived self-interest in participating, as well as the reasons they might feel dissuaded from doing so.

There are convincing arguments for States to be involved in responsibility-sharing measures. These include norm-based imperatives, linked not solely to domestic priorities, but to wider benefits for the international community at large. States recognize that refugee protection constitutes a global public good,[36] offering benefits to the international community. Ensuring respect for the rights of refugees and upholding the international protection regime will be seen by some as an incentive to support such measures.

It can also be argued that responsibility-sharing is a 'functional necessity'[37] for the operation of the refugee protection regime. In cases of mass influx, international cooperation and solidarity may be required to ensure States can respond to refugee arrivals at their borders. Further, a lack of protection in a first country of arrival may also compel refugees to move onward to seek protection and adequate standards. Desire to avoid the duplication, inefficiencies, delays, and tensions between States that can result from refugees claiming in multiple countries *en route* can itself motivate States to support improvement of conditions in first arrival countries. However, UNHCR and others have cautioned that such support must be undertaken in ways that strengthen access to protection in all concerned countries, without increasing strains on countries in regions of origin: effectively sharing, rather than shifting, burdens and responsibilities.[38]

States may also see responsibility-sharing as a form of 'insurance' against exposure to future risks—namely the possibility of being left unassisted by other States in the case of possible future arrivals. If a State accepts additional responsibilities for refugees hosted by others, it may subsequently be in a better position to request help if faced with refugee movements beyond its capacity in the future. Suhrke maintains that the insurance logic also provides 'a reasonable guarantee that the institution of asylum will be kept intact, since States are more likely to offer protection if they can share the burden'.[39]

[36] See A Suhrke, 'Burden-sharing during Refugee Emergencies: The Logic of Collective versus National Action' (1998) 11(4) JRS 396; Alexander Betts, 'Public Goods Theory and the Provision of Refugee Protection: The Role of the Joint-Product Model in Burden-Sharing Theory' (2003) 16(3) JRS 274.

[38] See UNHCR, 'Guidance on Responding to Irregular Onward Movement of Refugees and Asylum-Seekers' (September 2019) para 25.

[39] Suhrke (n 36) 398.

This argument might be less persuasive in cases where States might consider, based on their geography or restrictive border control policies, that they are unlikely to receive overwhelming arrivals. Similarly, if they judge that they have the capacity to take unilateral action to address such a threat more effectively than through a collective scheme[40]—effectively 'self-insure'—the motivation to participate may be weaker.

One potentially dissuasive element is the lack of clear legally binding norms. In addition, States may rely on arguments based on sovereignty to claim they are not bound by any measure that might limit their right to determine who enters and stays in their territory. Some experts also point to the likelihood of 'free riding'—namely, the risk they will be left with a significant share of the costs, while other States—which have not contributed at the same level or at all—will also receive the benefits.[41] Additionally, States may feel disinclined to participate in responsibility-sharing arrangements if these are seen to have little measurable impact on the scale of displacement worldwide. However, this argument overlooks the importance of protection in individual cases and the potential effect of cumulative responsibility-sharing measures taken by numerous States in coordinated fashion.

In sum, beyond legal principles, persuasive arguments appealing to States' interests are likely to be important in encouraging sustained and impactful engagement in responsibility-sharing.

3. The Global Compact on Refugees

Against a backdrop of evident need, imprecise legal norms, and varying approaches to the concept, the UN General Assembly in 2016 expressed its clear commitment to the principle of responsibility-sharing for refugees. In the New York Declaration, it unanimously stated: '[t]o address the needs of refugees and receiving States, we commit to a more equitable sharing of the burden and responsibility for hosting and supporting the world's refugees, while taking account of existing contributions and the differing capacities and resources among States', seeking 'to translate this long-standing principle' of responsibility-sharing 'into concrete and practical action'.[42]

The Global Compact on Refugees (GCR), affirmed in December 2018, expressed UN Member States' commitment to responsibility-sharing in unequivocal terms. Recognizing that refugees are a 'common concern of humankind', it is described as 'emanating from fundamental principles of humanity and international solidarity', which 'intends to provide a basis for predictable and equitable burden- and responsibility-sharing among all UN Member States, together with other relevant stakeholders as

42 New York Declaration para 68.

appropriate'. As a non-legally binding document, it avowedly did not purport to define new norms or create new obligations; but rather to provide a basis for operationalizing key international legal principles, including international cooperation.[43]

The GCR articulated four objectives, namely to: (1) ease pressures on host countries; (2) enhance refugee self-reliance; (3) expand access to third country solutions; and (4) support conditions in countries of origin for return in safety and dignity.[44] To achieve these, it called for efforts to 'broaden [the] base of support' for refugee protection, and establish arrangements for more equitable, sustained, and predictable contributions to responsibility-sharing. These include the Global Refugee Forum, to be convened every four years, inviting UN Member States at Ministerial level to 'announce concrete pledges and contributions towards the objectives of the Global Compact'[45] and subsequently take stock of progress.

Recognizing the importance of national leadership, the GCR provides that host countries may create situation-specific national arrangements to support responsibility-sharing 'to coordinate and facilitate the efforts of all relevant stakeholders working to achieve a comprehensive response'.[46] A 'Support Platform' may be activated at the request of a host country to mobilize context-specific support for refugees and host communities in the case of a large-scale or complex refugee situation. It may galvanize political efforts to prevent displacement and reinforce protection, or bring in financial and technical assistance, resettlement places, and complementary pathways to solutions.[47]

Some analysts have observed that the framing of the GCR's support arrangements offers grounds for progress beyond previous achievements and deadlock. Gilbert has highlighted the importance of measuring its outcomes through targeted indicators,[48] while Cantor has posited that 'however modestly within the "politics of the possible" . . . [the GCR's provisions address] the notion of "fairness" in global refugee policy', seen as a step forward from previous approaches to inter-State dealings on refugees.[49]

The GCR's approach to large-scale and protracted situations aims to achieve more systematic support than past efforts, promoting linkages between refugee responses and development, and mobilizing a broader range of solutions, which together correspond to more comprehensive systems thinking.[50] Jobs and livelihoods are approached more proactively in the GCR than past multilateral refugee frameworks. The GCR emphasizes the value of economic opportunities for refugees to improve self-reliance and reduce dependence on State or international humanitarian assistance during displacement, as well as a means to improve refugees' prospects of solutions, whether in host countries, third countries, or on return to their countries of origin. It calls for

expanded job creation and entrepreneurship programmes for host communities as well as refugees,[51] incentivizing host States to relax limitations on refugees' rights to work and self-reliance.

The multistakeholder approach adopted in the GCR recognizes that civil society, the private sector, academia, and others have expertise, experience, and access to information that are not always at the immediate disposal of States. The Compact calls for an active role for those entities in strengthening reception, solutions, livelihoods, and support to host communities. This can be pursued by capitalizing on the extensive field presence, operational experience, and protection focus of many national and international non-governmental organisations (NGOs), all of which equip them particularly well in contributing to comprehensive responses. Civil society's strong interest in supporting GCR implementation[52] can be harnessed productively to improve coordination, transparency, and impact. In addition, religious communities and faith leaders have also been recognized as particularly influential actors that can mobilize host societies and governments to enhance acceptance and inclusion of refugees.[53] The potential of these and other non-State stakeholders to contribute to promoting more effective sharing of responsibilities—between and within countries—is significant.

4. The Comprehensive Refugee Response Framework in Africa

On the African continent, support for reinforced responsibility-sharing efforts has come from the Comprehensive Refugee Response Framework (CRRF), forming part of the GCR. As of mid-2019, the CRRF was being applied in eight African States, namely Chad, Djibouti, Ethiopia, Kenya, Rwanda, Somalia, Uganda, and Zambia, as well as in the long-standing Somali refugee situation in the East and Horn of Africa.

The New York Declaration called for a CRRF for situations involving large movements of refugees, based on the principles of international cooperation and on burden- and responsibility-sharing, to ensure more effective protection and assistance for refugees and support for host States and communities.[54] Further, the Declaration foresees a shift from reliance by refugees on humanitarian assistance, provided through parallel support systems established by humanitarian agencies, to inclusion of refugees in

[54] New York Declaration, annex I, para 1.

national services. Such services, including health and education, are to be reinforced by funding and technical support from the international community.

Facilitated by UNHCR, but with an evident need for agreement and positive engagement of States, the CRRF aims to enlist the efforts of a wider group of stakeholders, including national and local authorities, international financial institutions, regional bodies, civil society organizations, the private sector, and refugees themselves.

Development actors and multilateral financial institutions—carrying significant leverage with many refugee-hosting countries—have also been engaged to support GCR implementation. These efforts gained momentum in 2018, when the International Development Assistance (IDA) programme of the World Bank Group established a $US2 billion financing sub-window for refugees and local communities, designed to help host governments address longer-term socio-economic challenges associated with refugee arrivals. Four of the seven countries that qualified for funding under this sub-window were CRRF countries in Africa (Chad, Ethiopia, Djibouti, and Uganda), where the funding has provided important support to the CRRF's implementation.

Subsequent developments in three of these illustrate the potential of such targeted support to bring about measurable progress in relatively short timeframes. The CRRF's implementation in Chad exemplifies the stakeholder-driven and development focus of the GCR. In mid-2018, Chad hosted close to 500,000 refugees, the highest number relative to population amongst all countries in Africa. Chad's government in 2016 had pledged to improve access to education, land, and birth certificates for refugees, commitments to the GCR goal of enhancing refugee self-reliance. A $US50 million IDA 18 grant supported expansion of education opportunities, enabling 108 schools located in refugee camps and settlements to be declared Chadian schools, permitting Chadian and refugee children to attend and receive State support.[55] In 2018, it was announced that Chad's legislature would draft a new refugee law.[56] These steps are promising for a country whose legal and institutional framework previously limited scope for refugee protection and solutions.

In Ethiopia, significant steps in 2018 included the adoption of a Refugee Proclamation, which relaxed prohibitions on refugees' free movement and labour rights. In addition, the enrolment of refugee children in primary school increased significantly over the two years to mid-2018, bringing the figure of enrolled school-aged refugee children to 72 per cent. New administrative arrangements also allowed refugees to register births, deaths, and marriages, using national civil documentation that was made available to refugees. The Ethiopia Jobs Compact project has also received extensive support from the World Bank, funding the establishment of industrial parks and providing productive employment opportunities for Ethiopians and refugees to further their self-reliance.

[55] UNHCR, 'Two Year Progress Assessment of the CRRF Approach: September 2016–September 2018,' UN doc ES/2018/07 (December 2018) <https://www.unhcr.org/5c63ff144.pdf> accessed 28 January 2020.

[56] UNHCR, 'Applying Comprehensive Responses (CRRF) in Africa' (August 2018) <https://www.unhcr.org/publications/operations/5a8fcfff4/applying-comprehensive-responses-crrf-africa.html> accessed 28 January 2020.

Uganda has received and granted land usage rights to many refugees, enabling them to undertake income-generating activities. In 2018, it also included refugees in national development plans through the Settlement Transformative Agenda, aimed at enhancing livelihood opportunities for refugees and host communities. Uganda further adopted a national Education Response Plan for 2018–21, targeting 675,000 children from refugee and host communities. Donors supported vocational training for refugees and capacity development for local authorities. The IDA 18 programme further provided loans and grants for national infrastructure, and water management and development.

CRRF support for the Somali refugee situation went to major receiving countries for Somalis in the region, together hosting some 836,000 refugees as of March 2018. While many refugees contribute to economic activity in countries of asylum, some representatives of these countries have expressed concerns about unemployment, perceived security threats, and the social and environmental impacts of the refugees' presence. The CRRF sought to promote self-reliance for Somalis, including through environmentally sustainable activities, and to boost efforts to achieve solutions, including notably voluntary return to Somalia where this is viable. In this way, amongst other objectives, the CRRF has aimed to counter negative perceptions and reinforce host country support for refugee protection.

In the Somali situation, the CRRF has also sought to harness the potential of regional processes collectively to address displacement challenges. In March 2017, IGAD[57] heads of State and government met and agreed on the Nairobi Declaration and Plan of Action, committing to accelerate solutions in Somalia by creating conditions conducive to voluntary and sustainable return, while maintaining protection space in countries of asylum and strengthening sub-regional cooperation.[58] In the subsequent Djibouti Declaration, States hosting Somali refugees further agreed to improve their access to education, including by providing more places for refugee children in local schools, and incorporating refugees into national education systems by 2020.[59] Durable solutions and reintegration of refugees was enshrined for the first time in Somalia's own national development plan, as well as a draft National Policy Plan on Durable Solutions.

In a 2018 evaluation of the CRRF,[60] UNHCR observed advances in each of the participating countries, including through mobilization of unprecedented resources and political support for refugee protection and solutions. Some donors have aligned their funding programmes with CRRF objectives, providing a strong incentive to government and other actors to engage. Furthermore, on free movement—seen as a crucial

[60] UNHCR (n 55).

contributing factor in promoting refugee self-reliance—substantial progress occurred in some countries. Along with changes to labour and documentation legislation, these have the potential substantially to improve the situation of refugees in key host countries. The engagement of development actors and processes in displacement, bringing in larger funding envelopes and longer-term planning horizons, should also provide a basis for more effective and consistent approaches to improving refugee self-reliance while supporting host communities.

By contrast, on the other two GCR objectives—return and resettlement to third countries—UNHCR's evaluation found that progress and impacts were more limited. Ongoing violence combined with drought in parts of Somalia has meant that conditions have remained unfavourable for large-scale return, with global resettlement places declining sharply in 2019, undermining the prospect of durable solutions still further for many refugees. Such outcomes highlight the value of caution and transparency, in avoiding risks in raising expectations.[61] Thus, while advances may improve the situation of refugees in some protracted and new displacement situations in Africa, without redoubled international support and further progress on local integration they will not be able to solve them in a durable and comprehensive way.

5. North and Central America: MIRPS

In a major regional initiative to strengthen responsibility-sharing under the rubric of the GCR, six countries in the North and Central Americas agreed in late 2017 to work together to develop a 'Comprehensive Regional Protection and Solutions Framework', known by its Spanish acronym 'MIRPS'.[62] The arrangement was defined in the San Pedro Sula Declaration, adopted by Belize, Costa Rica, Guatemala, Honduras, Mexico, and Panama, as a regional cooperation framework amongst countries of origin, transit, and destination. Its aims included establishing mechanisms for sharing responsibility, strengthening protection, and facilitating solutions for refugees, as well as promoting wider respect in practice for the rights of asylum seekers, internally displaced persons (IDPs), and returnees. The arrangement was developed consultatively amongst States and regional entities, notably the Organization of American States and the Central American Integration System, together with UN agencies, civil society, private sector actors, academia, and development banks. Its terms envisaged UNHCR support for the six initiating governments, but also support from other partners, including 10 additional countries that agreed through the MIRPS to offer technical cooperation and financial assistance.

[61] Randall Hansen, 'The Comprehensive Refugee Response Framework: A Commentary' (2018) 31(2) JRS 131.

[62] 'San Pedro Sula Declaration as a Regional Contribution to the Comprehensive Refugee Response Framework' (San Pedro Sula, 26 October 2017) <https://www.acnur.org/5b58d75a4.pdf> accessed 28 January 2020; UNHCR (n 55).

National Action Plans were developed for each of the MIRPS participating countries, defining measures to strengthen domestic refugee protection systems and promote comprehensive and sustainable solutions. The plans span four pillars, broadly corresponding to those in the CRRF, covering reception and admission, immediate and persistent needs, support to host countries and communities, and durable solutions. They contain baseline measures for national actions, including improved collection of data, disaggregated by age, sex, nationality, and needs. Also foreseen is the necessity for reinforced protection systems for women and girls—a critical need in a region where gender-based violence, discrimination, and femicide are widespread and devastating. Emphasis is placed on ensuring participation of displaced populations in needs assessment and response design.

A noteworthy aspect of the MIRPS is the character of the movements it addresses. Displacement in North and Central America is driven by complex factors, including in many cases persecution, generalized violence, and insecurity perpetrated by organized criminal gangs, against whom States have been unable to protect their citizens. At the same time, poverty and dysfunctional economies have prompted many people in the region to move across borders. In addition to refugee status under the Refugee Convention, and the wider ambit of the Cartagena Declaration—which includes people fleeing circumstances seriously disturbing public order—national forms of status based on humanitarian and other grounds have been applied in many countries in the region. States have granted other rights to stay to many people moving for reasons other than fear of persecution, serious harm, or public order disruption. By providing effective responses for people within mixed movements who are not refugees, such approaches have the potential to reduce pressure on developing asylum systems.

From approximately 2010, the numbers of people seeking asylum in the region rose significantly, and nascent State asylum systems sought support, including capacity development through technical assistance. Refugee movements and State responses were central themes in discussions amongst Latin American and Caribbean States, leading to the adoption of the Brazil Declaration and Plan of Action in 2014.[63]

While expressing positive intentions, a number of the commitments in these documents remain unfulfilled. Asylum and protection systems in the region continue to need reinforcement, notably as movements in 2018–19 saw increasing numbers of people in need of protection, including from resurgent gang violence in Honduras, and from the developing crisis in Venezuela. In May 2019, UNHCR issued guidance indicating that the majority of those fleeing Venezuela and seeking protection in neighbouring countries should be recognized as refugees under the Cartagena Declaration, or under the Refugee Convention.[64] The MIRPS has an important role to play in ensuring that access

[63] 'A Framework for Cooperation and Regional Solidarity to Strengthen the International Protection of Refugees, Displaced and Stateless Persons in Latin America and the Caribbean and Brazil Plan of Action' (Brasilia, 3 December 2014) (Brazil Declaration) <https://www.acnur.org/fileadmin/Documentos/BDL/2014/9865.pdf?file=t3/fileadmin/Documentos/BDL/2014/9865> accessed 28 January 2020.

[64] UNHCR, 'Guidance Note on International Protection Considerations for Venezuelans—Update I' (May 2019) <https://www.refworld.org/docid/5cd1950f4.html> accessed 19 February 2020.

to, and operation of, asylum processes are reinforced, so that national and regional capacity to cope with large-scale movements is not overwhelmed.

Amongst the concrete results of the MIRPS, Costa Rica established a system of documentation for asylum seekers, which provided access to the local e-payment systems, as well as social services and a national poverty reduction programme.[65] Guatemala expanded the provision of health services to assist some 15,000 refugees, as well as members of the host community. In Honduras, efforts under the MIRPS have included developing legislation on internal displacement, to be followed by a protocol on refugee status determination. In this way, a legal framework is being developed to address the displacement continuum, including support and solutions for IDPs, which may reduce the compulsion to cross borders in order to seek protection.

In sum, it would appear that a regionally specific framework or model, such as the MIRPS, or the Somalia CRRF, could lend additional impetus to global approaches to responsibility-sharing. Provided outcomes remain consistent with high international standards and principles, the MIRPS and African CRRF rollouts demonstrate the value of initiatives by States to take ownership of the CRRF and tailor it to regional needs and dynamics.

6. A Basis for Progress?

This chapter has sought to examine the legal and conceptual foundations of responsibility-sharing, as well as insights from its application in specific refugee settings. These demonstrate that while there is no perfect or generally applicable method of encouraging States to engage in responsibility-sharing, several factors may strengthen such arrangements, including under the GCR.

First, it can be argued that the vocal and increasingly active engagement of large host countries in debates around refugee protection and burden- and responsibility-sharing can be both positive and productive. Large host countries, including some non-parties to the Refugee Convention, take part in UNHCR's ExCom and other formal structures, which decide on key operational questions around refugee issues, in ways that bring realism and immediacy to the debates. Evidence of productive engagement in this context includes not only the GCR, but also ongoing work by UNHCR, requested by ExCom Member States, on measuring the impact of hosting refugee populations.[66]

Secondly, recent years have highlighted the need for national structures to work across governmental divides. The GCR supports a multistakeholder and 'whole of government' approach, which is needed to ensure coordination and consistent messaging between foreign affairs, humanitarian aid, home affairs, and development cooperation.

[65] UNHCR, 'Global update on the Comprehensive Refugee Response Framework' (September 2018).

[66] See UNHCR (n 26). See also ExCom Conclusion No 112 (n 14); ExCom Conclusion No 113 (LXVII) (2016); ExCom Conclusion No 114 (LXVIII) (2017).

Effective coordination can reduce duplication, wasted resources, and risks of tension, confusion, and unproductive parallel action. While the impact of this wider cross-governmental approach is yet to be tested fully in the GCR context, it appears to have yielded positive early results in more holistic planning and programming.

Thirdly, there is now wider acceptance of the need to forge or strengthen linkages between humanitarian and development strategies and programmes. In the past, some States might have seen efforts to include refugees' needs in development programming as inappropriately diverting funds that should have exclusively benefited citizens. This concern can be addressed through 'additionality'—where donors are ready to affirm that funding to address development challenges associated with refugee populations is additional to, and not in place of or deducted from, development funds supporting nationals. It may be that the presence of refugees can even serve to mobilize funding that would not otherwise have been available. Moreover, where development funding can be applied in ways that harness the potential contributions of refugees, rather than approaching them as a problem to be overcome, this may help some segments of host communities to appreciate more readily the benefits of receiving and protecting refugees.

Finally, there is increasing recognition of the importance, not only of consulting refugees and other displaced persons in the course of planning and implementing interventions, but of involving them in making and implementing decisions affecting their well-being. UNHCR's community-based protection approach and participatory assessments, including with a focus on age, gender, and diversity, were developed to provide platforms for refugees to express views, and to respond to their insights and proposals. Refugees and other displaced people have the right to be consulted; but apart from the rights-based rationale, the imperative to facilitate their involvement comes also from recognizing that refugees and other displaced persons have skills, knowledge, and insights, all of which are useful for protecting others and reinforcing systems to maintain their well-being. This need for participation—which must extend beyond symbolic consultation and avoid the risks of tokenism, or worse, instrumentalization of displaced persons—is reflected in the GCR, and other UNHCR documents and policies.

Ensuring refugees and other displaced people are involved in decision-making and the design of assistance, protection, and solutions programmes may prove challenging in practice. Arrangements for doing so need to make the most of people's skills, knowledge, and insights, without patronizing them or raising expectations that cannot be fulfilled. They need to take account of the situation of people of all ages, genders, and diverse backgrounds, and that needs to be done in cost-effective ways, to ensure ongoing donor support. At the same time, it is increasingly recognized that refugee participation is crucial for ensuring that assistance programmes, protection measures, and efforts to promote solutions will be better informed by the experiences and perspectives of people who have experienced displacement.[67] Such people have invaluable first-hand insights

[67] See Kate Pincock, Alexander Betts, and Evan Easton-Calabria, *The Global Governed? Refugees as Providers of Protection and Assistance* (CUP 2020).

that can complement and, where necessary, reorient standard institutional approaches. Involving persons of concern in programme design also concretely recognizes their rights and agency, to which many international and national administrations are committed on paper, but which may require greater efforts and innovative approaches to realize in practice.

7. Conclusion

Discussions and initiatives on responsibility-sharing for refugee protection, at policy and academic levels, have broadened in conceptual scope over recent years. These now extend beyond the concept's legal dimensions, possibly reflecting the limited application in State practice of provisions in international and regional legal instruments on responsibility-sharing to date. The increasingly pressing need to find more systematic and predictable mechanisms to support States receiving large numbers of refugees has nonetheless been acknowledged in multilateral and regional fora. The New York Declaration and the GCR provide new impetus to the issue and a framework for States to pursue responsibility-sharing in concrete ways through the UN. Responsibility-sharing could thus be seen as acquiring a stronger institutional basis through the GCR's provisions and support mechanisms, which will enable States experiencing large-scale arrivals and strained protection capacity to bring their needs to global attention.

By taking a multistakeholder approach, the GCR has broadened the categories of actors who can and do support refugee protection, assistance, and solutions. From large NGOs through to philanthropic foundations to faith actors, they are called upon to play a greater role in responding to large influxes and protracted situations. This approach has the potential to mobilize practical and material assistance in more flexible arrangements, reflecting the potential of non-State actors to contribute substantially to enhancing refugee protection, and pressing States to do more.

In the absence of binding obligations, responsibility-sharing arrangements are likely to continue to face challenges in enlisting contributions from reticent States. Even at the regional level, some decline to take part.[68] By contrast, others will see alternative geopolitical considerations and strategic benefits in engagement, based on a multilateralist approach.[69] It is argued that this selective participation does not undermine or refute the importance, value, and potential of responsibility-sharing efforts. Rather, leadership shown by a limited group of States and stakeholders may

[68] See, for example, the objections by a number of Central European States to relocation of asylum seekers in the EU as a responsibility-sharing measure, challenged unsuccessfully in the Court of Justice of the EU: Joined Cases C-643/15 and C-647/15, *Slovakia and Hungary v Council* [2017] OJ C 374/4.

[69] See, for example, the work of the Core Groups on Resettlement, comprised of resettlement countries committed to working together to identify and meet resettlement needs: UNHCR, 'Core and contact Groups' <https://www.unhcr.org/core-and-contact-groups.html> accessed 28 January 2020.

provide an important starting point for broader efforts over time. Examples of concrete efforts made in South America and in African countries taking part in the CRRF demonstrate strong interest in investing in cross-border cooperation and peer-to-peer arrangements, which can strengthen protection, assistance, and solutions. In this context, there are grounds for optimism, but further work still needs to be done to ensure that the responsibility-sharing arrangements under the GCR will succeed in establishing a framework for more systematic cooperation and support and strengthened responses to displacement in the future.

CHAPTER 26

PROTECTION AT SEA AND THE DENIAL OF ASYLUM

VIOLETA MORENO-LAX

1. Introduction

MARITIME migration in search of refuge has a long history.[1] The exodus of Vietnamese 'boat people' in 1979 is a well-known example.[2] Since then, the oceans increasingly have become the theatre of forced movement, putting the fundamentals of State sovereignty and the international protection regime under strain, undoing 'classic' understandings of State jurisdiction and fundamental rights.[3] There is widespread recognition that the duty to rescue, in customary and treaty law,[4] is part of the most 'elementary considerations of humanity'.[5] Yet, in recent years, the overwhelming global trend has been for destination States (the ones asylum seekers try to reach) to engage in interdiction,[6] blocking 'boat migrants' *en route*.[7] Examples extend from the Mediterranean to the Asia-Pacific region, the Caribbean, the Gulf of Aden, and the Bay

of Bengal and the Andaman Sea.[8] Although statistics show that the vast majority of people attempting these perilous voyages come from refugee-producing countries, sympathy has given way to indifference, resulting in mass drownings, pushbacks, and abandonment at sea.[9] Global cross-border deaths have reached nearly 40,000 since 2014, with almost half the total recorded in the Mediterranean.[10] The perception of 'boat migrants' as threats to national security has reinforced responses of prevention and deterrence.[11]

States' modalities of interdiction have evolved over time, often justified on purported humanitarian grounds, such as the benevolent effect of 'stopping the boats' as a mechanism to 'save lives'.[12] Presumably in a bid to circumvent legal responsibilities, while maintaining high levels of control, they have become ever more secretive and sophisticated.[13] There has been a shift from direct to indirect forms of interdiction, increasingly performed by third countries or private actors at the behest of destination States. These modalities of interdiction are based on expansive interpretations of State powers in the different jurisdictional areas in which the oceans have been divided, as explained in Section 2. They are also substantiated by self-serving notions of rescue obligations, addressed in Section 3, including by reference to intersecting norms of human rights and refugee law that do not cease to apply in the maritime context.

