Finally, States may increasingly seek the greater use of technology in RSD. States are already making use of artificial intelligence (AI) and automated decision-making systems in the immigration sphere, including a pilot project in Latvia, Hungary, and Greece which uses AI to monitor passengers' faces for signs of lying.[112] As to these, Molinar raises general concerns including issues of consent, data-security, bias, and lack of accountability. Of more specific concern to the extension of these technologies into RSD, Molinar rightly questions, can 'an automated decision-making system account for trauma and its effects on an asylum seeker's memory, or for cultural differences in communication'.[113]

A human-centred approach to credibility and risk assessment certainly has its flaws. Yet, it remains far from clear that automated decision-making would perform any better and, more importantly, that claimants would welcome their predicament being assessed

by a machine. Great caution is warranted. Moreover, removing the human element from a decision-making process which has the protection of *human* rights as a core objective, devalues the process as a means by which the legal content of the shared humanity of claimant and decision-maker is able to be affirmed.

6. Conclusion

The phenomenon of RSD has deep historical roots grounded in processes that give effect to ancient norms of offering asylum or sanctuary. While under enormous pressure, and something available to only a fraction of the world's refugees, it is wrong to regard RSD as an anachronism or past its 'use-by date'. Challenges—both inherent and structural in nature—undoubtedly exist, but RSD will continue to be a critical tool—whether conducted by States or by UNHCR—for dealing with claims for protection in the twenty-first century.

CHAPTER 32

ASYLUM PROCEDURE

ÁLVARO BOTERO AND JENS VEDSTED-HANSEN

1. Introduction

This chapter examines the standards on asylum procedures that apply within various regulatory contexts. In terms of thematic delimitation, the focus is on the standards pertaining to the examination of those applications for asylum that have been submitted to the authorities of the State from which protection is sought. Thus, the issue of access to jurisdiction, be it territorial or otherwise, and to the examination procedures of the relevant State, as well as procedural safeguards in connection with border controls, will not be further explored.[1]

The chapter's normative focus includes not only the standards for determination of refugee status under the Refugee Convention and Protocol, but also those concerning the examination of applications for complementary or subsidiary forms of protection as well as those operationalizing the regional refugee definitions. Nonetheless, the legal interaction between asylum procedures and Convention refugee status will be the starting point (Section 2).[2] As the Refugee Convention is scant on procedural standards, soft law standards that partly fill the normative gap will be discussed (Section 3). In addition, procedural standards concerning subsidiary or complementary protection that have been developed on the basis of human rights norms prohibiting *refoulement* beyond the scope of the Refugee Convention will be examined (Section 4). Human rights treaties generally include the right to effective remedies at national level and are therefore relevant for the administrative or/and judicial procedures that apply when States parties to such treaties examine asylum applications. Although directly linked to

[1] See Chapters 27 and 48 in this volume.

[2] The term 'asylum procedures' is used when referring in general to the standards dealt with in this chapter. The terms 'asylum procedures' and 'determination of refugee status' will be used interchangeably in specific references to the procedures aimed at operationalizing the Refugee Convention definition. For an examination of the latter, see also Chapter 31 in this volume.

the protection against *refoulement* under human rights treaties, the requirement of effective remedies has indirect effect for procedures concerning the determination of Convention refugee status.

2. The Refugee Convention and Asylum Procedures

Procedural standards are apparently absent from the Refugee Convention. The existence of asylum procedures at national level is, however, presupposed in article 9 of the Convention according to which provisional measures considered essential to national security in time of war or other grave and exceptional circumstances may be taken in the case of a particular person 'pending a determination by the Contracting State that that person is in fact a refugee'. Similarly, article 31 allows Contracting States to apply necessary restrictions on refugees' movements 'until their status in the country is regularized or they obtain admission into another country', again alluding to national procedure to examine the legal status of (persons claiming to be) refugees. Although the Refugee Convention does not include any procedural requirements, it imposes an implicit duty to establish administrative or judicial mechanisms that are able to deal meaningfully with applications for asylum.[3] The alternative would arguably be for States to treat any asylum seeker[4] in accordance with the protection standards laid down in the Refugee Convention until properly deciding that the applicant falls outside the scope of the Convention refugee definition.[5]

The obligation to establish asylum procedures does not include any specific requirements as to their design or implementation, hence the Refugee Convention creates a duty of result rather than one of formalized process. This duty is to be seen in the light of the general principle that recognition of refugee status is a *declaratory* act, as explained in the UNHCR dictum:

[3] cf Andreas Zimmermann and Claudia Mahler, 'Article 1 A, para 2' in Andreas Zimmermann (ed), *The 1951 Convention Relating to the Status of Refugees and its 1967 Protocol. A Commentary* (OUP 2011) 314.

[4] Having no specific meaning in international law, the term 'asylum seeker' is used as a general reference to persons requesting protection under the Refugee Convention or any other international instrument providing for international protection as mentioned in this chapter.

[5] cf James C Hathaway, *The Rights of Refugees under International Law* (CUP 2005) 184–5, 278; Rainer Hofmann and Tillmann Löhr, 'Introduction to Chapter V: Requirements for Refugee Determination Procedures' in Zimmermann (ed) (n 3) 1126; James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014) 1, 26.

> A person is a refugee within the meaning of the 1951 Convention as soon as he fulfils the criteria contained in the definition. This would necessarily occur prior to the time at which his refugee status is formally determined. *Recognition of his refugee status does not therefore make him a refugee* but declares him to be one. He does not become a refugee because of recognition, but is *recognized because he is a refugee*.[6]

As recognition is not constitutive of refugee status and therefore immaterial to the acquisition of such status, States' obligations towards refugees under the Refugee Convention are not contingent on formal recognition.[7] Hence, the procedures to be established by each State serve the crucial purpose of identifying persons who fall within the definition in article 1 of the Convention and who are therefore entitled to be treated in accordance with articles 2 to 34 of the Convention.[8] In practice, such procedures also serve to identify persons in need of complementary or subsidiary protection under regional refugee definitions or human rights treaties, often by way of an alternative examination if the applicant is found not to be eligible for Convention refugee status.[9]

In line with this purpose, while individual States will differ in form and style,[10] national examination procedures must be designed and conducted in such a way as to ensure compliance with the obligations undertaken by Contracting States to the Refugee Convention, in accordance with the obligation to perform treaty obligations in good faith and the principle of effectiveness as generally recognized in international law.[11] Due to the absence of specific procedural requirements in the Convention itself, a number of 'soft law' standards have been adopted by various international and regional bodies in order to supplement the Refugee Convention and provide States with guidance on how to comply with their obligations under the Convention. The following sections will account for the most important amongst those standards.

[6] UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019) para 28 (emphasis added).

[7] cf Hathaway (n 5) 158–9, 184–5, 278; Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (2nd edn, OUP 2007) 158–60, 184, 278; Zimmermann and Mahler (n 3) 299, 314; Hathaway and Foster (n 5) 1, 25–6.

[8] cf Zimmermann and Mahler (n 3) 313–14; Jens Vedsted-Hansen, 'The Asylum Procedures and the Assessment of Asylum Requests' in Vincent Chetail and Céline Bauloz (eds), *Research Handbook on International Law and Migration* (Edward Elgar 2014) 439–41; see also UNHCR (n 6) para 189.

[9] cf Ruma Mandal, 'Protection Mechanisms Outside of the 1951 Convention ("Complementary Protection")', UNHCR Legal and Protection Policy Research Series, PPLA/2005/02 (2005) 49–55 <https://www.unhcr.org/435dfoaa2.pdf> accessed 22 April 2020. On asylum systems examining eligibility for both forms of protection in one single procedure, see Section 3.d.

[10] A significant distinction in this regard is to be made between adversarial and inquisitorial procedures; see Rebecca Hamlin, *Let Me be a Refugee: Administrative Justice and the Politics of Asylum in the United States, Canada and Australia* (OUP 2014) 18.

[11] cf article 26 of the Vienna Convention on the Law of Treaties (adopted 23 May 1969, entered into force 27 January 1980) 1155 UNTS 331; see also Hofmann and Löhr (n 5) 1100.

3. Standards for the Determination of Refugee Status

a. Individual versus *Prima Facie* Recognition of Refugee Status

Reflecting the Refugee Convention's focus on individuals meeting the criteria in the refugee definition,[12] asylum procedures have traditionally aimed at the determination of the status of each individual applicant, particularly in the Global North. This has resulted in the development of detailed procedural safeguards for asylum seekers as well as the often strict scrutiny of the evidence presented by asylum seekers and of their individual credibility.[13]

At the same time, however, it is widely recognized that such individualized procedures are not always practically feasible and also not always necessary. In situations where entire groups have been displaced, often on a large scale, under circumstances indicating that members of the group can be considered individually as refugees, States as well as UNHCR have resorted to 'group determination' of refugee status in which each member of the group is considered *prima facie* as a refugee.[14] Thus, members of the group in question are presumed to be refugees in the absence of evidence to the contrary relating to individual persons, including possibly the basis for application of the exclusion clauses in article 1F of the Refugee Convention.[15]

Importantly, however, *prima facie* recognition may also be an appropriate approach in individualized asylum procedures where the presumption of refugee status can facilitate evidentiary assessment with a view to simplifying or accelerating the examination of individual applications for asylum.[16]

b. Status Determination by States, by UNHCR, and Jointly by States and UNHCR

As stated above, it is incumbent on the Contracting States to the Refugee Convention to have in place Refugee Status Determination (RSD) procedures, yet their organizational design and operation have been largely left to States, with domestic constitutional and administrative structures determining both first instance and appeal proceedings.[17]

[12] cf James C Hathaway, *The Law of Refugee Status* (Butterworths 1991) 24–7.

[13] See Chapter 33 in this volume.

[14] cf UNHCR (n 6) para 44; UNHCR, 'Guidelines on International Protection No. 11: Prima Facie Recognition of Refugee Status,' HCR/GIP/15/11 (24 June 2015).

[15] cf UNHCR (n 14) paras 18–21.

[16] cf ibid paras 40–1.

[17] cf UNHCR (n 6) para 189.

Some States have received technical or legal assistance from UNHCR, ranging from assistance during the establishment of national asylum systems to UNHCR itself carrying out RSD. In some instances UNHCR is involved in the conduct of national asylum procedures by participating in State-run RSD processes.[18]

If operating in States that are not parties to the Refugee Convention, UNHCR carries out RSD on the basis of the mandate laid down in the organization's Statute.[19] The organizational modalities and procedural standards for such mandate RSD activities have been decided by UNHCR itself, partially influenced by recommendations from the UNHCR Executive Committee (ExCom).[20] Notably, while UNHCR procedures also focus on individual persons, UNHCR frequently determines eligibility for refugee status on a 'group basis', in particular in situations of large-scale refugee movements or where conditions have substantially the same effect on a large population.[21]

By 1977, UNHCR ExCom '[n]oted that only a limited number of States Parties to the 1951 Convention and the 1967 Protocol had established procedures for the formal determination of refugee status under these instruments'.[22] Since then, States have increasingly established asylum or RSD procedures, moving from 148 States or territories with asylum procedures in 2002 to at least 173 with these kinds of procedures by the end of 2018.[23] Over the years, there has also been a decreasing shift in the joint procedures (those conducted between governments and UNHCR) from 11 in 2002 to five in 2018.[24]

c. Soft Law Standards relating to the Refugee Convention

In order to fill the normative gap resulting from the absence of procedural standards in the Refugee Convention, UNHCR's ExCom, composed of Contracting States as well as some non-parties to the Convention, has adopted minimum recommended standards. As the basic requirements for national determination of refugee status, ExCom adopted as early as 1977 a number of recommended standards. These include (1) ensuring that

[18] On the various forms of UNHCR cooperation with States, see Chapter 31 in this volume.

[19] 'Statute of the Office of the United Nations High Commissioner for Refugees', UNGA res 428 (V) (14 December 1950); the personal scope of competence of the UNHCR is defined in paras 6 and 7, largely reflecting the refugee definition laid down in article 1 of the Refugee Convention, and the protection mandate is described in paras 8 and 9 of the Statute.

[20] See in particular UNHCR, 'Procedural Standards for Refugee Status Determination under UNHCR's Mandate' (2005) <https://www.unhcr.org/4317223c9.pdf> accessed 29 March 2020; on criticism raised against UNHCR status determination, see Chapter 31 in this volume with further references.

border officials are instructed to act in accordance with the principle of *non-refoulement*; (2) assigning a clearly identified authority with responsibility for examining requests for refugee status; (3) providing applicants with adequate facilities including the services of a competent interpreter and UNHCR representation; and (4) providing a right to appeal, including permission to remain pending the appeal.[25]

In the same Conclusion, ExCom requested UNHCR prepare a Handbook relating to procedures and criteria for determining refugee status, which was meant to serve as guidance for governments.[26] When issued two years later, the Handbook restated the basic requirements recommended by the ExCom for such procedures, reflecting the special situation of applicants for refugee status.[27] UNHCR ExCom has subsequently reiterated the importance of national procedures for the determination of refugee status as a means to implement the Refugee Convention.[28]

The content and tenor of the procedural recommendations issued by UNHCR ExCom have changed somewhat over time. Thus, since the early 1990s, the ExCom has included certain quality ambitions or organizational ideals for the asylum procedures to be in place, such as 'fair and efficient',[29] 'fair and effective',[30] and 'fair and expeditious'.[31] As another feature, the recommendations have increasingly focused on especially vulnerable categories of asylum seekers, especially women and children.[32]

The ExCom has further expanded the scope of its recommendations so as to address procedures not only for the determination of Convention refugee status, but also for the examination of applicants' need for complementary or subsidiary forms of protection,[33] thereby drawing on standards that have gradually been adopted by human rights bodies at both the universal and regional levels.[34]

At the regional level, attempts have also been made to harmonize national law and practice relating to asylum procedures by way of non-legally binding instruments. Some of these have been adopted within the Council of Europe where the first recommendation on asylum procedures was adopted by the Committee of Ministers

in 1981.[35] While reflecting UNHCR ExCom Conclusion No 8 (1977), the standards adopted by the Council of Europe were both more specific and more firm, not least as regards asylum applicants' right to remain in the territory during the examination of their case, both at first instance and during appeals procedures.[36] At the same time, however, the Recommendation provided for exceptions from these standards insofar as manifestly unfounded applications are concerned.

Later, the Council of Europe adopted a Recommendation on the procedural safeguards for rejected asylum applicants, flowing from the requirement of effective remedies in article 13 in conjunction with article 3 of the ECHR, most notably the requirement that for a remedy to be effective, it has to be accessible and to have suspensive effect.[37] Notwithstanding the non-binding nature of the Recommendation, these requirements are based on settled case law of the European Court of Human Rights (ECtHR) concerning article 13 ECHR.[38]

In the Americas, various factors have favoured the emergence and strengthening of asylum procedures. In the American continent, there are several models of asylum procedures, with administrative procedures being the predominant model in the region and with the possibility of judicial review, either through constitutional remedies (*amparo*, *tutela*, habeas corpus, habeas data) or administrative litigation. In this context, refugee protection has been strengthened by a series of regional processes, as well as the role of the Organization of American States (OAS), in particular the integrative approach of the bodies of the Inter-American Human Rights System.[39]

Regarding regional processes, it is important to highlight that the Cartagena Declaration on Refugees, adopted by the Colloquium on International Protection of Refugees in Central America, Mexico, and Panama in 1984,[40] seeks to 'to promote within the countries of the region the adoption of national laws and regulations facilitating the application of the Convention and the Protocol and, if necessary, establishing internal procedures and mechanisms for the protection of refugees'.[41]

More recently, the Comprehensive Regional Protection and Solutions Framework (known as MIRPS in Spanish), which is a pioneering initiative in the implementation of

[41] Cartagena Declaration, conclusion III(1).

the Comprehensive Refugee Response Framework (CRRF) and a State-led regional application of the Global Compact on Refugees, has also identified the need to strengthen asylum procedures.[42]

Another factor that has been highly relevant in the Americas, especially for countries in Latin America and the Caribbean, has been the integrating role of the bodies of the Inter-American Human Rights System, composed of the Inter-American Commission on Human Rights (IACHR) and the Inter-American Court of Human Rights (IACtHR). The IACtHR has held that, in order to interpret and apply the provisions of the American Convention on Human Rights (American Convention) in cases relating to asylum seekers and refugees, it takes into account the significant evolution of international refugee law, based also on the authorized statements of agencies such as UNHCR.[43]

In Africa, the 1969 OAU Convention Governing the Specific Aspects of Refugee Problems in Africa is an important regional complement to the Refugee Convention. Nonetheless, it does not establish specific provisions in terms of asylum procedures. In this regard, on the basis of an interpretation of article 26 of the 1981 African Charter on Human and Peoples' Rights on 'the establishment and improvement of appropriate national institutions entrusted with the promotion and protection of the rights and freedoms', Zard has stated that the obligation of States to establish institutions and fair procedures for RSD could be developed.[44]

The various procedural standards established at regional level shall be accounted for in Section 4.

d. Specific Procedural Issues

As a result of the absence of procedural standards in the Refugee Convention, a number of more specific issues relating to the examination of asylum applications has been settled by regulatory measures at regional level, often in the context of securing effective remedies as required by human rights treaties which indirectly apply to refugee claims especially in single combined procedures.[45]

[42] Marco Integral Regional para la Protección y Soluciones (MIRPS) (2017) <https://acnur.org/5b50d83b4#_ga=2.4268535.514613400.1589682029-1940678519.1589552681> accessed 15 May 2020.

[44] Monette Zard, 'Refugees and the African Commission on Human and Peoples' Rights' (2003) 16 Forced Migration Review 33, 34.

[45] See, as an example, the EU standards of the Common European Asylum System as laid down in EU Directive 2013/32/EU of the European Parliament and of the Council of 26 June 2013 on Common Procedures for Granting and Withdrawing International Protection (recast) [2013] OJ L180/60 recital 11, arts 3, 10(2) (EU Asylum Procedures Directive).

An important distinction should be made between *admissibility decisions* and the examination in substance of applicants' need for international protection. The risk of conflating the two distinct issues is particularly acute in systems that operate *border procedures*. Border procedures are generally not suitable for the proper examination of protection needs, as clearly reflected in the recommendations on asylum procedures mentioned above.[46] In order to prevent a violation of the Refugee Convention as well as the protection obligations under human rights treaties, it is therefore crucial that border procedures are operated with caution and only exceptionally include decisions on substance, if at all.[47]

The risk of *refoulement* inherent in border procedures may also arise where one State returns an asylum seeker to another State assuming that the responsibility for examining the application lies with the latter State. In order to reduce the risk of indirect *refoulement* to the country of origin without any substantive examination of the need for protection, it is important that the returning State expressly states that the decision exclusively deals with the admissibility issue. Furthermore, in order to prevent situations of *refugees in orbit*, there ought to be agreed criteria and practical arrangements for the division of inter-State responsibility for the examination of asylum applications. Despite the most serious failures of the Dublin system established by the EU and the arguable deficiencies of both design and implementation of this system,[48] it could be seen as an advantage in the formal sense of specifying that one single EU Member State is to be identified as responsible for examining each application before the asylum seeker can be returned to the country of origin.[49]

As a procedural device potentially forming the basis of inadmissibility decisions, the notions of '*safe third country*' and '*first country of asylum*' also need to be clearly defined and cautiously applied in order to prevent violation of States' obligations under the Refugee Convention and human rights treaties. If operated in connection with pre-procedure returns of asylum seekers to another State considered responsible for examining the case and protecting the asylum seeker, these notions have to presuppose an actual connection between the asylum seeker and the third country in question, as well as genuine prospects of readmission into that country. In addition, and crucially, the asylum procedures, the reception conditions, and the standards of protection for persons granted asylum in the 'safe third country' must be in compliance with the inter-

46 ExCom Conclusion No 8 (XXVIII) (1977) para (e)(iii); Council of Europe (n 35) paras 2, 3.

47 As an illustration, see article 43 of the EU Asylum Procedures Directive (n 45) which allows for border procedures only to decide on the admissibility of applications and on the substance of applications considered manifestly unfounded, cf articles 31(8), 32(2), in any case requiring that procedures be in accordance with the basic principles and guarantees of chapter II of the Directive.

48 See UNHCR, 'Left in Limbo: UNHCR Study on the Implementation of the Dublin III Regulations' (2017).

49 See EU Regulation No 604/2013 of the Council of 26 June 2013 Establishing the Criteria and Mechanisms for Determining the Member State Responsible for Examining an Application for International Protection Lodged in one of the Member States by a Third-Country National or a Stateless Person (recast) [2013] OJ L180/31.

national obligations under both the Refugee Convention and human rights treaties, including protection against *refoulement* as well as the various civil, social, and economic rights enshrined in these instruments.[50]

When it comes to substantive examination of asylum cases, the relevance of *accelerated procedures* for asylum cases that are so obviously without foundation as not to merit full examination at every level of the procedure has been widely recognized, yet with the proviso that they are applied to narrow and objectively defined cases. In an early recommendation on the problem of manifestly unfounded or abusive applications for asylum, UNHCR ExCom defined such cases as 'those which are *clearly fraudulent* or *not related to the criteria for the granting of refugee status* [under the Refugee Convention] *nor to any other criteria justifying the granting of asylum*'.[51] The tendency in recent years seems to be that many States have extended the scope of application of such accelerated procedures, in some instances combining them with less objective criteria or with generalized assumptions of specified countries as being 'safe countries of origin'.[52] In particular when operated in the context of border procedures, there is a clear risk that this approach to asylum applications may lead to summary examinations, implying enhanced risk of erroneous rejections.

4. Procedural Standards under Human Rights Treaties

a. The Human Rights Systems: The UN, African, Inter-American, and European Systems

The treaty bodies in the United Nations Human Rights System and those in the regional systems—the European Human Rights System, the Inter-American Human Rights System, and the African Human Rights System—have developed standards pertaining to asylum procedures through interpretation and application of their respective human rights instruments in judgments, cases, and other mechanisms such as country reports, thematic reports, and resolutions. Specifically, in relation to asylum procedures, treaty bodies have interpreted rights to an effective national remedy, due process, fair trial, and judicial protection in order to determine the procedural guarantees that must be observed in these procedures. Based on their evolutive interpretation of certain rights, most relevantly *non-refoulement*, regional human rights bodies have developed a

[50] cf Hofmann and Löhr (n 5) 1110–14; Hathaway (n 5) 328–33; on 'safe third countries', see also Chapter 28 in this volume.

[51] ExCom Conclusion No 30 (XXXIV) (1983) para (d) (emphasis added).

[52] See eg EU Asylum Procedures Directive (n 45) arts 31(8), 36, 37.

minimum set of procedural guarantees that must be respected in the framework of asylum procedures. In this sense, Chetail has indicated that 'the substantial overlap between the principle of *non-refoulement* under refugee law and human rights law has a critical impact by compensating for the absence of procedural guarantees in the Geneva Convention'.[53]

b. Developing a Right to an Asylum Procedure

The ECtHR's jurisprudence on procedural standards for RSD hinges not only on the risk of expulsion that may violate article 3, but also on article 13 that guarantees the right to an effective remedy.[54]

In the case of *MSS v Belgium and Greece* concerning the return of an Afghan asylum seeker from Belgium to Greece where he was exposed to degrading treatment, the ECtHR determined that in order to be considered an effective remedy in the context of the expulsion of an asylum seeker, such a procedure must integrate the following elements: access to a competent national authority; independent and rigorous scrutiny of the complaint; a particularly prompt response; and automatic suspensive effect of appeals against the expulsion measure.[55] Thus, procedural guarantees deriving from the right to an 'effective remedy' have to govern initial decision-making and appeals.[56]

In order to attract such guarantees, a claim must be 'arguable', that is, 'a claim which could have some merit and which is based on an alleged violation of a right protected by the ECHR'.[57]

In the Inter-American System, the IACtHR has understood that, '... the international protection regime has become imbued with a human rights approach. An example of this is the incorporation of due process guarantees in refugee status determination procedures.'[58] Likewise, the bodies of the Inter-American System have considered that in cases of persons seeking asylum or the expulsion or deportation of a refugee, the analysis of compliance of the State's obligations under the American Convention entails a combined assessment of the rights to seek and be granted asylum (article 22.7), prohibition of *refoulement* (article 22.8) with the rights to a fair trial (article 8) and

judicial protection (article 25), which guarantees that the person seeking refugee status has access to due process and judicial protection.[59] In the case of the *Pacheco Tineo Family*, the IACHR asserted that any refugee determination process implies an assessment and a decision on the possible risk of impairment of the most basic rights, such as the rights to life, personal integrity, and personal liberty.[60]

Finally, the African Commission on Human and Peoples' Rights has also held that procedural guarantees must be applied in the framework of procedures relating to asylum seekers, in accordance with the 'right to a fair trial', established in article 7(1) of the African Charter on Human and Peoples' Rights.[61]

In contrast, the jurisprudence of the Human Rights Committee has been based on the fact that certain procedural parameters apply to the refugee status determination procedure by virtue of article 7 (or 6) of the ICCPR, concerning the harm involved, and not by virtue of the standards developed by article 14 ICCPR on the right to a fair trial, which is similar to the approach taken by the ECtHR.[62]

c. Standards on Asylum Procedures

i. *Access to the Asylum Procedure*

Access to the procedure for asylum seekers must be guaranteed[63] from the arrival of the applicant at the border. Thus, in *Sharifi v Italy and Greece*, concerning 32 Afghan nationals, two Sudanese nationals, and one Eritrean national, who alleged that they had entered Italy irregularly from Greece and been returned to that country immediately, the ECtHR noted that Greece had not informed asylum seekers of their right to apply for asylum, by omitting this right in information leaflets.[64] The ECtHR considered that Greece's omission constituted a violation of the right of access to procedure, through article 13 in conjunction with article 3.

In addition, the ECtHR has considered that the material impossibility of submitting an application for asylum is contrary to the Convention. For example, in the case of *AEA v Greece*, the Court noted the difficulties in registering asylum applications that had resulted in hundreds of people lining up in Athens, unable to file applications for months.[65]

[64] ibid paras 177–81.

[65] ibid para 77.

On the other hand, more recently, the ECtHR issued the judgment in the case of *ND and NT v Spain*, heavily criticized for its finding that 'hot returns' from Spain to Morocco do not constitute a violation of the prohibition on collective expulsions, as established in article 4 of Protocol 4. Provided the existence of 'genuine and effective access to means of legal entry', the Grand Chamber held that States may refuse entry to their territory to aliens, including potential asylum seekers who have crossed the border, without cogent reasons, in an unauthorized manner.[66]

In the Inter-American System, the scope of the right of access to the procedure has been developed through the right to seek asylum. The IACtHR, in the framework of its consultative competence, considered:

> for the right to seek asylum to take effect in practice, host States are required to allow persons to apply for asylum or refugee status, which is why such persons cannot be rejected at the border or returned without an adequate and individualised analysis of their claims with due guarantees.[67]

ii. *Screening and Identification of International Protection Needs and Special Needs*

The bodies of the European and Inter-American systems have stated their position on the obligation to identify international protection needs and special needs, such as the situation of unaccompanied children, victims of human trafficking, amongst others. In this regard, the IACHR in its Inter-American Principles has understood that 'States should configure and apply instruments that allow for the detection of situations of vulnerability on a case-by-case basis, as well as mechanisms of referral to the appropriate agents to address the needs identified in the short, medium, and long term'[68] and that 'States should ensure the prompt identification and referral to competent asylum authorities or relevant protection procedures of those in need of any form of international protection or who are unaccompanied or separated children'.[69]

The IACtHR has considered that 'the establishment of procedures for the identification of protection needs is a positive obligation of States and failure to institute them would constitute a lack of due diligence'.[70] Further, States must ensure that the persons involved in such procedures are properly trained to identify special protection needs,[71]

[66] *ND and NT v Spain,* App Nos 8675/15 and 8697/15 (ECtHR, Grand Chamber, 13 February 2020) paras 209–10.

[71] ibid para 121.

and that, if risks and needs are identified, the person should be given access to procedures that are suitable for specific protection and care according to the circumstances of each case.[72]

Similarly, the ECtHR has referred to the obligation to identify and adequately cater for the special needs of asylum seekers. In particular, in the case of *OM v Hungary*, concerning an asylum seeker who had fled from Iran because he was persecuted for being a homosexual, the Court considered that it was contrary to the ECHR to detain an asylum seeker whose particular circumstances had not been taken into account. In this case a homosexual person such as the applicant was unsafe when detained with others from countries with widespread cultural or religious prejudice against LGBTIQ+ persons.[73]

iii. *Access to Legal Assistance and Representation*

European case law has established that the State must guarantee access to justice *de jure* and *de facto*, so that if it does not provide a free legal aid system, it must inform the applicant about organizations that do so.[74] For its part, the bodies of the Inter-American System have stated the right to receive legal aid in the event of an application. In its leading case on refugees, the case of the *Pacheco Tineo Family v Plurinational State of Bolivia*, the IACtHR held that States must guarantee access to legal advice and representation, which includes receiving necessary guidance as to the procedure to be followed, in a language and format that can be understood by the applicants.[75] In addition, the bodies of the Inter-American System have held that the applicant must have the opportunity to contact a UNHCR representative.[76]

Finally, article 7 of the African Charter on Human and Peoples' Rights states that the right to a fair trial includes the right to be defended. The African Commission has established the right to be defended in administrative cases, so free legal assistance must also be guaranteed in migration procedures.[77]

iv. *Access to Translator or Interpreter*

The ECtHR has highlighted the need to provide, when necessary, the assistance of an interpreter in order to guarantee access to effective remedies for the processes of asylum

[72] ibid para 261. [73] *OM v Hungary,* App No 9912/15 (ECtHR 5 July 2016) para 53.

See also IACHR (n 67) principle 50. Migration processes must offer the migrant at least the following guarantee: Assistance and legal representation by a competent legal representative selected by the migrant (including in any process related to his/her migration status) and free of charge when the migrant lacks the means to pay for private representation.

[76] *Case of the Pacheco Tineo Family v Plurinational State of Bolivia* (n 75) para 159; IACHR (n 67) principle 50.

[77] *Media Rights Agenda v Nigeria*, African Commission on Human and Peoples' Rights, Comm No 224/98 (2000).

seekers.[78] In this regard, the IACtHR has determined that article 8 of the American Convention entails the duty to provide free access to a translator or interpreter in case of lack of knowledge of the language. Additionally, the IACtHR has indicated that, in the case of asylum seekers, the assistance of a translator must be provided free of charge, as one of the impassable limits of administrative action, and to ensure the effective access to communication.[79]

v. *Confidentiality of the Procedure*

The ECtHR has found that the lack of sufficient protection of confidentiality could constitute a breach of article 8 of the ECHR. In this regard, the European Court has highlighted the need to guarantee asylum seekers the confidentiality of the asylum procedure, in particular between States.[80] For its part, the IACtHR has stressed that in the conduct of procedures, the protection of asylum seekers' data and applications must be respected at all stages, based on the principle of confidentiality, with the aim of protecting the rights of applicants who might be at risk.[81]

vi. *Individualized and Personal Interviews*

The ECtHR has understood that for the RSD procedure to be individual, fair, and effective, it must necessarily provide for a personal interview with the asylum applicant before the decision on the application is taken.[82] Likewise, the IACtHR has held that the right to be heard, in all cases, requires the holding of a hearing or personal interview.[83]

The IACHR has expressed its concern about the use of video conferencing for interviews and hearings on the merits. In particular, it has indicated that the use of video conferencing would be contrary to human rights standards if there were (1) reduced interaction between the interviewer and the interviewee;[84] (2) inhibiting asylum officials from observing body language and behaviour;[85] (3) reducing the quality of legal representation;[86] and (4) obstacles to interpretation from another language.[87]

[86] *Report on Immigration in the United States: Detentions and Due Process*, Inter-American Commission on Human Rights OEA/Ser.L/V/II (30 December 2010) para 406.

[87] ibid.

vii. *Information and Length of Proceedings*

In respect of asylum seekers, the ECtHR has found, in particular, that individuals need to have adequate information about the asylum procedure to be followed and their entitlements in a language they understand.[88] This requires the existence of a reliable system of communication between the authorities and the asylum seeker.[89]

In the Inter-American System, it has been held that States are under the obligation to guarantee that the person seeking refugee status is heard by the State to which he or she is applying, within a reasonable period of time, which is verified by the prompt and timely conduct of a personal interview.[90] Likewise, the ECtHR has paid particular attention to the speed of the remedy. In that sense, in the case of *IM v France*, concerning the deportation of a Sudanese asylum seeker from France, the ECtHR indicated that an unreasonably short time limit to submit a claim, such as in the context of accelerated asylum procedures, can undermine the exercise and the effectiveness of the remedy. In particular, the ECtHR considered that a reduced period of five days was contrary to the ECHR.[91]

viii. *Burden of Proof*

The ECtHR has developed a detailed case law in respect of the burden of proof. The court clarified in the case of *JK v Sweden* that it is the shared duty of the asylum seeker and the immigration authorities to ascertain and evaluate all relevant facts in the asylum procedures.[92] However, the burden remains on asylum seekers to adduce evidence as regards their own personal circumstances although the ECtHR recognized that it was important to take into account all of the difficulties which an asylum seeker may encounter in collecting evidence.[93]

ix. *Psychological Assistance during the Procedures*

Recognizing the importance of maintaining and preserving mental health, the IACtHR has stressed that the lack of protection for asylum seekers constitutes a violation of their mental integrity.[94] In addition, the IACtHR has highlighted the importance of protecting the mental health and psychological well-being of children in the midst of asylum procedures.[95]

[94] *Case of the Pacheco Tineo Family v Plurinational State of Bolivia* (n 75) para 207.

[95] Advisory Opinion OC-21 (n 70).

x. *Decisions and Appeals Proceedings*

The ECtHR has highlighted the need to ensure that the authority responsible for deciding the asylum application carries out a rigorous examination of each element of the application and its merits.[96] In relation to appeals proceedings, the ECtHR has established that article 13 also requires automatic suspensive effect of the remedy, which means that the planned expulsion must be put on hold until the final decision is taken.[97] Also, the mere possibility of requesting suspensive effect, or a remedy which has such effect 'in practice' only, is not sufficient.[98] In addition, the ECtHR has indicated that an unreasonably short time limit to appeal a subsequent removal decision can render a remedy practically ineffective. Thus, in the case of *IM v France*, the 48-hour time limit for appeal was found to be contrary to international law.[99] Meanwhile, the IACHR has expressed its concern about a reduced period of three days.[100]

Along these lines, the IACHR and the IACtHR have found that the remedy of review or appeal must have suspensive effect and the asylum seeker must be allowed to remain in the country until the decision in the case is made by the competent authority, even while the means of challenge is pending, unless the application is proven to be manifestly unfounded.[101]

xi. *Specific Provisions for Children and Adolescents*

The ECtHR has held that any procedure in which children are involved must be carried out in the best interests of the child.[102] This has also been emphasized in the Joint General Comment of the UN Committee on the Protection of the Rights of All Migrant Workers and Members of Their Families and the UN Committee on the Rights of the Child.[103] The IACtHR has extensively discussed the specific provisions that States must adopt for children and adolescents seeking asylum, referring to the State's obligation to institute and follow fair and efficient proceedings; to provide necessary guidance as to the procedure to be followed; to ensure legal representation should be free of charge and have specialized training; to conduct the interview in a location appropriate to the needs and safety of the children, meaning a non-threatening space, and by a specially trained professional; and to use the interview to identify immediate needs for assistance, such as clothing, food, and hygiene.[104] The IACtHR, the Committee on Migrant Workers and the Committee on the Rights of the Child have emphasized that children have the right

[104] Advisory Opinion OC-21 (n 70) paras 247–55.

to be heard in their application for asylum or refugee status, regardless of whether they are with their parents or whether they are unaccompanied or separated from their parents.[105]

With regard to legal guardianship, the ECtHR has pointed out that children and adolescents are amongst the vulnerable groups that require special protection.[106] Likewise, the IACtHR has reiterated the States' position as guarantors with regard to persons within their territory, especially those in their custody,[107] as might be the case of separated or unaccompanied children. For its part, the African Human Rights System has determined the obligation of States to provide adequate assistance to children, whether accompanied by their families or not.[108]

Furthermore, the ECtHR has indicated the prohibition of arbitrary detention of minors and vulnerable groups.[109] In relation to the above, the IACtHR has emphasized the prohibition of the deprivation of liberty of children who are with their parents as well as of children who are alone or unaccompanied.[110]

5. Concluding Remarks on Procedural Safeguards and the Influence of International Human Rights Bodies

As shown above, procedural requirements and standards developed by human rights bodies play a crucial role in filling the normative gap that results from the absence of such standards in the Refugee Convention. In this regard, there are significant differences in legal approach and protective levels between the various regional human rights systems. In general, it would seem safe to say that the Inter-American Human Rights System tends to set the higher procedural standards.[111]

Study of the European Court of Human Rights with an Inter-American Counterpoint* (OUP 2015) 503–12; Pablo Ceriani Cernadas, Ricardo Fava, and Diego Morales, 'Políticas migratorias, el derecho a la igualdad y el principio de no discriminación: Una aproximación desde la jurisprudencia del Sistema Interamericano de Derechos Humanos' in Pablo Ceriani Cernadas and Ricardo Fava (eds), *Políticas migratorias y derechos humanos* (Ediciones de la UNLa 2009) 143–4.

In the Americas, the interplay amongst State authorities, UNHCR, the bodies of the Inter-American Human Rights System, non-government organizations, litigants, scholars, asylum seekers, and refugees has shaped the measures that have been taken for the protection of refugees, including the establishment of asylum procedures. An interesting trend in the Americas, in particular in Latin America, relates to how national courts and judges have started to internalize in their jurisprudence the standards developed by the bodies of the Inter-American Human Rights System and also the doctrine of UNHCR. This cascade effect between international and regional standards has been favoured by the concept of 'control of conventionality' developed by the IACtHR, that is, when applying domestic rules, the courts and judges must verify that these rules are compatible with the American Convention on Human Rights.[112] This empowers courts at the national level to review the compliance of asylum procedures with the provisions of the American Convention and the standards developed by the IACtHR.

Enforcing international standards in domestic law is crucial to the effective procedural protection of asylum seekers. Regardless of how ambitious the standards adopted at the international or regional level are, they cannot work effectively if enforcement lies primarily with the respective human rights bodies at these levels. This is amply demonstrated by the Common European Asylum System, which includes probably the most detailed standards on asylum procedures in supranational instruments,[113] yet their effects are being hampered by inefficient enforcement at the EU level combined with dysfunctional asylum systems and, not least importantly, barriers to accessing the asylum procedures in a number of Member States.

The history of refugee protection is one that has developed as a result of, and despite, humanity's major crises. Recent protection crises are occurring in the context of rising nationalism and populism in many countries across the world. Since the 1980s, States in the Global North have introduced a range of policies to deter or prevent migrants and refugees from arriving on their territories or to limit access to their asylum systems by increasing border controls, introducing extraterritorial controls, and restricting procedural safeguards.[114] Within an increasing context of large mixed migration movements, the ability of asylum procedures to have an *effet utile* lies in their capacity to adapt, respecting the obligations derived from refugee law and human rights law while developing simplified and differentiated procedures that meet actual protection needs.

CHAPTER 33

CREDIBILITY, RELIABILITY, AND EVIDENTIAL ASSESSMENT

GREGOR NOLL

1. Introduction

How are we to recognize the facts that make a person a refugee? While various forms of group-based recognition, including *prima facie*, dominate the practice of refugee recognition worldwide, it is individual assessment in refugee status determination (RSD) that has established itself as the main point of reference in evidential issues.[1] This form of assessment is often conducted by States in the Global North, although not exclusively so. In these States, in particular, it plays an important limitative role, restricting access to asylum, and so is the focus of this chapter. Evidential assessment in asylum law differs from that in other fields of law in that at the heart of the asylum procedure is a single source, bearing witness in its own interest, about future events. Each of these three factors is problematic in their own right, but in asylum law, they come as a threefold unit. Let us look at them one by one.

A single source dominates evidential assessment in the asylum procedure, that is, the applicant's testimony. Relevant personal documentation is often sparse, and may raise complex questions of authenticity. Directly inquiring with the authorities of the home State on the issue at hand is out of the question; at worst, this might play into the persecutor's hand. With the applicant's testimony being the dominant source, cases are to a large degree decided on the assessment of credibility and reliability. The

[1] See Chapter 31 in this volume.

decision-maker may not have the benefit from the usual interplay between different evidential sources that characterizes other fields of law. The asylum process resembles a monologue interspersed with a few footnotes. The question of the applicant's credibility, how reliable her statements are, takes central ground. This, in turn, augments the overall impact of the decision-maker's discretionary judgment on credibility and reliability. This risks deciding cases on credibility that could have been decided on other evidence, and at worst, findings of a lack of credibility used as a strategy to reject applications and render these rejections appeal-proof.

In an effort to widen their cognitive resources, decision-makers collect country of origin information (COI), send experts on exploratory missions to important countries of origin,[2] and take expert testimony on the country of origin,[3] medical[4] or psychological[5] issues. All this seeks to compensate for the absence of a shared world between the applicant and decision-maker, which is a given in wholly domestic legal matters. However, COI is general, and does not relate to the single events at issue in a particular case. While it may provide broader, contextual evidence, it may also be used to assess the applicant's credibility and reliability. A gap remains between its generality and the specificity of the case.

Secondly, the applicant testifies in her own interest, in particular where neither COI nor other evidence goes to the heart of the matter. Delivering evidence *about oneself* as the sole witness has been considered dubious or invalid since Antiquity. Socrates' trial[6] and the trial of Jesus suggest as much: '[t]hou bearest record of thyself; thy record is not true'.[7] Throughout Western legal history, it seems that combination of testifying as sole witness *and* in one's own interest has disqualified testimony or greatly diminished its value. *Testis unus, testis nullus* states a principle of Roman law that can be traced back to a constitution by Constantine in AD 334: one witness is no witness.[8]

[2] On COI see Femke Vogelaar, 'Principles Corroborated by Practice? The Use of Country of Origin Information by the European Court of Human Rights in the Assessment of a Real Risk of a Violation of the Prohibition of Torture, Inhuman and Degrading Treatment' (2016) 18 EJML 302; and Femke Vogelaar, 'The Eligibility Guidelines Examined: The Use of Country of Origin Information by UNHCR' (2017) 29 IJRL 617.

[8] 'We now manifestly sanction that the testimony of only one witness shall not be heard at all, even if such witness should be resplendent with the honour of the glorious council'. Codex Justinianum 4.20.9, AD 334, as quoted in Antonino Metro, 'Unus Testis, Nullus Testis' in John Cairns and Olivia Robinson, *Critical Studies in Ancient Law, Comparative Law and Legal History* (Hart 2001) 110.

Thirdly, a refugee fears a future event: being persecuted upon return. This pushes her testimony towards prophecy, an altogether different mode of speech than evidencing the past or present. It puts the applicants in Cassandra's position in Agamemnon, Aeschylus's play: displaced to a foreign country as a subaltern, and predicting outrageous events to an audience that rejects her testimony as incredible.[9] While contemporary law cannot be reduced to these traditions, strong scepticism against a single source speaking about herself in the future tense is a force to be reckoned with. The question is whether refugee law succeeds in tempering that sceptical force.

Credibility assessment in asylum appears to be constrained by a conceptual framework, as are other fields of law. Refugee law offers a particular constellation of the burden of proof, the standard of proof, and the benefit of the doubt that we shall present. However, this chapter argues that there are serious logical deficiencies in the way that these three concepts interact in asylum law, with the result that they are unable to restrain discretion and regulate the decision-making (Section 2). If we look beyond these legal concepts and rules in search for restraint in proxies for credibility, scientific studies in psychology and traumatology suggest that standard credibility criteria, such as behaviour or the coherence and plausibility of statements, are also deficient. These studies in effect undermine the validity of standard criteria used in the UNHCR Handbook ('the Handbook')[10] and the EU Qualification Directive[11] (Section 3). Without functioning legal constraints and valid credibility criteria, the discretion of decision-makers occupies too much space. Empirical studies confirm that the allocation of a case to an individual judge is the weightiest factor in dictating the outcome of an asylum case, leading to the conclusion that evidential assessment actually plays a minor role (Section 4), suggesting that evidential assessment in asylum law is deeply dysfunctional. This leaves refugee law with the question of which strategy to adopt for the future (Section 5).

A number of terminological notes and delimitations are in order. First, in this chapter, 'credibility' denotes the capability of a human to be believed, while 'reliability' denotes the capability of a statement to be relied upon. When the term 'credibility' is used by other authors, it is not always clear which of these capabilities is referred to. Secondly, the term 'refugee law' is used in a wide sense, encompassing the Refugee Convention, relevant human rights treaties and EU law, and the related asylum practices. Thirdly, the female pronoun is intended to cover all genders, unless indicated otherwise by the context in which it appears. Fourthly, both quasi-judicial refugee status determination by authorities and judicial determination by courts are considered in this chapter. While jurisdictions in Europe and North America dominate my references, it is reasonable to expect that similar problems as the ones described in the following will emerge in other jurisdictions as well, as other chapters attest.[12]

2. Legal Constraints on Evidential Assessment

Evidential assessment is constrained by law. In common law, formal rules may govern the introduction and use of evidence, while in civil law, the principle of free evidential assessment prevails, with conceptual constraints in place. A common denominator for both types of legal systems is the concepts of the burden of proof, the standard of proof, and the benefit of the doubt. Their understanding is frequently taken for granted, or merely hinted at in the Handbook.[13] Doctrinal analysis of evidence within asylum law remains sparse, and the field of procedural law research has not taken more than a fleeting interest in the oddities of asylum adjudication.

Procedural doctrines from other legal fields appear to be influential in asylum. From administrative procedure, asylum borrows the idea that as the applicant is claiming a benefit, she carries a burden of proof for eligibility.[14] But from the perspective of international refugee law, which imposes explicit and implied obligations of *non-refoulement* on States, that makes no sense. These obligations are not formulated as an individual benefit. In sharp contrast, they are obligations directed at States, and do not make their applicability contingent on a particular procedural performance by the applicant.[15] In international law terminology, they are obligations of result, not obligations of conduct.[16] This might explain why the European Court of Human Rights has refrained from placing the burden of proof on individual applicants.[17] Public international law and domestic public law may have two very different takes on this procedural issue, troubling the comparison between asylum and domestic administrative procedure.

[13] UNHCR Handbook (n 10) paras 196, 203–4, 210.

[14] The term 'burden of proof' is at times reserved for adversarial trials and considered less appropriate for refugee status determination to the extent it is performed in an inquisitorial setting. But, as Kirby J has pointed out, 'the forensic context still reflects the reality of a decision-making process. If a party that could be expected to present material in support of its case fails to do so, that party cannot then complain if the decision-maker decides that a basis for the relief claimed has not been established.' *Minister for Immigration and Multicultural and Indigenous Affairs v QAAH of 2004* [2006] HCA 53, para 136.

[15] Refugee Convention, art 33; ECHR, arts 3, 13.

[16] An example of an obligation of result would be 'see to it that no one is removed to a situation of torture'. An example of an obligation of conduct would be: 'see to it that there is a legal procedure for individuals to claim international protection'. Article 33 Refugee Convention, article 3 CAT and the implied prohibitions of *refoulement* in article 7 ICCPR and article 3 ECHR are like the former and unlike the latter. This reading of *non-refoulement* obligations explains why para 28 of the UNHCR Handbook casts refugee status determination as being declaratory rather than constitutive. For an analysis of the two types of obligations in international law see Rüdiger Wolfrum, 'General International Law (Principles, Rules and Standards)' Max Planck Encyclopedia of Public International Law 1408, paras 66–93.

[17] 'As a general rule, post admissibility, the burden of proof is not always borne by one or the other party as is usually the case before other international tribunals with an adversarial procedure'. Michael O'Boyle, 'Proof: European Court of Human Rights (ECtHR)' Max Planck Encyclopedia of International Procedural Law 3437, para 33.

At first sight, analogies with criminal procedure also seem inapt, as the criminal procedure is about past events, while asylum revolves around a future state of affairs. Yet the concept of the benefit of the doubt figures prominently in both fields. In criminal law, the benefit of the doubt is shorthand for the requisite standard to which the prosecutor has to prove the case. If it has to be proven beyond reasonable doubt that the accused perpetrated the crime, any measure of reasonable doubt is beneficial for the accused, who then goes free. In asylum law, however, the benefit of the doubt denotes an alleviation of the evidential burden otherwise imposed on the applicant.[18] In the criminal procedure, the accused has the right to remain silent, which the asylum seeker does not. Therefore, the context in which the term 'benefit of the doubt' operates is so different in the two procedures that this terminological loan seems unsuitable.

The asylum procedure remains a phenomenon *sui generis*, not susceptible to analogies from the administrative or criminal procedure. This leaves us with a set of mainstream views in refugee law, influenced by the Handbook.[19] As mentioned above, it is widely held that the burden of proof is on the applicant, but that she enjoys a benefit of the doubt.[20] To this, the Handbook adds that 'the duty to ascertain and evaluate the relevant facts is shared by the applicant and the examiner',[21] reminding of the evidential strategy of the ECtHR.[22] Case law from both Germany and the UK stipulates a low standard of proof.[23] In combination, these positions invite us to consider the central concepts used in them—the burden of proof, the standard of proof, and the benefit of the doubt—in greater depth. It is helpful to start with the most evocative, and most enigmatic of the three: the benefit of the doubt.

What evidential burden does the benefit of the doubt alleviate? It cannot be the burden of proof, which has to remain with one particular party so as to offer meaningful guidance. Either this one party has that burden, and loses the case if the standard of proof is not met, or the other party has that burden and will lose if the standard of proof is not met. In refugee law as we know it, the benefit of the doubt certainly cannot amount to a reversal of the burden of proof.[24] This would make it the duty of the State to furnish

[18] This supposed alleviation comes at too high a price for the applicant, as I shall argue below. UNHCR Handbook (n 10) paras 196, 203–4. See also article 4.5 of the recast EU Qualification Directive, which permits Member States to make it 'the duty of the applicant to substantiate the application for international protection'.

[19] See n 13.

[20] An analogous understanding is expressed by the ECtHR in its line of cases on rejected asylum cases and article 3. See, amongst other authorities, *Collins and Akaziebie v Sweden*, App No 23944/05 (ECtHR, 8 March 2007); and *Hakizimana v Sweden*, App No 37913/05 (ECtHR, 27 March 2008). *JK and Others v Sweden*, App No 59166/12 (ECtHR, Grand Chamber, 2016) para 51.

[21] UNHCR Handbook (n 10) para 196.

[22] O'Boyle (n 17).

[23] International Association of Refugee and Migration Judges, 'Assessment of Credibility in Refugee and Subsidiary Protection Claims under the EU Qualification Directive: Judicial Criteria and Standards' (Haarlem 2012) 82–3. Expressing the standard of proof in a certain percentage is meaningless, unless it can be practically ensured that we all relate the same state of affairs to 0 per cent and 100 per cent.

[24] The idea of a reversible burden appears at times in case law. This is usually a reference to the *evidential* burden one party needs to shoulder if it wishes to prevent the other party from satisfying the burden of proof in a given evidential situation. As a rule, this is done through the invocation of additional facts and evidence disproving the claim of the other party. For an example, see the Grand Chamber judgment of *JK and others v Sweden* (n 20) para 51. For the stated reasons, the burden *of proof* can never be reversible.

evidence to the requisite standard, and the asylum seeker would in fact enjoy a right to remain silent, flying in the face both of the practice of States and the Handbook. But neither can it be that the standard of proof is alleviated. As earlier touched upon, the term 'benefit of the doubt' is a conceptual loan from criminal law, where it provides an alternative expression for a standard of proof 'beyond reasonable doubt'. In refugee law, one influential formulation of the standard of proof derives from EU law, stating that the applicant 'may reasonably fear, in light of his individual situation, that he will in fact be subject to acts of persecution'.[25] It is illogical to think of the 'benefit of the doubt' as an 'alleviation' of this standard, though. We cannot know what it would mean to lower the standard of proof to 'less than reasonable fear'. I conclude that it remains unclear exactly which evidential burden the benefit of the doubt is supposed to alleviate. In practice, it might not have any alleviating effect.

That does not mean, however, that it has no effect at all. The Handbook describes giving the benefit of the doubt as follows:

> After the applicant has made a genuine effort to substantiate his story there may still be a lack of evidence for some of his statements. As explained above (paragraph 196), it is hardly possible for a refugee to 'prove' every part of his case and, indeed, if this were a requirement the majority of refugees would not be recognized. It is therefore frequently necessary to give the applicant the benefit of the doubt.
>
> The benefit of the doubt should, however, only be given when all available evidence has been obtained and checked and when the examiner is satisfied as to the applicant's general credibility. The applicant's statements must be coherent and plausible, and must not run counter to generally known facts.[26]

Put otherwise, few asylum applicants satisfy the evidential requirements that they would have to respond to, were it not for the benefit of the doubt. The benefit of the doubt, however, is conditional on the 'general credibility' of the asylum seeker, expressed through the combination of three proxies (coherency, plausibility, freedom from external contradiction). If we run this in the reverse, it is only the generally credible applicant that, as a rule, is able to satisfy the procedural requirements in place for her recognition as a refugee. The same logic features in EU law,[27] and there are likely to be similar ripple effects in other parts of the world.

Would the benefit of the doubt make more sense if combined with a duty to produce evidence that were 'shared' between the claimant and the State authorities? The concept of shared evidential duties cannot be reconciled with a logically stringent conception of the burden of proof. 'The claimant has the burden of proof' and 'the duty to produce evidence is shared' cancel each other out, unless I am told exactly what each party has to

[25] Note how the chosen formulation operationalizes the term 'well-founded fear' of the refugee definition. Cases C-71/11 and C-99/11, *Germany v Y and Z* (CJEU, 5 September 2012) para 76.

[26] UNHCR Handbook (n 10) para 203, 204.

[27] For an extensive analysis, see Gregor Noll, 'Evidentiary Assessment in Refugee Status Determination and the EU Qualification Directive' (2006) 12 European Public Law 295.

do in order to satisfy its share of the duty of production. A burden of proof staying with one party for the whole of the procedure always relates to a standard of proof. A shared duty to produce evidence lacks the linkage to the standard of proof. It also lacks a particular standard which tells us when this duty shifts from one party to the other.[28] This instability is further exacerbated if we introduce the concept of a benefit of the doubt into such an environment. It leaves us with the question of how to alleviate a non-existent standard: a question that cannot be answered.

The two formulations of the benefit of the doubt in the Handbook and EU law condition the benefit of the doubt on 'the applicant's general credibility' and on his 'statements [being] coherent and plausible' and 'not running counter to generally known facts'. The alleviating evidential rule in EU law adds that the applicant needs to have made 'a genuine effort to substantiate his application' and has applied for protection at the earliest point in time, unless there are good reasons to the contrary.[29] The benefit of the doubt is granted, if we follow a first impression, if and only if the applicant has satisfied three criteria in the Handbook, and/or five criteria in EU law. From a strictly formalist perspective, here is what we have:

a. A burden of proof that is routinely deemed to be on the applicant.
b. A standard of proof that is believed to be low.
c. As soon as there is doubt about at least on one part of the statement, which the applicant cannot dispel with further evidence on the relevant *factum probandum*, something is added to the process.

If we cast these added elements as a set of three or five new *facta probanda* in the procedure (genuineness of the effort to substantiate, exhaustiveness of substantiation, coherence, plausibility, timeliness of the application and general credibility), this confronts us with the question of how an applicant is to prove these added elements pertaining to her general credibility and so on. Logically, this is untenable, because it mixes up facts with their evaluation, and evidence with proof. The applicant cannot be supposed to prove to the judge that she has just proven herself as credible. The alternative is that these added elements are as an escalated standard of proof. This is analytically more satisfying, but the outcome is dreadful in reality. It means that RSD operates with a low standard of proof, but, in reality, we apply a high standard of proof, because most cases trigger doubt. Knowing to what extent something needs to be proven is of value only if we know who is supposed to prove it to that standard. As this is what we do not know in refugee law, there is no point in specifying the standard of proof further.

To conclude, the interaction of the burden of proof, standard of proof, and benefit of the doubt in asylum is vague and logically deficient. The benefit of the doubt works

[28] This indicates that the introduction of additional norms to clarify an indeterminate standard of proof falls victim to the same systemic indeterminacy from which the standard suffers. Sebastían Reyes Molina, *Legal Interpretation and Standards of Proof. Essays in Philosophy of Law and Evidence Law Theory* (Uppsala University 2020) ch III.

[29] EU Qualification Directive, art 4.5.

against the applicant in making acceptance of a less than fully corroborated claim conditional on a positive credibility finding. In comparison with criminal or administrative proceedings, both factors—the logically deficient interaction of the three core concepts, and the escalated focus on credibility—widens the space for the personal discretion of the decision-maker.

3. Do We Have Criteria for Credibility?

Refugee law does not provide us with an intelligible framework on evidential questions. With credibility being so central an issue, we are left with the question on how to assess it. This section examines whether seemingly common-sense criteria suggested in refugee law and related doctrine are supported by scientific research.

Criteria for credibility assessment appear in the Handbook and EU law. The Handbook conditions the benefit of the doubt on the 'general credibility' of the applicant, and then suggests that her 'statements must be coherent and plausible, and must not run counter to generally known facts'.[30] For decision-makers subject to EU law, the black letter law of article 4.5 of the Qualification Directive is far more demanding. It states that documentation for certain aspects of the claim can be foregone if five conditions are cumulatively met: (a) the genuine character of the applicant's effort to substantiate her application; (b) submission of all relevant elements, satisfactory explanation of any lacunae: (c) coherence, plausibility, and external non-contradiction; (d) filing of the protection claim at the earliest possible time, unless there are good reasons for not doing so; and (e) the 'general credibility of the applicant'.

Both the Handbook and EU law use the problematic term 'general credibility', which opens up for an assessment of the applicant's personality beyond the statements she makes relating to her protection claim.[31] The Handbook, however, limits that assessment through a follow-up sentence listing coherence, plausibility, and external consistency as credibility criteria; all of them relating to the reliability of the applicant's statement rather than to her personality at large. Article 4.5.e of the Qualification Directive, by contrast, mixes statement reliability under its points (b) and (c) with the personal credibility criteria under points (a) and (e). General credibility is set out as a criterion in itself, as the genuineness of the applicant's efforts. With that, the decision-taker has to perform a much more comprehensive assessment; as we will see, it is one far beyond the competencies of any decision-maker.

This brings us to the question of how general credibility assessments and the use of more specific reliability criteria relate to the sciences. One strategy is to seek support in psychology and traumatology for the way credibility and reliability is assessed in refugee

[30] UNHCR Handbook (n 10) para 204.

[31] Jennifer Beard and Gregor Noll, 'Parrhesia and Credibility: The Sovereign of Refugee Status Determination' (2009) 18 Social and Legal Studies 455.

law, another to check whether research suggests that certain practices or criteria in refugee law are invalid. Research on deception detection is relevant for both strategies. Rooted in behavioural psychology, this field seeks to identify criteria to separate truth-telling from lies. This research tells us that humans are generally not very good lie detectors. In most empirical studies, accuracy rates fall below 60 per cent.[32] A 2006 metastudy by psychologists Charles Bond and Bella Depaolo synthesized research results from 206 earlier studies representing experiments with a total of 24,483 judges with no special aids or training.[33] In these circumstances, an average of 54 per cent correct lie–truth judgments was achieved. With an accuracy rate of 50 per cent expected by chance alone, this is unimpressive. But how about experienced asylum decision-takers? A 2006 study by Per Anders Granhag, a cognitive psychologist, compared the beliefs on lie detection cues held by staff at the first instance Swedish Migration Board to those of a group of random students.[34] Beliefs amongst Migration Board staff were 'not more in tune with research findings on objective cues to deception than were the beliefs of the students'.[35] Clearly, asylum decision-makers do not enjoy any professional privilege when telling lies from the truth.

Are there any objective cues to deception, then? Researchers distinguish between non-verbal cues (such as gestures or body movements) and verbal cues (such as words or expressions chosen in an oral statement). The 51 authors of a 2019 article underscore that 'scholars who have scientific expertise in lie (and truth) detection agree that there are no nonverbal behaviours that are present in all liars and are absent in all people who tell the truth'.[36] This rejection of nonverbal cues also undermines the rationality of 'general credibility' assessments proposed by refugee law and related doctrine. What distinguishes credibility from reliability is that it reaches beyond the statement: and therewith precisely for the nonverbal cues that scholars reject.[37] Therefore, the general credibility criterion is renounced as 'lack[ing] empirical support'.[38]

[32] Kraut and Vrij are standard references. Robert Kraut, 'Humans as Lie Detectors: Some Second Thoughts' (1980) 30 Journal of Communication 209; Aldert Vrij, *Detecting Lies and Deceit: The Psychology of Lying and the Implications for Professional Practice* (Wiley 2000).

[38] ibid 45.

The 2005 ECtHR judgment in *N v Finland*, a rare ECtHR case touching on evidential assessment in asylum, also supports the rejection of general credibility as a criterion.[39] The court accepted parts of the applicant's statement central to the claim of protection need, while quite forcefully rejecting the veracity of other parts.[40] In brief, *N v Finland* supports a narrow interpretation of 'general credibility', reducing it to the reliability of statements central to the protection claim.

Concerning the assessment of reliability, verbal cues are at the centre of deception researchers' efforts and are seen as having potential. While there are some cues for truth-tellers (the level of detail being a prime example), deception researchers yet have to agree on cues for liars. But even cues as the level of detail are discussed with great caution by researchers, as not every researcher has the same conception of what constitutes richness in detail.[41] In a 2017 research publication distilling findings from deception research into concrete advice for migration caseworkers, all verbal cues are immediately problematized, and most to the point where their practical usefulness is becoming doubtful. By way of example, it is pointed out that richness in detail may indicate that a statement is true. However, the authors underscore that there are strong counter-indications if speakers have witnessed sexual violence. Such speakers offer accounts devoid of detail that are nonetheless true.[42] Before a criterion such as 'the level of detail' can be used, a decision-taker would need to decide whether the claimant may have witnessed sexual violence. This would make the evaluation of earlier persecution into a pre-condition for a credibility criterion, reversing the sequence of method and outcome. In all, its laudable advances notwithstanding, deception research is not at a stage today where its most promising results can be readily transposed into practical advice. This is acknowledged by the field itself.[43]

The research makes it outright inadvisable to employ two of the three criteria used in the Handbook and EU law. Everyone, including asylum seekers, struggles to recall temporal information, verbal exchanges, proper names, the appearance of common objects, and peripheral memory.[44] Autobiographical memory changes over time in anyone, suggesting that we are all incoherent.[45] Trauma and post-traumatic stress disorder may have a negative impact on recall and narrative.[46] Post-traumatic stress

results in changes in account over time.[47] Research in a population of unaccompanied minor asylum seekers shows that accuracy and consistency are unrelated.[48] These findings not only suggest that the 'coherence' criterion is an unrealistic precondition for credibility, but also that the least coherent applicants may be most in need of protection, in particular if their claim and the traumatic event are linked, as they so often are.

'Plausibility' cannot be shared interpersonally, because our plausibility judgments are dependent on our past experiences, biases, and assumptions about the world.[49] This is why 'plausibility' as a credibility criterion is useless, inviting subjective judgment under a deceptive label. In contrast to coherence and plausibility, the Handbook criterion of a statement 'not running counter to known facts' is acceptable. However, it presupposes that we consider the overall quality of what is taken as 'known facts' first, raising the question of how COI and expert evidence have been produced. When comparing Western narratives of COI and expert evidence with the often interpreted or translated narrative of an asylum seeker, who may not have been fully informed about the asylum procedure, the risk for intercultural miscommunication is particularly acute.