This chapter identifies two competing yet complementary dynamics. First, while destination States *inflate* their policing competence through reliance on rescue rhetoric and intervene beyond prerogatives explicitly recognized in the law of the sea, they tend to maintain minimalistic constructions of the associated concepts of 'distress' or 'place of safety' to reduce the scope of their legal responsibilities. Thus, secondly, they *deflate* their rescue duties and detach them from their international protection obligations,[14]

either by deflecting them to third countries or neglecting them through different strategies. Section 4 explores this phenomenon by examining the US Caribbean interdiction programme,[15] the 'Pacific Solution' in Australia,[16] and the *mare clausum* approach favoured in the Mediterranean.[17] The ultimate effect, as Section 5 concludes, is one that paradoxically converts rescue itself into an interdiction tool that impedes access to international protection for 'boat migrants'.

2. State Interdiction Powers at Sea

The maritime context is not 'an area outside the law'.[18] Precisely because it is a space of common interest and shared sovereignty, multiple norms operate to demarcate the exact contours of jurisdictional competence. The UN Convention on the Law of the Sea (UNCLOS) is considered to codify long-standing customary rules on the prerogatives of flag and coastal States in the different sea zones, including norms on interdiction—understood as 'any act of interference' with foreign vessels, 'even acts which do not involve physical [contact] or enforcement'.[19] States do not have absolute control, however, and disagreements regarding the specific reach of interdiction powers necessarily have implications for 'boat migrants'.

a. Territorial Waters: Quasi-plenary Police Powers

The territorial sea extends 12 nautical miles (NM) from the baselines of the coastal State.[20] This is an area of extensive yet limited sovereignty, which must be exercised in conformity with UNCLOS and 'other rules of international law'.[21] Within this area, the coastal State enjoys quasi-plenary policing jurisdiction, although the vessels of all countries have a right of innocent passage.[22] This allows them to navigate the territorial sea without entering internal waters or calling at a port, unless authorized by the coastal State. Passage must be continuous and expeditious, except for stopping or anchoring incidental to ordinary navigation, or rendered necessary by *force majeure* or distress or for the purpose of rendering assistance.[23]

[20] UNCLOS (n 4) arts 2(2), 3. [21] ibid art 2(3). [22] ibid art 17. [23] ibid art 18(2).

Article 19 of UNCLOS specifies that passage is not innocent when it is prejudicial to the peace, good order, or security of the coastal State. In particular, passage is rendered non-innocent if a vessel engages in the 'loading or unloading' of persons 'contrary to the immigration rules of the coastal State'.[24] In such situations, if the coastal State has adopted domestic legislation to regulate the matter, it may enforce it, including through interdiction.[25] Article 25 of UNCLOS explicitly authorizes coastal States to adopt 'the necessary steps . . . to prevent passage', which has been interpreted as entailing a power to eject vessels from the territorial sea.[26]

Goodwin-Gill and McAdam have suggested that '[t]he fact that a vessel may be carrying refugees or asylum seekers who intend to request the protection of the coastal State arguably removes that vessel from the category of innocent passage'.[27] But there is no consensus. Pallis rejects this approach, noting that asylum seeking actually 'accords with international law', and thus the passage of migrant boats cannot automatically be assumed as non-innocent.[28] In fact, interdiction powers must comply with UNCLOS and 'other rules of international law',[29] including human rights and refugee law, regardless of how passage is characterized.[30] This includes the principle of *non-refoulement*,[31] the prohibition on penalizing refugees for irregular entry,[32] and the right of any person to seek asylum.[33] Moreover, 'passage' does not strictly correspond to the 'loading' or 'unloading' of persons, which arguably excludes migrant boats merely transiting the territorial sea from the scope of interdiction powers. There is also the possibility that migrant boats become or are in distress, in which case the general customary right of ships in distress to seek refuge in foreign ports[34] would 'neutralize' the non-innocence of their passage.[35] Contrary State practice should, therefore, be seen as a violation of the relevant norms.[36]

b. Contiguous Zone: Limited Constabulary Functions

The contiguous zone (CZ) is a 'functional' area,[37] extending 24 NM from the baselines,[38] within which the coastal State enjoys 'a limited right of police'.[39] This area preserves the navigational freedoms associated with the high seas. But article 33 of UNCLOS allows the coastal State to exercise 'the control necessary to prevent [the] infringement of its . . . immigration . . . laws and regulations within its territory or territorial sea',[40] subject to proportionality.[41]

It is not obvious that powers of detention are encompassed by this provision. While the coastal State is permitted to issue warnings and to board and inspect foreign vessels suspected of engagement in illicit activity,[42] it is 'arguable that the necessary power to control does not include the right to arrest and forcible redirection into port, because at this stage [namely, that of a ship coming into the CZ from outside territorial waters] the ship cannot have committed an offence'.[43] Yet, it has been argued that in situations of 'constructive presence', whereby mother ships on the high seas transfer illicit cargoes to smaller boats that complete smuggling offences within the territorial jurisdiction of the coastal State, there is a right to interfere and seize the delinquent vessels to prevent the crime.[44]

A different matter is the right of 'hot pursuit', which may be undertaken when the coastal State has good reason to believe that a foreign ship has violated its domestic regulations.[45] But there are conditions to its exercise. Such pursuit must commence when the foreign ship is within the territorial sea or the CZ of the pursuing State and may only be continued outside that area if the pursuit has not been interrupted. If the foreign ship is within the CZ, it may only be pursued if there has been an infringement 'of the rights for the protection of which the zone was established',[46] which includes the prevention of violations of immigration laws.[47] Based on the doctrine of 'objective territorial jurisdiction',[48] some authors conclude that this allows for the prosecution of ships for acts committed in the CZ that produce effects in the territorial waters of the coastal State.[49]

In both scenarios, interdiction powers translate into a right of the coastal State to apprehend delinquent vessels and escort them to a port within territorial waters for further legal enforcement. This may explain why few coastal States engage in this course vis-à-vis 'boat migrants', for fear of becoming responsible for any related asylum claims.[50] There is no right *per se* to push vessels away from the CZ to elsewhere in the high seas. And every exercise of jurisdiction in this zone remains subject to 'other rules of international law',[51] including human rights and refugee law.

c. High Seas: Near-absent Interdiction Prerogatives

On the high seas, freedom of navigation reigns and, as a rule, ships are subject to the exclusive jurisdiction of their flag State.[52] Other States may exercise jurisdiction in very limited circumstances, as '*expressly* provided for in international treaties or in [UNCLOS]'.[53] This includes situations of slave transport, piracy, unauthorized broadcasting, flaglessness, and hot pursuit,[54] where a 'right of visit' obtains.[55] Such a right, '[e]xcept where acts of interference derive from powers conferred by treaty', entitles States to approach and board foreign ships to effect a *vérification du pavillon*. Whether it grants further powers of arrest and detention is controversial.[56] Opinion is divided and limited jurisprudence is available on this point.[57]

Regarding flagless ships and vessels without nationality,[58] which are typically the vessels used by 'boat migrants', some consider that the use of force would not be justified without 'some jurisdictional nexus in order that a State may extend its laws to those on board…and enforce the laws against [them]'.[59] Others suggest that 'extraordinary deprivational measures are permitted with respect to stateless ships', since they do not enjoy the protection of any State.[60] The first view appears more aligned with UNCLOS. The fact that visit and enforcement powers are regulated separately—as in relation to pirate vessels, where the right of visit is enshrined in article 110, while seizure is allowed under article 105—suggests that a right of visit does not generally imply wider enforcement prerogatives without express provision to that effect. According to article 110, when a ship is without nationality, the warship of the State concerned may proceed to verify its identity. 'If suspicion remains after the documents have been checked, it may proceed to a further examination on board the ship, which must be carried out with all

possible consideration'. Nowhere does UNCLOS provide for any additional powers with regard to these vessels or the persons on board.[61]

Seizure would assume that a crime has been committed on the high seas, but merely navigating on a flagless ship is not illegal. If the ship is used to transport slaves, articles 99 and 110 of UNCLOS only grant a right of visit.[62] In cases of human trafficking, the relevant UN Protocol calls for cooperation to prevent and combat the crime, while protecting and assisting the victims thereof,[63] reminding States party that 'the[ir] rights, obligations and responsibilities . . . under international law' remain unaltered.[64] The same applies in smuggling scenarios, where the related UN Protocol aims to 'prevent and combat the smuggling of migrants . . . while protecting the rights of smuggled migrants'.[65] Regarding interdiction, article 8 of the Smuggling Protocol allows parties to 'board and search' flagless vessels used for the crime and to 'take appropriate measures'. But any such measures must comply with 'relevant domestic and international law',[66] taking account of 'other rights, obligations and responsibilities of States and individuals under international law'.[67] Therefore, actions like ordering the ship to modify its course; escorting it on such course; conducting the ship to a third country; or handing its passengers over to foreign authorities, insofar as they may be exposed to a risk of *refoulement*, are not permitted. As discussed in Section 4, these are, however, some of the actions that destination States have adopted vis-à-vis 'boat migrants', thus evading their rescue and related obligations, which are examined in Section 3.

3. Search and Rescue Obligations (and Their Intersection with Human Rights and Refugee Law)

Like the interdiction powers explored above, search and rescue (SAR) obligations under UNCLOS must also be carried out in conformity with 'other rules of international law'.[68]

[61] Myron Nordquist (ed), *United Nations Convention on the Law of the Sea*, vol III (Nijhoff 1985) 127; cf Irini Papanicolopoulou, 'A Missing Part of the Law of the Sea Convention: Addressing Issues of State Jurisdiction over Persons at Sea' in Clive Schofield, Seokwoo Lee, and Moon-Sang Kwon (eds), *The Limits of Maritime Jurisdiction* (Nijhoff 2014) 387, 402–3.

[66] ibid art 8(7). [67] ibid art 19. [68] UNCLOS (n 4) arts 2(3), 87(1).

States' selective and minimalistic understanding of their SAR duties, detaching them from related commitments under human rights and refugee law, contradicts this imperative. Rather, an integrated reading of the maritime treaties is called for which takes account of all relevant rules applicable in the specific situation.[69] This is true for both flag and coastal States.

a. Search and Rescue Duties of Flag States

Article 98(1) of UNCLOS obliges 'every State' to require ships flying its flag 'to render assistance to any person found at sea in danger of being lost' and 'to proceed to the rescue of persons in distress'. The only limitation foreseen is that the captain intervene 'in so far as he can do so without serious danger to the ship, the crew, or the passengers'. The Safety of Life at Sea (SOLAS) Convention reiterates the obligation in similar terms, the trigger being the receipt of 'a signal *from any source* that persons are in distress'.[70]

The personal scope of application of the obligation is universal. It benefits 'any person' irrespective of nationality or legal status, which includes 'boat migrants'.[71] Discrimination on other grounds is also prohibited. The territorial ambit extends 'throughout the ocean'.[72] The use of the generic 'at sea' in the relevant provisions does not allow for geographical restrictions. This means that, regardless of where a vessel encounters a ship in distress, it is duty-bound to assist it.

As regards the material object of the obligation, the notions of 'distress' and 'rescue' are key. 'Distress' is defined as 'a situation wherein there is reasonable certainty that a person, a vessel or other craft is threatened by grave and imminent danger', which is the reason for it requiring 'immediate assistance'.[73] Yet, the term has been interpreted in two different ways. The most stringent requires that safety of life be a factor, entailing 'something of a grave [and impending] necessity'.[74] The other focuses on the likelihood of the danger materializing in the foreseeable future, without there being 'an actual physical necessity existing at the moment'.[75] This interpretation better accommodates the object and purpose of the maritime conventions,[76] which strive to secure the safety of human life at sea, and take account of the positive obligations ensuing from the right to life,

which favour an expansive reading.[77] In this light, unseaworthiness *per se* may entail distress, which would make boat migrants' vessels—typically overcrowded, ill-equipped, and vulnerable to many hazards—in need of assistance *by definition*.

Whether 'boat migrants' put themselves in peril by 'voluntarily' undertaking a voyage does not release shipmasters from their duty to assist. There is no indication to this effect in the relevant texts. Moreover, this would require an *ex tunc* subjective assessment on dubious moral premises, away from the *ex nunc* objective appraisal of the situation at hand. Such a stance would contravene 'elementary considerations of humanity',[78] and amount to indirect discrimination regarding the enjoyment of the right to life.[79]

Like 'distress', 'rescue' is not defined in UNCLOS. The 2004 amendments to the SAR and SOLAS Conventions have clarified the term.[80] It is now accepted to entail an operation in three steps: 'to retrieve persons in distress', to 'provide for their initial medical or other needs', and 'to deliver them to a place of safety', where rescue is considered to terminate.[81] Since survivors are to be 'disembarked from the assisting ship and delivered to a place of safety',[82] this implies that the 'place of safety' needs to be on dry land,[83] requiring cooperation from the coastal States.

b. Search and Rescue Duties of Coastal States

Coastal States have a duty to ensure that necessary arrangements are made for coast watching and for both the searching *and* rescuing of persons in distress around their coasts. These arrangements include the operation and maintenance of SAR facilities.[84] The SAR Convention provides, in addition, for inter-State coordination of SAR services and for the delimitation of SAR regions (SRR) in cooperation between the parties.[85] The objective is to develop a SAR system that can effectively respond to emergencies at sea.

[85] SAR Convention (n 4) annex, chs 2, 3.

This requires the establishment of adequate communication and operational infrastructure, including a Rescue Coordination Centre responsible for recording distress signals and coordinating the assistance response.[86] Rescue units attached to them must, in turn, be suitably equipped, staffed, and managed.[87]

Awareness of a distress situation through whatever means—including satellite imagery, drone surveillance, or radar detection—triggers the obligation to assist.[88] The objective is to ensure the preservation of human life at sea. The State responsible for the SRR in which assistance is rendered retains 'primary responsibility' to ensure the cooperation necessary for the survivors to be 'delivered to a place of safety'.[89] Although the duty on the coastal State is limited to ensuring collaboration, rather than disembarkation in its own territory, the 2004 amendments nonetheless establish an obligation of result, in that survivors must be taken to landfall.[90] The SAR operation will not be considered accomplished unless survivors are effectively disembarked.

Neither the 'place of safety' nor the concept of 'safety' itself has been defined. Yet, the amendments do indicate that in determining such a location, both the individual circumstances of the case as well as the International Maritime Organization (IMO) Guidelines have to be taken into account.[91] According to the Guidelines, this must be 'a place where the survivors' safety of life is no longer threatened and where their basic human needs . . . can be met'.[92] Because '[e]ach case is unique', the selection of a place of safety 'may need to account for a variety of important factors',[93] in particular any risk of *refoulement*, which 'is a consideration in the case of asylum-seekers and refugees recovered at sea'.[94] States cannot circumvent international protection obligations by declaring interdiction measures to be rescue operations.[95] Equating the two and disconnecting them from their human rights and refugee law implications has no support in international law.[96]

The identification of a precise port of disembarkation has been most problematic,[97] with divergent views clashing as a result. It can be the next port of call, the geographically closest to the emergency, one within the SRR where survivors are retrieved, or one

provided by the flag State of the rescuing vessel. In case of conflict, there is no residual rule in the maritime conventions. An IMO circular recommended that '[i]f disembarkation . . . cannot be arranged swiftly elsewhere', the State responsible for the relevant SRR '*should* accept the disembarkation of the persons rescued . . . into a place of safety under its control'.[98] This has not become hard law, however, leaving ample space for negotiations, delays, and disputes between the countries concerned, which powerful States have exploited to their advantage, as Section 4 elaborates.

4. Creating Spaces of Non-protection through Interdiction

The maritime conventions delineate functional areas of responsibility that States must oversee in good faith. Yet, perceived gaps and ambiguities have been interpreted in self-serving ways by destination States. As discussed below, rescue has been (mis)construed to inflate interdiction powers and to deflect protection responsibilities to other States, if not to neglect them altogether. The three strategies of inflation, deflection, and negation result in a denial of opportunities for 'boat migrants' to access international protection. Interdiction in these different configurations is undertaken directly, indirectly, or by omission, as examples from the US, Australia, and the Mediterranean demonstrate.

a. Direct Interdiction: Co-opting Rescue within the US Caribbean Programme

The first and most rudimentary type of interdiction emerged and was systematized as part of the US Caribbean interdiction programme in the 1980s, to prevent an influx of Haitian refugees by sea.[99] It was extended to Cubans, Ecuadorians, Dominican Republic nationals, and Chinese citizens in later periods.[100] The technique is 'direct' and consists in contact-based measures of detention, seizure, boarding, and apprehension of the persons concerned for their repatriation or forcible transfer to areas within government control. The technique draws on an understanding that neither *non-refoulement* nor international protection obligations at large apply in these circumstances. Rhetorically, interdiction is justified on compassionate grounds, co-opting the meaning of rescue and exploiting provisions in the maritime conventions to ramp up policing strategies of

'sovereign capture'.[101] This entails the instrumentalization of succour to legitimize interception, diversion, and rejection of responsibility for those concerned, (re)presenting interdiction as a humanitarian measure that saves lives, albeit negating related rights.

In the first iteration of the programme, the US accepted it had a *non-refoulement* obligation vis-à-vis potential refugees, maintaining a rudimentary screening process on board interdicting ships. 'Screened-in' Haitians were taken to the US military base in Guantánamo for offshore processing, while those 'screened-out' were held at sea. When the number of shipboard detainees became too large, the US started repatriations. The fear was that taking screened-out Haitians to US soil would create a 'pull factor' and 'bring a massive outflow [from Haiti] resulting in large numbers of deaths on the high seas',[102] so the measure was obliquely justified as a sort of pre-emptive rescue.

The approach changed in 1992, when the US disclaimed *non-refoulement* responsibilities and extended the repatriation policy to all Haitians intercepted at sea, regardless of international protection considerations.[103] The approach was validated by the US Supreme Court in *Sale*, based on the interpretation that neither domestic US immigration law or constitutional protections, nor the Refugee Convention, had extraterritorial application.[104] Interdiction and forced repatriation were, once more, portrayed as 'tantamount to a life-saving policy, preventing death at sea'.[105]

Over the years, the shipboard pre-screening policy has been reintroduced, interrupted, and reintroduced again. But this has been done without reversing the *Sale* paradigm:—in other words, as an act of goodwill, rather than as a matter of legal obligation,[106] following Haiti's threat to otherwise suspend the readmission agreement.[107] Instead of providing access to its territory, the US has concluded additional agreements with several Caribbean Island States for the processing and resettlement of 'screened-in' claimants elsewhere.[108]

Although the US has since recognized the extraterritorial scope of the Convention against Torture and has accepted its application to Guantánamo in the context of the

'war on terror',[109] there has been no substantial change to the Caribbean interdiction programme. The Obama and Trump Administrations have continued the policy, which is used as a deterrent for unauthorized maritime arrivals,[110] maintaining the shipboard pre-screening process as a discretionary, compassionate measure that 'the Secretary of Homeland Security may conduct... [if] he deems [it] appropriate'.[111]

b. Indirect Interdiction: Deflecting Rescue within the Australian 'Pacific Strategy'

A second modality of interdiction is 'indirect' and does not necessarily entail full-contact measures or the immediate repatriation of 'boat migrants'. It can be undertaken from a distance by escorting vessels out of jurisdictional waters, enlisting third parties to thwart journeys, or deflecting international responsibilities to third countries, with or without their explicit consent. In this scenario, rescue can be delegated through formal shiprider agreements[112] or via less explicit means of 'consensual containment',[113] such as orchestrating 'pullbacks' by proxy.[114] Recent variants of this practice rely on merchant vessels to carry out 'privatized' interdiction, following guidelines provided by the authorities of countries of intended destination, or on non-State actors, including repurposed militias and former traffickers, to keep unwanted arrivals at bay.[115]

Australia has pioneered this approach through its 'Pacific Strategy' following the so-called *Tampa* incident of August 2001. The incident involved a Norwegian-registered container ship that had rescued 433 asylum seekers within the SRR of Indonesia, but geographically closer to Christmas Island (part of Australia). Australia refused permission to disembark, claiming that it was Indonesia's responsibility to provide a 'place of safety'. This triggered a diplomatic standoff lasting several days, after which the asylum seekers were transferred by the Australian Navy to Nauru and New Zealand for refugee status determination.[116]

[116] *Ruddock* (n 36); cf Penelope Mathew, 'Australian Refugee Protection in the Wake of the *Tampa*' (2002) 96 AJIL 661.

The incident led to the adoption of domestic legislation through which Australia has since 'excised' its national territory for immigration law purposes, such that no valid asylum claim can be made by unauthorized arrivals.[117] This is based on a legal fiction, according to which, even if asylum seekers physically reach Australia's territorial jurisdiction, they are treated as if they had not entered Australia in the legal sense. Instead, in some cases they are taken to third countries, such as Nauru and Papua New Guinea (PNG), where Australia has funded detention centres.[118] Those recognized as refugees are denied settlement in Australia and must remain in Nauru or PNG or be resettled elsewhere.[119] Within this scheme, maritime interdiction has been carried out through *Operation Relex* until 2008 and *Operation Sovereign Borders* since September 2013.[120] The Australian Navy has been instructed to 'turn back' migrant boats at sea or, that failing, to apprehend survivors and forcibly transport them to Nauru or PNG, based on legislative amendments that permit such actions regardless of whether 'the exercise of the power is inconsistent with Australia's international obligations'.[121]

The 'stop the boats' policy has been cloaked in a rhetoric of pity and care for those concerned, presented as 'the most compassionate thing [one] can do'.[122] The majority of turnbacks, however, entail the return of migrant boats to the edge of Indonesian waters, often without Indonesia's knowledge, and sometimes after people have been transferred to purpose-built lifeboats purchased by Australia.[123] There are also reports of asylum seekers being handed over to Sri Lankan authorities on the high seas, exposing them to a direct risk of *refoulement*,[124] and of instances where interdiction has been carried out from within Australia's territorial waters, in contravention of UNCLOS provisions.[125] A Parliamentary inquiry was established in 2015 when it emerged that Australian author-

ities had paid smugglers to turn around ‘boat migrants’.[126] The scandal exposed the government’s objective of impeding boat arrivals through whatever means,[127] despite the ‘saving lives’ rhetoric.

c. Interdiction by Omission: Negating Rescue in the Mediterranean

The third and most dangerous kind of interdiction is accomplished ‘by omission’. This purportedly falls within the family of measures of neo-*refoulement*, defined by Hyndman and Mountz as measures that instrumentalize geography to restrict access to asylum.[128] These practices have flourished and acquired new proportions, particularly in the Mediterranean, since the eruption of the ‘refugee crisis’, consolidating ‘policies based on deterrence, militarization and extraterritoriality’ that incorporate ‘the risk of migrant deaths as part of an effective control of entry’.[129] This modality is based on the negation of rescue, including through outright abandonment at sea,[130] the withdrawal of naval assets, or the reduction of operational areas covered by maritime missions to avoid contact with potential ‘boat migrants’.[131] Port closures and the criminalization of ‘solidarity rescues’ undertaken by civil society organizations are also characteristic of this trend.[132]

The replacement of *Mare Nostrum*,[133] an Italian mission launched in response to the mass drownings of Lampedusa of 2013,[134] with the much smaller EU border control

operation *Triton*,[135] coordinated by the external frontiers agency (Frontex),[136] illustrates this approach. *Mare Nostrum* had been deployed after Italy's condemnation by the European Court of Human Rights in *Hirsi* for practices of interdiction and direct return of 'boat migrants' to their point of departure, similar to those of Australia and the US.[137] These practices had been praised by EU officials for having 'a positive impact', because, 'on the humanitarian level, fewer lives ha[d] been put at risk, due to fewer departures'.[138] The *Hirsi* judgment rejected the interdiction–rescue equation and declared pushbacks to Libya a violation of the prohibitions of ill-treatment and collective expulsion, clarifying the extraterritorial reach of *non-refoulement* at sea.[139]

With pushbacks banned and *Mare Nostrum* cancelled,[140] in the aftermath of the Lampedusa tragedy, the EU launched *Triton*. The EU Council expressed 'its deep sadness' for the deaths and asserted that 'determined action should be taken…to prevent the loss of lives at sea'.[141] The solution proposed, however, was to strengthen 'the fight against trafficking and smuggling' by reinforcing Frontex.[142] *Triton*'s operational area, naval assets, and financial means were much smaller than those of *Mare Nostrum*.[143] Despite the grand language used to justify the mission, it was not designed as a SAR operation, since 'Frontex is not [intended as] a search and rescue body'.[144] As a result, only a small proportion of rescues in the Central Mediterranean have been carried out by Frontex-coordinated assets since 2014.[145] This is the consequence of *Triton*'s operational area lying far away from Libyan jurisdictional waters, where most distress incidents occur, and due to the strategic choice by Frontex that 'instructions to move…outside *Triton* operational area' for the purpose of rendering assistance to

migrant boats '[would] not be considered'.[146] The manifest breach of rescue obligations this involves is presented as necessary to avoid 'act[ing] as a pull factor'.[147]

EUNAVFOR MED *Operation Sophia*,[148] deployed in 2015 as part of the EU's 'war on smugglers',[149] constituted another expression of the interdiction by omission strategy. Justified as an endeavour to 'save lives by reducing crossings',[150] its mission was to engage in a 'systematic effort to capture and destroy vessels used by the smugglers',[151] so as 'to better contain the growing flows of illegal migration' across the Central Mediterranean.[152] A UN Security Council Resolution provided the legal backing.[153] In the course of their interventions, *Sophia* assets were occasionally called upon to assist migrant vessels in distress. Although the operation played a relatively minor role in total rescues,[154] such that it could not be 'regarded as decisive in terms of a pull factor',[155] discontent amongst participating Member States led to the withdrawal of naval assets.[156] From March 2019 until the end of the operation one year later,[157] the EU conducted a naval mission without naval assets in an effort to avoid direct contact with migrant vessels in distress and evade rescue responsibilities.[158] Instead, surveillance drones were used to capture relevant information,[159] which was communicated to the Libyan

Coastguard for its intervention, through the intermediation of the Italian authorities.[160] Intercepted 'boat migrants' were thus pulled back to Libya, in disregard of 'place of safety' and *non-refoulement* provisions.[161]

5. Conclusion

As the foregoing has shown, rhetorical recourse to 'saving lives' has been instrumentalized to justify practices of interdiction impeding access to safety worldwide.[162] Besides the erosion of the principle of *non-refoulement* that such practices entail, they also undermine the right to leave any country and the right to seek asylum, converting rescue into a denier of international protection. While destination States inflate their interdiction powers through reliance on rescue discourse, beyond the provisions of the law of the sea (Section 2), they deflate their SAR obligations and detach them from related human rights and refugee protections, quibbling with the definitions of 'safety' and 'distress' (Section 3). The precise modalities are varied and can range from forms of 'direct', 'indirect', and 'by omission' interdiction employed to deflect responsibilities to third countries or to neglect them altogether, as the examples from the US, Australia, and the Mediterranean illustrate (Section 4).

The ultimate consequence of these practices is to overwhelm rescue with interdiction, through a mechanism that launders the final effect. The invocation of humanitarian language masks the violence implicated. It makes measures that deny dignity and rights ethically more palatable. The line between SAR and security-related interdiction is, thereby, increasingly blurred and manipulated. SAR should be understood as an end in itself, not as a means to prevent 'boat migration' at the service of anti-smuggling strategies. The use of rescue as a form of containment fundamentally fails to create protection space or to address the root causes of displacement, leaving both unchanged.[163] Such policies do not remove the actual drivers of forced movements by sea. Rather, they erect barriers and divert flows to typically longer and more perilous routes, contributing

[160] Letter of Ms Paraskevi Michou, Director-General for Migration and Home Affairs, to Mr Fabrice Leggeri, Frontex Executive Director (Ref Ares(2019)1755075, 18 March 2019)<http://www.statewatch.org/news/2019/jun/eu-letter-from-frontex-director-ares-2019)1362751 per cent20Rev.pdf> accessed 25 May 2020.

[161] This practice of employing the Libyan Coastguard as proxy for pullbacks has been denounced at the European Court of Human Rights: *SS v Italy*, App No 21660/18 (ECtHR) (pending). See further Moreno-Lax (n 3).

[163] Regarding Libya, see eg Human Rights Watch, 'No Escape from Hell' (January 2019) <https://www.hrw.org/report/2019/01/21/no-escape-hell/eu-policies-contribute-abuse-migrants-libya> accessed 25 May 2020.

to the rise of death tolls.[164] They also entrench insecurity, fuelling not only the original causes of flight but creating new dangers that make seeking protection a life-or-death exercise.[165] Rescue, in this guise, is essentially distorted and ultimately becomes a denier of asylum.

Scholars in the field need to be wary of developments in domestic law and practice which reinforce this slant. The renewed appeal of nationalist politics and anti-refugee sentiment globally endangers the integrity of the international protection regime and international law at large. Particular vigilance is required to monitor consolidating practices of interdiction by omission, which not only tolerate, but purposively embed, the risk of death as part of the migration control toolbox of destination States. The securitization of maritime borders risks becoming all-pervading, obfuscating rescue, asylum, and *non-refoulement* at sea. Further investigation is hence required of these dynamics which, if unchecked, will dismantle the most fundamental principles of international refugee law.

CHAPTER 27

EXTRATERRITORIAL MIGRATION CONTROL AND DETERRENCE

THOMAS GAMMELTOFT-HANSEN
AND NIKOLAS FEITH TAN

1. Introduction

The right to seek asylum is elemental to the international protection of refugees, yet almost always requires that an asylum seeker reach a State's territory to access protection. During the last three decades different forms of extraterritorial border controls have developed across the world, rendering access increasingly difficult. For the vast majority of refugees today, access to international mobility is thus highly limited or non-existent.[1]

As a matter of international law, States retain the right to control immigration as an ancillary prerogative flowing from territorial sovereignty. States further have legitimate reasons to enforce border controls, including the prevention of transnational crimes, such as smuggling in goods, terrorism, and trafficking in persons. Yet far too often, extraterritorial controls fail to provide the necessary 'doors' for persons in need of international protection.[2]

Since the end of the Cold War, policies to block and deter international mobility for refugees have emerged as an increasingly normalized form of policymaking on the part of developed States. Today, the 'deterrence paradigm' arguably constitutes the dominant

policy framework through which States in the Global North approach refugees.[3] In the same period, deterrence and the ensuing lack of access to asylum have emerged as 'perhaps the single most prominent topic in refugee studies'.[4]

This contribution begins by reviewing some of the key shifts in the evolution of extraterritorial migration control from the 1980s to the present. The second section sets out the state of international refugee law vis-à-vis extraterritorial controls. Section 3 accounts for existing refugee law responses to extraterritorial controls, encompassing key questions of extraterritorial jurisdiction and State responsibility. Finally, the chapter sketches out a 'topographical approach' to understanding and challenging contemporary extraterritorial controls.

2. The Evolution of Extraterritorial Migration Control

The separation of migration control from State borders and territory is not a new phenomenon. As early as 1751, Denmark levied fines on shipowners bringing in Jewish passengers, prompting private shipmasters to perform controls prior to boarding (thus having the same effect as carrier sanctions today).[5] The United States first introduced visa requirements in 1924, thereby shifting control over admission from State territory to embassies and consulates around the globe.[6] It is, however, in the lead-up to the end of the Cold War that the modern-day variants of these policies have re-emerged as a systematic response to proxy war refugee flows, changing asylum and migration patterns, and waning ideological receptivity to receive refugees.[7] Since then, extraterritorial controls have continuously expanded and today comprise a broad 'toolbox' of both direct and indirect measures to frustrate access to States' territory and asylum systems.[8]

Several more substantial shifts can be observed in the way that extraterritorial migration control has evolved. First, while early forms of extraterritorial controls—for

example, visa regimes,[9] carrier sanctions[10] and high seas interdictions[11]—tend to involve one State acting unilaterally, extraterritorial controls have gradually come to feature more prominently as part of regional cooperation, becoming embedded in international agreements at both the bilateral and multilateral level. Contemporary extraterritorial controls thus often involve two or more States (as well as private actors[12]) engaged in 'cooperative deterrence', such as third country processing.[13]

Secondly, while policies of extraterritorial migration control have traditionally been led by asylum countries in the Global North—particularly the United States, Australia, and Europe—the geographic *locus* of controls has shifted well beyond these regions. As a matter of international diplomacy, some forms of controls, such as visas, are often subject to reciprocity, making many States in the Global South adopt similar restrictions in reverse. Likewise, the role of private airline staff performing migration control has come to be regulated as a matter of international aviation law, providing for a similarly globalizing effect.[14] Asylum countries in the Global South may sometimes be seen to adopt similar deterrence policies in response to regional refugee pressures. For instance, Thailand, Malaysia, and Indonesia all pushed back boats carrying Rohingya and Bangladeshi migrants and asylum seekers in the Bay of Bengal and the Andaman Sea in 2015,[15] before agreeing to provide temporary protection to Rohingya asylum seekers. In some cases, this kind of 'policy transfer' occurs as a result of cooperation with diplomatic pressure from Global North States, keen to expand controls further upstream.[16] For example, Australia has lobbied both Indonesia and Malaysia to cease granting visas on arrival to Iranian nationals.[17]

[16] On the subject of policy transfer in regard to migration control more generally, see Rosemary Byrne, Gregor Noll, and Jens Vedsted-Hansen (eds), *New Asylum Countries? Migration Control and Refugee Protection in an Enlarged European Union* (Kluwer Law International 2002); Daniel Ghezelbash, *Refuge Lost: Asylum Law in an Interdependent World* (CUP 2018).

[17] Asher Hirsch, 'The Borders beyond the Border: Australia's Extraterritorial Migration Controls' (2017) 36(3) RSQ 48, 73.

Thirdly, and related to the point above, even within Global North-led cooperation on migration control, recent practice suggests a gradual reversal of operational roles. Earlier forms of cooperative deterrence tended to place emphasis on controls being performed by the intended destination State's own authorities—limiting the cooperative element to ensuring access to third State waters and territory, or providing more nominal contributions from third State authorities, such as 'shipriders'.[18] Current cooperation on migration control, however, often leaves the actual implementation of controls largely to the authorities of partner States in transit or origin countries. This form of 'contactless control'[19] is specifically designed to avoid any direct jurisdictional links to the sponsoring State, at whose behest controls are carried out.[20] Thus, Italy and other European States provide extensive material assistance, training, and guidance to the Libyan Coast Guard, which assumes the principal role in stopping and turning around migrant boats along the central Mediterranean route. The EU–Turkey Statement agreement equally leaves Turkish authorities to perform exit border controls.[21] Similarly, Australia has sought to wind down its operational involvement in Nauru and Papua New Guinea, ceding greater operational control to local authorities.

As Sections 3 and 4 explain in more detail, each of these shifts raises further questions from the perspective of international refugee and human rights law. The current state of deterrence practices means that refugee lawyers must be particularly attentive to how responsibility is established and distributed across multiple States, the different international and regional legal regimes applicable across jurisdictions, and what forums of accountability exist at both the national and international levels.

3. The State of International Refugee Law

The right to seek and enjoy asylum is enshrined in article 14 of the UDHR.[22] International refugee law, however, does not provide a right to access asylum in the

[18] Douglas Guilfoyle, *Shipping Interdiction and the Law of the Sea* (CUP 2009) 72.

[19] Violeta Moreno-Lax and Mariegiulia Giuffré, 'The Rise of Consensual Containment: From "Contactless Control" to "Contactless Responsibility" for Migratory Flows' in Satvinder Juss (ed), *Research Handbook on International Refugee Law* (Edward Elgar 2019) 85; Thomas Gammeltoft-Hansen, 'International Cooperation on Migration Control: A Legal Research Agenda' (2018) 20 EJML 373, 379.

[20] Whether, from an international law perspective, sponsoring States are successful in this endeavour is, however, debatable. See further Section 3.

[21] European Council, 'EU–Turkey Statement' (18 March 2016) <http://www.consilium.europa.eu/en/press/press-releases/2016/03/18-eu-turkey-statement> accessed 25 November 2019.

sense of permission to enter and remain on the State's territory.[23] Instead, the *non-refoulement* principle prohibits States from exposing refugees to the risk of being persecuted for a Convention reason.[24] The duty of *non-refoulement* is a robust obligation and finds expression in several general human rights treaties beyond the Refugee Convention, as well as in regional refugee and human rights instruments.[25] Moreover, article 33 of the Refugee Convention explicitly prohibits *refoulement* 'in any manner whatsoever', covering any measure of rejection, expulsion, extradition, or return to a situation where a refugee's life or freedom is threatened.

The *non-refoulement* principle may be argued to amount to a '*de facto*' duty to admit asylum seekers until their claim has been examined, in most situations.[26] The asylum process requires a thorough evaluation of the individual's case if *refoulement* is to be avoided. In practice, this means that any person who either claims asylum or who is recognizable as coming from a refugee-producing situation should be allowed to remain on the territory of the asylum State for the duration of the refugee status determination process.[27]

Yet, the duty of *non-refoulement* does not guarantee that refugees must in all cases be admitted to the territory. The drafters of the Convention were conscious that situations could arise where States might refuse admission to their own territory and divert a refugee to a third country as long as no risk of persecution existed there.[28] However, attempts by States to realize 'protection elsewhere' policies face a number of obstacles which stem not only from the *non-refoulement* principle, but also other key rights in the Refugee Convention and general human rights law.[29]

States have also sought to deny admission to refugees who have not yet arrived on their territory by arguing that the *non-refoulement* principle only protects those already present within their territory. Unlike most other provisions of the Refugee Convention, article 33 does not contain a specific delimitation *ratione loci*. This led some of the early commentators to assume a strict territorial interpretation,[30] a view also upheld by the United States Supreme Court with respect to the Haitian interdiction programme in the

Sale case.[31] Today, however, the overwhelming consensus is that the *non-refoulement* principle applies wherever States exercise jurisdiction, including when carrying out migration control on the high seas or within foreign territory.[32] This is supported by both State practice[33] and a growing body of case law.[34] In one of the most prominent cases concerning interception of refugees on the high seas, *Hirsi v Italy*, the Grand Chamber of the European Court of Human Rights unanimously struck down the legality of Italy's cooperation scheme with Libya, arguing that pushbacks on the high seas violated article 3 of the ECHR. The court equally suggested that international refugee law, notably the principle of *non-refoulement*, has to be observed when carrying out operations on the high seas.[35] In a separate opinion, Judge Pinto de Albuquerque explicitly rejected the reasoning in *Sale*, stating that 'the United States Supreme Court's interpretation contradicts the literal and ordinary meaning of the language of Article 33 of the UN Refugee Convention and departs from the common rules of treaty interpretation'.[36]

Refugees further benefit from other rights under both refugee and general international law when seeking asylum. Article 31 of the Refugee Convention provides that States may not impose penalties on refugees for illegally crossing a border or staying on the territory. This non-penalization principle provides legal protection against a number of States' current deterrence policies, such as mandatory detention practices and criminalization, which *de facto* penalize asylum seekers.[37]

Similarly, given the inherent dangers related to the journeys many refugees undertake today, international human rights law provides important auxiliary protections, placing obligations upon States both during the initial encounter with border authorities and for refugees in transit crossing their jurisdiction.[38] International human rights law further places a positive duty upon all States to prevent, investigate, and prosecute serious human rights violations against migrants and refugees by non-State actors within their jurisdiction.[39]

The law of the sea imposes a duty on coastal and seafaring States to perform search and rescue. Both government and private vessels are obliged to rescue anyone in distress,[40] and coastal States must maintain 'an adequate and effective search and rescue service'.[41] The search and rescue regime has been marred by the absence of clear rules for deciding where rescued persons should be put ashore and the lack of an explicit obligation for States to allow disembarkation at a place of safety. While legal amendments to the relevant treaties,[42] regional standards,[43] and guidelines[44] have attempted to close this gap, differing interpretations still result in political stand-offs between States and private vessels, often with dire humanitarian consequences.[45]

A particular concern may arise where migration control is carried out within a refugee's country of origin. This may occur where naval authorities are granted permission to patrol the territorial waters of foreign States; where immigration liaison officers operate control in foreign airports; or where visas are denied consulates, thereby impairing the possibility of lawful travel to another country.[46] In such cases, all rights under the Refugee Convention are inoperable, since refugee status is premised upon the refugee having left the country of origin. Here again, the protection offered by general human rights law becomes particularly important: it should be noted that the principle of *non-refoulement* here does not carry a similar geographical restriction. In addition, exercising migration control to the effect that individuals are prevented from leaving their

[40] United Nations Convention on the Law of the Sea (adopted 10 December 1982, entered into force 1 November 1994) 833 UNTS 397 (UNCLOS) art 98(1) and International Convention on the Safety of Life at Sea (adopted 1 November 1974, entered into force 25 May 1980) 1184 UNTS 3 (SOLAS) Chapter V, Regulations 10(a) and 33. This entails a positive duty on flag States to adopt domestic legislation that imposes penalties on shipmasters who ignore calls for, or fail to provide, assistance. In practice, however, many States have failed to do so and enforcement is difficult. See Michael Pugh, 'Drowning not Waving: Boat People and Humanitarianism at Sea' (2004) 17 JRS 50; Sophie Cacciaguidi-Fahy, 'The Law of the Sea and Human Rights' (2007) 19 Sri Lanka Journal of International Law 85.

country of origin may, depending on the circumstances, amount to a violation of the right to leave any country as established in article 12 of the ICCPR, for example.[47]

4. Legal Responses to Extraterritorial Controls

Various challenges have been brought against the legality of extraterritorial controls since their inception. Much of the legal scholarship in this area is directed towards demonstrating that particular measures are unlawful, in the hope of forcing States to either abandon or significantly alter their practices. Reviewing this body of work shows a similar evolution in terms of legal thinking, highlighting how international refugee law has successfully expanded its gaze to leverage doctrinal and institutional developments within the broader frameworks of international human rights law and public international law.[48]

Early challenges to extraterritorial controls and other deterrence mechanisms often centred on arguments based on the Refugee Convention itself.[49] Central debates revolved around the geographical scope of the *non-refoulement* principle and the implications of the non-penalization principle. In some instances, this resulted in expansive interpretations that are difficult to reconcile with the plain meaning of the Convention's text. For example, it was argued that article 31 of the Refugee Convention (prohibiting States from penalizing refugees for irregularly entering their territory) encompassed financial penalties imposed on airlines in the context of carrier sanctions.[50] In practice, however, the success of such arguments has been limited.

Domestic courts have played a significant role in challenging certain deterrence measures, such as safe third country rules and mandatory detention. Yet, national judges from key States implementing deterrence policies have so far been more reluctant to extend protection under the Refugee Convention to situations involving extraterritorial action.

[47] Human Rights Committee, 'General Comment No 27: Freedom of Movement (art 12)', UN doc CCPR/C/21/Rev.1/Add.9 (2 November 1999) para 10.

[48] This is particularly evident when comparing subsequent editions of refugee law textbooks covering this issue. See Thomas Gammeltoft-Hansen, 'The Role of International Refugee Law in Refugee Policy' (2014) 27 JRS 574, 584. Some scholars further advance explicitly 'integrationist' or 'aggregate standards' methodologies: see eg Violeta Moreno-Lax, *Accessing Asylum in Europe: Extraterritorial Border Controls and Refugee Rights under EU Law* (OUP 2017).

[49] See eg Jens Vedsted-Hansen, 'Transporters' Responsibilities under the Chicago Convention on International Civil Aviation' in Morten Kjærum (ed), *The Role of Airline Companies in the Asylum Procedure* (Danish Refugee Council 1988) 14–16; Guy S Goodwin-Gill, 'The Haitian Refoulement Case: A Comment' (1994) 6 IJRL 103; James C Hathaway, 'The Emerging Politics of Non-Entrée' (1992) 91 Refugees 40.

[50] Erika Feller, 'Carrier Sanctions and International Law' (1989) 1 IJRL 48, 58; Anthony Cruz, *Shifting Responsibility: Carriers' Liability in the Member States of the European Union and North America* (Trentham Books 1995) 74.

Thus, despite broad scholarly consensus and UNHCR's support for the position that the *non-refoulement* principle enshrined in article 33 of the Refugee Convention applies extraterritorially, wherever a State exercises jurisdiction, higher courts in the United States, the United Kingdom, and Australia have adopted more restrictive interpretations.[51]

The wider embrace of international human rights law within refugee law scholarship represents a significant turning point in regard to extraterritorial controls as well.[52] International human rights law has served both as a framework through which to interpret core obligations of international refugee law, and as a wider catalogue of substantive rights creating other normative entry points against deterrence policies or additional protections for certain people at risk. These include, for instance, the right to leave[53] and the special protection afforded to children.[54] A number of studies have further linked interpretation of the *non-refoulement* obligation within the Refugee Convention to the burgeoning literature and case law on extraterritorial human rights jurisdiction.[55]

From a practice-oriented perspective, perhaps the most important implication of this human rights turn has been the concurrent shift in litigative avenues. By framing arguments through international human rights law, access is simultaneously enabled to a range of regional courts and international human rights bodies. Over the past decades, several important cases relating to extraterritorial migration control have thus been heard before regional human rights courts, with successful litigation often forcing States to substantially adjust their policies. In Europe, this includes the *Hirsi* case mentioned in

the previous section,[56] as well as cases establishing jurisdiction in situations concerning bilateral agreements to intercept migrant boats,[57] and attempts to define 'international zones' to exclude access to domestic asylum procedures.[58] Contrary to the US Supreme Court, the Inter-American Commission of Human Rights found the Haitian interdiction programme to have triggered the United States' obligations under the Refugee Convention and Protocol.[59]

The UN human rights bodies have similarly come to play an important role in this area. In the *Marine I* case, the Committee against Torture considered Spain to have exercised jurisdiction both during interception of migrants off the West African coast and throughout the ensuing detention of 23 persons at a Mauritanian fishing plant.[60] Both the Committee against Torture and the Human Rights Committee, in their concluding observations on Australia, found the Regional Processing Centre on Manus Island in Papua New Guinea to fall under Australia's jurisdiction.[61] More generally, individual communications in relation to asylum and immigration matters have come to form a significant part of the committees' caseloads.[62] Some scholars have thus advocated a greater role for the human rights committees in 'grant[ing] relief to a growing number of asylum seekers and refugees'.[63] Other authors remain more sceptical, noting that far from all of the States accept the individual communication procedure—or, even when they do, the committees' views—and that the soft law status of such views has a limited impact in shaping State practice.[64]

Most recently, the law of complicity has attracted particular attention from refugee law scholars and NGOs. The customary international rule on complicity, expressed in article 16 of the Articles on the Responsibility of States for Internationally Wrongful Acts,[65] provides a possible avenue for holding destination States responsible for aiding and assisting another State in breaching common international obligations. Legomsky has thus applied a 'complicity principle' to safe third country practices,[66] while den

Heijer has considered European 'aid or assistance' in the context of extraterritorial migration control.[67] Giuffré has argued for Italy's derived responsibility vis-à-vis cooperation with Libya in carrying out extraterritorial border controls, finding that 'the conditions posed by Article 16 of the ILC Articles appear to be fully met'.[68] Gammeltoft-Hansen and Hathaway have applied article 16 to situations of cooperative deterrence more generally, concluding that 'States that believe that the more diffuse forms of *non-entrée* involving no exercise of jurisdiction are thus necessarily immune from legal liability are thus proceeding with false confidence'.[69] Markard, in her work on the right to leave, has suggested that EU Member States could be 'complicit in internationally wrongful departure prevention by third countries'.[70] Similarly, Moreno-Lax and Giuffré have raised the possibility of derived responsibility on the part of the EU and its Member States in cooperating with Turkey and Libya on preventing departures.[71]

While complicity is undoubtedly a useful entry point for arguments and advocacy around shared responsibility, it should also be acknowledged that so far it has seen limited practical application by national and international judiciaries.[72] Thus, the French administrative court refused the application of eight NGOs seeking an injunction of France's donation of six patrol vessels to the Libyan Coast Guard on the basis that the determination was too closely related to foreign relations.[73] Nevertheless, at the time of writing, several cases raising issues about attribution and complicity were pending before international courts and bodies. As such, one cannot rule out important advances in this area in coming years, thereby clarifying the interaction between the law on State responsibility and international human rights law in regard to, amongst other things, cooperative forms of migration control.

5. Towards a Topographical Approach to Accountability for Extraterritorial Migration Control

Refugee law, human rights law, and State responsibility continue to have an important role to play in challenging extraterritorial controls. At the same time, the evolution of

approaches sketched out in the previous section are also representative of a particular trajectory which looks to human rights law and general international law as a means of overcoming shortcomings and bolstering interpretation within international refugee law as the core legal regime governing people on the move in need of protection. Recently, a group of scholars called for a break with what they see as the 'refugee paradigm' in regard to international migration.[74] In its place, they call for a more 'migrant-centred perspective' exploring the fragmented legal spaces beyond the Refugee Convention and including all levels of law, whether at the 'international, regional, bilateral, transnational [or] national' level.[75]

Following this call, and drawing inspiration from other recent scholarship, this final section sets out what might be termed a 'topographical approach' to accountability for extraterritorial migration control. Such an approach requires refugee lawyers to apply a broader frame to accountability both in terms of the legal regimes they engage with and the geographical outlook applied. While it is beyond the scope of this chapter to provide a full overview of such alternative avenues for accountability, a number of legal areas seem to be of particular relevance.

At the national level, constitutional law offers an accountability regime of growing importance for a range of asylum seeker and refugee rights. In particular, non-discrimination law lends itself as a means of realizing refugee rights.[76] Since the well-known *Prague Airport* case, which found pre-clearance measures to constitute discrimination under the United Kingdom's Race Relations Act 1976, a number of complaints have been brought before constitutional courts. In 2014, for example, the Constitutional Court of Ecuador struck down a presidential decree that limited the rights of asylum seekers to apply for and appeal protection decisions and narrowed the meaning of 'refugee' in national law.[77] In 2016, the Supreme Court of Papua New Guinea in *Namah v Pato* found that detention of asylum seekers breached the right to liberty set out in the constitution.[78] Most recently, Guatemala's Constitutional Court imposed a temporary injunction on the operation of a safe third country agreement with the United States.[79]

Particularly in common law countries, private law avenues, such as tort law, may provide remedies for (potential) harm. In Australia, perhaps the most effective litigation challenging third country processing has stemmed from the use of civil litigation establishing the existence of a duty of care between the Australian government and asylum seekers held offshore.[80] Tortious litigation and settlements have thus resulted in the medical evacuation of hundreds of people from Papua New Guinea and Nauru to Australia.

Likewise, different legal regimes may be explored at the international level in order to further litigation and advocacy in regard to cooperative or extraterritorial migration controls. The law of the sea is one potential source of accountability. In the recent *M/V 'Norstar' (Panama v Italy)* case, which concerned Italy's arrest of a Panamanian-flagged vessel, the International Tribunal for the Law of the Sea found that Italy's exercise of criminal jurisdiction over the oil tanker violated the vessel's freedom of navigation under article 87(1) of the Convention on the Law of the Sea. The Tribunal held that 'even acts which do not involve physical interference or enforcement on the high seas may constitute a breach of the freedom of navigation … if such acts produce some "chilling effect" '.[81] Communications to the International Criminal Court alleging crimes against humanity have further arisen with respect to both Australia's operations on Manus Island and the EU's role in pullback operations to Libya.[82] The legal viability of such claims notwithstanding, the submissions have helped create wider attention on and public debate about these policies.[83]

A topographical approach to accountability also implies a broader geographical focus. It is noteworthy that while policies have developed to encompass more complex forms of international cooperation between sponsoring States and an expanding array of transit and origin countries, the focus of scholars and refugee advocates has remained almost exclusively on the role and possible responsibility of sponsoring States in the Global North. The responsibility of cooperating States in transit and origin countries, as

part of these schemes, is seldom, if ever, considered, much less the possibility to address or litigate human rights violations through the domestic jurisdiction or regional avenues provided for in these countries.[84]

It is arguable that this bias is appropriate given developed States' principal role in instigating and funding such cooperation, as well as the fundamental inequality in terms of wealth and political power across the Global North–South divide. Yet, an exclusive focus on the responsibility of sponsoring States risks coming at the expense of migrants and refugees, for whom the international justice element is likely to be a secondary concern to the human rights violations endured. Moreover, at a time when international cooperation on migration control is generally tipping towards stronger involvement of authorities in transit and origin States, it becomes all the more important to consider the role and responsibility of these States, as well as the legal remedies available within these jurisdictions.