Coherence, plausibility, and general credibility are written into the black letter of EU law. Is there a way to interpret these provisions in light of their refugee protective aim? To arrive at an interpretation 'in accordance with' the Refugee Convention as required by EU Treaty law,[50] we might read article 4.5 of the Qualification Directive through the lens of the term 'well-founded fear' in the Refugee Convention, drawing on treaty interpretation norms.[51] To conclude that a finding of 'well-founded fear' is contingent on the black letter requirements of article 4.5 of the Qualification Directive is a 'manifestly absurd' interpretation, because it would require the judge to act in contravention with what science and scholarship has now made common knowledge. As a manifestly absurd interpretation opens the door to the broader means of interpretation under article 32 of the Vienna Convention on the Law of Treaties, we could draw on the medical, cognitive, and psychological studies referred to. This would then reduce the scope of the terms 'coherent', 'plausible', or 'general credibility' to a minimalist reading, *de facto* incapacitating them. To be sure, this is not to say that the current formulation of article 4.5 of the Qualification Directive always leads to violations of the Refugee Convention. If, and only if, it is interpreted in the limitative way suggested here, it may be applied consistently with the Convention.

4. Divergences in Recognition and Empirical Studies of Refugee Adjudication

So far, we have shown that the legal process for assessing the credibility of asylum applicants provides little constraint on the subjective discretion of decision-takers. Against that background, we may reasonably expect that recognition rates should vary across actors assessing these applications. It is well known that recognition rates vary widely amongst Member States in the European Union.[52] Even though international and EU law norms might be expected to harmonize outcomes,[53] domestic legislation and procedural traditions in Member States diverge, which might explain why recognition rates do so as well. Yet recognition rates *within* Member States may also vary significantly, as a 2017 study on recognition divergences in the German asylum system found.[54] This undermines an explanation based on insufficient harmonization, as the same procedural tradition and the same legislation are applied by authorities and courts in the German *Länder*.

What is known about the causes for divergences? The asylum system of the US is well researched. In their seminal 2007 study, Ramji-Nogales, Schoenholtz, and Schrag found that, in many cases, 'the most important moment in an asylum case is the instant in which a clerk randomly assigns an application to a particular asylum officer or immigration judge'.[55] Their analysis of some 400,000 decisions and judgments in the US asylum system indicated that outcomes varied significantly between decision-takers on one and the same country of origin, even within one and the same authority or court. The likelihood of being granted asylum increased if the applicant had a spouse or a minor child in the US, if a female judge decided a case, if there was legal assistance, or if the case was decided by a judge who earlier worked in private practice, at an NGO or as an academic teacher. The likelihood for being granted asylum decreased if the judge was male, or if the judge earlier worked for the US Department of Homeland Security.[56] These differences were not trivial: female judges granted asylum at a rate that was 44 per

cent higher than that of their male colleagues.[57] Also, Rehaag's study of the outcome divergences produced by the Canadian asylum system highlights the importance of the judge assigned to the case to the outcome.[58] A 2000 study on Switzerland shows that recognition rates vary between its cantons, explained partly by their different asylum system organizations.[59] Hamlin's study of the RSD regimes of Australia, Canada, and the US argues that recognition rates vary due to their particular ways of conceptualizing and organizing administrative justice.[60] Martén's 2015 study of 16,000 Swedish judgments found evidence that lay judges' partisan affiliation measurably impacted outcomes across the Swedish system.[61] A 2020 study on the German federal system by Schneider, Segadlo, and Leue uncovers 'considerable spatial inequities', not only amongst authorities, but even at court level.[62]

These studies suggest that discrepancies cannot be explained by rational, protection-related factors alone. The considerable legal space for discretion demonstrated above is consonant with these patterns of outcome variation, leading to the conclusion that the individual decision-taker is often the most important determinant factor.[63] Knowing that, we could ask a different type of question: can we predict a final outcome if we know the identity of the decision-taker? Dunn, Sagun, Sirin, and Chen's 2018 machine-learning study of some 21 million records of US asylum decisions, affecting some 800,000 cases, confirms this possibility. Only using information on the identity of the judge and the applicant's nationality, their algorithm could predict the outcome of the asylum claim with 80 per cent accuracy.[64] It is distressing that a degree of predictive accuracy this high can be reached *without* having examined the evidence or its assessment by the judge. The conclusion is that that evidential assessment plays a minor role in

[57] Ramji-Nogales, Schoenholtz, and Schrag (n 55) 367. In a 2017 machine learning study of a larger dataset by Chen and Eagel, female judges had an average grant rate of 45 per cent compared to males, which had just a 30 per cent grant rate. the outcome, save for being a door-opener for subjective discretion. When outcome variations are so large, and driven predominantly by the individuals taking asylum decisions, another object of credibility is at issue: that of the asylum system itself.

5. Which Strategy for Credibility Assessment?

Evidential assessment in the asylum procedure is dysfunctional. It confronts challenges acknowledged in ancient traditions of legal witnessing; its rules on the burden and standard of proof are inconclusive at best, deceptive at worst; and its protective track record is dismal with significant variations between individual decision-makers persisting over years. This puts into doubt the larger project of rendering asylum outcomes more predictable and harmonized, be it through international or regional law. For observers outside the legal field, the conclusion should be clear: law is far from delivering justice on a central issue of global reach: that of membership in protective communities. In the asylum field, it is not law that rules, but individual decision-makers.

Which strategies might we adopt in this situation, and which are unsuitable? First, as we found that law is contradictory and cannot guide decision-maker, requiring them to undergo more legal training would not make a difference. It might be worthwhile exposing them to findings from psychology and trauma research on regular intervals, and to offer them more training on interviewing technique and cross-cultural communication. This might warn them away from the worst fallacies (such as the belief that there are cues for liars) and weed out clearly unsuitable and irrational ideas (such as the use of 'coherence' and 'plausibility' as credibility criteria). Yet weeding out irrationality is not enough, unless we have a rational and intelligible legal framework to fall back on. This we do not have. Therefore, overall outcome variations would not diminish significantly even if such training programmes were implemented widely.

A second strategy would be to acknowledge the paramount role of the individual decision-taker, and to cultivate an ethos of individual responsibility with the persons passing a credibility judgment. This would displace the problem into the hiring of suitable staff[65] and the method of assigning decision-makers to cases. While being honest about the subjective dimension of asylum adjudication is a good thing, building a moral meritocracy is less attractive an option as it begs the question of its ultimate foundation.

[65] Ramji-Nogales, Schoenholtz, and Schrag (n 55) 380 propose more rigorous hiring standards for US judges working on asylum cases.

A third strategy would be to build a new and more coherent doctrine of evidential assessment in asylum cases.[66] Evans Cameron has usefully proposed to base assessment practices on abductive reasoning, which looks for the best explanation instead of the truth or a threshold of probability. Between considering the evidence 'in the round' and applying the standard of proof, she asks for a crucial step to be taken:

> Throughout the hearing, a decision maker using abductive reasoning will be looking to infer, from among 'all the relevant possibilities' about what happened to the claimant in her homeland, the one that best explains what the decision-maker is seeing and hearing. In deciding the claim, he will be looking to infer, from among 'all the relevant possibilities' of what might be awaiting the claimant on return, the one that best explains the totality of the evidence.[67]

Evans Cameron's suggestion rests on the authority of evidential theorists who think of proof as that which best explains the evidence. For the purposes of RSD, she endorses the use of a set of factors for considering the strength of a leading hypothesis as proposed by Josephson, an evidence theorist.[68] In fact, this is no less than a set of second-order rules intended to clarify how first-order rules on the standard of proof and the benefit of the doubt are to be applied. More rules are added to the legal system. However, there are powerful arguments against second-order rules formulated within the 'best explanation' approach. If the problem is that the standard of proof in RSD is currently too vague, the second-order norms proposed by Evans Cameron will not resolve it. Reyes Molina has shown that such norms do not say anything about the setting of the quantum of evidence, which is at the heart of the matter. Their meaning, he argues, is as indeterminate as that of the first-order norm they seek to elucidate.[69] While his critique is not geared against the best explanation approach as such, it renders the strategy of building a better normative doctrine into a questionable pursuit.

With a fourth strategy, we could move to the other end of the spectrum. Algorithmic machines allowed us to analyse the malaise, so why not let them provide the remedy? Babic, Chen, Evgeniou, and Fayard have proposed a human-machine collaboration where Artifical Intelligence (AI) nudges human decision-takers along the lines of their

[66] For an early example, see Aleksandra Popovic, 'Evidentiary Assessment and Non-Refoulement: Insights from Criminal Procedure' in Noll (n 46).

[68] ibid 203, referring to John R Josephson, 'On the Proof Dynamics of Inference to the Best Explanation' in Marilyn MacCrimmon and Peter Tillers (eds), *The Dynamics of Judicial Proof: Computation, Logic, and Common Sense* (Springer 2012) 291–2.

[69] Reyes Molina (n 28) ch III, 24–7. His argument objects against second-order norms as proposed by Pardo (whom Evans Cameron also quotes), but it applies to the argument made by Evans Cameron with reference to Josephson as well.

earlier decisions, or those of their colleagues.[70] Even here, the problem would be displaced: primarily into system design, an area opaque for most lawyers, and secondarily into staff hiring and case assignment. Also, as machine nudging becomes more intrusive, judicial independence would seem to be compromised.

Finally, a fifth strategy would be to move to group-based determination in the Global North. This might reduce the problematic role played by individual credibility to an extent. Still, the system would need to identify whether particular individuals belong to the risk groups deemed eligible for protection under the Refugee Convention or other instruments. Individual evidential assessment would come back through that door.[71] To be sure, the overall cognitive load handled by RSD would be no less than today, but differently distributed. Powers that are allocated to individual decision-takers in individualized procedures would be concentrated at an aggregate level, with a concomitant shift in the magnitude of error risks.

We have a number of alternative avenues to choose from, some reformist, other more radical in the changes they demand. None of them offers a clear-cut resolution to the problems of evidential assessment in the asylum procedure mapped in earlier sections of this chapter. It will take time to properly consider all conceivable options and their consequences. At the systemic level, though, we have enough information to reject the way evidence and credibility is currently assessed in asylum cases.

[70] Boris Babic, Daniel L Chen, Theodoros Evgeniou, and Anne-Laure Fayard, 'A Better Way to Onboard AI' 2020 (11) Harvard Business Review (https://hbr.org/2020/07/a-better-way-to-onboard-ai). A nucleus of the nudging element can be found in Ramji-Nogales, Schoenholtz, and Schrag (n 55) 381, where the authors suggest that adjudicators with particularly high and particularly low grant rates should confer with each other to find out the reasons for their discrepancy.

[71] By way of example, doubts on the real nationality or permanent residency of an applicant have been addressed by questionable means as language tests.

PART V

THE SCOPE OF REFUGEE PROTECTION

CHAPTER 34

THE INTERNATIONAL AND REGIONAL REFUGEE DEFINITIONS COMPARED

TAMARA WOOD

1. Introduction

When the modern refugee protection regime first began to emerge in the early twentieth century, refugees were generally identified by group according to specific situations or nationalities—for example, agreements relating to Russian and Armenian refugees in 1926.[1] In the years leading up to the adoption of the Refugee Convention, this *ad hoc*, political decision-making about refugee protection was gradually replaced by a more individual, and 'legalized', approach to identifying refugees using generic, pre-determined criteria.[2] This culminated in the adoption of the Refugee Convention's article 1A(2) 'universal refugee definition', which defines a 'refugee' as a person with 'a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion'.[3]

While the universal refugee definition remains the cornerstone of the international refugee protection regime, it is far from the final word, as 'states parties [to the Refugee Convention] have not infrequently agreed by either regional accord or national law to *extend* the scope of refugee status to other persons'.[4] The most widely recognized regional refugee definitions are found in Africa and Latin America, where multilateral

[3] See the full definition in Section 2.a. Article 1A(2) of the Refugee Convention is described as the 'universal' refugee definition due to its international applicability and widespread ratification by States.

[4] James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014) 2 (emphasis in original).

arrangements between regional State groupings have extended refugee protection beyond those with a well-founded fear of being persecuted to people fleeing other, more widespread situations and harms, such as generalized violence, massive human rights violations and serious disturbances to public order.[5] Other regions have also considered alternative conceptions of a refugee, even if they have not always been formally applied.[6]

The scope of protection provided by the Refugee Convention's universal refugee definition has been supplemented in other ways as well. At the national level, some Contracting States to the Refugee Convention have expanded the scope of the definition within their own legislation—for example, by recognizing 'sex' or 'tribe' as an additional ground of persecution.[7] At the international and regional levels, 'complementary' or 'subsidiary' protection frameworks based on international human rights law have extended States' non-return (*non-refoulement*) obligations to those at risk of torture, cruel, inhuman, or degrading treatment, or arbitrary deprivation of life.[8] Broader still, notions of 'non-returnability' based on principles of temporary or humanitarian protection have further extended the category of people who may have a claim to special treatment or status in a country outside their own.[9] Over time, the scope of protection provided by the universal refugee definition itself has also changed. The changing nature of displacement since 1951, and evolving meanings of the definition's terms in international law, mean that the universal refugee definition now extends protection to persons not necessarily thought to be 'refugees' at the time of its drafting.[10]

Developments in international protection since 1951, and in particular the regional refugee definitions in Africa and Latin America, have often been praised for their generous scope and humanitarian spirit, and for addressing the perceived limitations of the Refugee Convention.[11] Not every such development has led to the *expansion* of protection, however. In Europe, for example, the 2004 European 'Qualification Directive',[12] which provides interpretative guidance to European Member States on the scope and application of the universal definition, has been criticized for promoting a 'lowest common denominator' approach to the definition that limits its interpretation

and application in practice.[13] In Latin America, States have sometimes used more discretion-based temporary, or humanitarian, protection regimes as *de facto* replacements for refugee protection, effectively circumventing their core obligations under the Refugee Convention.[14]

Irrespective of ongoing developments in the scope of international protection, the term 'refugee' continues to demarcate a category of persons with specific, enforceable rights under international, regional, and domestic law. Against this background, this chapter provides a closer look at the three main refugee definitions in operation today: the universal refugee definition in the Refugee Convention, the African refugee definition in the OAU Convention, and the Latin American definition in the Cartagena Declaration. This chapter provides an overview of the core criteria for refugee status set out in each of these three definitions. It then considers the definitions in comparative perspective, comparing and contrasting their scope and application to specific displacement scenarios. This chapter focuses on the 'inclusion' criteria set out in each definition. The definitions' respective 'exclusion' or 'cessation' clauses and criteria, which may prevent an individual who otherwise meets the criteria for refugee status from obtaining the benefits of its protection, are addressed elsewhere in this volume.[15]

2. Defining Refugees

a. Universal Refugee Definition

The universal refugee definition in article 1A(2) of the Refugee Convention defines a refugee as:

> any person who . . . owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it.[16]

An additional paragraph of article 1A(2) stipulates that refugees with multiple nationalities must establish a well-founded fear with respect to each country of

[16] Refugee Convention, art 1A(2).

nationality before qualifying for refugee protection elsewhere. A temporal limitation in the original definition, which applied only to events occurring before 1 January 1951, was effectively removed in 1967 with the adoption of the 1967 Protocol.[17]

When a person applies for refugee status under the universal refugee definition, their claim is commonly assessed according to several distinct, though related, components of the definition's criteria. Goodwin-Gill and McAdam articulate these components as follows:

> (1) They are outside their country of origin; (2) they are unable or unwilling to seek or take advantage of the protection of that country, or to return there; (3) such inability or unwillingness is attributable to a well-founded fear of being persecuted; and (4) the persecution feared is based on reasons of race, religion, nationality, membership of a particular social group, or political opinion.[18]

In practice, components (1) and (2) can usually be dealt with quickly within refugee status determination procedures. Being outside one's country of origin is generally a precondition for accessing refugee status determination procedures in the first place. It is not usually practicable, for example, to claim the benefits of refugee protection from within one's own country.[19] A refugee's inability or unwillingness to avail themselves of the protection of their country of origin is also usually self-evident in the very act of making a claim for refugee status. In practice, the question of what protection is available to the applicant in his or her home country arises more often in the assessment of whether he or she has a 'well-founded fear of being persecuted'.[20]

Component (3)—'a well-founded fear of being persecuted'—is at the heart of refugee status determination under the universal refugee definition. Establishing a well-founded fear of being persecuted involves a forward-looking assessment of the risk of harm to the applicant if returned. In essence, it requires that a refugee face a real chance (well-founded fear) of experiencing serious harm (being persecuted) if returned to their country of origin (or any other place where they face a relevant risk).[21] A 'real chance' of persecution is one that is significant, involves a reasonable degree of likelihood, or is more than a remote possibility.[22] Importantly, a real chance may be less than 50 per

[17] Only Madagascar and Saint Kitts and Nevis remain parties to the 1951 Convention only, making the temporal limitation now largely irrelevant. Article 1B(1) of the Refugee Convention originally gave Contracting States the option to adopt a geographical limitation on the universal refugee definition, limiting it to refugees fleeing events occurring 'in Europe' within the specified timeframe. With the exception of Madagascar, this has also been effectively removed.

cent—it does need to be more likely than not.[23] The notion of serious harm—'being persecuted'—is generally understood by reference to international human rights law, such that a 'sustained or systemic violation of basic human rights demonstrative of a failure of State protection' will constitute persecution.[24] This may include 'threats to life or freedom' as per the 1951 Convention's *non-refoulement* provision,[25] as well as other 'serious violations of human rights'.[26]

Not every person facing a real risk of serious harm is a refugee under the universal refugee definition. Component (4) of the definition requires that the risk of harm arise 'for reasons of' one of the five Convention grounds—race, religion, nationality, membership of a particular social group, or political opinion. This component of the definition is sometimes described as the 'nexus' requirement, as refugees must not only have (or be perceived to have) one of the relevant attributes; there must also be a 'nexus' between that attribute and the risk of harm.

The universal refugee definition has sometimes been criticized for its 'Eurocentric' focus, and for being 'out of date' and unable to respond to current displacement drivers, such as climate change and social inequality. Despite such criticisms, the definition's meaning and application have actually evolved considerably since 1951. This is the result of changes in the nature and causes of displacement worldwide, advances in the scrutiny and analysis provided by decision-makers and others, and the evolution of international law as a whole. For example, the protection of 'particular social groups' under the universal refugee definition has evolved to reflect changes in societies over time and across the world. This has allowed the definition to incorporate 'new' persecuted groups not envisaged at the time of the definition's drafting, such as women, homosexuals, conscientious objectors, and people with particular occupations.[27] Understandings of the definition's nexus requirement ('for reasons of') have also developed, so that it is now better understood that the discriminatory element of persecution is not always overt, but may be hidden, or implicit, in apparently generalized conditions and/or social structures. This has been important in the application of the universal refugee definition to situations involving conflict, generalized violence, and even disasters.[28]

An increasing appreciation of the interrelationship between refugee law and the broader body of international human rights law has also informed developments in the meaning and application of the universal refugee definition—in particular, in the kinds of harms that constitute 'persecution'.[29] For example, many courts and decision-makers have now recognized that persecution is not limited to violations of civil and political

[28] See Section 3.b.

[29] See Chapter 11 in this volume.

rights, such as the prohibitions on torture, arbitrary detention, or arbitrary deprivation of life, but may also include serious or systemic violations of socio-economic rights.[30] In addition, where courts have sometimes held that a potential refugee could avoid being persecuted by changing their behaviour or concealing certain aspects of their identity—for example, their sexuality or religious beliefs—it is now more widely accepted that being forced to conceal ones identity in this way might *itself* amount to a form of persecution and give rise to a refugee claim.[31]

Despite considerable developments in the scope and application of the universal refugee definition, it remains the case that not all persons forced to flee their home will fall within its criteria. For those who do not, alternative refugee definitions, such as those that exist under region-specific agreements for refugee protection, may provide another source of refugee protection.

b. African Refugee Definition

In Africa, the OAU Convention provides Africa's 'regional complement' to the 1951 Convention,[32] dealing with 'specific aspects of refugee problems in Africa' not dealt with in the 1951 Convention.[33] Chief amongst these specific aspects at the time of the Convention's drafting were concerns about colonial domination in Africa and the desire that 'freedom fighters'—those engaged in the struggle for African independence—be able to make a legitimate claim for protection as refugees.[34] Article I(1) of the OAU Convention incorporates the Refugee Convention's universal refugee definition, while article I(2) extends the term further, providing:

> The term 'refugee' shall also apply to every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.[35]

This Africa-specific refugee definition has been widely praised for providing 'a valuable addition specifically designed to meet the requirements of African reality'[36] and for

[30] See Michelle Foster, *International Refugee Law and Socio-Economic Rights: Refuge from Deprivation* (CUP 2007). For a critique of the human rights-based approach to interpreting the universal refugee definition see David James Cantor, 'Defining Refugees: Persecution, Surrogacy and the Human Rights Paradigm' in Bruce Burson and David J Cantor (eds), *Human Rights and the Refugee Definition: Comparative Legal Practice and Theory* (Brill 2016).

'translat[ing] the core meaning of refugee status to the reality of the developing world'.[37] The definition has been widely incorporated into the domestic legislation of African States.[38] Despite this, it is difficult to establish the scope and meaning of the definition's criteria for refugee status with the same level of precision or certainty as there is for the universal refugee definition. This is due to the historical lack of attention or close scrutiny that the African refugee definition (like other regional refugee protection regimes) has received. Indeed, there is a pressing need for the regional definitions, such as the African refugee definition, to be interpreted and applied in a more principled fashion than they have been to date.[39] Nevertheless, drawing on more recent engagement and commentary on this definition by refugee status decision-makers, legal scholars, and international and regional organizations, the following comments about its criteria for refugee status can be made.

The African refugee definition includes two core components. These are: (1) one (or more) of the four enumerated refugee-producing events—external aggression, occupation, foreign domination, or events seriously disturbing public order—exists in the country of origin; and (2) the refugee is 'compelled to leave' as a result of the relevant enumerated event. While attention to the African refugee definition has historically focused solely on component (1)—the enumerated events—the 'compelled to leave' requirement in component (2) is now more widely recognized as a core part of the definition's criteria.[40] In fact, this additional component of the African definition is a key factor in maintaining the integrity of the definition's protection, which could otherwise be broad enough to capture situations that pose little or no risk of harm to the affected population (for example, a peaceful 'occupation').

Under component (1) of the African refugee definition, the refugee must establish the existence of one of the definition's four enumerated refugee-producing events.[41] Only one of the events needs to be established for a refugee to qualify for protection, and all are potentially relevant to refugee claims in Africa today. While the first three events—external aggression, occupation, and foreign domination—evidently reflect the concerns of the definition's drafters to protect those fleeing colonial and minority rule at the time of the OAU Convention's adoption, they might equally apply to situations arising within, or between, independent African States. Kenya's 2012 incursion into Somalia, border disputes between North and South Sudan, and Morocco's occupation in Western Sahara all provide potential examples of these events.

Of the four enumerated refugee-producing events in the African refugee definition, the fourth—events seriously disturbing public order—has been most commonly

recognized and applied within African States' refugee status determination procedures in practice.[42] Both in practice and within scholarship, 'events seriously disturbing public order' is usually associated with situations of war, conflict, and violence. Important questions remain largely unresolved, however, including how public order should be assessed, or what threshold of fighting and violence is required to constitute a serious disturbance.[43] This fourth ernumerated event has been applied by African States to refugees fleeing civil wars and conflict in Angola, Côte d'Ivoire, Central African Republic, DRC, and Somalia, as well as to the genocide in Rwanda and post-election violence in Côte d'Ivoire.[44] More recently, UNHCR and others have begun to consider the potential application of events seriously disturbing public order to situations involving natural hazards, disasters, and the negative effects of climate change.[45] Here, the practice of African States is more ambiguous. Some States, such as Kenya and Ethiopia, have been willing to apply the phrase to such situations—for example, the 2011 Horn of Africa drought—while others, such as South Africa, have not.[46]

Component (2) of the African refugee definition—'compelled to leave'—fulfils a similar function to the 'well-founded fear' component of the universal refugee definition. It requires a forward-looking assessment of the risk to the refugee if returned to one of the enumerated refugee-producing events.[47] While the use of the past tense—'compelled'—has led to suggestions that this component of the African definition involves a retrospective (or 'backwards' looking) assessment of the refugee's reasons for flight,[48] such a reading should be rejected. Not only would it undermine the very purpose of refugee protection under the OAU Convention, which is the prevention of future harm to refugees,[49] but it also risks creating a protection gap for those whose refugee claims arise *sur place*.[50]

Two further features of the 'compelled to leave' requirement are important to note. The first is that the refugee must be compelled to leave his or her 'place of habitual

[50] Sharpe (n 43) 18.

residence'. This means that only those who habitually reside in an area impacted by one of the definition's enumerated events will be entitled to the definition's protection. The second is that the refugee must be compelled to leave 'in order to seek refuge in another place outside his country of origin or nationality'. This aspect of the compelled to leave requirement has generally been overlooked. However, it suggests that those who could obtain effective protection within their own country are not entitled to refugee protection elsewhere for, although they may be compelled to *leave*, they may not be compelled to *seek refuge elsewhere*. In effect, this reading of the definition would allow for the application under the African refugee definition of the so-called 'internal flight alternative', something which has so far generally been rejected.[51]

Finally, exactly how to determine whether a refugee is 'compelled to leave' under the African refugee definition remains subject to debate. For the most part, a 'subjective' view of this requirement, which focuses on whether the refugee *feels* compelled to leave, has been rejected in favour of an approach that looks to the 'causal connection' between the event and the refugee's flight and whether the event is 'sufficiently serious that it is objectively reasonable for a person to leave her or his place of habitual residence and seek refuge in another country'.[52]

c. Latin American Refugee Definition

In Latin America, the regional refugee protection framework is provided by the 1984 Cartagena Declaration. While Latin America is a region with a long history of providing diplomatic asylum to individuals persecuted for their political beliefs,[53] during the 1970s and 1980s, increasing political instability and violence in the region led to larger numbers of displaced people and strained an asylum system better suited to individuals or small groups of similarly situated people.[54] In 1981, a Colloquium on Asylum and International Protection of Refugees in Latin America noted the inadequacies of the existing refugee regime to address the Central American crisis and recommended that a new, more encompassing refugee definition be adopted for all Latin American

countries.[55] In 1984, the Colloquium on the International Protection of Refugees in Central America, Mexico, and Panama adopted the Cartagena Declaration.

The Cartagena Declaration calls on Latin American States to adopt the universal refugee definition in the Refugee Convention, and to 'consider enlarging the concept of a refugee' further. Citing the precedent of article I(2) of the OAU Convention, it calls on States to include amongst refugees:

> persons who have fled their country because their lives, safety or freedom have been threatened by generalized violence, foreign aggression, internal conflicts, massive violation of human rights or other circumstances which have seriously disturbed public order.[56]

As a declaration (and not a treaty), the Cartagena Declaration is not binding under international law, and according to Fischel de Andrade, it was 'never intended to create binding law'.[57] Nevertheless, the Cartagena Declaration and its expanded refugee definition carry strong normative influence in Latin America, providing the basis for refugee policy and status determination across the region.[58] Of the 20 States in total in Latin America,[59] at least 13 have incorporated some version of the Cartagena refugee definition within their domestic legislation.[60] Claims that the Cartagena Declaration's 'legal relevance has become obsolete'[61] therefore risk overlooking the critical role that domestic law plays in refugee protection in practice.[62]

To date, there has been marginally more detailed analysis of the Latin American refugee definition than the African refugee definition. Expert groups convened by the International Conference on Central American Refugees (CIREFCA) and UNHCR have considered and advised on the scope of the definition's enumerated events, including the meaning of 'generalized violence' and 'massive human rights violations'.[63] The CIREFCA Guidelines are sometimes cited as an authoritative source of guidance for the definition's interpretation, however they have also been criticized for their 'overly

legalistic' approach and near exclusive reliance on international humanitarian law (IHL) in interpreting the enumerated events.[64]

Like the African refugee definition, there are two core components of the Latin American refugee definition's criteria for refugee status. Component (1) requires the establishment of one of the definition's enumerated list of refugee-producing events—generalized violence, foreign aggression, internal conflicts, massive violation of human rights, or other circumstances which have seriously disturbed public order. Component (2) requires that refugees' 'lives, safety or freedom have been threatened' by one of the relevant events.

Also like the African refugee definition, the enumerated events in the Latin American refugee definition should be interpreted 'in an evolutionary way so that they remain relevant to situations not foreseeable when the Cartagena Declaration was drafted'.[65] The most significant additions to the enumerated events in the Latin American definition, when compared with the African definition, are 'generalized violence' and 'massive violations of human rights'. According to the International Conference on Central American Refugees (ICCAR), massive human rights violations occur 'when large-scale violations take place that affect the human rights and fundamental freedoms enshrined in the Declaration of Human Rights and other relevant instruments' and include 'severe and systematic denial of civil, political, economic, social and cultural rights'.[66] A group of experts convened by UNHCR expanded upon what is required to meet the threshold of a serious violation, suggesting that this would be met in situations where the extent of the violations make it difficult to identify the victims, or where violations impact not only on the real or direct victims but also affect other segments of the population or even society as a whole.[67] The same group held in relation to 'generalized violence' that 'it is not always the intensity of the violence that would render it generalized, but rather its geographic spread and density'.[68]

On one view, the enumerated events in the Latin American definition are 'even broader' than those in the African definition,[69] and indeed may encompass even 'the *indirect* effects of the five … events—including poverty, economic decline, inflation, violence, disease, food insecurity and malnourishment and displacement'.[70] Evidence elsewhere, however, suggests that this broad view is not universally shared. For example, while in Africa, a number of States have been willing to apply the African regional refugee definition in situations involving natural hazards and disasters,[71] the 'official' guidance on the interpretation of the Latin American definition explicitly opposes such

an approach.[72] Moreover, the widespread failure of decision-makers to apply the Latin American definition within States' refugee status determination procedures means that the breadth of its scope may not be realised in practice.[73] This was evident in the region's response to the Venezuelan crisis in 2019–2020, when Latin American States (with the exception of Mexico) largely failed to confer refugee status on displaced Venezuelans, preferring instead to use other temporary stay visas and permits to regularize their status within host States.[74]

Component (2) of the Latin American refugee definition's criteria for refugee status requires that refugees' 'lives, safety or freedom have been threatened' by a relevant event. This requirement closely mirrors the language of the Refugee Convention's article 33 *non-refoulement* provision,[75] and like the African definition's 'compelled to leave' requirement, involves an assessment of the risk of harm to the refugee if returned to face one of the enumerated events. According to UNHCR, the threat to life, safety, or freedom under the Latin American definition 'connotes the *possibility* of harm being inflicted on a person, a group or a whole population; it does not imply that the harm has actually materialized'.[76] Assessing the requisite threat involves an assessment of 'the objective situation in the country of origin and the particular situation of the individual or group of persons who seek protection'.[77]

3. The Definitions Compared and Contrasted

Within international refugee law scholarship, analyses of the regional refugee definitions have tended to focus on their distinguishing features and differences when compared with their universal counterpart. The key question is: to what extent do the African and Latin American refugee definitions *expand upon* the protection provided by the universal refugee definition? Some of the most commonly cited differences between the respective definitions include: first, the regional refugee definitions are more 'objective' in nature than the universal refugee definition, focusing on the conditions or events in the country of origin rather the refugee's individual, 'subjective' fear of

[77] CIREFCA Guidelines, para 26.

being persecuted.[78] Second, the absence of a discriminatory component in the regional refugee definitions means they are better suited to protecting people fleeing generalized and indiscriminate forms of harm, such as war, conflict, disasters, and the negative effects of climate change.[79] Third, and related to the first two claims, the regional refugee definitions are said to be better suited to dealing with situations involving large-scale displacement or mass influx, and to being applied within group-based or *prima facie* refugee status determination procedures.[80]

Not everyone agrees with these broad claims. As noted above, some commentators on the regional refugee definitions have drawn attention to their limited application within refugee status determination procedures in practice and emphasized the need for more principled analysis of their criteria for refugee status, suggesting that they are 'not necessarily quite as inclusive or broad as most commentators suggest'.[81] Moreover, the differences cited above may fail to appreciate the extent to which the universal refugee definition has evolved since 1951, and how it now applies in situations involving widespread and generalized harm or large-scale displacement, including those that occur in the context of war, conflict, disasters, and climate change.

The extent to which the regional refugee definitions expand upon the protection provided by the universal refugee definition depends on the interpretation and application of the respective definitions across places and over time. Definitions are not static. International law principles of treaty interpretation require that they be interpreted in an 'evolutionary' manner, taking into account changes in the broader context and body of international law of which they are a part.[82] Changes in the nature and drivers of displacement over time also affect the application of the respective definitions—the growing impacts of climate change, for example, may reveal new forms of persecution and new kinds of disturbances to public order. Compounding the difficulties in comparing the scope of the respective refugee definitions is the fact that, while the universal refugee definition has been subject to regular and robust interrogation by courts, scholars, and institutions such as UNHCR, the regional definitions have received comparatively little detailed scrutiny or attention.

[82] See eg Wood (n 40) 311 ff.

With these limitations in mind, this chapter now turns to consider in turn the common distinctions between the universal and refugee definitions set out above. While the analysis below does not provide a definitive answer to the question—to what extent do the African and Latin American refugee definitions expand upon the protection provided by the 1951 Convention's universal refugee definition?—it nevertheless highlights some of the key considerations that must be taken into account in understanding and comparing the scope of the respective definitions.

a. 'Subjective' versus 'Objective' Refugee Definitions

Because the enumerated refugee-producing events in the regional refugee definitions focus on conditions in the country of origin, rather than the predicament of the individual refugee, the regional definitions are often described as more 'objective' in nature, in contrast with the more 'subjective' universal refugee definition. Of the African refugee definition, Edwards states that '[i]t has been taken for granted by most commentators that the [OAU] Convention is an objective test, rather than a subjective one'.[83] In Latin America, Reed-Hurtado describes 'a shift in focus from the subjective and individualised element—fear of persecution of the 1951 Convention—to the objective elements leading to flight'.[84]

This distinction between the 'subjective' universal refugee definition and the 'objective' regional refugee definitions is potentially flawed, however. In particular, it risks obscuring the fact that establishing one of the enumerated refugee-producing events alone is not sufficient to establish refugee status under either of the two regional refugee definitions, which also require a connection between the relevant event and the refugee's flight. Under the African definition, this is the requirement that the refugee is 'compelled to leave', while in Latin America, it is the threat to the refugee's 'life, safety or freedom'. Thus, while the enumerated events in the regional refugee definitions may be concerned only with the objective conditions in the country of origin, the definitions' full criteria also include consideration of the circumstances of the individual refugee.

In fact, in light of the increasing awareness of the individual component of the regional refugee definitions, some commentators have argued that they are not objective at all, but mandate 'a *subjective* test of refugee status, because [of] the requirement of a nexus between the disruptive situation and flight'.[85] However, it does not follow from the inclusion of individual criteria for refugee status that the regional definitions are 'subjective', at least in the sense in which the term has usually been used in international refugee law. Under the universal refugee definition, the term 'subjective' generally refers, not only to the individual refugee, but more specifically to his or her subjective beliefs or state of mind, such that the 'fear' component of a 'well-founded fear' has been said to

[83] Edwards (n 53) 228. [84] Reed-Hurtado (n 55) 12.
[85] Sharpe (n 42) 12 (emphasis added); see also Edwards (n 53) 228–9.

denote the refugee's 'state of mind and…subjective condition'.[86] Using the term 'subjective' to refer simply to the individualized aspects of the regional refugee definitions' criteria for refugee status risks creating confusion. It also risks inadvertently incorporating into the regional refugee definitions an inquiry into the state of mind of the refugee—something that, even under the universal refugee definition, has been criticized for its inherent difficulties and potential to deny protection to persons genuinely at risk.[87]

b. Generalized and Indiscriminate Harms

The regional refugee definitions' enumerated refugee-producing events have led to common claims that they are better suited than their universal counterpart to protecting people fleeing situations of widespread, generalized, and indiscriminate forms of harm. While the universal refugee definition has 'tended to favour the asylum seeker who can show how she has been singled out for persecution',[88] the regional refugee definitions encompass 'situations where the qualities of deliberateness and discrimination need not be present'.[89] Thus, the regional refugee definitions may be better able to address some of the common causes of displacement today, including: displacement from war, conflict, and generalized violence, and displacement in the context of natural hazards, disasters, and climate change.[90]

It is true that the Refugee Convention's universal refugee definition has posed barriers to protection for persons at risk of harms that are perceived as generalized or indiscriminate, such as war, generalized violence, or the negative impacts of climate change. This is due largely to the universal definition's 'nexus' requirement, which stipulates that the risk of persecution to the refugee must arise 'owing to' their (actual or perceived) personal characteristics—namely, race, religion, nationality, membership of a particular social group, or political opinion. In addition, the notion of 'persecution' under the universal refugee definition is frequently linked to the deliberate actions (or wilful complicity) of the State. In contrast, the generalized nature of the regional definitions' enumerated events—including aggression, occupation, massive human rights violations, and serious disturbances to public order—and the absence of any discriminatory component in their criteria for refugee status, mean that the source of harm may be indeterminate and 'need not be the actions of a State or its agents'.[91]

These important distinctions between the universal and regional refugee definitions should not be overstated, however. In particular, they must not obscure the potential application of the universal refugee definition in situations involving widespread and

[86] UNHCR Handbook, paras 37–8. [87] Hathaway and Foster (n 5) 95.
[88] Tuepker (n 81) 410. [89] Arboleda (n 55) 195.
[90] Reed-Hurtado suggests that this was the 'main purpose' of the Latin American refugee definition. See Reed-Hurtado (n 55) 28.
[91] Okoth-Obbo (n 79) 112.

apparently generalized forms of harm. Despite the element of deliberateness inherent in the notion of persecution, the universal refugee definition does not require that the refugee be 'singled out' for persecution, nor more at risk than any other person sharing the same characteristic or facing a similar situation. It is possible, for example, that an entire racial or religious group in a particular country may have a well-founded fear of persecution for reasons relating to their particular race or religion. Secondly, understandings of the nature of persecution and the application of the universal refugee definition have evolved to recognize that seemingly 'indiscriminate' forms of harm are often underpinned by implicit or structural forms of discrimination, so that even conflict, disasters, and the negative effects of climate change may be shaped by political, ethnic, or religious divides.[92]

Evolving understandings of implicit discrimination and the differential impacts that generalized situations and events can have has been especially significant in recognizing the applicability of the universal refugee definition to people fleeing situations of war, conflict, and generalized violence. While the UNHCR Handbook, first published in 1979, advises that '[p]ersons compelled to leave their country of origin as a result of international or national armed conflicts are not normally considered refugees',[93] UNHCR's updated guidance on this issue, published in 2016, recognizes that:

> Rarely are modern-day situations of armed conflict and violence characterised by violence that is not in one way or another aimed at particular populations, or which does not have a disproportionate effect on a particular population, establishing a causal link with one or more of the Convention grounds.[94]

Similar reasoning is also relevant to understanding the role that the universal refugee definition could play in protecting people displaced in the context of natural hazards, disasters, and climate change. For while the drafters of the 1951 Convention may have felt that 'it was difficult to imagine that fires, flood, earthquakes or volcanic eruptions . . . differentiated between their victims',[95] it is becoming increasingly evident that even so-called 'natural' disasters have differential impacts on the populations that they affect.[96]

Ultimately, while the enumerated refugee-producing events and absence of a discriminatory component in the regional refugee definitions makes them well-suited to protecting people fleeing apparently generalized and indiscriminate forms of harm, claims under the universal refugee definition must be closely examined before concluding that an individual's well-founded fear of being persecuted is not connected to his or her personal characteristics such that it arises 'owing to' one of the Refugee Convention's five grounds of discrimination.

c. Large-scale Movement, Mass Influx and *Prima Facie* Refugee Status Determination

Commentary on the expanded refugee definition has often emphasized its particular suitability to providing protection in situations of large-scale displacement and mass influx, and its application within group-based, or *prima facie*, refugee status determination procedures.[97] This suitability derives largely from the two previous characterizations of the regional refugee definitions. Because of the emphasis on events or conditions in the country of origin, and the absence of a discriminatory component in the regional refugee definitions, the regional definitions offer a 'more explicit recognition of the mass persecution behind many asylum claims'[98] and a 'valuable mechanism for dealing with large-scale influx situations'.[99] It also reflects historical approaches to refugee status determination in both Africa and Latin America, where States have frequently adopted group-based and *prima facie* refugee status determination procedures.[100]

Moreover, the very nature of the enumerated refugee-producing events in the regional refugee definitions—including aggression, generalized violence, massive violations of human rights, and serious disturbances of public order—means that, when they occur, they are likely to produce displacement on a large scale.[101] When this happens, refugee status may be readily conferred on entire populations of displaced people without requiring each individual to establish his or her own claim. The 'proximity of the circumstance to the person would suffice to create a threat forcing the person to flee the country'[102] and satisfaction of component (2) of the respective regional definitions may be presumed. Particularly in situations where the relevant event affects a country as a whole, 'any other approach would belabour the obvious and, particularly in large-scale influxes, risks overwhelming already strained [refugee status determination] processes'.[103]

The suitability of group-based, or *prima facie*, refugee status determination procedures under the regional refugee definitions should not detract, however, from the potential application of both definitions within individual refugee status determination procedures as well. In some cases, the differential impact of one of the enumerated refugee-producing events may mean that not every person exposed faces a relevant risk as a result. As the High Court of South Africa noted in 2014, 'it is conceivable that the existence of the same set of given circumstances might sustain a conclusion that they compelled A to leave, but not B'.[104] This is important, as the automatic conflation of the

[104] *Radjabu* (n 41) para 6.

regional refugee definitions with situations of mass influx and *prima facie* refugee status determination can negatively affect the willingness and capacity of governments and decision-makers to apply it in practice, for fear that any invocation of the definition is tantamount to declaring all persons from a particular country or region to be refugees.[105] Moreover, even the more 'individualized' universal refugee definition may also be applied on a *prima facie* basis, extending protection to large groups of refugees and in situations of mass influx.[106] As UNHCR has explained, 'entire groups have been displaced under circumstances indicating that members of the group could be considered individually as refugees [under the universal refugee definition]'.[107]

4. Conclusion

While there are significant differences between the universal and regional refugee definitions, an oversimplification of these differences risks obscuring important features of each of the respective definitions. It risks creating the impression that the universal refugee definition is suited only to isolated cases of individual, targeted persecution, when in fact the interpretation and application of the universal refugee definition has evolved considerably to recognize that a well-founded fear of persecution can be widespread and can arise in situations which seem to be generalized and indiscriminate but are in fact underpinned by discriminatory structures, motivations, and impacts. In addition, overstating the breadth of the regional refugee definitions risks ignoring the more specific and individualized components of their criteria for refugee status and may undermine their application in practice.

Definitions are not static. The precise differences in scope between the universal and regional refugee definitions depend on the interpretation and application of each across places and time. Further engagement with the regional refugee definitions by decision-makers, scholars, and organizations such as UNHCR will provide a more solid and principled basis for assessing the common distinctions between the various definitions discussed in this chapter. In the meantime, it must be remembered that, while the Refugee Convention's universal refugee definition continues to provide the core of the refugee protection regime, it is not the end of the story. Regional refugee definitions provide equally important, and potentially better suited, sources of protection for a large number of the world's displaced people. A full appreciation of their criteria for refugee status is essential to ensuring that all those who are entitled to international protection are able to access it in practice.

UNRWA AND PALESTINE REFUGEES

SUSAN M AKRAM

1. Introduction and Background to Palestinian Displacement and the UN Response

Palestine, situated between the Mediterranean Sea and the Jordan River, had an indigenous majority Arab population from the seventh century through successive invaders until the British occupation and Mandate from 1917–47. Under the terms of the Lausanne Treaty that terminated the First World War, Ottomans residing in the area who were Turkish subjects became Palestinian nationals when the treaty entered into force on 6 August 1924.[1] Britain codified the nationality provisions of the treaty through the Palestine Citizenship Order of 1925, conferring citizenship on persons acquiring nationality through parentage and birth in Palestine.[2] By 1924, just under one million people, overwhelmingly Arab, were nationals of Palestine, connected to a recognized territory with borders fixed by the Lausanne Treaty.

In the midst of the post-Second World War effort to establish a new global order, the Palestine–Israel conflict unfolded. The massive Palestinian refugee crisis that ensued—with 750,000–800,000 people forced from their lands and homes in the newly created State of Israel—featured prominently in the drafting discussions of foundational

[1] Treaty of Lausanne (adopted 24 July 1923, entered into force 6 August 1924) 28 LNTS 11.

[2] Palestine Citizenship Order 1925 (adopted 24 July 1925, entered into force 1 August 1925). The 847,000 persons who met the Citizenship Order criteria included foreign residents entering Palestine between 1920 and 1922 who did not meet the Lausanne Treaty requirements, while excluding thousands of Palestinians who did meet the treaty's criteria.

instruments of the UN, including the Refugee Convention and the 1954 Convention on the Status of Stateless Persons.[3]

The UN passed a series of resolutions to provide for the refugees' immediate relief, as well as for longer-term solutions to their plight. The General Assembly appointed a UN Mediator for Palestine, whose report was adopted into the core resolution on the rights of Palestinian refugees (resolution 194).[4] The General Assembly also established the first short-term agency to provide immediate relief, the UN Relief for Palestine Refugees (UNRPR),[5] and an agency intended to secure and implement legal protection and durable solutions for the refugees, the United Nations Conciliation Commission on Palestine (UNCCP).[6]

UNCCP was to 'take steps to assist the governments and authorities concerned to achieve a final settlement of all questions outstanding between them'.[7] Its mandate included protecting and implementing the rights of refugees enumerated in resolution 194. For the purposes of UNCCP's mandate, Palestine refugees were defined as all habitual residents and citizens covered by the Palestine nationality law under the Lausanne Treaty who left, or were forced to leave, that territory from 6 August 1924 through to the 1947–49 conflict.[8] Under resolution 194, UNCCP was required to 'facilitate the repatriation, resettlement and economic and social rehabilitation of the refugees and the payment of compensation', commonly understood as the 'right to return'.[9] Its role in protecting 'the rights, property and interests of the refugees' has been reaffirmed each year by the General Assembly.[10]

The General Assembly acknowledged that until the terms of resolution 194 could be fulfilled, the UN had to continue providing assistance to Palestinian refugees to prevent further 'starvation and distress'.[11] As an interim measure, it established a second agency, the UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) to

[3] Convention relating to the Status of Stateless Persons (adopted 28 September 1954, entered into force 6 June 1960) 360 UNTS 117, art 1 (1954 Statelessness Convention).

[4] See UNGA res 186 (S-2) (14 May 1948); Folke Bernadotte (UN Mediator for Palestine), 'Progress Report of the United Nations Mediator on Palestine Submitted to the Secretary-General for Transmission to the Members of the United Nations' (16 September 1948) UN doc A/648. See also UNGA res 194 (III) (11 December 1948). In this chapter, 'Palestine refugees' is used to refer to the first generation (1948) refugees, while 'Palestinian refugees' is used as a generic term to cover all generations and categories of Palestinian displaced populations. See further UNRWA, 'Consolidated Eligibility and Registration Instructions (CERI)' (2009). <https://www.unrwa.org/sites/default/files/2010011995652.pdf> accessed 20 October 2019.

take over the relief work begun by the UNRPR.[12] UNRWA's founding resolution explicitly linked its mandate to UNCCP's obligation to fulfil the terms of resolution 194.[13] UNRWA's role was to provide humanitarian 'relief' and to provide economic opportunities—'works'—for refugees in the areas of major displacement: the West Bank, Gaza, Syria, Jordan, and Lebanon. Initially, the definition of Palestine refugee for UNRWA's purposes was a sub-category of the UNCCP definition for purposes of relief provision, but also 'grandfathered' persons included in the UNRPR rolls. It later included Palestinians displaced from subsequent conflicts.[14] The Consolidated Eligibility and Registration Instructions (CERI), setting out entitlement for registration by UNRWA and receipt of its services, define Palestine refugees as:

> Persons whose normal place of residence was Palestine during the period 1 June 1946 to 15 May 1948, and who lost both home and means of livelihood as a result of the 1948 conflict. Palestine Refugees, and descendants of Palestine refugee males, including legally adopted children, are eligible to register for UNRWA services.[15]

Following the 1967 Arab–Israeli conflict, Israel occupied the West Bank, Gaza, East Jerusalem, the Egyptian Sinai, and Syrian Golan, forcing another 350,000–400,000 Palestinians to flee their homes, some for the second time. In response, UNRWA included the 1967 Palestinian 'displaced persons' and other categories of Palestinians eligible for its services into its eligibility criteria.[16] The 'other claimants' grandfathered from the UNRPR rolls were maintained, but no new applicants were registered.[17]

The third agency established for the protection and assistance of refugees and other displaced persons was UNHCR,[18] with an explicit mandate to provide international protection to all defined refugees and to provide durable solutions for them. For Palestinian refugees, paragraph 7(c) of UNHCR's Statute and article 1D of the Refugee Convention are of primary importance. Paragraph 7(c) of the Statute provides that 'the competence of the High Commissioner . . . shall not extend to a person . . . (who) continues to receive from other organs or agencies of the United Nations protection or assistance'.[19] Similar, although not identical, language appears in article 1D of the Refugee Convention. The drafting history of these instruments shows that the UN delegates felt that Palestine refugees should be excluded from them since the UN had

[15] CERI (n 4).

[16] Lance Bartholomeusz, 'The Mandate of UNRWA at Sixty' (2009) 28(2–3) RSQ 452, 457–60. UNRWA's CERI (n 4) lists categories of beneficiaries, not just those defined as 'Palestine refugees' under res 194. The refugee definition applies to subsequent generations of refugees in the recognized categories, but only through the male line.

[17] These included 'Jerusalem Poor', 'Gaza Poor', 'Frontier Villagers', and 'Compromise Cases': Bartholomeusz (n 16) 458.

[18] UNGA res 319 (IV) (3 December 1949).

[19] ibid para 7(c). Note also 1954 Statelessness Convention, art 1(2).

already extended protection and relief through UNCCP and UNRWA.[20] Accordingly, delegates from a number of Arab States proposed an amendment that the '[m]andate of the High Commissioner should not extend to refugees currently under the mandates of other UN organs'.[21] It was clear to all delegates that the only 'refugees' to whom this exclusion applied were Palestine refugees.

The Arab delegates' reasons for excluding Palestinians from UNHCR's mandate included, first, that Palestine refugees were the only population that had become refugees through an act of the UN itself—namely, the passage of resolution 181—recommending partition of their homeland. Secondly, because the UN had incorporated a specific durable solution for them in resolution 194, focused on their right to return to their homes, Palestinian refugees should not be 'submerged' with other refugees in a new resettlement-focused treaty.[22] Thirdly, there was a general consensus that overlapping competencies amongst UN agencies should be avoided.[23]

The language that became paragraph 7(c) of the UNHCR Statute was further debated at the Conference of Plenipotentiaries that adopted the Refugee Convention.[24] When it became apparent that Palestine refugees might be excluded from the Convention,[25] the Arab States proposed an amendment to ensure the continuity of their protection in case the 'special regime' of UNCCP and UNRWA should cease to function.[26] Their amendment became article 1D in the final text.[27]

A related provision was included as article 1(2)(i) of the 1954 Statelessness Convention, which, like paragraph 7(c) of the UNHCR Statute, replicates only the first sentence of article 1D.[28] Following the passage of the Convention on the

[25] See Statement by Mostafa Bey, 'Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons: Summary Record of the Twenty-Ninth Meeting', UN Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons (28 November 1951) UN doc A/CONF.2/SR.29.

[26] UN Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons, 'Draft Convention relating to the Status of Refugees. Egypt: Amendment to Article 1' (3 July 1951) UN doc A/CONF.2/13.

[27] See 'Final Act of the United Nations Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons' (n 24). The inconsistent language between the first and second sentences was pointed out after the text was adopted, but it was too late to correct the ambiguity: see Commission of the Churches on International Affairs 'Observations Concerning Article I of the Draft Convention relating to the Status of Refugees' (6 July 1951) UN doc A/CONF.2/NGO/10. Since the UNHCR Statute had already been adopted, the second sentence of art 1D does not appear in para 7(c).

[28] 1954 Statelessness Convention, art 1(2).

Reduction of Statelessness,[29] the General Assembly authorized UNHCR to include stateless persons within its mandate.[30] The Arab host States do not recognize Palestinians as falling under the international legal definitions of 'refugees' or 'stateless persons', however, and have refused to accept any UNHCR involvement vis-à-vis Palestinians in the UNRWA areas. The effect of these provisions is that Palestinians are excluded from UNHCR's protection mandate in UNRWA areas, and since UNRWA has no durable solutions mandate, Palestinians have no access to durable solutions either as refugees or as stateless persons in UNRWA fields.

2. UNRWA and Ongoing UN Engagement with Palestine Refugees

The international community's ambiguity towards the scope of UNRWA's work is reflected in changes to the agency's role and mandate over time. The General Assembly has vacillated between emphasizing its 'relief' and 'works' roles, and, more recently, its role in providing 'international protection'.[31] Following aborted efforts to integrate refugees 'into the economic life of the Near East' through work projects, UNRWA reoriented its focus to relief in the form of human resources development.[32] This became the foundation for its permanent service delivery programme for the Palestinian refugee population. Its provision of education, social services, and healthcare—though basic and, in many cases, wholly inadequate for their needs—has ensured the refugees' survival and afforded opportunities for employment both inside and outside the region. Due to continued funding pressures, UNRWA has significantly reduced its basic relief and has concentrated aid delivery on smaller numbers of hardship cases.[33] However, the need for relief has waxed and waned with the multiple crises affecting Palestinian refugees as a result of ongoing Israeli occupation and expulsion policies and conflicts in Lebanon, Kuwait, Iraq, Gaza, and most recently, Syria.

Beginning in the 1980s, General Assembly resolutions increasingly referenced UNRWA's obligations to guarantee 'the legal and human rights' of Palestinian refu-

gees.[34] During the first Palestinian uprising (*intifada*), the General Assembly approved UNRWA's establishment of 'protection officers' under the Refugee Affairs Officer (RAO) programme,[35] which monitored, intervened, and raised complaints about Israel's mistreatment of Palestinian refugees (including deaths and injuries during the uprising).[36] Subsequently, UNRWA established the Operations Support Officer (OSO) Programme in the second *intifada* in 2000;[37] a Senior Protection Policy Advisor post in 2007; and a Protection Division in its headquarters in 2016.[38] Based on more explicit General Assembly resolutions referring to its 'protection role',[39] UNRWA incorporated 'protection' into all its work, and set 'protection standards' in its programming.[40] At the same time, UNHCR has sought and facilitated durable solutions for Palestinians in specific crises, including the First Gulf War in 1991 when Palestinians were forcibly displaced from Kuwait; the exodus of Palestinians from Libya in 1995–96; the mass displacement of Palestinians during the Second Gulf War into camps in Syria and Jordan; and the recent flight of Palestinians from Syria to Turkey and other countries.[41]

As a subsidiary organ, UNRWA reports directly to the General Assembly which renews its mandate every few years.[42] Because UNRWA's continued operations depend on the voluntary commitments of States, which never meet its full budgetary requirements, it is in permanent budget deficit. Aside from its core budget needs, UNRWA has faced constant shortages across its fields of operation and must perpetually fundraise for 'emergency appeals'. In 2018, the Trump Administration announced that it would cease funding the agency—a loss of more than US$300 million per annum. As a result, UNRWA cut staff and services, and closed schools across its fields.

[34] See eg. UNGA res 37/120 (16 December 1982); UNGA res 38/83 (15 December 1983); UNGA res 43/57 (6 December 1988).

3. UNRWA, UNCCP, and UNHCR: The Debate over Protection

Shortly after its establishment, it became clear that UNCCP would be unable to fulfil its functions due to the impasse in finding political solutions to the conflict and to Israel's resistance to the refugees' return and recognition of their rights. The General Assembly took a series of steps that reduced UNCCP's funding, effectively ending the agency's capacity to protect and implement durable solutions for the refugees. By the early 1960s, UNCCP began to focus its efforts on gathering documentation and recording Palestinian refugees' property interests, creating a database that it maintains today.[43] Other than recording property rights, UNCCP's main protection role came to an end. At the same time, the interpretation of the various legal provisions relevant to Palestinian refugees (in the UNHCR Statute, Refugee Convention, and 1954 Statelessness Convention) engendered significant debate amongst academics, the agencies involved, and Palestinians themselves, including in litigation before international and domestic courts.[44] Today, it remains contested whether the interrelated provisions created a 'protection gap' for Palestinian refugees.[45] The key concerns about the consequences of the way these provisions are currently interpreted by States and adjudicators are whether UNRWA's protection activities are equivalent to what UNHCR provides for all other refugees; whether Palestinian refugees have meaningful access to durable solutions; and the consequences for Palestinians both within and outside the five UNRWA fields of operation.

The primary issues raised by article 1D of the Refugee Convention (which not all States invoke) are: (a) which refugees fall within the provision's scope; (b) when are such refugees considered to no longer be receiving protection or assistance (and from which agency); and (c) what is meant by the *ipso facto* clause (in the second sentence of article 1D). Some of these issues have been addressed by the Court of Justice of the European Union (CJEU), summarized below. Currently, the debate centres on the meaning of 'protection or assistance', and whether what UNRWA provides is equivalent to what UNCCP was intended to provide. UNHCR maintains that Palestinian refugees who are in UNRWA areas are not within its competence and are excluded from the benefits of

[43] See Michael R Fischbach, *Records of Dispossession: Palestinian Refugee Property and the Arab–Israeli Conflict* (Columbia University Press 2003).

[44] For the range of conflicting views on the interpretation of article 1D and related provisions, see eg Bartholomeusz (n 16); Lilly (n 37); Morris (n 40); Goddard (n 41); Michael Kagan, 'Is There Really a Protection Gap? UNRWA's Role vis-à-vis Palestinian Refugees' (2009) 28(2–3) RSQ 511; Susan M Akram, 'Palestinian Refugees and Their Legal Status: Rights, Politics, and Implications for a Just Solution' (2002) 31 Journal of Palestinian Studies 36; Susan M Akram and Nidal Al-Azza, *Closing Protection Gaps: Handbook on Protection of Palestinian Refugees in States Signatories to the 1951 Refugee Convention* (2nd edn, BADIL Resource Center for Palestinian Residency and Refugee Rights 2015).

[45] See Lilly (n 37) 444.

the Refugee Convention.[46] UNHCR's most recent interpretation is that Palestinian refugees fall into three categories, two of which are covered by article 1D as UNRWA refugees.[47] These two categories of persons could be eligible for the benefits of the Refugee Convention if they are outside UNRWA areas for reasons beyond their control, and should be assessed under article 1D criteria. The third category, Palestinians who do not qualify as 'Palestine refugees' or 'Displaced Persons' under UNRWA regulations, falls under article 1A(2) of the Refugee Convention once they have left the areas where they have been residing, and should be assessed under that definition.[48]

There are widely divergent and often inconsistent interpretations in States' application of article 1D and the refugee definition in article 1A(2) to Palestinian asylum seekers. A survey of the jurisprudence of more than 30 States revealed over a dozen interpretations.[49] The EU Qualification Directive, which incorporates article 1D into EU law, has been interpreted by the CJEU in several recent decisions. In 2010 in *Bolbol v BAH*, the CJEU interpreted the phrase 'receiving . . . protection or assistance' as meaning that 'a person receives protection or assistance from an agency of the United Nations other than UNHCR, when that person has actually availed himself of that protection or assistance'.[50] Two years later, the court held that the language 'when protection or assistance has ceased . . . for any reason' means for any reasons 'beyond [a person's] control and independent of his volition', giving examples of when it will be deemed that protection or assistance has ceased for reasons 'beyond the person's control'.[51] It also held that the *ipso facto* clause means that a 'Member State must recognize [the person] as a refugee . . . and that person must automatically be granted refugee status'.[52] In that case,

[46] This has evolved from the Handbook position that Palestinians covered by art 1D are excluded entirely from the benefits of the Convention and UNHCR's mandate: UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019) paras 140–3.

[47] The first two categories are 'Palestine refugees' from the 1948 conflict registered or eligible for registration and residing in UNRWA areas, and 'Palestinian displaced persons' during the 1967 conflict registered or eligible for registration in the UNRWA areas. UNHCR parallels UNRWA's registration regulations by confirming that descendants of the first two categories would also fall under art 1D. See UNHCR, 'Note on the Applicability of Article 1D of the 1951 Convention relating to the Status of Refugees to Palestinian refugees' (2002) 14 IJRL 450; UNHCR, 'Revised Note on the Applicability of Article 1D of the 1951 Convention relating to the Status of Refugees to Palestinian Refugees' (2009); UNHCR, 'Guidelines on International Protection No. 13: Applicability of Article 1D of the 1951 Convention relating to the Status of Refugees to Palestinian Refugees' (December 2017) HCR/GIP/16/12 (Guidelines on International Protection No 13).

[48] See 'Guidelines on International Protection No 13' (n 47).

[49] Akram and Al-Azza (n 44).

[50] C-31/09, *Nawras Bolbol v Bevándorlási és Állampolgársági Hivatal* [2010] ECR I-05539, para 53.

[51] C-364/11, *Mostafa Abed El Karem El Kott and Others v Bevándorlási és Állampolgársági Hivatal* [2012] (CJ 19 December 2012) para 82. A Palestinian could be considered to have lost protection or assistance against his or her volition when, for example, his or her personal safety was at serious risk and it was impossible for the agency to guarantee that living conditions would be commensurate with its mission: paras 63, 65. See also UNHCR, 'Note on UNHCR's Interpretation of Article 1D of the 1951 Convention relating to the Status of Refugees and Article 12(1)(a) of the EU Qualification Directive in the context of Palestinian Refugees Seeking International Protection' (2013).

[52] *El Kott* (n 51) para 82.

the court found that, because UNRWA was unable to provide effective protection to Palestinian refugees in Lebanon, Hungary was required to grant them refugee status.

However, the CJEU's interpretations are questionable in light of the plain language and drafting history of article 1D, as well as the object and purpose of the Refugee Convention. First, the cases conflate 'protection' with 'assistance' and fail to make the critical distinction between the mandates of the various agencies established for Palestinian refugees. The cases acknowledge the establishment of UNCCP, but fail to recognize that it was the only UN agency given a protection mandate for Palestinians and that UNRWA does not, and never did, have a mandate with regard to the most critical component of protection—namely, to implement the required durable solution for Palestinian refugees of return to their homes, restitution, and compensation.[53] Despite efforts to expand UNRWA's protection activities, it is clear that it does not have a mandate to seek and implement durable solutions for Palestinian refugees.[54] The CJEU Advocate-General herself noted the limits of UNRWA's protection role in her opinion to the court in *El Kott*.[55] By contrast, the CJEU wrongly focused on whether UNRWA's assistance had ceased, failing to take into account the cessation of UNCCP's protection to Palestinian refugees as the condition for re-including Palestinians in the 'benefits of the Convention'. Moreover, the transformation of the phrase 'when protection or assistance has ceased for any reason' into 'when protection or assistance has ceased for a reason beyond his control and independent of his volition' has no support whatsoever either in the text or drafting history.[56]

Most important are the consequences of the protection gap, which remain unexplained in the jurisprudence. First, despite the efforts noted above with respect to ongoing cooperation between UNRWA and UNHCR in certain emergencies, Palestinian refugees as a whole have no agency that promotes and implements durable solutions for them in the Arab host States in which the majority reside (other

[54] Bartholomeusz (n 16) 469–71.

[55] *El Kott* (n 51) Opinion of AG Sharpston, para 66.

[56] ibid paras 61–5. See also UK Home Office, 'Asylum Policy Instruction: Article 1D of the Refugee Convention: Palestinian Refugees Assisted by the United Nations Relief and Works Agency (UNRWA)' (9 May 2016) 10, according to which, cessation of UNRWA protection or assistance is in practice likely to occur only 'in one of the following circumstances: threats to life, physical integrity or security or freedom, or other serious protection related reasons, including: situations such as armed conflict or other situations of serious violence, unrest and insecurity . . . individualised threats or protection risks such as sexual and/or gender-based violence, human trafficking and exploitation, torture, inhuman or degrading treatment or punishment, severe discrimination, or arbitrary arrest or detention, or practical, legal and/or safety barriers, including: being unable to access UNRWA assistance because of long-term border closures, road blocks or closed transport routes, absence of documentation to travel or where the authorities in the receiving country refuse their re-admission or the renewal of their travel documents, serious dangers such as minefields, factional fighting, shifting war fronts, banditry or a real risk of other forms of violence or exploitation'. This shows how national adjudicators are further distorting the meaning of art 1D and further restricting those who should be entitled to its benefits.

than in exceptional cases). Secondly, the debate about the scope of UNRWA's protection activities remains academic, for the most part, as the agency struggles to provide even core services to all Palestinians who need them. Thirdly, as described at the outset, the definition of Palestine refugee in resolution 194 is a nationality, not a refugee, definition, which applies to approximately 12 million Palestinians worldwide, while UNRWA-registered Palestinian refugees total only 5.5 million persons.[57] The durable solution incorporated in resolution 194 is guaranteed to all Palestinians meeting the nationality definition, not just those registered with UNRWA. The CJEU, UNHCR, and UNRWA interpretations of the scope of the inter-related Palestinian refugee provisions fail to take into account the full significance of their meaning and purpose.

4. Palestinian Refugees and the Politics of the Palestine Liberation Organization (PLO) and the Arab Host States

Ever since the Palestinian refugee crisis unfolded on the newly independent Arab States, their position has been that the UN is primarily responsible for the refugees' plight (along with Israel), and that it is up to the international community to care for the refugees and facilitate their return. This position reflects the demands of the refugees themselves and the League of Arab States (LAS).[58] However, this position has been manipulated for the benefit of Arab host States, depending on the politics of the moment, often at significant cost to the refugees themselves. It has further been complicated by the Arab States' fluctuating relationship with the PLO over time.

The establishment of the PLO in 1964 was a mixed blessing for Palestinian refugee communities in the main host States. The PLO's presence as a political force in Jordan ended in the violent conflict between the Jordanian army and the PLO of 1970–71, known as Black September. The PLO's establishment in Lebanon through the Cairo Agreement of 1969 led to improvement of living conditions and rights of Palestinian refugees in Lebanon, which lasted until the Israeli invasion of 1982. The PLO's base of operations in Lebanon ended with the siege of Beirut and the US-brokered deal to allow it to depart Lebanon for Tunisia. The PLO maintained its base of operations in Tunis

until the first uprising of 1987–90, which ended with the Oslo negotiations and, ultimately, the establishment of the Palestinian Authority (PA) in Ramallah, with Yasser Arafat returning as its first president.

The Arab States have insisted that Palestinian refugees should have the right to return to their homes (including in present-day Israel) and should not be integrated into the citizenry of the host States (*tawtin*). They have therefore implemented a form of temporary protection that allows Palestinian refugees to remain in their territories and have cooperated with UNRWA to provide relief and services. This temporary protection regime rests on a series of LAS resolutions and agreements, and domestic laws and policies.[59] The most important instrument is the Casablanca Protocol, adopted by the main Arab host States in 1965 to regularize the status of Palestinians in their territories,[60] which supplements earlier LAS resolutions on rights to be provided to Palestinian refugees (including family unity and freedom of movement).[61] The Casablanca Protocol requires States to provide the same treatment to Palestinians as their nationals concerning residence and employment; to issue and renew travel documents and visas to Palestinians; and to grant Palestinians the right to leave (and return to) the country. Such rights were generally respected through the 1980s; in 1991, the LAS passed resolution 5093 recommending that the Casablanca Protocol be applied according to the national laws of each State party.[62] Arab host States have interpreted this resolution as allowing them to suspend the Casablanca Protocol's guarantees.[63]

The irony has not been lost on the Arab host States that, although they are not parties to the international refugee and statelessness treaties, they have been the hosts to millions of Palestinian refugees for over seven decades. Taking the position that they have borne the burden of the refugee problem, they have resisted attempts to cut UNRWA's funding or to substitute UNRWA services for greater support from their own governments.[64] At the same time, they have entered into agreements with UNRWA that govern the scope of UNRWA's work and activities in their territories.[65] LAS Council resolutions have called on Arab States to develop a unified approach to UNRWA in

the treatment of refugees across the host States.[66] The Arab League has facilitated cooperation with UNRWA on a wide range of issues, including providing land and services for refugees and assisting with family reunification.[67]

i. Jordan

Over two million Palestinian refugees are registered with UNRWA in Jordan, which hosts the largest Palestinian refugee population.[68] Jordan granted citizenship to the first wave of 1948 Palestinian refugees, including those in the West Bank and East Jerusalem, affording them permanent passports with national identity numbers. When Israel occupied the West Bank, Gaza, and East Jerusalem in 1967, it conducted a census and recorded Palestinians in the occupied areas on its Population Registry, classifying them as 'non-citizens and foreign residents', while maintaining military law over Palestinians (but not Jews) in the occupied territories (Opt). Palestinians not recorded on the Registry became 'illegal' and were ineligible to return to or reside in their homes in the Opt. Following the 1967 conflict, West Bank Palestinians at first received Jordanian temporary passports for two years—later extended to five years—but needed border-crossing cards to enter Jordan. Palestinians with Jordanian passports residing in the West Bank without Jordanian national identity numbers were not Jordanian citizens. In 1988, when Jordan relinquished all claims over the West Bank, it began to issue five-year passports, and later two-year passports; since these do not include national identity numbers, they are essentially travel documents and not proof of citizenship. Between 2004 and 2008, Jordan stripped thousands of Palestinians of Jordanian citizenship (most were 1967 Palestinian refugees or later arrivals).

Other categories of Palestinians registered with UNRWA in Jordan include approximately 80,000 Palestinians who fled Gaza in 1967; 'ex-Gazans' have Egyptian travel documents but do not have residency or citizenship in Jordan. Today there are approximately 130,000 of these stateless refugees with two-year temporary passports, but few benefits in Jordan. Since 2011, nearly 10,000 Palestine refugees from Syria (PRS) have entered Jordan and are relying on UNRWA assistance. Due to political and economic considerations, UNRWA instituted a policy of 'recording' them as 'Palestine refugees-Syria' rather than registering them in Jordan (or Lebanon).

ii. Lebanon

Like Jordan, Lebanon is not a party to the refugee or stateless persons treaties. Lebanon's Law Regulating the Entry, Stay, and Exit of Foreigners regulates the status of refugees,

[66] See LASC res 325 (12 June 1950); LASC res 2252 (12 June 1966); Al-Az'ar (n 58) 215.

[67] Al-Az'ar (n 58) 216, citing LASC Resolutions.

including Palestinians, and all other foreigners.[69] UNRWA has 463,000 Palestinian refugees registered in Lebanon.[70] For a short period in 1994, Lebanon allowed some Palestinians to apply for citizenship, but this was not well advertised and few benefited. Lebanon, like most Arab States, discriminates in nationality law such that only men can pass nationality to their children, and few Palestinians have acquired citizenship. Lebanese law grants rights on a reciprocal basis to foreigners, so Palestinians cannot benefit from the rights granted other foreigners whose States give reciprocal rights to Lebanese. Thus, Palestinians are denied many basic rights, including the right to work in dozens of professions. In 2013, Lebanon lifted restrictions on some of the previously closed professions but few Palestinians benefited.[71] Palestinians who are registered with UNRWA or the League of Red Crescent Societies can obtain travel documents valid for a year that are renewable up to three times. Palestinians not registered with either agency can obtain a travel document valid for three months.[72]

Lebanon's Memorandum of Understanding with UNHCR prevents that agency from extending protection or assistance to Palestinians as stateless persons or as refugees, including Palestinians from Syria.[73] As of December 2016, the population of Palestinian refugees from Syria recorded by UNRWA in Lebanon had dropped dramatically due to the closure of the border (in 2014).[74] Since Lebanon prohibits the construction of new camps, PRS have been forced to live in already overcrowded camps or in temporary shelters that have sprung up mostly on private land. UNRWA notes that almost 90 per cent of the PRS in Lebanon live below the poverty line. Due to the complicated process of civil registration in Lebanon, many PRS, as well as Palestinian refugees in Lebanon, do not (or cannot) register their children's birth, compounding the problem of statelessness for this population.[75]

iii. Syria

Syria was once the only country where Palestinian refugees enjoyed rights almost on a par with citizens—other than the right to vote, own more than one home, or purchase

arable land.[76] Before the start of the conflict in 2011, 552,000 Palestine refugees were registered with UNRWA in Syria.[77] The Syrian war has had devastating consequences for the population and Palestinian refugees have been severely affected; about 120,000 Palestine refugees have fled the country since the start of the conflict.[78] UNRWA is currently providing those remaining with basic food assistance, as well as attempting to continue ongoing service delivery of healthcare and schooling. About 60 per cent of Palestinian refugees in Syria have been displaced. UNRWA currently has access to 10 of the 12 camps in the country; all UNRWA facilities have suffered damage or become inaccessible to the agency. As a result of the war, 40 per cent of UNRWA classrooms have been destroyed and 25 per cent of its health centres have been rendered unusable. A number of UNRWA staff members have also been killed or injured.[79]

iv. West Bank

There are 775,000 Palestinian refugees registered with UNRWA in the West Bank: 25 per cent live in the 19 UNRWA camps while the rest live in towns and villages. Since 1967, Palestinians in the West Bank and Gaza have been under Israeli military occupation. As such, they do not hold Israeli citizenship but, rather, various forms of residency status under a highly arbitrary permit system. Israel has revoked the residency of over a quarter of a million Palestinians in Jerusalem and the Opt since 1967, leaving them stateless.[80] Under Israeli law, the Opt are governed by military law, while Jewish settlers benefit from full civil rights as Israeli citizens.[81] The Oslo 'process' installed the Palestinian Authority in 1994 as an interim government with limited authority over parts of the Opt.[82] The West Bank was divided under Oslo into three administrative areas, with the PA having full control over only 18 per cent. However, today, Israel

maintains *de facto* control over all of the West Bank through a regime of permits, checkpoints, and the wall that extends throughout the West Bank. This regime has subdivided the West Bank into over 100 fragmented areas that prevent Palestinians from moving easily, if at all, from one side of the Opt to the other.[83] Palestinian refugees face daily threats of injury, death, house demolition, eviction, displacement, and severe restrictions on their freedom of movement at the hands of the Israeli authorities. Despite ongoing international attention to the fact that Israel, as the occupying power, has obligations under international humanitarian and human rights law to respect and protect Palestinians, Palestinian human rights have continued to deteriorate.[84] The Special Rapporteur on the Occupied Palestinian Territories concluded in his recent report to the General Assembly that in its administration of the Opt, Israel was in systemic violation of these obligations, and was no longer merely an 'occupier', but has *de facto* annexed a significant part of the West Bank.[85]

v. Gaza

Of the 1.9 million people living in Gaza, 1.4 million are Palestine refugees registered with UNRWA, living in eight refugee camps. Gaza has endured three massive invasions by Israel since its 'disengagement' of settlers in 2004. Israel remains the sole controlling authority over entry and egress by air, sea, and land; Hamas has civilian control over the Gazan population, but has no *de facto* control over the territory. Because Israel controls the movement of all Palestinians into and out of the Gaza Strip, and the entry and exit of all goods and services, as the occupying power it continues to bear the obligations to protect the population.[86]

UNRWA declared a humanitarian emergency in July 2014 after Israel's 50-day bombardment of Gaza.[87] The Israeli-imposed blockade, imposed in 2007 after Hamas won the elections, has devastated the lives and livelihoods of Gazans and destroyed the local Gaza economy, leaving 80 per cent of the population dependent on humanitarian

[83] Under the DOP, the PA was afforded civil and security control over Area A (18 per cent of the WB); the PA was afforded civil control but Israel retained security control over Area B (22 per cent of the WB); and Israel maintains full control over Area C (60 per cent of the WB). assistance. Unemployment exceeds 50 per cent, one million Palestinian refugees rely on UNRWA for food aid, and 95 per cent of Gazans do not have access to clean water.[88]

5. UNRWA's Current Challenges and Prospects for the Future

States outside the region have severely criticized the Arab League and States for not integrating Palestinian refugees into their citizenry. However, the Arab League and Arab States' position that they are not legally obliged to integrate the refugees is arguably consistent both with international law and the Palestinian demand to implement their right of return. States' core obligation with respect to refugees is to respect the principle of *non-refoulement* and grant temporary protection over time, while 'making every effort to facilitate the naturalization of refugees'.[89] The Arab host States have offered a form of temporary protection to Palestinian refugees for more than 70 years under regional instruments, in sharp contrast to the failure of the international community to implement durable solutions for this population. The standards of rights offered to Palestinian refugees in the Arab States vary substantially, and in many instances fall below the human rights norms to which the States have committed themselves. In particular, the systemic discrimination and targeting of Palestinians in many, if not all, of the host States violates their obligations under both international and regional human rights instruments.[90] At the same time, it must be acknowledged that the host States have provided them with safe haven, often at great cost to themselves. Moreover, it is clear from State and UNHCR practice that of the three durable solutions, only voluntary return is an absolute obligation on any State;[91] no State is required to accept a refugee or national of any other State or to grant him or her permanent status.

On the other hand, Israel's obligations towards Palestinians, as the occupying power in the West Bank and Gaza, include protection of civilians, the prohibition against settler implantation and transfer of populations, protection of natural resources for the benefit of the occupied population (not the occupier), and preservation of the local laws in place prior to occupation.[92] What is clear is that the main obligation to implement the core durable solution of Palestinian right of return rests on Israel. The territorial settlement that has thus far been discussed during negotiations has ignored the fact that refugees moving to the West Bank or Gaza, whose original

homes were not in those areas, would be exercising an option of resettlement, not return.[93] Regardless of the ultimate territorial outcome of peace negotiations, individual Palestinian refugees remain legally entitled to return 'to their homes' of origin, as stated in resolution 194, and UNRWA is required to continue assistance and service delivery until this is achieved.

The UN has repeatedly referred to resolution 194 as incorporating the 'just solution' for Palestinian refugees, which in turn rests on fundamental international human rights law principles.[94] Any steps taken by a UN agency in the context of a peace agreement must be consistent with international refugee law, incorporating the core principles of voluntary return, restitution of refugee property, and compensation for losses. UNCCP, UNHCR, and UNRWA each has an important role to play in any post-conflict settlement. UNCCP's expertise and documentation of Palestinian refugee property will be essential to restitution and compensation. UNHCR's experience in implementing comprehensive plans of action and durable solutions for refugees will be essential to the multi-State, multilevel (and region-wide) plan that will be necessary for a resolution of the issues.[95]

UNRWA's accomplishments in service delivery to date are significant: there are approximately half a million children registered in the 700+ schools it operates; over 1.5 million children have graduated from its primary schools; over 7,700 students are enrolled in technical and vocational training programmes; and two-thirds of registered refugees have benefited from health services delivered by 143 healthcare centres.[96] UNRWA's camp and infrastructure improvement projects have included water and sanitation, hospital construction, and innovative camp re-design.[97] Despite its limitations and deficiencies, UNRWA has been the main provider for Palestinian refugees for seven decades. The most serious challenge faced by UNRWA to date is the termination of US funding in 2018, which was its largest single source (30 per cent).[98] The Trump Administration shares Israel's view that a condition of any peace agreement should be the elimination of the agency. While defunding UNRWA does not formally

change its mandate or functions, which are solely matters for the General Assembly,[99] it does make service delivery extremely difficult. The drastic budget cut seriously threatens the ability of UNRWA to maintain the long-term investment in human development it has made for the welfare of generations of Palestinian refugees.[100] Meanwhile, UNRWA has proved to be particularly innovative in the face of multiple challenges over the years. As long as the UN continues to renew its mandate, UNRWA will adapt to the latest challenge and provide for the needs of Palestinians until they can achieve the durable solution first established for them when their long displacement began.

[99] The General Assembly has continually renewed UNRWA's mandate: see eg the latest resolution, UNGA res 74/85 (13 December 2019).

CHAPTER 36

COMPLEMENTARY PROTECTION

JANE McADAM

1. Introduction

In addition to refugees, there are other forced migrants in need of international protection. The principle of *non-refoulement* extends beyond article 33 of the Refugee Convention to preclude (at a minimum) the removal of people who face a real risk of being arbitrarily deprived of their life, or subjected to the death penalty, torture, or cruel, inhuman, or degrading treatment or punishment. These obligations derive from international human rights law, although it is only in the past few decades that States have come to accept such protection as a matter of international legal obligation, rather than goodwill. Some scholars have identified an even broader principle of refuge in customary international law,[1] which Goodwin-Gill describes as an 'overarching principle of protection, sufficient to accommodate all those instances where States are obliged to act or refrain from action in order that individuals or groups are not exposed to the risk of certain harms'.[2]

The present chapter focuses on the principle of *non-refoulement* in human rights law, which provides a clear, definitive basis for non-removal that is recognized in the law and practice of many States and which also encompasses the provision of a legal status. Although not a term of art, this is known generally as 'complementary protection'. The 'complementary' element describes protection derived from sources *complementary to*

[1] On this, see Chapters 13 and 37 in this volume.

[2] Guy S Goodwin-Gill, '*Non-Refoulement*, Temporary Refuge, and the "New" Asylum Seekers' in David J Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity? War Refugees and International Humanitarian Law* (Brill 2014) 458. See also Walter Kälin and Nina Schrepfer, 'Protecting People Crossing Borders in the Context of Climate Change Normative Gaps and Possible Approaches', UNHCR Legal and Protection Policy Research Series, PPLA/2012/01 (2012) 65. See further Chapter 13 in this volume.

the Refugee Convention—such as human rights treaties (or more general humanitarian principles, such as assisting those fleeing generalized violence)—while the 'protection' element implies a status that confers more than the benefit of *non-refoulement* alone.[3] According to the Inter-American Court of Human Rights, 'complementary protection constitutes a normative development that is consistent with the principle of non-*refoulement*, by means of which States safeguard the rights of those who do not qualify as refugee[s] . . . but who cannot be returned'.[4] In State practice, it consists of 'a number of administrative or legislative mechanisms . . . in place for regularizing, on a variety of grounds, the stay of persons, including those who may not be eligible for refugee protection but who may be in need of international protection'.[5]

Complementary protection should be distinguished from protection granted solely on compassionate grounds or for practical reasons (such as the inability to obtain travel documents).[6] It is also distinct from the expanded protection provided by the African and Latin American refugee instruments, which extend Convention refugee status to a wider class of beneficiaries (who are also described as 'refugees').[7]

As a concept, then, 'complementary protection' refers to a status in domestic law that is granted to individuals who have been determined not to be refugees under the Refugee Convention, but who nonetheless have an international protection need based on the principle of *non-refoulement*. Standards of treatment vary between States, but according to UNHCR's Executive Committee of States, they should, at the very least, 'provide for the highest degree of stability and certainty by ensuring the human rights and fundamental freedoms of [beneficiaries] without discrimination, taking into account the relevant international instruments and giving due regard to the best interest of the child and family unity principles'.[8]

Many States now have domestic complementary protection regimes in place, including in Albania,[9] Australia,[10] Bosnia,[11] Canada,[12] Costa Rica,[13] the European Union

[19] Law on International and Temporary Protection of Foreigners (29 December 2016) arts 4, 25.

[20] Ley No 761—Ley General de Migración y Extranjería (7 July 2011) art 220.

[21] Act of 15 May 2008 on the Entry of Foreign Nationals into the Kingdom of Norway and Their Stay in the Realm (Immigration Act), s 28.

[22] Law on Asylum (2007), arts 2, 4.

[23] Refugee Act, Law No 11298 of 2012, art 2(3).

[24] Federal Act on Foreign Nationals and Integration of 16 December 2005, art 83(3)–(4).

[25] Law No 6458 of 2013 on Foreigners and International Protection (as amended 29 October 2016), arts 46, 48, 55, 63. Of note is that, in addition to EU-like subsidiary protection grounds (in art 63), a humanitarian permit may be granted *inter alia* 'where the best interest of the child is of concern', 'where, notwithstanding a removal decision or ban on entering Turkey, foreigners cannot be removed from Turkey or their departure from Turkey is not reasonable or possible', or 'in extraordinary circumstances'.

[26] Law of Ukraine on Refugees and Persons in Need of Complementary or Temporary Protection in Ukraine 2011, No 3671-VI, art 1(4), (13).

[27] Immigration Rules (as updated 2 May 2017), part 11, paras 339C–339CA. The UK is not bound by the recast EU Qualification Directive.

[28] Immigration and Nationality Act 8 CFR §§ 208.16, 208.17 (protection from return to torture pursuant to CAT).

[29] David J Cantor and Farai Chikwanha, 'Reconsidering African Refugee Law' (2019) 31 IJRL 182 explain that Angolan law prevents the removal of individuals to a country where they will be subjected to torture or cruel or degrading treatment: Lei No 10/15, art 54(3). In Sierra Leone and the Central African Republic, people must not be expelled to a risk of torture: Refugees Act, s 16 and Loi No 07.019, art 22, respectively. Burundian law provides that asylum may be granted to any non-national 'whose life or liberty are threatened in their country or who is exposed to inhuman or degrading treatment when such threats or risks emanate from persons or groups other than the public authorities of their country', and beneficiaries are granted the same rights as refugees: Loi No 1/32, art 5.

[30] See Jane McAdam and Fiona Chong, 'Complementary Protection in Australia Two Years On: A Developing Human Rights Jurisprudence' (2014) 42 Federal Law Review 441. In New Zealand, 'persecution' encompasses inhuman or degrading treatment and the latter thus does not involve a lower level of harm: *AC (Syria)* [2011] NZIPT 800035, paras 70–80.

not others (including with respect to one 'absolute' right),[31] begs further analysis. Article 3 of the CAT expressly prohibits States from removing an individual in any manner whatsoever where there are substantial grounds for believing that doing so would expose him or her to a danger of being subjected to torture.[32] By contrast, the prohibition on torture and cruel, inhuman, or degrading treatment or punishment contained in article 7 of the ICCPR[33] (with parallels in other international and regional instruments)[34] has been interpreted as preventing the removal of individuals who face a real risk of being exposed to those forms of harm[35]—as have article 6 of the ICCPR and article 2 of the ECHR with respect to the right to life.[36] Article I of the American Declaration of the Rights and Duties of Man, which protects everyone's 'right to life, liberty and the security of his person',[37] has been interpreted broadly, arguably precluding removal to a wider range of harms than comparable provisions elsewhere.[38]

[31] Article 4 of the ECHR prohibits slavery, servitude, and forced or compulsory labour. Article 4 was considered in *Ould Barar v Sweden* (1999) 28 EHRR CD 213 but there was no risk of a violation. See also *MO v Switzerland*, App No 41282/16 (ECtHR, 20 June 2017); *J v Austria*, App No 58216/12 (ECtHR, 17 January 2017), Concurring Opinion of Judge Pinto de Albuquerque, joined by Judge Tsotsoria, para 40.

[32] CAT, art 3.

[33] ICCPR, art 7, which is reflected in all domestic complementary protection regimes mentioned in this chapter except the US, which only safeguards against return to persecution or torture. In Costa Rica and Nicaragua, the obligation is expressed more broadly—non-return to places where individuals' lives are at risk, and non-return to places where people would suffer violations of their human rights: respectively, Ley General de Migración y Extranjería (n 13) art 6(6); Ley No 761 (n 20) art 220.

[34] CRC, art 37(a); ECHR, art 3; EU Charter of Fundamental Rights, art 19(2); African Charter on Human and Peoples' Rights (adopted 17 June 1981, entered into force 21 October 1986) (1982) 21 ILM 58, art 5; Arab Charter on Human Rights (adopted 22 May 2004, entered into force 15 March 2008), art 8.

[35] See eg UN Human Rights Committee, 'General Comment No 20: Replaces General Comment 7 concerning Torture or Cruel, Inhuman or Degrading Treatment or Punishment (Art 7)' (10 March 1992) para 9; UN Human Rights Committee, 'General Comment No 31: Nature of the General Legal Obligation on States Parties to the Covenant', UN doc CCPR/C/21/Rev1/Add.13 (26 May 2004) para 12; *Soering v United Kingdom* (1989) 11 EHRR 439. There are procedural and evidentiary merits/drawbacks of the various adjudicatory bodies: Jane McAdam *Complementary Protection in International Refugee Law* (OUP 2007) 138–40.

[36] See eg UN Human Rights Committee 2004 (n 35) para 12; UN Human Rights Committee, 'General Comment No 36 (2018) on Article 6 of the International Covenant on Civil and Political Rights, on the Right to Life', UN doc CCPR/C/GC/36 (30 October 2018) paras 30–1; *Bader and Kanbor v Sweden*, App No 13284/04 (ECtHR, 8 November 2005); *AL (XW) v Russia*, App No 44095/14 (ECtHR, 29 October 2015).

[37] American Declaration of the Rights and Duties of Man (adopted at the 9th International Conference of American States, Bogota, 2 May 1948).

[38] David J Cantor and Stefania E Barichello, 'The Inter-American Human Rights System: A New Model for Integrating Refugee and Complementary Protection?' (2013) 17 International Journal of Human Rights 689, 693. The Commission has also precluded removal in the context of article XXVI 'not to receive cruel, infamous or unusual punishment': *Mortlock v United States*, Inter-American Commission on Human Rights Report No 63/08, Case No 12.534 (25 July 2008).

Human rights law also precludes removal to situations where individuals face a real risk of being subjected to the death penalty[39] or an enforced disappearance.[40] In each case, these rights are absolute. No exceptions to,[41] derogations from, or reservations to the prohibition on removal are permitted.[42]

The majority of complementary protection claims are made on the basis that the feared harm constitutes cruel, inhuman, or degrading treatment. As noted below, even though it is widely accepted that most other human rights could independently found a *non-refoulement* claim, the absolute nature of non-return to cruel, inhuman, or degrading treatment, its reflection in international, regional, and domestic law, and the extensive jurisprudence that has developed as to its meaning, make it the 'go to' complementary protection ground. Arguably, this has stultified the development of other grounds for protection since violations of other rights are recharacterized as examples of cruel, inhuman, or degrading treatment.

Decision-makers often do not clearly distinguish between treatment that is 'cruel', 'inhuman', or 'degrading',[43] instead viewing them either as a sliding scale of ill-treatment (with torture the most severe form[44]), or collectively as the 'compendious expression of a norm' that 'proscrib[es] any treatment that is incompatible with humanity'.[45] In some domestic schemes, such as the Australian Migration Act, decision-makers must identify precisely which form of ill-treatment the applicant fears;[46] by contrast, it is rare for the

[39] Second Optional Protocol to the International Covenant on Civil and Political Rights on the Abolition of the Death Penalty (adopted 15 December 1989, entered into force 11 July 1991) 999 UNTS 414; *GT v Australia*, UN doc CCPR/C/61/D/706/1996 (4 December 1997) para 8.5; *Judge v Canada*, UN doc CCPR/C/78/D/829/1998 (13 August 2003) para 10.4; CRC, art 37(a); EU Charter of Fundamental Rights, art 19(2); Protocol No 13 to the Convention for the Protection of Human Rights and Fundamental Freedoms, concerning the Abolition of the Death Penalty in All Circumstances (adopted 3 May 2002, entered into force 1 July 2003) ETS 187; *Wong Ho Wing v Peru*, Inter-American Court of Human Rights Series C No 297 (30 June 2015) para 134.

[40] This derives from the International Convention for the Protection of All Persons from Enforced Disappearance (adopted 20 December 2006, entered into force 23 December 2010) 2716 UNTS 3, art 16. This is reflected in Japanese law, which protects people from being removed where there are substantial grounds for believing that they would be in danger of being subjected to an enforced disappearance: Immigration Control and Refugee Recognition Act (Cabinet Order No 319 of 4 October 1951), art 53(3)(iii).

[41] *Tapia Paez v Sweden*, UN doc CAT/C/18/D/39/1996 (28 April 1997) para 14.5; *Aemei v Switzerland*, UN doc CAT/C/18/D/34/1995 (9 May 1997) para 9.8. The Supreme Court's approach in *Suresh v Canada*, 2002 SCC 1, [2002] 1 SCR 3 is contrary to international law and has been criticized by the UN Human Rights Committee, 'Consideration of Reports: Concluding Observations on Canada', UN doc CCPR/C/79/Add.105 (7 April 1999) para 13.

[42] This also means that there is no scope for balancing a person's conduct (however abhorrent) against the risk of harm if he or she is returned (see eg *Chahal v United Kingdom* (1996) 23 EHRR 413, paras 79–80).

[43] UN Human Rights Committee 1992 (n 35) para 4 has explained that any distinctions 'depend on the nature, purpose and severity of the treatment applied'.

[44] eg *Ireland v United Kingdom* (1979–80) 2 EHRR 25, para 167.

[45] *Taunoa v Attorney-General* [2007] NZSC 70, para 82 (Elias CJ), referring to *Miller v R*, 1976 CarswellBC 321, [1977] 2 SCR 680, 690 (Laskin CJ).

[46] Migration Act (n 10) ss 5, 36(2A).

Human Rights Committee to explain which element of article 7 of the ICCPR has been violated (which explains the limited jurisprudence from that body about the nature of each type of harm). The case law of the European Court of Human Rights falls somewhere in between, although it has come to consider the various types of ill-treatment as a whole, and has observed that, as a '"living instrument which must be interpreted in the light of present-day conditions"[,] . . . certain acts which were classified in the past as "inhuman and degrading treatment" as opposed to "torture" could be classified differently in future'.[47]

In practical terms, it is not hard to see why complementary protection has developed in this way. It is much harder to successfully mount a case for *non-refoulement* with respect to a 'qualified' right, which can be derogated from in certain circumstances, be subject to reservations, or balanced against competing considerations. For example, while the preservation of family unity may in some cases mandate against removal, this will be balanced against what is 'necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others'.[48] As noted above, in such cases, it is common for applicants to seek to characterize the harm (eg family separation) as 'inhuman or degrading treatment'.[49] This provides a more straightforward basis for the protection claim, and involves a less stringent threshold than the 'flagrant denial of a right' test, discussed below. Further, as the European Court of Human Rights noted in *Z and T*, 'it would be difficult to visualise a case in which a sufficiently flagrant violation of Article 9 [freedom of thought, conscience, and religion] would not also involve treatment in violation of Article 3 of the Convention'.[50]

The Human Rights Committee,[51] the Committee on the Rights of the Child,[52] the European Court of Human Rights,[53] the Committee on the Elimination of Racial

Discrimination,[54] the Inter-American Court of Human Rights,[55] the House of Lords,[56] and States themselves in the 2018 Global Migration Compact[57] have all acknowledged that the principle of *non-refoulement* may extend to other rights,[58] which is why it is problematic that different thresholds have emerged in some contexts, depending on the nature of the right concerned.

Of all the international and regional bodies, the European Court of Human Rights has engaged in the most detailed analysis of the scope of other human rights (beyond the right to life,[59] and the prohibition on torture and cruel, inhuman, or degrading treatment or punishment) to entail a *non-refoulement* obligation.[60] It has expressly recognized this with respect to articles 4 (prohibition of slavery and forced labour),[61] 5 (right to liberty and security),[62] 6 (right to a fair trial),[63] 8 (right to respect for private and family life),[64] and 9 (right to freedom of thought, conscience, and religion).[65] However, in that jurisdiction, a very high standard is required in such cases—a 'flagrant denial' of a right—which has rarely been met.[66] It requires a breach 'so fundamental as to amount to a nullification, or destruction of the very essence, of the right

[66] It was first met in *Othman* (n 63); see also *El-Masri* (n 62); *Al Nashiri v Poland*, App No 28761/11 (ECtHR, 24 July 2014); *Husayn (Abu Zubaydah) v Poland*, App No 7511/13 (ECtHR, 24 July 2014). For a detailed overview of cases, see Costello (n 60) 197–205.

guaranteed'.[67] An individual must demonstrate an added 'measure of persecution, prosecution, deprivation of liberty or ill treatment' beyond a 'mere' violation of the right.[68] This is because the State may have a 'legitimate aim' in restricting a qualified right, such that

> it is only in such a case—where the right will be completely denied or nullified in the destination country—that it can be said that removal will breach the treaty obligations of the signatory state however those obligations might be interpreted or whatever might be said by or on behalf of the destination state.[69]

This seems to be premised on the idea that the ECHR's Contracting States are not the 'indirect guarantors of [rights] for the rest of the world',[70] and on 'a purely pragmatic basis, it cannot be required that an expelling Contracting State only return an alien to a country where the conditions are in full and effective accord with each of the safeguards of the rights and freedoms set out in the Convention'.[71] As Foster rightly observes, this 'certainly raises a question as to the universality of human rights'.[72] Costello argues that the flagrant breach standard 'hamper[s] the progressive development of the law'[73] because it is 'unduly uncertain and excessively stringent'.[74]

By contrast, the Human Rights Committee and the Committee on the Rights of the Child have stated that individuals must not be removed to any country where they face a real risk of 'irreparable harm'. That term is not defined, but both committees cite arbitrary deprivation of life, torture, and cruel, inhuman, or degrading treatment or punishment as examples of such harm.[75] In the context of interim measures, the Human Rights Committee has stated that the 'essential criterion' of irreparable harm is 'the irreversibility of the consequences'.[76] While Noll has argued that this is 'ambig-

uous' and 'opens up a new arena for indeterminacy',[77] in practice it has not been used as an independent standard.

The distinctions between absolute and qualified rights are problematic, especially when contrasted with refugee law's more holistic assessment of the conditions amounting to persecution. There is a paucity of cogent reasoning by decision-makers as to when a *non-refoulement* duty attaches and why—especially when it comes to the nature of the right concerned (absolute/qualified), and the requisite degree of involvement by the State (in cases relating to inadequate resources or medical care, where there are 'fault-lines in the case law around the source of the harm').[78] Much of the reasoning seems to be based on policy concerns rather than anything more normative,[79] with Costello suggesting that the European Court of Human Rights seems to be deferring more to States' migration control prerogatives than to anything more principled.[80]

When it comes to domestic complementary protection regimes, most prohibit removal to the 'clear-cut' cases of arbitrary deprivation of life, the death penalty, torture, and cruel, inhuman, or degrading treatment or punishment. Indeed, the Human Rights Committee has stated that States parties to the ICCPR '*must* allow all asylum seekers claiming a real risk of a violation of their right to life in the State of origin access to refugee or other individualized or group status determination procedures that could offer them protection against *refoulement*'.[81] In some jurisdictions, the legislation refers directly to the relevant treaty provision as the source of the *non-refoulement* obligation,[82] whereas in others, the legislation itself defines the scope of the obligation.[83] The EU Qualification Directive additionally precludes a civilian's removal to a real risk of a 'serious and individual threat to . . . life or person by reason of indiscriminate violence in situations of international or internal armed conflict',[84] while Nicaraguan law prohibits the return of people suffering violations of their human rights.[85] Harm may result both from positive acts (eg the actual infliction of harm) as well as from deprivation (eg resources being withheld).[86] Furthermore, the individual circumstances of each case will influence whether or not the particular ill-treatment feared attains the minimum level of severity required.

[82] New Zealand's Immigration Act (n 16) ss 130, 131 refer respectively to the CAT and ICCPR.

[83] For example, Australia's Migration Act (n 10) s 5(1) requires 'intent' to cause harm—namely, 'an actual, subjective, intention on the part of a person to bring about suffering by his or her conduct'; *SZTAL v Minister for Immigration and Border Protection* (2017) 262 CLR 362, para 8 (Kiefel CJ, Nettle, and Gordon JJ); para 114 (Edelman J).

[84] EU Qualification Directive, art 15(c). [85] Ley No 761 (n 20) art 220.

[86] On the latter, see Chapter 46 in this volume.

3. Particular Issues

a. The Impact of Subsidiary Protection on Refugee Law and Protection

A long-standing concern is whether complementary protection regimes might result in the atrophy of refugee law. Many domestic regimes require asylum seekers' claims to be assessed in accordance with the Refugee Convention first, and only subsequently assessed against the complementary protection grounds if they are found not to be a refugee.[87] However, there remains a risk that if it is simpler for a decision-maker to identify a particular form of harm as 'inhuman treatment', rather than analysing in detail whether it constitutes persecution on account of membership of a particular social group, for instance, then refugee law jurisprudence may suffer.[88] Durieux contends that the long history of human rights-based protection in Europe 'reveals a worrying trend of using the *non-refoulement* potential of article 3 ECHR not as subsidiary or complementary to, but rather as a substitute for, refugee status'.[89] As such, Costello cautions that human rights law has the capacity to undermine refugee law 'as cases are siphoned into human rights claims'.[90] Highly divergent recognition rates throughout the EU Member States suggest that decision-makers are applying different tests and interpretations, developing refugee jurisprudence in some jurisdictions but not in others.[91]

A related—and very real—problem is that if complementary protection results in beneficiaries receiving a lesser status, there may be policy pressures to grant that, rather than refugee status. This seems to be borne out in practice. Whereas Australia, Canada, and New Zealand grant identical rights to refugees and beneficiaries of complementary protection,[92] the EU permits differential treatment. Even though the recast EU Qualification Directive has moved towards a greater convergence of rights for refugees

[87] This is the case in the EU, Canada, Australia, and New Zealand, for instance.

[88] See eg *F v United Kingdom* (n 64) and critique by Costello (n 60) 199; Spijkerboer (n 72) 224–8. On complementary protection being used for honour killings, see McAdam and Chong (n 30) 467–71. On concerns about stifling refugee law, see Jean-François Durieux, 'The Vanishing Refugee: How EU Asylum Law Blurs the Specificity of Refugee Protection' in Hélène Lambert, Jane McAdam, and Maryellen Fullerton (eds), *The Global Reach of European Refugee Law* (CUP 2013) 254.

[92] See Migration Act (n 10) s 36; Immigration and Refugee Protection Act (n 12) ss 95–7; Immigration New Zealand, *Operational Manual: Refugees and Protection* (8 May 2017) ch 5 pt 15.1. The regional African and Latin American refugee treaties envisage the extension of Convention refugee status to the broader categories of people they protect: OAU Convention, art VIII(2). Nothing in the Cartagena Declaration suggests a different status should be accorded to its wider category of 'refugees', referring to the OAU Convention as a precedent: Cartagena Declaration, conclusions III(3), III(8); see also Advisory-Opinion OC-21/14 (n 4) para 239.

and beneficiaries of subsidiary protection,[93] several EU Member States have since reduced the latter's entitlements to the minimum allowed by EU law.[94] Furthermore, the European Commission's proposal for a Qualification Regulation, which would replace the Directive and directly bind Member States, seeks to entrench inequalities in treatment in three areas: duration of protection, social benefits, and exclusion.[95]

The evidence suggests that differential statuses mean people are being denied protection as refugees.[96] Following the arrival of 890,000 Syrian asylum seekers in Germany in 2015, a policy change reducing the entitlements of beneficiaries of subsidiary protection (including no family reunion) saw a surge in grants of that status, and a sharp decline in grants of refugee status. As a result, thousands of people appealed their subsidiary protection determination to try to 'upgrade' to refugee status—with over 75 per cent succeeding in 2016.[97] Such practices raise valid legal concerns about discrimination, given that any differences in treatment between the holders of different forms of migration status must be objectively and reasonably justified.[98]

b. Risk of Generalized Violence or Armed Conflict

Beyond protection based on specific provisions of human rights treaties, there has been a consistent, albeit varied, trend in State practice to provide some form of protection to

[93] Differences remain with respect to the length of residence permits granted (article 24), social assistance (which can be limited to core benefits for beneficiaries of subsidiary protection (article 29)), and access to employment, social welfare, healthcare, and integration facilities may be made contingent on the prior issue of a residence permit (recital 40).

[94] Mouzourakis (n 91) 15–23.

[95] European Commission, 'Proposal for a Regulation of the European Parliament and of the Council on Standards for the Qualification of Third Country Nationals or Stateless Persons as Beneficiaries of International Protection, for a Uniform Status for Refugees or for Persons Eligible for Subsidiary Protection and for the Content of the Protection Granted and Amending Council Directive 2003/109/EC of 25 November 2003 Concerning the Status of Third-Country Nationals Who Are Long-Term Residents' COM (2016) 466 final.

[96] Some States tend to grant subsidiary protection instead of refugee status (eg Malta, Cyprus, Portugal, and Romania): European Council for Refugees and Exiles, 'Asylum Decisions in the First Half of 2019: Unlocking Statistics' (10 September 2019) <https://www.asylumineurope.org/news/10-09-2019/asylum-decisions-first-half-2019-unlocking-statistics> accessed 16 December 2020.

[97] Whereas 95.8 per cent of Syrians had been granted refugee status in Germany in 2015, this decreased to 56.4 per cent in 2016 and only 35 per cent in 2017, while the rate of Syrians granted subsidiary protection rose exponentially from 0.1 per cent in 2015 to 41.2 per cent in 2016 and 56 per cent in 2017. A legislative amendment in March 2016 temporarily suspended family reunification for beneficiaries of subsidiary protection. See Mouzourakis (n 91) 8; Asylum Information Database, 'Differential Treatment of Specific Nationalities in the Procedure: Germany' <http://www.asylumineurope.org/reports/country/germany/asylum-procedure/treatment-specific-nationalities> accessed 24 May 2019; Asylum Information Database, 'Criteria and Conditions: Germany' <http://www.asylumineurope.org/reports/country/germany/content-international-protection/family-reunification/criteria-and> accessed 24 May 2019. Arguably, had the Temporary Protection Directive been triggered (providing an interim status), Germany would not have used subsidiary protection in this way.

[98] *Hode and Abdi v United Kingdom*, App No 22341/09 (ECtHR, 6 November 2012); European Commission (n 95) 23–6. In the context of internal displacement, see *Mapiripán Massacre v Colombia*, Inter American Court of Human Rights Series C No 134 (15 September 2005) paras 177–9.

'persons whose life or freedom would be at risk as a result of armed conflict or generalized violence if they were returned involuntarily to their countries of origin'.[99] As noted above, the EU Qualification Directive expressly prohibits the removal of civilians who are individually at risk during conflict,[100] with the caveat that '[r]isks to which a population of a country or a section of the population is generally exposed do normally not create in themselves an individual threat which would qualify as serious harm'.[101]

In such cases, considerable attention has focused on the extent to which the individual must be personally targeted.[102] The Court of Justice of the EU has clarified that a person does not have to 'adduce evidence that he is specifically targeted by reason of factors particular to his personal circumstances',[103] but, rather, show that the harm 'is so serious that it cannot fail to represent a likely and serious threat to that person'.[104] The more a person is individually affected, 'the less it will be necessary to show that he faces indiscriminate violence in his country or a part of the territory which is so serious that there is a serious risk that he will be a victim of it himself'.[105] Canada's Federal Court has similarly held that demonstrating a personal and objectively identifiable risk 'does not mean that the risk or risks feared are not shared by other persons who are similarly situated'.[106]

c. Children's Protection Needs

In addition to the general grounds for complementary protection outlined above, children may require special protection. Article 3 of the CRC requires that a child's best interests are a primary consideration in any decision concerning him or her. They may only be outweighed if another consideration (individual or cumulative) is inherently more significant,[107] and cannot be overridden by non-rights-based arguments (such as migration control).[108]

For factors that have been considered to outweigh the child's best interests, see Jason M Pobjoy, *The Child in International Refugee Law* (CUP 2017) 236–7.

[108] Committee on the Rights of the Child (n 52) para 85. See also *Tarakhel v Switzerland*, App No 29217/12 (ECtHR, Grand Chamber, 4 November 2014) para 99; *Mubilanzila Mayeka and Kaniki Mitunga v Belgium*, App No 13178/03 (ECtHR, 12 October 2006) para 55; *Popov v France*, App Nos 39472/07 and 39474/07 (ECtHR, 19 January 2012) para 91.

This is a 'fundamental, interpretative legal principle'[109] and 'substantive right',[110] not merely a procedural rule.[111] Indeed, an age-sensitive approach to a child's protection needs[112] is central to the question whether removal is in the child's best interests or not. Protection may be triggered by 'degrees of risk falling short of a well-founded fear or serious reasons of anticipated harm', as well as by '*types* of risk not generally or directly relevant to refugee or complementary protection, such as deprivation, destitution, denial, exploitation, or absence of care'.[113] The Committee on the Rights of the Child has stated that a child should not be removed if there is 'a "reasonable risk" that such return would result in the violation of fundamental human rights ... and in particular, if the principle of *non-refoulement* applies'.[114]

d. Domestic Carve-outs

Some domestic regimes contain carve-outs to preclude complementary protection from being granted. For example, Australia, Canada, and the EU deny protection if the risk is faced by the population generally and not by the individual in particular.[115] Canada and New Zealand refuse protection if the risk stems from a State's inability to provide adequate health or medical care.[116] Australia, Canada, and New Zealand deny protection if the risk is inherent or incident to lawful sanctions (that are not inconsistent with international standards).[117] Neither Australia nor the EU grants protection if an internal flight alternative is available.[118]

4. Threshold or 'Standard of Proof'

In general, the relevant standard is that there are 'substantial grounds' for believing that a person would face a 'real risk' of harm if removed. It derives from article 3 of the CAT and has been adopted by the Human Rights Committee and the European Court of Human Rights, as well as incorporated into the legislation of some States.[119] In terms of best practice, the 'real risk' threshold should be interpreted as equivalent to the 'well-founded fear' test in refugee law (as in Australia, New Zealand, and the UK, for example).[120] The UK Asylum and Immigration Tribunal has noted that it would be strange if a different standard were to apply:

> Apart from the undesirable result of such a difference of approach when the effect on the individual who resists return is the same and may involve inhuman treatment or torture or even death, an adjudicator and the tribunal would need to indulge in mental gymnastics. Their task is difficult enough without such refinements.[121]

A different approach has been taken in the US and Canada, however, where the test is 'more likely than not'.[122] This imposes a higher standard for complementary protection than for refugee claims, where the 'well-founded fear' test is interpreted as a 'reasonable possibility' of persecution (in the US)[123] or a 'reasonable chance' or 'serious possibility' of persecution (in Canada).[124] The Committee against Torture has criticized the US for using a standard that is inconsistent with international law and at odds with the

[119] EU Qualification Directive (original) art 2(e); EU Qualification Directive (recast) art 2(f); Migration Act (n 10) s 36(2)(aa); Immigration Act (n 16) ss 130(1), 131(1). Others refer to a 'danger': Mexico, Canada, Costa Rica. For detailed analysis of the jurisprudence on the meaning of these terms, see McAdam (n 117) 716–25.

[120] See *Minister for Immigration and Citizenship v SZQRB* (2013) 210 FCR 505, paras 246–8 (Lander and Gordon JJ), 297 (Besanko and Jagot JJ), 342 (Flick J); *AK (South Africa)* [2012] NZIPT 800174 (16 April 2012) para 79. The Court of Justice of the EU has not ruled directly on the standard but would appear to regard 'well-founded fear' and 'real risk' as the same: International Association of Refugee Law Judges (IARLJ) European Chapter, *Qualification for International Protection (Directive 2011/95/EU): A Judicial Analysis* (European Asylum Support Office 2016) 114–15, referring to C-71/11 and C-99/11 *Germany v Y and Z* [2013] All ER (EC) 1144, ECJ, paras 75, 79, 80.

[121] *Kacaj v Secretary of State for the Home Department* [2001] UKAIT 00018, [2001] INLR 354, para 10, see also para 12; *Bagdanavicius v Secretary of State for the Home Department* [2005] UKHL 38, [2005] 2 AC 668, para 30.

[122] See 8 CFR (n 28) §208.16(c)(2); *Li v Canada (Minister for Citizenship and Immigration)* 2005 FCA 1, [2005] 3 FCR 239, paras 27–9; cf Immigration and Refugee Board of Canada, *Consolidated Grounds in the* Immigration and Refugee Protection Act: *Persons in Need of Protection: Risk to Life or Risk of Cruel and Unusual Treatment or Punishment* (15 May 2002) 39.

[123] Compare 8 CFR (n 28) §208.16(c)(2) and §208.13(b)(2).

[124] *Adjei v Canada (Minister of Employment and Immigration)* 1989 CarswellNat 40, [1989] 2 FC 680.

Committee's jurisprudence.[125] Similarly, the Human Rights Committee has criticized Canada for relying on outdated international jurisprudence to justify a higher test for complementary protection claims.[126] As noted above, for qualified rights, the European Court of Human Rights requires a 'flagrant breach' or a 'flagrant denial' of a right.

5. Exclusion from Complementary Protection

Although the prohibition on removal to certain types of serious harm is absolute, many States' complementary protection regimes contain exclusion clauses that are based on articles 1F and 33(2) of the Refugee Convention.[127] This does not mean that States can remove people contrary to international law, however.[128] Instead, people are typically denied the legal status granted to other beneficiaries of complementary protection, often resulting in legal limbo and even indefinite detention.[129] Although State practice varies considerably and is marked by unsystematic, *ad hoc* approaches, it seems to be underpinned by the (misplaced) assumption that the need to remain will necessarily be temporary; thus, cases are regularly reviewed to determine whether

[125] Committee against Torture, Summary Record of the First Part (Public) of the 424th Meeting (10 May 2000), UN doc CAT/C/SR.424, para 17.

[126] Individual opinion (concurring) by Committee members Ms Helen Keller, Ms Iulia Antoanella Motoc, Mr Gerald L Neuman, Mr Michael O'Flaherty, and Sir Nigel Rodley in *Pillai v Canada*, UN doc CCPR/C/101/D/1763/2008 (9 May 2011) 22.

[127] See eg EU Qualification Directive, art 17; Immigration and Refugee Protection Act (n 12) s 98; Immigration Act (n 16) ss 137(2), 139; Migration Act (n 10) s 5H(2). US law also excludes certain 'undesirable' people from 'withholding of removal' but gives them 'deferral of removal' status (amounting to little more than toleration of their presence).

[128] It will rarely be possible for States to extradite or prosecute people for the alleged crimes that have resulted in their exclusion from refugee or complementary protection status: Maarten P Bolhuis, Louis P Middelkoop, and Joris van Wijk, 'Refugee Exclusion and Extradition in the Netherlands: Rwanda as Precedent?' (2014) 12 Journal of International Criminal Justice 1115; Geoff Gilbert and Anna Magdalena Rüsch, 'Jurisdictional Competence through Protection: To What Extent Can States Prosecute the Prior Crimes of Those to Whom They Have Extended Refuge?' (2014) 12 Journal of International Criminal Justice 1093.

[129] In New Zealand, the status of such people is left to executive discretion. This enables the greatest flexibility in individual cases but provides no certainty for the individuals concerned. Under the EU Qualification Directive (art 14(6)), 'refugees' denied refugee status (on the grounds of criminal activity or national security) are nevertheless entitled to the rights set out in articles 3, 4, 16, 22, 31, 32, and 33 of the Refugee Convention. No equivalent entitlement exists for those denied subsidiary protection (see EU Qualification Directive, art 19). See further Joined Cases C-391/16, C-77/17, and C-78/17 *M v Ministerstvo vnitra, X and Y v Commissaire général aux réfugiés et aux apatrides* [2019] OJ C255/2, paras 105, 109. For an overview of practices in a number of jurisdictions, see Refugee Law Initiative, *Undesirable and Unreturnable? Policy Challenges around Excluded Asylum Seekers and Other Migrants Suspected of Serious Criminality Who Cannot Be Removed* (Conference report, 2016) <https://cicj.org/wp-content/uploads/2016/09/Undesirable-and-Unreturnable-Full-report.pdf> accessed 27 November 2019.

removal is possible.[130] This considerable protection gap has been described as a 'fundamental system error'.[131]

6. Conclusion

While on one reading, complementary protection has expanded the bases on which people cannot be removed to serious harm, on another it has diluted refugee protection and risked reducing international protection to *non-refoulement* alone.[132] As Durieux reminds us, human rights instruments like the ECHR do 'not actually deal with asylum, if that concept is construed to mean the sum total of protection afforded by a State to refugees on its territory or under its jurisdiction'.[133] He argues that whereas refugee law is framed 'positively', affording a legal status to aliens we want to protect, human rights law is framed 'negatively', simply limiting who can be removed.[134] As such, EU law 'induces the phenomenon of a "vanishing refugee"', who is 'blurred, marginalized or ignored'.[135]

There is clearly a need for greater, principled articulation of the relationship between refugee law and human rights law when it comes to the principle of *non-refoulement* and—importantly—the legal status granted to those who cannot be removed. The dissonance between the protection afforded by article 3 of the ECHR and subsidiary protection under the EU Qualification Directive is illustrative of a systemic disjointed approach that results in protection gaps—gaps that can rarely be explained by principled reasoning.

[130] For example, Norway grants a temporary residence permit with very limited rights, reviewed every six months. In the UK, excluded individuals may be granted restricted leave for up to six months. See Mi Christiansen and Terje Einarsen, 'The Situation in Norway' (Preliminary Workshop, Undesirable and Unreturnable? Policy Challenges around Excluded Asylum-Seekers and Other Migrants Suspected of Serious Criminality but Who Cannot Be Removed, Vrije University Amsterdam, 27 March 2015) 2; Home Office, 'Restricted Leave (version 3.0)' (25 May 2018) 14; Sarah Singer, '"Undesirable and Unreturnable" in the United Kingdom' (2017) 36(1) RSQ 9, 30.

[131] Joke Reijven and Joris van Wijk, 'Caught in Limbo: How Alleged Perpetrators of International Crimes Who Applied for Asylum in the Netherlands are Affected by a Fundamental System Error in International Law' (2014) 26 IJRL 248, 249.

[132] Durieux (n 88) 251; cf Chetail who argues that 'human rights law has become the ultimate benchmark for determining who is a refugee': Vincent Chetail, 'Are Refugee Rights Human Rights? An Unorthodox Questioning of the Relations between Refugee Law and Human Rights Law' in Ruth Rubio-Marín (ed), *Human Rights and Immigration* (OUP 2014); see also Chapter 11 in this volume.

[133] Durieux (n 88) 247.

[134] ibid 252; see also Jean-François Durieux, 'Three Asylum Paradigms' (2013) 20 International Journal on Minority and Group Rights 147, 168–9. Kälin provides more nuance, distinguishing the approach of the Human Rights Committee—which regards States as having 'a duty to actively protect individuals against infringements of their rights'—from that of the Committee against Torture and the European Court of Human Rights—which preclude return 'based on a duty to abstain from treating individuals in an inhuman manner': Walter Kälin, 'Limits to Expulsion under the International Covenant on Civil and Political Rights' in Francesco Salerno (ed), *Diritti dell'uomo, estradizione ed espulsione* (CEDAM 2003) 159.

[135] Durieux (n 88) 228.

Finally, just as the meaning of the 'refugee' definition in the Refugee Convention has evolved over time through robust judicial, institutional, and legislative engagement,[136] so, too, must the interpretation of complementary protection remain alive to developments in international human rights law. Among other things, this means giving considered attention to the role of *non-refoulement* with respect to rights other than the right to life and the prohibition on torture and other cruel, inhuman, or degrading treatment or punishment.

136 UNHCR, 'Persons in Need of International Protection' (June 2017) 2–3.

CHAPTER 37

TEMPORARY PROTECTION AND TEMPORARY REFUGE

JEAN-FRANÇOIS DURIEUX

1. Introduction

Though they are often discussed together, 'complementary protection' and 'temporary protection' occupy substantially different spaces within the international legal regime of refugee protection. 'Complementary' is readily understood to mean 'additional' to the protection provided to refugees in accordance with the Refugee Convention. In contrast, the import of the adjective 'temporary' is far from obvious, since Convention refugee status itself is, in essence, temporary.[1] The choice of adjective by governments, UNHCR, and scholars is, however, far from haphazard or casual. Unlike 'complementary protection', the concepts of 'temporary refuge' and 'temporary protection' (both of which will be discussed in this chapter) were introduced either as challenges to the Refugee Convention, or in order to remedy flaws deemed to be inherent in it. One specific concern is directly related to the temporal dimension of protection: it is based on a reading of the Refugee Convention, according to which the treaty requires that Contracting States provide refugees on their territories with permanent or at least durable residence. At its core, then, the debate over 'temporary' forms of protection exposes a tension within the Refugee Convention-based regime, which can be summarized as follows: while premature return to an ongoing situation of persecution or other relevant harm is clearly prohibited by the *non-refoulement* principle, changes in a refugee's country

[1] UNHCR observed in 1994 that '[t]emporary protection, like refugee status, should last as long as there remains a need for international protection (or until conversion to a more permanent status)': UNHCR, 'Note on International Protection', UN doc A/AC.96/830 (7 September 1994) 24. See also Chapter 57 in this volume.

of origin are usually slow to come about, and take much longer to stabilize; meanwhile, the refugee's lawful presence gradually turns into near-irreversible integration, through the combined effect of the Convention's provisions and of other human rights standards.[2]

This (real or perceived) flaw in the Refugee Convention tends to come to light mainly—perhaps exclusively—within the context of large-scale influxes of refugees. Such flows raise complex issues that are not easy to disaggregate. It comes as no surprise, therefore, that the concepts of 'temporary refuge' and/or 'temporary protection' have impregnated some policy and scholarly debates that do not address the above-mentioned 'clash of times' in the Refugee Convention, or address it only implicitly. These include: the status and scope of the *non-refoulement* principle where mass influxes of refugees threaten the security and/or overwhelm the resources of receiving States;[3] the legal condition of the people involved in such flows, the causes of which may be within, as well as outside, the ambit of the accepted definition of a Convention 'refugee'; and the status and scope of a 'principle of international solidarity'[4] of the international community at large towards States admitting and/or hosting large numbers of refugees.[5]

Neither 'mass influx' nor 'large-scale influx' is a term of art in international refugee law. It is generally acknowledged, however, that the terms denote more than sheer numbers: amongst the characteristics of 'mass influx situations', UNHCR's Executive Committee has listed: '(i) considerable numbers of people arriving over an international border; (ii) a rapid rate of arrival; (iii) inadequate absorption or response capacity in host States, particularly during the emergency; and (iv) individual asylum procedures, where they exist, which are unable to deal with the assessment of such large numbers'.[6] This mix of quantitative and qualitative criteria finds an echo in the 2016 New York Declaration on Refugees and Migrants.[7]

[2] I have referred to a 'clash of times', as the Refugee Convention represents time as both attachment and deadline: Jean-François Durieux, 'Temporary Protection: Hovering at the Edges of Refugee Law' [2014] Netherlands Yearbook of International Law 221, 230–2.

[3] On *non-refoulement*, the starting point is that the prohibition of returning refugees to danger applies in all circumstances, regardless of the size of the influx. This is notwithstanding the (widely contested) clause in the 1967 declaration of the UNGA, 'Declaration on Territorial Asylum', UNGA res 2312 (XXII) (14 December 1967) art 3(2), according to which '[e]xception may be made to the foregoing principle only for overriding reasons of national security or in order to safeguard the population, as in the case of a mass influx of persons'. See also Chapter 50 in this volume.

[4] UNHCR ExCom Conclusion No 52 (XXXIX), 'International Solidarity and Refugee Protection' (1988) para 4. See also Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007) 416: 'the duty to accord *non-refoulement* through time cannot be separated in practice from that other complex duty which recognizes the responsibility of the community of States in finding durable solutions.'

[5] In an 'extra-large' version of the concept, Fitzpatrick wrote that 'temporary protection can be presented as an adaptation to the contemporary realities of forced displacement': Joan Fitzpatrick, 'Temporary Protection of Refugees: Elements of a Formalized Regime' (2000) 94 AJIL 279, 287.

[6] ExCom Conclusion No 100 (LV), 'International Cooperation and Burden and Responsibility Sharing in Mass Influx Situations' (2004) para (a).

[7] New York Declaration for Refugees and Migrants, para 6.

Large-scale movements of refugees have been 'an enduring and global issue throughout the twentieth century'.[8] Until the 1980s, however, little attention was paid in doctrine to the legal implications of the 'massification' of flows. In the inter-war period and in the immediate aftermath of the Second World War, population movements involving refugees, amongst others, occurred on a huge scale without raising many legal questions.[9] Through the following decades, the general feeling was that large-scale refugee movements in Africa were adequately addressed by the OAU Convention, while those happening in Asia had to be dealt with on an *ad hoc* basis, since the Refugee Convention had not penetrated that continent. What changed the deal was the phenomenon of the 'new asylum seekers'[10]—in other words, the globalization of refugee flows 'in an age when asylum-seekers are no longer only border crossers, but arrive by sea and by air in increasingly large numbers in countries far away from their homelands'.[11] Together with this new phenomenon came the realization that large-scale flows of refugees exposed gaps and points of tension within the international refugee law regime. Durieux and Hurwitz identify these at three levels: qualification, standards of treatment, and termination and solutions.[12]

a. Qualification

The proponents of temporary forms of protection have argued that the Refugee Convention is ill-suited to deal with large-scale influxes of refugees, owing to its refugee definition's focus on individualized persecution.[13] While this reading of the definition is

This enduring assumption has been challenged by, amongst others, Jean-François Durieux, 'The Many Faces of *Prima Facie*: Group-Based Evidence in Refugee Status Determination' (2008) 25(2) Refuge 151; Francesco Maiani, 'The Concept of "Persecution" in Refugee Law: Indeterminacy, Context-sensitivity, and the Quest for a Principled Approach' (2010) Les Dossiers du Grihl <https://journals.openedition.org/dossiersgrihl/3896> accessed 6 October 2019.

highly debatable,[14] it is a fact that recognition of Convention refugee status often commands a detailed examination of the merits of a claim to refugee status; and it cannot be denied that a massive and sudden influx of asylum seekers puts significant pressures on such a process.[15]

b. Standards of Treatment

The Refugee Convention's overall logic is one of progressive accrual of rights over time: because refugees cannot return to their countries of origin, they must be given a chance to start a new life and become integrated into a new community. While this 'assimilative path'[16] is generally accepted by Contracting States to the Convention, absorption capacity becomes a serious issue when refugees arrive in large numbers: suddenly, the basic standards of the Convention appear terribly expansive and generous. 'More refugees, less asylum' is increasingly presented as an inescapable equation.[17]

c. Termination and Solutions

This is, as explained above, when the adjective 'temporary' reaches its full significance. Faced with both political and practical obstacles in invoking group cessation on account of changed circumstances, States are tempted to make questionable assumptions about the expected duration of the need for international protection and/or to try to circumvent the rather strict requirements of cessation through resort to notions such as 'safe return'.[18]

2. Temporary Refuge: Concept, Practice, Principle?

In the late 1970s, war and regime changes on the Indochinese peninsula drove people to flee in their tens, then hundreds, of thousands, which 'generated debate about "status", and then about admission and treatment and solutions, in a region where few States

[14] UNHCR has observed that, 'in fact, there is nothing inherent in the provisions of the 1951 Convention and 1967 Protocol to preclude it being applied in mass influx situations. The stumbling block has been less the Convention itself and more the individualised processes put in place to implement it, coupled with a perception of the Convention as an instrument of integration': UNHCR, 'Protection of Refugees in Mass Influx Situations: Overall Protection Framework', EC/GC/01/4 (19 February 2001) para 17.

[15] See Chapters 31 and 32 in this volume. It is noteworthy that mass influxes may also put pressure on exclusion procedures which, owing to their exceptional character, can never be 'group-based'.