As Abass and Ippolito point out, the role of domestic courts in transit and origin countries is often underestimated.[85] It was neither UN treaty bodies nor domestic courts in Australia that finally undid detention in Australia's offshore processing centre on Manus Island. Rather, the Supreme Court of Papua New Guinea ruled that the detention of asylum seekers within the centre violated the right to personal liberty enshrined in the country's constitution.[86] In March 2017, a Libyan appeal court formally suspended the Memorandum of Understanding signed between Libya and Italy and ordered a halt to all current cooperation on migration control between the two countries—even though the case was subsequently overturned by the Supreme Court.[87]

At the regional level, refugee instruments such as the OAU Convention and the Cartagena Declaration both entail more refined approaches to international cooperation and responsibility-sharing.[88] In terms of litigation, the Inter-American human rights system has a long track record of affording complementary protection to refugees and

asylum seekers.[89] More nascent, recent rulings from the African Court on Human and Peoples' Rights suggest that this institution could potentially play a stronger role in this area in the future.[90] Refugee issues may furthermore be addressed in the context of broader regional political institutions and frameworks. As Ebobrah shows, regional economic communities have given rise to sub-regional human rights regimes across the African continent that hold the potential to play a bigger role in issues concerning refugee and migrant rights.[91]

In sum, a variety of avenues exists beyond the traditional Global North and human rights-centred approaches through which to pursue accountability for extraterritorial migration control. While not diminishing the continued importance of existing efforts to litigate extraterritorial migration control before bodies such as the European Court of Human Rights, the topographical approach sketched out here shows that legal responses in this area may still see substantial evolutions.[92]

6. Conclusions

The present chapter has dealt with extraterritorial migration control as a fundamental and systemic challenge for refugees' ability to access asylum. From its modern origins in the 1980s, extraterritorial migration control has spread across countries in both the Global North and—to a lesser extent—the Global South and continuously developed and refined as States hope to eclipse their responsibilities under international refugee law. The chapter has also sought to demonstrate that international refugee law has far from remained static in this period. From dynamic developments in the interpretation of key concepts—such as the geographical application of the *non-refoulement* principle—to the wider turn to international human rights law and litigation, refugee lawyers have consistently challenged new developments in State practice. The recent surge in scholarship and advocacy work focusing on the law on State responsibility and principles of complicity may come to constitute another significant turning point in this area, to the extent that such arguments gain acceptance by domestic and international judiciaries.

[92] For a more comprehensive account of the topographical approach, see Nikolas F Tan and Thomas Gammeltoft-Hansen, 'A Topographical Approach to Accountability for Human Rights Violations in Migration Control' (2020) 21 German Law Journal 335.

As the final part of the chapter outlined, however, legal responses to extraterritorial migration control do not stop here. In line with the topographical approach advanced above, accountability for migration control should be pursued through a broad range of avenues, cutting across different legal regimes, different levels of national, transnational, regional, and international law, and different jurisdictions in both the Global North and the Global South. With current shifts in cooperative deterrence leading to a bigger operational role for authorities in the Global South, these 'alternative' venues through which to establish accountability for extraterritorial migration control are likely to become more important in the years to come.

CHAPTER 28

THE EVOLUTION OF SAFE THIRD COUNTRY LAW AND PRACTICE

LUISA FELINE FREIER, ELENI KARAGEORGIOU, AND KATE OGG

1. Introduction

States and regions use safe third country (STC) practices to deny protection to asylum seekers and refugees on the grounds that they have, or may have, protection in another country. While ascribed different labels, including 'protection elsewhere', 'country of first asylum', and 'safe third country', and implemented by various methods, the core legal issues remain the same: whether a State can deny protection on the grounds that it is available elsewhere, and the nature and scope of protection the third country must provide.[1]

The STC notion originated in Switzerland in 1979, spread throughout Europe in the 1980s, and was adopted by the European Union (EU) and countries such as Australia and Canada in the 1990s.[2] Since then, developments in STC law and practice globally include new bilateral agreements, reforms to STC provisions in domestic and supranational legislation, and landmark decisions of superior courts. We examine these changes in Europe, Australia, and North and South America, focusing in particular on the period from 2010 to 2020. As yet, these developments have received little academic attention, particularly offering the comparative perspective provided in this chapter. We argue that there has been a dilution of STC protection standards in these four regions. The thresholds for effective protection have diminished and are lower than the minimum

[1] Stephen Legomsky, 'Secondary Refugee Movements and the Return of Asylum Seekers to Third Countries: The Meaning of Effective Protection' (2003) 15 IJRL 567, 570–1.

[2] Jane McAdam, 'Migrating Laws? The "Plagiaristic Dialogue" Between Europe and Australia' in Hélène Lambert, Jane McAdam, and Maryellen Fullerton (eds), *The Global Reach of European Refugee Law* (CUP 2013) 29–34.

laid down in international treaties. Further, in the introduction and evolution of these STC practices, lawmakers and judges have disregarded the legal principle of international solidarity. While STC practices have long been critiqued as burden-shifting rather than -sharing,[3] new STC law and jurisprudence exacerbates inequities between States with respect to responsibility for hosting refugees. These developments pose significant risks to the protection of individual refugees, as well as the international protection regime more broadly.

2. Protection and Cooperation as Foundational Principles of Refugee Law

One of the central issues in STC scholarship is the delineation of the appropriate protection standards that must be available in the third country.[4] The predominate view is that the third country must comply with all obligations assumed by virtue of being a party to the Refugee Convention. The Michigan Guidelines on Protection Elsewhere (Michigan Guidelines) state that while *non-refoulement* is 'the most fundamental constraint on implementation of a protection elsewhere policy',[5] STC practices must ensure that refugees enjoy all rights in the Refugee Convention.[6] UNHCR's understanding of effective protection has been ambivalent,[7] but in its most recent guidance it has stressed the need for third countries to meet Convention protection standards.[8] Suggestions that there is a

[4] The dominant view is that because the Convention neither authorizes nor prohibits such transfers, they are acceptable if effective protection is available in the third State: UNHCR, 'Summary Conclusions on the Concept of "Effective Protection" in the context of Secondary Movements of Refugees and Asylum Seekers (Lisbon Expert Roundtable, 9–10 December 2002)' (February 2003) para 12; Michelle Foster, 'Protection Elsewhere: The Legal Implications of Requiring Refugees to Seek Protection in Another State' (2007) 28 Michigan Journal of International Law 223, 237; University of Michigan Law School, 'Michigan Guidelines on Protection Elsewhere' (2007) <https://www.refworld.org/docid/4ae9acd0d.html> accessed 23 May 2020; cf Violeta Moreno-Lax, 'The Legality of the "Safe Third Country" Notion Contested: Insights from the Law of Treaties' in Guy S Goodwin-Gill and Philippe Weckel (eds), *Migration & Refugee Protection in the 21st Century: International Legal Aspects* (Martinus Nijhoff 2015).

[5] Michigan Guidelines (n 4) para 6. The Guidelines refer to the principle of *non-refoulement* as reflected in art 33 of the Refugee Convention, as well as in human rights treaties and customary international law: para 11.

lower threshold for effective protection have been critiqued on the grounds that there is no principled method for determining which Convention rights should be prioritized.[9]

While the Refugee Convention outlines a refugee-specific rights regime,[10] there are significant gaps that need to be supplemented by regional law and international human rights law (IHRL), such as the ICCPR, ICESCR, and ECHR.[11] If protection granted to refugees in the third country was to be limited to the prescriptions of the Refugee Convention, this would legitimize transfers to third countries that do not guarantee, *inter alia*, a refugee's right to personal security,[12] family life and unity,[13] or an adequate standard of living.[14]

We suggest that when determining whether a third country is safe, the starting point should be the rights enumerated in the Refugee Convention, including, but not limited to, *non-refoulement*. Refugees' access to further civil and political and socio-economic rights should also be taken into account. While some suggest that this is a difficult standard to reach in practice,[15] it is the correct and appropriate threshold for effective protection for three reasons. First, States cannot 'contract out' of their obligations under the Refugee Convention and human rights treaties through STC policies.[16] Secondly, the Refugee Convention's rights regime was never intended to be aspirational but was designed to 'give refugees a minimum number of advantages, which would permit them to lead a tolerable life in the country of reception'.[17] Thirdly, fundamental human rights, such as personal security and family unity, are not expressly enumerated in the Refugee Convention, yet are crucial for adequate protection.[18]

The Refugee Convention also rests on notions of international cooperation, solidarity, and responsibility-sharing.[19] Given that the effects of refugee movements are not distributed evenly, States are expected to show solidarity through providing assistance to overburdened States.[20] This is reflected in regional law where solidarity obligations

[9] Foster (n 4) 279–84 critiques Legomsky's (n 1) suggestion that fundamental or non-derogable rights be prioritized; Stevens (n 7) 248 criticizes the articulation in UNHCR, 'Statement by Erika Feller at the Fifty-Fifth Session of the Executive Committee of the High Commissioner's Programme' (7 October 2004) of 'quality protection' that includes only some Refugee Convention rights.

have been institutionalized[21] and affirmed in the New York Declaration for Refugees and Migrants[22] and the Global Compact on Refugees.[23] Accordingly, we also suggest that a State's legislature, executive, and judiciary must consider the principle of international solidarity when implementing and interpreting STC rules. STC practices that lead to refugees' containment to countries already hosting large numbers of refugees or are otherwise unable to provide effective protection, run contrary to the Refugee Convention and jeopardize the provision of asylum.

3. European STC Law and Practice

The EU has established a body of law and institutional practice on asylum—the Common European Asylum System (CEAS). The EU Treaties require both that CEAS measures be in accordance with the Refugee Convention and other relevant human rights treaties, and be based on solidarity between the Member States.[24] The CEAS cooperation is underpinned by the principle of mutual trust, that is, the presumption that all EU Member States observe fundamental rights and international law obligations vis-à-vis refugees.[25] A generalized assessment of safety underlies the transfer of responsibility for refugees to non-EU countries as well. While the protection standards for STC transfers to EU States are fairly weak, recent developments with respect to STC transfers to non-EU countries reflect even lower protection safeguards. Judicial references to solidarity are scarce and have failed to challenge responsibility-shifting through STC rules.

a. Dublin Regulation Transfers

The Dublin Regulation[26] embraces the core elements of the STC concept, namely the allocation of responsibility to examine a claim and the transfer to the country responsible,[27] in a way that apparently reflects the objectives of the internal market.[28]

[28] Elspeth Guild, 'The Europeanisation of Europe's Asylum Policy' (2006) 18 IJRL 630.

This system was intended neither to distribute hosting responsibilities fairly, nor to pay due regard to individual preferences or integration prospects. Rather, it was designed to be a system to assign responsibility, in which the State that played the most significant role in the asylum seeker's entry into the EU would be responsible for examining her or his application.[29]

While the Dublin system purports to deal with the allocation of responsibility between safe countries with comparable reception and protection systems, empirical analysis has revealed the opposite.[30] Furthermore, the European Court of Human Rights (ECtHR) and the Court of Justice of the EU (CJEU) have precluded transfers on human rights grounds. The ECtHR in *MSS v Belgium and Greece* determined that extreme poverty and homelessness in the receiving country, in combination with procedural shortcomings, and long delays in decision-making, amounted to inhuman or degrading treatment.[31] In *NS and ME*, the CJEU declared the presumption that other EU Member States are safe for asylum seekers, and that their claims would be properly processed, is rebuttable.[32] However, despite challenging the automatic nature of Dublin transfers, the ruling imposed the high threshold of 'systemic deficiencies'[33] for the suspension of transfers, even on grounds of risks of inhuman and degrading treatment. This narrow understanding is also reflected in more recent CJEU jurisprudence concerning the living conditions in a Member State following the grant of international protection. Only 'a situation of extreme material poverty that does not allow the individual to meet his most basic needs' would amount to inhuman and degrading treatment such as to preclude transfer.[34]

Unlike the CJEU, the ECtHR does not endorse the 'systemic breaches' threshold. In post-*MSS* jurisprudence, factors such as age and family unity are taken into account,[35] rendering the legality of a Dublin transfer conditional upon a thorough and individualized assessment of the applicant's situation in the receiving State.[36] Thus, it is arguable that the ECtHR looks beyond *refoulement* and takes into account, for example, children's rights, whereas the standard for effective protection in CJEU jurisprudence is limited to *non-refoulement* as protection from cruel, inhuman, and degrading treatment.

Reference to solidarity between States has rarely been part of courts' decisions in relation to Dublin transfers.[37] An exception was in *Jafari*, where the CJEU used the principle

of solidarity to justify why compliance with the 'first entry criterion' in the Dublin Regulation should not be disputed, even in times of crisis.[38]

b. Transfer of Responsibility to Non-EU Countries

Protection standards are lower in the context of EU readmission policy to 'third countries', when contrasted with the Dublin standards set out above. The STC concept is enshrined in the Asylum Procedures Directive (APD) and serves as the basis for EU States to declare asylum applications inadmissible and to transfer the applicants to third countries, often through readmission agreements.[39]

A recent example is the transfers executed pursuant to the EU–Turkey statement.[40] Under the APD, the third country to which an applicant is to be transferred is not explicitly required to have ratified the Refugee Convention; rather, the applicant must have the possibility to acquire refugee status and, if found to be a refugee, to receive protection 'in accordance with' the Convention.[41] Although Turkey has ratified the 1967 Protocol to the Refugee Convention, it has maintained the geographical limitation, meaning it is only obliged to consider as refugees those individuals who have fled from events taking place in Europe. This excludes the majority of those seeking refuge in Turkey from Convention-based protection. As suggested above, forcible return of an asylum seeker to an intermediary country is permitted provided that the full protection package under the Refugee Convention along with IHRL standards is guaranteed. With respect to the EU–Turkey statement, this condition is not fulfilled.[42]

As regards international solidarity, the agreement envisages financial assistance to Turkey and some resettlement of Syrian refugees from Turkey to EU Member States.[43] Overall, the agreement confirms and legitimizes the confinement of refugees in Turkey, rather than questioning the system of refugee containment. Replicating the migration-control rationale of the Dublin system, the allocation of responsibility through the

[43] EU–Turkey Statement (n 40) paras 2, 4, 6.

EU–Turkey statement is grounded in a fundamental inequality between the countries involved, which is being addressed by compensatory measures such as transfer of money and States' voluntary pledges for resettlement. This is not in accordance with the principle of solidarity under European and international law, which requires fairness between States and towards refugees.[44] By shifting responsibilities to countries closer to regions of origin, such practices weaken protection by making it hard for host States to comply with their international obligations, and undermine, rather than express, international solidarity.

The CJEU declined to review the EU–Turkey statement, deeming it not to be an EU act.[45] This has been, indeed, a legally unpersuasive ruling that, arguably, made it possible for EU institutions to circumvent the democratic and judicial checks and balances as laid down in EU Treaties.[46]

The legality of EU Member States' sending applicants to STCs has been the subject matter of a number of ECtHR judgments, the most recent being *Ilias and Ahmed*.[47] In earlier cases, the court prohibited removal when the treatment of the applicant in the destination country would amount to a violation of article 3 (or other) ECHR rights.[48] In more recent STC cases, the court's approach is mainly procedural, examining the procedures of the removing State, without a substantive assessment of whether the third country in question is safe or not.[49] Regarding containment in facilities at the borders or airport zones prior to removal, the court has apparently diluted protection by permitting removing States to invoke 'exceptional migratory pressures' in a manner that facilitates STC returns.[50] In *Ilias and Ahmed*, the Grand Chamber held that the applicants' stay in the Hungarian border transit zone did not amount to detention under article 5 ECHR as they could return to Serbia without facing any 'direct threat to life and health'.[51] The court considered this a 'realistic' possibility for the applicants in light of the EU–Serbia readmission agreement, despite contending that it is not for the court to assess whether the applicants fall under the scope of that agreement.[52] Following this line of reasoning, the court did not undertake the substantive assessment of the risk of treatment contrary to article 3 EHCR in Serbia, or indeed whether Serbia was inclined or prepared to take these particular individuals in.[53]

[52] ibid paras 236–7.

[53] *Amuur v France*, ECHR 1996-III 850 para 48.

The European courts' STC jurisprudence indicates that breaches of article 3 ECHR and article 4 EU Charter of Fundamental Rights remain the main consideration when assessing the legality of a removal. The standard is set at *non-refoulement*—far lower than the protections in the Refugee Convention and IHRL. Compared to transfers within the EU, a lower standard focusing mainly on States' procedural obligations is applied to transfers outside the EU, raising further protection concerns. This analysis suggests that STC arrangements within the CEAS and beyond do not meet the standards set by the Refugee Convention and IHRL. In addition, the Dublin system's inbuilt inequality for States located in Europe's external borders, and readmission agreements that shift responsibility to non-EU countries, have not been challenged by reference to European and international solidarity. In this context, the 2016 proposed reform of the EU asylum procedures, which makes the application of STC rules mandatory,[54] should not come as a surprise. STC rules are becoming the *modus operandi* of EU policies on asylum.

4. Australian STC Law and Practice

STC practices in the EU influenced the development of Australian STC policy.[55] This section analyses the development of two areas of Australian STC law and practice.[56] First, the Migration Act 1958 (Cth) (Migration Act) stipulates that Australia does not owe protection to a person who has not taken all possible steps to avail themselves of a right to enter and reside in another country.[57] Secondly, many refugees have resisted transfer to, or sought transfer from, one of Australia's regional processing centres (RPCs) in Nauru and Papua New Guinea (PNG). Both STC practices have generated a significant body of case law that remains largely unexamined with respect to what constitutes effective protection.

a. The Right to Enter and Reside in a Third Country

This STC notion first arose in a 1997 Federal Court decision concerning a man who had been recognized as a refugee in France. The court held that the Refugee

[54] Proposal for a Regulation of the European Parliament and of the Council Establishing a Common Procedure for International Protection in the Union and Repealing Directive 2013/32/EU, COM/2016/0467 final—2016/0224.

[55] McAdam (n 2).

[56] The STC rules not discussed here are procedural bars preventing an application for a protection visa. The Migration Act 1958 (Cth), Division 3, Subdivision AI bars a person from applying if they have a connection to a prescribed STC (see McAdam (n 2) 30–4). Currently, there are no prescribed STCs. There is a procedural bar if a country is declared to have requisite protection standards: Migration Act s 91N(2). However, no such declaration has been made. A procedural bar also applies to dual nationals: Migration Act s 91N(1).

[57] Migration Act s 36(3).

Convention does not preclude a State from sending a refugee to a third country that provides effective protection.[58] The decision, which predated the STC legislation noted above, did not set the standard for effective protection at the legally appropriate standard (ie respecting the rights in the Refugee Convention), but rather at the lower threshold of *non-refoulement*.[59] Nevertheless, the court stated that the third country must 'effectively ensure' against *refoulement*.[60] Both a protected status and legal right to re-enter and reside were relevant to determining this standard.[61] In this limited way, consideration of the refugee protection in the third country beyond formal *non-refoulement* was relevant.

In subsequent cases, this threshold of effective protection was diluted,[62] drifting further from the Refugee Convention standards. Courts even accepted that effective protection was available in circumstances where *non-refoulement* could not be 'effectively ensured'. For example, asylum seekers were deemed to have effective protection even if they did not have confirmed refugee status[63] or a right of residence[64] in the third country. A third country that was not a party to the Refugee Convention could also be deemed to provide effective protection.[65]

In 2005, the High Court of Australia (HCA) overturned the STC rule in *NAGV and NAGW*, which concerned whether Jewish refugees have effective protection in Israel because of the right to return.[66] The HCA held that the Migration Act did not permit Australia to deny protection on the ground that a person could be sent to another country.[67] While the HCA did not explicitly define the scope of effective protection, the judgment is closer to the international standards espoused above. It stated that protection obligations go beyond *non-refoulement* and include, for example, access to courts and religious freedom.[68] However, before the HCA determined *NAGV and NAGW*, the Migration Act was amended to provide for denial of protection on STC grounds. The Act stipulates that if a person has a right to enter or reside in another country permanently or temporarily, they will be denied protection in Australia unless there is a risk of *refoulement* in the third country.[69] These amendments were introduced due to a perceived need to deter refugees from 'forum shopping'.[70] Given that there are few constitutional rights protections in Australia, the legislative amendment effectively overrode the HCA ruling.

[70] Border Protection Legislation Amendment Bill 1999 (Cth) Supplementary Explanatory Memorandum para 1.

Since then, there is a burgeoning body of jurisprudence interpreting the new statutory provision, which is in need of deeper scholarly analysis. Courts have included some safeguards. For example, the STC provisions will not apply if the person has a right to enter another country for a limited purpose as opposed to a genuine right of residence.[71] Also, they will only be triggered when a person can immediately exercise a right to enter without any preliminary processes.[72] Nevertheless, the threshold for effective protection is far below international standards. A person can be denied protection even though they will not be recognized as a refugee in the third country[73] and will not have any form of protection beyond protection against persecution.[74] This means that, rather than entitlement to all rights in the Refugee Convention and other fundamental human rights, protection is reduced to *non-refoulement*. Moreover, the protection against *refoulement* is, in many cases, illusory. A person can be denied protection even though there is no guarantee that they can access the STC once removed from Australia. This can be observed in a case involving an Indian man who established a well-founded fear of persecution, but was denied protection because he had not availed himself of his right to enter Nepal.[75] One issue was whether he would be able to enter Nepal without having to first go to India. The court confirmed that the STC provision 'looks to the past rather than the future' and operates differently from the internal relocation test.[76] The relevant question was whether the refugee took all possible steps to avail himself of his right to enter Nepal. Whether Nepal would grant him entry or whether he would have to first travel through India was irrelevant.[77] The Federal Court has refused to interpret 'all possible steps' in a more refugee-protective way, stating that it should 'not be read down in any way'.[78]

This STC jurisprudence creates a *refoulement* risk because, even when a person can travel directly from Australia to the third country, there is no guarantee of entry. Courts have interpreted the 'right to enter and reside' as not requiring a legally enforceable right. A person will be deemed to have such a right even if it is 'capable of withdrawal and not capable of any particular enforcement' and 'does not give rise to any particular duty upon the state in question'.[79] How this creates a *refoulement* risk is evident in a decision concerning a Latvian family denied protection because they had not taken all possible steps to enter and reside in all other 27 EU Member States.[80] The family pleaded

[80] *SZNBX v MIBP* [2018] FCA 1172, paras 6, 9. Section 36(3) was applied even though when the family left Latvia, Latvia was not in the EU. The time of the decision is the relevant time for determining whether a person has a right to enter and reside in another country: Department of Home Affairs, Refugee Law Guidelines (1 July 2017) para 4.3.

that they would be excluded from other EU countries on security and health grounds (the husband had a criminal conviction and the wife had mental health conditions). The court held that the family, who were not legally represented, could not substantiate this claim.[81] The family provided a European Parliament document providing statistics of EU countries' refusal to grant residence to EU citizens.[82] However, the court reasoned that it bore no relevance to the asylum seekers' individual circumstances.[83] This raises the question as to what evidence could have been supplied other than affidavit evidence from all 27 immigration authorities as to what decision would have been made.

This STC jurisprudence is also in tension with international cooperation. The main cases considering the original STC rule involved France and Israel as STCs, States that arguably have a similar protection capacity to Australia. However, the legislative STC provisions have been applied in more inequitable circumstances, without any judicial reflection on the capacity of the STC in question. For example, a Syrian man who came to Australia in 2012 was denied protection because he had an expired Lebanese permanent residence visa, and would be granted a six-month visa upon re-entry.[84] The assessment of Lebanon as an STC was limited to *refoulement*, and the court paid no regard to Lebanon's extraordinarily high *per capita* refugee population.[85] Similarly, a Burundian woman was denied protection because she had the right to enter and reside in any part of the East African Community (Uganda, Kenya, Tanzania, and Rwanda), all lower income States already hosting large numbers of refugees.[86]

b. Offshore Processing

Australia has made RPC agreements with Malaysia, PNG, and Nauru. Numerous refugees have instituted court proceedings resisting transfer to an RPC or requesting return to Australia. The decisions do not use the term 'safe third country' but nevertheless delimit the conditions and circumstances that permit or necessitate a transfer, so are in substance an STC practice. The scope and content of protection required to permit transfer has decreased from a broad set of rights to a much narrower focus on emergency medical care.[87]

In a 2011 decision regarding Australia's agreement with Malaysia, the HCA set a high watermark for effective protection.[88] At the time, the Migration Act provided that refugees could be sent to a third country if the Minister made a declaration that the

country provides protection.[89] The lead majority held that the word 'protection' referred to 'protections of all of the kinds, which parties to the [Refugee Convention] are bound to provide', including *non-refoulement* but also rights such as freedom of religion, access to courts, work, and education.[90] Justice Kiefel added that there must also be reference to IHRL more broadly.[91] Thus, the HCA's judgment is in line with the international standards for effective protection.