[18] Goodwin-Gill and McAdam (n 4) 496–7.

were party to the 1951 Convention ... and the 1967 Protocol'.[19] Potentially exposed to large-scale arrivals of 'boat people', and with little prospect of external support, Australia in 1979 launched an international initiative proposing that the concept and practice of temporary refuge should be studied by the international community. Gervase Coles was the 'brain' behind this initiative, and the author of a seminal paper submitted to an Expert Group on Temporary Refuge in Situations of Large-Scale Influx, which met in Geneva in April 1981.[20]

In that paper, 'temporary refuge' is defined as 'that protection characterized by the principle of *non-refoulement* which is accorded a person and which is temporary pending the obtaining of a durable solution'.[21] The 'proper function' of this concept/practice is 'to facilitate admission and the obtaining of satisfactory durable solutions' in large-scale influx situations. In such situations, Coles wrote, 'it may ... be reasonable and desirable for the country of refuge to state at the time of admission that the solution granted by admission should be regarded as temporary'.[22] This proposition was meant to challenge the generally accepted concept of asylum, which Coles presented as an 'ideal' inherent in the Refugee Convention, whereby the State of first admission also provided a durable solution on its territory. In the same vein, Goodwin-Gill and McAdam observe that, in the case of large-scale movements, 'the presumption or at least ... reasonable expectation that a local durable solution will be forthcoming' can no longer be raised.[23] The concept of 'temporary refuge' reaches, however, beyond this sober finding, as it includes, from the standpoint of a 'State of first admission', an important *external* dimension: 'the qualification of the grant of protection as temporary ... places the international community on notice that the presence of the refugees in the country of refuge should not be construed by itself as a satisfactory durable solution'.[24]

Indeed, the genuine novelty of the concept lies in its articulation between immediate, basic protection and longer-term solutions. As a link between admission and durable solutions, temporary refuge does not absolve the country of refuge from the obligation to find a satisfactory durable solution, but clearly, and from the onset of the crisis,

[19] Guy S Goodwin-Gill, '*Non-Refoulement*, Temporary Refuge and the "New" Asylum-Seekers' in David J Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity? War Refugees and International Humanitarian Law* (Martinus Nijhoff 2014) 432.

[20] Paper submitted by Gervase JL Coles and included in UNHCR, 'Report of the Meeting of the Expert Group on Temporary Refuge in Situations of Large-Scale Influx', EC/SCP/16/Add.1 (17 July 1981).

[21] The paper includes a full section on terminology, explaining why 'refuge' should be preferred to 'asylum': 'protection provided by admission on a temporary basis has sometimes been called by different phrases, such as '"temporary asylum", "provisional asylum", "first asylum" or "temporary residence" ... None of these phrases is satisfactory': ibid 11.

[22] ibid 3.

[23] Goodwin-Gill and McAdam (n 4) 344. They add: 'the concept of temporary refuge ... thus stands paradoxically as both the link and the line between the peremptory, normative aspects of *non-refoulement* and the continuing discretionary aspect of a State's right in the matter of asylum as a permanent or lasting solution.'

[24] Coles (n 20) 18.

distributes this responsibility between the State of refuge and other States in the regime. Seen in this light, temporary refuge is also 'an essential link between the principle of *non-refoulement* and the principle of international solidarity'.[25]

Both principles underpin the most detailed (non-binding) instrument resulting from the Australian initiative, namely Executive Committee (ExCom) Conclusion No 22 on 'The Protection of Asylum-Seekers in Situations of Large-Scale Influx'.[26] The Conclusion stresses that asylum seekers should always be admitted, at least on a temporary basis, in the country in which they first seek refuge; and that (other) States 'shall, within the framework of international solidarity and burden-sharing, take all necessary measures to assist, at their request, States which have admitted asylum seekers in large-scale influx situations'.[27] This Conclusion has been praised for elucidating the minimum standards of treatment owed to refugees arriving in large numbers, including (perhaps especially) in States that are not bound by the Refugee Convention. It is not certain, however, that it represents a normative leap in the articulation of immediate protection—the responsibility of frontline States—with the collective responsibility of the international community at large to provide longer-term solutions: it is definitely possible to read Conclusion 22 as establishing a sequence of distinct obligations, rather than successive manifestations of a single collective duty.[28] To be sure, the 'protection before burden-sharing tradition'[29] endures in the doctrine of ExCom, which insists that 'access to asylum . . . should not be dependent on burden and responsibility sharing arrangements first being in place, particularly because respect for human rights and humanitarian principles is a responsibility for all members of the international community'.[30]

Likewise, Conclusion 22 does not fully clarify the relationship between 'temporary refuge' and the Refugee Convention: while it acknowledges that Convention standards do not cover all aspects of the treatment of asylum seekers in large-scale influx situations, it stops short of providing what the Australian initiative had asked for, namely 'a clearer understanding of the application of the Convention to [such] situations', which 'may help to remove some of the obstacles to the wider ratification of the Convention'.[31]

[25] ibid 21.

[26] ExCom Conclusion No 22 (XXXII), 'Protection of Asylum-Seekers in Situations of Large-Scale Influx' (1981). Paragraph I(3) reads:

> It is . . . imperative to ensure that asylum seekers are fully protected in large-scale influx situations, to reaffirm the basic minimum standards for their treatment pending arrangements for a durable solution, and to establish effective arrangements in the context of international solidarity and burden-sharing for assisting countries which receive large numbers of asylum seekers.

Apart from Coles[32] and Goodwin-Gill,[33] refugee law scholars did not immediately pursue the line of thought suggested by the 1979 Australian initiative. Academic debate on the international law dimensions of temporary refuge resurfaced in 1986, inspired by the work of Perluss and Hartman.[34] The concept, and behind it the legal principle which these authors described, were, however, quite distinct from the earlier manifestation of 'temporary refuge': in this new version, the 'principle of temporary refuge' addresses an issue related to the causes, rather than the consequences, of displacement; and it imposes a unilateral obligation on States, upon which the search for durable solutions through international solidarity has little, if any, bearing.[35] This principle 'prohibits states to which civilians have fled in search of safety from internal armed conflict from forcibly repatriating them during the pendency of the conflict. It also prohibits rejection at the frontier where such rejection would have the effect of exposing the civilians to the armed conflict.'[36] Through a remarkably comprehensive review, Perluss and Hartman find evidence of this principle at work in the practice of international organizations and regional institutions, as well as States in all regions—the notable exception (and the authors' principal target) being the US policy at the time of forcibly repatriating Salvadoran and Guatemalan asylum seekers.

Their argument resolutely breaks new ground where they assert 'that the norm of temporary refuge exists as a part of customary international law and that its distinctive character is best appreciated by recognizing it as a customary humanitarian norm, rather than as an extension of refugee law or as a gloss upon codified humanitarian law'.[37] The first part of this thesis is backed by an extensive discussion of *opinio juris* in the creation of custom.[38] The second part relies on a pioneering exploration of the refugee protection potential of general principles of law, international humanitarian law,

[32] Relevant writings by Coles include: Gervase JL Coles, 'Temporary Refuge and the Large Scale Influx of Refugees (1983) 8 Australian Year Book of International Law 190; Gervase JL Coles, 'Approaching the Refugee Problem Today' in Gil Loescher and Laila Monahan (eds), *Refugees and International Relations* (OUP 1989).

[33] Guy S Goodwin-Gill, *The Refugee in International Law* (Clarendon Press 1983) 119–21. Having analysed State practice within the Indochinese and Afghan refugee contexts, he concludes that in 'neither case could the condition of temporary refuge be considered a satisfactory durable solution in itself; that was an objective which remains to be pursued'.

[34] Deborah Perluss and Joan F Hartman, 'Temporary Refuge: Emergence of a Customary Norm' (1986) 26 Virginia Journal of International Law 551.

[35] ibid 633. Humanitarian solidarity is, however, mentioned at 619: 'persons seeking temporary refuge must at the least be permitted to accept the benefactions of organizations engaged in charitable efforts to provide humanitarian assistance.'

[36] Joan F Hartman, 'Temporary Refuge and Central American Refugees' (1987) 10 In Defense of the Alien 171, 172. This description of the principle is more comprehensive than the original one in Perluss and Hartman (n 34), notably in its affirmation that both 'repatriation' and 'rejection at the frontier' are prohibited. Hailbronner had criticized, *inter alia*, Perluss and Hartman's weak stress on non-rejection: Kay Hailbronner, '*Non-Refoulement* and "Humanitarian" Refugees: Customary International Law or Wishful Legal Thinking' (1986) 26 Virginia Journal of International Law 857.

[37] Perluss and Hartman (n 34) 554.

[38] ibid 575–8. Contra Hailbronner (n 36), rebutted by Goodwin-Gill (n 19).

and human rights law.[39] It reaches the conclusion that, while the norm of temporary refuge can be traced to the prohibition of *refoulement*, the latter should not be understood in its narrow refugee law meaning.[40] Within the particular context in which the article was written, resort to a 'customary humanitarian norm' represented in part a flight forward, implicitly admitting that the US resistance (notably, to admission as a necessary corollary of *non-refoulement*) could not be overcome with traditional refugee law tools.[41] This particular battle was lost, as US tribunals and courts rejected the argument, finding that 'neither the Fourth Convention nor customary international law provides potential relief from deportation that can be sought by individual aliens in deportation proceedings over and above that which is provided by the Immigration and Nationality Act, as implemented by regulation';[42] and that 'Congress has specifically rejected the norm of temporary refuge' in adopting the Refugee Act of 1980.[43] The 'Temporary Protected Status' which Salvadorans in the US eventually obtained was a discretionary measure, which in any event did 'not operate as an admission program'.[44] More generally, the intended beneficiaries of temporary refuge—namely, civilian victims of internal armed conflict—remain caught in a grey area as regards the source of their international protection, although in Europe at least, complementary protection has come to fill the gap somewhat.[45]

Perluss and Hartman put forward another argument for the recognition of temporary refuge as a customary norm, however, and this one goes some way towards meeting Coles' vision—even though the latter never resorted to customary international law as such: 'if a grant of temporary refuge is no more than a simple voluntary act of charity by the refuge state, there is no particular reason other states should be obligated to come to its assistance with material support. If, however, the state of refuge lacks free choice because it is constrained by an international norm . . . its moral claim to burden-sharing is a powerful one'.[46]

[39] Perluss and Hartman (n 34) 601–23.

[40] On this point, compare Goodwin-Gill (n 19) 439–40 with Goodwin-Gill (n 10).

[41] At the same time, other voices in the US were calling for either an expansion of the 'asylee' definition: Michael G Heyman, 'Redefining Refugee: A Proposal for Relief for Victims of Civil Strife' (1987) 24 San Diego Law Review 449; or, alternatively, for a liberal interpretation of art 1A(2) of the Refugee Convention (which indeed worked in some famous cases): Deborah Anker, '*INS v Cardoza-Fonseca*, One Year Later: Discretion, Credibility and Political Opinion' (1988) 11 In Defense of the Alien 120.

[45] See eg EU Qualification Directive; see also Chapter 36 in this volume. It is worth noting that UNHCR's attempts in the 1990s to secure 'a more predictable and secure legal basis' for the protection of 'refugees from armed conflict and civil strife', including in 'States that are not party to [relevant] international instruments', were unsuccessful: see ExCom, 'The Scope of International Protection in Mass Influx', EC/1995/SCP/CRP.3 (2 June 1995); ExCom Conclusion No 86 (XLIX), 'Decision on Informal Consultations on Protection Issues' (1998).

[46] Perluss and Hartman (n 34) 588.

3. Temporary Protection: From Flexibility to Predictability?

Whereas the concept of 'temporary refuge' emerged in Australasia and was later invoked to address an American conundrum, 'the contemporary international law understanding of "temporary protection" is based predominantly on European practice' and law.[47] The term gained prominence during the 1990s in relation to the crisis in the former Yugoslavia, which produced massive displacement of populations both within and outside the Western Balkans. It was first coined by UNHCR in 1992, within the framework of 'an informal international meeting at the ministerial level, with the objective of launching an initiative, on the one hand to address the immediate humanitarian needs of the victims and receiving States and, on the other, to intensify the action in search of a lasting solution to the plight of the victims of the conflict'.[48] According to UNHCR, the pursuit of this dual objective required 'a comprehensive approach which serves to: (i) enhance respect for human rights and humanitarian law; (ii) strengthen efforts to prevent or contain displacement; (iii) provide temporary refuge and material assistance for those in need of international protection; and (iv) initiate action to create conditions . . . in order to encourage refugees and displaced persons to return home'.[49] Use of the term 'temporary refuge', as well as a reference to Executive Committee Conclusion No 22 in the same document's description of temporary protection,[50] testify to a certain lineage between 'temporary refuge' and 'temporary protection'; and indeed, the Australian initiative of 1979 contained most of the ingredients of the debate surrounding the advent of temporary protection in Europe some 15 years later.

Different contexts command different approaches, however. The concrete problem at hand in 1979 was the 'push-back' of boat people by coastal States in Southeast Asia, most of which were not party to the Refugee Convention, and thus were largely insensitive to any arguments based on a legal duty to refrain from *refoulement* of refugees, let alone a legal duty to grant them asylum. On the other hand, precisely because they were not bound by refugee treaties, States of 'first refuge' had no reason to dismiss the refugee character of the flow.[51] To the contrary, the refugee label proved convenient *because* it

[47] Goodwin-Gill and McAdam (n 4) 340. Note that temporary visa regimes, such as Australia's Temporary Protection Visas, do not fall within the international law concept of temporary protection. The US Temporary Protected Status (see Fitzpatrick (n 44)) also falls outside the scope of this section, for it is a defence against deportation for specified nationalities and not an admission mechanism.

[48] UNHCR, 'A Comprehensive Response to the Humanitarian Crisis in the Former Yugoslavia', HCR/IMFY/1992/2 (24 July 1992) para 3.

[49] ibid.

[50] ibid para 13: 'the concept of temporary protection . . . should include, at a minimum, admission to the country where such protection is being sought, respect for the principle of non-refoulement and basic human rights (the elements of which are further outlined in ExCom Conclusion 22 (XXXII)), and repatriation when conditions so allow in the country of origin.'

[51] The questioning eventually came from (Western) resettlement countries, and led to the adoption of the Comprehensive Plan of Action in 1989. See UNGA, 'Declaration and Comprehensive Plan of Action of the International Conference on Indo-Chinese Refugees. Report of the Secretary-General', UN doc A/44/523 (22 September 1989).

was 'foreign' and, as such, made sure that, through international burden-sharing, refuge in Asia would be a mere way-station. In contrast, when people started fleeing from former Yugoslav republics in the early 1990s, they sought refuge in European States that were all parties not only to the Refugee Convention, but also to the European Convention on Human Rights. Temporary protection had to be crafted, therefore, within the parameters of an agreed framework of refugee rights.[52] Wary of unmanageable numbers of protection-seekers from the former Yugoslavia, European States found that evading their obligations under the Refugee Convention—including time-consuming status determination procedures—was only possible through questioning the refugee character of the flow and, more generally, by avoiding any reference to refugee law standards. 'Flexibility' became the buzzword.[53]

The rationale for recommending a 'flexible system' in the face of obvious humanitarian needs was found in the *emergency* and *temporary* nature of such needs. Both characteristics deserve some scrutiny. There is little doubt that the violent disintegration of Yugoslavia triggered a displacement crisis of a magnitude unseen in Europe since the Second World War. However, a large-scale influx of refugees into several wealthy European States need not create an emergency, so long as responsibilities are shared amongst those States. As Kjaerum observed: 'In Western Europe today . . . the major reason for the introduction of temporary protection is the inability of the European countries to co-ordinate their efforts sufficiently to allow for equal burden-sharing'.[54] Sadly, 'burden-sharing was a dismal failure during the Yugoslav crisis',[55] which allowed those States that were most exposed, such as Germany, to seek the same kind of justification as States in the developing world for a less than welcoming attitude towards new and prospective asylum seekers.[56]

As for the temporary nature of the need for international protection, it is unequivocally linked to 'return home', which UNHCR presented as both a desirable and feasible

[52] See Walter Kälin, 'Temporary Protection in the EC: Refugee Law, Human Rights and the Temptation of Pragmatism' (2001) 44 German Yearbook of International Law 202.

[53] 'I believe that the nature of the current conflict is such that a flexible system of temporary protection would respond adequately to the emergency situation': Sadako Ogata, 'Statement of Mrs Sadako Ogata, United Nations High Commissioner for Refugees, to the International Meeting on Humanitarian Aid for Victims of the Conflict in the Former Yugoslavia, Geneva, 29 July 1992' (UNHCR, 29 July 1992) <https://www.unhcr.org/en-us/admin/hcspeeches/3ae68fac1a/statement-mrs-sadako-ogata-united-nations-high-commissioner-refugees-international.html> accessed 6 October 2019. See Fitzpatrick (n 5) 305: 'formalizing TP could have the effect of shifting refugee protection from the realm of law, with treaty-based norms enforceable by individuals in domestic tribunals, to an uncertain realm of political bargaining and humanitarian assistance.'

[56] Quoting UN figures, the International Crisis Group reported that close to one-half of the pre-war population of Bosnia and Herzegovina were displaced during the 43 months of war. One million of the displaced remained within the country, and over 1.2 million refugees were dispersed throughout 25 host States. By early 1996, Germany was host to 345,000 Bosnians with temporary protection, Austria to 80,000 and Sweden to 61,500, while other EU Member States were hosting only a few thousand. International Crisis Group, 'Refugees and Internally Displaced Persons in B-H' (30 April 1997) <https://www.refworld.org/docid/3ae6a6d20.htm> accessed 6 October 2019.

solution to the displacement crisis. It was deemed desirable on account of the 'horrifying twist' of the conflict in the former Yugoslavia, where '[d]isplacement seems to be the goal, not just the result of the war, with the motive clearly being ethnic relocation'.[57] This characteristic made it morally compelling to reverse ethnic cleansing, which could only be achieved through return to the multi-ethnic *status quo ante*.[58] However, there is also a hint in the High Commissioner's statement that this result can be achieved promptly. In the words of Joly, 'it is semantically logical that temporary protection ought to be used for temporary crises or, in UNHCR's words, "whenever safe return to the country of origin can be envisaged within a reasonable period" '. And she adds:

> Not only must one ask here 'when' and 'who', but also 'how' can one know? . . . such an evaluation cannot be based on hard facts and presumes of events which follow their own course. The conflict in former Yugoslavia is a case in point and calls for greater caution in the future.[59]

In fairness, though, there was more than wishful thinking in UNHCR's insistence on 'temporariness'. The implicit (political) message to States read: if you work harder on solutions (as well as prevention), you may be justified in offering a lesser quality of protection.

Indeed, *quality* and *duration* of protection are intimately interconnected in the conceptualization of temporary protection. In essence, temporary protection was conceived as a return-oriented protection mechanism, within which 'the focus on return as the most appropriate solution' provided the rationale for 'standards of treatment which emphasize the provisional aspect of the refugees' stay . . . and minimize, at least in the initial stages, efforts to promote integration'.[60] Duration of sojourn is 'linked to standards of treatment' where 'social and economic benefits facilitate local integration and deter repatriation'.[61] With the withholding of such benefits, Kjaerum has argued, 'a signal is sent to the refugee that his or her stay in the specific country is only temporary'.[62]

In practice, national temporary protection regimes varied greatly.[63] They were phased out very much in the way they had been introduced, that is, in a cacophony. Come 1997, therefore, interest in the formalization of temporary protection would have waned had it not been for the activism of the European Commission, which under the Maastricht

[57] Ogata (n 53).

[58] ibid: '[r]eturn . . . fundamentally . . . will require the reaffirmation of the basic human right to return home in safety and dignity and for an end to all practices and actions which force people out of their homes and block the prospects of return. I consider this point to be of crucial importance. Otherwise, measures to protect and assist refugees will amount to complicity in the policy of "ethnic cleansing"'.

Treaty had assumed a new, albeit still modest, role in the harmonization of migration and asylum policies of EU Member States.[64] One year later, the Amsterdam Treaty elevated the harmonization of those policies to the supranational level,[65] and the Tampere Council of October 1999 laid out the agenda, which included 'step[ping] up . . . efforts to reach agreement on the issue of temporary protection for displaced persons on the basis of solidarity between Member States'.[66] Most significantly, though, it was a fresh conflict in the Balkans that made temporary protection a popular concept again: the 1999 NATO campaign in Serbia and Kosovo entailed an unprecedented movement of Kosovar refugees—around 900,000—across the borders to the Former Yugoslav Republic of Macedonia (FYROM), Albania, and Montenegro. The massive outflow to FYROM, in particular, led the authorities to close the border to would-be refugees, which increased the pressure to undertake evacuations out of the sub-region. The Humanitarian Evacuation Programme to airlift Kosovar refugees to temporary safety in European and more distant States surely 'exemplifie[d] TP's [temporary protection's] appeal and adaptability'.[67] It must be stressed, however, that in the eyes of asylum States, the success of that programme did not reside so much in the evacuation *per se* as it did in its happy ending, whereby the vast majority of the evacuated refugees were both willing and able to return to (the UN-administered) Kosovo within a matter of months. At last, the temporary character of temporary protection had been vindicated.

The European Commission explicitly acknowledged that the experience and confidence gained during the Kosovo crisis had influenced the proposal it put forward in October 2000 for a Council Directive on temporary protection, which was eventually adopted in July 2001.[68] The Temporary Protection Directive attempts to meet two goals, namely solidarity and consistency. The first objective is to ensure that, in future refugee emergencies, Member States will act in concert and in a 'spirit of solidarity'—something that was in very short supply at the outset of the former Yugoslavia crisis. On this front, the outcome of EU negotiations is disappointing. 'Solidarity' is clearly short-changed in the Directive: the only 'measures promoting a balance of efforts between Member States' mentioned in the text are of a procedural character, or rely on a pre-existing common

[67] Fitzpatrick (n 55) 279.

[68] Council Directive 2001/55/EC of 20 July 2001 on Minimum Standards for Giving Temporary Protection in the Event of a Mass Influx of Displaced Persons and on Measures Promoting a Balance of Efforts between Member States in Receiving such Persons and Bearing the Consequences Thereof [2001] OJ L212/12 (Temporary Protection Directive). For commentaries, see Durieux (n 2); Karoline Kerber, 'The Temporary Protection Directive' (2002) 4 EJML 193; Nuria Arenas, 'The Concept of Mass Influx of Displaced Persons in the European Directive Establishing the Temporary Protection System' (2005) 7 EJML 435.

'pot of gold' in the form of the European Refugee Fund.[69] Furthermore, the potential of the Directive as the driver of a truly collective response is also weakened by the mechanism it provides for the activation of temporary protection Union-wide.[70] While the prescribed procedure is far from odd within the EU context, in view of its complexity it does not seem well suited to emergency situations that require quick action. In view of these two shortcomings, the risk of the Directive remaining a dead letter is real.

The second objective of the Directive, meanwhile, is to harmonize the practice of all Member States faced with the same emergency, as regards the contents and duration of the temporary protection granted to the incoming 'displaced persons' (the Directive carefully avoids calling them 'refugees'). On this front, the Directive is far from disappointing. Indeed, it resolves a fair number—although not all—of the ambiguities that had marred the doctrine, and above all, the practice, of temporary protection in the preceding decade. Welcome clarifications are found in five main areas.

First, temporary protection is affirmed as a '*procedure* of exceptional character' to be applied 'in the event of a mass influx or imminent mass influx'.[71] Emphasis on the procedural character of temporary protection is essential, as it discards the notion that temporary protection might constitute an alternative or additional status. As a procedural tool, temporary protection comes close to—but deliberately stops short of—*prima facie* recognition of the refugee character of all members of a group, which is practised in other parts of the world.

Secondly, the Directive clarifies another key point: the operation of the Refugee Convention cannot be suspended, regardless of the size or suddenness of the influx. The principle that '[p]ersons enjoying temporary protection must be able to lodge an application for asylum at any time'[72] is an important and necessary re-affirmation of the universal right to seek asylum, which implies the right to seek the specific protection of the Refugee Convention in States that are bound by it.[73]

Thirdly, EU law clearly portrays temporary protection as a prelude to the 'normal' operation of the Refugee Convention. This prelude is filled with protection contents that compare well with what the Convention mandates on behalf of refugees. The Directive guarantees the issuance of personal documentation and fairly extensive rights to work, housing, social welfare, education, and family reunification, thus providing beneficiaries of temporary protection with a status that constitutes 'a middle ground between the status of asylum seeker and the rights accorded to refugees'.[74] Adherence to high standards in times of crisis may be difficult to obtain, even in wealthy European States. Still, Member States can hardly object, since their domestic

[69] Temporary Protection Directive (n 68) ch VI.

[70] This involves a proposal by the Commission (which itself may be seized of a request by a Member State) and a Council decision adopted by a qualified majority: ibid art 5.

[71] ibid art 2(a) (emphasis added).

[72] ibid art 17(1).

[73] The 'twist' introduced by the Directive is in its art 17(2): while claims must be registered 'at any time', as long as temporary protection applies, decisions on these claims may be delayed.

[74] Durieux and Hurwitz (n 12) 149. See also Kerber (n 68) for an assessment of temporary protection status against EU law standards regarding refugees.

legislation is, as a rule, well ahead of Convention standards as regards the rights of lawful foreign residents in general.

Fourthly, the 'return orientation' of temporary protection is represented in the Directive through a form of 'group cessation': pursuant to article 6, the Council may at any time decide that temporary protection shall come to an end because the situation in the country of origin is 'such as to permit the safe and durable return of those granted [temporary protection]'. The meaning of 'safe and durable' is briefly explicated by reference, in the article, to 'respect for human rights and fundamental freedoms and Member States' obligations regarding *non-refoulement*'. Of course, given the second point above, the ending of temporary protection by a Council decision does not, in and by itself, cause the 'safe and durable return' to happen.

Finally, whether or not a movement of return is initiated, the exceptional mechanism of temporary protection cannot be maintained for more than two years unless a fresh decision is made by Council, extending the duration of temporary protection by up to one year.[75] These are short deadlines when compared with earlier proposals that regarded a maximum duration of five years as reasonable.

4. Temporary Refuge/Protection Today and Directions for Further Research

The Syrian refugee 'crisis', which started in 2011 and reached dramatic proportions in 2015, should have provided a prime opportunity for EU Member States to activate temporary protection under the 2001 Directive. This did not happen, for reasons which Garlick has tried to elucidate in her award-winning thesis.[76]

The European Commission drove what may be the final nail into the coffin of the Temporary Protection Directive with its 2020 communication on a 'New Pact on Migration and Asylum', in which it recommended that the Directive be repealed.[77] Instead, it proposes a new instrument to address 'crisis situations of such a magnitude that put under significant strain even well prepared and functioning asylum and

[75] Temporary Protection Directive (n 68) art 4.

[76] Madeline Garlick, 'Solidarity under Strain: Solidarity and Fair Sharing of Responsibility in Law and Practice for the International Protection of Refugees in the European Union' (PhD thesis, Nijmegen University 2016) 116–19. She explains that, while at least Germany and Sweden could justifiably have asked the Commission to propose a temporary protection motion in the Council in 2015, 'neither State appeared to be in favour. This suggests that EU Member States are concerned that, rather than spreading the responsibility around among other Member States, temporary protection would simply attract even more desperate Syrian people.'

[77] Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions on a New Pact on Migration and Asylum, COM(2020) 609 final (23 September 2020) 11. All quotes in this paragraph from the same page.

migration management systems'.[78] The main features of the proposed new mechanism—'some limited margin to temporarily derogate from the normal procedures and timelines, while ensuring respect for fundamental rights and the principle of *non-refoulement*',[79] and the equivalent of subsidiary protection to be 'immediately granted to a pre-defined group of people, notably to people who face an exceptionally high risk of indiscriminate violence due to armed conflict in their country of origin'[80]—do not seem strikingly different from the Directive itself. Will 'immediate protection' succeed where 'temporary protection' has failed? Nothing is less certain. The justification given for substituting new legislation for something that was never tested—namely 'the development of the concepts and rules of qualification for international protection'[81]—is disingenuous: the true problem is solidarity (better said, lack thereof), and in this respect the proposed new mechanism is likely to meet the same resistance as was displayed in the aftermath of the 2015 crisis.

Meanwhile, since 2014 Syrians in Turkey have formally enjoyed 'temporary protection' under Turkish law.[82] This terminology is inspired by the EU Directive insofar as the law refers to mass influxes and emergency needs. It must also be read, however, within the peculiar context of a State that has maintained a geographical limitation to the Refugee Convention.[83] As a concept of potentially universal application, temporary protection seems to have lost most of its appeal, not only to States, but also to academic experts. UNHCR has tried to rekindle the interest of both constituencies, with limited success. In 2012 and 2013, it convened two Roundtables on the subject at the International Institute of Humanitarian Law in San Remo, Italy, but the gathered experts failed to agree on a 'Global Framework on Temporary Protection'.[84] In its stead, in 2014, UNHCR issued a set of 'Guidelines on Temporary Protection or Stay Arrangements', intended to 'guide and assist Governments in the development of…responses to humanitarian crises and complex or mixed population movements'.[85] On the whole, though, this

rather poor piece of UNHCR doctrine deepens, rather than dispels, confusion about the nature and scope of temporary protection.[86] The question to be asked, therefore, is whether, aside from its established meaning and (untested) capacity in EU law, temporary protection is 'the tool States need in order to resolve contradictions, fill gaps, and correct weaknesses in extant international law'.[87] On the one hand, the very malleability of the temporary protection concept makes it an interesting object of creative research, as well as an attractive policy device for States yearning for 'flexible' approaches to refugee protection. On the other hand, the time may have come to 'unpack' the varied issues which temporary protection came to represent, in order to address them within known legal frameworks. Thus, the status of people fleeing the indiscriminate effects of armed conflict remains a crucial question of international refugee law, which can only be obscured by being put in the temporary protection box: indeed, there is nothing especially 'temporary' about what Fitzpatrick called 'nonpersecutory violence'.[88] Likewise, the criteria for cessation of refugee status on account of changed circumstances deserve to be studied further.[89] The quality of protection in emergency situations is another issue that requires a more robust legal approach, including through a discussion of derogation.[90] Last but not least, the solidarity dimension of international protection, the vexing Achilles' heel of the regime, requires serious attention. Twenty years ago Fitzpatrick thought that 'concretizing long-standing calls for international responsibility sharing may become possible in the context of the broader process of formalizing TP, and would constitute an important inducement to risk-averse states to embrace formalization'.[91] In actual fact, the EU experiment seems to prove the opposite. To be sure, neither the New York Declaration nor the Global Compact on Refugees makes a link between temporary protection and responsibility-sharing: both instruments remind us that responsibility-sharing is an essential component of the refugee regime, independently from the duration of the need for protection.

Even if temporary protection (as opposed to visas that are 'simply' temporary) remains confined to EU law, there are indications that contemporary State practice bears out the minimum understanding of temporary refuge, namely as *non-refoulement* and admission on a large scale, including in non-party States and in the absence of firm commitments to physical burden-sharing. In 2019, Bangladesh hosted some 700,000 Rohingya refugees from Myanmar, and while repatriation of the entire caseload was touted as the only solution, Bangladesh's attitude seemed more principled than on the occasion of the previous influx (1991–93) with respect to the preconditions to be met in the country of origin. Undoubtedly, though, the most noteworthy development in the

last two decades has occurred in the Middle East, a region traditionally impervious to 'classic' refugee law standards. The tipping point was the exodus of Iraqi nationals in the wake of the US invasion (2003). On that occasion, Syria and Jordan were persuaded to function as traditional 'countries of first asylum' very much in the same way as Southeast Asian States were in the late 1970s: the international community implicitly acknowledged that the problem affecting frontline States was of 'foreign' origin, and it offered massive assistance (albeit not in the form of mass resettlement). This opening paved the way for the response to the next crisis, this time affecting Syria. Lambert sees in the response of States neighbouring Syria a confirmation of the existence of a regional custom of temporary refuge, vindicating the emergence of a universal customary norm.[92] She suggests that every new refugee emergency, particularly outside the area of application of the Refugee Convention, is a rich terrain for debating the sense of obligation underpinning humanitarian responses. However, as Goodwin-Gill recently observed, '[i]t is in the nature of customary international law to be contested . . . particularly in the absence of a final authoritative ruling by a competent international tribunal'.[93]

Creative thinking about *opinio juris* was definitely an important element of Perluss and Hartman's analysis—but other insights deserve to be rescued from their work, not least those that carry on Coles' search for a link between protection and solutions, and between *non-refoulement* and international solidarity. Reflecting upon this link, Goodwin-Gill asserts that a 'good case can be made for de-linking the concepts of refuge and *non-refoulement*, and in developing refuge itself as the overarching principle of protection'.[94] His arguments for temporary refuge, along with the earlier ones of Perluss and Hartman, are, in any event, 'located against a broad, normative background, which included . . . that much older body of principles encompassing the specific needs of those in distress by reason of *force majeure*'.[95] The challenge resides, it seems, in identifying and defining a corresponding legal duty that would be incumbent, not only on States of 'first refuge', but indeed on all actors in the international regime. If the phrase 'temporary refuge' does not sufficiently convey this collective dimension, the duty to rescue refugees offers itself as alternative terminology.[96]

[92] Lambert (n 83) 723–45. Her discussion of *opinio juris* is fully in line with Perluss and Hartman (n 34). In a rather daring move, Lambert includes the treatment of Palestinian refugees in the custom-generating practice of Arab States.

CHAPTER 38

THE INTERNAL PROTECTION ALTERNATIVE

BRÍD NÍ GHRÁINNE

1. Introduction

The Internal Protection Alternative (IPA) has been referred to as 'a shorthand way of describing a factual situation'[1] and stems from the premise that if there is a safe place within an individual's State of nationality or habitual residence where they can relocate, they are not a refugee. The IPA concept emerged in domestic German jurisprudence in the 1980s and quickly spread unevenly across the jurisprudence of developed countries.[2] Today it is an inherent part of refugee status determination in most Contracting States of the Refugee Convention and has been incorporated into article 8 of the 2011 Recast European Union (EU) Qualification Directive.[3] Examples of the application of the IPA could include relocating from the countryside to the city where an individual is less likely to be found by his or her persecutors;[4] or relocating to an area where a clan, tribe, militia, or international organization could provide protection.[5]

The actor of protection is not just relevant to the IPA analysis but also to the meaning of protection more broadly in the Refugee Convention.

The IPA does not appear in the refugee definition and no explicit reference was made to its existence at the time of drafting.[6] As refugee law lacks an international mechanism capable of providing a common interpretation of the Refugee Convention, the IPA's interpretation has primarily been left to Contracting States by means of domestic court decisions. International courts and Treaty Monitoring Bodies (TMBs) have also interpreted how the IPA is applied under the respective instruments they are tasked to monitor, which has helpfully shed light on the IPA's meaning under the Refugee Convention.[7] Unsurprisingly, the views of courts, TMBs, and scholars on the IPA's interpretation have varied widely, leading to a divergence in protection standards across States. For example, Germany and Slovakia consider that most parts of Russia can constitute an IPA for Chechen asylum claimants, whereas in France the IPA is not applied to this group.[8] Cyprus, Germany, Sweden, Norway, and the UK consider that Mogadishu can be an IPA for Somali asylum seekers, whereas Italy, Malta, and Spain do not.[9] Finally, Austria, the UK, Netherlands, Australia, and Finland all consider that Kabul can be an IPA for Afghan asylum seekers, whereas Switzerland and France do not.[10]

These divergent approaches to the IPA analysis are reflected in the different names attached to the concept, including the 'Internal Flight Alternative' (IFA) and the 'Internal Relocation Alternative' (IRA).[11] The choice of words is not neutral.[12] The terms IFA and IRA imply a retrospective analysis and a focus on the ability to relocate rather than the availability of protection, respectively. The term IPA is preferable because it accurately reflects the fact that the protection/relocation analysis is

prospective, and most accurately captures the essence of the concept, which is the availability of protection in the proposed area of relocation.[13] For these reasons, this chapter uses the term IPA.

This chapter aims to critically assess the application of the IPA. Section 2 will conceptualize the IPA and Section 3 will examine how it has become well entrenched in State practice. Section 4 will illustrate that there is a wide divergence amongst States and scholars on how the IPA is applied. Section 5 will show that, using the rules of treaty interpretation, it is nonetheless possible to distil a minimum binding standard of relevant IPA criteria from both State practice and the text of the Refugee Convention itself. These criteria are that (i) the proposed IPA must be accessible to the applicant, (ii) there is no risk of exposure to the original risk of persecution, and (iii) there must be no new risk of persecution or of *refoulement* in the proposed IPA, and the conditions there must not be so unreasonable as to risk driving the individual to a place where there is a risk of persecution. The conclusion will briefly set out the main contributions of the chapter and future directions for research.

2. Conceptualizing the Internal Protection Alternative

It is difficult to pinpoint the exact source of the IPA concept in international law. As aforementioned, there is no mention of an IPA in the refugee definition and no explicit reference was made to its existence at the time of drafting. This is not surprising, considering that the traditional assumption was that State sovereignty extended over the whole of the State and that States were the primary actors of persecution. It was hence presumed that an individual's ability to receive protection would not depend on whether he or she could relocate within the State. Nonetheless, two years after the conclusion of the Refugee Convention, Robinson alluded to the IPA concept. Regarding the meaning of persecution, he commented that 'happenings of a local character, for instance, riots in a certain region or events which are being combated by the authorities' would not qualify a person for refugee status 'because in such cases there would be no reason for a person possessing a nationality to be unwilling to avail himself of the protection of his country'.[14]

[13] James C Hathaway and Michelle Foster, 'Internal Protection/Relocation/Flight Alternative as an Aspect of Refugee Status Determination' in Erika Feller, Volker Türk, and Frances Nicholson (eds), *Refugee Protection in International Law: UNHCR's Global Consultation on International Protection* (CUP 2003); European Legal Network on Asylum, 'Research Paper on the Application of the Concept of Internal Protection Alternative' (2000); James C Hathaway and Michelle Foster, *Law of Refugee Status* (2nd edn, CUP 2014).

[14] Robinson (n 6) 46.

Authorities in the field generally accept that the IPA is consistent with international refugee law.[15] This is because, as Hathaway explains, 'international protection is designed only to provide a back-up source of protection' or 'surrogate protection' to persons seriously at risk.[16] States have held that there exists a nexus between the IPA and the refugee definition in two main respects. The first is based on the definition's requirement that the fear must be 'well founded'. This has been interpreted to mean that the fear is not well founded where the persecutory source of the fear could be avoided by relocating to a safe area within the country of origin.[17] The second basis for the IPA lies in the notion of 'protection'.[18] If within that country, obtaining its 'protection' is merely a question of relocating, it implies that inability or unwillingness to return is for reasons extrinsic to those set out in the Refugee Convention and that the claimant is therefore not a refugee. As Sections 4 and 5 will illustrate, both of these elements are drawn upon when establishing the applicable criteria in the IPA analysis. Before setting out IPA criteria, however, Section 3 will illustrate how the IPA came to be an intrinsic part of the refugee status determination of most Contracting States to the Refugee Convention.

3. History and Development of the Internal Protection Alternative

IPA practice emerged in 1970s German cases.[19] The practice of applying the IPA bloomed in the mid-1980s, owing to the arrival of increased numbers of refugees from countries that were very different from Western asylum States, and a growing number of individuals fleeing largely regionalized threats rather than aggressor States.[20] In response to the increased application of the IPA, UNHCR tried to limit its use by issuing guidelines on its application.[21] The *Handbook on Procedures and Criteria for*

Determining Refugee Status—which has been referred to as encapsulating the classic formulation of the IPA[22]—permits a narrow scope for IPA practice if a reasonable IPA was available at the time the claimant became a refugee and continues to be available at the time of status determination. Paragraph 91 states:

> The fear of being persecuted need not always extend to the whole territory of the refugee's country of nationality. Thus in ethnic clashes or in cases of grave disturbances involving civil war conditions, persecution of a specific ethnic or national group may occur in only one part of the country. In such situations, a person will not be excluded from refugee status merely because he could have sought refuge in another part of the same country, if under all the circumstances it would not have been reasonable to expect him to do so.[23]

UNHCR has issued various subsequent statements regarding the IPA's scope and content, but such statements have neither been consistent nor clear. UNHCR has referred to the IPA by various different terms, including the IFA,[24] and the IRA.[25] As set out in the introduction to this chapter, the choice of terms is not neutral and connotes different interpretations of the relevant criteria in the IPA analysis. Moreover, UNHCR has been inconsistent in identifying the doctrinal basis, if any, for the IPA test. It initially stated that the IPA principle 'rests on understandings which are basically at odds with those underlying the fundamental refugee protection principles',[26] implying that it was contrary to the Refugee Convention's object and purpose. In 1995, it accepted that the IPA test is relevant to the question of the willingness and capacity of the State of nationality to provide protection,[27] but in 1999 implicitly reversed this proposal and stated that the IPA test is relevant to whether an applicant's fear is well-founded.[28] In its guidance on the criteria of the IPA, UNHCR uses terms such as 'reasonableness',[29] 'safety',[30] and 'durability'[31] without explaining how these terms relate, if at all, to the Refugee Convention. As a result, it is unclear what UNHCR's position is on the IPA's treaty basis, interpretation, and application.

Despite (or perhaps because of) these inconsistent declarations, the IPA has been widely adopted across both domestic and regional refugee law.[32] At present, it is a discretionary provision in the EU Recast Qualification Directive but it is applied by most Member States,[33]

and will likely become mandatory in the future.[34] EU practice has shed valuable insight into the meaning and scope of the IPA, as EU asylum law constitutes State practice in the implementation of the Refugee Convention. The practice of the EU and its Member States informs the analysis of the IPA criteria in Sections 4 and 5.

The IPA has also been examined by the European Court of Human Rights (ECtHR) and the Committee against Torture,[35] in relation to the ECHR and the CAT, respectively. Although these bodies do not interpret the Refugee Convention, their views inform our understanding of the IPA under the Refugee Convention for three main reasons. First, the ECtHR and Committee against Torture interpret 'relevant rules of international law', which ought to be taken into account when interpreting the Refugee Convention.[36] There is a significant body of literature that views human rights law as a mandatory interpretative tool of the Refugee Convention generally,[37] and the IPA analysis specifically.[38] Secondly, the views of the Committee against Torture and ECtHR are relevant to the broader analysis on IPA application in refugee law because of their normative influence on affirmative claims for international protection.[39] Thirdly, persons considered for complementary protection may, in fact, be unrecognized refugees and thus their factual situations may be very similar to those that appear before refugee status determination bodies. For these three reasons, the views of these bodies represent an important source of interpretation of the IPA under the Refugee Convention.

Finally, it is important to note that although there exist regional systems of refugee protection in both Africa and Latin America, the IPA is generally accepted to not be applicable to the two main refugee protection instruments in these regions—the OAU

[34] The IPA has been incorporated into article 8 of the EU Qualification Directive. The European Commission has proposed to replace the Qualification Directive with a new Regulation. See European Commission, 'Completing the reform of the Common European Asylum System: Towards an Efficient, Fair and Humane Asylum Policy' (13 July 2016) <http://europa.eu/rapid/press-release_IP-16-2433_en.htm> accessed 28 January 2019.

Convention,[40] and the Cartagena Declaration, respectively.[41] Article 1(2) of the OAU Convention states that:

> The term 'refugee' shall also apply to every person who owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.

The non-binding Cartagena Declaration employs a similar expanded definition of a refugee. While it does not state that the reason for being outside the country of origin may have its locus 'in either part of the whole' of a country of origin, it does state the necessity 'of bearing in mind . . . the precedent of the OAU Convention (article 1, paragraph 2)'.[42]

The reference to 'either part or the whole of [the] country of origin' in the OAU Convention, and the reference in the Cartagena Declaration to the OAU Convention, respectively, has led to a general agreement that the above Conventions preclude the existence of an IPA.[43] Hathaway specifies three reasons why this approach is contextually sensible: (i) issues of distance from, or unavailability of, escape routes may prevent travel to a putative IPA; (ii) political instability of many developing States may mean that a 'safe' region today may be dangerous tomorrow; and (iii) colonial-imposed boundaries make the identification of a putative IPA artificial.[44]

Having established the regions and bodies that apply the IPA most frequently, the following sections will illustrate the criteria taken into account in their decisions relating to the IPA.

4. Applicable Criteria

The criteria applied in the IPA analysis fall into two categories: (i) a long list of criteria which are applied by some States but do not have widespread acceptance; and (ii) a handful of criteria upon which there is consensus. This section outlines the range of criteria applied across Contracting States that are prevalent but not consistently applied or accepted.

a. Conditions within the Putative IPA

It is widely accepted that the conditions in the IPA should be reasonable, and/or not unduly harsh,[45] but there is disagreement over what these terms actually mean. Some argue that the availability of basic norms of civil, political, and socio-economic rights should inform the IPA inquiry,[46] but there is a lack of definition of what these standards entail. There is also considerable uncertainty regarding the meaning of effective protection from persecution and how it applies in the IPA analysis.[47] Relevant factors include whether the risk of persecution is 'permanently eradicated',[48] and/or whether there is a legal system in operation for the detection, prosecution, and protection of acts of persecution or serious harm.[49] Finally, some courts and scholars are of the view that the IPA analysis should be informed by the Refugee Convention's definition of protection, namely articles 2–33.[50] However, this approach has been criticized on the basis that it purports to use refugee rights to consider the situation of citizens in their country of origin, which goes against the object and purpose of the Refugee Convention.[51] Section

5 below attempts to show how linking the prohibition of *non-refoulement* to the 'reasonableness' requirement may clarify how this latter term is to be interpreted.

b. Can an IPA Exist when the State is the Agent of Persecution?

Some jurisdictions apply a presumption that the IPA is inapplicable where the State is the agent of persecution.[52] This is because the State is presumed to act throughout the territory of a country,[53] making it difficult, if not impossible, for a persecuted individual to avoid detection by the State. This presumption may be rebutted where there is compelling evidence of the ability to deliver durable protection in the proposed IPA, and/or where the threat is one that emanates from local government authorities rather than throughout the State, and/or where the threat is from a 'rogue' agent of the State.[54] A related question is whether non-State actors can provide protection, a point that is examined in more detail below.

c. Actors of Protection and the IPA

There is considerable disagreement over whether non-State actors can qualify as actors of protection for the purposes of establishing an IPA. Although some argue that the term 'protection' in the refugee definition refers only to lack of State protection,[55] there have been some suggestions in the literature and in case law that a modern-day interpretation of the Refugee Convention permits refugee status to be denied where effective protection is available from non-State actors such as international organizations, NGOs, shelters, or clans.[56] In addition, the EU Qualification Directive provides that international organizations can be actors of protection. Even if non-State actors can, *prima facie*, constitute actors of protection, questions remain about whether non-State actors are able to offer sufficient protection from persecution, and whether such protection

must be durable, which is explained in more detail below.[57] Research on domestic practice indicates that while decision-makers consider a broad range of non-State entities in the IPA inquiry, they often conclude that the proposed actor does not offer sufficient protection.[58]

d. The Relevance of the IPA's Durability[59]

Many States require that an IPA must be durable.[60] Article 7 of the EU Qualification Directive requires that protection must be 'non-temporary'. Although neither the Directive nor the Court of Justice of the European Union (CJEU) has given any further guidance on the meaning of 'non-temporary' as per article 7, the term has been examined in the context of the cessation clauses. In the case of *Abdulla*, the CJEU held that protection is of a 'non-temporary' nature when it can be said that the factors that formed the basis of the refugee's fear of persecution may be regarded as having been permanently eradicated.[61] This implies that the body providing protection need not be present permanently, but rather that it has the ability to completely eradicate the persecution feared. However, even though durability is a requirement under the Qualification Directive, a study by the European Council for Refugees and Exiles found that many EU Member States rarely assess the durability of protection in practice.[62] The ECtHR has taken a similar approach. Although it has found that the IPA must provide a reliable guarantee against persecution,[63] in the case of *Sufi and Elmi* it held that the fact that 'safe' areas were controlled by armed groups with a tenuous hold over the territory did not disqualify it on durability grounds.[64]

As is evident from the above analysis, there exist wide-ranging approaches to the IPA inquiry. This leads to a divergence in how the Refugee Convention is applied, which in turn leads to unpredictability and undermines the rule of law. It also incentivizes asylum

shopping, whereby States that offer higher levels of protection receive a larger number of asylum applications.[65] This in turn can lead to a 'race to the bottom',[66] whereby States are incentivized to offer lower standards of protection to deter refugees from seeking asylum.

It is therefore necessary to clarify which standards are applicable in the IPA analysis. Sections 5 and 6 will illustrate how the rules of treaty interpretation and State practice allow us to identify criteria which form a binding minimum standard for any State that wishes to apply the IPA.

5. A Treaty-based Approach

This section argues for recourse to the rules of treaty interpretation to clarify which criteria must be taken into account in the IPA analysis. As aforementioned, the IPA is often considered to be an implicit part of the Refugee Convention. The Vienna Convention on the Law of Treaties (VCLT) provides us with a number of rules that can help discern the meaning of the Refugee Convention, and therefore the meaning of the IPA and its applicable criteria.

First, article 31(1) of the VCLT provides that a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of the treaty's object and purpose. The starting point for determining the criteria for the IPA (and hence how the refugee definition is interpreted) is therefore the terms of the refugee definition itself, as well as the text of the Refugee Convention as a whole, which forms part of the refugee definition's context.[67]

Secondly, 'subsequent practice' should be taken into account when determining the meaning of a treaty.[68] Both judgments of domestic courts and the practice of regional systems created by States (such as the EU) constitute subsequent practice for the purposes of interpreting the IPA and are thus relied upon heavily in the following sections.[69]

Thirdly, article 31(3)(b) of the VCLT directs us to take into account 'other relevant rules of international law' when interpreting the meaning of a treaty.[70] Understanding how the IPA has been interpreted in other treaty regimes helps us to understand how it should be interpreted in relation to the Refugee Convention.

[70] VCLT (n 36) art 31(3)(c).

Applying these rules leads to the conclusion that three criteria are applicable in the IPA analysis, which are set out below.

a. The IPA Must Be Accessible to the Applicant

First, the IPA must be accessible to the applicant.[71] In the words of the Canadian Federal Court of Appeal:

> Any barriers to getting [to the proposed IPA] should be reasonably surmountable. The claimant cannot be required to encounter great physical danger or to undergo undue hardship in travelling there or in staying there. For example, claimants should not be required to cross battle lines where fighting is going on at great risk to their lives in order to reach a place of safety.[72]

UNHCR gives additional examples of when an area would not qualify as an IPA owing to accessibility reasons, such as where an individual would have to travel through mine fields, factional fighting, or shifting war fronts; and/or where travelling to the proposed location would put them in danger of banditry, or other forms of harassment or exploitation.[73]

The requirement that the IPA must be accessible results from an application of the VCLT rules of interpretation. Subsequent practice of Contracting States to the Refugee Convention informs the Convention's meaning, and it is clear that the requirement of accessibility is widely applied in State practice.[74] At a regional level, its omission from the 2004 Qualification Directive was heavily critiqued as omitting an essential requirement,[75] and it was introduced in the recast version. Moreover, the requirement of accessibility follows a 'good faith' interpretation of the Refugee Convention as per the general rule of interpretation in article 31 of the VCLT.[76] If the proposed IPA is not accessible, the applicant cannot be expected to seek protection from persecution there, and the applicant may qualify for international protection.

[75] Hathaway and Foster 2014 (n 13) 343.
[76] VCLT (n 36) art 31(1) provides that a treaty must be interpreted in good faith.

b. There Must Be Effective Protection from the Original Risk of Persecution

Effective protection from the original risk of persecution essentially means that the relocation area must be an 'antidote'[77] to the persecution feared. In the words of the House of Lords in *AH Sudan*

> [b]y definition, if the claimant had a well-founded fear of persecution, not only in the place from which he has fled, but also in the place to which he might be returned, there can be no question of internal [protection].[78]

A decision-maker must therefore examine (a) the ability of the agent of persecution to be present in the IPA; and (b) the likelihood of pursuit in the IPA.[79]

The criterion that there must be effective protection from the original risk of persecution is well established in State practice,[80] and is anchored in the text of the Refugee Convention. Article 1A provides that an individual is a refugee, *inter alia*, if he/she has a well-founded fear of persecution. It is generally accepted that if that fear of persecution can be remedied by relocating within the State, the individual does not qualify as a refugee.[81] However, if relocation would expose the individual to persecution, the area of relocation cannot be said to provide an antidote to the persecution feared and thus cannot qualify as an IPA.

There is no definition of what constitutes persecution in the Refugee Convention. Indeed, it is generally accepted that the drafters of the Refugee Convention intentionally declined to define 'being persecuted' because they recognized the impossibility of exhaustively listing all the forms of maltreatment that might entitle persons to refugee status.[82] However, many scholarly authorities propose a human rights interpretation of the term 'persecution',[83] and this approach is generally accepted in State practice.[84] It is nonetheless important to note that not all human rights violations will necessarily constitute persecution. Assessment will turn on factors including (i) the nature of the

[81] *Butler v Attorney General* [1999] NZAR 205, para 5; *Januzi* (n 17) para 7; *SZATV v Minister for Immigration and Citizenship* (2007) 233 CLR 18, para 56; EU Qualification Directive, art 8.

[82] Hathaway and Foster 2014 (n 13). See also UNHCR (n 23).

[83] Zimmermann (n 11); Goodwin-Gill and McAdam (n 15); Hathaway and Foster 2014 (n 13).

[84] For example, the EU's Qualification Directive has explicitly adopted the human rights approach by defining 'an act of persecution' as an act that is 'sufficiently serious by its nature or repetition as to constitute a severe violation of basic human rights, in particular the rights from which derogation cannot be made' or an 'accumulation of various measures, including violations of human rights' art 9(1)(a).

freedom threatened; (ii) the nature and severity of the restriction;[85] and (iii) the likelihood of the restriction eventuating in the individual case.[86]

The general acceptance that the term 'persecution' has a strong basis in human rights means that many of the considerations set out in Section 4 on the conditions within the proposed IPA can be taken into account when analysing whether there is a risk of persecution there. For example, whether relocation to a proposed IPA is 'reasonable' or 'unduly harsh' may be measured using the standard of serious harm sufficient to establish a risk of being persecuted such as a risk to life, the risk of torture or cruel, inhuman, or degrading treatment or punishment, slavery, risk of beatings or other physical violence, and the risk of violation of socio-economic rights.[87] Similarly, the proposition that human rights considerations should be taken into account in the IPA analysis can be addressed, at least in part, by ensuring that there is no risk of persecution in the proposed IPA. Finally, issues relating to durability of protection and whether non-State actors can provide adequate protection may be taken into account by assessing whether the threshold of protection against persecution is reached.

c. There Must Be No New Risk of Being Persecuted or of *Refoulement*

The third generally accepted criterion is that there must be no new risk of being persecuted or of *refoulement*.[88] This criterion is uncontroversial because, as set out above, lack of protection from persecution is one of the criteria for establishing refugee status, and *refoulement* is prohibited by article 33(1) of the Refugee Convention. This criterion prohibits the return of every individual who could face a new risk of persecution, or where there are substantial grounds for believing that he or she would be in danger of torture or cruel, inhuman, or degrading treatment or punishment if returned to a particular IPA.[89] In addition, there must be no risk of 'chain' or 'constructive' *refoulement*, that is, an applicant should not be returned to an inadequate IPA where the conditions there are such that an applicant may in desperation return to the territory of her persecutors or another area where there is a real risk of serious harm.[90] Thus, where conditions in the proposed area of relocation are 'unreasonable' or 'unduly harsh'—for example, because of poor socio-economic conditions, lack of employment prospects, lack of linguistic

[85] For example, the EU Qualification Directive notes that the violation(s) must be 'sufficiently serious by its nature or repetition' art 9(1)(a).

skills, and/or the presence of armed conflict or national disasters—the proposed area would not constitute an IPA.

6. The Benefits of a Treaty-based Approach

Distilling the IPA criteria from a treaty-based approach is preferable for four reasons. First, it provides much-needed clarity to the IPA analysis. Concepts applied by States such as 'safety' and 'reasonableness', and 'unduly harsh' are not anchored in the text of the Refugee Convention, are vague, and have led to highly diverging interpretations and applications amongst States.[91] Linking these concepts to the terms of the treaty and specifically the prohibition of *refoulement* allows for a more principled and clearer approach to the IPA analysis.

Secondly, and relatedly, Eaton notes that

> Some States have arguably used the IPA to effectively raise the standard for who qualifies for protection, or in its most restrictive form, use the IPA as a threshold test requiring an asylum applicant to show 'country-wide persecution' or to prove that she had a well-founded fear of persecution in all regions of her country of origin.[92]

Locating the IPA analysis in the binding rules of treaty interpretation limits the discretion of States in applying the IPA. For example, linking the reasonableness requirement to the terms of the treaty may encourage States such as Norway and Australia, which do not formally consider reasonableness as a criterion in the IPA analysis, to reconsider their approach.[93] Limiting State discretion in this way may in turn lead to further convergence amongst States on the relevant IPA criteria. Such convergence is desirable from both a legal and a practical perspective. Legally, States are under the obligation to use the same rules of treaty interpretation.[94] In the case of the EU, Member States have an obligation to interpret the Refugee Convention uniformly.[95] Thus States should interpret the Refugee Convention in a harmonious manner. From a practical perspective, fragmented interpretation leads to diversity in protection standards and asylum shopping, as outlined in Section 4 above.

Thirdly, locating the IPA analysis in the terms of the Refugee Convention itself helps distinguish refugee claims from those based on humanitarian reasons. Human rights considerations only enter the IPA inquiry where relevant to a State's obligations under

the Refugee Convention. For this reason, only those who fit the refugee definition will be able to invoke the Refugee Convention to preclude expulsion and it will not be possible to invoke the Refugee Convention to provide international protection for those who seek to escape a life of poverty (but not necessarily persecution).

Finally, as noted in Section 5, many of the divergent criteria set out in Section 4 can be streamlined into the IPA analysis using the rules of treaty interpretation. By using a doctrinal basis to justify the applicable IPA criteria, the IPA analysis incorporates a human rights approach but in a principled, defined way. Importantly, the requirement of 'reasonableness', which has received widespread acceptance in both literature and practice, can be incorporated into the prohibition of constructive *refoulement*. In sum, a treaty-based approach to the IPA analysis addresses, at least in part, Marx's plea to determine more 'clear cut'[96] criteria in the IPA analysis.

7. Conclusion

Regardless of the treaty basis of the IPA, it is now so well ingrained in State practice that it is too late to resile from it. Its widespread adoption by States has led to divergent approaches, which in turn has contributed to further fragmentation in refugee protection standards. Using the rules of treaty interpretation, this chapter has argued that there are three binding criteria in the IPA analysis: (i) the IPA must be accessible to the applicant; (ii) there must be effective persecution from the original risk of persecution; and (iii) there must be no new risk of being persecuted or of *refoulement*.

These three criteria are cumulative, meaning that a failure to satisfy even one criterion means that the location being examined does not qualify as an IPA. However, these three criteria set a low bar. This author does not necessarily agree in normative terms that this low threshold should be the yardstick by which a lawful IPA is measured, but accepts that the terms of the treaty itself and the actual practice of States,[97] as set out in the VCLT, are amongst the most important barometers in establishing the criteria applicable in the IPA inquiry. States alone apply the Refugee Convention, and States are the predominant creators of international law.

As refugee numbers grow, so does the hostility of States towards refugees, and consequent divergence in the IPA's application. This makes the IPA an important topic for future study, and research is particularly encouraged on the relationship between the IPA and the Refugee Convention's cessation clauses,[98] the practice of Global South States in interpreting and applying the IPA, and the relationship of the ever-developing body of human rights jurisprudence with the IPA's application in asylum cases. Scholars, lawyers, and advocates have a crucial role to play in monitoring how the IPA develops over time.

CHAPTER 39

EXCLUSION

GEOFF GILBERT AND
ANNA MAGDALENA BENTAJOU

1. Introduction

The Refugee Convention was drafted in a very different era, but one that displays many of the characteristics of today. The period 1933–45 had seen persecution of groups based on religion, political opinion, nationality, race, and membership of particular social groups. It had seen States closing their borders to those fleeing that persecution, people who were fleeing statelessness, and those without travel documents. The post-war era saw many people who had been involved in that persecution now displaced themselves and seeking to create new lives where they could hide their past crimes and activities under a new identity. At another level, however, the idea of universal human rights was still very much in its infancy: there were no extant international human rights law treaties with effective treaty bodies to monitor how States treated individuals within their territory or jurisdiction. The idea that international law might provide a forum where individuals could hold States to account was not accepted, with the United Nations still finding its way in this regard, having only recently promulgated the non-binding UDHR in 1948.

That background partly explains the approach taken in the Refugee Convention: the protection of the individual balanced by the capacity to withdraw or deny that protection; and UNHCR's supervisory function under article 35, albeit without a forum before which to hold States to account, except insofar as other States would be willing to take cases before the International Court of Justice under article 38. During the almost 70 years of its operation, UNHCR has viewed interpreting the Convention as part of its article 35 supervisory function, while recognizing that Contracting States' courts would also interpret it. There has been a willingness by courts to consider UNHCR's views, but there has also been independent interpretation of the treaty as judges and other decision-makers have applied their own legal understanding and canons of interpretation.[1] When it is remembered that the Convention will often have been incorporated into domestic law, often in a language different from the original official English and French texts, and, generally, as part of a State's immigration control regime rather than as part of a *protection* framework, the scope for variation and disagreement is clearly huge—and that is before one notes that the Convention itself is not consistent in the language it uses when dealing with similar concepts.[2] In the areas of exclusion and national security, these factors are magnified. There is broad scope for differences in interpretation when the Convention uses phrases such as 'serious reasons for considering', 'reasonable grounds for regarding', 'serious non-political crime', 'particularly serious crime', 'danger to the security of the country', and 'national security or public order (*ordre public*)'. Furthermore, as explained below, article 1F can only properly be understood when analysed in the context of international criminal law and the international law of armed conflict.

The language used in articles 1F, 33(2), and 32 of the Refugee Convention is very different, yet much of the domestic case law fuses the concepts. This is not only because domestic legislation has not simply transposed the wording of the Convention and has mixed up ideas from the different provisions, but also because the provisions are wrongly perceived as serving a similar function, namely, lawfully removing refugees and asylum seekers from the State. Article 1F provides that the Convention shall not apply to persons with respect to whom there are serious reasons for considering that they have committed (a) war crimes, crimes against humanity, crimes against peace, (b) serious non-political crimes, or those who (c) are guilty of acts contrary to the purposes and principles of the UN Charter. Article 33(2) denies the benefit of *non-refoulement* to those convicted of a particularly serious crime who are a danger to the community of the country of asylum or where there are reasonable grounds to regard them as a danger to the security of that country, while article 32 prohibits expulsion from the country of asylum 'save on grounds of national security or public order'.[3] Implementation at the domestic level and the trans-jurisdictional borrowing of ideas in the case law render it very difficult to make a clear distinction in any analysis of exclusion and security issues as to whether certain facts will be treated as falling within article 1F or 33(2).[4] Therefore, while this chapter does not analyse the content of articles 33(2) and 32,[5] it recognizes the connections between these provisions. It should also be noted that UNHCR's separate treatment of each of these provisions leaves the 2003 UNHCR Guidelines on Exclusion failing to address all the issues in some domestic cases, as ideas from articles 1F, 33(2),

[1] Guy S Goodwin-Gill, 'The Search for the One, True Meaning…' in Guy S Goodwin-Gill and Hélène Lambert (eds), *The Limits of Transnational Law: Refugee Law, Policy Harmonization and Judicial Dialogue in the European Union* (CUP 2010).

[2] For example, consider the relationship between cessation under art 1C(5) and 'unable or unwilling to avail oneself of the protection' of the country of nationality in art 1A(2), let alone the different categorization of 'refugee' depending on which rights are being accorded in arts 12–33.

[3] On national security, see also arts 9 and 28.