The Migration Act was subsequently amended to provide that the only condition for the Minister to designate a third country as an RPC is that it is in the national interest.[92] Accordingly, given Australia's constitutional system, courts can no longer consider questions of protection.[93] The later case law is now divorced from international standards on effective protection. Nauru and PNG have been designated as RPCs. All cases before Australian courts in which refugees have relied on international and public law arguments to resist transfer to, or request transfer from, Nauru or PNG have been unsuccessful.[94] The only cases that have secured transfers, albeit temporary ones, are grounded in the private law wrong of negligence and concern access to medical care.[95] The turn to private law means that case law now focuses on protecting refugees' physical and mental health, but no longer considers their human and refugee rights as such. If they are admitted to Australia, it is as sick people in need of medical care rather than as refugees entitled to effective protection.[96] The use of private law to challenge offshore processing needs further research.[97]

5. STC Law and Practice in the Americas

In the United States (US), the Immigration and Nationality 1965 Act (INA) bars a person from applying for protection if they fall under the scope of an STC Agreement (STCA).[98] The INA provides that refugees may be sent to countries where they are

not persecuted for a Convention reason and have full access to fair asylum procedures,[99] a standard that excludes most of the protections in the Refugee Convention. Below, we analyse STCAs between the US and Canada and Central American countries, and Peru's recent STC practice. We highlight how evolving STC law and practice in the region weakens protection standards and is antithetical to international solidarity.

a. STCA between the US and Canada

Modelled on the Dublin II Regulation, the US signed its first STCA with Canada in 2004.[100] Under this STCA, asylum seekers were required to make their protection claims in the first of the two countries entered, unless they qualified for an exception.[101] If asylum seekers entered Canada via an official land border crossing from the US, they were removed back to the US. In 2007, the Canadian Federal Court declared the STCA unconstitutional as it violated sections 15 (equality)[102] and 7 (life, liberty, and security of person)[103] of the Canadian Charter of Rights and Freedoms (Charter) and Canada's *non-refoulement* obligations.[104] It found that the US was unsafe for refugees due to the imposition of statutory bars.[105] Further, the exclusion of people from refugee status for reasons impermissible by the Refugee Convention,[106] and its equivocal approach to gender claims were noted.[107] Nevertheless, the court set the standard for effective protection at the very low threshold of *non-refoulement*,[108] despite expert evidence urging that other rights should also be considered.[109]

In 2008, the Federal Court of Appeal reversed this decision.[110] The appeal removed protections for asylum seekers in the US subject to the STCA by declaring that the Charter does not operate extraterritorially,[111] and that evidence regarding US breaches of international law was irrelevant to the STCA's validity.[112] While the first instance

[112] The Federal Court of Appeal held that that the Federal Court erred in ruling that US compliance with the Refugee Convention and CAT was a condition precedent to the exercise of delegated authority, the only requirement being that the executive acted in good faith in designating the US as a country that complied with *non-refoulement* obligations: ibid para 80.

decision set the bar for effective protection at the low threshold of *non-refoulement*, the appeal decision removed even this minimal protection.

In 2011, the Inter-American Commission on Human Rights found Canada to be in breach of both the right to asylum and to a fair trial in returning asylum seekers to the US under the STCA.[113] This decision was significant because it rejected the lawfulness of an inter-State system based on the automatic application of the STC concept,[114] reflecting the Inter-American system's more human rights-driven approach to migrants and refugees (in comparison to the ECtHR).[115] However, the decision is not binding and the STCA continues to operate.

A new legal challenge to the STCA was launched in the Canadian Federal Court in 2017. It was heard in the context of Canada's intentions to expand the STCA to the entire border.[116] The asylum seeker applicants had each been physically present in Canada, which meant that the question of whether the Charter applies extraterritorially was not relevant. The court held that the STCA is in violation of article 7 of the Charter on the grounds that asylum seekers who are returned to the US pursuant to the STCA are arbitrarily detained.[117] The Court stressed that the risks of *refoulement* and imprisonment under cruel conditions are grossly disproportionate to the administrative benefits of such responsibility sharing agreements. Broader arguments, including that the STCA is inconsistent with Canada's obligations under the Refugee Convention and that the US is in violation of *non-refoulement*, were not successful.[118] The court suspended the declaration of STCA's invalidity to allow time for the Parliament of Canada to respond. The Canadian government has appealed the decision, but the appeal had not been heard at the time of writing.

b. Asylum Cooperation Agreements between the US and Central American Countries

In 2019, the Trump administration introduced sweeping changes to US asylum practice, ostensibly aiming to reduce irregular immigration at the southern US border with Mexico.[119]

The Transit Country Asylum Ban purports to preclude asylum seekers from applying for protection in the US if they transited through a State which was either a party to the Refugee Convention or the Convention Against Torture (CAT).[120] The US also signed Asylum Cooperation Agreements (ACAs)—*de facto* STCAs—with Guatemala, El Salvador, and Honduras.[121] These agreements require asylum seekers to make their claims in the first of the three Central American countries they enter. Only if denied protection there, may they apply in the US. Otherwise, their asylum claims are deemed inadmissible in the US, and the US asserts it may deport them to one of these Central American States. These STC laws and practices have led to a substantial increase in rejections of asylum claims and deportations.[122] Furthermore, the US signed the Migrant Protection Protocol (MPP) with Mexico, whereby Mexico pledged to accept and retain Spanish-speaking (mainly Central American) migrants while they await their US asylum hearings.[123]

Regarding the threshold of effective protection in the ACAs with Guatemala, El Salvador, and Honduras, it is questionable whether these States meet even these low standards, given the prevalence of violent crime and socio-economic deprivation.[124] None of the three Central American States has a well-developed asylum system.[125] The US screenings purport to determine whether an asylum seeker is at risk of persecution, but they are cursory and lack procedural protections.[126] There are no protection standards in the agreement with Mexico, and asylum seekers deported under the MPP

have faced human rights abuses and some have lost their lives.[127] The agreements also disregard the principle of international solidarity. They allocate responsibility to Central American countries under asymmetrical power contexts; the US exerted economic pressures to secure these agreements,[128] while the agreements overburden third countries with the task of processing an increased number of asylum applications, which exceeds their resources and capacities.[129]

These practices are being challenged in US courts. The Transit Country Asylum Ban only entered into full effect after the US Supreme Court (USSC) stayed a District Court ruling that had suspended it temporarily during litigation.[130] In January 2020, the ACAs were legally challenged.[131] In February 2020, the Ninth Circuit upheld a preliminary injunction against the implementation of the MPP, indicating it may breach *non-refoulement*,[132] but put its ruling on hold after a request by the Trump administration. In March 2020, the USSC stayed the preliminary injunction and gave permission for the MPP to be implemented while the US government appeals.[133] The legal challenges are ongoing but these preliminary decisions indicate that *non-refoulement* may be the main legal consideration.

c. South America: STC Practice in Peru

In South America, a region that UNHCR officials have hailed as the avant-garde of international refugee protection,[134] non-government organizations and UNHCR representatives have reported *de facto* STC practices, which often lack any legal basis. Since 2015, the Venezuelan displacement crisis has put the refugee protection system across the region to test.[135]

Based on the Cartagena refugee definition, South American countries are obliged to recognize most Venezuelans who flee as refugees.[136] However, many States have

implemented increasing restrictions to legal access, residence, and the asylum procedure.[137] For example, Peru introduced screening interviews at the border in mid-2019. This violates the right of asylum seekers to due process.[138] Furthermore, asylum applicants have been rejected if they could not sustain why they had not applied for asylum in Ecuador, with reference to article 6 of the regulating decree of Peru's 2002 Refugee Law.[139] Although UNHCR officials have reported informal STC pratices in other countries in the region, Peru represents the first case of a South American country systematically implementing a unilateral STC measure to limit the inflow of asylum seekers. It has done so without any standards with respect to what constitutes effective protection.

6. Conclusion

The changes to STC law and practice examined in this chapter reveal a concerning trend. Standards for effective protection are moving further away from the Refugee Convention's rights regime and IHRL, while proportionate responsibility for refugee hosting is disregarded. A central question for refugee law scholars is how to realign understandings of effective protection with the Refugee Convention rights regime, supplemented by IHRL. In pursuing this inquiry, one area of focus should be the efficacy of strategic litigation. Much of the European, Australian, and North American litigation examined here has been undertaken by public interest organizations and is the product of carefully planned strategies, often involving media campaigns and broader law reform agendas. Yet, there is little investigation of the outcomes of these interventions, especially with respect to the evolution of STC rules and the notion of effective protection. There also needs to be greater emphasis on comparative scholarship and transjudicial communication. The extent to which domestic and regional STC jurisprudence is, and should be, informing other jurisdictions, especially in the context of recent landmark decisions, is an important question for future research. Finally, there is a need for further investigation of how international solidarity can be harnessed to inform and influence policymaking, legislative change, and jurisprudence. The disconnect between international solidarity as a principle of international law, and evolving STC policies, is an urgent endeavour for refugee law scholarship.

CHAPTER 29

SMUGGLING OF MIGRANTS AND REFUGEES

ANDREAS SCHLOENHARDT

1. Introduction

In large parts of the world, avenues for legal migration and asylum seeking are not available. If they do exist, they are often slow, inefficient, or expensive. As a result, many migrants use irregular avenues. Irregular migration comprises mixed flows of persons who are forced to emigrate as well as persons who willingly cross international borders. Many States respond to irregular migration by tightening border controls, building fences, and turning away boats carrying people seeking asylum. Such measures increase human suffering, and push migrants further into irregularity.[1] As early as 2000, UNHCR noted that, 'given an increasing number of obstacles to access safety, asylum seekers are often compelled to resort to smugglers'.[2]

Smuggling of migrants broadly refers to the facilitation of irregular migration, though international law uses the term more narrowly for circumstances in which the illegal entry of another person is facilitated for the purpose of obtaining a financial or other

material benefit.[3] The Refugee Convention and its Protocol do not expressly deal with the facilitation of cross-border movements and make no mention of smuggling of migrants, a term that was not in use when these instruments were conceived. The principal binding global instrument on this topic is the United Nations Protocol against the Smuggling of Migrants by Land, Sea and Air, which is the main focus of this chapter, especially insofar as applies to the situation of refugees.

On the surface, the Smuggling of Migrants Protocol coexists alongside international refugee law in situations where smuggled migrants are asylum seekers, as will often be the case. Unlike the Refugee Convention, the Smuggling of Migrants Protocol is a criminal justice instrument, which is emphasized by its relationship to the UN Convention against Transnational Organized Crime (UNTOC).[4] The Smuggling of Migrants Protocol expressly recognizes the protection afforded to refugees under international law and does not alter this regime. Further, it contains clear statements confirming that the Protocol seeks to criminalize migrant smugglers who prey on, and seek to profit from, irregular migrants but does not intend to criminalize those who are the object of migrant smuggling, including asylum seekers. The interpretation, operation, and implementation of the Smuggling of Migrants Protocol by States parties, however, has been less clear on this point, and all too frequently the focus of law enforcement, criminal justice, and other repressive measures has been on smuggled migrants and not on their smugglers.

2. Concepts and Terminology

Article 3(a) of the Smuggling of Migrants Protocol defines smuggling of migrants as 'the procurement, in order to obtain, directly or indirectly, a financial or other material benefit, of the illegal entry of a person into a State party of which the person is not a national or a permanent resident'. Illegal entry is defined in article 3(b) to mean 'crossing borders without complying with the necessary requirements for legal entry into the receiving State'. The reference to 'financial or other material benefit' adds a purpose element to the definition.

Somewhat related to—and often confused with—the smuggling of migrants is trafficking in persons, which involves the transportation or acquisition of people by improper means, such as intimidation or deception, with the aim of exploiting them.[5] Not all instances of trafficking involve cross-border movements and, if they do, these may not be irregular. Because of their volatile situation and their irregular status, many refugees are particularly vulnerable to exploitation and trafficking.

[3] Protocol against the Smuggling of Migrants by Land, Sea, and Air (adopted 15 November 2000, entered into force 28 January 2004) 2247 UNTS 507 (Smuggling of Migrants Protocol) art 3(a).

[4] United Nations Convention against Transnational Organized Crime (adopted 12 December 2000, entered into force 29 September 2003) 2225 UNTS 209.

[5] Protocol to Prevent, Suppress and Punish Trafficking in Persons, especially Women and Children (adopted 15 November 2000, entered into force 25 December 2003) 2237 UNTS 319 (Trafficking in Persons Protocol) art 3(a); see Chapter 30 in this volume.

Smuggling of migrants and trafficking in persons are governed by two separate legal instruments that contain different obligations concerning criminalization and, importantly, the protection of smuggled migrants and victims of trafficking. Although definitions of smuggling of migrants and trafficking in persons have existed in international law for 20 years, confusion persists about the elements that define and distinguish them.

In international law, the main point of difference lies in the legislative purpose of the offences. The trafficking offence seeks to protect the rights, integrity, and freedom of trafficked persons (who are referred to as victims) and to punish people who force, threaten, deceive, or otherwise abuse them for exploitative purposes. Smuggling of migrants, on the other hand, is an offence against the State that seeks to protect national sovereignty and the ability of States to control borders, manage the flow of people across them, and prevent misuse of immigration procedures.[6] The protection of smuggled migrants is only a secondary goal of the Smuggling of Migrants Protocol.

Another point of difference can be found in the smuggler's/trafficker's motivation. The United Nations Office on Drugs and Crime (UNODC), the 'guardian' of UNTOC and its protocols, explains that 'the primary source of profit and thus also the primary purpose of trafficking in persons is exploitation'.[7] Smuggling of migrants, by contrast, typically involves 'no intention to exploit the smuggled migrant after having enabled him or her to irregularly enter or stay in a country'.[8] Rather, smugglers seek to make profit by demanding financial or other material payment from the smuggled migrants for facilitating their illegal entry.

The issue of consent provides a further point of difference. The Trafficking in Persons Protocol is based on the understanding that '[v]ictims of trafficking have either never consented—for instance if they have been abducted or sold—or, if they have given an initial consent, their consent has become void through the means the traffickers have used to gain control over the victim, such as deception or violence'.[9] While the Smuggling of Migrants Protocol does not directly address questions about consent, it takes the view that smuggling involves a consensual agreement whereby the smuggler facilitates the illegal entry of the migrant and receives some benefit in return.[10] For this reason, the Smuggling of Migrants Protocol does not refer to smuggled migrants as victims.[11]

The distinction between smuggling of migrants and trafficking in persons is difficult to maintain in practice, and situations of smuggling can morph into trafficking. For example, a person may agree to be smuggled, unaware that, on arrival, he or she will be forced to work in poor or restrictive conditions for the smuggler in order to pay off a debt for the service.[12] This situation would be considered an instance of trafficking

[12] See also Obokata (n 10) 401.

because of the deceptive means and the exploitation. Smuggled migrants might retract their consent during a smuggling venture but may be forced by the smugglers to continue the journey.[13] Retracting consent alone does not automatically transform smuggling into trafficking; other elements of trafficking in persons, such as the purpose of exploitation, would still need to be satisfied.

The Working Group on the Smuggling of Migrants, established by the Conference of the Parties to the UNTOC, has acknowledged that '[t]here is a need for more clarity regarding the differences between the crimes of trafficking in persons and smuggling of migrants'.[14] It is imperative to distinguish clearly between the two phenomena because separate legal instruments with vastly different requirements and consequences govern international and national responses to smuggling and trafficking. The distinction is particularly consequential for the persons concerned as it affects the protection and assistance afforded to them. Several authors have criticized the existing definitions for creating an artificial dichotomy between the experiences of victims of trafficking and smuggled migrants.[15] This problem is all the more complex if a person is also seeking asylum. It 'can make a difference between arrest and protection, or between deportation and asylum, or between return to an uncertain fate and assistance for a decent life'.[16] For example, persons crossing a border with the aid of smugglers may be detained and swiftly removed from the receiving State without any assessment of the circumstances of their arrival, which may involve exploitation and other elements of trafficking. All too frequently, border guards, law enforcement officers, and immigration officials focus only on the irregular status of the person and fail to recognize that they may be victims of trafficking or refugees fleeing persecution.

3. The Smuggling of Migrants Protocol

a. Outline and Purpose

On the surface, it appears that the Smuggling of Migrants Protocol pursues three equally important goals: to stop the smuggling of migrants, foster international cooperation, and protect the rights of smuggled migrants.[17] A closer look, however, reveals that the

[17] Smuggling of Migrants Protocol (n 3) art 2.

criminal justice focus of the Smuggling of Migrants Protocol trumps human rights considerations.

Early drafts of the Smuggling of Migrants Protocol were limited to criminalization and international cooperation and made no reference to the protection of smuggled migrants.[18] During its development, several delegations suggested adding the words 'as well as to protect the victims of such smuggling, including their human rights' to the stated purposes or, alternatively, in a separate article,[19] but the draft text remained unchanged at that time.[20] An intervention by several UN agencies eventually led to a formal, albeit modest, textual recognition of the rights of smuggled migrants. In early 2000, the Office of the United Nations High Commissioner for Human Rights (OHCHR), along with UNHCR, the United Nations Children's Fund (UNICEF), and the International Organization for Migration (IOM) submitted a note stressing the

> clear need to ensure that the individuals falling victim to such practices are protected. The vulnerability of migrants, in particular irregular migrants, as a result of their precarious situation in society often leads to violations of their most basic human rights.... It is imperative, therefore, that the Protocol should preserve and seek to uphold the fundamental human rights to which all persons, including smuggled migrants, are entitled.[21]

With the support of most delegations, the purpose 'to promote international cooperation in the interest of the protection of such trafficking and respect for their human rights' was included in a revised draft.[22] In October 2000, the words 'victims' and 'trafficking' were removed (and incorporated in the corresponding text of the Trafficking in Persons Protocol) and substituted with the final text of article 2, which refers to 'protecting the rights of smuggled migrants'.[23]

b. Saving Clause

i. *Reference to International Refugee Law*

The only express reference to refugees in the Smuggling of Migrants Protocol can be found in article 19(1), which states:

[18] UNODC, *Travaux préparatoires of the Negotiations for the Elaboration of the United Nations Convention against Transnational Organized Crime and the Protocols thereto* (2006) 459.

[19] ibid.

[22] UNODC (n 18) 461.

[23] ibid. See also Anne Gallagher and Fiona David, *The International Law of Migrant Smuggling* (CUP 2014) 47–8.

> Nothing in this Protocol shall affect the rights, obligations and responsibilities of States and individuals under international law, including international humanitarian law and international human rights law and, in particular, where applicable, the 1951 Convention and the 1967 Protocol relating to the Status of Refugees and the principle of non-refoulement as contained therein.

Article 14(1) of the Trafficking in Persons Protocol contains an identical provision. This clause was adapted from the original draft which only referred to the Refugee Convention and Protocol. In their note, OHCHR, UNHCR, UNICEF, and IOM stressed the importance of 'the inclusion of a specific reference to international human rights law' and

> recommended that a saving clause such as that contained in the Trafficking Protocol be inserted, with reference being made to the rights, obligations and responsibilities of States and individuals under international law, including applicable international humanitarian law and international human rights law and, in particular, the 1951 Convention and the 1967 Protocol relating to the Status of Refugees.[24]

The saving clause serves as a reminder that, although the two protocols are criminal justice instruments, States are nevertheless under an obligation to ensure that measures taken do not undermine or otherwise negatively affect human rights.[25] The basic principle established by this clause is that any rights, obligations, or responsibilities arising from other international instruments are maintained and not compromised by the Smuggling of Migrants Protocol.[26] While the saving clause makes explicit mention of the Refugee Convention, the Interpretative Notes stress that the two protocols do 'not cover the status of refugees'.[27] In cases where a smuggled migrant is also a refugee, the Refugee Convention applies in addition to the Smuggling of Migrants Protocol.[28] This also means that a migrant smuggler who is a refugee is afforded protection under the Refugee Convention even though he or she may be prosecuted for smuggling.[29]

The note by the UN agencies also led to the inclusion of the express reference to the principle of *non-refoulement*, thus acknowledging 'that increasing numbers of asylum

[29] Gallagher and David (n 23) 167.

seekers, including those with genuine claims to refugee status, are being transported by means covered in the [Smuggling of Migrants Protocol]'.[30] The fact that some asylum seekers and refugees employ smugglers does not undermine their right not to be subjected to *refoulement*, which applies irrespective of whether a person enters a State lawfully or unlawfully and with or without the aid of smugglers.[31]

The note further suggested that, in order to make such a provision effective, a clause should be added requiring States parties to ensure that smuggled migrants were given full opportunity, including through the provision of adequate information, to make a claim for asylum or to present any other justification for remaining in the country, and that such claims be considered on a case-by-case basis.[32] However, this suggestion was not adopted by the drafters.

ii. *Non-discrimination Clause*

Article 19(2) of the Smuggling of Migrants Protocol states that the measures set forth by the Protocol shall be interpreted and applied in a way that is not discriminatory to persons on the grounds that they have been smuggled, and shall be consistent with internationally recognized non-discrimination principles. The statement acknowledges that measures taken by States to prevent and suppress smuggling can perpetuate discrimination or violate the prohibition against discrimination, which is particularly acute in cases involving persons who are not citizens of the host country, such as refugees. International law is clear that smuggled migrants cannot be discriminated against simply because they are non-nationals.[33]

The 'internationally recognized principles of non-discrimination' referred to in article 19(2) are not further defined in the Smuggling of Migrants Protocol and the phrase does not refer to a specific set of instruments or documents. Article 2 of the UDHR provides one of the earliest non-discrimination statements by declaring that all rights and freedoms are afforded 'without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status'. Subsequent international agreements, such as article 26 of the ICCPR, further elaborate on this statement by recognizing additional protected classes or persons.[34]

c. Criminalization and Offences

The central feature of the Smuggling of Migrants Protocol is the obligation in article 6(1)(a) to criminalize the smuggling of migrants. Article 6(1)(b) provides that (i) 'producing a fraudulent travel or identity document' and (ii) 'procuring, providing or possessing

33 OHCHR (n 25) 6.
34 See McClean (n 20) 369.

such a document' must be criminalized. Under article 6(1)(c), States parties must further criminalize enabling the illegal stay of migrants, such as

> cases where the smuggling scheme itself consisted of procuring the entry of migrants using legal means, such as the issuance of visitors' permits or visas, but then resorting to illegal means to enable them to remain for reasons other than those used for entry or beyond the length of time covered by their permits or authorisations to enter.[35]

Article 6(3) creates an obligation to legislate aggravating circumstances for situations 'that endanger, or are likely to endanger, the lives or safety of the migrants concerned' or in which smugglers maltreat or exploit migrants. This provision seeks to protect the physical integrity and the lives of smuggled migrants by calling on States parties to provide higher penalties for instances that involve particularly dangerous methods of smuggling or circumstances that put the health of smuggled migrants at risk or their lives in jeopardy.

d. Carrier Liability

Under article 11(2), States parties must adopt measures to prevent the use of commercial carriers, such as airlines, bus companies, and shipping companies, to smuggle migrants. This includes a requirement that carriers check the travel documents of passengers (article 11(3)) and provision for appropriate sanctions if that is not done (article 11(4)). These measures can have far-reaching implications for refugees and asylum seekers. An Interpretative Note to article 11(2) adds that

> this paragraph requires States parties to impose an obligation on commercial carriers only to ascertain whether or not passengers have the necessary documents in their possession and not to make any judgment or assessment of the validity or authenticity of the documents. It should further be noted that this paragraph does not unduly limit the discretion of States parties not to hold carriers liable for transporting undocumented refugees and that article 19 preserves the general obligations of States parties under international law in this regard, making specific reference to the 1951 Convention and 1967 Protocol relating to the Status of Refugees. Article 11 was also adopted on the understanding that it would not be applied in such a way as to induce commercial carriers to impede unduly the movement of legitimate passengers.[36]

e. Exemptions and Limitations

The Smuggling of Migrants Protocol recognizes that smuggling frequently involves persons who flee persecution, war, torture, discrimination, or severe human rights

[35] UNODC (n 13) 342–3.

[36] UNODC (n 18) 521.

abuses.[37] For this reason, the instrument does not intend to criminalize persons who offer humanitarian assistance. To achieve this, the definition of smuggling migrants and the criminalization requirements are limited to instances in which the offender seeks to obtain 'a financial or other material benefit'. This element reflects the drafters' intention

> to include the activities of organised criminal groups acting for profit, but to exclude the activities of those who provided support to migrants for humanitarian reasons or on the basis of close family ties. It was not the intention of the Protocol to criminalise the activities of family members or support groups such as religious or non-governmental organisations.[38]

Humanitarian smuggling activities include, for instance, providing food, medication, clothing, and temporary accommodation if these activities serve to save or protect the life of smuggled migrants. They further involve rescuing migrants from a life-threatening situation and other measures to save or restore their lives or health. Whether or not the danger stems from another person or from natural events does not matter.[39] The Smuggling of Migrants Protocol leaves it open for States to criminalize such acts under their domestic laws even if they are not done for profit,[40] but the Protocol does not provide the foundation or justification for such offences and they do not fall within the definition of smuggling of migrants.

The financial or other material benefit element further exempts from criminal liability individuals who are involved in the smuggling of their family members. It is not uncommon for earlier migrants to support the migration of their relatives, and smuggling can serve as a way to reunite families or to rescue family members from situations of persecution, poverty, or other hardship. Persons facilitating the illegal entry or enabling the illegal stay of a family member (or indeed any other person), or who provide fraudulent documents to enable their irregular migration, are not criminalized by the Smuggling of Migrants Protocol so long as they do not seek to benefit materially from these activities. The idea here is that no person should have to choose between committing a criminal offence or abandoning his or her closest relatives.[41]

f. Non-criminalization of Smuggled Migrants

For refugees and asylum seekers, one of the most important provisions under the Smuggling of Migrants Protocol is article 5 which states that 'migrants shall not become liable to criminal prosecution under this Protocol for the fact of having been the object of conduct set forth in article 6 of this Protocol'. The basic effect of this provision is to shield smuggled migrants from prosecutions arising from the fact of having been smuggled. It upholds the cardinal principle that irregular migration and asylum seeking are not criminal offences. It was 'the intention of the drafters that the sanctions established in accordance with the Smuggling of Migrants Protocol should apply to the smuggling of migrants by organized criminal groups and not to mere migration or migrants, even in cases where it involves entry or residence that is illegal under the laws of the State concerned'.[42]

Through article 5, the Smuggling of Migrants Protocol recognizes that smuggled migrants, including 'refugees, often have to rely on smugglers to flee persecution, serious human rights violations or conflict. They should not be criminalized for making use of smugglers or for their illegal entry.'[43] In this context, reference is also made to article 31 of the Refugee Convention which recognizes that refugees may have to use irregular means to enter a country of asylum.[44] Article 31 was included in the Refugee Convention specifically to prevent States from penalizing the unauthorized entry or presence of refugees or applying unnecessary restrictions to their movement.[45] In a similar fashion, article 5 of the Smuggling of Migrants Protocol operates to protect irregular migrants from criminalization merely for seeking or gaining entry with the assistance of smugglers.[46] Smuggled migrants may, however, be prosecuted for violating national immigration laws and for offences unrelated to their smuggling.[47] Furthermore, article 5 does not shield migrants from removal or deportation to another country.[48] The Legislative Guides note that:

> The Protocol itself takes a neutral position on whether those who migrate illegally should be the subject of any offences: Article 5 ensures that nothing in the Protocol itself can be interpreted as requiring the criminalisation of mere migrants or of conduct likely to be engaged in by mere migrants as opposed to members of or those linked to organised criminal groups. At the same time, article 6, paragraph 4, ensures that nothing in the Protocol limits the existing rights

> of each State Party to take measures against persons whose conduct constitutes an offence under its domestic law.[49]

Article 16(5) of the Smuggling of Migrants Protocol acknowledges that some States parties detain persons who are suspected of illegal entry in order to investigate their background, process their claims, and/or facilitate their removal. The Smuggling of Migrants Protocol does not endorse or condone this practice; rather, it takes a neutral position on this point.

g. Protection of Smuggled Migrants

The initial drafts of the Smuggling of Migrants Protocol did not contain any reference to the protection of, or assistance for, smuggled migrants.[50] To this day, the Smuggling of Migrants Protocol faces criticism for failing to protect smuggled migrants, refugees, and asylum seekers in particular.[51] In 1999, the UN High Commissioner for Human Rights urged the drafting committee to recognize the vulnerability of irregular migrants and incorporate provisions protecting their human rights.[52] The note submitted by OHCHR, UNHCR, UNICEF, and IOM further emphasized the need to include a specific and explicit provision for the protection of smuggled children,[53] but this never materialized.

The Smuggling of Migrants Protocol now lists the protection of the rights of smuggled migrants as one of its purposes in article 2. Article 4 extends the scope of the Protocol to 'the protection of the rights of persons who have been the object of' smuggling. Article 9(1) requires States parties to 'ensure the safety and humane treatment of the persons on board' suspected smuggling vessels.

Article 16 contains several provisions relating to protection that apply equally to the receiving State and the country of origin or habitual residence of smuggled migrants. These 'provisions are intended to set an appropriate standard of conduct for officials who deal with smuggled migrants and illegal residents and to deter conduct on the part of offenders that involves danger or degradation to the migrants'.[54] Article 16(1) contains a general statement to protect the basic human rights of smuggled migrants afforded in relevant international treaties—especially the ICCPR and the ICESCR—it does not create any new obligations for States parties.[55] Article 16(2) requires States parties to protect smuggled migrants from physical violence, and article 16(3) calls on States

[55] ibid 265; UNGA (n 38) para 109.

parties to 'afford appropriate assistance to migrants whose lives or safety are endangered by reason of being' smuggled. Just how such assistance may be afforded remains within the ambit of States' discretion. The Model Law against the Smuggling of Migrants proposes that smuggled migrants shall have the right to receive urgent medical care where their life is at risk or they face irreparable harm to their health.[56] This is drawn from the inherent right to life under the ICCPR. A combined reading of article 16(1) of the Smuggling of Migrants Protocol and provisions under the CRC further suggests that assistance could extend to providing education to smuggled migrants who are children.[57]

Article 16(5) implies an obligation to facilitate communication between smuggled migrants and their relevant consulate, especially in situations in which the receiving country detains migrants because of their illegal entry or to facilitate their removal.[58] Reflecting provisions under the Vienna Convention on Consular Relations,[59] this obligation encompasses assistance measures such as informing migrants of their right to contact their relevant consulate, notification of a migrant's request to do so, and facilitation of this communication, in person or otherwise.[60]

Article 18 sets out basic parameters to facilitate the return of smuggled migrants. The return of smuggled migrants is not mandatory, although many receiving States will want to return them if the migrants entered their territory unlawfully and are not eligible for asylum. The provisions under article 18 broadly reflect a call by the UN human rights agencies that

> an article on return should be accompanied by strong and effective safeguard or saving clauses ensuring the right to international protection against *refoulement* and guaranteeing the basic human rights of the migrants involved. In light of its experience in return activities undertaken on behalf of States, IOM suggests that States should be obliged to issue travel documents at the request of another State Party or a relevant international organisation.[61]

h. Border Measures

The Smuggling of Migrants Protocol acknowledges the sovereignty of States over their borders but also seeks to uphold established international human rights and refugee law principles. Regrettably, and all too frequently, the Smuggling of Migrants Protocol has been used as a front to implement restrictive control measures at the border, denying refugees and asylum seekers their rights.[62] 'Instead of curbing' smuggling, notes Young, 'these strict policies compel refugees and [asylum seekers] to resort to traffickers and smugglers'.[63]

[56] UNODC, 'Model Law against the Smuggling of Migrants' (October 2010) 65–6.

[61] Ad Hoc Committee (n 21) para 19.
[62] Kneebone (n 1) 139; Young (n 6) 116.
[63] Young (n 6) 116, 120–1.

Article 11(1) of the Smuggling of Migrants Protocol obliges States parties to strengthen border controls as may be necessary to prevent and detect the smuggling of migrants. This obligation is subject to several qualifications. The words 'to the extent possible' limit it to the means and resources available to each State party. Practical limitations may also arise from the geographical settings of a State's land and sea borders, which can make effective border control difficult. Further, border controls must be 'without prejudice to international commitments in relation to the free movement of people'.[64] The obligation under article 11(1) is further limited to border controls 'as may be necessary to prevent and detect smuggling of migrants'. The Smuggling of Migrants Protocol does not promote the tightening of immigration laws and rigid inspections of cross-border movements; it merely highlights the use of border controls as an additional tool to prevent and detect some instances of smuggling.

When adopting and strengthening border control measures, States need to be mindful that the human rights of all persons at international borders must be respected, regardless of which authorities perform border governance measures and where such measures take place.[65] The UN human rights agencies specifically stress that

> the strengthening of border controls and other measures foreseen in the . . . Smuggling of Migrants Protocol to prevent the smuggling of migrants should be implemented in such a manner that they will not undermine the rights of individuals to seek asylum or put refugees and asylum seekers at risk of refoulement.[66]

In practice, however, many countries who interdict smuggled migrants at the border return them without assessing an asylum claim, which can result directly in *refoulement* or contribute to 'chain *refoulement*' if the country to which the migrants are returned expels them. Moreover, many countries have used anti-migrant smuggling measures, such as returning migrants to transit points, as a way to shift the protection and processing of refugees and asylum seekers to other countries.[67]

4. Binding Regional Law

At present, the only binding regional measures pertaining to smuggling of migrants are those developed by the European Union (EU) in the early 2000s. These measures are part of a framework of common policies on asylum and immigration across EU Member States, in part enabling the free movement of people while also combatting immigration-related crime and abuse of asylum systems.[68]

[64] See eg ICCPR, art 12(2).
[65] See also McAdam (n 16) 127.
[66] Ad Hoc Committee (n 21) para 21.
[67] Young (n 6) 118–19.
[68] See further Patricia Mallia, *Migrant Smuggling by Sea* (Brill 2010) 200–22.

On 28 November 2002, the Council of the European Union adopted Directive 2002/90/EC 'defining the facilitation of unauthorised entry, transit and residence',[69] followed by Framework Decision 2002/946/JHA 'on the strengthening of the penal framework to prevent the facilitation of unauthorized entry, transit and residence'.[70] Council Directive 2002/90/EC provides the definition of facilitation of unauthorized entry, transit, and residence and the cases of exemption. Framework Decision 2002/946/JHA sets out the 'minimum rules for penalties, liability of legal persons and jurisdiction' of the offences under the Council Directive.[71] The framework established by these documents—which do not use the term 'smuggling of migrants'—is less comprehensive than the Smuggling of Migrants Protocol and departs from that instrument in several ways.

One main point of difference is the Council Directive's lack of any reference to the purpose of obtaining a financial or other material benefit, which is explained by the Directive's aim to combat facilitation of illegal immigration in all its forms. This is reinforced by a statement in paragraph 2 of the Directive's preamble, which states that '[m]easures should be taken to combat the aiding of illegal immigration both in connection with unauthorised crossing of the border in the strict sense and for the purpose of sustaining networks which exploit human beings'. Ventrella notes that 'Directive 2002/90/EC does not limit the targets it is aimed at, potentially punishing those who are assisting irregular migration for honourable reasons as harshly as those who do so for financial gain, such as organised crime'.[72] Mitsilegas similarly observes that '[t]he scope of criminalisation is very broad as it can cover any form of assistance to enter or transit the territory of a EU Member State in breach of what is essentially administrative law (such as cases where the migrant is traveling without travel documents)'.[73] The financial or material benefit is only an aggravation under article 1 of the Framework Decision 2002/946/JHA, which envisages higher penalties if the offence under article 1(1)(a) of the Council Directive is committed for financial gain and endangers the lives of the smuggled migrants, or is part of the activities of a criminal organization.

Whereas the Smuggling of Migrants Protocol is clear about its intention not to criminalize persons who engage in the smuggling of migrants for humanitarian purposes with no financial gain, the Council Directive leaves this matter to States' discretion. Article 1(2) allows Member States 'not to impose sanctions with regard to the behaviour defined in paragraph 1(a) by applying its national law and practice for cases

where the aim of the behaviour is to provide humanitarian assistance to the person concerned'. This exemption, which is not a mandatory provision, is of particular relevance in situations involving refugees and other asylum seekers who are fleeing from situations of persecution, discrimination, war, other human rights violations, or humanitarian disasters. Just what exactly amounts to humanitarian assistance is not clear and there is no further clarification in the Council Directive on this point. Some guidance may be offered by article 6 of the Framework Decision which recognizes Member States' obligation to protect

> refugees and asylum seekers in accordance with international law on refugees or other international instruments relating to human rights, in particular Member States' compliance with their international obligations pursuant to articles 31 and 33 of the 1951 Convention relating to the status of refugees, as amended by the Protocol of New York of 1967.[74]

Seen in this context, article 1(2) of the Council Directive, which shares similarities with article 19 of the Smuggling of Migrants Protocol, can be understood to exempt persons from liability who facilitate the illegal entry of persons who are refugees. However, article 6 of the Framework Decision only affects punishment; it does not eliminate the offence of facilitating illegal entry as such and may thus undermine the obligation under article 31 of the Refugee Convention, which requires States parties not to penalize refugees for illegal entry if they come directly from a territory where their life or freedom is threatened.[75] Neither the Council Directive nor the Framework Decision contains any safeguards to protect persons acting for other humanitarian purposes, rescue at sea, or acting in other emergency situations.[76] The fact that the Council Directive does not directly and conclusively exempt smuggling for humanitarian purposes from criminal liability has attracted criticism for leaving asylum seekers, and those who come to their aid, in limbo.[77]

Unlike the Smuggling of Migrants Protocol, the EU instruments provide no specific exemption for situations in which a person facilitates the illegal entry of a family member for no financial or other benefit. The perpetrators covered by the Council Directive, notes Ventrella, 'include migrants who regularly reside within the territory of a Member State, and who are attempting to reunite with family, prevent the persecution of relatives in war-torn countries, or aiding them in escaping unbearable economic conditions'.[78] She suggests that article 8 of the European Charter of Fundamental Rights, which protects the right to family life, can be interpreted to permit irregular migrants to be reunited with their families,[79] although it is not clear that this would exempt them from criminal liability for facilitating their illegal entry.

[74] See also EU Charter of Fundamental Rights art 18 ('right to asylum').

[76] ibid 9. [77] Mitsilegas (n 73) 10. [78] Ventrella (n 72) 44. [79] ibid.

Neither the Council Directive nor the Framework Decision contains a specific clause on the (non-)criminalization of persons who are the object of the offences set out in paragraphs 1(1)(a) and (b) of the Council Directive. It is difficult to gauge whether or not the EU instruments endorse the non-criminalization principle advocated by article 5 of the Smuggling of Migrants Protocol. There is nothing in the EU instruments mandating or justifying the criminalization of migrants for having been smuggled. While the preambles of both instruments recognize 'that illegal immigration must be combated', it is also clear that their main focus is on 'combatting the aiding of illegal immigration'[80] and not on punishing smuggled migrants.[81]

5. Observations

International law relating to smuggling of migrants complements international refugee law, but can also run into conflict with it. The Smuggling of Migrants Protocol is a criminal justice instrument that acknowledges the rights and protection of refugees, which can be 'problematic from a human rights perspective'.[82] The Protocol supplements the UNTOC,[83] and through it States gain access to a range of criminal law and law enforcement tools designed to combat organized crime and foster international cooperation. The Smuggling of Migrants Protocol and the UNTOC add little to protect refugees and other migrants. Human rights protection was not the pre-eminent driver for those who drafted the Smuggling of Migrants Protocol and it remains a secondary goal compared to the strong criminal justice focus of this instrument.

Concerns have been raised that international law on the smuggling of migrants has contributed to the criminalization of refugees and other migrants and has thus exacerbated hostile responses to international migration.[84] The fact that many refugees actively resort to smugglers to escape persecution and/or to join their families has largely been overlooked by those proposing action against smuggling. It is now an international offence to assist any person in an illegal border crossing, regardless of whether that person is a refugee in need of protection.[85] 'By using smugglers', notes Young,

> refugees and asylees risk compromising their immigration claims because many nations regard smuggling as circumventing border control measures and associating with criminal organisations. Many nations presume smuggled migrants are economic migrants, not refugees and asylum seekers, and therefore focus on punishment rather than protection.[86]

The human rights deficiencies of the Smuggling of Migrants Protocol are most evident in its reference to migrants as 'objects',[87] thus enabling States to describe smuggling as a victimless crime.[88] Trafficked persons, on the other hand, are referred to as 'victims' and have access to several assistance and protection measures not afforded to smuggled migrants. The distinction between different categories of irregular migrants, such as smuggled migrants, victims of trafficking, and, where applicable, refugees, has created a hierarchy of protection, with some people receiving more benefits than others. The criteria used to make these distinctions are not always certain; the consequences, however, are very severe. In some cases, this can lead to the exclusion of people who do not neatly fit into any of these categories.

Furthermore, because the Trafficking in Persons Protocol affords greater protection, States 'have additional incentives to categorize the individuals as smuggled rather than trafficked'.[89] Adding to this problem is the fact that illegal entry and smuggling of migrants are generally much easier to detect and prosecute than trafficking in persons. This means that many more persons are treated as smuggled migrants and 'illegal immigrants' rather than potential victims of trafficking or, as the case may be, as asylum seekers or refugees. 'The trafficking issue is far more complex than envisaged by policy makers'[90] and law enforcement, border control, and asylum authorities are often not well trained or equipped to identify instances of trafficking.[91]

Against this background, some authors have called for a more holistic approach that captures the full spectrum of irregular migration, while others advocate strongly for maintaining the established categories and privileging some irregular migrants over others. 'The different types of protection and assistance afforded should complement—and not compete with—each other,' remarks Elliott.[92] Those 'who fixate, for instance, on disassociating "refugee" from what it is to be a "migrant" [worker] overlook the chaotic circumstances of individuals and the common shifts in factors driving human mobility', notes McAdam.[93] 'The "one or the other" agenda fuels a destructive turf war over topic-territory that ultimately may come at the cost of meaningful protection of the people caught in its crossfire.'[94]

In 2018, two new instruments came into being that adopt a more comprehensive approach to irregular migration generally, and to the situation of refugees specifically. The Global Compact for Migration, adopted by the UN General Assembly in December 2018, seeks to improve cooperation on international migration, and enhance migration governance, human mobility, and the rights of migrants. It contains specific sections on the smuggling of migrants that echo the obligations under the Smuggling of Migrants Protocol, but that also place smuggling within the broader migration context. Importantly, the Compact contains a range of measures aimed at creating durable

solutions to irregular migration in all its forms, something the Smuggling of Migrants Protocol fails to consider. The Global Compact on Refugees, also adopted in 2018, contains a range of measures to support refugees and addresses some of the strategic and policy issues that were not predictable when the Refugee Convention and its Protocol were conceived.

Despite the criticism levelled at the Smuggling of Migrants Protocol and its many weaknesses and gaps, the Protocol nevertheless sets standards that many States have yet to reach. Conflicts between international law relating to smuggling of migrants, on the one hand, and international refugee law, on the other, are less likely to arise from the relevant treaties but rather from State practice. The Smuggling of Migrants Protocol, seen in context with other international agreements on refugees, human rights, and migration, constitutes one piece of a global framework that seeks to promote safe and managed migration. It does not endorse policies and practical measures aimed at curtailing migration, exacerbating the risks faced by migrants, or creating zones of lawlessness and impunity at borders.[95]

CHAPTER 30

HUMAN TRAFFICKING AND REFUGEES

CATHERINE BRIDDICK AND
VLADISLAVA STOYANOVA

1. Introduction

This chapter assesses the interactions between the international trafficking regime and international refugee and human rights law. In practical terms, refugees and other forced migrants can fall victim to trafficking when they travel irregularly in search of protection, or when they seek livelihoods while lacking legal rights, as may arise when they await the outcome of protracted status determination, or live without the right to work. The chapter takes a feminist approach, highlighting the gendered nature of trafficking and the responses thereto.[1] The major difficulties in researching trafficking notwithstanding,[2] there is much evidence that women and girls are more likely than men and boys to be trafficked, and are also more likely to be trafficked for particular forms of exploitation.[3] Consonant with this evidence and the specialist legal regimes

[1] See Chapters 3 and 40 in this volume.

[2] See Mary Bosworth, Carolyn Hoyle, and Michelle Madden Dempsey, 'Researching Trafficked Women: On Institutional Resistance and the Limits to Feminist Reflexivity' (2011) 17 Qualitative Inquiry 769.

[3] Eurostat, *Trafficking in Human Beings* (2015) 10–11, over the three-year period considered, 80 per cent of identified and registered victims of trafficking were women, 95 per cent of those trafficked for sexual exploitation were women, while 71 per cent of those trafficked for labour exploitation were men. See also Sylvia Walby and others, *Study on the Gender Dimension of Trafficking in Human Beings: Final Report* (European Commission 2016) and Committee on the Elimination of Discrimination against Women, 'DRAFT General Recommendation on Trafficking in Women and Girls in the Context of Global Migration' <https://www.ohchr.org/EN/HRBodies/CEDAW/Pages/GRTrafficking.aspx> accessed 16 October 2020.

concerned with violence and discrimination against women, this chapter takes the position that trafficking is, in some circumstances, a form of gender-based violence.[4]

This chapter argues that the international trafficking regime has negative consequences for migrants, refugees and trafficked persons themselves. While some victims of trafficking may be entitled to protection as refugees, as UNHCR acknowledges, '[n]ot all victims or potential victims of trafficking fall within the scope of the refugee definition'.[5] Recourse to international human rights law is, consequently, vital, not only to mitigate some of the trafficking regime's harmful consequences, but also to enhance the protective capacities of both the trafficking regime and refugee law, for the benefit of *all* those whose rights and statuses are determined by them.

Section 2 introduces the international trafficking regime, a complex and multilayered regime with diverse legal sources; it explores its links with the suppression of mobility and compares the limited rules that protect some refugees and trafficked persons from criminalization. Section 3 explores the links between trafficking and refugee recognition. Section 4 examines the protections provided to both refugees and trafficking victims by 'general' international human rights law and the specialist legal regimes concerned with discrimination and violence against women. Ensuring victims' residence status is one form of protection specifically considered. The chapter concludes by briefly discussing the potential of the three different bodies of law drawn on: the trafficking regime, refugee law, and human rights law, to remedy and mitigate each other's deficiencies.

2. The Trafficking Regime

The UN Trafficking Protocol supplementing the UN Convention against Organized Crime,[6] defines trafficking as:

[4] There are four main legal definitions of gender-based violence/violence against women: see Committee on the Elimination of Discrimination against Women, 'General Recommendation No 35 on Gender-Based Violence against Women, Updating General Recommendation No 19', UN doc CEDAW/C/GC/35 (26 July 2017) para 9; Inter-American Convention on the Prevention, Punishment and Eradication of Violence against Women (adopted 9 June 1994, entered into force 5 March 1995) 33 ILM 1534 (1994) (Convention of Belém do Pará), art 1; Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa (adopted 1 July 2003, entered into force 25 November 2005) (Maputo Protocol), art 1(j); Council of Europe Convention on Preventing and Combating Violence against Women and Domestic Violence (adopted 11 October 2011, entered into force 1 August 2014) 3011 UNTS 1 (Istanbul Convention), art 3(a), (d).

[5] UNHCR, 'Guidelines on International Protection No 7: The Application of Article 1A(2) of the 1951 Convention and/or 1967 Protocol Relating to the Status of Refugees to Victims of Trafficking and Persons at Risk of Being Trafficked', HCR/GIP/06/07 (7 April 2006) para 6.

[6] Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children (adopted 15 November 2000, entered into force 25 December 2003) 2237 UNTS 319 (UN Trafficking Protocol); United Nations Convention against Transnational Organized Crime (adopted 15 November 2000, entered into force 29 September 2003) 2225 UNTS 209 (UN Organized Crime Convention).

> the recruitment, transportation, transfer, harbouring or receipt of persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation. Exploitation shall include, at a minimum, the exploitation of the prostitution of others or other forms of sexual exploitation, forced labour or services, slavery or practices similar to slavery, servitude or the removal of organs.[7]

The definition adds that the consent of a victim of trafficking to the intended exploitation is irrelevant where any of the means (force, coercion, fraud, deception, etc) has been used.[8] For trafficking to be constituted, therefore, three elements need to be cumulatively fulfilled: (1) an action of recruitment, transportation, transfer, harbouring, or receipt; (2) by certain means (such as the threat or use of force); (3) for the purposes of exploitation. Significantly, a person can be trafficked even if he or she is not, for whatever reason, exploited. It is enough if the victim has, for example, been recruited by abusing her or his position of vulnerability 'for the purpose of exploitation'. The wrong captured by this definition is not, consequently, exploitation itself, but a process that *might* lead to it.[9]

As trafficking is 'the international supply chain into exploitation',[10] it is important to understand what 'exploitation' entails and, crucially, what severity threshold needs to be applied when determining whether someone has been, or is at risk of being, exploited. The UN Trafficking Protocol does not define 'exploitation'; it only provides examples of what exploitation might mean *at a minimum*. The term 'sexual exploitation', and whether prostitution is *per se* a form of exploitation, continues to be the subject of contestation and debate.[11] For present purposes, it suffices to observe that there is no international consensus on how prostitution should be addressed within the trafficking framework, States having highly divergent policies in this area.[12]

As to the other examples of exploitative practices in the definition, for example, forced labour, slavery, and practices similar to slavery, there is no doubt that these reflect severe forms of abuse.[13] However, as noted above, they are examples of what

7 UN Trafficking Protocol (n 6,) art 3(a). 8 ibid art 3(b).

11 Stoyanova (n 9) 62. See Dissenting Opinion of Judge Koskelo in *SM v Croatia* (2019) 68 EHHR 7 (referred to the Grand Chamber).

12 The Protocol was not intended to affect national laws on prostitution: UN Office on Drugs and Crime (UNODC), *Travaux Préparatoires of the Negotiations for the Elaboration of the United Nations Convention against Transnational Organized Crime and the Protocols Thereto* (UN 2006) 347.

13 The meanings of these terms have been clarified by the ECtHR and the Inter-American Court of Human Rights: *Siliadin v France* (2006) 43 EHHR 16; *CN and V v France*, App No 67724/09 (ECtHR, 11 October 2012); *Case of the Hacienda Brasil Verde Workers v Brazil*, Inter-American Court of Human Rights Series C No 318 (20 October 2016) (judgment in Spanish only). See further Vladislava Stoyanova, 'United Nations against Slavery: Unravelling Concepts, Institutions and Obligations' (2017) 38 Michigan Journal of International Law 359.

'exploitation' might mean at the very minimum. The term 'exploitation' may be used to encompass and capture other, less severe, conduct. Terms like 'deception' and 'abuse of power or of a position of vulnerability' are, similarly, ambiguous. As with 'exploitation', there is also no clear conceptual framework for defining the minimum threshold of severity for the 'means' element in the trafficking definition.[14] The trafficking definition is, consequently, of only limited use in assessing the level and severity of harm that migrants may be subject to. Materially different cases might, and are, pooled together under the same heading.[15]

The ambiguities discussed in the preceding paragraph are informed by the specific legal context[16] in which the definition was adopted: transnational criminal law.[17] This branch of international law uses the tools of criminal law and enhanced international cooperation to suppress certain cross-border activities that States consider undesirable, including migration from the Global South. Similar to the UN Smuggling Protocol,[18] article 11(2)–(4) of the UN Trafficking Protocol, for example, obliges States to impose sanctions on carriers who transport passengers without the correct travel documents.[19] Together with the UN Smuggling Protocol, the UN Trafficking Protocol can, consequently, be viewed as part of an arsenal of measures designed to suppress mobility.[20]

The immigration position of trafficking victims is dealt with in articles 7 and 8 of the UN Trafficking Protocol. While article 7 briefly encourages States to consider taking measures to permit victims to remain in their territory, article 8 provides detailed guidance on 'repatriation'. States in which the trafficked person last had a right of permanent residence are to 'facilitate and accept' their return; States are also to assist in verifying a trafficked person's identity and facilitate their re-documentation.[21] Although repatriation is 'preferably' voluntary,[22] it does not have to be so, the Protocol's drafters having rejected a US proposal that required any repatriation to be both 'safe and voluntary'.[23]

[14] Stoyanova (n 9) 54.

[15] ibid 309.

[16] The UN Trafficking Protocol (n 6) was adopted with the Protocol against the Smuggling of Migrants by Land, Sea, and Air, supplementing the United Nations Convention against Transnational Organized Crime (adopted 15 November 2000, entered into force 28 January 2004) 2241 UNTS 507 (UN Smuggling Protocol). According to Stoyanova (n 9) 309, 'all of these intended to effectively function regardless of whether the alleged victims of human trafficking were exploited, as understood in the broad sense, or in fact enslaved'.

Finally, although the UN Trafficking Protocol imposes a number of clear obligations on States relating to their borders or domestic criminal laws, when it comes to victims' protection and assistance, the obligations it imposes are significantly weaker. For example, States are required to criminalize trafficking (as discussed further below),[24] but they are only encouraged to protect victims' 'privacy and identity' where 'appropriate'[25] and to '*endeavour* to provide for the physical safety of victims'.[26]

The UN Trafficking Protocol has been supplemented by a range of measures developed and adopted at the regional level. While there is no African treaty addressing trafficking, various 'soft law' initiatives have been undertaken in the region to 'fight' it.[27] Similarly, although the Inter-American system has not developed a general anti-trafficking convention, it has taken action on the trafficking of minors.[28] Trafficking-specific instruments have been adopted in both Europe and Asia.

Within Europe, two legal frameworks address human trafficking. The first is established by the Council of Europe Convention on Action against Trafficking in Human Beings (the CoE Anti-Trafficking Convention).[29] The second is established by two EU law instruments: the EU Anti-Trafficking Directive[30] and the EU Residence Permit Directive.[31]

The CoE Anti-Trafficking Convention, which reproduces the UN Protocol's trafficking definition, requires each State Party to identify, assist, and protect victims, including by not punishing them, preventing their removal and, in certain limited circumstances, providing them with renewable residence permits.[32] Asylum seekers and refugees may benefit from these provisions in parallel with the protection and assistance that is specifically applicable to them (discussed below). The CoE Anti-Trafficking Convention also establishes the Group of Experts on Action against Trafficking in Human Beings (GRETA) to monitor its application.[33] Similar to the UN Trafficking Protocol, it also imposes obligations for enhanced border control measures.[34]

[32] CoE Anti-Trafficking Convention (n 29) ch III.