[5] See Chapter 50 in this volume.

and 32 are often fused in domestic practice.[6] States often regard these provisions as a suite of measures enabling the deportation of refugees, a view that has been enhanced and emboldened by those 2003 Guidelines with their retroactive application of article 1F(a) and 1F(c) where there are serious reasons for considering that there has been criminal behaviour, or activity falling within those sub-paragraphs after refugee status has been properly accorded under article 1A(2).[7]

This chapter explores how article 1F was initially understood, before considering its application in practice and the increasing intermingling of certain ideas: exclusion as pre-status and retroactive; the difficulties of conceiving of refugee status without the guarantee of *non-refoulement*; the overlap of the different phrases used in the Refugee Convention when dealing with crimes and the security of the country of asylum; and how crimes that are not particularly serious might yet indicate a danger to the security of the hosting State or be contrary to the purposes and principles of the United Nations, a threat to national security, or even simply a public order concern. In addition, standards of proof, sequencing, regional mechanisms, and complementary human rights protection regimes[8] add layers of complexity to the analysis. In sum, to focus just on exclusion, as much previous scholarship has done, misses the context in which these provisions are applied. As such, this chapter seeks to provide a more comprehensive framework for their analysis.

2. Background to Article 1F

Article 1F has been the object of much analysis and discussion over the past 20 years.[9] The 2003 Guidelines and their accompanying Background Note reflect in great part UNHCR's continuing view of the meaning of the provision.[10]

[6] UNHCR, 'Guidelines on International Protection No 5: Application of the Exclusion Clauses: Article 1F of the 1951 Convention relating to the Status of Refugees', HCR/GIP/03/05 (4 September 2003) see also accompanying Background Note. And see *Abramov v Minister for Justice, Equality and Law Reform* [2010] IEHC 458.

[7] UNHCR (n 6) para 6. This is often coupled with the use of diplomatic assurances, which are utilized where international human rights law would protect the individual who has been excluded under art 1F, or denied the guarantee of *non-refoulement* under art 33(2), or simply made liable to expulsion under art 32 (but who should still benefit from *non-refoulement*).

[8] See Chapters 11 and 36 in this volume.

[9] See Yao Li, *Exclusion from Protection as a Refugee* (Brill 2017); Geoff Gilbert, 'Current Issues in the Application of the Exclusion Clauses' in Erika Feller, Volker Türk, and Frances Nicholson (eds), *Refugee Protection in International Law* (CUP 2003); Geoff Gilbert, 'Hierarchies, Human Rights and Refugees' in Erika de Wet and Jure Vidmar (eds), *Hierarchy in International Law: The Place of Human Rights* (OUP 2012); Geoff Gilbert, 'Exclusion is Not Just about Saying "No": Taking Exclusion Seriously in Complex Conflicts' in David J Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity: War Refugees and International Humanitarian Law* (Brill 2014); Geoff Gilbert and Anna Magdalena Rüsch, 'Jurisdictional Competence through Protection: To What Extent Can States Prosecute the Prior Crimes of Those to Whom They Have Extended Refuge?' [10] UNHCR (n 6).

First and foremost, if an individual falls within article 1F, then that person cannot be a refugee. Since the benefits of the Refugee Convention are only accorded to refugees and, in varying degrees, to asylum seekers, the consequence is that none of the guarantees set out in articles 3 to 34 are available, most notably protection from *refoulement* under article 33(1).[11] This distinction is particularly significant because some rights under the Refugee Convention persist under article 33(2) and, more so, article 32.

According to the *travaux préparatoires*, two purposes were sought to be achieved through article 1F: that serious transgressions prior to entry should bar an applicant from refugee status, and that no one who had committed such crimes should escape prosecution through obtaining refugee status.[12] In international human rights law, which applies to everyone, exclusion is an alien concept.[13] Therefore, given that article 1F is a limitation on a humanitarian provision, it must be interpreted narrowly.[14] Moreover, as was stated by the Grand Chamber of the Court of Justice of the European Union (CJEU), article 1F is also exhaustive; there are no further grounds for exclusion.[15]

3. Content of Article 1F

Turning to the content of the sub-paragraphs of article 1F, it is worth noting the provision's interrelatedness with articles 33(2) and 32, even if there is no direct mapping.[16] Article 1F crimes would certainly fall within any set of particularly serious crimes, yet under article 1F there does not need to be a conviction by a final judgment or a con-

[11] Equally, the person will be outside the remit of UNHCR under paragraph 7(d) of the Statute of the United Nations High Commissioner for Refugees (adopted 14 December 1950) UNGA res 428(V) (1950 Statute).

[12] See Standing Committee of the Executive Committee of the High Commissioner's Programme, 'Note on the Exclusion Clauses', EC/47/SC/CRP.29 (30 May 1997) para 3; see also Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons, Summary Record of the 24th Meeting (27 November 1951) UN doc A/CONF.2/SR.24, 4–11 (statements of M Herment, Belgium and Mr Hoare, UK).

[15] Joined Cases C-391/16, C-77/17 and C-78/17 *M v Ministerstvo vnitra, X v Commissaire général aux apatrides et aux apartrides* [2019] OJ C255/2, para 76.

[16] There is not so much an overlap between these articles as a convergence of influences and interactions, like the wakes of three speedboats affecting three separate water skiers on some *Escher-ian* lake on three different planes—see MC Escher, 'Relativity' <http://www.mcescher.com/lw-389/> accessed 13 November 2019.

tinuing danger to the community,[17] but only serious reasons for considering that the applicant for refugee status, or the refugee, has committed such a crime or is guilty of such an act.

a. Article 1F(a)

Sub-paragraph (a) applies to war crimes, crimes against humanity, and crimes against peace 'as defined in the international instruments drawn up to make provision in respect of such crimes'. As such, it is emblematic of the complexities of exclusion: article 1F draws on other sub-disciplines of international law, that is, international criminal law and the international law of armed conflict, but how they should be applied vis-à-vis a restriction on a humanitarian provision in an international refugee law treaty is open to interpretation. Although there may have been issues regarding being 'defined in international instruments', particularly as regards crimes against humanity in relation to which there is no specific international convention,[18] they have been effectively resolved by the Rome Statute of the International Criminal Court,[19] even if not every Contracting State to the Refugee Convention is a party to the Rome Statute, and while at all times remembering that article 1F is part of a treaty for humanitarian protection. Crimes against humanity, for the purposes of article 1F, must fall within article 7(1) of the Rome Statute and be part of a widespread or systematic attack on a civilian population with knowledge of that attack. Likewise, a crime against peace would be classified as 'aggression' under article 8 *bis* of the Rome Statute. The same is not true, though, as regards 'persecution' in article 1A(2) of the Refugee Convention, because that is a provision focused on protecting the individual, not characterizing criminality—the use of the same word in article 7(1) of the Rome Statute does not indicate a common understanding.

[17] Although the Dutch Council of State, Administrative Jurisdiction Division, in *State Secretary of Security and Justice v X*, 201401560/1/V2 (16 June 2015) found that previous exclusion under art 1F proved the person had committed the crimes and that crimes of that nature meant that he constituted 'a direct threat to the Dutch legal order and the peace of mind of the Dutch people' and a 'present danger' for the purposes of art 27 Council Directive (EC) 2004/38 on the Right of Citizens of the Union and their Family Members to Move and Reside Freely Within the Territory of the Member States Amending Regulation (EEC) No 1612/68 and Repealing Directives 64/221/EEC, 68/221/EEC, 72/360/EEC, 73/148 EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEc and 93/96/EEC [02004] OJ L158/77. cf Joined Cases C-331/16 and C-366/16 *K v Staatssecretaris van Veiligheid en Justitie, HF v Belgische Staat* (CJEU, 2 May 2018) that held that previous exclusion of a member of the family could not automatically prove that their mere presence was a present and serious danger to the security of the State.

[18] See however International Law Commission, 'Fourth Report on Crimes against Humanity by Sean D Murphy, Special Rapporteur', UN doc A/CN.4/725 (18 February 2019) (referred to the Drafting Committee, 7 May 2019). Of course, genocide under the Convention on the Prevention and Punishment of the Crime of Genocide (adopted 9 December 1948, entered into force 12 January 1951) 78 UNTS 277 would count as a 1F crime against humanity.

[19] See Rome Statute of the International Criminal Court (adopted 17 July 1998, entered into force 1 July 2002) 2187 UNTS 3 (Rome Statute), art 25(3)(e).

As for war crimes, there would need to be some form of armed conflict for an applicant to be excluded for this reason,[20] distinguishing war crimes from crimes against humanity. The international law of armed conflict distinguishes between different types of armed conflict—international and non-international. Treaty-based war crimes are set out in the grave breach provisions of the Geneva Conventions of 12 August 1949[21] and Additional Protocol I of 1977.[22] However, article 1F(a) war crimes are not limited to those crimes. Grave breaches can only occur in international armed conflicts,[23] and neither common article 3 of the four Geneva Conventions of 1949 nor Additional Protocol II of 1977 explicitly provide for individual criminal responsibility in non-international armed conflicts.[24] However, since *Tadić*,[25] it has been accepted that breaches of either could give rise to individual criminal responsibility. Thus, given the principle of *nullum crimen sine lege*, an applicant should only be excluded if, under the international law of armed conflict or international criminal law, there are serious reasons for considering that she has committed a war crime, a crime against humanity, or aggression, as defined.

b. Article 1F(b)

The concept of the political offence comes from extradition law, which, during the nineteenth century, developed an exception for fugitive offenders where the crime for which their surrender was sought was political in character.[26] Overthrowing a government

[20] See *Prosecutor v Ljube Boškoski and Joran Tarčulovski*, Case No IT-04-82-A ICTY (19 September 2010) paras 19ff, especially para 22, dealing with art 3 of the ICTY Statute. The Appeals Chamber of the ICTY took into account, amongst many other things, the frequency of the fighting, its geographic scope, the use of heavy weaponry, the role of the ICRC, the mass displacement of persons, but also, interestingly, that the governmental forces were ordered to 'destroy terrorists' and that the Security Council condemned the 'terrorist activities', showing that there is no clear line in international law between armed conflict and terrorism.

[21] Geneva Convention for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field (adopted 12 August 1949, entered into force 21 October 1950) 75 UNTS 31 (First Geneva Convention); Geneva Convention for the Amelioration of the Condition of the Wounded, Sick and Shipwrecked Members of Armed forces at Sea (adopted 12 August 1949, entered into force 21 October 1951) 75 UNTS 85 (Second Geneva Convention); Geneva Convention relative to the Treatment of Prisoners of War (adopted August 12 1949, entered into force 21 October 1951) 75 UNTS 135 (Third Geneva Convention); Geneva Convention relative to the Protection of Civilian Persons in Time of War (adopted 12 August 1949, entered into force 21 October 1951) 75 UNTS 287 (Fourth Geneva Convention).

[22] Protocol Additional to the Geneva Conventions of 12 August 1949 and relating to the Protection of Victims of International Armed Conflicts (adopted 8 June 1977, entered into force 7 December 1978) 1125 UNTS 3 (Additional Protocol I).

[23] See *Duško Tadić aka 'Dule', Decision on the Defence Motion for Interlocutory Appeal on Jurisdiction before the Appeals Chamber of ICTY*, Case No IT-94-1-AR72 ICTY (2 October 1995) especially paras 134, 137.

[24] Eg. Fourth Geneva Convention (n 21) art 3; Protocol Additional to the Geneva Convention of 12 August 1949 and relating to the Protection of Victims of Non-International Armed Conflicts (adopted 8 June 1977, entered into force 7 December 1978) 1125 UNTS 609 (Additional Protocol II).

[25] *Duško Tadić* (n 23).

[26] See Geoff Gilbert, *Responding to International Crime* (Martinus Nijhoff 2006) especially ch 5.

was originally seen as the archetypal political offence.[27] Almost immediately, the scope of the political offence exemption was queried with respect to crimes of violence, as self-proclaimed alleged anarchists adopted 'propaganda by the deed'. Over the course of the twentieth century, courts in various jurisdictions developed the understanding of the political offence, often in response to fugitive offenders whose crimes were described as terrorist in nature.

While extradition and refugee status determination have diametrically opposed objectives—the former facilitating prosecution or punishment, the latter protection—in this regard they both address the same issue: is the crime in question political in character? Nevertheless, evidence for an extradition hearing is with a view to sending a person back to face trial where any crime would need to be proven beyond reasonable doubt; exclusion from refugee status is the final step in the process leading to deportation, so one should expect more evidence than is demanded for extradition cases.

The leading UK case on political offences relates to exclusion from refugee status. In *T v Secretary of State for the Home Department*,[28] the then House of Lords adopted the Swiss approach to political offences, one that looks for proximity to the ultimate goal of the organization to which the fugitive belongs and proportionality in seeking to achieve that goal: 'Homicide, assassination and murder, is one of the most heinous crimes. It can only be justified where no other method exists of protecting the final rights of humanity.'[29] Therefore, if there are serious reasons to consider that an applicant for refugee status has engaged in indiscriminate violence constituting a crime 'prior to [her/his] admission to that country as a refugee', then she would fall within article 1F(b) of the Refugee Convention and forfeit her/his protection under the treaty.

The overlap between serious non-political crime and particularly serious crime in article 33(2) is clear, but the focus must be on 'particularly', not 'non-political', since a particularly serious 'political' crime committed in the host State is, at one level, just another crime and, if committed vis-à-vis a third State, one that will likely, in practice, not be pursued against a refugee. 'Serious non-political crime' is peculiar to the Convention but is left undefined, but it ought to be interpreted in its context,[30] that is, it should be compared with war crimes, crimes against humanity, crimes against peace,

[27] *In re Castioni* [1891] 1 QB 149.

[28] *T v Secretary of State for the Home Department* [1996] UKHL 8, [1996] AC 742, 785–6 (Lord Lloyd).

[29] *In re Pavan* [1927–28] Annual Digest of Public International Law Cases 347, 349. cf *Watin v Ministère Public Fédéral* [1964] 72 ILR 614 (Swiss Federal Tribunal).

[30] See Vienna Convention on the Law of Treaties (adopted 23 May 1969, entered into force 27 January 1980) 1155 UNTS 331 (Vienna Convention) art 31. Part of that context must be extradition law because art 1F(b) clearly draws on the concept of the political offence, that is, where a fugitive would not be extradited if their crime were deemed to be political in character—so, only if the crime is not political in character and is sufficiently serious should refugee status be denied. The political character ordinarily depends not so much on motive, but whether the crime was part, and in furtherance, of a political disturbance, not too remote from the ultimate goal of the organization to which the applicant belongs, and is proportionate; *T v Secretary of State for the Home Department* (n 28); *In re Nappi* [1952] 19 ILR 375 (Swiss Federal Tribunal); *Watin* (n 29); *Pavan* (n 29). Given that part of that test is that the crime in question ought not to be too remote from the ultimate goal of the organization to change the political environment in a State, then quite clearly these will be 'serious' just to pass that threshold.

and acts contrary to the purposes and principles of the United Nations in terms of seriousness, even if the context is wholly domestic. That several different States treat certain behaviour as a 'serious' crime is indicative that it should be regarded as potentially falling within article 1F(b).

c. Article 1F(c)

Sub-paragraph (c) excludes persons who are 'guilty of acts contrary to the purposes and principles of the United Nations'. Not all the purposes and principles could render an individual 'guilty' and, having regard to paragraph 7(d) of the 1950 Statute,[31] the drafters probably considered that it reflected article 14(2) of the UDHR (violations of international human rights law not amounting to crimes against humanity). Nevertheless, it has been interpreted more broadly and applied more widely than simply to persons in senior government positions, who might be recognized as having responsibilities vis-à-vis the Charter, and thus article 1F(c) excludes persons more generally.[32]

The case law on 'danger to the security' of the hosting State under article 33(2) has made direct analogies to article 1F(c), and this interconnectedness is significant. According to paragraph 6 of the 2003 Guidelines,[33] articles 1F(a) and 1F(c) can be applied to deny refugee status where it had previously been properly accorded.[34] Thus, a refugee could lose protection under article 1F(c) or article 33(2) on the same facts. Article 33(2), however, does not deny the refugee the protection of the Convention, and various rights persist after its application. That very overlap raises a concern, though, regarding the scope for domestic courts to apply the Refugee Convention, as filtered through domestic legislation that has fused articles 1F and 33(2) in a manner that undermines the guarantees set out separately in each article.[35]

At one level, it is good that 'danger to the security' of the hosting State is seen as parallel to article 1F(c) because 'guilty of acts contrary to the purposes and principles of the United Nations' ought to be seen as establishing a high threshold. Both are vague, however, and the case law on article 33(2) can be read to suggest that there has been an apparent equalization down.[36]

[31] See 1950 Statute (n 11).

d. Burden and Standard of Proof

The burden of proof is on the State to show that there are serious reasons for considering that the applicant is suspected of having committed the relevant crimes or acts that fall within article 1F. While the Refugee Convention does not set out any procedure for refugee status determination, given that it is generally accepted that the applicant must show she falls within article 1A(2) and that article 1F is a limitation on a humanitarian provision, the burden is on the State to present evidence to exclude someone who would otherwise qualify as a refugee.[37]

The 'serious reasons for considering that' test is less stringent than either 'beyond reasonable doubt' or even 'the balance of probabilities', the usual standards of proof applied by courts in criminal and civil litigation respectively. However, it 'sets a standard above mere suspicion'.[38] Even though the standard of proof is not 'beyond reasonable doubt', exclusion under article 1F is still associated with the attribution of criminal behaviour to an individual that entails very serious consequences, namely exclusion from refugee status. Thus, while the benefit of the *doubt* should in strict grammatical terms only attach to the beyond reasonable *doubt* test, such a narrow approach belies the commonly understood meaning of the phrase and undermines the accepted view that any limitation on a fundamental right should be interpreted restrictively.[39]

On that issue, how do the different standards of proof in articles 1F and 33(2) affect the protection of the individual? According to the existing jurisprudence, article 1F imposes a more demanding standard.[40] This poses some problems when one has regard to the text in the equally authentic English and French versions of the Convention: while the English text refers to 'serious reasons for considering that' and 'reasonable grounds for regarding', the French text refers to '*raisons sérieuses de penser que*' in article 1F, and to '*raisons sérieuses de considérer comme*' in article 33(2). Thus, at first blush, article 33(2) in the French text uses the same terminology as article 1F in the English text. Unfortunately, it is not that straightforward: in French, there is no difference between '*penser*' and '*considérer*' in this context and the use of different terms can be explained by the phraseology of the rest of the provision—'*penser que*' and '*considérer comme*'. That does mean, though, that the French text equates the standard of proof for articles 1F and 33(2). Nevertheless, the practice in Anglophone courts is to require a higher standard of proof for article 1F exclusion, even if that is not explicit in the French language version of the Convention.[41]

e. Participation

Article 1F refers to crimes or acts having been committed. Clearly, that covers direct perpetration. What further forms of participation in a crime, though, justify exclusion? Reference can be made to article 25 of the Rome Statute.[42] Command and superior responsibility suffice.[43] Attempts and conspiracies are enough to satisfy article 1F, but not mere membership of a group.[44] Three other potential forms of indirect participation might justify exclusion: joint criminal enterprise, complicity, and aiding and abetting, which cannot always be distinguished in practice.[45]

Joint criminal enterprises (JCEs) in international criminal law were the subject of much debate before the International Criminal Tribunal for the Former Yugoslavia (ICTY), with three different types eventually being recognized. The third type was the most controversial, as being too broad, and article 25(3)(d) of the Rome Statute adopts only the first two interpretations.[46] The logic must be that only those types of JCE should suffice to exclude individuals from protection, not the previous broader and more far-reaching type in JCE III.[47]

Complicity was a term used in the Nuremberg cases and the trials in the courts set up by the Allies in post-Second World War Germany and other occupied countries. It is undoubtedly the case that persons who were senior members of government, financiers, and industrialists were deemed complicit in the Nazi era war crimes. However, in all those cases, there was a direct link between the role of the complicit criminal and the crimes perpetrated. For instance, in *Bruno Tesch and Two Others*,[48] the accused were the principal suppliers of Zyklon B to the concentration camps in Nazi-controlled territories east of the Elbe.[49] This requirement is not settled in international criminal law, and exclusion hearings, which should be more protection-oriented, may or may not adopt it.

International criminal law on aiding and abetting is not clear. The ICTY adopted a singular and very restrictive approach. In *Prosecutor v Perišić*, the Appeals Chamber held 'that specific direction is an element of the *actus reus* of aiding and abetting', that is, that the aider and abettor acted specifically to further the crime, which is difficult to prove where they are remote from its place of perpetration.[50] Subsequently, in

[42] See Rome Statute (n 19). [43] ibid art 28. [44] See *JS (Sri Lanka)* (n 14) 38, 49.

[45] With respect to genocide, incitement should also be recognized, Rome Statute (n 19) art 25(3)(e).

[46] Rome Statute (n 19).

[47] An example of JCE III would be where an act by one of the perpetrators, outside the common plan, can still be considered a natural and foreseeable consequence of the common purpose and the perpetrator willingly took that risk, *Prosecutor v Ntakirutimana and Ntakirutimana*, Case No ICTR-96-10-A and ICTR-96-17-A (13 December 2004) paras 463–6.

[50] Case No IT-04-81-A ICTY (28 February 2013) para 30 fn 76. See also paras 37–40 and 42. cf *Prosecutor v Šainović, Pavković, Lazarević and Lukić*, Case No IT-05–87A, ICTY (23 January 2014).

Prosecutor v Taylor,[51] the Appeals Chamber of the Special Court for Sierra Leone (SCSL) decided '475 … that the *actus reus* of aiding and abetting liability under Article 6(1) of the [SCSL] Statute and customary international law is that an accused's acts and conduct of assistance, encouragement and/or moral support had a substantial effect on the commission of each charged crime for which he is to be held responsible'. Given, however, this disagreement between the different courts and tribunals in the area of international criminal law, courts dealing with exclusion in relation to refugee status determination are entitled to apply the most appropriate approach when deciding whether the applicant has been involved in aiding and abetting. Reference to international criminal law is central to a coherent and informed approach, but the exclusion clause requires that refugee status determination adopt an autonomous understanding appropriate to the particular process.[52] Equally, the Supreme Court of Canada, in *Ezokola*, held that 'the factors will be weighed with one key purpose in mind: to determine whether there was a voluntary, *significant*, and knowing contribution to a crime or criminal purpose'.[53]

Given the lack of agreement and the complexity of the issues that turn on the specific wording of international criminal law instruments, it is proposed that 'committed' and 'guilty of' in article 1F of the Refugee Convention must be given an autonomous meaning that respects the principle that, since article 1F is a limitation on a humanitarian provision, it must be interpreted restrictively, namely, in favour of the applicant for refugee status.[54]

f. Proportionality

The final aspect of article 1F also highlights an issue pertinent to article 33(2): proportionality. Should there be a balancing exercise between the nature of the crime or acts for article 1F and the treatment risked in the country of nationality if the applicant for refugee status were to be returned? Academic literature and UNHCR suggest there ought to be.[55] At one level, proportionality is intrinsic to making a full assessment of all the facts of the claim before deciding whether or not to exclude. For example, while it might seem appropriate to exclude someone who shot at another person with the intent to kill, this

analysis might change when taking into account additional facts, such as, that only a superficial wound was caused, and that the perpetrator would fear being tortured and killed by extremist groups as well as the government if returned to her/his country of origin. Furthermore, the principle of *non-refoulement* is now recognized as customary international law,[56] and both international human rights law[57] and international criminal law have developed exponentially, with several UN anti-terrorism treaties prohibiting surrender where there is a fear of prosecution or punishment on grounds of race, religion, nationality, or political opinion.[58] However, case law weighs heavily against including a proportionality test, based, according to the courts, on a plain reading of the text of the Convention,[59] although sometimes that case is overstated.[60] Even so, the traditionalists asserting the so-called straightforward language of the Convention are not as traditional as they claim. Denmark, participating in the drafting process, argued that one needed to balance the seriousness of the crime against the persecution feared.[61] Nevertheless, as regards article 1F, the weight of jurisprudence from different jurisdictions is that there is no proportionality test.

4. Regional Variations

For UNHCR, other regional refugee instruments always have to be interpreted within the framework provided by the Refugee Convention.[62]

a. Africa

Articles I(4), I(5), and III of the OAU Convention are pertinent to this discussion. Paragraphs I(4) and I(5) are similar but not identical to article 1F of the Refugee

Convention. It is the differences that raise questions. The OAU Convention 'ceases to apply' if a person commits 'a serious non-political crime outside his country of refuge after his admission to that country as a refugee', or seriously infringes the purposes and objectives of the OAU Convention. Article I(5) effectively extends article 1F(c) to cover the purposes and principles of the African Union too. While article I(4)(f) looks, at first sight, like article 1F(b) of the Refugee Convention, it is more akin to the particularly serious crime limb of article 33(2). Unlike article 1F(b), it is not enough that there are merely 'serious reasons for considering that' the serious non-political crime has been committed by this refugee. The rest of the provision referring to the geographical location of the crime would indicate not so much that there is danger to the community of the country of refuge, but that the refugee is a threat to national security or public order. This is difficult to reconcile completely with the Refugee Convention, but it is possible to read it sufficiently narrowly. Sub-paragraph (g), on the other hand, has no direct correlation with the text of the Refugee Convention, but does reflect part of the *travaux préparatoires* on the purpose of article 1F generally: refugee status was to be protected from abuse by prohibiting it from being granted to undeserving cases, namely those who had committed serious transgressions prior to entry. Here, there is an intrinsic link 'between ideas of humanity, equity and the concept of refuge'.[63] As such, it is no great leap to exclude someone who has 'seriously infringed the purposes and objectives of [the OAU] Convention'.[64] As for article I(5), it does follow article 1F, except as regards sub-paragraph (c). Following the same basic principle, that the OAU Convention complements the Refugee Convention, someone applying under the OAU Convention should only be excluded if the purposes and principles of what is now the African Union that have been violated are in line with those of the United Nations.

Article III requires OAU Convention refugees to conform to the laws and regulations of the country of asylum and to 'abstain from any subversive activities against any Member State of the [AU]'. There is no individual consequence set out in the article for its violation, but 'subversive activities' could fall within article I(4)(g). Moreover, there are parallels with article 2 of the Refugee Convention and the concept could, on appropriate facts, be brought within the remit of article 1F(c), applied retroactively, or the danger to the security limb of article 33(2). Only if the subversive activities were to fall within article 1F(c) or article 33(2) of the Refugee Convention could a State use them to remove a refugee's protection under the OAU Convention. Regardless, like all the provisions that render the Convention inapplicable or remove the guarantee of *non-refoulement*, the State would still have to respect international human rights law. In *Organisation mondiale contre la torture, Association Internationale des juristes démocrates v Rwanda*,[65]

the African Commission of Human Rights, applying the African Charter of Human and Peoples' Rights, prohibited the deportation of refugees accused of subversive activities within article III.

b. Europe

Europe has a complex set of multilayered legal regimes.[66] The Council of Europe's European Court of Human Rights does not apply the Refugee Convention, but it provides protection from *refoulement* under human rights law.[67] Where persons are not protected under the Refugee Convention, the court often deals with those who would otherwise be refugees. Usually, this is based on freedom from torture or inhuman or degrading treatment (article 3) or arbitrary deprivation of life (article 2), but family life (article 8), the right to liberty (article 5), fair trial (article 6), freedom of expression (article 10),[68] and freedom from expulsion for aliens (article 1, Protocol 7)[69] have all been prayed in aid. The court has also taken a strict line against diplomatic assurances that were being used to deport to the country of nationality under article 32, the assurance allegedly discounting the threat to life or freedom.[70] While the European Court of Human Rights has held that article 6 on the right to a fair trial does not apply to deportation or extradition proceedings,[71] it has held that, under article 13 on the right to an effective remedy, domestic courts cannot be overly deferential to the executive in carrying out a meaningful analysis of proportionality with respect to an expulsion order.[72] Akin to article 32(2) of the Refugee Convention, the court has established proper procedures for deportation hearings, as set out in article 1(2) of Protocol 7.[73] The Refugee

[66] See Geoff Gilbert, 'Europe, International Law and Refugees' (2004) 15 European Journal of International Law 963.

[67] See *Labsi v Slovakia*, App No 33809/08 (ECtHR, 15 May 2012) para 117, the court held that it was to decide simply 'whether that individual's deportation [is] compatible with the [ECHR]'. Note that while the court is limited to deciding cases as regards the Council of Europe Member States, the rights in the ECHR are mirrored in the ICCPR and the other regional human rights mechanisms, so the arguments are transposable. See below, 'serious harm' and subsidiary protection.

[68] See *R (on the application of Lord Carlile of Berriew QC and others) v Secretary of State for the Home Department* [2014] UKSC 60, [2015] AC 945 para 57.

[69] Protocol No 7 to the Convention for the Protection of Human Rights and Fundamental Freedoms (adopted 22 November 1984, entered into force 01 November 1988) ETS 117, art 1. See Chapter 36 in this volume.

[71] *Maaoui v France*, App No 39652/98 (ECtHR, Grand Chamber, 5 October 2000); cf *QX v Secretary of State for the Home Department* [2020] EWHC 1221 (Admin).

[72] *Raza v Bulgaria*, App No 31465/08 (ECtHR, 11 February 2010) 63. In *Labsi* (n 67) 137, the court held that to be effective in deportation proceedings, starting a complaint under the ECHR must have a suspensive effect on domestic proceedings.

[73] *Geleri v Romania*, App No 33118/05 (ECtHR 15 February 2011) 44. Given that States can control entry to their territory and that criminal convictions can justify expulsion, the right to a family life under art 8 ECHR will generally not override exclusion under arts 1F, 33(2), or 32 of the Refugee Convention: see *Krasniqi v Austria*, App No 41697/12 (ECtHR, 25 April 2017) 46.

Convention is applied more restrictively and protection is denied or limited under article 1F, but international human rights law mitigates some of its harshness.

The European Union (EU) impacts directly on refugee protection through its Common European Asylum System (CEAS), particularly the Qualification Directive.[74] While the Qualification Directive claims in its preamble to be based on the Refugee Convention and Protocol, which form the cornerstone of international refugee protection,[75] it does not faithfully transpose the text, and this is pertinent to the discussion here. Articles 12 and 14 of the Qualification Directive aim to implement article 1F, but do so along with articles 33(2) and 32.[76] Article 12(2) repeats article 1F, but broadens the reach of sub-paragraph (b) on serious non-political crimes by extending the timeframe to permit exclusion until status has been determined, rather than only up to the point of entry to the territory of the country of asylum. One of the most egregious glosses concerns preambular paragraph 37, which states that belonging to or supporting an association that supports international terrorism could be a threat to national security: mere membership of an organization is not usually sufficient for exclusion.[77]

Paragraphs (4), (5), and (6) of article 14 are the most problematic. Paragraph (5) allows Member States of the EU to apply a provision before status has been decided, which, under the Refugee Convention, can only be used against recognized refugees. While there may be situations where an applicant for refugee status has committed a particularly serious crime and would be a danger to the community, it may seem redundant to carry out an article 1A(2) determination only to immediately remove the guarantee of *non-refoulement*. However, article 14(5) of the Qualification Directive allows States to deny refugee status to someone with respect to whom there are mere 'reasonable grounds for regarding him or her as a danger to the security of the Member State in which he or she is present'. The Refugee Convention excludes under article 1F(c) where there are 'serious reasons for considering that' the applicant for refugee status 'is guilty of acts contrary to the purposes and principles of the United Nations', a much stricter demand. Thus, paragraph (5) is a significant threat to protection.

[74] See EU Qualification Directive. See also UNHCR, 'Comments on the European Commission's proposal for a Directive of the European Parliament and of the Council on Minimum Standards for the Qualification and Status of Third Country Nationals or Stateless Persons as Beneficiaries of International Protection and the Content of the Protection Granted: COM(2009)551, 21 October 2009' (July 2010). See also European Commission, 'Proposal for a Regulation of the European Parliament and of the Council on Standards for the Qualification of Third-Country Nationals or Stateless Persons as Beneficiaries of International Protection, for a Uniform Status for Refugees or for Persons Eligible for Subsidiary Protection and for the Content of the Protection Granted and Amending Council Directive 2003/109/EC of 25 November 2003 Concerning the Status of Third-Country Nationals Who Are Long-Term Residents' COM (2016) 466 final; UNHCR (n 55).

[75] EU Qualification Directive, preambular paras 3 and 4.

[76] Article 17 does much the same for subsidiary protection from serious harm, but that will not be discussed in this chapter.

[77] See *JS (Sri Lanka)* (n 14).

Secondly, does 'status granted to a refugee' refer to article 1A(2) of the Refugee Convention or to refugee status as set out in article 2(e) of the Qualification Directive, leaving Refugee Convention status intact?[78] The importance of this is that article 33(2) leaves the person falling within the sub-paragraph as a refugee (unlike article 1F), whereas article 14(4) of the Qualification Directive apparently ends this status. This contradiction has been noted in domestic case law.[79] The individual would remain a refugee under the Refugee Convention and would remain, even within the EU, entitled to the guarantee of *non-refoulement*, unless they were to fall within article 1F as well. That is part of the reasoning behind the conjoined Belgian and Czech cases,[80] where the CJEU held that those whose Qualification Directive status was revoked or refused under article 14(4) and 14(5) would continue to benefit from all the Refugee Convention rights set out in article 14(6), as well as the rights accorded to 'refugees' in the Refugee Convention.[81] Article 14(6) holds that, even after losing Qualification Directive status, the rights in article 33 of the Refugee Convention (protection from *refoulement*) persist.

5. Conclusion

Exclusion is an unusual concept for the contemporary world of protection, where international human rights law applies to all human beings no matter what they might have done.[82] It is a relic of the immediate post-war era that international refugee law preserves. However, its limits must be recognized: those that were understood at that time, and those that are part of the progressive development of international refugee law since 1951. Even so, when thinking about the Refugee Convention, one needs to be aware of contemporary attitudes to those seeking to enter the territory of a State in circumstances

[78] See Pieter Boeles, 'Non-refoulement: Is Part of the EU's Qualification Directive Invalid?' (*EU Law Analysis*, 2017) <http://eulawanalysis.blogspot.com/2017/01/non-refoulement-is-part-of-eus.html?spref=tw> accessed 15 November 2019. Part of this debate turns on the parallel application of the EU Qualification Directive, and Directive 2008/115/EC of the European Parliament and of the Council of 16 December 2008 on common standards and procedures in Member States for returning illegally staying third-country nationals [2008] OJ L348/98; see also Case C-562–13 *Centre public d'action sociale d'Ottignies-Louvain-la-Neuve v Moussa Abdida* (GC, 18 December 2014). To a large extent, this is a question of EU law and is not pertinent to the interpretation of the Refugee Convention.

[80] See *M v Ministerstvo vnitra* (n 15) paras 99–100.

[81] ibid para 105.

[82] See also Chapter 11 in this volume; Vincent Chetail, 'Are Refugee Rights Human Rights? An Unorthodox Questioning of the Relations between Refugee Law and Human Rights Law' in Ruth Rubio-Marín (ed), *Human Rights and Immigration* (OUP 2014) 37; Jane McAdam, *Complementary Protection in International Refugee Law* (OUP 2007) ch 6.

that immigration law would not usually permit. Their entry is permitted because they qualify as refugees; States see article 1F, along with articles 33(2) and 32, as a way of preserving control of their own borders. Requiring a narrow interpretation of restrictions on humanitarian provisions has to be the proper approach towards article 1F and other constraints on article 1A(2), advancing arguments derived from human rights and international criminal law in the twenty-first century, alongside fundamental principles of criminal justice: benefit of the doubt, expiation, and constraining the scope of participation.

CHAPTER 40

WOMEN IN REFUGEE JURISPRUDENCE

CATHERINE DAUVERGNE

1. Introduction

The challenge of summing up the state of refugee law jurisprudence about women is difficult because it is profoundly disheartening. What began with a huge burst of energy and creativity in the final decade of the twentieth century has stalled spectacularly. The past three decades of feminist work in refugee law advocacy stand as a cautionary tale. While scholars, policymakers, decision-makers, and activists have occupied this terrain for some time now, the central dilemmas for women seeking protection from a risk of being persecuted are remarkably similar to those of the late 1980s. There have been very significant wins, of course, but also major losses. Each win contains its own slippage. Each new policy statement fosters its own exceptions. And against this backdrop, the number of women (and men) who need the protection of the Refugee Convention has increased astronomically.

An obvious starting point for a chapter such as this is to survey recent scholarship in this area. I focused in particular on the short interval since the collection that I published with Arbel and Millbank in 2014.[1] In broad brushstrokes, this survey highlighted two points: first, that the production of scholarship about women as refugee claimants has slowed;[2] and second that the issues being researched and written about are generally

[1] Efrat Arbel, Catherine Dauvergne, and Jenni Millbank (eds), *Gender in Refugee Law: From the Margins to the Centre* (Routledge 2014).

[2] A search of the Westlaw and Lexis-Nexis databases showed three and six articles written about women in refugee law in the period 1980 to 1989, in each respectively. This number increased over 10 times by the period 1990 to 1999 with 46 and 71 articles, respectively. The number of articles increased slightly in the period 2000 to 2010 with 40 and 87 and decreased in the period 2010 to 2019 with 34 and 69 articles, despite many more employed scholars at this time.

the same as those on offer since the 1990s. Furthermore, many leading scholars who have undertaken seminal work in this area have not published anything new on this topic in the past six years. There was a time when many potential new graduate students interested in refugee law wanted to write about women; this is no longer the case. We can imagine a scholarly landscape with these features if it were the case that the 'problem' that had animated scholarship and advocacy had been resolved. This is not the case. It appears that research about women in refugee law has ceased to be topical, compelling, or maybe even publishable.

This brief chapter attempts to unravel why these twinned trends in jurisprudence and scholarship have occurred. The explanation is multifaceted, and tells us a great deal about how refugee law works at its coalface—in individual status determination settings around the world. It is also the case that taking a step back from advocacy work, and looking instead at the trajectory of that advocacy over a quarter of a century, reveals that in refugee law doctrine a number of key decisions were made early on that probably contributed to the current desultory state of the jurisprudence. Finally, this examination demonstrates something about the nature of scholarly pursuits.

Importantly, the lack of progress that is central to this narrative is both challenged and confirmed by the difficulty of getting good data. With others, I have written about this problem before.[3] This is the principal caveat to my argument here. The lack of information is truly far-reaching. In most jurisdictions, it is impossible to obtain even basic data such as how many women claim asylum annually and on what grounds. From this baseline, the problems only get worse—there is no jurisdiction anywhere where a complete set of first instance decisions is publicly available; there are few jurisdictions where those decisions that are available come with reasons; there is little capacity to gender our understandings of access to the status determination procedures around the world that end up generating jurisprudence.[4] What is unknown overwhelms what we know. How, then, is it possible to conclude that progress has stalled? Could it be that we simply do not have enough information to know? Part of the answer is that we have stalled in the very basic enterprise of attempting to know more. A second part makes up the core of this chapter: the central debates about women in refugee law jurisprudence have scarcely shifted since becoming the forefront of refugee jurisprudence more than a quarter of a century ago.

Stagnated progress is not to say that decisions about women have not become central to refugee law jurisprudence. With Arbel and Millbank, I wrote in 2014 that women had indeed moved 'from the margins to the centre' of refugee law.[5] Ironically, this may be part of the explanation for stagnation. The broad arc of refugee jurisprudence has tended towards expanding categories of inclusion. This is a trend explored throughout this volume. Despite this trend, however, it is not the case that success rates in asylum proceed-

[4] See Chapter 3 in this volume.

[5] Arbel, Dauvergne, and Millbank (n 1).

ings have increased over time.[6] In the few jurisdictions where this query can be easily addressed, there is no evidence of expanded protection in terms of the numbers of asylum seekers whose claims are successful; rather, it is the categories that are expanding. This observation supports two possible explanations: either weaker and weaker cases have been brought forward over time, or decision-makers have become more and more exacting. Parsing this dilemma is not necessary to make this point—the answer could be a bit of both. What matters is that this is a very broad trend; it is visible now with the experience of over half a century of refugee decision-making, in every part of the world. That jurisprudence about women, too, fits this trend is not surprising. But it is instructive. It tells us something both about women in refugee law and about the productivity of liminal spaces to generate new outcomes.

This chapter follows the approach of the leading texts on refugee law doctrine by analysing elements of the refugee definition in turn, considering how each applies to women. I have left out some areas where useful things could be said about women for the sake of focusing squarely on jurisprudential developments.[7] I have also rearranged some of the more traditional treatments of the elements of the refugee definition to reflect where the heft of jurisprudence about women has been generated, or where the absence of jurisprudence has particularly gendered characteristics. As a result, the sections are: well-founded fear; being persecuted (divided into the subsections of 'serious harm' and 'State protection'); reasons for being persecuted; nexus; and exclusion. I am obviously not attempting to catalogue every jurisprudential development, which would certainly be impossible in such a short piece.[8] Rather, this structure is a useful rubric for summarizing trends, and is ideal for demonstrating a central part of my argument: that because *every* element of the refugee definition must be satisfied in order for a claim to be successful, there is a significant tendency for problems to slip from one definitional element to another as the jurisprudence advances. In other words, once it becomes settled law that women can fit in the category of 'membership in a particular social group', a

[6] See Catherine Dauvergne, Leonara Angeles, and Agnes Huang, *Gendering Canada's Refugee Process* (Status of Women Canada 2006). See also Tara Carmen, 'Canada's Acceptance Rate of Asylum Seekers is the Highest in 27 Years—Here's Why', *CBC* (7 February 2018) <https://www.cbc.ca/news/canada/asylum-seekers-overview-data-1.4503825> accessed 18 March 2020; UN Women, *Report on the Legal Rights of Women and Girl Asylum Seekers in the European Union* (2017).

[7] An important example here is the matter of 'alienage'. For a variety of well-known reasons (money, care responsibilities, etc) men are more easily able to travel to foreign countries than women in order to seek asylum. The fact that more men than women claim asylum around the globe contributes to masculinist biases in jurisprudence, but the topic of alienage itself has yielded little by way of gendered jurisprudence. A similar comment can be made about cessation. In Canada there has been a recent spate of cessation cases, many triggered by individuals returning to their home countries to care for aging parents. See further Chapter 3 in this volume.

[8] There are several sources which present jurisprudential compendia: Immigration and Refugee Board of Canada, 'Chairperson Guidelines 4: Women Refugee Claimants Fearing Gender-Related Persecution' (1996) (Canadian Guidelines); the website of Hastings' Centre for Gender and Refugee Studies is another *Centre for Gender and Refugee Studies* <https://cgrs.uchastings.edu/> accessed 18 March 2020.

series of contestations then emerge in another area such as 'nexus' or 'State protection'. This tendency for slippage has driven much jurisprudential growth.

2. Well-founded Fear

The traditional approach views the well-founded fear criterion as having a subjective and an objective element.[9] Despite this alleged bifurcation, the existence of a subjective fear is rarely if ever a hurdle for those seeking protection, and the weight of jurisprudence has been focused on objective assessments of whether fear is well-founded.[10]

At the broadest level, assessments of well-founded fear are gendered. While it is difficult to parse the reasoning, there seem to be two factors that account for this. In terms of the subjective assessment, a gendering affect likely occurs because the idea of subjective fear is intertwined with credibility. Over time, and in assessments in many Western countries, refugee decision-makers appear to find women more believable than they find men.[11] There is a persistent, if small, difference in the acceptance rates of women's claims in comparison with men's. While no one has done the work required to conclusively explain this, the explanation offered by many Canadian decision-makers—that women are simply more believable—has not been seriously challenged.[12] The more reliable objective aspect of well-founded-ness arguably also has gendered aspects because there is robust evidence that women's human rights are poorly recognized and poorly protected in many parts of the world.

This observation signals the irony which surrounds the jurisprudence of refugee women: a trope in which vulnerable women from 'less advanced' societies are rescued by Western decision-makers has been present within Western refugee law ever since women became prominent and distinct subjects of this law.[13] This trope has often served individual women well; and thus scholars and advocates have trod carefully in challenging it. It also points to the troubling absence of non-Western perspectives in refugee law—something that I reinforce here by assembling an overview of leading trends in the law—none of which reflect Global South decision-making in any way, as Global South decisions have not attained that odd legal status of 'leading'.

[9] See UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019). There is one final point to be made in regard to gender and well-founded fear. The analysis of well-founded fear sometimes engages with the question of why a claimant has taken so long to bring the true basis of her claim forward, or has changed her story part-way through the process. There is much psychological evidence that people often need time and support to reveal their experiences of sexual violence.[14] This is true of men and women, of course. But overwhelmingly more women than men are victims of sexualized violence. Some of the guidelines on women refugees are attuned to this issue, and caution against adverse credibility conclusions on the basis of a 'late' revelation of sexualized violence, or an altered narrative.[15] Nonetheless, a changing story continues to be a basis of adverse credibility assessments. Like so many aspects of gendered refugee jurisprudence, while the issue is widely understood, it cannot be said that this persistent problem has been solved.

3. Being Persecuted

Persecution is the core of the refugee definition. It has been the focus of considerable jurisprudential attention, which has resulted in progressive expansion of the categories of persecution as refugee law's connections with human rights norms have deepened. It has also provoked a predictable response as a number of States have sought to limit the ambit of persecution through legislative or policy statements.[16] Since at least the 1990s, persecution has been understood to include two aspects: serious harm and a failure of the State to effectively protect an individual against that harm. Both of these aspects of being persecuted have provoked significantly gendered jurisprudence.

a. Serious Harm

A number of serious harms that affect women predominantly or exclusively have become well established as categories of being persecuted. Predominant among these is female genital mutilation (FGM), which has been the harm at the core of leading cases in many jurisdictions.[17] Other gendered harms that have a significant presence in

refugee law include forced abortion,[18] forced sterilization,[19] rape,[20] forced marriage,[21] allegations of witchcraft,[22] being forced to comply (or punished for failing to comply) with cultural or religious conventions,[23] and domestic violence.[24]

This list is revelatory. It demonstrates both how extensive serious gendered harms are globally, and also how contested the terrain of gendered harm has been. FGM has become a paradigmatic category in refugee jurisprudence about women, in part because there has been no sustained argument that boys or men face the same harm. Despite the existence and cultural embrace of male circumcision, this argument has not (for very good reasons) taken hold in refugee law. Further, FGM lurks at the very dark edges of the Western imagination, an almost unspeakable violation. In this way, it fits what might be called the 'exotic paradigm' of gendered harm, and as such it reinforces the image of the Western State, or decision-maker, as saviour and protector of women from 'backwards' places. Indeed, it is helpful in understanding gendered harms as persecution to map both of these vectors: gendered exclusivity and exoticism.

In the case of harms such as forced sterilization, rape, or forced marriage, advocates and analysts thoughtfully draw attention to the fact that men are also victims of these crimes. The incidence of these harms demonstrates that in every society where they occur, women comprise the majority of victims. Even when the victim is male, the harm has gendered aspects which shape and alter it, sometimes making it harder for men to come forward or to seek help, sometimes making it uniquely psychologically damaging,

[18] Caselaw in this area relates primarily to particularly harsh enforcement in some regions of the PRC's former one-child policy, see *Applicant A v Minister for Immigration and Ethnic Affairs* (1997) 190 CLR 225; *Cheung v Canada (Minister of Employment and Immigration)*, [1993] 2 FC 314, 102 DLR (4th) 214.

[23] The case that spurred the development of the Canadian guidelines was that of a woman named 'Nada' by the press who came from Saudi Arabia and claimed refugee status in Canada in 1991 because she was rebelling against cultural and social norms for women in Saudi Arabia by refusing to wear a veil. She was denied refugee status and her application to the Federal Court was denied but she was eventually granted status in 1993 after the media began reporting on her story; Immigration and Refugee Board Decision, File no M91–04822 (24 September 1991).

sometimes ensuring the harm is deployed as a weapon against gender non-conforming persons, especially those born biologically male. The fact that these gendered harms are not visited exclusively upon women troubles their fit into the complicated categorical matrix that is the refugee definition. This becomes clearer in the analysis of grounds for being persecuted and the nexus between those grounds and the risk of harm, but the problem begins here, in understanding how these harms are gendered. The careful work of demonstrating the falsity of a women-only analysis makes it more difficult for the woman-as-victim trope to function within refugee law. A particularly clear example of this problem is provided by the 1995 Supreme Court of Canada case of *Chan*,[25] where a male claimant from the People's Republic of China sought protection on the basis of a fear of forced sterilization. While the Court did not question that forced sterilization could constitute being persecuted, the majority agreed with the conclusion that the claimant was not credible.

The exoticization vector is equally important. One of the most vexing harms for Western decision-makers has proven to be domestic violence. At least one aspect of the problem is that women seriously harmed by intimate partners are commonplace in Western societies, and so-called 'best efforts' by governments and police to end this have been met with limited success. As with the gendered-exclusivity problem, this issue reveals itself more completely when analysing both the grounds for being persecuted and the nexus between grounds and harm, but it begins here with understanding the harm (and in this case, the question of State protection). A prominent example of this problem occurred in the United States, where Attorney General Jeff Sessions intervened in 2018 to overturn a ruling that domestic violence could constitute persecution for the purposes of asylum claims.[26] Millbank and I found in analysing forced marriage claims that exotic circumstances were more likely to coincide with accepted claims.[27] A number of factors may be at work here; partially this struggle to accept domestic violence as a mode of being persecuted may be related to a floodgates fear, partially it may be that it fails to conform to the 'backwards society' trope (are all societies backward?).[28]

An important twist on the gendered exclusivity and exoticization vectors is presented by the rising prevalence of witchcraft in refugee caselaw. A narrative of women being persecuted for witchcraft is centuries old in Western societies. Millbank, Dehm, and Vogl have scrutinized the refugee cases and discovered significant patterns. While men appear in these cases most often as victims of witchcraft as persecution, women face risks of being persecuted as witches.[29] Interestingly, however, in these refugee claims credibility is often the problem—the women bringing these claims are simply not believed. It may be that there is a limit to the exoticization factor, or that as more cases

arise, more international human rights groups will produce third party accounts that will add strength to these claims. In either case, the fact that gendered effects are evident for both men and women means that witchcraft cases remain an important area to monitor.

Finally, the length of this brief summary of gendered harms is itself a risk. There has been so much attention to the complexity of analysing gendered harms, that scant attention has been paid to how an analysis of non-gendered harms—which continue to make up the bulk of refugee law—may affect women differently. This risk was pointed out as early as 2000, by Spijkerboer in his seminal text *Gender and Refugee Status*.[30] It was also observable in my global study of political opinion claims.[31] In all of the scholarly production on women in refugee jurisprudence over the past three decades, I have not been able to locate even one article that focuses on harms that do not have a particularly gendered aspect. The various guidelines on women making refugee claims generally limit their attention to gender-related persecution, sometimes adding an unexplored mention of the potential relevance of gender in other aspects of refugee law or even the refugee definition.[32] The assumption that lies behind these mentions is that in the case of any serious harm that is not specifically gendered, women and men will be similarly situated. This is surely an assumption worth testing.

b. State Protection

When a third party is the agent of persecution, international refugee law can step in to provide surrogate protection to an individual as long as their own State is unable or unwilling to do so. Furthermore, State inability or unwillingness to protect can provide the vital nexus element of the refugee definition. For women seeking refugee protection, the issue of State protection has been persistently problematic. The principal reason for this is the gap between State laws that protect women from violent harms and the willingness or efficacy of enforcement of those laws. A secondary issue is the question of internal protection alternatives within a claimant's home State. Both of these aspects have gendered features.

A person is not required to seek State protection if it is reasonable to assume that it would be unlikely to be forthcoming.[33] Despite this straightforward and long-established principle, in the case of women seeking protection this point appears to require constant reaffirmation. The basic terrain of the State protection requirements

[33] Hathaway and Foster (n 9) 323–30.

was well-mapped in two early leading cases involving claims made by Pakistani women for whom the police had refused to provide protection.[34] In the words of Lord Hoffman:

> What makes it persecution in Pakistan is the fact that according to evidence which was accepted by the special adjudicator in Mrs Islam's case and formed the basis of findings which have not been challenged, the State was unwilling or unable to offer her any protection. The adjudicator found it was useless for Mrs Islam, as a woman, to complain to the police or the courts about her husband's conduct. On the contrary, the police were likely to accept her husband's allegations of infidelity and arrest her instead. The evidence of men was always deemed more credible than that of women.[35]

Despite this guidance from pinnacle courts, the tendency of some decision-makers (especially in cases of domestic violence) is to review legal protections 'on the books' and to find that these are sufficient to ensure protection, even when there is evidence to the contrary.[36] This tendency reflects the concomitant standard within State protection jurisprudence that State protection need not be perfect. Furthermore, and following the exoticization theme, the fact that no State in the world is able to guarantee protection against domestic violence sometimes fuels a line of reasoning that privileges State efforts at protection (which are easier to document) over the results of those efforts (which are always more difficult to evince).[37] The jurisprudential standard of 'effective' or 'adequate' or 'sufficient' protection leaves a considerable space for slippage on this point, and the fact that courts have not settled on a single description of the standard is itself instructive.

By contrast, the matter of internal protection alternatives may be gendered in a way that advantages women, or that at least does not create disadvantage. This is so because many of the guidelines on protecting women call attention to the difficulties women may have in moving to a different part of the country, such as living in an area where they do not have a male relative to protect them, bringing children with them in a difficult move, or issues with safe travel.[38] It is impossible to say whether these guidelines are followed in routine decision-making, but they do provide clear direction. In the work

[34] *Minister of Immigration and Multicultural Affairs v Khawar* (2002) 210 CLR 1 (*Khawar*); *R v Immigration Appeal Tribunal, ex parte Shah* [1999] UKHL 20, [1999] 2 AC 629 (*ex parte Shah*).

[35] *Ex parte Shah* (n 34) 648.

[36] The Australian case of *AZAAR v Minister for Immigration and Citizenship* [2009] FCA 912 is a notable example; coming seven years after the *Khawar* ruling, the Refugee Review Tribunal had persisted in elevating legal protections on the books in Vanuatu to the status of actual protections.

Labman and I did reviewing use of the Canadian guidelines, internal protection did not appear to be a significant barrier to women's claims.[39]

4. Reasons for Persecution

Complexities and contours of the 'particular social group' category have dominated judicial and scholarly debate about women refugees. As is the case with gender-related modes of persecution, one consequence of this debate is that there is little analysis of how women are distinctly at risk of being persecuted on the basis of race, religion, nationality, or political opinion, and a concomitant assumption that, in relation to these other grounds, women and men are identical. Both of these intertwined trends contribute to the picture of refugee jurisprudence about women.

The core of the debate about particular social groups has always been whether 'women', as such, are a particular social group. As 'particular social group' is not defined in the Refugee Convention, various interpretational trends have governed over time and in varying jurisdictions. The three principal, sometimes overlapping, definitions have focused on: (a) innate and unalterable characteristics;[40] (b) social perceptions;[41] and (c) protected characteristics.[42] In almost all circumstances, a category labelled simply 'women' would fit within each of these approaches.

The origin of the problem with this straightforward approach seems to have been a desire by some decision-makers to craft a narrower category in order to resist an implicit or explicit floodgates argument. This has resulted in a series of contorted and unusual particular social groups such as 'single women living in a Muslim country without the protection of a male relative'.[43] Identifying groups in this way risks running into one of

[39] Shauna Labman and Catherine Dauvergne, 'Evaluating Canada's Approach to Gender-Related Persecution—Revisiting and Re-embracing "Refugee Women and the Imperative of Categories"' in Arbel, Dauvergne, and Millbank (n 1) 264. It is impossible to broadly generalize from this small sample, given that the larger matter that we found was that the well-respected Canadian guidelines appear to be infrequently explicitly referenced.

[40] This approach was most prominently launched in *Canada (Attorney General) v Ward*, [1993] 2 SCR 689, 103 DLR (4th) 1.

[41] This approach was most prominently launched by the High Court of Australia in *Applicant A* (n 18).

[42] This approach was most prominently launched by the *Acosta* case: *Matter of Acosta*, 19 I&N Dec 211, 232 (BIA 1985), the analysis being that social groups must be somehow similar to the other listed grounds using the *ejusdem generis* interpretation principle. A detailed analysis of how the particular social group jurisprudence is applied to women was published by Michelle Foster in 2012 'The "Ground with the Least Clarity": A Comparative Study of Jurisprudential Developments relating to "Membership of a Particular Social Group"', UNHCR Legal and Protection Policy Research Series, PPLA/2012/02 (2012), and with further observations, summarized in 2014 (in our edited book). Michelle Foster, 'The "Ground with the Least Clarity": A Comparative Study of Jurisprudential Developments relating to "Membership of a Particular Social Group"' in Arbel, Dauvergne, and Millbank (n 1).

[43] Canadian Guidelines (n 8) fn 11.

the firmest aspects of the jurisprudence: that a group will not qualify if it is defined solely by the persecution its members face.[44] While a number of leading courts, and UNHCR, have clarified that 'women' can indeed be a particular social group, this has not stopped first instance decision-makers from persisting in this practice.[45] In addition to sometimes creating a group that is then impermissible within refugee law, this approach can also create problems with the nexus and being persecuted analyses. Indeed, Foster summed up the central problem with this jurisprudence by stating that this approach imports all aspects of the refugee definition in the group definition.[46] The resistance to a broadly defined social group has, in some jurisdictions, been made explicit in policy statements. For example, the Dutch Aliens Act Implementation Guidelines state that women are not considered to be a social group on the basis of gender because the composition of the group is too diverse.[47] It seems, therefore, that the problem of uncertainty over whether women as such will be considered to be a particular social group is intransigent. This is a marked contrast with groups defined on the basis of sexual orientation or non-binary gender identity, with respect to which Western decision-makers do not appear to focus their floodgates fears at this definitional point, nor do they seem to have any concern about social cohesion.[48]

The one other ground that has attracted some gendered analysis is that of political opinion. This typically arises in the case of women who resist traditional social or religious mores and are at risk of punishment because of that resistance. Thus, for example, the desire to wear Western clothes, or to reject religious traditions, or sometimes to reject an arranged or forced marriage, is interpreted as a political opinion. This approach conforms with the generally very broad political opinion jurisprudence, but there are very few cases in comparison with those under the particular social group ground.[49] It is difficult to explain why this is the case given the intransigence of the particular social group jurisprudence. It may simply be that decision-makers and policymakers are unwilling to shift a significant number of women's cases to a ground where the analysis has generally been more inclusive. Another plausible

[44] This is discussed at length in *Applicant A*, and was briefly noted in the *Ward* ruling. It has been reflected in many other decisions, and is noted in the UNHCR (n 15) para 11. See *Ward* (n 40); *Applicant A* (n 18) 263–6 (McHugh J).

[45] Random examples from Canadian decision-makers in the past year include: 'unaccompanied women in Pakistan' (*Thornton v Canada (Citizenship and Immigration)*, [2019] FC 792, 306 ACWS (3d) 816); 'educated single Tamil women who speak English' (*Rasaiah v Canada*, [2019] FC 632, 306 ACWS (3d) 827); 'young women, old women, and women living in precarious housing in Haiti' (*Jacinthe v Canada (Citizenship and Immigration)*, [2019] FC 1558, 313 ACWS (3d) 808).

[46] Foster 2014 (n 42) 28.

[47] Netherlands, Vreemdelingencirculaire 2000 (Aliens Circular) art C.2.3.2 (Dutch Guidelines).

[48] The same Dutch Guidelines, ibid, that express this concern about women, address sexual orientation (art C.2.3.2) without any concern about social cohesion. See also Jenni Millbank, '"The Ring of Truth": A Case Study of Credibility Assessment in Particular Social Group Refugee Determinations' (2009) 21 IJRL 1. See also Laurie Berg and Jenni Millbank, 'Developing a Jurisprudence of Transgender Particular Social Group' in Thomas Spijkerboer (ed), *Fleeing Homophobia: Sexual Orientation, Gender Identity and Asylum* (Routledge 2013).

[49] See Dauvergne (n 31). This is the preferred approach in the Dutch Guidelines (n 47) art C.2.3.2.

explanation is that there is still widespread reluctance to view women's resistance to social and religious mores as political acts.

The grounds of race, religion, and nationality have not attracted sustained or high-profile gendered analyses. This is curious given that punishment for refusal to follow religious norms could certainly be interpreted as a risk of being persecuted on the basis of religion within the established jurisprudence. This evinces that decision-makers have worked to confine women's refugee claims to the particular social group category, which has been highly problematic for precisely those claims.[50]

5. Nexus

The issue of nexus within the refugee definition merits particular attention because many of the persistent issues in this jurisprudence have particular relevance to women's claims. The textual anchor for the nexus requirement is the 'for reasons of' clause within the definition, and this has led some decision-makers down the path of a complicated causation analysis, with all the attendant potential to draw on complex causation principles from other areas of the law. At its core, nexus in refugee law functions as a limiting principle: it ensures that not all those at risk of being persecuted fall within the definition, only those whose risk is discriminatory in a way that links directly to human rights principles.

The logic of limitation is, as we have seen above, central to refugee jurisprudence about women under both the categories of persecution and particular social group. In the analysis of nexus, where the limiting principle is most directly situated within the definition, this impetus has had its most extensive effects.

A straightforward recitation of the major struggles over the meaning of 'for reasons of' illustrates this well.[51] These include: the question of whether the risk is related to a single ground, or instead to two or more grounds that are interrelated; the question of whether the perpetrator and the victim share a common protected characteristic; the question of whether a person may be at risk on the basis of a defined ground even if not all persons sharing that ground are at risk; the question of whether a protected category needs to be a minority numerically; and the question of whether the persecutor must have a nefarious motive. Each of these issues has resonated through the jurisprudence spurred by women's claims. To understand how this is so, it is vital to keep in mind that while convoluted causation analyses do recur in lower level decision-making, the high-

[50] Foster asserts that the problem of importing other aspects of the refugee definition analysis into the parameters of particular social group is unique to gender claims. Foster 2014 (n 42) 28.

[51] I am borrowing from Hathaway and Foster's summary of these points to organize this overview, see Hathaway and Foster (n 9) 363–90. The topics they identify, which I do not consider to have had a special impact on women's cases, are the question of whether the individual has correctly identified the ground and the question of whether the claimant must actually possess the characteristic that a potential persecutor attributes to her.

est common law courts, UNHCR handbook, and some of the guidelines in the civil law sphere, have settled the question that the 'for reasons of' clause should be understood as a requirement that the protected characteristic (in this case, being a woman) explains (at least in part) the risk of being persecuted.[52] Also, the risk of being persecuted may be either because of State action or because of an absence of State protection, and thus the nexus requirement will be satisfied by a connection to either factor. With all this in mind, the ways in which women's claims have animated the sites of contestation become evident. The matter of one or many grounds of risk finds a home in assessments where women face risks because of their gender as well as their place within their family or their religious group. The 'common protected characteristic' issue has arisen again and again in FGM cases, where the practice in many locales is carried out by women. The lack of uniform risk criterion arises in analyses of State protection in questions of domestic violence and sexual violence. The floodgates problem appears endemic to women's claims.

The question of whether a perpetrator must have a nefarious and specific motivation deserves some distinct attention because the United States has taken a different direction than the rest of the world on this matter and does require proof of a potential persecutor's intention.[53] This is especially problematic for women who are, for example, at risk because of a State's inability to provide effective protection in matters of domestic violence or sexual assault. When specific motivation is required, inability or unwillingness often fails women when the analysis can focus on the ostensibly protective laws on the books.

Finally, the nexus criterion directly troubles the thorny question of defining a particular social group. The idea that the protected ground must somehow include only those who face a uniform risk appears to account for at least some of the very convoluted groups that recur in this jurisprudence. With nexus in the picture, interrelationships of the various aspects of the refugee definition come fully into focus. In order for a claimant to be successful, each aspect of the definition must be satisfied. The capacity for decision-making concerns (for example, a floodgates concern) to slip from risk of being persecuted, to State protection, to a group definition, to nexus, sometimes creates an ever-receding horizon for those seeking protection.

6. Exclusion

A brief note about exclusion under the provisions of article 1F is worthwhile because refugee exclusion is starkly gendered. The twenty-first century has seen a sharp uptick in the

[52] UNHCR (n 9) paras 66–7. *Ex parte Shah* (n 34) 652–4; *AC (Russia)* [2012] NZIPT 800151, para 77. Dutch Guidelines (n 47) art 2.1.

[53] Following the US Supreme Court's decision in *Immigration and Naturalization Service v Elias-Zacarias*, 502 US 478 (1992).

use of the Convention's exclusion clauses.[54] Although, yet again, a clear statistical portrayal is not available; the evidence that is available shows that these clauses are applied overwhelmingly to men.[55] The scant evidence is bolstered by the fact that this trend aligns with our stereotypical imagery of who is likely to be a terrorist, a serious criminal, or a war criminal. In other words, it is likely *both* that more men than women fit within the exclusion clauses *and* that, as is the case with well-founded fear, women are beneficiaries, in this aspect of refugee law, of stereotypes which portray them as victims lacking agency.

When Lindy and I began our research project in 2016, we could not locate a single article looking specifically at how women have fared under article 1F.[56] Our own conclusions called for serious attention to how these clauses are being applied to women, but it is fair to say that our work was not able to do more than call attention to the issue, and to substantiate that there were a number of important concerns apparent even on the surface.[57] Looking only at the Canadian jurisprudence, we found that gender appeared to account for some aspect of almost every single one of the 51 cases we were able to locate. Our two most astonishing findings were also sharply gendered. The first of these was that the single largest category of excluded women was those who were barred from refugee protection because they had taken their own children with them when fleeing. The second mind-boggling finding was that, of the five claims that were accepted despite an exclusion argument being raised, three of those claimants had committed some of the most serious crimes in the entire dataset: manslaughter, robbery, and sexual interference.[58]

While guidelines on gender-related persecution, or even on women in a more general sense, have little or nothing to say about article 1F, exclusion jurisprudence confirms that refugee law is problematically gendered even in areas where stereotyping generally serves women's claims.

7. Conclusions

Explaining why progress in refugee status jurisprudence about women has stalled is complex and important. In broad brushstrokes, there are three factors that have contributed.

[54] See Asha Kaushal and Catherine Dauvergne, 'The Growing Culture of Exclusion: Trends in Canadian Refugee Exclusions' (2011) 23 IJRL 54. See also James Simeon, 'Complicity and Culpability and the Exclusion of Terrorists From Convention Refugee Status Post-9/11' (2010) 29(4) RSQ 104; Obi Okafor, *Refugee Law After 9/11: Sanctuary and Security in Canada and the United States* (University of British Columbia Press 2020). See also Molly Joeck, 'Refugee Protection at the Edges: Exclusion for Serious Criminality in Canada Since Febles' (LLM thesis, University of British Columbia 2018).

[55] Catherine Dauvergne and Hannah Lindy, 'Excluding Women' (2019) 31 IJRL 1.

[56] Since that time, see Katherine Shelley, 'The Exclusion Trap for Women Refugee Claimants Who Escape Domestic Violence with Children' (2019) 55 Osgoode Hall Law Journal 756.

[57] Dauvergne and Lindy (n 55)26–9.

[58] ibid 9–11, 18, 28.

Certainly, one part of the explanation lies in the fact that refugee determinations are made every single day somewhere in the world. The majority of these first instance decisions are made by decision-makers who do not have legal training, who have comparatively little refugee law-specific training (two weeks is considered utterly extravagant), and who work in pressure-filled situations facing high volumes and short timelines. A further factor is that oversight of first instance decisions is scant and decision-makers have independence. These two factors tend to have an inverse relationship: in prosperous Western countries where more extensive oversight of first instance decision-makers is possible, those on the frontlines tend to have more institutionally protected independence; in cases where decision-makers have less training and less role-based protection, the situations are often much more overwhelming, and oversight is simply impossible. This constellation of factors means that while apex courts and government policy makers have resolved a significant number of the problematic issues in ways that are supportive of women's protection needs, these directions often do not 'trickle down' to where they matter most. A crystalline example of this is provided by Arbaoui's analysis of claims based on risk of forced marriage.[59] Even though forced marriage claims ought to be among the simplest facts to analyse because of the myriad human rights instruments that address the topic, and because State protection is almost universally ineffective, these claims continue to be routinely rejected, very often by decision-makers who seem not to understand the facts.

A second aspect of the explanation is found in key features of the jurisprudence. The two most important of these are the acceptance early on of a variety of fragmented and incoherent 'particular social groups' and the effects that stereotyping has had, especially in the areas of 'well-founded fear' and exclusion. Early advocacy efforts about women in refugee law did devote considerable time to asserting that a ground such as 'gender' or even 'sex' ought to be added to the refugee definition itself. This pursuit was countered by those who felt, quite likely correctly, that asking States to open up the Refugee Convention was simply not worth the risk that it might cause a serious erosion in protection.

Accepting convoluted particular social groups, and failing to challenge the serious gendered stereotypes imbedded in the law, were not bad ideas. Indeed, they were approaches that provided protection to women all over the world. And a successful challenge to either of these ideas may not have been possible. Still, with hindsight we can observe how these directions have created a problematic legacy. The failure to firmly and fully settle the idea that 'women' are a particular social group has not only kept this question perpetually alive, it has also engendered jurisprudential gymnastics that continue to overflow into analyses of State protection and nexus. If gender were a category like religion or political opinion, much of this could be curtailed. It may also have limited the need to make the most of the protective umbrella that is created by stereotyping women as victims. A clear statement that women are in fact recognized *ab initio* as a category of potential victims, would have created a space in which it would not have posed so many

[59] Arbaoui (n 21).

jurisprudential risks to argue overtly against discursive victimization. It would have been ever so slightly more possible to advocate for women on the basis of equality.

The idea of a jurisprudential difference of this sort is, of course, a complete fantasy. Not least because refugee jurisprudence relies very heavily on inequality at its core. But reflecting on what this dream might look like is useful because it provides the basis for understanding what is going on in this jurisprudence, as well as what is at stake in pursuing a change.

The third factor that helps to understand the stagnancy is found in the overlapping terrain of advocacy and scholarship. For those of us who have been working, and arguing, in this space since the outset, it is not insignificant that the scholarly terrain has changed very little. This is empirically observable, with the exception of some wholly new topics like witchcraft and exclusions (which have in common that they deal with very small numbers of cases), the topics that scholars are writing about in the second decade of the twenty-first century are largely not new. In the corridors of the ivory tower, this work, therefore, risks being labelled unoriginal and therefore not publishable or, if publishable, not important, and not career advancing. It is no wonder that scholars move on to other things. A further and more intangible factor is that scholars have the privilege of pursuing intellectual challenges. The challenge here is significant, but no longer intellectually novel.

The advocacy side of the equation is more nuanced and more dire. Advocates (or scholars with their advocacy hats on), are much less likely to put aside an important issue because there are no new ideas left. But advocates are faced with a vastly altered terrain for refugee law over the past quarter-century. There are so many battles to be fought. Refugee law is surrounded by securitization and populism, both of which are growing unchecked. These forces have brought myriad challenges to refugee law, and it has required renewed and sustained advocacy in most Western liberal democracies simply to preserve the core commitments of refugee law. These commitments have lost ground in Western States. Any number of issues have rivalled protecting women as priorities for refugee advocates, even before 2015 arrived and the crisis in global asylum seeking increased so dramatically that the word crisis fails to capture it.

Lastly, the alchemy of the liminal space deserves comment. It is not a case of ancient magic to remark that the most generative growth in refugee jurisprudence occurs at its edges; this phenomenon is both logical and easy to see. When the challenge of bringing women within refugee jurisprudence was new, changes occurred at a steady pace. Where alchemy comes in is when we try to understand how to preserve the edgy-ness. The newer challenge of protecting LGBTIQ+ claimants—women and men and non-binary persons—has generated much more that is new in the past decade than any work about women. It is instructive in this regard that most countries have not refreshed their guidelines on women or on gender-related persecution in the past 10 years, and that notable exceptions (Norway in 2012 and Australia in 2015) appear to have been undertaken in part to address specifics related to LGBTIQ+ claims. But similar expansion has not taken place with regard to transgendered individuals, or to tackle issues like witchcraft. Furthermore, neither of these two areas seems to be just around the corner for policymakers or decision-makers. Most would assume that transgendered people are 'taken care of' (isn't that what T means?) by precedents addressed to sexual orientation. And witchcraft, surely that's infinitesimally irrelevant?

I would argue that both of these responses amount to failure of imagination. They also mirror very closely the response of anonymous reviewers to the first research grant application that Millbank and I submitted to develop a database study of refugee claims by lesbians and gay men in the late 1990s. Predicting where the next generative liminal space will emerge requires alchemy.

Attempting to explain why progress for women within refugee jurisprudence has stalled produces some useful insights. It is less clear whether any of these could constitute steps towards renewing the promising trajectory of the 1990s. Rather, I hope that there is some value in stating clearly and at some length that the work here is not yet done.

CHAPTER 41

REFUGEE CHILDREN

JASON POBJOY*

1. Introduction

In 2019, the recorded global refugee population was 26 million people,[1] of whom approximately half were children.[2] This included more than 150,000 unaccompanied and separated refugee children.[3] These are chilling statistics. There are approximately 13 million children who have been compelled to flee their home country, search for protection, and navigate administrative and legal processes that are oriented towards adults. Most children who flee will spend most, if not all, of their childhood away from their original home. Once they have fled, they face further rights violations.[4] In the past two years, refugee children have been separated from their families at the United States border,[5] and arbitrarily detained and deprived of medical care in Australia's offshore processing facilities.[6] It is estimated that more than half of the world's school-age refugee children do not get an education,[7] and millions are exposed to preventable and

infectious diseases in overcrowded camps, reception centres, and poor quality accommodation.[8]

International law affords all refugee children special protection, under both the Refugee Convention and, of particular significance, the Convention on the Rights of the Child (CRC). The CRC recognizes children as independent rights-bearers, entitled to a comprehensive set of civil, political, social, economic, and cultural rights that are designed to cater for their specific needs. The rights set out under the CRC apply to all children, wherever they find themselves, without discrimination. Evidently there is a significant protection gap. This chapter briefly traces the development of international law relating to refugees and to children, before addressing six key issues: first, the notion of childhood and the difficulties in proving age; secondly, the application of the refugee definition to children; thirdly, the extent to which the CRC is capable of affording independent and more appropriate forms of protection status for children; fourthly, a refugee child's entitlement to appropriate protection and humanitarian assistance (article 22 of the CRC); fifthly, the availability of durable solutions; and finally, family reunification. The chapter concludes with some brief observations on the need for future research and scholarship.

2. The International Legal Framework

A refugee child's entitlement to special care and protection has long been a feature of international law. It has been repeatedly affirmed by the UN General Assembly, the UN Committee on the Rights of the Child (UNCRC), and UNHCR.[9]

The Refugee Convention is age-neutral, and remarkably contains no express reference to, or provision for, refugee children.[10] However, the need to prioritize the special protection needs of children is reflected in the summary of conference proceedings appended to the Refugee Convention, which provides for '[t]he protection of refugees who are minors, in particular unaccompanied children and girls, with special reference to guardianship and adoption'.[11]

The CRC was the first international instrument to set out the full range of civil, political, social, economic, and cultural rights specifically applicable to children. It is the

[9] For details, see Jason Pobjoy, *The Child in International Refugee Law* (CUP 2017) 14–15.

[10] The only specific references to children in the Refugee Convention are in article 4 (which accords to refugees 'freedom as regards the religious education of their children') and article 17(2)(c) (which concerns the effect on an adult refugee's right to employment where he or she 'has one or more children possessing the nationality of the country of residence').

[11] Final Act of the United Nations Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons (25 July 1951) UN doc A/CONF.2/108/Rev.1, Pt IV.

most widely ratified human rights treaty, with the US being the only country not to have ratified it (although it has signed it). It applies to 'each child within [a States party's] jurisdiction' and prohibits any discrimination 'irrespective of the child's or his or her parent's or legal guardian's . . . birth or other status.'[12] During its drafting, the drafters repeatedly acknowledged the special protection needs of children. Although the first draft contained no express provision relating to refugee children, in 1981 the Danish delegate proposed such a provision, resulting in the inclusion of what is now article 22. Article 22(1) provides that refugee children and children seeking refugee status, whether accompanied or unaccompanied, must 'receive appropriate protection and humanitarian assistance in the enjoyment of applicable rights set forth in the present Convention and in other international human rights or humanitarian instruments to which the said States are Parties.'

UNHCR has consistently drawn on the CRC as a guide for its policies and practices. Its 1993 policy on refugee children characterized the CRC as 'a comprehensive framework' both for its States parties and as 'a normative frame of reference to UNHCR's action.'[13] UNHCR's Executive Committee has repeatedly affirmed its 'fundamental importance', calling upon UNHCR 'to continue to integrate fully the rights of the child into its policies and programmes'.[14] UNHCR's 2009 guidelines on child asylum claims emphasize that the substantive and procedural aspects of the assessment of a child's application for refugee status should be informed by the CRC.[15] The UNCRC has also issued a relevant General Comment which makes similar points.[16]

3. A Threshold Question: Who Is a 'Child'?

Prior to considering the issues relating to refugee children, there is a threshold question as to who is to be treated as a 'child'. Article 1 of the CRC defines a child as 'every human being below the age of eighteen years unless under the law applicable to the child, major-

[12] CRC, art 2(1).

ity is attained earlier.'[17] This explicit age-based definition gives rise to two issues. The first is whether 18 years will always be an appropriate cut-off point. Although there are benefits in having a clear rule, there will be certain circumstances where flexibility is necessary. So, for instance, decision-makers have acknowledged the dangers of drawing inflexible distinctions when defining age-based grounds for a 'particular social group'. As the England and Wales Court of Appeal has observed, 'persecution is not respective of birthdays' and 'there is no temporal bright line across which the risks to and the needs of the child suddenly disappear'.[18] Similarly, an assessment of what is in a child's best interests must consider the long-term effects that a decision may have, beyond the child's 18th birthday. The need for a forward-looking examination is impossible to reconcile with the approach adopted by some States, including the United Kingdom, of granting children temporary protection solely for the duration of childhood. Such an approach gives rise to an enforced state of limbo, requiring children to live with a constant fear that they will be removed as soon as they reach adulthood.

A second issue relates to the well-documented 'culture of disbelief' that has developed in the context of assessing a child's age.[19] As a consequence of the additional rights that may apply to children, a number of States have implemented particularly draconian age-assessment practices and have made attempts to delay the child's application processes, such that they attain the age of 18 prior to any protection decision being taken (referred to as 'ageing out'). Although an age assessment may be appropriate in certain circumstances, it is imperative that any such assessment is compatible with the rights set out under the CRC, including, in particular, articles 3 and 22. As UNHCR has observed, an age assessment must: be conducted in a safe, child- and gender-sensitive manner with due respect for human dignity;[20] form part of a comprehensive assessment that considers both physical and psychological maturity;[21] and take into account the child's ethnic and cultural background.[22] Children must be given clear information about the purpose and process of the age assessment procedure in a language they understand, and a qualified independent guardian must be appointed to advise the child.[23] In addition, age assessments should never be used as a matter of routine,[24] and individuals claiming to be under the age of 18 should be regarded as children and benefit from the rights of a child 'unless this would be clearly unreasonable.'[25] Where doubt remains regarding a child's age, an applicant must always be given a liberal benefit of the doubt

and assumed to be a child.[26] Any policy or practice which allows for and/or encourages 'ageing out' will infringe articles 3 and 22 of the CRC.

4. The Application of the Refugee Definition to Children

In order to be a refugee for the purposes of the Refugee Convention, a child must satisfy each element of the refugee definition set out in article 1A(2). There are no exceptions or qualifications that apply to children. Like adults, children must demonstrate that they are outside their country of origin, and have a well-founded fear of being persecuted which is causally connected to one of the five enumerated forms of civil or political status: race, religion, political opinion, nationality, or membership of a particular social group. Refugee status will not be available if they can re-avail themselves of protection in their home State, if they have secured durable protection elsewhere, or if they have committed a crime that excludes them from refugee protection. There is a significant body of jurisprudence addressing each of these elements, particularly in the Global North.[27]

The refugee definition has traditionally been interpreted in an adult-focused way. More recently, and in part because of the arrival of increasing numbers of unaccompanied refugee children in host States, decision-makers have started to focus greater attention on the specific needs and vulnerabilities of children. The discussion that follows is a very brief overview of some of the key issues that may arise in determining a child's claim for refugee status under the Refugee Convention, or under the comparable regional regimes that adopt similar definitions.[28]

An important limit in the Refugee Convention is that a child must be outside his or her country of origin in order to be considered a refugee. This excludes internally displaced children. This is to be contrasted to article 23(4) of the African Charter on the Rights and Welfare of the Child, which provides that the protections afforded to refugee children or children seeking refugee status apply 'mutatis mutandis to internally displaced children whether through natural disaster, internal armed conflicts, civil strife, breakdown of economic and social order or howsoever caused'.[29]

In order to satisfy the well-founded fear requirement, an applicant must demonstrate both subjective fear and an objective forward-looking risk of being persecuted. The requirement to prove subjective fear can be particularly problematic for children, who

[26] GC6 (n 16) para (31)(i).

[27] For a comprehensive overview, see James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014); and Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007).

[28] The summary that follows is based in part on Jason Pobjoy, 'Article 22: Refugee Children' in Tobin (n 17) 825–32.

[29] African Charter on the Rights and Welfare of the Child (adopted 11 July 1990, entered into force 29 November 1999) OAU doc CAB/LEG/24.9.49, art 23(4).

may be unable to articulate or even apprehend a future risk of harm. If the child is unable to do so, a strict insistence on the demonstration of subjective fear may mean that a child's refugee claim will be rejected even though there is an objective risk of harm. In order to avoid this, decision-makers have developed a variety of strategies to circumvent the Refugee Convention's purported insistence on evidence of subjective fear. The first is to impute fear from the child's parent: '[w]hen the parent or caregiver of a child has a well-founded fear of persecution for their child, it may be assumed that the child has such a fear, even if s/he does not express or feel that fear.'[30] The second is to dispense with the subjective requirement altogether in cases involving children: where 'a child is unable to express fear when this would be expected or, conversely, exaggerates the fear . . . decision makers must make an objective assessment of the risk that the child would face'.[31]

A child will be a refugee only if he or she is at risk of a form of harm that satisfies the 'being persecuted' threshold. The phrase 'being persecuted' is undefined in the Refugee Convention, but it is widely understood as requiring evidence of the 'sustained or systemic violation of basic human rights demonstrative of a failure of State protection'.[32] Many children will be threatened with a form of persecutory harm that is similar or identical to that faced by adults: for instance, a risk of death, torture, cruel, inhuman or degrading treatment, kidnapping, rape, or other forms of sexual assault. However, there are cases where the individual's status as a child will be critical. First, there are cases where the nature of the persecutory harm is such that it can only be inflicted on children, such as infanticide, underage military recruitment, forced child labour, forced underage marriage, child pornography, domestic child abuse, child prostitution, corporal punishment, deprivation of a primary education, and separation from a parent. Secondly, there are cases where the objective underlying risk is similar or identical for an adult and a child, but by reason of a child's heightened sensitivity and developmental needs, the child will suffer a greater degree of harm. In such cases, the applicable standard remains the same ('being persecuted'), but that standard may be more easily satisfied in claims involving children.

The CRC has a particularly important role to play in identifying those forms of harm that satisfy the persecutory threshold in claims involving children.[33] The rights protected under the CRC are tailored to take into account the reality that children experience harms in different ways from adults. The CRC thus provides a principled means for adapting the persecutory threshold to take into account a child's heightened sensitivities and distinct developmental needs. As the Federal Court of Canada has stated:

> If the CRC recognizes that children have human rights and that 'persecution' amounts to the denial of basic human rights, then if a child's rights under the CRC are violated in a sustained or systemic manner demonstrative of a failure of state protection, that child may qualify for refugee status.[34]

[30] 2009 Guidelines (n 15) para 11. See eg *Chen Shi Hai v MIMA* (2000) 201 CLR 293, para 4.

[31] 2009 Guidelines (n 15) para 11. See also GC6 (n 16) para 66.

[32] James C Hathaway, *The Law of Refugee Status* (Butterworths 1991) 104–5. For an overview of the widespread endorsement of this definition, see Hathaway and Foster (n 27) 185, 196–7.

[33] See generally Pobjoy (n 9) 101–56.

[34] *Kim v Canada (Minister of Citizenship and Immigration)* [2011] 2 FCR 448, paras 51, 74.

Both the UNCRC and UNHCR have also issued guidance that promotes interaction between the 'being persecuted' element of the refugee definition and the CRC. In its 2009 Guidelines, UNHCR made clear that '[i]n determining the persecutory character of an act inflicted against a child, it is essential to analyse the standards of the CRC and other relevant international human rights instruments applicable to children.'[35]

In assessing whether the 'being persecuted' standard has been met, it is also necessary to consider the availability of State protection. It is well-established in the case law that there can be a failure of State protection even where the risk emanates from a private actor, provided that there is evidence that the State will not or cannot respond to the risk. This is particularly important in claims involving children, where the agent of persecution will frequently be a non-State actor.[36] It will generally be inappropriate for a decision-maker to draw an inference about the availability of State protection from the fact that a child has not previously sought protection from State authorities.[37] A child cannot be expected to approach the State for protection if it would be impractical, futile, or otherwise unreasonable for them to do so.[38] Finally, in assessing whether a child has an internal protection alternative in her country of origin, a decision-maker must have regard to the child's age, and, in particular, to whether relocation would be in the child's best interests.[39]

A child must also demonstrate that the risk of 'being persecuted' arises 'for reasons of' at least one of the five enumerated grounds in the Refugee Convention. Three of the grounds have given rise to particular issues for children: political opinion, religion, and membership of a particular social group. While there has been a tendency for decision-makers to treat children as incapable of expressing political views or engaging in political activity,[40] the reality is that children can be politically active and targeted because of that activity.[41] An interesting recent development in the US has been the increased reliance on the 'political opinion' ground in claims brought by children who have resisted gang recruitment in their home country.[42] Regarding religion, a child may be at risk of being persecuted not only because of what the child believes, but also because of what the child does *not* believe. So, for instance, a child may be at risk because he or she has refused to engage in mandated religious education, undergo traditional religious prac-

tice, or submit to other religion-inspired restrictions or demands.[43] Membership of a particular social group has proven the most significant, but also the most challenging, ground for children.[44] Decision-makers have recognized particular social groups defined in whole or in part by a child's age. The most straightforward route is to define the group exclusively by reference to a child's age. In Canada, for instance, decision-makers have recognized 'children',[45] 'minors',[46] and 'minor children'[47] as particular social groups. The second, more common method is to define the group by reference to the child's age plus some other characteristic (such as 'unaccompanied children', 'orphaned children', 'abandoned children', 'girl children', 'children with a disability', 'hei haizi',[48] 'gay, bisexual, and transgender children', and 'children resistant to gang-recruitment'). This approach is appropriate where it is an intersection of factors, including the child's age, that explains the reasons why the child will be exposed to a risk of being persecuted if returned to his or her country of origin.[49]

The exclusion clauses in article 1F of the Refugee Convention also apply to children, but can only do so where a child has reached the age of criminal responsibility.[50] For children over the minimum age, 'the emotional, mental and intellectual maturity of any child ... would need to be evaluated to determine whether s/he had the mental capacity to be held responsible for a crime within the scope of Article 1F.'[51]

Article 12 of the CRC has a particularly important role to play in the refugee status determination process, mandating that children have a right to be heard in 'any judicial and administrative proceedings affecting [them]'.[52] This provides a principled basis for enhancing the visibility of children in the refugee status determination process, particularly for accompanied children who are very often subsumed into a parent's claim without any independent assessment of their particular circumstances. UNHCR guidelines

[47] See eg *T93-09636, T93-09638 and T93-09639* (IRB, 26 January 1994) 9. A similar approach can be seen in New Zealand: *Refugee Appeal Nos 76494 and 76495* (RSAA, 23 November 2010) para 76.

[48] This means 'black child' and refers to children born outside of China's former One Child policy, or more generally to children who are not registered in the national household registration system.

[49] A child may also be at risk because of his or her family membership; for instance, because his or her family is at risk of being targeted by external forces because of the status or activities of a family member, or, increasingly, where the risk derives from inside the family itself (eg cases of domestic violence). Decision-makers have had no difficulty in finding that the family constitutes a particular social group: Hathaway and Foster (n 27) 445–9.

[50] Article 40 of the CRC requires States to set a minimum age of criminal responsibility, although there is no universal minimum age.

[51] 2009 Guidelines (n 15) para 61; UNHCR, 'Background Note on the Application of the Exclusion Clauses: Article 1F of the 1951 Convention relating to the Status of Refugees' (4 September 2003) para 91. [52] CRC, art 12(2).

state that in any decision regarding refugee status, children should be afforded a *liberal* benefit of the doubt.[53] What does this mean in practical terms? If a child presents a claim that is, taking into account the child's age and developmental capacities, 'on balance, capable of being believed',[54] this should be sufficient for the purposes of establishing refugee status.

5. The CRC as a Source of Protection Status

There have been calls in recent years to rethink the way that one assesses whether a child is entitled to protection in a host country. Goodwin-Gill has convincingly argued that no 'useful purpose is served by forcing the child asylum seeker through the process of refugee status determination, or by requiring the child... to show that he or she has a well-founded fear of persecution', arguing instead that the best interests principle codified in article 3 of the CRC provides a more appropriate basis for assessing the protection needs of children.[55] This section examines two such child-specific forms of protection. The first is the child-specific *non-refoulement* obligation that is implicit in (at least) articles 6, 37, and 38 of the CRC. The second is article 3 of the CRC, which requires that 'in all actions concerning children... the best interests of the child shall be a primary consideration.'

The UNCRC has stated that a child must not be returned to his or her country of origin where there are 'substantial grounds for believing that there is a real risk of irreparable harm to the child'.[56] Although the Committee has not provided an exhaustive definition of what constitutes 'irreparable harm', it has stated that the concept includes the harms contemplated under articles 6 (right to life, survival, and development), 37 (right to liberty and freedom from torture and cruel, inhuman or degrading treatment), and 38 (underage military recruitment) of the CRC.[57] These child-specific *non-refoulement* obligations cast a wider net than the *non-refoulement* provisions under other general human rights treaties, such as the ICCPR and CAT.[58] In the same way that

[56] GC6 (n 16) para 27. Similar to the ICCPR, this derives from a State's obligation to 'respect and ensure the rights set forth in the [CRC]': CRC, art 2(1).

[57] GC6 (n 16) paras 27–8.

[58] See Chapter 36 in this volume; Başak Çali, Cathryn Costello, and Stewart Cunningham, 'Hard Protection through Soft Courts? *Non-Refoulement* before the United Nations Treaty Bodies' (2020) 21 German Law Journal 355.

the Refugee Convention must be interpreted and applied to take into account the specific circumstances of refugee children, so, too, must the *non-refoulement* obligations take into account the reality that children may be at risk of irreparable harm in a wider range of circumstances than adults.

There is also a compelling argument that the best interests principle enshrined in article 3 of the CRC may preclude the removal of a child to her country of origin, notwithstanding the fact that the child is not eligible for protection under the Refugee Convention or any of the more traditional *non-refoulement* obligations, including those noted above.[59] In this regard, article 3 has the potential to create a new category of protected children whose claims will need to be assessed and evaluated by domestic decision-makers. The starting point for the inquiry is whether the removal of a child is in the child's best interests. If removal is contrary to the child's best interests, there will be a strong presumption against removing the child, subject only to a tightly circumscribed range of considerations.[60] The argument that article 3 provides an independent basis for international protection has both academic[61] and institutional[62] support, and the provision is playing an increasingly central role in domestic jurisprudence concerning the removal of children and/or their parents.[63]

The best interests principle has had a key role in UNHCR's operations for well over a decade, particularly in countries in the Global South. In 2008, UNHCR published its first guidelines on determining the best interests of the child, which were subsequently revised in 2018.[64] The guidelines set out processes designed to identify what is in the best interests of refugee children and other at-risk children, including a 'Best Interests Determination', which, according to the 2018 guidelines, will be required in 'situations where a decision is likely to have far-reaching implications for the child', and is 'based on standards and procedural safeguards that include the child's meaningful participation, involvement of persons with different backgrounds and relevant expertise, the system-

[60] GC6 (n 16) para 86. The UNCRC has suggested that, in exceptional circumstances, other considerations may override the best interests of the child; it stresses, however, that '[n]on-rights-based arguments such as those relating to general migration control, cannot override best interests considerations' (para 86). However, as this writer has argued elsewhere, such a strict interpretation does not sit comfortably with the language of article 3, which places no limitation on the range of interests that may be taken into account and balanced against the best interests of a child. For full discussion see Pobjoy (n 59).

[61] See in particular Jane McAdam, *Complementary Protection in International Refugee Law* (OUP 2007) 173–96; Guy S Goodwin-Gill, 'Unaccompanied Refugee Minors: The Role and Place of International Law in the Pursuit of Durable Solutions' (1995) 3 International Journal of Children's Rights 405; Goodwin-Gill (n 55).

[62] See in particular GC6 (n 16) para 84, which states that '[r]eturn to the country of origin shall in principle only be arranged if such return is in the best interests of the child'. See also paras 85–8.

atic documentation of the case, and a collaborative follow-up process that is underpinned by child protection principles.'[65]

The best interests principle is, however, not without controversy. A key concern relates to the potential indeterminacy of the concept. In this regard, it has been suggested that such imprecision gives rise to a risk that the principle will be used as 'an alibi for individual arbitrariness'[66] or may become 'an empty rhetorical vessel into which subjective preferences or political agendas may be poured.'[67] This criticism is premised on an interpretation of article 3 that fails to take into account the balance of the treaty. As the international rules of treaty interpretation make clear, article 3 must be read within the context of the CRC as a whole, including each of the rights protected therein.[68] These rights inject substantive content into article 3, and provide a critical bulwark against the risk of such arbitrariness and/or subjectivity.[69] Moreover, to the extent that there is flexibility in the concept, this is a virtue rather than a vice. A best interests assessment must take place on a case-by-case-basis, taking into account the specific circumstances of the individual child.[70] As noted by Justice McLachlin of the Supreme Court of Canada, '[a] more precise test would risk sacrificing the child's best interests to expediency and certainty.'[71]

The role of the CRC in the refugee context is likely to increase in light of the introduction of an individual complaints mechanism.[72] A significant number of the communications to date have concerned child migration issues. By way of illustration, the case of *DD v Spain*[73] concerned a child who had fled Mali because of the armed conflict, and had attempted to cross the border fence between Morocco and the Spanish enclave of Melilla. He was apprehended and immediately sent back to Morocco. The child alleged that his return violated his rights under the CRC because Spain had failed to provide him with the special protection and assistance to which he was entitled as an unaccompanied minor (article 20), failed to respect the principle of *non-refoulement* (article 37), and failed to consider his best interests (article 3). All of these complaints were upheld by the UNCRC. The Committee noted that before returning the child to Morocco, Spain 'did not ascertain his identity, did not ask about his personal circumstances and did not conduct a prior assessment of risk, if any, of persecution and/or irreparable harm in the

country to which he was returned.'[74] It considered that 'the failure to assess the risk of irreparable harm to the author prior to his deportation or to take into account his best interests constitutes a violation of Articles 3 and 37 of the Convention.'[75]

6. Appropriate Protection and Humanitarian Assistance

The entitlement to refugee status or some other independent form of protection status is a critical issue for children seeking international protection. However, equally important is the treatment of the child in the host State, both during and after any assessment process. A child is entitled to the full range of rights afforded under the CRC while he or she remains in the host State. This includes children who are ineligible for refugee status and/or a complementary or independent form of international protection. In this scenario, the child remains entitled to the protections afforded under the CRC, and those rights must also be protected throughout the process of return.[76]

Although a displaced child is entitled to all of the rights in the CRC, article 22 of the CRC is particularly relevant.[77] It is the only provision in any international human rights treaty that deals expressly with the situation of refugee children.[78] Article 22 is often mischaracterized as limited to guaranteeing refugee children and children seeking refugee status access to CRC rights on a non-discriminatory basis. In fact, article 22 extends beyond this (which is, in any event, guaranteed by CRC, article 2), and imposes an obligation on States to take into account any additional protection and humanitarian assistance that a refugee child or a child seeking refugee status may require in order to effectively enjoy those rights. This 'rights-plus framework' gives expression to the longstanding recognition, addressed above, that refugee children are entitled to special protection. So, for instance, additional measures may be required in order to secure a refugee child's access to education, including, for example, the allocation of 'the necessary financial, technical and human resources to provide special language programmes for refugee or asylum-seeking children to prepare them for full-entry into the general educational system of the country.'[79] In addition, it may require the provision of 'supplementary assistance to refugee children according to Individual Education Plans, in order to prevent early dropout and meet specific education needs.'[80]

[75] ibid. For a further example, see eg *IAM (on behalf of KYM) v Denmark*, UN doc CRC/C/77/D/3/2016 (25 January 2018) (return of child to Somalia where return would expose her to a risk of subjection to female genital cutting in violation of articles 3 and 19 of the CRC).

[76] GC6 (n 16) para 87.

[77] See generally Pobjoy (n 28) 818.

[78] At a regional level, the African Charter on the Rights and Welfare of the Child contains a similar provision: see text to (n 29).

[79] UNCRC, 'Concluding Observations: Czech Republic' (17 June 2011) UN doc CRC/C/CZE/CO/3–4, para 66.

[80] ibid. See also UNHCR, *Refugee Children* (n 13) 190–9.

All rights under the CRC are pertinent to refugee children and children seeking refugee status, but for reasons of space, this chapter focuses on the four general principles embodied in the CRC: non-discrimination (article 2); participation (article 12); the best interests principle (article 3); and the right to life, survival, and development (article 6).[81] Although by no means comprehensive, it provides an illustration of the significance of the rights-based framework provided for under the CRC to the refugee child's experience.

Article 2 of the CRC contains an obligation on States to respect and ensure the rights protected under the CRC to each child within their jurisdiction without discrimination of any kind.[82] The application of non-discrimination norms does not mean that everyone should be treated equally: there may be specific groups of children who, because of their specific needs or circumstances, require special measures to be taken in order to ensure that they can effectively exercise their rights.[83] Article 22 of the CRC identifies refugee children as one of these groups.

Article 12 of the CRC provides that States 'shall assure to the child who is capable of forming his or her own views the right to express those views freely in all matters affecting the child, the views of the child being given due weight in accordance with the age and maturity of the child.' In order to determine the 'appropriate measures' to be adopted for beneficiaries of article 22, and the content of any 'appropriate protection and humanitarian assistance', States must elicit and take into account the views of the child.

Article 3 of the CRC mandates that the best interests of the child shall be a primary consideration in all actions concerning children. The UNCRC has emphasized that it is critical 'during all stages of the displacement cycle.'[84] It will inform both the 'appropriate measures' required of a State, as well as the content of the 'appropriate protection and humanitarian assistance' to which a refugee child or child seeking refugee status is entitled. There are three factors that must be taken into account in assessing the best interests of the child: first, the views of the child; secondly, the specific situation and circumstances of the child, including the child's age, level of maturity, and any particular vulnerabilities or special needs the child may have (including whether the child is unaccompanied or separated from their parents); and thirdly, the extensive catalogue of rights protected under the CRC.

Article 6 protects a child's inherent right to life and places an obligation on States to ensure to the maximum extent possible the survival and development of the child. Importantly, article 6(2) extends the right beyond traditional conceptions of the right to life, and incorporates a positive duty to ensure the survival and development of the child. In defining the scope of article 6(2), reference should be had to other rights in the

[81] See UNCRC, 'General Comment No 5 (2003): General Measures of Implementation of the Convention on the Rights of the Child (Articles 4, 42 and 44(5))', UN doc CRC/GC/2003/5 (2003) para 12 (GC5).

[82] See also GC6 (n 16) para 18.

[83] In addition to the discussion on article 22, see more generally GC5 (n 81) para 12.

[84] GC6 (n 16) para 19.

CRC, including the rights to education (article 28), the highest attainable standard of health (article 24), and an adequate standard of living (article 27). All of these rights are particularly relevant to refugee children and children seeking refugee status, who are often susceptible to heightened risks to their rights to life, survival, and development. This is particularly so for children who find themselves in refugee camps, or children living in urban environments without a parent or guardian.

7. Durable Solutions

The identification and implementation of a durable solution is particularly important in the context of refugee children. Children only get one opportunity to experience their childhood: there are no second chances. The search for a durable solution must therefore commence immediately. There is no single point in time when a displaced child 'suddenly becomes ready for a durable solution'; to the contrary, 'as the child will not postpone his or her growth or development . . . the need to implement elements of a durable solution is immediate'.[85] The absence of a timely and durable solution 'can result in increased protection risks for children and youth'.[86] As a result, the identification of a durable solution should be pursued '*whilst* subject to or going through immigration and asylum procedures'.[87]

The durable solution itself should address all of a child's protection needs (including the full range of rights protected under the CRC, both at present and into the future), having regard to the child's best interests, and taking into account the child's views.[88] A child should, to the greatest extent possible, have 'accurate information concerning their present situation, rights and responsibilities and possibilities'.[89] The solution must take into account a child's shorter- and long-term developmental needs, including those effects that may be felt after a child has reached his or her 18th birthday.[90] Where a child is unaccompanied or separated, the UNCRC has made clear that a rights-based approach requires that the search for a durable solution commence with 'analysing the possibility of family reunification.'[91] In the majority of cases involving unaccompanied or separated children, if the child's family can be located, then the child's best interests will generally be best served by reuniting the child with his or her family. However, the principle of family unity is not absolute, and family reunification will not provide a trump card where removal is contrary to the child's best interests. A consideration of

[91] GC6 (n 16) para 79.

durable solutions will generally be more complex in cases involving children accompanied by their parents. In this context, it is imperative that individual consideration is given to the independent needs of the child.

8. Family Reunification

The separation of a child from his or her family can have debilitating effects on the child's physical and emotional well-being and may seriously impede the child's development.[92] Family reunification is thus a key issue for refugee children who have been separated from their family in the course of displacement. There are various international and regional instruments relevant to the issue,[93] but the most significant is article 10(1) of the CRC, the first provision in an international human rights treaty to deal expressly with family reunification.[94]

Article 10(1) imposes an obligation on States to deal with applications to enter or leave their territories for the purpose of family reunification, and requires that these applications be dealt with in a 'positive, humane and expeditious manner'. While the rights to leave any country and to enter one's own country were already guaranteed under international human rights law, article 10(1) went a step further, conferring an express right to apply to enter a country other than one's own for the purpose of family reunification. Article 10(1) contains an unqualified right to make an application; hence, jurisdictions which have a blanket prohibition on family reunification for refugee children will infringe the provision.[95] Although article 10(1) does not mandate that a State must approve applications for family reunification, it does require that any application must be dealt with in a positive, humane, and expeditious manner, and must be determined in accordance with the obligations contained under articles 3 and 9(1) of the CRC. In these circumstances, it has been suggested that article 10(1) gives rise to a presumption in favour of approval, with a State that wishes to refuse an application bearing the burden of demonstrating why the refusal is justified, having regard, in particular, to the best interests principle under article 3, and the principle of non-separation under article 9(1).[96]

9. Conclusions

The CRC was a critical milestone in securing rights for children generally, and refugee children specifically. Since then, there has been recognition at the international and domestic levels that refugee children are entitled to the full protection afforded by both the CRC and the Refugee Convention. The influence of the CRC is evident from the Global Compact on Refugees, which embraces the concept of children's rights, including, in particular, the concept of the best interests of the child.[97] The role and influence of the CRC in this area is only likely to increase as a result of the introduction of a complaint mechanism for violations of the CRC.

In circumstances where there is now widespread acceptance that the CRC has an important role to play in securing the protection needs of refugee children, further research is required to better understand the scope of that protection, and, in particular, the interaction between international refugee law and international law on the rights of the child. Does the Refugee Convention remain the appropriate starting point for addressing the protection needs of refugee children, or does the CRC provide a more appropriate framework for protection? To what extent, and in what circumstances, might the best interests principle provide an independent source of protection for children seeking international protection? What is the scope of a State's obligation to ensure appropriate protection and humanitarian assistance under article 22 of the CRC? What is the scope and content of a State's obligation to deal with family reunification claims in a positive, humane, and expeditious manner? What role does international law have to play in the identification and implementation of durable solutions for refugee children? Although international law does not provide a complete answer to the many and varied challenges faced by refugee children, the international legal framework – applicable to both refugees and to children – has a vital role to play in providing advocates and decision-makers with an important tool to assist in securing an appropriate level of protection and assistance.

[97] For instance, the Global Compact supports the establishment of mechanisms for the identification and referral of children to best interests assessment and/or determination (para 65), and makes specific reference to the need for integrated and age-sensitive services, and child-sensitive determination procedures (para 76).

CHAPTER 42

SEXUAL ORIENTATION AND GENDER IDENTITY IN REFUGEE CLAIMS

JENNI MILLBANK

1. Introduction

This chapter explores two key themes in modern refugee jurisprudence concerning sexual orientation and gender identity (SOGI) claims over the past 35 years. First, there is a persistent, indeed widening, gap between the formal acceptance of SOGI claims in refugee *law* (broadly taken to include authoritative international guidance, interpretative norms, and binding domestic precedent) and the implementation of such law through the low-level administrative practice that comprises the vast bulk of refugee status determination (RSD). Secondly, although SOGI claims are often considered as marginal or exceptional cases, I argue that they should be seen as a key axis from which to understand major developments and failings of refugee law across the board. Relatedly, I suggest that SOGI claims are a paradigm example of the ontological challenges at the heart of RSD, including the enduring challenges posed by fact-finding and evidentiary practices such as future-focused risk analysis, credibility assessment, and the interpretation of claims across culture.

2. Overview

Despite the fact that lesbians, gay men, transgender and other gender and sexuality non-conforming people have suffered, and continue to suffer, widespread persecution globally,[1] refugee law has been slow, and arguably reluctant, to accept them as valid subjects of protection under the Refugee Convention.[2]

The Netherlands was the first country to accept sexuality as a particular social group (PSG) in 1981;[3] others followed haltingly. It was more than a decade later that sexual orientation was accepted in principle as an eligible formulation of the PSG ground by courts in countries such as Canada, Australia, and the UK, and it was notable that these moves were initially made through obiter observations,[4] rather than in the successful claims of gay men or lesbians themselves. In practice, lower-level administrative decision-makers continued to dismiss sexuality-based claims on the reasoning that no Convention ground had been engaged.[5] Unequivocal high-level precedential determination of sexual orientation and gender identity as falling squarely within the purview of protected grounds under the Refugee Convention was not clearly established in a number of key Anglophone receiving nations until the 2000s.[6] This trend was reflected globally through influential international guidance, such as the reference to sexual orientation in Gender Guidelines produced by UNHCR, then more overtly through the

initial UNHCR guidance note and later authoritative Guidelines on sexual orientation and gender identity claims.[7]

A significant turning point in terms of settling formal eligibility was the European Union Council Directive on minimum standards for the qualification of refugees, which stated in its first iteration in 2004 that sexual orientation is covered by the PSG Convention ground, and in the revised 2011 version expanded this to include gender identity.[8]

Notably there have been only a small minority of SOGI refugee claims made, and even fewer accepted, on other ostensibly applicable Convention grounds, in particular political opinion and religion. This is despite the fact that many SOGI claims concern applicants fleeing countries where non-conforming sexuality is widely seen as a challenge to the dominant political or religious order, and even directly to the government of the day, such that a claim based on the religion or political opinion ground would seem logical.[9] In the very few countries where policy guidelines exist concerning the assessment of SOGI claims in RSD, the PSG ground is assumed as the basis of claims, even if passing reference is made to the possibility of 'interaction' with other Convention grounds.[10] The limitation of SOGI claims to the PSG ground—while credited, along with gender-based claims with the contemporary expansion and revitalization of the PSG category[11]—has not been entirely benign. I suggest that the focus upon, indeed restriction to, the PSG category has led to a number of profound ripple effects over the ensuing decades in how SOGI claims are framed and understood in RSD.

The early characterization of SOGI claims as 'social' and the concomitant framing of sexuality rights in human rights terms as a right to private life rather than equal treat-

ment of freedom of communication and assembly (logical corollaries of the religion and political grounds) meant that claimants were caught in an enduring Catch 22 in terms of the group analysis and risk assessment and nexus. Reasoning under each of the two limbs of the PSG definition (immutable/protected characteristics and social perception) circumscribed and denied sexuality-based claims by reference to a public/private divide shaped by the widespread criminalization of gay sex (including colonial legacy laws in a number of countries of origin and 'modernized', partially repealed, or little enforced statutes in many receiving countries). In countries such as France, and to a lesser extent Australia, where the 'social perception' approach to PSG prevails, lesbian and gay claimants who had not outwardly manifested their identity were excluded from the social group ground altogether on the basis that there was no perception of them as members. This approach persisted in France until the late 2000s.[12] Conversely under the immutable/protected characteristics approach, bisexual and cross-dressing claimants were at times excluded as not falling within an immutable group, but rather as simply engaging in unprotected 'conduct'.[13]

Through the 1990s and 2000s applicants who had been sufficiently public in the expression of their sexual or gender identity and had come to the attention of State persecutors (whereupon they were described as 'flaunting', or 'provoking') were often viewed as 'criminals' who had breached criminal prohibitions on gay sex, public sex, and other modes of public order legislation and who were therefore legitimately prosecuted rather than unlawfully persecuted.[14] Over time, as criminal prohibitions on gay sex were progressively repealed in receiving nations and equality provisions took their place (through, for example, legislated anti-discrimination protections and various forms of same-sex relationship recognition), it became broadly accepted in RSD that the enforcement of criminal proscriptions on gay sex and discriminatory application of public order offences are in fact persecutory. More slowly, there was acceptance that criminal laws could be persecutory even if notionally 'unenforced', because of the way that such laws drive and enable other persecutory conduct, such as blackmail of gay men by police and others, and the structural unavailability of State protection when gay and trans

people are persecuted by non-State actors.[15] Note, however, that to date the European Court of Justice (CJEU) has reflected State practice in baulking at the notion that discriminatory criminal laws targeting gay sex are persecutory *per se*.[16]

Applicants who had not previously come to the attention of persecutors because they were afraid to express their sexual or gender identity openly were commonly understood in RSD to be acting 'discretely' and therefore not to be at risk either now or in the future. Lesbian applicants have been particularly disadvantaged by such reasoning, as their claims often involve domestic settings and risk at the hands of family members, and decision-makers have understood them to belong to the private realm such that there is neither risk nor nexus.[17] Relatedly, the claims of lesbians, and to a lesser extent gay men, to refugee protection when the persecution they suffer is embedded in widespread and hegemonic social norms continues to remain largely imperceptible to decision-makers, such as in forced marriage claims.[18] Taken together, the implicit expectations of States and societies that gay people should conceal themselves, conform wherever possible, and avoid confronting heterosexual norms and institutions, has pervasively informed RSD. The near exclusive use of the PSG category has contributed to that paradigm through shaping and playing into accepted notions of what the 'group' is and how its members engage in public space and civil society.[19]

3. The Yawning Divide: Law Says versus Admin Does

The sustained attention of human rights organizations to abuses perpetrated against lesbians, gay men, and transgender people[20] has contributed to considerable advances over the past 30 years in refugee law's treatment of SOGI claims. However, as formal eligibility barriers and doctrinal obstacles are dismantled, significant and enduring informal resistance has sprung up at the level of local practice, undermining the effect of such advances.

Lack of access to written reasons for low-level decisions (for example, by UNHCR adjudicators, immigration courts and administrative tribunals, and internal govern-

ment departmental decision-makers) makes it extraordinarily difficult to gain an understanding of how the law is being developed and applied at the level where it has the greatest impact. While there are now many thousands of written decisions on SOGI refugee claims available worldwide, there remains very little reliable, large-scale or longitudinal data on trends in applications, outcomes, or reasoning in most receiving nations. Most countries do not collect or collate data on the Convention grounds of claim (ie PSG), and certainly not on 'subsets' within a ground of claim (such as sexual orientation), nor on a gender disaggregated basis. On the rare occasions that information on SOGI claims has been made available, it is usually made in a piecemeal fashion as a response to freedom of information requests from researchers, for instance in Canada and Norway.[21] Even under the common framework of the EU, as at 2016 most member countries still did not gather data on sexual orientation asylum applications (Belgium being a long-standing exception), nor did they have any specific policy guidance in place for their assessment.[22]

In 2017, initially in response to freedom of information requests, the UK began releasing 'experimental statistics' on sexual orientation claims annually from 2015, with a commitment to continued annual release.[23] While not gender disaggregated and not covering gender identity claims, this publicly available data is important in demonstrating where claimants are coming from, the proportion of overall claims that are lesbian, gay, bisexual or transgender (LGBT), overall success rates, and initial trends in terms of whether the numbers of such claims, and their viability, are increasing over time. The evidence is that they are not—in the sense that both the overall proportion of LGBT claims *and* their success rate declined over the four years of figures. The fact that LGBT claims have lower success rates than average in the UK generated significant media attention and criticism in response.[24]

Ongoing transparency about outcomes allows attention, and critical reform efforts, without which flawed processes—in which the bulk of applications are determined in

private (often under a 'fast-track'[25] and in combination with detention)[26] and never reviewed—will continue unchecked. It is striking that when field research has been done into lower-level practices—through, for example, interviewing applicants, lawyers, and support and advocacy personnel, and collecting and analysing rejection letters sent to applicants—findings are remarkably consistent over the past decade in documenting ongoing misapplication and misunderstanding of SOGI and gender-related jurisprudence at the level of initial determination.[27]

Nowhere is the divide between refugee law and refugee practice more clearly manifested than in the invidious and enduring operation of so-called 'discretion' reasoning. In discretion reasoning SOGI claimants are assumed, or expected, to avoid the risk of harm by conducting themselves 'discretely'. Discretion reasoning has been associated with very high failure rates for lesbian, gay, and bisexual refugee claimants for over 25 years.[28] While variously expressed, the universalized assumption of natural 'closetedness' for gay men, lesbians, and especially bisexuals,[29] led to requirements in RSD that SOGI claimants be expected or assumed to be capable of (re)concealing, or relocating and thereby reconcealing, their identity in their home country in order to avoid persecution. In earlier decisions this was baldly expressed as a 'reasonable expectation that persons should, to the extent that it is possible, cooperate in their own protection'[30] but in later years has been more commonly embedded as an assumption or factual finding that behavioural 'modification', 'restraint', or 'adaptation' will simply 'happen' or be 'chosen'.[31] It has also been expressed, particularly in the UK, as a finding that 'core rights' are not infringed by minor behavioural modifications that can be reasonably tolerated. In the words of Pill LJ, at Court of Appeal level in *HJ (Iran) v Secretary of State for the Home Department*,

[25] And see on the particular adverse impact of such processes on a lesbian claimant struggling to produce corroborative evidence of her membership of the group: *PN v Secretary of State of the Home Department* [2019] EWHC 1616.

[31] So a gay applicant from Uganda was found as a question of fact to be 'mindful of his society's concepts of good manners and the general social mores' such that he would continue concealing his sexuality: *JM v Secretary of State for the Home Department* [2008] UKIAT 00065, para 149. See discussion of more recent examples in Dustin and Held (n 13).

> according . . . a degree of respect for social norms and religious beliefs in other states is in my view appropriate. Both in Muslim Iran and Roman Catholic Cameroon, strong views are genuinely held about homosexual practices. In considering what is reasonably tolerable in a particular society, the fact-finding Tribunal is in my view entitled to have regard to the beliefs held there.[32]

Elsewhere I have argued that, '[d]iscretion logic is a particularly invidious form of victim-blaming because it affirms the perspective, if not the conduct, of the persecutor', which has generated a plethora of legal errors, including: reversing the onus of Convention protection, treating the scope of protection offered by the Convention grounds inequitably, failing to undertake a future-focused analysis of the risk of harm, construing internal flight alternatives as opportunities for re-concealment rather than safety, and misleading risk analysis for the fundamental reason that there is no such thing as a complete and lifelong closet.[33]

The 2000s saw increasingly authoritative rejections of discretion approaches in both judicial and policy spheres across multiple jurisdictions. Over a 10-year period beginning in 2003, the Australian High Court, the UK Supreme Court and the ECJ all declared, with increasing confidence, that discretion reasoning in sexual orientation refugee claims is bad law. In a slim majority decision of four to three judges, the High Court of Australia held that, '[i]t would undermine the object of the Convention if the signatory countries required them to modify their beliefs or to hide', holding it was incorrect in law to require or expect someone to 'take reasonable steps to avoid persecutory harm'.[34] In 2010, the Supreme Court of the United Kingdom issued a unanimous five opinion judgment approving the majority approach in *Appellant S395/2002 v Minister for Immigration and Multicultural Affairs* and condemning discretion reasoning in much stronger terms as 'wrong in principle, unworkable and inconsistent' with article 1A(2) of the Convention.[35] The Supreme Court also emphatically propounded the right of lesbians and gay men to live freely, openly, and on equal terms, with heterosexuals.[36]

[32] *HJ (Iran) v Secretary of State for the Home Department* [2009] EWCA Civ 172, [2009] Imm AR 600, para 32.

[33] See discussion in Jenni Millbank, 'The Right of Lesbians and Gay Men to Live Freely, Openly and on Equal Terms is not Bad Law: A Reply to Hathaway and Pobjoy' (2012) 44 New York Journal of International Law and Politics 497.

[34] *Appellant S395/2002 v Minister for Immigration and Multicultural Affairs* (2003) 216 CLR 473, paras 41, 50 (Kirby and McHugh JJ) see also paras 82–3 (Gummow and Hayne JJ).

[35] *HJ (Iran) v SSHD* [2010] UKSC 31, [2011] 1 AC 596, para 81 (Lord Rodger).

[36] Prompting, somewhat ironically, a backlash from notable refugee scholars Hathaway and Pobjoy who argued that the decision had 'gone too far' in protecting trivial conduct: see special issue 'Online Symposium' (2013) 44 (2) New York Journal of International Law and Politics, and Opinio Juris <http://opiniojuris.org/2012/03/07/new-york-university-journal-of-international-law-and-politics-vol-442-opinio-juris-online-symposium/> accessed 26 February 2020. I won't re-engage with that debate further, except to say that I hope very much to live to see the day that courts and tribunals of receiving nations offer excessively generous protections to lesbians, gay men, and trans peoples.

The 2011 Fleeing Homophobia report, based on a survey of practitioners and advocates across 25 European Union countries, found discretion reasoning still occurring in Austria, Belgium, Bulgaria, Cyprus, Denmark, Finland, France, Germany, Hungary, Ireland, the Netherlands, Malta, Poland, Romania, Spain, Norway, and Switzerland.[37] This was despite the fact that in the Netherlands, for example, a formal policy directive had been in place since 2007 providing that '[p]ersons with a homosexual orientation are not required to conceal that preference on their return'.[38] Such ongoing contention led the Netherlands to refer an interpretive question on the Minimum Standards Directive to the CJEU, asking the question '[m]ay homosexuals be expected to conceal their sexual orientation or to exercise restraint in expressing their sexual orientation?'. The court was clear in its 2013 judgment that neither concealment nor restraint can be required or assumed.[39]

Yet discretion continues to creep back into RSD through the mask of choice and an unreflexive dismissal of 'social and family pressures', such that the very concealment that cannot be 'required' or 'expected' by decision-makers is still seen as a state that is elected, commonplace and natural, and thereby viewed as a complete defence to persecution rather than *prima facie* evidence of its real risk. Two of the Supreme Court opinions in *HJ (Iran)* reference a *naturally* secretive gay person who is exercising free choice in no way related to persecutory conditions by never disclosing their sexuality. Lord Hope imagines the possibility of someone who is '*naturally* reticent' and who conceals their sexuality 'in reaction to family and social pressure' 'or for cultural or religious reasons *of his own choosing*' and states that such person would not have a well-founded fear of persecution. Likewise, Lord Rodger hypothesizes a 'perfectly *natural* wish to avoid harming his relationships with his family, friends and colleagues' as a reason for concealment and repeatedly uses the word 'choice' in contrasting persecution with 'social pressures'.[40]

Janna Weßels notes that, in addition to being an untenable distinction in any persecutory environment, this provokes decision-makers to place the burden on applicants to demonstrate that the 'material reason' for their concealment is fear (this was also a distinctive feature of the UK discretion approach prior to *HJ (Iran)* and a feature of the dissenting judgments in *S395/2002*).[41] Sabine Jansen has noted that the Netherlands asylum authorities implemented the CJEU decision in *X, Y, Z*[42] by asking applicants how they intended to express themselves on return, and then finding that there was no risk if the applicant indicated an intention to remain concealed. Jansen contends that this displays a poor understanding of the complex and interlocking dimensions of minority sexuality experience that may lead to concealment.[43] Jansen states,

[37] Jansen and Spijkerboer 2011 (n 15) 34.

[38] See Jansen 2018 (n 3) para 2.3.2.

[42] *XYZ* (n 16).

[43] See also Arzu Guler, 'Refugee Status Determination Process for LGBTI Asylum Seekers: (In) Consistencies of States' Implementations with UNHCR's Authoritative Guidance' in Guler Shevtsova, and Venturi (n 2).

> This interpretation by the Council of State might be based on the idea that since the XYZ judgment, the normative variant of 'discretion' (Get (back) into the closet!) is no longer allowed but that the factual form of 'discretion' (Stay in the closet!) is acceptable. In other words: people are no longer returned to the closet, but if they are or were in the closet of their own accord they might just as well be returned to that situation. In British asylum law, this variant of living in the closet is also called 'natural discretion'.[44]

That is, it is not enough that one concealed one's sexuality or gender identity while living under a persecutory regime; the applicant must bear the brunt of distinctly proving that it was the fear of persecution that motivated their concealment. This requirement is now specifically included in the UK sexual orientation guidance as something which 'the claimant must establish':

> If someone has hidden their sexual orientation in response to social pressures or *for cultural or religious reasons of their own choosing*...then they may not have a well-founded fear of persecution.[45]

In the UK gender identity guideline this is expressed even more disingenuously,

> If a transgender individual chooses to live discreetly because s/he wants to avoid embarrassment or distress to his or her family or friends s/he will not be deemed to have a well-founded fear of persecution and will not qualify for asylum. This is because s/he has *adopted a lifestyle to cope with social pressures* and not because s/he fears persecution due to his or her gender identity.[46]

In such a framework, the ongoing concealment of sexual and gender identity are undertaken for entirely personal reasons, quite divorced from fear, to the extent that 'coping' with social 'pressure' or reflecting cultural and religious condemnation can be understood as purely individual *choices*.[47]

In a different vein, Heimer argues that naturalized discretion reasoning, which she traces through more recent UK cases, reflects and reinforces 'orientalist discourses

[44] Jansen (n 3). See also Moira Dustin, 'Many Rivers to Cross: The Recognition of LGBTQI Asylum in the UK' (2019) 30 IJRL 104.

[45] UK Home Office 2016 (n 10) 38 (emphasis added).

[46] UK Home Office 2011 (n 10) 15 (emphasis added).

[47] So for example in a 2011 refusal letter the UK Home Office reasoned,

> The country evidence shows Malawi to be a dangerous country for practising homosexuals. What would she do if removed there? Homosexuality is not a crime in the United Kingdom and there is no bar to anybody who is gay to be open about their sexual orientation. The appellant has chosen to hide it. That is her prerogative, her free choice. If she can hide it in the United Kingdom, where tolerance rules (very effectively it would seem), then she can hide it in Malawi.

referenced in UKLGIG 2013 (n 27) 24; see more recently, UKLGIG 2018 (n 27) 33–5.

allowing for racialised sexual others to be problematically portrayed as "discreet" as opposed to Western liberated queers'.[48] She argues that this involves a

> displacement of the idea of repression which transfers the responsibility for the allegedly sexual repression of non-Western queers from British refugee jurisprudence to asylum seekers themselves. In other words, repression passes from being seen as something that the UK forces upon asylum seekers ... to being something that is produced by their inherent nature or by the family values, supposedly inherited from the very same culture they flee from.[49]

This insight connects to one of the other major challenges of SOGI claims, which is often addressed as a procedural issue, within the umbrella of 'credibility assessment'; that is, the cultural gulf involved in the determination of whether the applicant is a member of the group at all. Refusal rates of SOGI claims on the basis that the claimant is falsely claiming to be lesbian, gay, or bisexual appear to be at a record high.[50] Indeed, credibility assessment, centred on group membership rather than persecution, occupies a major place in most of the existing policy guidance on SOGI in RSD.[51] From the outset, but with increasing frequency, RSD processes have been plagued by sexualized and intrusive questioning of SOGI applicants, as well as the pervasive use of stereotypes, assumptions, and false dichotomies used to determine group membership. Case examples abound of LGBT applicants being asked in detail about explicit sexual acts during hearings, asked to provide 'proof' through explicit sexual imagery or intrusive psychical testing, and being found non-credible because their understanding or experience of their identity does not conform to the decision-maker's expectation of (what one assessor tellingly called) the 'gay reality'.[52]

In 2015, the CJEU held that no conclusions are to be drawn solely on the basis of stereotyped notions associated with (what it still calls) homosexuals, questions about the details of sexual practices are not allowed, and the court prohibited any 'proof' such as the performance of homosexual acts, the submission to 'tests' to proof homosexuality, or video recordings of intimate acts, as this would infringe human dignity.[53] As with

discretion reasoning, repeated high-level jurisprudential pronouncements[54] and detailed guidance[55] on identity questioning, 'testing' and credibility assessment have largely fallen on deaf ears and been heavily undermined in practice.[56]

Canada was a world leader in engaging regular external training of its decision-makers from the 1990s to try to develop a more sensitive and appropriate adjudicative framework for SOGI claims. Refugee scholar Nicole LaViolette pioneered training in the 1990s, which she delivered for many years to the Canadian tribunal.[57] LaViolette proposed a structured series of topics for decision-makers to question applicants that did not focus on sexual acts; rather it comprised a series of areas (self-identity, experiences of societal discrimination, same-sex relationships, responses of family and friends) to elicit from SOGI claimants a narrative of the realization and experience of 'difference'.[58] In the 2000s, UK barrister S Chelvan built on this work to develop what he called the 'DSSH Model' of questioning (based on the topic areas of difference, stigma, shame, and harm).[59] The DSSH model has been utilized extensively in training for adjudicators and advocates by UNHCR, and by refugee advocacy groups in Europe, and is incorporated into the UNHCR SOGI Guidelines.[60] Both LaViolette's and Chelvan's interview tools were thoughtfully created and, in the right hands, have been incredibly useful to elicit, explore, and understand many SOGI claims. However, Berg and Millbank have argued that, regardless of the nuance or appropriateness of such question guides, they are limited in effect when decision-makers interpret and apply them in a rigid form of interrogation that is based upon assumptions about sexual identity that are

fixed, linear and universalized.[61] More recently, Middelkoop, and Dawson and Gerber, have expressed similar concerns, which Dawson and Gerber argue are even more acute for female applicants.[62]

There is now an established and voluminous body of scholarship on the 'performance' of sexuality in RSD.[63] Indeed it could be argued that the principal focus of both legal and non-legal queer interventions in refugee law over the past decade has been on the misunderstanding of non-Western SOGI expressions, and consequent failures in translation—both literal[64] and figurative—of SOGI life experiences in refugee adjudication.[65] Yet these extensive critical interventions, like the highest-level legal and policy guidance, appear to have made little impact on everyday administrative practice, which continues to be riddled with intrusive questioning and simplistic and inappropriate assumptions about how gay identity is experienced and expressed.[66] Take, for example, a decision in 2016 in which the Administrative Appeals Tribunal in Australia made an adverse credibility finding and rejected as fabricated the claim of an applicant from Nepal based on reasoning as follows:

> The Tribunal had expressed its concerns that it may find that the applicant is not a homosexual, and is not in a homosexual relationship, at the first hearing. In the applicant's post first hearing statement, he claimed that as a couple they took photos while engaging in sex for their personal satisfaction which he offered to provide to the Tribunal to confirm that he and his partner are in a same sex relationship. The Tribunal wrote to the applicant, inviting him to a second hearing and giving him an opportunity to produce such photos but he did not. When this was noted at the second hearing, his evidence was evasive, finally he claimed he had been uncomfortable to produce the photos, however he suggested he wanted to do so now. The Tribunal did not find this explanation persuasive, noting that it had been his offer to provide them to the Tribunal in his statutory declaration; such photos had not been requested by the Tribunal. However, after the second

> hearing, the applicant produced a number of photos . . . The Tribunal notes that there are two identical photos which appear to show the applicant and his claimed partner kissing. One photo shows the applicant naked and entwined with another unidentified male person's limbs (face not visible). There are a further three photos of two unidentified bodies (not faces) of two men: two photos show a penis being held by a hand, and another photo is suggestive of (without evidencing) intercourse (perhaps between two males but this is unclear). Having regard to the Tribunal's credibility concerns, it is not prepared to accept that these photos are genuine, non-staged photos of the applicant and his claimed partner engaged in sexual activity.[67]

Every academic and press article on lesbian, gay, and bisexual refugee claims around the world has an example like the one above, in which an applicant was rejected for not having corroborative evidence of their gay sex, or having such evidence which seemed staged; not knowing the names of the receiving country's current gay bars, or the works of their own country's gay poets of antiquity; or having a religious affiliation, or children, or a past opposite sex partner; or expressing no sense of shame in their identity, or too much; and so on.