[33] ibid art 36.

[34] ibid arts 7–8.

The EU's Trafficking Directive develops[35] and clarifies the international law definition of trafficking and obliges EU Member States to criminalize it.[36] At the same time, the Directive also reproduces many of the CoE Anti-Trafficking Convention's protection and assistance measures.[37] The Directive does not, however, guarantee victims' non-removal during the identification procedure or provide for the regularization of their stay.[38] These issues have been regulated by the EU Residence Permit Directive, which provides a residence permit to some victims of trafficking who cooperate with criminal proceedings.[39] Residence permits granted pursuant to this Directive are, however, granted on a much more limited basis, and are significantly more precarious, than those provided under the CoE Anti-Trafficking Convention.[40] Under the European trafficking regime, therefore, most victims of trafficking continue to face return to their country of origin, involuntarily if necessary. The granting of a residence permit operates to defer this return for a comparatively short period of time and for particular purposes only.[41]

The Association of Southeast Asian Nations (ASEAN) has adopted the ASEAN Convention against Trafficking in Persons, Especially in Women and Children.[42] This treaty also reproduces the UN definition of human trafficking and, similar to the CoE Anti-Trafficking Convention, contains provisions on the identification and assistance of trafficking victims.[43] A comparison of the ASEAN Convention and its UN and CoE counterparts reveals that the former does not reproduce provisions that position the enhancement of border control measures as a response to trafficking. However, the ASEAN Convention is less rights-protective than its CoE counterpart and does not have a dedicated monitoring body to oversee it.[44]

Finally, the South Asian Association for Regional Cooperation (SAARC) has adopted the SAARC Convention on Preventing and Combating Trafficking in Women and

[35] EU Trafficking Directive (n 30) preamble, para 11 states that 'the exploitation of begging, including the use of a trafficked dependent person for begging, falls within the scope of the definition of trafficking in human beings only when all the elements of forced labour or services occur'.

[43] ibid arts 2, 14. Art 14(4) refers to the possibility for victims to remain on the territory, but only 'in appropriate cases'.

[44] The ASEAN Convention (n 42) is monitored by the ASEAN Senior Officials Meeting on Transnational Crime per art 24. For a comprehensive comparison of the ASEAN Convention with the UN and the European standards, see Ranyta Yusran, 'The ASEAN Convention Against Trafficking in Persons: A Preliminary Assessment' (2018) 8 Asian Journal of International Law 258.

Children for Prostitution.[45] As the title suggests, this treaty has a limited personal scope. Its material scope is also constrained by its specific definition of 'persons subjected to trafficking' as 'women and children victimized or forced *into prostitution* by traffickers by deception, threat, coercion, kidnapping, sale, fraudulent marriage, child marriage, or any other unlawful means'.[46]

Pursuant to the international obligations described above, the main response to trafficking at the national level has been criminalization. States have, in general, reproduced the relevant international trafficking definitions in their domestic criminal laws and, in doing so, have imported those definitions' ambiguities.[47] As noted above, the international definitions only represent the *minimum* scope of criminalization required.[48] States may go beyond these in their own criminal laws.[49] Consequently, different States have developed quite different definitional approaches to trafficking.[50]

Enhanced border control measures were identified above as being an integral part of the international trafficking regime. Anti-trafficking measures purport to pursue humanitarian objectives, namely the prevention of coerced/deceptive movement and 'exploitation'. It is far from clear that enhanced border controls actually achieve this objective. A lack of legal clarity as to the relevant threshold of coercion/deception and as to what actually constitutes 'exploitation' (as discussed above) gives rise to uncertainty about what exactly it is that States should be, and are, trying to prevent.

In practice, the suppression of mobility in the name of anti-trafficking is generally indiscriminate, affecting all migrants, including those who seek, and may be entitled to, international protection. To flee persecution, refugees might be left with no option but to enter into exploitative arrangements.[51] The potential of anti-trafficking measures to affect the position of those seeking protection is recognized by the UN Trafficking Protocol, article 14(1) of which states:

[45] SAARC Convention on Preventing and Combating Trafficking in Women and Children for Prostitution (adopted 5 January 2002, entered into force 15 November 2005) <http://un-act.org/wp-content/uploads/2015/11/South-Asian-Association-for-Regional-Cooperation-SAARC-Convention-on-Preventing-and-Combating-Trafficking-in-Women-and-Children-for-Prostitution.pdf> accessed 20 May 2020.

[46] ibid art 1(5) (emphasis added).

[47] '[T]here exists a remarkable level of uniformity between States with respect to definitions [of human trafficking]': UNODC, 'The International Legal Definition of Trafficking in Persons: Consolidation of Research Findings and Reflection on Issues Raised, Issue Paper' (UN December 2018) 22.

[48] This is the case even for the EU, an advanced supranational legal order. EU law is limited to the adoption of 'minimum rules concerning the definition of criminal offences', Consolidated Version of the Treaty on the Functioning of the European Union [2012] OJ C326/47 (TFEU), art 83(1).

[49] Doing so may be impermissible if it is contrary to the object and purpose of the relevant treaty.

[51] Bill Frelick, Ian M Kysel, and Jennifer Podkul, 'The Impact of Externalization of Migration Controls on the Rights of Asylum Seekers and Other Migrants' (2016) 4 Journal on Migration and Human Security 190.

> Nothing in this Protocol shall affect the rights, obligations and responsibilities of States and individuals under international law, including international humanitarian law and international human rights law and, in particular, where applicable, the 1951 Convention and the 1967 Protocol relating to the Status of Refugees and the principle of non-refoulement as contained therein.

Nonetheless, there remains a fundamental tension between anti-trafficking measures and the rights of asylum seekers and refugees. As Hathaway has observed, such measures have 'resulted in significant collateral human rights damage by providing a context for developed [S]tates to pursue a border control agenda under the cover of promoting human rights'.[52] In contrast, Gallagher's 'sharply differing' perspective on the 'global battle to combat trafficking'[53] differentiates what she perceives to be the limitations of the UN's Trafficking and Smuggling Protocols from the 'failings and inadequacies of the international system for refugee protection',[54] including the absence of legal routes to seek protection. While we agree with Gallagher that a critical appraisal of the international trafficking regime should not obscure more 'obvious solutions'[55] to the needs of those seeking international protection, State practice since Hathaway's intervention on the '[q]uagmire'[56] of anti-trafficking has borne out many of his claims. Under the guise of preventing trafficking, States have adopted a number of measures suppressing mobility. For example, some States have taken steps to prevent particular groups of women from leaving their jurisdictions, justifying such restrictions as protective measures for the women concerned.[57] Countries of destination 'cooperate' with countries of origin and transit, strengthening the latter's border control capacities in an indiscriminate manner.[58] The EU's long-standing externalization of border controls,[59] often 'deceptively framed'[60] as pursuing humanitarian ends, entails much general suppression of mobility. Notably, EU documents often use the terms 'trafficking' and 'smuggling' interchangeably,[61] using trafficking's harmful and coercive nature to mask interventions that prevent refugees and others from fleeing. Such documents demonstrate that anti-trafficking border control measures are intertwined with the broader agenda of mobility suppression.

One consequence of these measures is the containment of migrants, including refugees,[62] within third countries where they suffer notable human rights violations.[63] Thus far neither the extraterritorial reach of *non-refoulement*, nor the human right to leave, have established clear legal pathways to protection that can counteract this containment. The former implies that the obligation not to remove people to a risk of persecution or other serious harm is activated once asylum seekers are in contact with agents of destination States (eg at the border or on the high seas).[64] The activation of this obligation is, however, contingent on contact with destination States' agents, a condition that is not met in circumstances of containment.

It has been claimed that the extraterritorial reach of *non-refoulement* facilitates trafficking (and smuggling), by encouraging people to undertake journeys in, for example, the hope that they come into contact with destination States' agents and are disembarked on those States' territories.[65] Such claims are, however, legally irrelevant from the perspective of the *non-refoulement* obligation which, once triggered, must be adhered to. The empirical basis of such claims is also highly questionable.[66]

Although individuals who are contained and thus prevented from leaving to seek international protection might not be protected by the extraterritorial reach of *non-refoulement*,[67] the right to leave any country, whether to seek international protection or for any other reason, is still relevant.[68] While this right may be subject to limitations on certain grounds (where provided by law, to protect public order, etc), restrictions on mobility pursuant to, or justified by, States' anti-trafficking obligations will only be in compliance with the right to leave if they are no more than is necessary to meet these objectives and do not discriminate.[69] States that limit individuals' ability to leave their territory will, under this test, have to demonstrate that such limitations actually prevent movement that is 'for the purpose of exploitation' and that there are no other, less restrictive measures available to achieve this. Crucially, however, the right to leave cannot impose an obligation upon countries of destination to ensure legal pathways to protection.[70]

Finally, despite the tensions between anti-trafficking measures and the rights of refugees, some regional anti-trafficking instruments offer important additional forms of protection. Refugees (including those who have been trafficked) and trafficking victims (whether or not refugees) may be protected from penalization for illegal entry or for their involvement in certain criminal activities. In relation to the former group, the Refugee Convention's article 31(1) ensures that, providing certain conditions are met, asylum seekers are not punished 'on account of their illegal entry or presence'.[71] In relation to the latter, some regional anti-trafficking instruments contain non-punishment provisions to ensure that victims are not punished for their involvement in unlawful activities connected to their trafficking.[72] While the protective scope of the refugee and trafficking non-punishment provisions overlap, there are some important divergences. For example, article 31(1) of the Refugee Convention is restricted to refugees 'coming directly from a territory where their life or freedom was threatened' who 'present themselves without delay to the authorities and show good cause for their illegal entry or presence'. In contrast, article 26 of the CoE Anti-Trafficking Convention is not limited in this way.

3. Victims of Trafficking as Refugees

The trafficking regime has a direct relationship with the refugee regime when victims of trafficking seek recognition as refugees.[73] Those who have been trafficked, or fear it, turn to refugee law for protection. Often this is because the trafficking regime is preoccupied with 'victim repatriation', whereas victims often need the sort of protection refugee law offers, in particular, protection from return and a secure right of residence. In contrast to the residence permits that may be available to *some* victims of trafficking in Europe, an individual's asylum claim cannot be linked to her or his willingness to cooperate with criminal proceedings.[74]

Trafficking itself, and many of the acts associated with it, including forced labour, sexual exploitation, and reprisals from traffickers, are severe human rights violations.[75] Such violations may amount to persecution for a Refugee Convention reason where the State itself

[75] CEDAW, art 6; Charter of Fundamental Rights of the European Union [2007] OJ C303/01 (CFREU), art 5(3). Trafficking was brought within the ambit of art 4 ECHR by the ECtHR in *Rantsev v Cyprus and Russia* (2010) 51 EHRR 1. Slavery and trafficking in *women* is prohibited by art 6(1) American Convention on Human Rights (n 68). However, following *Case of the Hacienda Brasil Verde Workers v Brazil* (n 13) this provision must be interpreted as protecting *all* trafficking victims. Finally, art 5 African Charter on Human and Peoples' Rights (adopted 27 June 1981, entered into force 21 October 1986) 21 ILM 58 (1982) prohibits slavery and 'all forms of exploitation and degradation of man'.

either perpetrates the relevant harm, or is unwilling or unable to offer sufficient protection from it.[76] Where the harm feared is from non-State actors, internal relocation is unlikely to be a viable option where the person concerned is vulnerable to being (re)trafficked because of factors including psychological problems, isolation, or a lack of skills.[77] A victim of trafficking may also fear persecution if, on return and absent State protection, he or she would be stigmatized, discriminated against, or punished because he or she had, for example, been sexually exploited.[78] Gallagher argues that the anti-trafficking regime has 'helped refugee advocates in their efforts to explore and extend the boundaries of international refugee law', with the recognition that trafficking can found a refugee claim enabling 'reinterpretations of core aspects of the much contested refugee definition'.[79]

While this may be the case, a brief consideration of the jurisprudence reveals that it is often difficult for victims of trafficking to establish a refugee claim, in particular the required nexus with a Convention ground[80] (especially since the Convention grounds are still subject to androcentric interpretation). For example, in New Zealand, a male human rights activist's resistance to trafficking was accepted as a political opinion for Convention purposes,[81] yet the same approach has often not been applied to the (usually female) victims who resist by escaping their traffickers and seeking protection. They tend to bring their claims as members of a particular social group (PSG), which poses greater legal challenges. This has been the case in jurisdictions that take either the 'social perception' or 'protected/immutable characteristics' approach[82] to the question of what constitutes a PSG.[83] EU law's combination of these two approaches in a single test,[84] the failure of decision-makers to recognize the gendered nature of trafficking,[85] and their recourse instead to overly narrow, restrictive PSGs[86] has given rise to a complex and

[85] And the harms associated with it, as occurred in *Talo v Canada (Minister of Citizenship and Immigration)*, 2012 FC 478.

[86] In *AZ* (n 84) para 140, the Upper Tribunal rejected the proposed PSG of 'women in Thailand', opting instead for the 'narrower' group of 'young females who have been victims of trafficking for sexual exploitation'. In *Matter of X* (n 83) 10–12 the PSG was identified as 'young Congolese women who have participated in prostitution'.

sometimes contradictory jurisprudence that excludes many trafficking victims from refugee protection.[87] Furthermore, the trafficking regime's association of victims with crime has also led to the denial of refugee protection.[88] To conclude, while some victims of trafficking may be recognized as refugees, in reality many trafficking victims are rendered 'invisible' as refugees.[89]

Recourse to the specialist regimes concerned with violence against women may be fruitful here, as the CEDAW Committee has, for example, made a series of recommendations concerning trafficking-related refugee claims.[90] In addition to setting standards for refugee status determination processes that are gender-sensitive, these recommendations confirm that trafficking is, or may entail, gender-related persecution.[91] Such recognition may be relied upon to found a more principled and inclusive approach to the identification and delineation of PSGs in trafficking cases, and may remedy, at least in part, some of the deficiencies in the jurisprudence on PSGs outlined above.

4. Human Rights Law for Victims of Trafficking

This chapter has argued that neither the trafficking nor the refugee regime effectively protects victims of trafficking. It now turns to human rights law by first examining its general protections, in particular the positive obligations it entails to protect against violence.

The obligation to provide effective protection from violence includes the obligation to exercise 'due diligence' and respond appropriately to actual or potential rights violations, whether or not these are attributable to the State.[92] While the precise nature and scope of

[91] ibid paras 45–6, 50.

[92] Due diligence obligations have been found to be inherent in protected rights and have also been justified by reference to States' obligations to secure rights within their jurisdictions and provide effective remedies to victims (arts 1 and 13 ECHR): see eg *MC v Bulgaria* (2005) 40 EHRR 20. The ECtHR has referred to, but not adopted, the terminology of 'due diligence' (used by the Human Rights Committee, CEDAW Committee, the IACtHR/IACHR, and now the Istanbul Convention) when considering States' positive obligations: see eg *Opuz v Turkey* (2010) 50 EHRR 28; Vladislava Stoyanova, 'Due Diligence versus Positive Obligations: Critical Reflections on the Council of Europe Convention on Violence against Women' in Johanna Niemi, Lourdes Peroni, and Vladislava Stoyanova (eds), *International Law and Violence against Women: Europe and the Istanbul Convention* (Routledge 2020) 95.

particular positive and due diligence obligations may be difficult to ascertain, it is possible to distinguish between two types or levels: obligations of a structural or systemic nature, and obligations owed to specific individuals (or groups thereof).[93] In relation to the former, States are required to put in place laws, processes, and policies to address the 'root causes' of rights violations, to prevent/deter them and, if/when they do occur, to identify perpetrators, hold them to account, and make appropriate reparation to their victims.[94] In *Hacienda Brasil Verde Workers v Brazil*,[95] the Inter-American Court of Human Rights (IACtHR) 'went beyond' the European Court of Human Right's (ECtHR) jurisprudence in this regard, establishing State responsibility for structural inequalities, including poverty, which make people vulnerable to exploitation.[96] With respect to the latter, States are required to offer individuals, including trafficked persons and refugees, 'effective measures of prevention, protection, punishment and reparation'.[97] A State is required to take 'preventative measures' where it knows, or ought to know, that a particular individual faces a 'real and immediate risk' of harm.[98]

These 'general' human rights protections have been supplemented by the specialist legal regimes concerned with discrimination and violence against women, such regimes considering trafficking to be, in some circumstances, a form of gender-based violence.[99] The Inter-American Convention on the Prevention, Punishment and Eradication of Violence against Women (Convention of Belém do Pará) requires, for example, that States 'take special account' of the vulnerability of women to violence by reason of their status as migrants, refugees, or displaced persons.[100] The Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa (Maputo Protocol) imposes specific obligations on States in relation to trafficking, as well as for the protection of refugees and other displaced persons.[101] Finally, the Council of Europe's Convention on Preventing and Combating Violence against Women and Domestic Violence (Istanbul Convention) protects migrant and refugee

women from discrimination, in addition to developing particular protective measures for their benefit.[102] International human rights law has, therefore, imposed obligations on States in relation to trafficking (and other) victims' needs, protection, and safety which are of a significantly higher standard than is required by the trafficking regime itself.

In addition to ensuring that, for example, victims of trafficking are protected from their traffickers, the obligation to provide effective protection from violence may be relied upon to challenge migration controls for contributing to and generating trafficking risks.[103] In *Rantsev v Cyprus and Russia*, the ECtHR examined immigration rules that subjected people to an increased risk of trafficking and (other) violence.[104] At the structural level, the court ruled that States' immigration rules must address concerns relating to the 'encouragement, facilitation or tolerance' of trafficking, and that the migration statuses such rules created must offer 'practical and effective' protection from trafficking and other forms of exploitation.[105] At the individual level, States must take operational measures to protect those who may be victims of trafficking or exploitation where they are aware, or ought to be aware, of circumstances giving rise to a credible suspicion that such victims are at risk of harm.[106]

In the cases that have followed *Rantsev*, the ECtHR has offered more detailed guidance as to the nature of such due diligence obligations, drawing at times on GRETA's work to do so.[107] In this jurisprudence, due diligence has been relied upon to improve the position of migrants who have, whether legally or not, gained access to the jurisdiction of a State party to the ECHR.[108] The complexity of the relationships between deterrence policies and trafficking notwithstanding, the 'nexus between access to safe migration routes, obligations of due diligence, and compliance with human rights standards is rarely acknowledged by [S]tates'.[109] The cases of *Hacienda Brasil Verde Workers*, *Rantsev*, and *Chowdury* establish the potential, however, of due diligence obligations to hold States responsible for structural inequalities, unsafe migration routes, and their allied and resulting failures to appropriately respond to irregular and illegalized migrants' increased vulnerability to violence.

Although not discussed in these terms by the UN Human Rights Committee, IACtHR, or ECtHR, protection from *refoulement* can also be characterized as a 'preventative measure'.[110] Whether or not the harm feared is anticipated to materialize in the State's own jurisdiction or the one to which an individual may be returned, the 'removing' State's obligation to the relevant individual is triggered in comparable circumstances: where he or she faces a 'real risk' of serious or irreparable harm.[111] However, while refugees are entitled to a protective and rights-bestowing status, the same is not, as a rule, true for those trafficking victims who are protected from *refoulement* by human rights law. Human rights law does not generally require States to offer a secure migration status to those it is prohibited from returning.[112] Some trafficking victims *may* be eligible for a residence permit under the European trafficking regime (as discussed above), or the Istanbul Convention.[113] Victims of trafficking who are not recognized as refugees may, therefore, face either return (if not protected from *refoulement*) or be protected from removal without being accorded a protective status. This situation leaves them in a 'Kafkaesque stalemate',[114] unable to live within, or leave, their country of residence.

To avoid this situation, due diligence obligations and the right to a remedy[115] may be relied upon to argue that particular cases or scenarios generate more than just a right not to be removed. The IACtHR has ruled that to be reparative, a remedy must rectify and not re-establish 'the same structural context of violence and discrimination' within which the relevant violation(s) occurred.[116] While removal may appear to involve the relatively benign re-establishment of the *status quo*, it involves detention, violence, and frequently family separation. This, and the purely instrumental 'remedy' of short-term non-removal (without status or with one that is precarious), are both significantly more likely to perpetuate, rather than provide reparation for, the discrimination and violence that contribute to and sustain the conditions in which trafficking and its associated harms occur. Members of the CEDAW Committee have, consequently, opined that

victims of trafficking should receive 'all necessary benefits', including, where necessary, a migration status.[117] The UN Special Rapporteur on Trafficking in Persons, Especially Women and Children has similarly recommended granting victims a temporary or permanent migration status as a transformative remedy.[118]

In the European system, the ECtHR's recourse to the CoE Anti-Trafficking Convention, as interpreted by GRETA, has the potential to yield similar benefits. In *Chowdury*, the failure of the relevant authorities in Greece to have regard to article 13 of the Anti-Trafficking Convention, which concerns the granting of recovery and reflection periods, was found by the court to give rise to a breach of the positive obligation under article 4 ECHR to conduct an effective investigation.[119] While the court in *Chowdury* did not go so far as to recognize that articles 4 and 13 ECHR (the right to a remedy) could/should give rise to a more general obligation to regularize victims' stay, the judgment is, nevertheless, a significant step in this direction.[120]

5. Conclusion

This chapter has explored the interactions between three regimes: trafficking, refugee law, and human rights law, and, in particular, the latter's specific instruments for the protection of women. In some respects, the regimes diverge sharply in their protective capacities. By adopting an integrated approach, each regime may mitigate some of the others' deficiencies. As the chapter has explored, recourse to human rights standards concerned with gender-based violence should ensure that more victims of trafficking are recognized as refugees. Anti-trafficking measures that suppress mobility may be challenged by reference to human rights law's protection of the right to leave, as well as extraterritorial protection from *refoulement*. Human rights law offers trafficked persons greater protections than the trafficking regime, providing a much-needed protective corrective to the latter's focus on criminalization and migration control. Conversely, human rights law's general failure to establish secure residence rights (even for those protected against *refoulement*) may be mitigated for some victims in Europe by the Istanbul Convention's provisions on regularization. Accordingly, this chapter demonstrates the value of using human rights law to bolster protection for victims of trafficking.

[117] *Zheng v The Netherlands*, UN doc CEDAW/C/42/D/15/2007 (14 November 2008), dissenting opinion of Committee members Mary Shanthi Dairiam, Violeta Neubauer, and Silvia Pimentel (the majority finding the trafficking complaint inadmissible) para 8.7.

[120] The court's reference to GRETA may be crucial here, as GRETA has consistently 'stressed the importance of ensuring that unconditional assistance is provided to victims': GRETA, '8th General Report on GRETA's Activities Covering the Period 1 January to 31 December 2018' (Council of Europe 2019) 6.

CHAPTER 31

REFUGEE STATUS DETERMINATION

BRUCE BURSON

1. Introduction

Refugee status determination (RSD) is the post-Second World War-era term to describe a process by which the asylum norm, now expressed primarily through the Refugee Convention, is operationalized. While the concept of offering sanctuary from harm—'asylum'—is old, little has been written about the surrounding decision-making processes in the Convention's historical antecedents or precursors. This chapter begins by examining the origins of RSD. It charts how contemporary RSD reflects its historical antecedents and questions the robustness of a dichotomy between group and individual determination as a marker of development. It then outlines the increased systemization of RSD through dedicated status determination structures comprising both State and mandate RSD, and juridification via an ever-denser body of law and guidance. It then considers inherent and contextual challenges faced by RSD before detailing various proposals for reform to ensure that RSD is a 'fit-for-purpose' protection mechanism in the twenty-first century.

2. The Origin and Development of RSD

While this section focuses on developments within the European tradition, the concept of 'asylum' is of polycentric provenance. It is rooted in religion: for example, the Ashgabat Declaration observes that 'over 14 centuries ago, Islam laid down the bases for granting refuge, which is now deeply ingrained in Islamic faith, heritage and tradition'.[1] It is also rooted in the conduct of ancient civilizations.[2]

The word 'asylum', however, derives from the Greek *asylia*—inviolability—something enjoyed by persons whose work necessitated travel outside their own State.[3] Significantly, the right to claim or invoke *asylia* was surrounded by a process. At its core was the obligation on the person seeking protection to enter a place of sanctuary, such as a temple or shelter (*asylia hieron*) and perform a rite of supplication (*hiketeia*). Nor was the grant of *asylia* automatic. Rather, supplicants:

> also had to convince the God's priest that they deserved protection, and if they failed to do so, they could be turned away. . . . the God was not obliged to accept and protect every supplicant, just those who had a just claim.[4]

Within the European context this classical practice had, by the Middle Ages, become embedded in 'the custom of kings, princes and potentates, free cities and the church to grant asylum—i.e. protection from pursuit—at will in respective territories or in the holy places'.[5] With the emergence of the nation-State, such long-standing religious or cultural traditions of offering shelter and sanctuary became rooted in an emergent body of international law which now located the asylum norm in terms of extending asylum to erstwhile members of another territorial entity in the nascent system of autonomous States.[6]

The process surrounding granting asylum changed in fundamental ways from its classical progenitors. Whereas earlier processes had been individualized, the newly internationalized system came to embrace group-based recognition. Further, in contrast to the classical tradition, recognition of 'refugee status' entitling asylum in the receiving territory occurred before, rather than post-flight. Recognition took the form of an expression of sovereign power through *ex-ante* declarations of willingness to admit to their territory categories of persons whose refugee-like character had *already* been recognized due to well understood conflict between the group's beliefs and the religious character of the territory of origin.