The pervasive endurance of such decisions about the 'gay reality', like the adaptive nature of discretion reasoning, indicates that this is not a failure of law, but of adjudicative cultures. In one of her last publications before her untimely death, LaViolette suggested that a comprehensive reassessment of SOGI 'cultural competency training' models be considered as a response. However, she noted that even in Canada, which is better resourced and more committed than many comparable receiving nations, SOGI training is only undertaken for a half-day or day every few years.[68]

It is important to acknowledge that issues such as discretion reasoning and disbelief of group membership pose distinct and enduring challenges for lesbians, gay men, and trans and gender-diverse peoples fleeing persecution. However it is also important to recognize that those specific challenges in many ways also exemplify the paradoxes at the heart of refugee status adjudication. The next section argues that, while often seen as an 'outer edge' or exceptional form of claim, sexuality and gender identity refugee claims encapsulate issues that speak to the troubled core of RSD and refugee jurisprudence.

[67] *1416486 (Refugee)* [2016] AATA 4994, para 60. This was despite the relevant gender guidelines (which themselves refer to the UNHCR SOGI guidance) stating, 'When conducting a hearing based on sexual orientation or gender identity, a Member should ask questions in relation to the applicant's realisation and experience of sexual orientation or gender identity rather than questions that focus on sexual acts': Administrative Appeal Tribunal, 'Migration and Refugee Division: Guidelines on Gender' (July 2015) para 21. That Tribunal finding was characterized as 'troubling' in a recent Federal Court decision allowing an extension of time for a judicial review application: *BHC16 v Minister for Immigration and Border Protection* [2019] FCA 1326.

[68] LaViolette (n 57).

4. Sexuality and Gender Identity Claims as Paradigm

Gender-related persecution jurisprudence is best understood as a 'mosaic' in which disparate and highly specific pieces fit together to form a global picture of asylum systems' responses to violence; that is, that recognition of the particularities of specific kinds of claims, such as forced marriage, or claims from certain places, should be examined as both unique and connected phenomenon.[69]

Both of the examples explored above, 'discretion' and credibility, are issues that continue to impact upon lesbians, gay men, and trans and gender-diverse peoples in an acute and specific manner. Yet they also exemplify key challenges in refugee jurisprudence and determination processes worldwide.

'Discretion' or potential concealment is an issue that arises, albeit under different discourses, in almost all political, religious, and many PSG claims.[70] There is frequently an act/identity distinction that flows from such categories because unless the identity is generally visible (eg women) it must be manifested through some form of conduct (political protest, religious gatherings) in order for the persecutor to identify the member and for the persecution to have a nexus.[71] Jana Weßels has argued compellingly that these claims also share the problem of 'future behaviour', that is, whether and why such acts will occur in the applicant's future if they are returned.[72] Through that process of manifestation, and assessment of futurity, a porousness opens up in which refugee decision-makers evaluate, either overtly or implicitly, whether a future life encompassing such conduct is reasonable, required, or sufficiently and intrinsically connected to the protected identity (proselytizing through doorknocking instead of worshipping in church and so on). In this sense refugee law is in an 'eternal dilemma',[73] perpetually both expanding and contracting the realm of international human rights as it determines what (lesser) scope of surrogate protection it should offer.

Similarly, the acute problem of credibility assessment in sexual orientation claims, in which self-disclosure will often be the primary if not exclusive evidence of group membership, is a stark exemplar of the profound challenges of credibility assessment and

[69] Sara Dehm and Jenni Millbank 'Witchcraft Accusations as Gendered Persecution in Refugee Law' (2019) 28 Social and Legal Studies 202, 204, drawing on Efrat Arbel, Catherine Dauvergne, and Jenni Millbank, 'Introduction' in Efrat Arbel, Catherine Dauvergne, and Jenni Millbank (eds), *Gender in Refugee Law: From the Margins to the Centre* (Routledge 2014).

[71] Weßels notes that the issue of discretion is considered in almost every chapter of one of the leading texts by James C Hathaway and Michelle Foster: Jana Weßels, 'The Art of Drawing Lines: Future Behaviour and Refugee Status' in Satvinder Juss (ed), *The Research Handbook on International Refugee Law* (Edward Elgar 2019) 275.

[72] ibid. [73] ibid 280.

evidentiary and fact-finding processes within RSD more broadly.[74] Many researchers have documented 'cultures of disbelief' in domestic RSD processes,[75] and have argued that the gulf of culture, language, and expectations[76] between applicants and Western decision-makers renders applicant experiences into, at best, a flattened and consumable simulacra and, at worst, an unintelligible otherness.[77] The more unknowable or untranslatable a person's experience of harm, the more likely it is to be distilled, adapted, and distorted to 'fit' within the framework of an intelligible claim. Thus, witchcraft and forced marriage are reformulated into 'gender' claims, domestic violence or trafficking into FGM, and so on.[78] Thus asylum claims are reshaped into not just the parlance but the paradigms of Western understanding.

These cultural gulfs and ontological challenges lie at the heart of all refugee adjudication processes, which grapple with the unknowability of the other, and of the future self. They also sit within a largely, and increasingly, hostile political context among refugee receiving nations, within which ever-sharpening bureaucratic imperatives drive RSD processes towards speed, exclusion, and non-reviewability—rather than towards critical reflection, complexity, or nuance. Thus, the crude proxies for group membership and credibility that have been so thoroughly and carefully critiqued in the past decade by researchers, activities, and advocates look set to become blunter, not better.

5. Conclusion

In the Canadian RSD context, Masoumi has argued that the expansion of refugee law to 'accommodate feminist readings of harm and violence' that took place in the 1990s occurred simultaneously with a systematic and severe restriction of access to refugee status, including through exclusions to entry.[79] Masoumi concludes that 'bureaucratic and administrative forces may capably undermine the potentially expansive effects of progressive legal change'.[80] In a similar vein, and somewhat pessimistically, this chapter has outlined how the dismantling of formal barriers and exclusions to refugee protection claims on sexual orientation and gender identity grounds has been undermined in RSD through the prolonged misapplication and misunderstanding of such law at the level of administrative practice and implementation.

Issues such as the act/identity distinction, which underlies the manifestation of protected grounds under the Convention, the problem of futurity in determining well-founded fear, and the cultural gulf at the heart of credibility assessment, and indeed much problematic evidentiary practice in RSD, are all starkly displayed in SOGI claims. The distinct aspects of SOGI claims should not be lost sight of, but neither should the ways in which the difficulties and controversies of such claims exemplify the founding paradoxes and contemporary challenges facing refugee law and refugee adjudication processes more broadly. Not least of all, one such paradox is the manner in which refugee jurisprudence, which continues to advance in its reach and sophistication, is so often rendered into a blunt instrument of exclusion at the point of impact.

CHAPTER 43

PROTECTING REFUGEES WITH DISABILITIES

MARY CROCK*

1. Refugees, Disabilities, and Displacement

It is accepted as axiomatic that events producing refugees—including armed conflict, civil unrest, and (for good measure) natural disasters—are a major cause of death and disability in vulnerable human populations.[1] Counterintuitively, however, statistical data collected by both national and United Nations agencies, including UNHCR, has traditionally identified only very small numbers of refugees as having disabilities.[2] The supposition seems to have been that persons with disabilities are not able to travel and that these individuals are most likely to be left behind to perish or otherwise suffer the slings and arrows of fate and misfortune. Research in more recent times has revealed such assumptions about the mobility of refugees with disabilities to be patently false.[3]

* I gratefully acknowledge the assistance provided by Laura Smith-Khan in the research for this chapter. Thanks also to Ron McCallum AO and the editors for comments on the chapter in its formative phase.

In 2011, the World Health Organization's global survey found that it is to be expected that 2.9 per cent of any population is comprised of persons with severe disabilities, while a further 12.4 per cent have moderate, long-term disabilities.[4] If the World Health Organization (WHO) findings were to be applied to the 79.5 million persons of concern identified by UNHCR in December 2019,[5] over 10 million of the world's refugees at that date are likely to be persons with a disability. Indeed, when HelpAge and Handicap International surveyed persons fleeing the conflict in Syria in 2014, almost twice the WHO global average were found to have 'special needs' and/or disabilities.[6] Sydney University researchers made similar findings in a project examining the experiences of refugees across six countries.[7]

This chapter explores the law and policy concerning persons with disabilities displaced as refugees, beginning in Section 2 with a broad survey of international legal and policy frameworks. Intersections between refugee law and human rights laws are explored in Section 3, examining how key elements of the definition of refugee should apply to persons with disabilities.Section 4 addresses the procedural implications of requirements that 'reasonable accommodations' be made in status determinations and treatment of refugees with disabilities. The chapter concludes with comments on durable solutions for refugees with disabilities and the future impact of the UN Convention on the Rights of Persons with Disabilities (CRPD) on international refugee law and policy.

2. Refugees with Disabilities as Rights Bearers

The change in attitude to refugees with disabilities is a ripple effect of the coming into force of the UN CRPD in 2008.[8] Within 10 years, 177 countries had signed or ratified this Convention and Protocol. The concurrent establishment of a Committee in 2008

provided a new voice and international forum for persons with disabilities that reflected and recognized the efforts of disability advocates around the world.[9]

The CRPD is a revolutionary instrument because it demands a move away from a medical or charity approach to disability that focuses on a person's 'problems' and on how they can be treated or cured.[10] Article 1 defines disability not just as impairment, but also as a product of context and societal attitudes that operate to deny an individual their rights to participate in society. It states:

> Persons with disabilities include those who have long-term physical, mental, intellectual or sensory impairments, *which in interaction with various barriers* may hinder their full and effective participation in society on an equal basis with others (emphasis added).

The Convention acknowledges that environmental factors can make participation a challenge for virtually everyone in developing countries experiencing conflict or disaster. Article 2 requires States parties to make 'reasonable accommodations' for persons with disabilities, defined as:

> ... necessary and appropriate modification and adjustments not imposing a disproportionate or undue burden, where needed in a particular case, to ensure to persons with disabilities the enjoyment or exercise on an equal basis with others of all human rights and fundamental freedoms ...

While the concept of reasonable accommodation recognizes practical and financial constraints faced by States, the Convention does not allow States to retreat from their obligations in difficult times. The CRPD is the first instrument to refer to both international humanitarian law and international human rights law[11] so as to articulate the rights of persons with disabilities in situations of emergency and displacement. Article 11 of the CRPD requires that States parties:

> [t]ake, in accordance with their obligations under international law, including international humanitarian law and international human rights law, all necessary measures to ensure the protection and safety of persons with disabilities in situations of risk, including situations of armed conflict, humanitarian emergencies and the occurrence of natural disasters.

[9] The Committee on the Rights of Persons with Disabilities (CRPD Committee). See Rosemary Kayess and Phillip French, 'Out of Darkness into Light? (2007) 34(2) Syracuse Journal of International Law and Commerce 563.

[10] See Louise Arbour, UN High Commission for Human Rights, 'Statement on the Ad Hoc Committee's adoption of the International Convention on the Rights of Persons with Disabilities' (5 December 2006) para 11. See also Tom Shakespeare, 'The Social Model of Disability' in Lennard J Davis (ed), *The Disability Studies Reader* (3rd edn, Routledge 2010) 266–73.

[11] The CRPD goes further than the CRC, art 38.

This provision is of critical significance to refugees with disabilities because it affirms their right to equal treatment in all circumstances. Second, the provision makes no attempt to qualify access to Convention rights according to a person's citizenship or immigration status. States parties must respect the rights and dignity of all persons with disabilities on their territory or in their care and control—including refugees.[12]

From the outset, the CRPD Committee ensured that the plight of refugees and forced migrants with disabilities was embraced as an issue of concern. It took a direct interest in the UNHCR Executive Committee Conclusion in 2010 on refugees with disabilities,[13] itself a reflection of an institutional desire to ensure that those with disabilities cease to be the 'forgotten and invisible' refugees.[14] The CRPD Committee includes questions on article 11 of the Convention in its country reviews and has offered criticisms of State practice and made recommendations for reform of law and policies.[15]

UNHCR followed in 2011 by producing its 'Need to Know Guidance' for field workers.[16] As explored in Section 5, the 'Resettlement Handbook' was revised in the same year so as to remove instructions that assumed certain refugees with disabilities to be inappropriate candidates for resettlement programmes.[17]

As natural disasters and global conflagrations spawned migratory flows (including across Europe) not seen since the Second World War, disability issues in recent decades have been given prominence in policy initiatives to re-draw the rules governing transnational human displacement. The ensuing documents may not bind States as a matter of law. However, persons with disabilities have certainly begun to be included in the policy discourse on human displacement.

The second decade of the new Millennium seems to have marked a turning point for both refugees and migrants with disabilities. The 2012 Nansen Initiative on Disaster-Induced Cross-Border Displacement made little reference to disabilities in its 'Protection Agenda'[18] but this is not true of the subsequent Platform on Disaster

Displacement.[19] This pattern is matched in the agencies responsible for general migration issues. The International Organization for Migration (IOM) has acquired the status of a UN body and has been called upon with increasing frequency to assist in the management of mass migration flows.[20] In 2012, IOM's *Migration Crisis Operational Framework* made no mention of people with disabilities. However, its *Migrants in Countries in Crisis Initiative*, launched in 2015, acknowledged that planning should address the needs of 'particularly vulnerable populations'. The related Guidelines acknowledge the needs of migrants with physical, visual, or auditory impairments in disaster contexts.[21] Within the UN system, the rights of persons with disabilities gained express recognition in the Sustainable Development Goals in 2014.[22]

The 'Sendai Framework for Disaster Risk Reduction 2015–2030' was adopted by UN Member States in response to the earthquake and tsunami in Japan that killed 16,000 people and caused the melt-down of the Fukushima nuclear power plant.[23] The Sendai *Guiding Principles* identify persons with disabilities and Disabled Peoples' Organizations as 'critical in the assessment of disaster risk and in designing and implementing plans tailored to specific requirements, taking into consideration, inter alia, the principles of universal design'.[24] The principles stress 'empowerment and inclusive, accessible and non-discriminatory participation' and require that a 'gender, age, disability and cultural perspective should be integrated in all policies and practices'.[25]

Mass migrations across Europe and the Middle East in these years prompted the World Humanitarian Summit in Istanbul, Turkey, in May 2016, which produced the Charter on Inclusion of Persons with Disabilities.[26] The Charter saw stakeholders, including UNHCR, commit to non-discrimination, and inclusive policy and practice in services and inter-agency operations. It was an important precursor to the UN summit in New York in September 2016, again focusing on mass migration. The New York Declaration for Refugees and Migrants calls on States to recognize and address 'the

special needs of all people in vulnerable situations who are travelling within large movements of refugees and migrants' including persons with disabilities.[27]

This summit led to the Global Compacts on Migration and Refugees that dominated the Secretary-General's 2018 agenda. Persons with disabilities are referenced no less than 15 times in the Global Compact on Refugees and five times in the Global Compact for Safe, Orderly and Regular Migration. While a 'work-in-progress', the situation of persons with disabilities on the move as migrants or refugees has finally gained 'mainstream' attention.[28]

Key humanitarian actors have created tools for collecting data on disability. In 2018, the Age and Disability Capacity Programme (ADCAP) consortium (which includes UNHCR) released its *Minimum Standards for Age and Disability Inclusion in Humanitarian Action*.[29] Revised Sphere Standards followed.[30] The UN Inter-Agency Standing Committee (IASC)[31] established a Task Team to draft Guidelines on Inclusion of Persons with Disabilities in Humanitarian Action. The IASC calls for the creation of 'cluster teams' to deal with areas such as Food Security, WASH, Health, Nutrition, Protection, and Logistics led by designated agencies and involving other operational actors. The IASC is working on the identification of preferred data collection tools for 'rapid needs assessment', known as the Multi-cluster/sector Initial Rapid Needs Assessment.[32] These processes have potential to achieve consensus in approach and actions between States and across international and domestic non-government organizations operating in humanitarian contexts.

The UN Office for the Coordination of Humanitarian Action responded by creating a 'Common Operational Dataset' (COD) to improve approaches to disaster preparedness.[33] Using demographic and geographic data collected by participating States and made available to key responders in crisis situations, the COD extended disaggregated demographic data to include disabilities. Another humanitarian reform

improving resource usage and cooperation between humanitarian actors is the 'Grand Bargain' process emanating from the 2016 Summit in Istanbul. One work stream in this process is devoted to improving the integration of needs assessment techniques.[34] Overall, the post-CRPD environment has seen a marked increase in the nature and quality of soft law and guidance documents relative to refugees (and migrants) with disabilities. In the field, it is to be hoped that this will eventually effect real change.

3. Disability and the Refugee Convention

a. Refugees with Disabilities and *Non-refoulement*

While persons with disabilities face acute challenges in displacement, impairment does not automatically make an individual a 'refugee' at law. Rather, he or she must meet the definition of refugee in article 1A(2) of the Refugee Convention. Where the CRC extends the protective reach of human rights and refugee law to children *because* they are children,[35] the CRPD does not contain an express *non-refoulement* provision for persons with disabilities tied to refugee law. Article 11 obliges States to take 'all necessary measures to ensure the protection and safety' of persons with disabilities in disaster contexts that clearly encompass refugee-producing events. The reference to international humanitarian law and international human rights law may not expand the operation of relevant areas of law, including refugee law. However, the provision should foreground consideration of disabilities in any context that could involve *refoulement*.[36]

Importantly, article 15 of the CRPD embraces article 3 of the CAT, enshrining the right to be free from torture or cruel, inhuman, or degrading treatment or punishment. This provision arguably creates a regime for the complementary protection of persons with disabilities who cannot meet the Convention definition of refugee.[37]

See Jason M Pobjoy, *The Child in International Refugee Law* (CUP 2017); Jason M Pobjoy, 'Article 22', in John Tobin (ed), *The UN Convention on the Rights of the Child: A Commentary* (OUP 2019).

[36] On the CRPD and *refoulement* as mandatory relevant considerations in criminal deportation contexts, see *Omar v Minister for Home Affairs* [2019] FCA 279.

[37] Whether and how the CRPD establishes *non-refoulement* obligations is untested. It is beyond the scope of this chapter to consider the matter in the depth that it deserves.

In mass migration contexts, UNHCR can declare whole populations to be 'mandate' refugees or persons of concern to whom assistance is extended. UNHCR and other relief agencies may see displaced persons with disabilities as a vulnerable cohort worthy of special protection regardless of their formal status as refugees. However, for individuals seeking asylum, or attempting to access resettlement programmes, meeting the elements of the Convention definition of refugee remains critical.

'Disability' is a broad concept, including physical impairments affecting gross motor through to fine motor functioning; varying degrees of cognitive impairments; and can encompass chronic illnesses and conditions that affect both physical and cognitive functioning.[38] The CRPD's central message is that context should always be considered. Persons afforded necessary supports may not be 'disabled' by their impairment. In the absence or impossibility of compensatory measures, however, some impairments produce serious functional deficits. Some refugees with disability may face no special impediments in demonstrating that they are Convention refugees. Conversely, others with certain psycho-social disabilities can find meeting even the most basic elements of the definition a challenge.

If article 11 of the CRPD does not create a stand-alone *non-refoulement* obligation, a core tenet of the convention is the obligation to make 'reasonable accommodations' for persons with disability. This will be used to frame three aspects of article 1A(2) of the Refugee Convention: the requirement that a person show a 'well-founded fear'; the meaning of 'persecution'; and challenges in establishing causative links to the five Convention grounds.

b. The Duty of 'Reasonable Accommodation'

Article 2 of the CRPD, extracted above, categorizes denial of 'reasonable accommodation' as discrimination. 'Reasonable accommodation' is established as an overarching duty,[39] not qualified by the Convention's reference in article 4(2) to the 'progressive realization' of rights, which acknowledges challenges facing developing countries. Yet, while the prohibition of discrimination is immediate and absolute,[40] the duty to accommodate is qualified. States must only make adjustments that are *reasonable*, having regard to matters such as resource constraints and other circumstances. The CRPD Committee notes that the duty can be divided into two parts. The first is a posi-

[40] See art 5(2) and the discussion in Motz (n 39) 148. See also Stephanie A Motz, *The Refugee Status of Persons with Disabilities* (Brill 2020).

tive obligation to provide modifications necessary or appropriate to ensure the enjoyment of rights. The second ensures that this obligation does not impose an undue burden on the duty bearer.[41]

The 'disproportionate burden' qualification could limit the ability of refugees with disabilities to use the CRPD in asserting rights to medical and other benefits in host countries where deprivation is pervasive.[42] General Comment No 6 of the CRPD Committee does not address this conundrum; it focuses on the increased risk for persons with disabilities in displacement contexts, including women and girls facing violence (especially sexual violence), exploitation, and abuse.[43]

The 'reasonable accommodation' principle arguably creates a positive duty on States to acknowledge and address the unequal position of persons with disabilities. This is of critical importance as it demands change in both process and interpretation of refugee law.

c. Well-founded Fear

The starting point for most asylum claims is that a person must fear persecution if returned to their country of origin. The requirement that fear be 'well-founded' imports subjective and objective elements. Theoretically, an asylum seeker should be able to articulate their apprehension—and available evidence should demonstrate that the fear has a rational and factual basis.[44] For persons with intellectual or cognitive disabilities these requirements can pose problems. They may lack the capacity to appreciate danger or be unable to express a sense of fear. Explaining the relationship between feelings and relevant persecutory events can pose challenges.

Hathaway and Foster cite instances where judges have opined that the absence of actual trepidation will be fatal to a refugee claim.[45] While often *obiter dicta* or made in the context of adverse credibility findings,[46] rigid adherence by adjudicators to the 'bipartite standard' of subjective and objective fear is problematic for persons with disabilities. Formal processes can overwhelm applicants to the point where determining their state of mind becomes almost impossible.[47] Where courts have had to deal with claimants lacking capacity to articulate a claim, for example in the case of child applicants, some judges have glossed over the requirement for subjective fear, finding that the parents' fear was sufficient.[48] The situation of an adult with limited capacities is arguably

more complex in the absence of a person legally able to speak for the claimant. In *Patel*, Canadian Justice Maurice Lagacé DJ found it unconscionable that 'all persons who are incompetent will, by reason of that incompetence, be unable to qualify as Convention refugees'.[49] His Honour preferred to focus on the objective evidence that the applicant was in danger, allowing subjective fear to be assumed or imputed.

Many commentators favour this approach,[50] although practices at decisional level across countries vary widely. As explored in Section 4, the absence of obvious trepidation can be conflated with general considerations of an individual's credibility. Yet the significance of the requirement that apprehension has a rational basis cannot be overemphasized. However great a person's fear, the Convention definition will not apply unless the fear can be justified: 'fear on the part of a claimant does not turn non-persecution into persecution'.[51] UNHCR says of 'mentally disturbed persons':[52]

> It will . . . be necessary to lighten the burden of proof normally incumbent upon the applicant, and information that cannot easily be obtained from the applicant may have to be sought elsewhere, e.g. from friends, relatives and other persons closely acquainted with the applicant, or from his guardian . . . It may also be necessary to draw certain conclusions from the surrounding circumstance . . . It may not be possible to attach the same importance as is normally attached to the subjective element of 'fear', which may be less reliable, and it may be necessary to place greater emphasis on the objective situation.[53]

This statement recognizes the problems that persons with intellectual and cognitive disabilities may have in articulating a coherent narrative of harm. The CRPD's 'reasonable accommodation' requirements[54] should operate to reinforce UNHCR's exhortation that allowances be made for disability in applying the Convention definition.

d. 'Persecution'

Although not defined in the Refugee Convention, the term 'persecution' has been the subject of much academic, legislative, and juridical consideration. The broad statement of the US Court of Appeal describing persecution as 'the infliction of suffering or

harm … in a way regarded as offensive'[55] is often used as a point of departure. In 1991, Hathaway sought to give structure to the concept by using the various forms of harm referenced in key human rights instruments.[56] More recently, Hathaway and Foster have used the language of 'serious harm',[57] qualified always by the proviso that mistreatment be associated with a breakdown of national protection. To adopt the formulation of Lord Hoffman, persecution has two elements: 'Serious Harm + Failure of State Protection'.[58] They argue against a subjective[59] or literalist[60] approach to interpreting 'persecution', using international human rights law as a benchmark. This field of law gives structure to an otherwise inchoate principle. It allows calibration of harms from most to least serious so as to allow nations to create distinguishing levels of harms attracting protection obligations.[61] The evolutionary nature of human rights law favours attention to 'individuated vulnerabilities'.[62] This can be critically important for persons with disabilities.

In some regions the language of human rights has been adopted into the legal discourse on persecution: article 9 of the EU Qualification Directive is an example in point. In contrast, Australia has opted for a descriptive definition that focuses on personal liberty and physical harms at one extreme and at the other, social and economic privations that 'threaten [a] person's ability to subsist'.[63] Both formulations of 'persecution' invite consideration of the particular circumstances of an asylum seeker, recognizing that harms can be disproportionately severe for those with personal characteristics such as 'age and frailty'.[64]

Arguments around the need for a nuanced interpretation of persecution developed first around children.[65] Persons with disabilities are another subset of asylum seekers who can experience harms in different ways because of their personal attributes; they can be particularly susceptible to injury, either because of their inherently precarious health status or because of their inability to take evasive or remedial action in the face of threatened harm. Persons with disabilities can also experience harms inflicted *because* they are identified as disabled. Research suggests that persons with both physical and intellectual disabilities can be targeted for sexual assault and exploitation[66]—just as

sexual abuse can cause disabilities.[67] National policies favouring the institutionalization of persons with disabilities can lead to situations where these people are incarcerated against their will and subjected to cruel and degrading treatment that could amount to torture.[68]

While the abuse of persons with disabilities may be common in many countries, it does not follow that all mistreatment will amount to persecution. First, the experience of discrimination alone may not be sufficient to amount to persecution if the consequences of discriminatory acts do not seriously affect a person's health and well-being. UNHCR's Handbook states that for discrimination to amount to persecution it must produce 'consequences of a substantially prejudicial nature'.[69] Contrast the case of a Chilean woman with visual impairments (who claimed she faced discrimination because she used a guide dog) with that of a disabled man from Burkino Faso whose experiences effectively denied him access to a livelihood, healthcare, and the basics for survival. The second was recognized as a refugee while the first was not.[70] Both cases illustrate that persecution is a question of fact—but also a matter of the extent and nature of harms suffered or feared.

With so many nations adopting the CRPD, national jurisprudence is evolving, particularly around the question of *when* a failure to provide 'reasonable accommodation' for disabilities will amount to persecution.[71] This represents an area of potential growth of refugee law and scholarship.

e. 'For Reasons of' and the Convention Grounds

Where asylum seekers with disabilities face persecution not obviously linked to nationality, race, religion, or political opinion, problems may arise in demonstrating the required nexus with a convention ground. As Hathaway and Foster document,[72] a range of problems can arise in identifying a *subjective intention* to persecute. For persons with disabilities (as with women), there is always a risk that persecutory behaviour can be dismissed as just something that happens to such people because of their vulnerabilities.[73] These problems are not universally overcome by acknowledging the significance of a State's failure to protect against discriminatory actions. Although Hathaway and

[72] Hathaway and Foster (n 45) ch 5.

[73] See discussion at ibid 372–3.

Foster demonstrate the merit of adopting a 'predicament' approach to the nexus requirement, they acknowledge that legislation in many countries adheres to the language of intent to persecute.[74] Persons with disabilities may be able to show the virtual certainty of harm, but not that the harm is intentional. Harm may be the product not of acts but of omissions—including a failure to provide reasonable accommodation—and dismissed as the product of pervasive poverty or resource limitations.[75]

If asylum seekers with disabilities can find it difficult to demonstrate that their experiences are 'by reason of' one of the five Convention grounds, characterizing such people as members of a 'particular social group' should pose fewer problems. Decision-makers have accepted that social groups may be constituted by both physical and intellectual impairments as well as chronic illness and conditions such as autism and albinism. In the words of a US judge, '[w]hile not all disabilities are "innate" or "inherent" . . . they are usually, unfortunately, "immutable" '.[76]

In many cases, decision-makers have no difficulty in identifying asylum seekers with obvious disabilities as a cognizable group.[77] Where claims are accepted, these cases often demonstrate that refugees with disabilities suffer discrimination that compounds and magnifies the general resource limitations that may beset the society from which they have fled. This discrimination may be visited on the refugee by private individuals—non-State actors. Refugee status does not require the State to be the persecutor: inability or unwillingness to protect will suffice.[78]

4. Refugee Status Determination Processes

a. Capacity and Credibility

Asylum seekers with disabilities have a legal entitlement to process adjustments. However, they will still be expected to produce a *credible* account of why they might face persecution if returned to the country from which they have fled. Kagan identifies the credibility requirement as 'the single biggest hurdle before applicants beginning the refugee status determination process'.[79]

[74] ibid 380 fn 102.

[79] Michael Kagan, 'Is Truth in the Eye of the Beholder? Objective Credibility Assessment in Refugee Status Determination' (2003) 17 Georgetown Immigration Law Journal 367, 368.

Disabilities can be of such severity that a person's very capacity to articulate a protection claim is compromised. 'Capacity' is a legal concept that describes a person's ability to understand the nature and effect of decisions and legal processes.[80] Some countries have codified mechanisms to determine capacity in legislation.[81] In general terms, deciding whether a person is capable of making a protection claim will be a question of fact. The modern approach, reflected in article 12 of the CRPD, is one that favours 'functioning' over labelling. Decision-makers are enjoined to consider the cognitive functioning of a claimant rather than relying on the simple identification of a particular condition or disease.[82] Where an individual is found to lack capacity, consideration should be given to the appointment of a guardian who can offer assistance or act on the person's behalf.

In asylum processes, disability and lack of capacity can merge into a grey area that plays out in an asylum seeker's inability to articulate a credible claim.[83] As noted earlier, disability can compromise a person's ability to concentrate, to recall details and to construct a logical narrative. Disability can be both exacerbated by experiences of trauma and be the product of trauma. All too often, asylum seekers carrying all manner of physical and psychological difficulties engage in processes with no legal counsel or other assistance.[84]

Some judges have adopted an all-or-nothing approach. Unless they perceive an individual to completely lack capacity, they have been unwilling to make allowances for psycho-social disabilities.[85] This is arguably dissonant with the requirement to make 'reasonable accommodations' for persons with disabilities.[86]

b. 'Reasonable Accommodation' of Disability in Status Determination Processes

As noted earlier, reasonable accommodation is defined as 'necessary and appropriate modification and adjustments', where needed, 'to ensure to persons with disabilities the enjoyment or exercise on an equal basis with others of all human rights and fundamental

[80] See discussion of the principle of 'Gillick competence' in *Gillick v West Norfolk and Wisbech Area Health Authority* [1985] UKHL 7, [1986] AC 112; *Secretary, Department of Health and Community Services v JWB and SMB* (1992) 175 CLR 218.

[86] See CRPD, art 3.

freedoms'.[87] CRPD General Comment No 6 sets out guiding elements in determining reasonable accommodation, with consultation with the person affected being an important requirement. These include identifying and removing barriers to enjoying human rights, assessing whether accommodation is legally or practically feasible, and assessing whether the accommodation is necessary, appropriate, and suitable to achieve the human rights objective. An assessment should also be made of whether the modification imposes a disproportionate or undue burden on the duty holder.[88]

Article 2 and good faith obligations[89] mean that identifying the nature and effect of a person's disabilities should be a first order priority for States parties to the CRPD. Disabilities such as blindness, deafness, and gross motor impairments may be obvious, but impairments that affect cognition and mood may not be easily detected. Failure to inquire can mean disabilities remain hidden—leading to false assumptions and/or the absence of accommodation.[90]

Accommodating an asylum seeker with a disability should not be a gesture of charity. Where the CRPD operates, people with disabilities have legal entitlements. Failure to adjust process can mean failure to recognize refugee status and thus a failure to protect, including against *refoulement*. Following are examples of accommodations that may need to be made.

Blindness and vision impairment can affect a refugee's mobility, their ability to read and absorb written material, and thus their capacity to participate in legal processes. Hearing loss and deafness can restrict a person's ability to understand and respond and can lead to frustration and confusion on all sides of an interview. A pervasive problem for the deaf and hard of hearing is that their behaviour can be misinterpreted as rudeness or as indicative of mental impairment. Cognitive impairments can produce similar process failures. Mobility constraints can compromise a person's ability to attend appointments, access buildings, or use public transport. Concomitant with physical and cognitive impairments, as well as chronic illness, is heightened fatigue and the inability to tolerate protracted and stressful processes.

In some developed countries a great deal of thought has been given to the precise adjustments that need to be made for individuals affected by particular impairments. In the United Kingdom, for example, the 'Equal Treatment Bench Book' includes an appendix that describes common disabilities and ways in which adjudicators can adapt their practice so as to improve the mood and performance of litigants with disabilities.[91]

The ideal is to identify disabilities at the outset of an asylum process. However, this will not always happen—particularly where an individual is reluctant to identify as a person with disability.[92] Adjudicators should be prepared to make adjustments as a hearing progresses when an impairment becomes apparent. Unfortunately, acceptance that an asylum seeker is suffering from a disabling psycho-social condition can prove controversial. The jurisprudence on point is not particularly encouraging in cases where asylum seekers are unable to lead definitive evidence from medical professionals.[93]

5. Durable Solutions for Refugees with Disabilities

Where a person with disabilities gains recognition as a Convention refugee, what happens next can be anything but certain. The three classic 'solution' options—local integration, resettlement in a third country, and repatriation—can all pose problems according to an individual's impairments and the availability of supports. As international law has developed in this area, awareness of the challenges facing refugees with disabilities appears to have grown—though the lived experience of many has not improved.[94] Access to education for young refugees with disabilities is a chronic problem in many displacement contexts.[95]

Whether or not it is formally 'bound' by human rights treaties,[96] UNHCR has been enthusiastic in its efforts to respond to recent human rights treaties—including the CRPD. Reference has been made above to UNHCR's Executive Committee's Conclusion on Refugees with Disabilities in 2010,[97] and UNHCR's policy guidelines to assist officers in the field.[98] These have been supplemented over time, most importantly through changes to registration and verification procedures, policies, and tools.[99] In 2011, the agency also removed text from its 'Resettlement Handbook' that some interpreted as

suggesting that refugees with disabilities could be inappropriate candidates for resettlement.[100] Paragraph 4.4.4 of the 2004 Handbook read:

> Disabled refugees who are well-adjusted to their disability and are functioning at a satisfactory level are generally not to be considered for resettlement. . . . Only when such disabilities are untreatable locally, and when they seriously threaten the person's safety or quality of life, should resettlement be explored.[101]

Putting to one side its discriminatory tone, this document demonstrated a tendency to see disability in medical terms. UNHCR removed the reference in acknowledgement of its dissonance with the CRPD,[102] providing further guidance for fieldworkers in 2013 with the Resettlement Assessment Tool.[103] Before the dramatic reduction in the US resettlement intake in 2019, disability was included as a 'priority one' factor for identifying refugees in situations of heightened need.[104] The progressive relaxation of the migration health rules in Australia may also have led to the admission of more refugees with disabilities over time, albeit starting from a low base.[105]

If any change is occurring at State level, some credit should be given to the accountability mechanisms established by the CRPD. The CRPD Committee is charged with reviewing the practice of States parties and has begun systematically to question States on laws, policies, and practice relevant to article 11 of the Convention.[106] In April 2018, the Committee expressed concern about Haiti's failure to include a disability perspective in disaster risk reduction strategies and its failure to provide equal access for persons with disabilities to humanitarian and emergency services including the distribution of humanitarian assistance, and shelters, centres, and facilities. Specific concerns about the treatment of refugees with disabilities were expressed in the Concluding Observations of the Initial reports for Armenia,[107] Cyprus,[108] Germany,[109] Italy,[110]

Montenegro,[111] Morocco,[112] Sudan,[113] and Thailand.[114] Portugal was criticized for leaving refugees and migrants with disabilities in situations of 'destitution and extreme poverty'.[115] Failure to provide support and reasonable accommodation to refugees and asylum seekers with disabilities was also raised in relation to Slovakia,[116] while the Committee expressed concern about the precarious situation of persons with disabilities in the current migrant crisis in the European Union as a whole.[117]

Two States that host a disproportionate number of refugees are Jordan and Uganda. The Committee generally commended both, although raised concerns about inclusion in disaster-planning (Jordan)[118] and in Peace, Recovery and Development Plans (Uganda).[119] Turkey was also questioned about its support of refugees with disabilities.[120] The United Kingdom was criticized for failing to support refugees and asylum seekers with psycho-social and intellectual disabilities in 'exercising their legal capacity'.[121]

Although no mention was made of refugees and asylum seekers in its initial observations on Australia,[122] the Committee's review of that country's second and third report, considered in September 2019, included multiple criticisms.[123] In respect of article 7, the Committee expressed concern at the situation of refugee and asylum-seeking children with disabilities kept in detention facilities in Australia and 'offshore'. It called for the removal of these children from detention and for 'the provision of individualized support and [to] recognize the denial of reasonable accommodation as a form of discrimination'.[124] The Committee expressed concern at Australia's discriminatory

immigration health rules (which group disability together with threats to public health), its exemption of migration laws from discrimination law, as well as its laws requiring migrants to wait 10 years before accessing age and disability support pensions. The Committee called on Australia to cease transferring *all* refugees and asylum seekers to Nauru and Papua New Guinea, in recognition that these policies and practices are harming refugees to the point of causing disabilities.[125]

It remains to be seen whether the work of the CRPD Committee will be a force for lasting change for refugees and asylum seekers with disabilities. There are large and significant States that have not acceded to this Convention—the United States being a notable example. What is apparent is that the situation of refugees with disabilities is now squarely on the agenda of international human rights law. In time it may be possible indeed to claim that refugees with disabilities are no longer forgotten and invisible.

[125] ibid paras 35–6 and also para 49 on work and employment of refugees with disabilities.

CHAPTER 44

STATELESS REFUGEES

HÉLÈNE LAMBERT

1. Introduction

The question of 'Who is a refugee?' has preoccupied the international community of States, civil society, and scholars for decades. States have long had a particular duty towards their nationals. However, governments' role towards the stateless (as non-nationals of any State) or towards refugees (as unwanted nationals of another State) has been less dutiful. This chapter focuses on the particular question of 'Who is a *stateless* refugee?'. The 1954 Convention relating to the Status of Stateless Persons (Stateless Convention)[1] and the 1961 Convention on the Reduction of Statelessness[2] together form the foundation of the international legal framework on statelessness and the protection of stateless persons.[3] At the same time, the Refugee Convention clearly encompasses some categories of stateless persons, considering that article 1A(2) defines a refugee as a person who,

> owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country; or who, *not having a nationality* and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it.[4]

[1] Convention relating to the Status of Stateless Persons (adopted 28 September 1954, entered into force 6 June 1960) 360 UNTS 117.

[2] Convention on the Reduction of Statelessness (adopted 30 August 1961, entered into force 13 December 1975) 989 UNTS 175.

[3] See Chapter 8 in this volume.

[4] Emphasis added.

As this definition makes clear, it has always been assumed that having or not having a nationality is not a determinant element for being recognized as a refugee;[5] in fact UNHCR datasets record *stateless* refugees as refugees.[6] At the same time, considerations of nationality, or lack thereof, can have a strong bearing on the assessment of key elements of the refugee definition. For instance, claims for protection from individuals whose nationality was denied or withdrawn or whose nationality is ineffective may be relevant facts in the assessment of persecution or well-founded fear.

This chapter examines the extent to which the Refugee Convention protects stateless persons *as refugees*. Thus, it scrutinizes all parts of the definition in article 1A(2). It begins with the clause that follows the semi-colon and that is explicitly concerned with persons who do not have a nationality, namely the *de jure* stateless, with Section 2 focusing on the meaning of 'not having a nationality' and Section 3 on its sequels. Section 4 then examines the part of the sentence that precedes the semi-colon and discusses the situation of individuals who despite having a nationality may have a strong case for refugee status on the basis that their nationality is 'ineffective', the so-called *de facto* stateless. It proceeds to discredit the notion that *de facto* statelessness is a relevant concept in international refugee law. The chapter concludes by examining what additional obligations, if any, States might have towards recognized refugees who are stateless with a particular focus on naturalization (Section 5).

2. 'Not Having A Nationality' in the Refugee Definition

Whether an applicant has or does not have a nationality is often one of the first questions a decision-maker has to answer because it is critical to an appreciation of key elements of the refugee definition: the country of reference, the harm feared and the reasons for persecution. Notwithstanding that the Refugee Convention is 'the most frequently applied international treaty in the world',[7] legal scholarship on the application of the refugee definition to persons 'not having a nationality' is limited compared to that on

(Les récents développements en droit de l'immigration, Barreau de Québec, 22 January 1993); UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019) paras 101–5.

[6] See Chapter 8 in this volume. The Institute on Statelessness and Inclusion estimates that today 1.5 million of the refugee population is stateless, in addition to an estimated 3.5 million Palestinian stateless refugees and an estimated 1 million stateless Rohingya in Bangladesh, Institute of Statelessness and Inclusion, 'Statelessness in Numbers: 2018' (2018) <https://files.institutesi.org/ISI_statistics_analysis_2018.pdf> accessed 12 October 2020.

[7] Catherine Dauvergne, *Making People Illegal: What Globalization Means for Migration and Law* (CUP 2008) 35.

persons with a nationality;[8] the enquiry has nevertheless received increased attention by courts across the world.[9] This section briefly examines what it means to be stateless in international law prior to considering when a person is without a nationality for the purpose of refugee law.

a. Statelessness in International Refugee Law: A Technical or Humanitarian Issue?

Historically, the general view was that refugees and stateless persons walked hand in hand,[10] as both groups were deemed to share the same plight, namely, lack of State protection and being in need of international protection in the form of a legal status.[11] The Refugee Convention and the Stateless Convention clearly reflect this long-standing view.

The Stateless Convention was originally intended to be a Protocol to the Refugee Convention.[12] When in July 1951 the Conference of Plenipotentiaries considered both the draft Refugee Convention and the draft Protocol relating to the Status of Stateless Persons, it was decided that more time was needed to discuss the issue of statelessness in detail and that the most pressing issue was that of refugees.[13] When the governments' representatives met again to discuss the draft Protocol for stateless persons, it was agreed (not without dissent) that the meaning of stateless person (statelessness being considered at the time to be a technical concept) was sufficiently different from the meaning of refugee (refugees being considered to be a humanitarian issue) to regulate their status in a separate Convention independent from the Refugee Convention. The clear understanding at the time was that stateless refugees would be protected under the Refugee Convention, and that the new Stateless Convention would only apply to stateless persons who were *not* also refugees.[14]

[8] But see Michelle Foster and Hélène Lambert, *International Refugee Law and the Protection of Stateless Persons* (OUP 2019); Eric Fripp, *Nationality and Statelessness in the International Law of Refugee Status* (Hart Publishing 2016); Hélène Lambert, 'Comparative Perspectives on Arbitrary Deprivation of Nationality and Refugee Status' (2015) 64 ICLQ 1; Maryellen Fullerton, 'The Intersection of Statelessness and Refugee Protection in US Asylum Policy' (2014) 2 Journal on Migration and Human Security 144; Guy S Goodwin-Gill, 'Nationality and Statelessness, Residence and Refugee Status: Issues Affecting Palestinians' (Carleton University March 1990).

[9] As comprehensively examined in Foster and Lambert (n 8).

[13] ibid para III. See also Carol Batchelor, 'Stateless Persons: Some Gaps in International Protection' (1995) 7 IJRL 232, 243 and Foster and Lambert (n 8) ch 2.

[14] A statement to that effect was put in the preamble to the Stateless Convention.

For decades, issues surrounding the protection of stateless persons took a back seat while refugee protection occupied centre stage during the Cold War. UNHCR itself only came to be conferred certain tasks in relation to the 1961 Convention on the Reduction of Statelessness in 1974[15] but its global mandate to identify, prevent, reduce statelessness, *and protect stateless persons* is more recent.[16] Through a more accurate and deeper understanding of international human rights law, which was in its infancy when the Refugee Convention was drafted, it is now recognized that refugees and stateless persons have more than their plight in common; they also often share the source of the problem (ie discriminatory treatment).[17] Kerber for instance highlights gender as 'a key factor in the history of statelessness. Only recently have gender-specific asylum claims… been recognized.'[18]

b. The Significance of Statelessness in the Refugee Definition

The Stateless Convention mirrors the terms of the Refugee Convention in so many respects that one might wonder whether it matters if a person, who is both stateless and refugee, obtains protection under either the Refugee Convention or the Stateless Convention. However, there are significant differences in principle and practice, which render the latter less effective as an instrument of protection than the former. First, there are discrepancies between the rights listed in both Conventions, such as, articles 15 (freedom of association) and 17 (right to work), which are formulated less favourably in the Stateless Convention, and articles 31 (right to non-penalization for unauthorized entry), 33 (*non-refoulement*), and 35 (UNHCR supervision), which are simply absent from the Stateless Convention.[19] Secondly, despite significant increases in State ratification of the Stateless Convention in recent years, it still enjoys fewer ratifications than the Refugee Convention (94 versus 147).[20] Thirdly, even in those States that have

[20] 'Status of Treaties: 3. Convention relating to the Status of Stateless Persons' (*United Nations Treaty Collection*, 12 October 2020) <https://treaties.un.org/pages/ViewDetailsII.aspx?src=TREATY&mtdsg_no=V-3&chapter=5&Temp=mtdsg2&clang=_en> accessed 12 October 2020. This number is expected to rise following the number of pledges made by States at the High-Level Segment on Statelessness, UNHCR, Executive Committee, Geneva, 11 October 2019, see UNHCR, 'Watershed Moment as Countries Step Forward to Tackle Global Statelessness' (11 October 2019) <https://www.unhcr.org/en-au/news/press/2019/10/5da04b1d4/watershed-moment-countries-step-forward-tackle-global-statelessness.html?mc_cid=4cfa0fa749&mc_eid=3614d1ba26> accessed 12 October 2020. In terms of the Refugee Convention, 147 States have ratified the 1967 Protocol: https://treaties.un.org/pages/ShowMTDSGDetails.aspx?src=UNTSONLINE&tabid=2&mtdsg_no=V-5&chapter=5&lang=en (as at 12 October 2020).

ratified the Stateless Convention, very few have implemented a procedure in domestic law for assessing and according a specific status under that Convention.[21] Finally, even in countries that have a stateless status determination procedure, refugee status may remain crucial, for example, where certain rights are accorded only to refugees.[22]

c. 'Not Having A Nationality' in International Refugee Law: In Search of a Principled Approach

The definition of a refugee in the Refugee Convention contemplates a refugee to be with or without a nationality but it fails to explain what 'not having a nationality' means. While judicial approaches unanimously agree that this expression refers to a 'stateless person',[23] the legal test for assessing whether a refugee applicant is stateless (or not) remains inexact. In the great majority of cases,[24] where the nationality of the applicant is clear and undisputed, this is not so much an issue. However, in those cases where nationality is unclear or disputed, courts and tribunals have adopted different approaches to help them decide whether someone is with or without a nationality for the purpose of article 1A(2) Refugee Convention; some have explicitly adopted the definition of a stateless person in the Stateless Convention, others have done so implicitly, others still have simply made no reference at all to any legal framework.[25] Further discrepancies exist in relation to the burden of proof and evidence of nationality.[26]

Guidance from UNHCR in this respect would help towards greater consistency and a more principled approach to interpreting the phrase 'not having a nationality' in the refugee definition. At present, UNHCR's *Handbook on Procedures and Criteria for Determining Refugee Status* (Refugee Handbook) merely recommends that '[w]here his nationality cannot be clearly established, his refugee status should be determined in a similar manner to that of a stateless person, i.e. instead of the country of his nationality, the country of his former habitual residence will have to be taken into account'.[27]

[21] The UNHCR reported in 2016 that twelve countries then had a stateless status determination procedure (France, Italy, Spain, Hungary, Latvia, Mexico, Switzerland, Georgia, Moldova, the Philippines, the UK, and Kosovo), with the Netherlands and Brazil scheduled to implement a procedure: UNHCR, 'Good Practices Papers, Action 6: Establishing Statelessness Determination Procedures to Protect Stateless Persons' <https://www.refworld.org/pdfid/57836cff4.pdf> accessed 12 October 2020. While more States have and will adopt an SDP, the number is still low relative to ratification of the Stateless Convention.

[22] As in the case of Hungary and Bulgaria, see 'Hungary' and 'Bulgaria' (*Statelessness Index*) <https://index.statelessness.eu/?mc_cid=6b88b29d5c&mc_eid=06c43831f2> accessed 12 October 2020.

[23] Foster and Lambert (n 8) 105.

[24] In 97 per cent of cases, according to Cathryn Costello, 'On Refugeehood and Citizenship', in Ayelet Shachar, Rainer Bauböck, Irene Bloemraad, and Maarten Vink (eds), *The Oxford Handbook of Citizenship* (OUP 2017) 716, 720.

[25] Foster and Lambert (n 8) 107–9.

[26] ibid 113–19.

[27] UNHCR (n 5) para 89.

However, it is silent on the precise meaning of 'not having a nationality', referring to 'stateless refugees' and 'stateless persons' without any allusion to the language or substance of the definition of a stateless person in international law (in article 1(1) Stateless Convention).[28] The UNHCR *Handbook on Protection of Stateless Persons* (Stateless Handbook) nevertheless clearly considers 'stateless refugees' to be stateless within the meaning of article 1(1) Stateless Convention.[29] This position could now be made explicit in the UNHCR Refugee Handbook, in addition to some explicit references to the UNHCR Stateless Handbook concerning issues of evidence.[30]

Noteworthy is UNHCR's recommendation that proof of nationality be required only in relation to States with which the applicant has 'a relevant link', such as 'birth on the territory, descent, marriage, adoption or habitual residence'.[31] This would exclude scenarios of 'virtual citizenship' whereby a putative asylum State attempts 'to stick' a nationality on an unwilling individual (eg Jews from the USSR who, despite never having lived in Israel and not wishing to live there, are nevertheless entitled to Israeli citizenship under the Law of Return) or where an individual is 'stuck' with a nationality that she is unable to reject (eg the nationality of South Korea in the case of North Korean refugees).[32] In both scenarios, asylum States have sought to deny refugee status on that ground.[33]

The reality is that international law is not unequivocal on the issue of individual consent to nationality. Indeed, in most cases nationality is acquired at birth based on parentage (*jus sanguinis*) or territory of birth (*jus soli*) or a combination of the two.[34] Yet, the British Digest of International Law, along with several distinguished scholars, believe that it would be contrary to international law for a State to impose its nationality on an individual against their will in the absence of a real connection with that State.[35] This point was first made in the context of the dispute between France and Great Britain over two French Decrees providing that anyone born in the Regency of Tunis or Morocco (French Zone) 'of parents of whom one, justiciable as a foreigner in the French Courts of the Protectorate, was also born there, is French'.[36] Great Britain objected to British subjects entitled to British nationality being automatically granted French

nationality. The Permanent Court of International Justice, in response to the question put to it, advised the parties that contrary to the arguments put forward by France, the matter at hand was not, by international law, solely within the jurisdiction of France.[37] Following negotiations and exchange of notes between the two countries, it was agreed that a British national born in Tunis of a British national should be entitled to decline French nationality; this right, however, was not to extend to succeeding generations.[38]

The view that a State should not impose its nationality on a person against her will is also reflected in article 8(2) of the Draft Articles on Nationality of Natural Persons in Relation to the Succession of States but with one important caveat concerning individuals who would otherwise be stateless;[39] in such cases, 'a State has the right to attribute its nationality to a person . . . irrespective of that person's will'.[40]

The weaknesses of a refugee protection regime which places nationality at its centre is captured by Costello as follows, '[i]f a person flees her country of residence, even if she has never lived in her country of nationality, her refugee assessment still turns on assessing her fear of persecution vis-à-vis her country of nationality'.[41] The above-mentioned examples of North Koreans and their 'virtual' right to South Korean nationality, and of Jewish refugees from the Soviet Union who are entitled to Israeli citizenship under the Israeli Law of Return even though they have never lived there, are cases in point. In both examples, the consent of the person claiming refugee status in another State is irrelevant; the idea being that a 'virtual citizenship' is better than no nationality. The problem with such reasoning is that refugee decision-makers equate a nationality, any nationality, to protection by the country of nationality and conclude that the individual in question is not in need of refugee protection.

3. The Sequel to 'Not Having A Nationality' in the Refugee Definition

Having established that 'not having a nationality' means being stateless as defined in article 1(1) of the Stateless Convention, this section examines whether stateless persons are protected *per se* under the Refugee Convention or whether they need to meet the requirements of the refugee definition (ie well-founded fear of persecution on Convention grounds). If the latter, what are the particular challenges faced by stateless persons seeking refugee protection in contrast with persons with a nationality?

a. A Single Test for Refugee Status: Well-founded Fear of Being Persecuted

Scholarly debates on whether a stateless person has to meet the same criteria as a refugee in order to qualify for refugee status, or whether statelessness *per se* is sufficient, have been comprehensively examined in the literature.[42] The general view is that *all* persons claiming refugee status by application of article 1A(2) must satisfy the same legal test, namely 'a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion'.[43] This general view is embraced by senior courts, for instance in Australia, Canada, France, Germany, Ireland, New Zealand, the UK, and the US, as well as in EU law; 'not having a nationality' does not lower the threshold for being recognized as a refugee.[44]

However, strong arguments to the contrary have been made over the years,[45] and although in the minority, they do question whether the Refugee Convention, correctly applied, should not clearly distinguish between refugees with a nationality and stateless refugees on the ground that nationality remains largely still a discretionary right of States.

As will be discussed next, 'not having a nationality' can also crucially impact on the interpretation of the country of reference, persecution, and the ability to return to that country.

b. Country of Reference: 'Country of Former Habitual Residence'

Once an individual has been identified as 'not having a nationality', the country of reference for assessing the fear of being persecuted becomes the 'country of former

habitual residence'. This was defined by the drafters of the Refugee Convention as 'the country in which he had resided and where he had suffered or fears he would suffer persecution if he returned',[46] with the term 'country' meaning something more than a State, for example, a part of territory or a camp under the control of an authority that is not recognized as a State.[47] Indeed, as pointed out by Gibney, stateless persons 'are not free-floating, deracinated individuals, moving aimlessly around the globe', they are usually settled in a particular country.[48] Generally, *actual* residence is necessary (as opposed to a short stay or visit),[49] but it does not need to be lawful.[50] As a result, it is not unusual for a person to have resided in more than one country prior to seeking asylum. In such cases, it is argued that all that is required by article 1A(2) is that an applicant establishes a well-founded fear in relation to at least one of her countries of former habitual residence,[51] unless article 1E is found to apply.[52]

c. Non-returnability to that Country as an Eligibility Requirement and/or an Act of Persecution

Article 1A(2) of the Refugee Convention differentiates between persons with a nationality and persons without a nationality on the question of return. While persons with a nationality must show that they are unable or unwilling to avail themselves of the protection of their country of nationality, stateless persons must be able to show their inability or unwillingness to return to their country of former habitual residence.

Despite some isolated arguments to the contrary,[53] practical obstacles to a right of return do not prevent a decision-maker from assessing a hypothetical claim for refugee status, if returned.[54] Further investigation is required as to whether an inability to return is being used as a tool of persecution. While the arbitrary refusal to a national to re-enter her country of nationality is generally accepted as amounting to persecution,[55] the same general conclusion cannot be made with respect to stateless persons. For instance, in a series of UK cases concerning stateless Palestinians, senior courts have ruled that, unlike citizens, stateless persons have no right to enter a country, including their country of

former habitual residence; hence to deny them such a right cannot be persecutory.[56] In the words of Maurice Kay LJ, '[t]he lot of a stateless person is an unhappy one, but to deny him a right that he has never enjoyed is not, in itself, persecution';[57] the assumption being that the right to return is attached to nationality, and that stateless persons are protected by the Stateless Convention.

Such reasoning is puzzling considering article 12(4) ICCPR, which guarantees, in very broad terms, the right to enter and remain in one's own country to everyone irrespective of nationality.[58] Instead of concluding that an inability to return cannot amount to persecution in such cases, questions should be asked about the strength of attachments vis-à-vis one's 'own country' and whether the denial of return is arbitrary.[59]

Outside the context of stateless Palestinians, denial of the right to return for stateless persons (particularly where there is evidence of discrimination) has been found to be capable of constituting persecution for the purposes of refugee protection in a number of jurisdictions.[60]

d. Well-founded Fear of Being Persecuted

Having established in Section 2(a) that a well-founded fear of being persecuted is a prerequisite to refugee protection in *all* applications for refugee status, this section now turns to the meaning of 'being persecuted' for a Convention reason in the context of stateless persons.

i. *Denial of Nationality*

Cases based on denial of nationality involve persons who claim that the failure of their country of origin to afford them nationality constitutes persecution (eg based on discriminatory nationality laws). Several of these cases have been met with scepticism by decision-makers on the ground that States are under no obligation to confer their nationality on an individual because nationality conferral is a sovereign act of States.[61]

While it is true that a *general* human right to a nationality may not yet exist in international law, except perhaps for children, human rights obligations are nevertheless engaged where there is evidence of discrimination on a protected ground in formulating

nationality laws.[62] In such cases, the key issue is not one of operation and conflict of nationality laws but rather one of scrutinizing the apparent neutrality of an existing law, by reference to international human rights treaties, such as CEDAW, CERD, ICCPR, ICESCR, CRC, and regional treaties, which may (or may not) lead to a finding of risk of persecution upon return.[63] This is an issue that is ripe for more sophisticated treatment by refugee decision-makers.

ii. *Withdrawal of Nationality*

The jurisprudence on active withdrawal of nationality is slightly more nuanced with distinctions made between cases where denationalization can be lawful in international law (on grounds of fraud or misrepresentation, disloyalty, or treason),[64] cases where individuals have one other (or more) nationality to fall back on, and cases where withdrawal may lead to statelessness, including cases of mass arbitrary deprivation of nationality.

There is now a considerable body of scholarship examining recent legislative changes aiming at withdrawing nationality on national security or public order grounds.[65] This body of scholarship, together with international law, make clear that it is only in the most exceptional circumstances that a State may lawfully denationalize and render an individual stateless. More commonly, withdrawal of nationality is used as a tool for discrimination,[66] often in order to authorize or justify the deportation or detention of entire groups of the population on political, racial, or religious ground.[67] Combatting discrimination is a fundamental purpose of the Refugee Convention and decision-makers have accepted that withdrawal of nationality on a protected ground (eg race, gender, ethnicity) is contrary to international law and cannot be justified for reason of

Fullerton (n 8); David C Baluarte, 'Life after Limbo: Stateless Persons in the United States and the Role of International Protection in Achieving a Legal Solution' (2015) 29 Georgetown Immigration Law Journal 351.

[67] eg the mass withdrawal of nationality to 1.9 million mostly Bengali Muslims, in Assam, northeast India, following the 2018 National Register of Citizens. See Suhasini Raj and Jeffrey Gettleman, 'A Mass Citizenship Check in India Leaves 2 Million People in Limbo', *The New York Times* (31 August 2019) < https://www.nytimes.com/2019/08/31/world/asia/india-muslim-citizen-list.html> accessed 12 October 2020.

sovereignty.[68] The harm must nevertheless be sufficiently serious to reach the threshold of persecution;[69] that assessment is context specific. Hence, withdrawal of nationality *on its own* may not necessarily reach the level of persecution; more may be required in terms of harm, in particular assessing the consequences of becoming stateless.[70]

iii. *Denial of Civil and Political Rights and/or Socio-economic Rights*

It is widely documented that stateless persons often face harm resulting from their lack of access to essential rights attached to nationality, such as education, birth certificates or other ID documents, work, health care, family unity, freedom of movement, etc in their country of former habitual residence. It is difficult to ascertain easily which denials of rights rise to the level of persecution since very often they are entangled. That said, despite an increased willingness by decision-makers to fully recognize the devastating effects of socio-economic deprivation, reluctance persists in recognizing the denial of these rights as persecution unless there is also evidence of physical injury, arrest, and/or detention.[71] The rationale behind such findings is that a stateless person cannot be found to be persecuted under international law for lacking socio-economic rights, which she is not entitled to under *domestic law*. The problem with such reasoning is that it ignores provisions of *international law* that require States to respect and ensure the rights protected in human rights treaties, including both ICCPR and ICESCR, to all people within their territory and subject to their jurisdiction, regardless of nationality or lack thereof. Similarly questionable is reasoning that rejects the possibility of persecution if a risk of harm exists against whole communities or civilians generally.[72] Nevertheless, *significant* hardship/severe treatment resulting from a denial of both civil and political rights and socio-economic rights taken cumulatively have been found to amount to persecution of stateless persons (eg in cases of undocumented Bidoons).[73]

On the whole, therefore, the particular challenge faced by stateless persons seeking refugee protection seems to be that 'persecution is more about serious human rights violations than a deficit of citizenship per se'.[74]

[68] eg *Haile v Gonzales*, 421 F 3d 493, 494 (7th Cir, 2005).

[69] *MA (Ethiopia) v Secretary of State for the Home Department* [2009] EWCA Civ 289; *Haile v Holder* (n 66).

[73] Foster and Lambert (n 8) 178–85. This would also be the case of those Rohingya able to flee and claim refugee status in a State party to the Refugee Convention (UN Human Rights Council, 'Report of the Special Rapporteur on the Situation of Human Rights in Myanmar', UN doc A/HRC/40/68 (2 May 2019)).

[74] Costello (n 24) 725.

4. Having an 'Ineffective' Nationality: The Discredited Notion of *De Facto* Statelessness

The preceding sections examined the relevance of the refugee definition to persons without a nationality, namely the *de jure* stateless. This section focuses on the part of the refugee definition that precedes the semi-colon and which refers to refugees with a nationality. It examines the notion of 'ineffective' nationality or so-called *de facto* statelessness with a view to assessing its usability in refugee law.[75]

De facto stateless persons have existed long before the definition of statelessness was adopted in 1954. According to article I of the Provisional Arrangement of 4 July 1936 concerning the Status of Refugees coming from Germany:

> [T]he term refugee coming from Germany shall be deemed to apply to any person who was settled in that country, who does not possess any nationality other than German nationality, and in respect of whom it is established that in law or in fact he or she does not enjoy the protection of the Government of the Reich[76]

but the term '*de facto* stateless' did not appear until much later, in 1949.[77]

The distinction between *de jure* and *de facto* statelessness, and the terminology '*de facto* stateless', have long been disputed. In 1952, Hudson (working at the time with Weis) observed that although the distinction introduced in the 1949 Study of Statelessness may have been useful then,

> it has, however, no place in the present paper. *Stateless persons in the legal sense of the term are persons who are not considered as nationals by any State according to its law*. The so-called stateless persons are *de facto* nationals of a State who are outside of its territory and devoid of its protection; they are therefore, not stateless: it might be better to speak of '*unprotected persons*' and to call this group '*de facto unprotected persons*', in distinction to '*de jure unprotected persons*', i.e., stateless persons.[78]

[75] Note that the focus here is on *ineffective* nationality and not on the wider issue of 'effective nationality' in the context of dual or multiple nationalities. Hugo Storey, 'Nationality as an Element of the Refugee Definition and the Unsettled Issues of "Inchoate Nationality" and "Effective Nationality" ', *RefLaw* (2 June 2019) <http://www.reflaw.org/nationality-as-an-element-of-the-refugee-definition-and-the-unsettled-issues-of-inchoate-nationality-and-effective-nationality-2/> accessed 12 October 2020.

[78] International Law Commission, 'Report on Nationality, Including Statelessness by Mr. Manley O. Hudson, Special Rapporteur', UN doc A/CN.4/50 (1952) 17.

Cordova, who succeeded Hudson in the role of Special Rapporteur, saw *de facto* statelessness as a much worse situation than *de jure* statelessness because

> the mere fact that they are not technically deprived of nationality itself renders them incapable of obtaining a legal remedy under the proposed statute for stateless persons unless the Commission has the courage to face the problem and provides the said legal remedy.[79]

In his view, 'a right which cannot be exercised is not a positive one' and article 15 UDHR recognizes that human beings have an entitlement to possess a positive, and effective, right of nationality.[80] Despite Cordova's efforts, *de facto* statelessness was not embraced by the International Law Commission on the ground that 'the term "*de facto* statelessness" had never been clearly defined',[81] that it 'was not an easy concept', and that the problem of *de facto* statelessness 'was not extremely urgent'.[82] Hence, it was not included in the Stateless Convention.[83] Notwithstanding this, scholarly debate continued, with some believing that in the eyes of the drafters of the Refugee Convention '*de facto* stateless persons *were* refugees', with others arguing that this not be the case for *all de facto* stateless.[84]

Although the term *de facto* statelessness has remained undefined in law, in its original meaning it referred to persons who have a nationality that is 'ineffective' in the sense that they were *outside* their country of nationality and their State of nationality would not protect them through the exercise of diplomatic and consular protection ('the unprotected').[85] The requirement that a *de facto* stateless person be outside their country of nationality meant that the overlap between *de facto* stateless and refugees was significant.

The rise and development of international human rights law and corresponding duties on States to protect these rights within their territory or jurisdiction provided an added meaning to 'ineffective': ineffective nationality could manifest itself also inside a country as a result of State repression and discrimination.[86] However, this expansion of the notion of *de facto* statelessness to persons whose general human rights have been

[86] David Weissbrodt and Clay Collins, 'The Human Rights of Stateless Persons' (2006) 28 Human Rights Quarterly 245, 263.

violated has not gone without criticism. For instance, Massey has argued that it conflates two conceptually distinct rights—the right to a nationality and the rights attached to nationality—and a violation of the right to a nationality may not necessarily entail a violation of the rights attached to nationality and vice versa.[87] De Chickera and van Waas describe it as 'the catch-all solution' used (wrongly, in their view) to fill shortcomings in the legal definition of a stateless person.[88] They further argue that

> [i]n the absence of an internationally agreed substantive minimum content of nationality, it becomes near impossible to objectively draw a line on a spectrum beyond which statelessness can be assumed on the basis of 'ineffective nationality',

suggesting instead 'effective human rights protection' as a better line of inquiry.[89]

Based on this scholarship, this chapter argues that *de facto* statelessness is a discredited notion,[90] which has no place in the application of the Refugee Convention. For the purpose of refugee law, a person is either with a nationality or without a nationality; this being primarily a question of law and how law operates in practice: 'the term "stateless person" means a person who is not considered as a national by any State *under the operation of its law*'.[91]

Considerations of 'ineffective' nationality are a mixed question of law and fact; the person is *not* stateless in law since she or he has a nationality. Yet the rights attached to that nationality and how these are protected by the State of nationality might raise concerns under international human rights law, which, in turn may be relevant to establishing a well-founded fear of being persecuted on a ground protected by the Refugee Convention.

While the distinction between a national and a stateless person may appear straightforward on paper, in practice, decision-makers have, as explained above, introduced doubtful practices aimed at denying refugee protection to asylum seekers. For instance, people who, notwithstanding being confirmed (*de jure*) stateless in their country of habitual residence, are nevertheless treated by decision-makers as possessing the nationality of another State simply because they might have the technical possibility of applying for citizenship, despite having no real links or connection with that country, resulting in the denial of protection. Although the lawfulness of such practices may have been uncertain some years ago, they have since been unequivocally discredited by legal scholars.[92]

[91] Statelessness Convention (n 1) art 1(1) emphasis added.

[92] eg Macklin (n 32); Foster and Lambert (n 8) 127–31 (criticizing the practice of 'inchoate nationality').

To be sure, persons whose nationality is ineffective *have* a nationality and the discriminatory treatments to which they are subject should be assessed in terms of persecution by reference to international human rights law standards, including the equal enjoyment of rights by everyone in their country of nationality.[93] Where nationality is disputed or contested, the core issue becomes one of identification, which may or may not lead to the conclusion that the person concerned is without a nationality or with a nationality, and in some cases that nationality may be ineffective.[94] However, in none of these scenarios is the concept of *de facto* statelessness relevant to refugee protection.

5. Naturalization and Stateless Refugees

Thus far, this chapter has examined questions of nationality in refugee status determination. But what happens once a stateless person has been recognized as a refugee? It is well recognized that 'protection should be followed by a "solution"—an end to the period as a refugee, either by naturalizing (in a country of first protection or in a country of resettlement) or by being repatriated if the conditions that induced flight change durably'.[95] This section investigates naturalization as a solution for stateless refugees.[96]

The intention of the drafters of the Refugee Convention was to have refugees, *all* refugees, assimilated and naturalized as much as possible.[97] It was hoped that, with article 34,

> the refugee may familiarize himself with the language of the country of reception, its customs and way of life of the nation among whom he lives, so that he—without any feeling of coercion—may be more readily integrated in the economic, social and cultural life of the country of refuge.[98]

But naturalization is not a right for the stateless or the refugee;[99] at best, it is 'an *opportunity* to enjoy *facilitated* naturalisation'[100] since these acts continue to fall within States' discretion pursuant to UN Charter principles of sovereignty, independence, and

[95] Costello (n 24) 730.

[96] See Chapter 58 in this volume.

[97] Articles 3 and 34 mean that no distinction is made between refugees with a nationality and stateless refugees in matters of naturalization.

[98] Atle Grahl-Madsen, 'Commentary on the Refugee Convention 1951' (UNHCR 1997) art 34 para 3.

[99] Note that article 32 of the Stateless Convention contains the same provision as article 34 of the Refugee Convention but for stateless persons.

[100] van Waas (n 93) 365.

non-interference in the domestic affairs of a State.[101] However, this discretion is mitigated by rules and principles including non-discrimination and good faith, with the latter arguably calling for 'favourable conditions' to be put in place to facilitate naturalization *of stateless persons*,[102] and 'the objective of tackling statelessness should be weighed into the equation at all times'.[103]

In the same way that States are not compelled to grant their nationality to refugees within their territory ('shall facilitate as far as possible…'), the compulsory naturalization of refugees was never considered an option.[104] Loyalty to the homeland and a desire to return one day are some of the reasons that may prevent a refugee from applying for naturalization in his or her new country.[105] One might, however, ponder whether a *stateless refugee* has a duty to accept an offer of nationality from her country of refuge where she has long been established. Considering the duty of States to eliminate statelessness, can a case ever be made for lawfully imposing a nationality on a *de jure* stateless refugee? The legislation and practices of most States, to grant nationality automatically based on birth (*jus sanguinis* and *jus soli*), coupled with States' duty under international human rights law to eliminate statelessness, would suggest that in situations involving stateless persons the will or consent of the individual may be secondary. What is certain is that refugee status can never be lost for refusing to acquire the nationality of the country of refuge because the cessation clauses for refugee status (article 1C) are clear and limited.[106]

6. Conclusion

This chapter has examined statelessness in a refugee law context. It has highlighted that nationality is not just relevant to identifying who a person claims she is, but also the country of return, and the reasons for persecution. Nationality is further relevant in the identification of persecution itself because, commonly with *stateless* refugees, the source of persecution relates to matters concerning nationality (namely, discrimination on political, racial, or religious grounds). Increasingly, arbitrary denial of nationality and arbitrary withdrawal of nationality, alone or together with the harm resulting from statelessness, including severe deprivation of the rights to subsistence, basic health care, and education, are being recognized as the basis for refugee protection in countries

across the world. However, significant gaps remain for certain large groups of stateless refugees, such as Palestinians.

The chapter has also argued that the refugee definition in article 1A(2) Refugee Convention calls for decision-makers to question the quality of the *nationality* of refugees in terms of access and enjoyment of human rights. This is not the same though as embracing *de facto* statelessness, which this chapter has argued is a discredited notion that has no place in refugee law.

While the issue of statelessness has increasingly attracted international attention, the particular challenges pertinent to stateless refugees have been overlooked. This chapter calls for more explicit analysis and guidance from UNHCR, the agency with the remit for both refugees and stateless persons, on the unique challenges in identifying and protecting stateless refugees. In particular, better alignment between the UNHCR Refugee Handbook and the UNHCR Stateless Handbook, especially on the meaning of key elements of the refugee definition such as 'not having a nationality', is required. More broadly, issues at the heart of the intersection between refugee protection and statelessness would be worthy of further judicial and scholarly exploration.

CHAPTER 45

CONFLICT REFUGEES

CORNELIS (KEES) WOUTERS*

1. Introduction

The vast majority of the world's refugees flee the atrocities and dangers of conflict.[1] In 2018, 67 per cent of all refugees worldwide came from just five countries: Syria, Afghanistan, South Sudan, Myanmar, and Somalia.[2] Violence in other countries, including in the north of Central America involving organized gangs, also contributed to a rise in the number of refugees.

Armed conflict and other situations of violence invariably cause human suffering, directly affecting the lives of civilian populations. Further, the indirect consequences of such situations can destroy State and societal structures, leaving people destitute and compelled to flee. The phrase 'armed conflict and other situations of violence' in this chapter should be understood broadly, referring to situations that are marked by a material level or spread of violence that affects the civilian population. The phrase is not limited to any specific meaning that 'armed conflict' or 'other situations of violence' may have under international humanitarian law (IHL).[3] In this chapter, the terms 'war', 'armed conflict', and 'conflict' are used interchangeably.

While it is difficult to argue that people should not be returned to the inherent dangers of war, different thinking and practices can be discerned when it comes to the role of international refugee law in providing protection to people displaced across borders by conflict. The discrepancies between recognizing people fleeing conflict as refugees and providing them with other, complementary, forms of international protection arise in part from the way in which armed conflicts are understood, the way in which the

definition of a refugee in the Refugee Convention has been interpreted and applied, and, in part, from limitations in the definition itself. Also relevant are broader refugee definitions in Africa and Latin America,[4] as well as the development of complementary forms of international protection, particularly subsidiary protection developed within EU law.[5] Recognizing 'conflict refugees' as refugees within the international legal framework requires an understanding of the dynamics of conflicts, as well as a dynamic interpretation of the refugee definitions at the global and regional levels, and appreciation of the complementarity of other forms of international protection.

This chapter explores the causes, character, and effects of conflicts, as well as the advanced understanding of the refugee definition in the Refugee Convention and regional instruments in the context of the inherent dangers in contemporary conflicts.[6]

2. Understanding Conflicts for the Purpose of Refugee Protection

Understanding the complexities of conflicts is essential when considering the applicability of international refugee law. Wars come in all shapes and sizes. In 2018, the Heidelberg Institute for Conflict Research counted 374 conflicts around the world, of which 214 were fought violently.[7] Conflicts can be rooted in ethnic, ideological, religious, or social grievances; fuelled by greed over resources, trade routes, land, and livelihoods; or in pursuit of economic gain. Most conflicts have multiple and overlapping causes and drivers.[8]

With a rise in non-international conflicts, a diversity of armed actors, including a diversity of irregular armed actors, with different—and often mixed—modes of violence, has emerged.[9] This blurs the traditional boundaries between war and peace and between combatants and civilians. It has also resulted in more protracted and cyclical conflicts. Periods of less violence are often just interludes between periods of greater intensity.

In modern-day conflicts, violence directed at civilians is a particular characteristic.[10] There has been an increasing targeting or terrorizing of civilians, and other forms of coercive violence, aimed at exploiting, controlling, or exterminating (parts of) the civilian population. While there has been a general decline in lethality in conflicts, their effects on people's lives and physical and mental integrity is evident.[11] Violence often takes place in crowded urban areas. The use and availability of low technological weaponry, such as machetes, automatic weapons, landmines, and rocket-propelled grenades, has further contributed to the spread of conflict into civilian areas. This invariably causes human suffering, directly affecting the lives of civilian populations. Violence in conflict may be widespread and large-scale, or rather small-scale, but it is rarely conducted indiscriminately or has an indiscriminate effect on civilians. For example, in 2019, UNHCR described the situation in Iraq as one of 'continuing insecurity in parts of Iraq and widespread human rights abuses', where, amongst others, ISIS conducted 'widespread attacks directed against civilians', but did so to target or affect religious and minority ethnic groups.[12]

A particularly concerning tool used in war is sexual and gender-based violence,[13] including rape, sexual and conjugal slavery, enforced prostitution, forced abortion and miscarriage, trafficking, and genital mutilation. Sexual and gender-based violence, which affects women and girls as well as men and boys, may be used as a weapon of war, aimed at destroying people's identity and dignity and the social fabric of communities.[14] Sexual and gender-based violence may be used to directly harm the victim, or as part of a broader strategy to control communities and territory.[15] Rape is particularly pervasive in many conflicts and cannot be characterized simply as lust. It is an expression by the perpetrator of control and power over the victim, as well as the family and community to which the victim belongs.[16] Particularly in situations of conflict, rape occurs in an overarching context of violence and impunity, of weak or misdirected State authority, and enhanced vulnerability and discrimination. It is therefore an effective tool for terrorizing civilian populations. Furthermore, the after-effects of rape must also be understood. Rape often results in societal stigma, leading to social, cultural, and economic exclusion of the victim, increased vulnerability, and further forms of violence.[17]

Children are also victims of conflict. Children may be more vulnerable to the effects of conflict because of their young age and immaturity. They may be subjected to forced separation from parents, malnutrition, disease, and deprivation of education. Children

may also be at risk of being exploited, trafficked, or recruited as child soldiers[18] (which may include brutal initiation rituals, fighting on front lines, killing others and being shot at, and other abuses, such as early or forced marriage, forced labour, or sexual slavery).[19] The recruitment of children (namely, the compulsory, forced, and voluntary conscription or enlistment of children into any kind of armed force or armed group) and the use of children under the age of 15 in hostilities, is prohibited in all circumstances[20] and qualifies as a war crime.[21] The prohibition in international law on the recruitment and the use in hostilities of children between the age of 15 and 18 is patchy, with some instruments allowing children to voluntarily join government armed forces.[22] The Optional Protocol to the Convention on the Rights of the Child on the involvement of children in armed conflict prohibits all recruitment and use of children under the age of 18 by armed groups that are distinct from the armed forces of the State,[23] as well as the compulsory recruitment of under-18s into the State's armed forces.[24] The ILO Convention No 182 on the Worst Forms of Child Labour prohibits the forced or compulsory recruitment and use in armed conflict of all children and applies to the armed forces of a State and to non-State armed groups.[25] Children may also be specifically susceptible to harm resulting from gangs and gang violence,[26] which may affect large segments of society, especially where the rule of law is weak. For example, gangs in the northern part of Central America exercise high levels of control, often by

[18] The term 'child soldier' refers to a child associated with an armed force or armed group. This includes 'any person below 18 years of age who is or who has been recruited or used by an armed force or armed group in any capacity, including but not limited to children, boys, and girls used as fighters, cooks, porters, messengers, spies or for sexual purposes. It does not only refer to a child who is taking or has taken a direct part in hostilities.' UN Children's Fund (UNICEF), 'The Paris Principles. violent means, over all aspects of life of members of the population in the areas under their control. This includes forced recruitment; harm or threats preventing recruited children from leaving; and forcing gang members to conduct violence against non-members and undertake criminal activities, such as trafficking drugs, arms, and people, to make a profit as well as consolidate or expand the gang's powerbase.[27]

Further, the indirect consequences of conflicts, such as food shortages, poverty, inflation, and disease, have increased. Conflicts often destroy State and societal structures and disrupt economies, leaving people marginalized and destitute.[28] Wars also exacerbate State fragility, shifting power from State to non-State actors, which exercise control over territories with little sense of responsibility towards the population.[29]

Finally, conflicts interact with disasters and the adverse effects of climate change. Given their geographical location, many countries experiencing conflict are already vulnerable to these impacts, which are worsened because of the effects of conflict on the State's ability to prevent and respond to them.[30] Priorities shift, assets weaken, and prevention, response, and adaptation activities become impossible to maintain. For example, drought conditions in Somalia are exacerbated by historical and ongoing political volatility, governance challenges, and conflict.[31]

Conflict-generating displacement is not a new phenomenon.[32] However, the complexities of conflict—causes, character, and effects—make it difficult to determine whether people fleeing conflicts are refugees.[33] An individual seeking protection will often have difficulty in giving a detailed account of the background and development of the conflict. Further, stereotypes, misunderstandings, and generalizations about the conflict may prevent a decision-maker from seeking a deeper understanding of the conflict.[34] Reliable and accurate information on countries in conflict may not be readily available or easy to obtain precisely because the country is in conflict. As UNHCR noted in its Guidelines on International Protection No 12, which deal specifically with claims for refugee status related to situations of armed conflict and violence, available country of origin information may not reflect the specific circumstances of women or men,

including the prevalence of gender-related forms of harm, or take into account the changing composition and conduct of the armed actors involved.[35]

3. Refugee Convention

a. Historical Context

It has long been postulated that the Refugee Convention does not protect the victims of war since they are subjected to the general threats resulting from indiscriminate violence that normally prevails in conflict situations. The perception in many States, particularly those with highly developed individual refugee status determination procedures, is that the Refugee Convention was not designed for 'conflict refugees'[36] and that conflicts should trigger alternative forms of protection.[37] It is ironic that the Refugee Convention does not explicitly provide international protection to civilians fleeing conflict, given that the treaty was a response to the Second World War, and there is a popular presumption that protection from conflict forms the essence of refugee protection.[38] Even UNHCR has long adopted the 'exceptionality approach',[39] holding that '[p]ersons compelled to leave their country of origin as a result of international or national armed conflicts are not normally considered refugees under the 1951 Convention', unless a foreign army is seeking to persecute the population of the country it has invaded and occupied.[40] Alongside this, however, UNHCR's mandate has evolved to include 'individuals who are outside their country of origin or habitual residence and who are unable or unwilling to return there owing to serious threats to life, physical integrity or freedom resulting from generalized violence or events seriously disturbing public order',[41] based largely on the regional refugee criteria developed in Africa and Latin America.[42]

Notwithstanding UNHCR's restrictive position vis-à-vis the Refugee Convention, the UN Secretary-General, the Executive Committee of the High Commissioner's Programme (ExCom), and UNHCR itself have all acknowledged the large number of persons in need of international protection who have been forced to flee the dangers of conflict. ExCom did so in several Conclusions on International Protection in the mid-1990s.[43] In 1999, the UN Secretary-General observed that '[p]eople forced to leave their country of nationality or permanent residence should enjoy the protection of international refugee law, yet many do not'.[44] Also in 1999, UNHCR referred to the conflicts in the former Yugoslavia, the Great Lakes region, and Kosovo, as 'striking examples of situations where violence has been used as a means to persecute specific communities, and where ethnic or religious "cleansing" has been the ultimate purpose of war'.[45] While there was a growing appreciation in the 1990s that international refugee law was a relevant legal framework for the protection of people fleeing conflict across borders, the view persisted that only in theory would such people face a risk of persecution related to a Convention ground. In 2001, UNHCR explicitly considered the Refugee Convention to be applicable to conflict refugees where sufficient harm could be shown and a link to a Convention ground established. UNHCR in fact acknowledged that conflicts are often rooted in ethnic, religious, or political differences that specifically victimize populations, qualifying people as refugees within the meaning of the Refugee Convention.[46] At the same time, UNHCR reiterated, without further explanation, 'that there are persons who flee the indiscriminate effects of violence associated with conflict with no element of persecution'.[47] With the publication of the Guidelines on International Protection No 12 in 2016, UNHCR clarified unequivocally the applicability of the Refugee Convention to persons displaced by conflict. UNHCR accepted the primacy of the Refugee Convention to 'conflict refugees' and considered that 'almost each and every conflict that we're dealing with today would make the case for the [application of the] 1951 Convention'.[48] A clear example of this is the large number of 'risk profiles' UNHCR identifies in its country (of origin)

guidance documents, which almost exclusively concern countries in conflict or otherwise experiencing public violence.[49]

The long-pervasive 'exceptionality approach' may have its roots in the drafting of the Refugee Convention itself, even though neither a textual nor a contextual reading supports this approach.[50] Negotiated in the aftermath of the Second World War, the drafters did not intend the refugee definition to cover persons fleeing the general dangers of war: indeed, a proposal to that effect by the International Committee for the Red Cross was rejected. However, the drafters understood that people fleeing the atrocities of war might also have a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion,[51] which is the analysis required under the refugee definition in article 1A(2). The definition contains no limitation on its application during times of peace or conflict.[52] In fact, the definition is indifferent towards the contextual situation in which a need for refugee protection is generated.[53] As such, a 'neutral'—or, perhaps more appropriately called, a contextual—approach to applying the Refugee Convention is called for in all circumstances, including when people flee conflicts.[54] What is required when dealing with refugee claims is an assessment of those claims based on individual facts and circumstances in the overall context of the country of origin.[55] The Convention is premised on the idea that people should be protected from harm to which they may be subjected because of their ethnicity, convictions, or other characteristics, or the group to which they belong. The real challenge is in understanding the realities of conflict and applying them to the elements of the refugee definition.

b. Challenges

To determine whether or not a person fleeing a conflict is a refugee requires an understanding and analysis of the conflict, that is, the factual situation in the country of origin affected by the conflict in its proper context, including the causes, character, and impact of the conflict on various populations and how it affects the particular individual

[55] Storey (n 36) 9 introduced a slightly different 'normalcy approach', namely, an approach according to which claims for international protection by persons fleeing armed conflict should normally succeed unless there are special circumstances.

seeking refugee protection. Decision-makers assessing claims for refugee status often fail to consider how claims related to conflict are characterized by harm targeted towards, or affecting, a specific individual or group. Challenges arise in part from limited understanding of the intricacies of the conflict, and in part from complexities in applying elements of the refugee definition.

Applying the refugee definition to conflict situations involves legal interpretative challenges relating to: (a) the individualized phrasing of the definition; (b) the meaning of 'persecution'; (c) identifying the relevant Convention ground; (d) establishing a causal link between the fear of persecution and a Convention ground; and (e) the relevance and reasonableness of an internal flight alternative.

Before discussing each of these challenges below, it is important to consider the relevance of classifying a conflict as an 'armed conflict'. There is no universally agreed definition of armed conflict in international treaty law or in IHL.[56] While State adjudicators and UNHCR have classified multiple situations as an armed conflict for the purposes of refugee status determination, such classification is not necessarily based on IHL.[57] The classification of a situation as an armed conflict within the meaning of IHL is neither required nor determinative and may distort the assessment of the refugee claim, emphasizing the general character and impact of the situation, rather than the risk of persecution for particular civilians. Importantly, classifying a conflict as an international or a non-international armed conflict within the meaning of IHL is not needed and not necessarily helpful,[58] since it includes considerations that are not relevant for assessing a person's eligibility for refugee protection. For example, establishing an armed conflict under IHL depends not only on the severity of the violence involved, but also on the level of organization of the parties to the conflict.[59] Further, refugee status determination applies a forward-looking approach to the situation in the country of origin, which is absent in an IHL determination of armed conflict. Additionally, classifying a situation as an armed conflict could distract decision-makers from the refugee's predicament, which should be the focus of refugee status determination.[60] Many conflicts are not designated as armed conflicts for the purposes of IHL, yet the means employed and their consequences may be just as violent and harmful, which *is* relevant when assessing a claim for refugee status.[61]

Other labels, such as generalized or indiscriminate violence, may also be distorting. The terms 'generalized' and 'indiscriminate' have no clear meaning in law. 'Generalized' tends to refer to the character of the violence as being widespread and/or systematic, affecting a large number of people.[62] By contrast, 'indiscriminate' refers to the effects of

the violence, especially when there is a lack of distinction between military and civilian targets, or when the violence is specifically directed against civilian populations or is disproportionate to the anticipated military advantage.[63] When, from the outset of assessing a claim for refugee status, a situation in the country of origin is classified as 'generalized' and/or 'indiscriminate' violence, the decision-maker may not appreciate that widespread and systematic violence affects many people and that it may not be random.

c. Individualization

As mentioned above, the vast majority of the world's refugees flee conflict, often in large numbers and *en masse*. Large unmanageable numbers of refugees have also played a part in restrictive approaches to applying the Refugee Convention to people fleeing conflict.[64] The individualized character of the Convention definition in article 1A(2), written in the singular person, seems contradictory and inappropriate when applied to the displacement of civilian populations from countries in conflict.[65] Whole populations may suffer or be at risk of persecution in such situations. A restrictive interpretation of the definition would require individual members of affected populations to show a fear of persecution over and above the risks inherent in war.[66] Such an interpretation would disregard the characteristics and effects of conflict on populations and result in the refugee definition only applying to individuals singled out for persecutory harm, which has been widely criticized.[67] The refugee definition does not balance the claims of individuals against each other.[68] Particularly in conflict situations, entire communities or populations may be at risk of persecution, leaving each member of the community or population at risk; a risk that is shared by many other individuals.[69] The fact that many or all members of a community may be at risk does not undermine the validity of any particular individual's claim.[70] The test is whether an individual's fear of being persecuted is well founded, based on the general conditions in the country of origin in combination with personal facts and circumstances. In fact, at times, the impact of the

conflict on an entire community strengthens, rather than weakens, the risk to any individual member of the community. Further, there is nothing in the refugee definition that requires individuals fleeing conflict to demonstrate a risk of harm over and above that of others caught up in the same situation. As such, potentially large numbers of people fleeing conflict may be recognized as refugees, provided they meet the other criteria of the definition.

d. Persecution

As already addressed above, the harms to which civilians are subjected in conflict are multiple. A conflict adds different layers of vulnerability through the means employed, the general degenerating situation, and the varying effects it has on different people.[71]

Whether harm is serious or severe enough to amount to persecution does not depend on whether it is conducted during, or is the result of, conflict.[72] The text and context of the refugee definition do not require a higher level of severity or seriousness of harm to amount to persecution in conflict situations. However, in times of conflict, a particular level of harm may ordinarily be expected and may not be in breach of international human rights law standards, particularly when it results from lawful and proportionate derogations. States may even declare a state of emergency.[73] While lawful derogations may not necessarily constitute persecution if adopted, as is strictly required by the exigencies of the situation,[74] the overall situation or a cumulation of measures may nonetheless be persecutory.[75]

Persecution may directly and immediately affect a person's life, physical integrity, or freedom in violation of human rights standards or even IHL standards. A series of harmful acts or omissions may also, cumulatively, amount to persecution. For example, regular exposure to security checks, property searches, or other forms of harassment, or the systematic denial of food and medical supplies, or the regular cutting off of water supplies and electricity may over time amount to persecution. Further, a conflict may have serious deleterious effects on the physical and psychological health of people or their personal development, which, particularly taking into account specific vulnerabilities of people, such as their age or gender, may amount to persecution. Indirect and longer-term consequences of conflict may also amount to persecution, including when they result in socio-economic shortcomings.[76] State institutions may become dysfunctional and vital services disrupted. As a result, crime may increase, access to food and livelihood options may be compromised, and access to education and health care services may be constrained. This may leave people without an adequate standard of living or even destitute, amounting to persecution.

[76] James C Hathaway and Michelle Foster, *The Law of Refugee Status* (CUP 2014) 228.

Further, conflict may interact with disasters and the adverse effects of climate change.[77] Decades of conflict and recurrent disasters may leave populations in a state of deep vulnerability through the destruction of livelihoods and the loss of livestock, growing rates of communicable diseases, increased displacement, continuous human rights abuses, and higher crime levels. Similarly, a combination of conflict, poor governance, and weak or corrupt institutions may lead to situations where disaster preparedness, risk reduction, and emergency response mechanisms are weak or absent. As a result, disasters, including floods, mudslides, earthquakes, droughts, and severe weather, are a further threat to people whose resilience has already been worn down.[78] Disasters may also lead to further tensions over natural resources and land, exacerbating communal tensions.[79]

e. For Reasons of Race, Religion, Nationality, Membership of a Particular Group, or Political Opinion

Being at risk of persecution alone is not sufficient to qualify as a refugee within the meaning of the Refugee Convention. The risk of persecution needs to be linked to one or more of the five Convention grounds, namely race, religion, nationality, membership of a particular social group, or political opinion. A persistent misperception regarding the applicability of the refugee definition to people displaced by conflict is the conventional assumption that the violence in conflict is general and indiscriminate.[80] As outlined above, harm that is general (namely widespread and/or systematic and affecting a large number of people) and indiscriminate (in the IHL sense of the term) may still target and be directed at specific individuals or populations. It is really only 'indiscriminate' in that the violence does not differentiate between military objectives and civilians and civilian objects because of the method of warfare chosen (for example, bombings, shellings, suicide attacks, and the use of improvised explosive

[80] Lülf (n 53) 86.

devices).[81] For instance, suicide attacks at marketplaces will have indiscriminate effects, but this weapon of war is used intentionally to affect large groups of people with suspected or associated distinct profiles, or to instil terror on the basis of a discriminatory and oppressive agenda. As a result, populations are either affected or targeted because they reside near hideouts of prominent opposition fighters, or because they belong or support an opposing fighting party—or are perceived to do so. Often particular neighbourhoods, villages, towns, or larger geographical areas are targeted because they are a real, or perceived, stronghold of a particular armed group. The perception of support for the 'other side' may be based on little more than the civilians' physical presence or origin in neighbourhoods or villages presently or previously under the control of, or having a presence of, armed groups. UNHCR has, for example, consistently noted that '[a] particular feature of the conflict in Syria is that different parties to the conflict frequently impute a political opinion to larger groups of people, including families, tribes, religious or ethnic groups, or whole towns, villages or neighbourhoods, by association'.[82] Civilians in such areas are at risk of persecution by reason of either their perceived opposition to, or support for, one (or more) of the armed groups. The risk of them being harmed is very real and is in no way diminished by the fact that they may not be targeted for, or exposed to, harm on an individual basis.[83]

The reality of many conflicts also means that journalists, human rights defenders, health care professionals, and humanitarian aid workers are often targeted for doing their work.[84] Reporting critically on conflicts or aiding the victims of war is frequently seen as supporting the opposition or assisting the enemy. These professionals are at risk of persecution by association, whereby the Convention ground is established by the persecutor's perception of the professionals' association with opposing groups and, as a result thereof, an attributed political opinion or religious belief.[85]

The complexity of drivers of conflict, as well as the strategies, tactics, and means and methods of warfare of the armed actors involved, have complicated the establishment of the appropriate Convention ground. There is usually no single explanation for a particular conflict. Multiple and overlapping causes may exist, which may change over time.[86] Conflicts may be primarily profit-driven but may also aim to consolidate or expand the actors' powerbase, implying that the actors' conduct may be racial, religious, or politically motivated. Violence in conflict is seldom a means to itself, carried out without reason.[87]

f. Internal Flight Alternative

A final relevant issue concerns the applicability of an internal flight alternative in the context of conflicts.[88] Conflicts may be limited to specific parts of a country, giving rise to the question of whether people have a protection alternative in their own country. However, it is highly questionable whether an internal flight alternative can be a relevant consideration in conflicts. Violence and oppression are often widespread and not geographically limited to one (or more) part(s) of the country. Further, conflicts may be fluid, with changing frontlines and escalations in violence, often involving a variety of actors, who may operate in diverse geographical areas and not be easily identifiable, nor have effective and durable control over territories. As such, people may not be free from a risk of persecution in all parts of the country, even though some parts may not be affected by the conflict. In such cases, it is relevant to consider whether these parts are practically and safely accessible. For example, minefields may prevent people from reaching these areas.[89] Even when a conflict has ended, places may continue to be inaccessible because of destroyed infrastructure or explosive remnants of war.[90] The unpredictability, volatility, and fluidity of conflict make it difficult to imagine an internal flight alternative to be a relevant consideration in any conflict. However, even when the conflict is geographically limited and confined to a specific part of the country, and an internal flight alternative can be a relevant consideration for decision-makers, it should be borne in mind that the humanitarian situation in such an area may be dire. Even the presence of humanitarian aid and humanitarian aid organizations to protect and assist the population in the area will not make the area a reasonable internal flight alternative.[91] The area may be overcrowded, limiting access to shelter, food, water, and other basic needs; inhabitants may be vulnerable to crime and exploitation; and there may be little prospects for improvements within a reasonable timeframe.[92] Finally, the existence of protected zones in accordance with IHL, or safe zones created under UN Security Council resolutions, does not necessarily make these areas a relevant or reasonable internal flight alternative under international refugee law. The safety of the people protected in these zones is easily compromised.[93]

4. Regional Refugee Criteria

Regional refugee instruments, such as the OAU Convention in Africa and the Cartagena Declaration in Latin America, have expanded the scope of the refugee definition by

[88] For a general discussion on the use of the internal flight alternative, see Chapter 38 in this volume.

adopting specific regional criteria.[94] These are often seen as being a generous and flexible alternative to defining a refugee.[95] Their adoption has contributed to the long-time persistent exceptionality approach of the Refugee Convention to 'conflict refugees'.[96] Where the composite elements of the refugee definition in the Refugee Convention create a range of interpretative questions, the regional refugee criteria appear better equipped to protect people fleeing conflict as they refer to people's compulsion to flee more general and indiscriminate situations of harm.[97] The OAU Convention was in part adopted to protect people fleeing the various struggles on the African continent for independence from colonial rule.[98]

The regional refugee criteria should not be viewed as alternatives to the Refugee Convention definition. This would ignore the primacy of the Refugee Convention and the complementary character of regional refugee protection instruments.[99] The Refugee Convention definition and the regional refugee criteria are not mutually exclusive; a person may be a refugee under both. However, the complementary character of the regional instruments means that it is preferable to first assess whether a person is a refugee under the Refugee Convention, before turning to the regional criteria. However, in relation to conflicts, where often many people simultaneously seek protection, applying the regional criteria may be more practical and efficient.[100] States parties to the OAU Convention show varied practices,[101] including using the regional criteria to adjudicate refugee claims on a *prima facie* basis.[102]

Under the complementary definitions in the regional instruments, fear of persecution for reasons of a person's ethnicity, convictions, or characteristics is not determinative; rather, the core element is being forced to leave one's home because of general dangers resulting from situational events. The OAU Convention refers to external aggression, occupation, foreign domination, and events seriously disturbing public order, while the Cartagena Declaration refers to generalized violence, foreign aggression, internal conflicts, massive violation of human rights, and other circumstances that have seriously disturbed public order. Many of these situations are the result of conflict.

[102] Sharpe (n 94) 67. Ivor Jackson, *The Refugee Concept in Group Situations* (Martinus Nijhoff 2004) 4.

The application of the regional refugee criteria is not without its own legal interpretative challenges. For the OAU Convention, this may be largely because there is very little relevant case law or scholarly analysis on which to draw, and much is left to a principled interpretation based on the rules of treaty interpretation provided under the Vienna Convention on the Law of Treaties (VCLT).[103] The Cartagena Declaration is not a legally binding instrument and, as such, not a treaty to which the VCLT rules of treaty interpretation apply. The importance of the regional refugee criteria included in the Cartagena Declaration depends on their incorporation into the domestic legal system of Latin American States.[104]

IHL has played a part in interpreting the situational events listed in the regional refugee criteria, particularly in relation to external aggression and occupation (in the OAU Convention) and internal conflicts, foreign aggression, generalized violence, and other circumstances that seriously disturb public order (in the Cartagena Declaration).[105] Some situational events listed can be clearly delineated, whereas others remain ambiguous. In Africa, the ground 'events seriously disturbing public order' appears to be the main one used, while the other grounds are largely ignored.[106] The concept of 'public order' does not have a single meaning under international law. It can be broadly linked to the prevailing level of the administrative, social, political, and moral order of the State. The prevailing level is to be assessed according to the effective functioning of the State in relation to its population, and based on respect for the rule of law and human dignity to such an extent that the life, security, and freedom of people are protected.[107] An alternative, narrower interpretation is based instead on the level of law and order in a country as assessed according to the effective functioning of law and order mechanisms, or even focusing exclusively on IHL.[108] The latter approach does not appear to be widely accepted.[109] Also, the threshold of what amounts to a 'serious' disruption of public order as opposed to a 'normal' disruption remains unclear: how bad does the fighting or the violence need to be before public order is seriously disturbed?[110] Notwithstanding the ambiguity of the meaning of 'public order', conflict appears to be the most common example of an event seriously disturbing public order. State practice reveals that this includes a range of conflicts—internal and international, between

non-State actors, and between State and non-State actors, and not limited to an IHL understanding of armed conflict.[111]

What is crucial for qualifying as a refugee under the regional criteria is the existence, in either part or the whole of the country, of one of the situational events mentioned, and whether this event has compelled those claiming protection to leave the country and seek protection abroad. A conflict may result in any or all of the situational events mentioned in the regional refugee criteria. What is relevant is that at least one can be identified, and that there is a connection between the event and the individual's compulsion to leave. While it can be argued that the connection is one of geographic proximity of the person with the situational event,[112] that may not be fully satisfactory. An assessment of a threat or risk to life, physical integrity, or liberty is required.[113] Clearly, in accordance with the refugee criteria elaborated in the Cartagena Declaration, people's lives, safety, or freedom must have been threatened.

5. Conclusion

Legal practitioners and commentators have long held the view that people fleeing the atrocities and dangers of conflict are not refugees within the meaning of the Refugee Convention, but there has been a shift in recent years. Now, it is recognized (by commentators, courts, and UNHCR) that people displaced by conflict can have a well-founded fear of being persecuted for one or more of the Convention grounds, and, moreover, that the realities of many, if not most, contemporary conflicts is that civilian populations are targeted or disproportionately affected because the conflict is rooted in, motivated, or driven by—and/or conducted along the lines of—race, ethnicity, religion, politics, gender, or social group divides (or may impact people along these lines). Even so, not all people fleeing conflict will be refugees within the meaning of article 1A(2) of the Refugee Convention. Where the harm resulting from conflict is truly indiscriminate, regional refugee criteria developed in Africa and Latin America may still enable people fleeing the dangers of war to qualify as refugees.

CHAPTER 46

DISPLACEMENT IN THE CONTEXT OF CLIMATE CHANGE AND DISASTERS

JANE McADAM

1. Introduction

The adverse effects of disasters and climate change are already impacting on human mobility. They contribute to displacement, influence decisions to migrate, trigger evacuations, and motivate planned relocations. Yet, there remain many legal, policy, and operational gaps.

Existing legal frameworks do not expressly address the movement of people across borders in response to, or in anticipation of, disasters or climate change-related harms. However, international law contains principles that affect what States are, and are not, permitted to do in such circumstances. This chapter examines the limits and scope of international refugee law, human rights law, and the law on statelessness to address displacement in the context of disasters and climate change. The chapter also considers measures that would enable people to remain in their homes, where possible and desirable, or to migrate or relocate elsewhere as an adaptation strategy in anticipation of potential future harm.

While the magnitude of movement associated with climate change is unknown, the evidence base is much richer than it was just a decade ago. Since 2008, the Internal Displacement Monitoring Centre (IDMC) has compiled data on internal displacement linked to sudden-onset disasters (such as storms, cyclones, floods, and landslides). In 2017 and 2018, disasters triggered by sudden-onset natural hazards displaced more people internally than conflict—61 per cent compared to 39 per cent.[1] In 2019, the figure

[1] Internal Displacement Monitoring Centre (IDMC), *GRID 2019: Global Report on Internal Displacement* (IDMC 2019) 1; IDMC, *GRID 2018: Global Report on Internal Displacement* (IDMC 2018) 6–7. There is no systematic data on cross-border displacement in this context, but there is evidence that most people remain in countries within the same geographical region: IDMC, *GRID 2017: Global Report on Internal Displacement* (IDMC 2017) 53.

was even higher—75 per cent compared to 25 per cent.[2] The impacts of climate change are predicted to amplify the effects of disasters as they become more frequent and/or intense.[3]

Meanwhile, slower-onset impacts (such as sea-level rise, erosion, and desertification) may result in a more gradual deterioration of physical conditions that ultimately render land uninhabitable for human settlement. Cumulatively, this may weaken people's resilience as their traditional coping mechanisms are challenged, contributing, in turn, to further displacement.[4] Displacement may be triggered by sudden-onset disasters, slow-onset processes, or a combination of both.[5] It is unknown how many people are displaced by slow-onset disasters worldwide: it is difficult to monitor and hard to distinguish from other internal movement, since 'it encapsulates a wide range of phenomena, drivers, triggers, impacts and movement types'.[6]

At the outset, it is important to appreciate five key factors. First, the impacts of climate change and disasters do not cause displacement on their own. Rather, they interact with a range of other drivers (economic, social, and political) that themselves affect mobility.[7] In particular, climate change amplifies the frequency and/or severity of certain disasters, such as extreme weather events. Secondly, regardless of the measures put in place to mitigate or adapt to the effects of climate change, some displacement is inevitable.[8] Thirdly, some disasters are not affected by climate change at all (eg earthquakes),[9] but they can have an equally devastating impact on people and give rise to the same assistance and protection needs. This chapter refers to displacement in the context of both 'disasters' and 'climate change' because drawing sharp distinctions between the two is unhelpful from a human rights and protection-oriented perspective. While a specific focus on climate change is important when it comes to attributing responsibility, concentrating on the complex issue of causation and responsibility in the present context may be a distraction when it comes to securing the protection needs of the

[4] Jane McAdam, Bruce Burson, Walter Kälin, and Sanjula Weerasinghe, *International Law and Sea-Level Rise: Forced Migration and Human Rights*, FNI Report 1/2016 (Fridtjof Nansen Institute and Kaldor Centre for International Refugee Law 2016) para 53. A 'hazard' becomes a 'disaster' when people's coping capacity is exceeded. Since disasters are always contingent on underlying social, economic, political, and environmental factors, it is inaccurate to speak of 'natural' disasters.

[5] IDMC developed a global model to assess the risk of displacement associated with sudden-onset hazards. It estimates an average annual displacement of 13.9 million people, not including people displaced as a result of pre-emptive evacuations or slow-onset hazards, 'which makes the risk estimates very conservative': IDMC 2018 (n 1) 52 (fn omitted).

displaced.[10] Fourthly, and significantly from the standpoint of international law, most movement occurs within countries rather than across borders.[11] When cross-border movement does occur, people will generally remain within their own region. Finally, migration can be an important climate change adaptation strategy, but often the law hinders rather than facilitates this.

In essence, legal and policy frameworks should be developed which assist people to: (a) remain *in situ*, where this is possible and desirable; (b) move elsewhere, in anticipation of harm; and (c) be protected and assisted if they are displaced (whether internally or across an international border).[12] At all times, the dignity of those who move must be a paramount consideration.[13]

2. Internally Displaced Persons

The majority of disaster displacement will occur within countries rather than across international borders, although some may become cross-border if not adequately managed.[14] A number of existing legal instruments are relevant despite not having been drafted specifically for this context.[15] The 1998 Guiding Principles on Internal Displacement,[16] recognized by the international community as an 'important international framework for the protection of internally displaced persons',[17] expressly include those 'who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular

as a result of or in order to avoid the effects of… natural or human-made disasters'.[18] They encompass those who flee (or are evacuated) from the anticipated impacts of a disaster, as well as those who are forced to leave their homes in the aftermath of a disaster.

Although not directly enforceable themselves, the Guiding Principles reflect binding international legal standards and set out in detail how internally displaced persons (IDPs) should be treated, assisted, and protected. The challenge lies in strengthening their normative and operational implementation in the disaster context and developing the capacity of the relevant authorities to apply them.[19]

In Africa, the 2006 Great Lakes IDP Protocol[20] and the 2009 African Union Convention for the Protection and Assistance of Internally Displaced in Africa (Kampala Convention)[21] expressly encompass those displaced by disasters. Uniquely, the Kampala Convention requires States parties to 'take measures to protect and assist persons who have been internally displaced due to natural or human made disasters, *including climate change*'.[22] However, ratifications remain low and '[m]uch work… remains to be done to translate this important instrument into practice and to secure concrete improvements in the protection of and assistance to internally displaced persons'.[23]

3. International Refugee Law

The drivers of displacement are typically multi-causal, and conflict, persecution, and disasters are often interlinked.[24] Since 'the impacts of a disaster may create conditions that reinforce or bolster claims for refugee status under the Refugee Convention',[25] refugee law should not automatically be dismissed when climate change or disasters play a role. Disasters not only interact with other drivers of displacement but may also provide an overarching context for displacement (such as where they trigger armed

conflict or result in a breakdown of law and order).[26] UNHCR rightly emphasizes the importance of focusing on the broader 'social and political characteristics of the effects of climate change or the impacts of disasters' and their potentially 'significant adverse effects on State and societal structures and individual well-being and the enjoyment of human rights' when assessing protection claims in this context.[27]

The Refugee Convention may therefore be relevant in a disaster context where: (a) certain individuals or groups are persecuted by the government (such as having humanitarian assistance withheld or being targeted for undertaking disaster-relief work);[28] (b) secondary impacts, such as 'increases in gender-based violence in temporary shelters, discrimination in assistance and solutions, shortcomings in evacuation procedures, etc',[29] give rise to a conventional refugee claim; (c) the adverse impacts of disasters or climate change intersect with or amplify persecution for a Convention reason;[30] (d) Convention refugees (persecuted for reasons unrelated to the disaster) flee across a border. In each of these cases, the act or omission by the government (or non-State actor)—rather than the disaster itself—would give rise to the well-founded fear of persecution (for a Convention reason) and lack of State protection.

More generally, however, the Refugee Convention will be of limited utility in situations of disaster displacement. The impacts of climate change or a disaster themselves will generally not satisfy the meaning of 'persecution' because of the need for human agency,[31] and a further challenge will be identifying a 'persecutor'. While it could be argued that the persecutor is the 'international community', and industrialized States in particular, they are likely to be the very countries in which people will seek protection. This represents a reversal of the traditional refugee paradigm,[32] something the New Zealand Court of Appeal described as an attempt 'to stand the Convention on its head'.[33] Furthermore, even if the impacts of disasters or climate change were accepted as constituting 'persecution', it would be difficult to establish a link with one or more of the five Convention grounds,[34] given that such impacts are largely indiscriminate.[35] Even so,

[26] In such cases, the broader regional refugee definitions may apply: OAU Convention, art 1(2); Cartagena Declaration, conclusion III(3); see Chapters 15, 17, and 34 in this volume.

decision-makers need to be aware of 'the deeply social nature of disasters, within which existing patterns of discrimination and marginalisation are exacerbated', and ensure that individual claims are scrutinized within this context.[36]

To date, no refugee claim based on the harmful impacts of climate change has succeeded.[37] The New Zealand Immigration and Protection Tribunal has acknowledged that the complex relationship between environmental degradation, disasters, and human vulnerability means that protection under the Refugee Convention should not automatically be ruled out,[38] but has noted that human rights law seems to offer the most scope for protection in such circumstances.

Before turning to human rights law, it is important to note the potential capacity of regional refugee law to protect the disaster displaced (since much remains to be formally tested).[39] The prevailing view among relevant States is that disasters will not engage the regional refugee definitions in the OAU Convention and the Cartagena Declaration unless they are also linked to a breakdown of public order or protection.[40] This is why Somalis fleeing conflict, drought, and famine in 2011–12 were granted refugee status pursuant to the OAU Convention,[41] and some Haitians were granted refugee

status pursuant to the Cartagena Declaration as a result of the breakdown in law and order generated by the 2010 earthquake.[42]

4. Human Rights Law

International human rights law sets out minimum standards of treatment that States must afford to individuals within their territory or jurisdiction. It is 'firmly established'[43] that 'the adverse effects of climate change have a range of direct and indirect implications for the effective enjoyment of all human rights'.[44] For instance, extreme weather events may threaten the right to life; increased food insecurity may jeopardize the right to adequate food; and flooding, erosion, or sea-level rise may threaten the right to adequate housing. When these issues are considered alongside pre-existing stressors such as overcrowding, environmental fragility, poor development practices, food scarcity, and so on, then they may (individually or cumulatively) threaten people's ability to live in safety and dignity.[45] Furthermore, if States do not take positive steps to realize such rights, or provide adequate safeguards against known risks,[46] then they may breach their human rights obligations.[47]

Under human rights law, the principle of *non-refoulement* relevantly protects people from forcible return to a real risk of life-threatening circumstances or other cruel, inhuman, or degrading treatment.[48] The Human Rights Committee has accepted in principle that the effects of climate change may expose people to such risks, 'thereby triggering the *non-refoulement* obligations of sending states'.[49] It has also noted that 'the conditions of life in such a country may become incompatible with the right to life with dignity before the risk is realized', meaning that protection should be forthcoming before the situation is imminently life-threatening.[50]

The right to life is enmeshed with other human rights, such as the right to an adequate standard of living and the right not to be deprived of a means of subsistence. The Convention on the Rights of the Child links it to the State's duty 'to ensure to the maximum

extent possible the survival and development of the child',[51] and the Committee on the Rights of the Child has explained that it must be implemented holistically, 'through the enforcement of all the other provisions of the Convention, including rights to health, adequate nutrition, social security, an adequate standard of living, [and] a healthy and safe environment'.[52]

Both the Inter-American Commission on Human Rights and the European Court of Human Rights regard the right to life as linked to the right to a healthy environment.[53] In particular, the obligation to protect the right to life may also include protection from environmental harm,[54] including protection from disasters where the risk is known.[55] The New Zealand Immigration and Protection Tribunal has expressly acknowledged that the right to life may be compromised by the impacts of disasters and climate change, but it has drawn a distinction between 'man-made' and 'natural' hazards on the basis that the State has less control over the latter.[56] Thus, where a family from Tuvalu argued that they would be in danger of being arbitrarily deprived of their lives if returned—*inter alia* on account of the impacts of climate change (in particular, a lack of fresh drinking water and sea-level rise)—the Tribunal found that while life in Tuvalu would be more challenging than in New Zealand, there was insufficient evidence to establish that their lives would be at risk as a result of any act or omission by the government of Tuvalu.[57]

Courts have recognized that 'destitution' or 'dire humanitarian conditions' may constitute inhuman or degrading treatment,[58] although to date protection has only been forthcoming when exposure could be attributed to the direct (in)action of the State rather than to a general state of affairs.[59] While the European Court of Human Rights has accepted that removal to inhuman or degrading conditions based on a lack of resources (rather than deliberate acts or omissions by the State) may be precluded in 'a

very exceptional [case] where the humanitarian grounds against removal are compelling',[60] this is an extremely high threshold.[61] The convoluted and sometimes inconsistent jurisprudence in this area is arguably a result of policy concerns about opening the floodgates, and there are different lines of reasoning depending on whether the relevant 'treatment' is considered to be the act of removal itself or the conditions in the country to which removal is proposed,[62] and whether such treatment is attributable to the State.[63] Costello has rightly noted that the practical workability of such distinctions is doubtful,[64] and that the focus on State attribution is 'out of kilter with the rest of the Article 3 case law'.[65]

In New Zealand, which has the most developed case law on displacement in the context of disasters and climate change, the need to show a real risk of inhuman or degrading 'treatment' has been interpreted as requiring a positive act or omission by an authority that 'transcend[s] failure of the state's general economic policies to provide for an adequate standard of living'.[66] Applying this logic to the disaster context, the New Zealand Tribunal has found that a State's incapacity to respond to a disaster will generally

[60] *SHH* (n 59) para 92, in accordance with the principles set out in *N v United Kingdom* (2008) 47 EHHR 39. See also *Paposhvili v Belgium*, App No 41738/10 (ECtHR, Grand Chamber, 13 December 2016); *AM (Zimbabwe) v Secretary of State for the Home Department* [2020] UKSC 17.

[61] The Inter-American Commission on Human Rights has borrowed this 'exceptionality' test but has applied it in a more relaxed way: David J Cantor and Stefania E Barichello, 'The Inter-American Human Rights System: A New Model for Integrating Refugee and Complementary Protection?' (2013) 17 International Journal of Human Rights 689, 693, referring to *Mortlock v United States*, Inter-American Commission on Human Rights Report No 63/08, Case No 12.534 (25 July 2008).

[62] The court has consistently observed that it is not the function of the European Convention on Human Rights to iron out socio-economic differences between States, noting that 'the level of treatment available in the Contracting State and the country of origin may vary considerably': *N v United Kingdom* (n 60) para 44.

[63] Contrast *D v United Kingdom* (n 58), *N v United Kingdom* (n 60), *MSS v Belgium and Greece*, App No 30696/09 (ECtHR, Grand Chamber, 21 January 2011), and *Sufi and Elmi* (n 58). In *SHH* (n 59), the court sought to reconcile the approach in *N v United Kingdom* with that in *Salah Sheekh v The Netherlands*, App No 1948/04 (ECtHR, 11 January 2007) and *Sufi and Elmi*. The dissenting judges viewed *SHH* as 'fall[ing] somewhere in between these lines of the Court's case-law and thus rais[ing] a new issue before the Court': Joint Dissenting Opinion of Judges Ziemele, Björgvinsson, and De Gaetano, para 3. See also the conceptualization of 'domestic' and 'foreign' cases by Lord Bingham in *R (Ullah) v Special Adjudicator* [2004] UKHL 26, [2004] 2 AC 323, para 9.

[64] Cathryn Costello, 'The Search for the Outer Edges of *Non-Refoulement* in Europe: Exceptionality and Flagrant Breaches' in Bruce Burson and David J Cantor (eds), *Human Rights and the Refugee Definition: Comparative Legal Practice and Theory* (Brill 2016) 193, citing *SHH* (n 59).

[65] Costello (n 64) 190. The Human Rights Committee has noted as recently as 2018 that 'States parties must…exercise due diligence to protect the lives of individuals against deprivations caused by persons or entities, *whose conduct is not attributable to the State*. The obligation of States parties to respect and ensure the right to life *extends to reasonably foreseeable threats and life-threatening situations* that can result in loss of life': Human Rights Committee, 'General Comment No 36 (2018) on Article 6 of the International Covenant on Civil and Political Rights, on the Right to Life', UN doc CCPR/C/GC/36 (30 October 2018) para 7 (emphasis added, fns omitted), read with paras 30–1 on non-removal.

[66] See eg *BG (Fiji)* [2012] NZIPT 800091, para 148. Australian law stipulates that 'treatment' must be 'intentionally inflicted': Migration Act 1958 (Cth) (Australia), s 5(1). See also *R (Adam) v Secretary of State for the Home Department* [2005] UKHL 66, [2006] 1 AC 396, para 7 (Lord Bingham).

be insufficient to constitute 'treatment', but if a State were to withhold post-disaster assistance on a discriminatory basis, or arbitrarily withhold access to available foreign assistance when domestic capacity were lacking, this could potentially constitute ill-'treatment' of the disaster-affected population.[67]

Thus, while the impacts of a disaster or climate change may 'provide a context in which a claim for recognition as a protected person' might be grounded,[68] the mere fact of the disaster, or a State's general incapacity to respond to it, is not enough. Furthermore, if a State is taking steps to protect those within its territory or jurisdiction (eg through disaster risk reduction or climate adaptation measures) then it is unlikely to be considered to have abrogated its obligations under human rights law.[69]

Beyond the legal principle of *non-refoulement*, there is support in State practice for what Kälin and Schrepfer describe as a 'returnability test' based on 'whether, in light of the prevailing circumstances and the particular vulnerabilities of those concerned, [people] can be required to return to their country of origin'.[70] A survey of State practice shows that at least 50 countries in recent decades have received, or refrained from returning, people in the aftermath of disasters because it is unsafe or impractical.[71] Practices have been very *ad hoc*, including the issuance of special humanitarian visas in the aftermath of a disaster,[72] temporary stay arrangements for people abroad at the time of a disaster and unable to return home,[73] expedited processing of, and/or flexibility with requirements for, regular migration visa applications, and temporary labour migration schemes to assist those living in precarious circumstances.[74] Free movement agreements may also facilitate admission and stay in the aftermath of a disaster.[75]

[67] *BG (Fiji)* (n 66) para 84. See discussion of the ILC's 'Draft Articles on the Protection of Persons in the Event of Disasters' in ILC (n 15) 13–17 in *AC (Tuvalu)* (n 28) paras 91–8.

[68] *AC (Tuvalu)* (n 28) para 70.

[69] See *AC (Tuvalu)* (n 28) para 75; *Budayeva v Russia* (n 55). In New Zealand, 'treatment' does not encompass the act of removal; cf approach by the European Court of Human Rights, on which see Walter Kälin, 'Limits to Expulsion under the International Covenant on Civil and Political Rights' in Francesco Salerno (ed), *Diritti dell'uomo, estradizione ed espulsione* (CEDAM 2003) 161.

[70] Kälin and Schrepfer (n 10) 65. Goodwin-Gill identifies an even broader principle of refuge in customary international law, which includes that 'deeper level of obligation which underpins, among others, rescue at sea, the landing of the shipwrecked, and the admission of victims of conflict or other humanitarian disaster': Guy S Goodwin-Gill, '*Non-Refoulement*, Temporary Refuge, and the "New" Asylum Seekers' in David J Cantor and Jean-François Durieux (eds), *Refuge from Inhumanity? War Refugees and International Humanitarian Law* (Brill 2014) 440.

[74] Nansen Initiative (n 72) 43 (Spain and Senegal). See also Sydney Declaration (n 13) 64.

[75] Nansen Initiative (n 72) 43–4; Bruce Burson and Richard Bedford, 'Clusters and Hubs: Toward a Regional Architecture for Voluntary Adaptive Migration in the Pacific' (Discussion Paper, The Nansen Initiative on Disaster-Induced Cross-Border Displacement 2013) 7–10.

5. Issues of Timing

While the effects of a disaster may be felt immediately, it may take many years before the deleterious impacts of slower-onset processes of climate change make life intolerable. At present, protection pathways do not offer an easy solution for people seeking to escape the future impacts of climate change. This is because many of their effects will take years to manifest at a sufficiently harmful level to satisfy the required threshold for 'inhuman or degrading treatment' or a threat to life; or may be severe but temporary, and not render return unlawful; or an internal flight alternative may be considered reasonable.[76] As Burson has observed, 'the longer the time-horizon contemplated for these thresholds or magnitudes to be reached, the less real and more speculative becomes the risk of qualifying harm as at the time of the decision . . . because there is more opportunity for risk-reducing factors to intrude'.[77]

However, it is useful to recall that every protection claim, in whatever context, involves an element of speculation as to future risk.[78] Thus, in refugee law, a person may have a 'well-founded fear' of being persecuted even if the risk of harm is as low as 10 per cent,[79] provided that the risk is plausible and reasonable.[80] An interesting counterpoint is provided by the precautionary principle in international environmental law, which provides that 'full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation' where 'threats of serious or irreversible damage' exist.[81] Like the 'well-founded fear' test in refugee law, the precautionary principle effectively operates as an insurance policy against potential harm. It does not require definitive proof of harm; the possibility of a risk that serious harm may ensue is sufficient to warrant protection (in the former case) and due diligence (in the latter).

[76] See generally Jessica Schultz, *The Internal Protection Alternative in Refugee Law: Treaty Basis and Scope of Application under the 1951 Convention relating to the Status of Refugees and Its 1967 Protocol* (Brill 2019); UNHCR, 'Guidelines on International Protection: "Internal Flight or Relocation Alternative" within the context of Article 1A(2) of the 1951 Refugee Convention and/or 1967 Protocol relating to the Status of Refugees', HCR/GIP/03/04 (23 July 2003) paras 29–30.

[81] UNGA, 'Annex I Rio Declaration on Environment and Development' in 'Report of the United Nations Conference on Environment and Development', UN doc A/CONF.151/26, vol I (12 August 1992) Principle 15.

In its consideration of whether the future impacts of climate change precluded removal to the small Pacific island State of Kiribati, the New Zealand Tribunal required only that there be 'sufficient evidence to establish substantial grounds for believing the appellant would be in danger',[82] comparable to the 'well-founded fear' test in refugee law. However, the danger must be a present one, and in applications to date, the feared harm has remained 'firmly in the realm of conjecture or surmise'.[83] The Human Rights Committee (examining the same case) endorsed the Tribunal's reasoning that risks materializing in 10 to 15 years' time were too speculative to give rise to protection now, since they 'could allow for intervening acts by the Republic of Kiribati, with the assistance of the international community, to take affirmative measures to protect and, where necessary, relocate its population'.[84]

6. Statelessness

The capacity of the statelessness regime to protect people at risk of displacement in the context of disasters and climate change is limited. However, it is briefly addressed here, given the propensity for it to be mooted as a solution for the inhabitants of small island States at risk of inundation by sea-level rise.[85]

The protection afforded by the two treaties on statelessness is expressly confined to those 'not considered as a national by any State under the operation of its law'.[86] It does not extend to people who are *de facto* stateless—that is, those who have a nationality but who are unable to exercise the rights of citizens. Unless a State were to deprive its citizens of nationality, which would be unlawful in this context,[87] the statelessness definition could only be triggered if the State no longer existed—because it would no longer be an entity capable of considering them as nationals under the operation of its law. This is not only a highly speculative and convoluted legal argument, but also one that is unlikely to offer much protection in reality.

Since the law on the extinction of States does not contemplate their physical disappearance, scholars have reversed the rules on the creation of States to determine if and when statehood might be lost on account of the impacts of climate change. To come into existence, a State must have a defined territory, a permanent population, an effective government, and the capacity to enter into relations with other States.[88] However,

[82] *AF (Kiribati)* (n 28) para 90. [83] ibid. [84] *Teitiota v New Zealand* (n 49) para 9.12.

the strong presumption of continuity of statehood means that the absence of one or more of these elements does not automatically mean that a State ceases to exist.[89] Even if a State were to experience a 'very extensive loss of actual authority',[90] past practice suggests that other States would very likely continue to recognize it as a State for some time.[91] Further, rather than the loss of territory signalling the State's demise (especially if rights to the exclusive economic zone were maintained),[92] it is far more likely that a loss of population, and with it effective government, would be the first sign that a State had started to 'disappear' as a legal entity.[93] Finally, from a purely practical perspective, the statelessness treaties are not well ratified, and few States have a procedure in place to determine who is stateless (and thus provide an appropriate legal status).[94]

7. International Policymaking and Standard-setting

Notwithstanding some earlier efforts, it was the Nansen Initiative on Disaster-Induced Cross-Border