These developments stemmed from the persecution of religious minorities in the pre-modern era. Louis XIV's 1685 Edict of Fontainebleau, prohibiting Protestant Huguenots from leaving France in breach of the understanding reached in the Peace of Westphalia—*jus emigrandi*—which allowed subjects of a religion different to that of their Prince to seek sanctuary in another territory, provided particular impetus.[7] What would now be described as recognition of the refugee-like character of persons exercising their right to *jus emigrandi*, was contained in edicts or proclamations by German princes,[8] English kings,[9] Dutch city magistrates,[10] and Swiss cantons.[11] Some described the beneficiaries of such proclamations as 'refugees'. For example, the 1709 decree by the Estates-General of the United Provinces of the Netherlands stated that 'Protestant refugees shall be acknowledged and received for the future as our subjects; and they shall enjoy the right of Naturalization'.[12] The 1690 Declaration of Privileges for Hamelin confers privileges on '*fluchtlinge*'—the German word for 'refugee'.[13]

In some instances, special privileges were conferred, and financial assistance and material benefits were provided. For example, in England, 'the Queens Charity' amounted to 9d per day for subsistence and lodging;[14] tariff exemption, housing assistance, and support for establishing businesses and manufactories under the Edict of Potsdam;[15] while Dutch city magistrates issued financial grants and discounted rental of specially constructed housing.[16]

Presaging the use of country information in contemporary RSD, these edicts and proclamations often followed a sophisticated lobbying campaign by trans-territorial networks of confessionalized diaspora/refugee populations, which utilized printing presses to 'publish accounts of the refugees' persecution, their sufferings, flight and exile'.[17]

There is also some evidence of a dedicated administrative process operationalizing such recognition. Hornung states 'the refugees usually moved in convoys from their home towns and arrived as groups at the assembly points where all immigrants were registered and their means and circumstances were recorded'. Hornung notes that the Edict of Potsdam instructed Huguenots to head to Amsterdam, Frankfurt, or Cologne where they would be met by a delegate who would transport them in convoys to their

assigned colony or place of settlement.[18] Struggling to cope with the influx of Huguenots, cantonal officials in Geneva opened a 'French Exchange', while their Bernese counterparts established a 'Chamber of Refugees' 'to aid the most necessitous newcomers and to try and find ways to resettle them in other Swiss areas or Germany'.[19] While the exact modalities surrounding Huguenot flight to safety are unclear, it seems reasonable to assume that Huguenot refugees, leveraging connections with trans-territorial networks and taking advantage of the protection and benefits extended under other edicts or proclamations, would also likely have met with some administrative authority on an *ad hoc* basis at the very least, particularly when members of the group were entitled to receive material assistance of some kind.

Yet, it would be a mistake to regard such dealings as a process of 'determination' of a refugee-like status. Given the *ex-ante* nature of the edicts and proclamations, the individual's refugee-like character was largely constituted by their membership of the group and their presence in the receiving territory. To the extent that an individual had to explain their presence, this appears to have involved establishing that they formed part of the subject group. Such an approach to status recognition is reflected in the comment by Sir Erskine May on the English tradition of the 'right' to asylum that 'disaffection to the rulers of his own country is natural to a refugee: his banishment attests it'. [20]

Both group and individuated approaches to recognition have remained elements of RSD in the modern era. Both featured in the inter-war League of Nations regime. The inter-State 'Arrangements' and Conventions of this regime echo historical antecedents by defining a refugee by reference to ethnicity or country of origin. Beyond a requirement that the person be without national protection, these instruments generally made no mention of the reasons for flight, or of an unwillingness to return. This, however, did not wholly preclude individuated assessment. After reviewing reports of the League's Advisory Committee and the international conference leading to the 1938 Convention concerning the Status of Refugees coming from Germany,[21] Jackson argues that while the:

> ... presumption resulting from the general determination of group refugee character involved a lighter burden of proof ... the individual had to show that he had in fact left his country for reasons leading to the *prima facie* determination of group refugee character and to otherwise show that he was a bona fide refugee, e.g. that he had not left his former home country for reasons of pure personal convenience and that he did not continue to maintain relations with the authorities of his country of origin.[22]

[22] Ivor C Jackson, *The Refugee Concept in Group Situations* (Martinus Nijhoff 1999) 25.

Group and individuated elements were again present in the status determination procedures of the International Refugee Organization (IRO). The IRO's 1950 Eligibility Manual outlines a complex eligibility determination process comprising three stages.[23] The first inquired into whether the claimant fell within the IRO constitutional definition of a refugee, for example, as 'victims' of the Nazi, fascist, and associated regimes. Stage two examined whether the applicant was disqualified from being a person of concern, for example as a war criminal. The third stage involved an assessment of 'valid objections to repatriation'. To be a person of concern to the IRO, a person who refused repatriation and who fell within the definition of refugee, must produce 'valid objections to repatriation based on adequate information'.[24] This was an individualized assessment involving the consideration of information provided by the government of the claimant's country of origin to refugees, as well as the claimant's subjective reasons for not wanting to return.

Both group-based and individual determination continues to this day. Group-based RSD, typically comprising *prima facie* recognition, forms a significant component of global RSD. *Prima facie* recognition is utilized by both UNHCR and States where 'readily apparent, objective circumstances' in the claimant's country of origin or habitual residence establish the requisite risk to bring the claimant within the applicable refugee definition.[25] In fact, *prima facie* recognition of refugee status has been a common practice of both States and UNHCR for over 60 years and the majority of the world's refugees are recognized on a *prima facie* basis.

While there is nothing in principle preventing *prima facie* recognition being applied in non-group situations, *prima facie* RSD typically occurs in a group setting where the volume of refugee claimants, or potential claimants, sharing a common characteristic such as national origin, ethnicity, or religion, overwhelms the host State's RSD capacity. *Prima facie* RSD continues to be deployed by both UNHCR[26] and by States[27] when dealing with the arrival of large numbers of asylum seekers. Some African States ground their *prima facie* RSD practice in national asylum legislation, under which a Minister is given legislative power to declare 'refugee status of all individuals belonging to a specific group'.[28] This approach has been applied by a number of African States to

claims by asylum seekers from Burundi, the Central African Republic, Mali, Nigeria, and South Sudan, amongst others.[29]

This reality is reflected in the Global Compact on Refugees, which recognizes:

> In the context of large refugee movements, group-based protection (such as prima facie recognition of refugee status) can assist in addressing international protection needs, where considered appropriate by the State.[30]

This is not to say that the recognition is conferred on the group, as a group. Rather, recognition of all group members remains individuated. Echoing historical antecedents, the claimant's individual refugee character is recognized by establishing their belonging to a similarly situated group whose refugee-like character is clearly established by objective country information. However, the RSD process may be limited to a registration interview and will typically only deal with matters of inclusion.[31]

This historical overview indicates that the Refugee Convention did not, as is sometimes thought, break new ground by heralding a shift towards individuated status determination from hitherto group-based approaches. Rather, it is possible to see the history of RSD, from historical precursors through to its modern incarnations, involving an ongoing interplay along two intersecting axes of: (a) pre and post-arrival determinations of status; and (b) between group-based, *prima facie* recognition and fully individuated assessments. Depending on the specific national and historical context, the form deployed may have been predominantly one or the other, but both have always been within the toolbox of decision-makers.

3. Systemization of RSD

These historical processes constitute primordial forms of what we now call RSD. Transition to its contemporary form came with the birth of the modern nation-State, which led to an increased systemization of the decision-making process.

This transition was spurred by two trends. First, the emergence of democratic modes of governance in newly established or reconstituted States: Revolutions in France and America, and the break-up of nineteenth-century Europe, created new flows of 'political' refugees, disenfranchised from the State;[32] Secondly, the trend towards regulation of international migration by States throughout the late nineteenth century

and the re-tooling of asylum to include not simply protecting certain fugitives from justice in other States, but also protecting persons who could establish a risk of harm for reasons unconnected to the commission of any crime. As noted by Price: 'in a world of open borders, asylum was needed only by those facing extradition; other persecuted persons were admitted as migrants.'[33] However, as States increasingly codified their immigration laws, asylum progressively expanded 'from an element of international criminal law (a defense to extradition) to a subset of immigration policy (a defense to deportation)'.[34]

The ensuing systemization of status determination has occurred along two broad planes: through the development of a dedicated administrative apparatus for determining status and through increased juridification of the asylum norm, both procedurally and substantively.

a. Administrative Systemization

While early instances of a dedicated State machinery for regularizing the status of refugees existed, the re-tooling of asylum to include persons other than fugitives raised administrative problems. Tellingly, one concern articulated in respect of Britain's 1905 Aliens Act was how its new asylum clause could be implemented in the absence of a pre-existing administrative structure.[35] This stemmed from the fact that the principle of asylum had functioned as traditional policy throughout the nineteenth century 'not by law but by the absence of laws'.[36] Although short-lived, the 1905 Act established an Immigration Board with power to hear appeals against a refusal of entry by an immigration officer.[37] It is unclear whether the Board had power to hear appeals in relation to asylum.[38] However, given that the Act expressly prohibited refusal of entry to 'an immigrant who proves that he is seeking admission' on refugee-like grounds,[39] it seems likely that there would have been a right of appeal to the Board had entry been refused contrary to that prohibition.

Despite large numbers of refugees being produced in the early twentieth century, this did not, on the whole, give rise to dedicated systems of RSD in refugee-receiving League of Nations Member States. Nevertheless, in some instances, concern over the potential admission of a broader range of persons as 'refugees' did lead to a bespoke individuated assessment process. In Belgium, for example, the government established an inter-

ministerial commission, presided over by a judge, to decide each case on an individual basis with the applicant being represented by an expert who set out the grounds on which the person claimed to be a refugee.[40]

The move towards a dedicated RSD structure began in earnest with the establishment of the IRO. As Holborn notes, the IRO provided services 'to individuals; and eligibility to receive them would require quite as much investigation as would the eligibility of the recipients of any social benefits'.[41] Foreshadowing contemporary RSD best practice, the IRO developed a sophisticated two-tiered structure involving a first instance interview and decision by an Eligibility Officer, and a right of review to an 'autonomous semi-judicial review board' at which an oral hearing could be requested.[42] Standardized forms were utilized for notification of outcomes and appeals.[43] There was a registration procedure in which the identity of the applicant was established through consideration of available documentation.[44]

The impetus towards systemization was, to some extent, ameliorated by the exigencies of the Cold War, during which status recognition became weaponized as another Cold War tool.[45] State interest in embarrassing Cold War adversaries led to the political weighting of asylum policy and status determination. This was particularly pronounced in the United States where, despite the passing of the 1980 Refugee Act, political weighting of admissions and status determination, which prioritized the admission of persons fleeing communist or communist-dominated countries, endured even after its entry into force.[46] The United States was not alone in this regard. In Canada, too, a 'bureaucratically formulated refugee definition, which focussed on the admission of ideological émigrés from the East Bloc' dominated until Canada's accession to the Refugee Convention and Protocol in 1969.[47]

Administrative systemization of RSD again deepened towards the end of the Cold War era, as intra-State conflict and associated State fragility or failure bred generalized insecurity and violence.[48] While the overwhelming majority of refugees fled—just as today—to proximate States in the Global South, increasing numbers of claimants from a

broader variety of source countries sought asylum in developed countries, raising issues which transcended the Cold War 'political refugee' paradigm. In response, status determination in developed countries moved decisively towards a more fine-grained and individuated process than had existed under any historical antecedent, in no small measure driven by a desire to distinguish between genuine and so-called 'bogus' refugee claimants.[49] Specialist refugee decision-making bodies, including at both first instance and appellate level, were established in Canada in 1989,[50] in the United States in 1990,[51] in New Zealand in 1991,[52] and in Australia in 1993.[53]

Other factors have also spurred increased administrative systemization at the national level. For example, in Brazil the establishment in 1991 of specific procedures for processing refugee claims and the establishment in 1997 of the National Committee for Refugees (CONARE) were linked to Brazil's return to democratic governance after decades of dictatorship.[54] In yet other instances, it is the transition of RSD responsibility from UNHCR to the State that has driven systemization. States in the Global South, including those hosting large refugee populations such as Turkey, Kenya, and South Africa, as well as a number of Southeast Asian States such as the Philippines and Cambodia, have also now established specialist administrative RSD units and/or appellate bodies.

Sitting alongside these developments and reflecting the centrality of country information to the assessment of risk, an increasingly sophisticated—and not infrequently contentious—system of country of origin information-reporting has also developed. Well-known examples include the Canadian Immigration and Refugee Board's 'Responses to Information Requests', and the Austrian Centre for Country of Origin and Asylum Research and Documentation (ACCORD). One of the key objectives of the European Asylum Support Office (EASO) is the provision of common country of information bundles and analysis for use in EU Member State RSD.[55]

b. Mandate RSD

A critical component of the administrative systemization of RSD, which emerged in the inter-war period, was the creation of a High Commissioner for Refugees. The

transformation of this office into what, post-Second World War, has become UNHCR, is a critical step in the global systemization of RSD, by providing a status determination mechanism where this would otherwise be absent. The UNHCR Statute of 1950[56] excluded the High Commissioner from taking over the IRO's function of determining and certifying individual eligibility, at least on a general basis, meaning that 'the only thing that was left was for the contracting States to determine "refugee character" according to the Refugee Convention 1951'.[57] States were thus intended to assume the primary responsibility for RSD under the contemporary international refugee regime. However, many Contracting States lack any implementing domestic legislation,[58] while others lack the human, technological, and financial resources necessary to competently perform RSD. Significantly, many of the world's refugees are located in countries such as Jordan and Pakistan, which are not parties to the Refugee Convention.

It is into this highly variegated landscape that UNHCR has come to undertake status determination under its mandate—the so-called 'mandate RSD'. According to UNHCR figures, in 2017 it conducted 87,400 status determinations, or some 6 per cent of the global total. While both the volume and percentage fluctuate, mandate RSD comprises a significant part of the global RSD caseload and UNHCR frequently performs more RSD assessments that any other determination body.[59]

Yet, it is a mistake to see global RSD in binary terms, performed by either the State or UNHCR. Rather, RSD systems exist on a structural spectrum, with State-administered RSD at one end and mandate RSD at the other. In between, a variety of forms exist. These include RSD performed by ministerial or inter-agency committees on which UNHCR representatives may sit or provide advice, or where the UNHCR is an *ex officio* member of specialist appellant tribunals.[60] In some national settings in the Global South, UNHCR performs RSD for certain caseloads, with national bodies performing RSD for others, as is the case in Turkey.[61]

c. Juridification

Juridification of RSD began in earnest under the IRO. Decisions by Eligibility Officers were collated in the IRO's Geneva headquarters, which produced, at first in 1948, a

Policy Guide which was expanded in May 1950 to a Manual for Eligibility Officers.[62] The Manual was a sophisticated document, running to 163 pages. It deals with matters of process, evidence, and the burden of proof, as well as substantive interpretive guidance drawn from individual eligibility decisions, brief summations of which are set out in each section. The Manual provided detailed guidance on matters of both inclusion and exclusion, often in terms that foreshadow many issues that resonate in contemporary RSD. For example, the Manual noted that:

> . . . not only is proof or disproof extraordinarily hard, but also motives of the objector are usually mixed, and the expressed statement likely inadequately to represent the true objection or contain relevant points by implication only. Every attempt should be made to discover what are an applicant's real objections . . .[63]

Juridification of RSD was significantly boosted in the late 1980s and early 1990s as refugee cases began to feature increasingly in judicial caseloads. Courts and the newly established specialist tribunals were required to grapple with the fundamentals of the Convention's refugee definition with increasing sophistication as industrialized States, confronted with increased refugee flows, pushed back through a range of restrictive interpretations. This has led to an increasingly dense body of refugee law. The post-Cold War phase witnessed an explosion of international jurisprudence with national jurisdictions examining various elements of the refugee definition, including the nature of the well-founded fear element, the degree of risk to be established,[64] and the meaning of 'being persecuted'.[65] This phase also witnessed the publication of influential legal texts, such as Goodwin-Gill's *The Refugee in International Law* in 1983 and Hathaway's *The Law of Refugee Status* in 1992, as well as the emergence, in January 1989, of the *International Journal of Refugee Law*.[66] In 1997, the International Association of Refugee Law Judges (IARLJ), a forum to promote inter-jurisdictional dialogue, was established, with one of its principal aims being to ensure that RSD is 'subject to the rule of law'.[67]

Further juridification has come in the form of Guidance Notes issued to manage caseloads in high-volume systems, specifying how to deal with types of claim or thematic issues such as credibility assessment.[68] General country guidance cases have also contributed. Developed in 2004–05, the United Kingdom has perhaps the most well-known, comprehensive approach.[69]

At the global level, the issuing of UNHCR's Handbook in 1979 constituted an early form of guidance.[70] Over the following years, UNHCR has periodically supplemented the Handbook with thematic position papers and, from 2002 following the global consultations process, with a series of Guidance Notes on International Protection (GIPs).[71] GIPs are intended to provide 'UNHCR's authoritative legal position on the various interpretive issues that arise and to provide legal guidance for governments and [legal] practitioners'.[72] UNHCR also periodically issues Eligibility Guidelines on a country-specific basis, setting out UNHCR's position as to categories of persons who, taking into account UNHCR's assessment of country conditions, should be regarded as being eligible for recognition as refugees. While acknowledged by courts and tribunals as an important source of guidance, the persuasive force of the Handbook is undermined by its age, lack of reference to case law and, in places, internal inconsistencies.[73] Concerns have been raised that UNHCR's guidance, more generally, also suffers from relevance, consistency and impartiality-related concerns, meaning 'UNHCR guidance is not always embraced with enthusiasm' by decision-makers or courts.[74]

4. Challenges

RSD faces challenges as increasing numbers of persons seek protection abroad due to the effects—often combined—of conflict and violence, socio-economic marginalization and poverty and, increasingly, disasters and the adverse effects of climate change.

a. Limits of Access

Only a small portion of the world's refugees have access to sophisticated RSD systems. The vast majority—by reason of geography and limited financial capacity—are located in countries proximate to the country of origin with no or limited RSD systems. Yet, since the 1990s, refugee-receiving developed States have established many—and often highly controversial—policies aimed at making it more difficult and less desirable for persons to seek access to their RSD systems. Examples include the use of accelerated procedures, safe third country and country-of-first-asylum practices, the imposition of carrier sanctions, increased detention, interdiction, and, perhaps most controversially, off-shore processing.[75]

As Kagan pointedly observes, 'individual status determination is extremely resource intensive, at least when done fairly'.[76] Yet, continued under-resourcing contributes to backlogs within RSD systems, which further limits access. Other factors also contribute. In his recent study, Barbour points to 'systemic issues that result in inefficiencies or reduced output over a sustained period'.[77] These include inadequate management, case management tools and techniques, scheduling deficiencies and prejudice against RSD itself.[78] Backlogs are an enduring and significant problem as the decision-making capacity of RSD systems—both mandate and State—fall far short of caseload flows.[79]

b. 'Refugee Roulette/Lottery'

Fundamentally, the 'refugee roulette' (or lottery) concept speaks to the concern that:

> The outcome of an application for asylum should not be a lottery depending on which country the asylum seeker lands up in or who the asylum Judge is. The least [he/she] can expect is that a decision will be taken on the merits of the case, and not the demerits of the system making the decision.[80]

The problem derives, in part, from a lacuna in the 1951 Refugee Convention. While containing a universally applicable refugee definition,[81] it prescribes no process by which States parties are to determine to whom that definition applied. Instead, States

have developed their own RSD processes. International human rights law jurisprudence of both universal and regional human rights treaty bodies,[82] regional frameworks,[83] and domestic law have to some extent filled the gap by providing some minimum access and process-related guarantees. Something of a 'consensus has emerged concerning the constituent elements of RSD', prevalent in RSD practice in both the Global North and South. This includes the need for an interview, the possibility of legal representation, and an opportunity for an independent review.[84]

Nevertheless, concerns remain that State reform of domestic RSD processes has emphasized efficiency and deterrence over fairness.[85] Variations in RSD structures and processes continue to perpetuate refugee roulette. Hamlin's comparative study of RSD outcomes in respect of the same caseload in Australia, the United States, and Canada concluded that the structure of the RSD system in each country was one of the most important variables in explaining the difference in outcomes, in particular the degree of 'administrative insulation' RSD decision-making bodies enjoyed 'from the exclusionary politics of deterrence'.[86] Hamlin argues:

> when administrative insulation is low, courts engage in turf wars as they try to limit legislative and executive interference. Thus, RSD outcomes depend on the institutional players that end up dominating the process, the level of contention between actors, and the degree of simplification in the decision-making process.[87]

Beyond the structuring of RSD systems, the use of binding legislative and/or regional overlays to the Convention definition feeds disjuncture between the intended definitional universalism and a national-level determinism of RSD. Divergent national contexts and operating frameworks, as well as differing conceptualizations and methodologies, impact upon the potential of international human rights law to advance the quest for the 'single autonomous meaning' of the Convention definition.[88] This creates the potential for an increased fragmentation of global RSD into jurisdictional silos and dissonance in the global refugee protection regime in terms of outcomes, particularly in those cases outside the classical 'political' refugee paradigm, such as domestic and gender-based violence.

[82] See discussion by David James Cantor, 'Reframing Relationships: Revisiting the Procedural Standards of Refugee Status Determination in Light of Recent Human Rights Treaty Body Jurisprudence' (2014) 34 RSQ 79.

The development of the Common European Asylum System has contributed to greater harmonization at the regional level, with the Court of Justice of the European Union now able to provide, on referral, an advisory opinion as to the correct interpretation of the refugee definition in the EU Qualification Directive. Nevertheless, even in this regional system, 'as asylum processes remain national, many divergences in outcomes and treatment of refugees persist'.[89]

An in-depth study of RSD in the United States revealed wide-ranging disparities in outcomes between different decision-makers. Studies in relation to Canada[90] and the Netherlands[91] raise similar concerns. Describing 'amazing disparities in grant rates', the United States study demonstrated how:

> the chance of winning asylum was strongly affected not only by the random assignment of a case to a particular immigration judge, but also in very large measure by the quality of an applicant's legal representation, by the gender of the immigration judge, and by the immigration judge's work experience prior to appointment.[92]

Beyond these macro-structural issues, at the micro-level, RSD based on individualized decision-making carries an inherent potential to perpetuate the refugee roulette syndrome. RSD is a difficult exercise. A senior United Kingdom judge has characterized RSD as involving making 'a possible life-and-death decision extracted from shreds of evidence and subjective impressions', in a jurisdiction that 'has neither the falsifiability of a science nor the completeness of an art'.[93] Language and information barriers, as well as sociocultural disconnects between the claimant and decision-maker, each play a part. Numerous studies have highlighted concerns around credibility assessments, a central component of the RSD process.[94]

Steps have been taken to ameliorate the roulette or lottery potential that inheres in individualized decision-making. The training of judges and decision-makers takes place both domestically and via organizations such as the IARMJ.[95] As already noted, in some jurisdictions, guidelines have been developed and 'country guidance' cases issued.

Nevertheless, it is unlikely that such initiatives will entirely eliminate disparities in individualized and credibility-centred RSD decision-making.

Significant criticism of mandate RSD emerged in a 1999 article,[96] which highlighted how underfunding, institutional culture and process-related deficiencies including a lack of general guidelines, limited access to legal representation and files, and inadequate reasoning undermined its integrity. Ongoing concerns about the quality of mandate RSD has been repeatedly voiced, with catalytic effect.[97] In 2003, UNHCR issued procedural guidelines that cover all aspects of the RSD process, from reception and registration of asylum seekers through to substantive determination.[98] Elements relating to issues such as legal representation[99] and the use of interpreters[100] were updated in 2016.

c. First amongst Equals? RSD as but one Protection Tool

RSD is a means to a protection end, not an end in itself. Whether State or mandate, group-based/*prima facie*, fully individuated, or something in between, RSD is but one protection-oriented tool. Indeed, most refugees obtain some form of protection without ever going through anything other than a basic registration procedure. In some instances, refugees themselves question the need for RSD to achieve a protection outcome. One recent study has shown a clear preference to avoid applying for refugee status where the benefits can be obtained through relying on other processes, both formal and informal.[101]

Even when RSD is a potentially available tool, in some instances and particularly in situations of mass influx, refugees are dealt with outside RSD procedures altogether, with States relying on temporary protection mechanisms or bilateral/regional agreements conferring rights of entry, stay, and livelihood entitlements.[102]

These realities are recognized by UNHCR, which affirms that where a refugee 'is assured of all the safeguards of refugee status, including protection from refoulement

and access to rights' there may be little need to engage in RSD.[103] To this end, UNHCR is currently exploring 'alternative protection interventions' that do not require RSD for every individual, but ensure protection and lay foundations for durable solutions.[104] That appropriate protection outcomes for refugees may be derived from non-RSD processes is also expressly contemplated by the Global Compact on Refugees.[105]

For most of the world's refugees, RSD is a luxury good. Many of the countries in the Middle East and Asia are not parties to the Refugee Convention, and yet four of the top six refugee-hosting States are in these regions. Despite being a 'zone of exception' to the Refugee Convention, refugee protection is nevertheless extended through a 'law of asylum', which draws on 'a variety of sources: international human rights law, local constitutional law, local legislation and delegated legislation, and other local legal norms'.[106]

5. Reform

Enduring concerns about the functioning and quality of global RSD has spurred repeated calls for overhaul. A key concern is whether a system based on individuated assessment is politically and financially sustainable. Recognizing the need for reform to relieve pressure on global RSD systems, UNHCR has proposed a new strategic direction revolving around three key areas: increasing the efficiency of RSD, improving the quality of RSD, and sustaining State assumption of responsibility for RSD. UNHCR argues:

> The urgency to implement a more strategic approach to case processing was also underscored by the global rise in refugee numbers and the need to enhance the capacity of UNHCR to respond to the increased number of individual applications. It is important therefore to review the circumstances under which it is essential to conduct RSD, consider how it can be streamlined, and where protection might be provided through other frameworks.[107]

Proposals for reform have included an enhanced role for the International Court of Justice, which under article 38 of the Refugee Convention and article IV of the 1967 Protocol, has jurisdiction to settle disputes between the parties as to matters of interpretation. While this might be a decisive way to resolve disputes, no referrals have been made to date and there is a general reluctance amongst States to resort to advisory

[107] UN Executive Committee of the High Commissioner's Programme (n 29) para 5.

opinions.[108] The formation of an international judicial RSD body under the auspices of UNHCR has also been mooted.[109]

More process-related proposals for reform argue for a greater role for group-based determination. Concerned with problems caused by backlogs and delays associated with individualized RSD, Kagan proposes the random sampling of cases from selected refugee populations within a year of arrival on an individual basis, from which the results would be used for group-based determination in respect of the remainder. Under this approach:

> …individual status determination might function somewhat like an audit; by pulling cases at random for closer evaluation, a government could be reassured that a group based system of refugee recognition could be justified.[110]

Durieux also makes the case for greater efficiency in RSD via enhanced group-based approaches, albeit in conjunction with an individualized assessment. He proposes a 'group-at-risk' methodology, by which *prima facie* refugee groups are identified which, he argues, offers 'interesting evidentiary shortcuts in refugee status determination, thereby reducing the complexity and opacity of procedures and lightening the burden of proof for the applicant'.[111]
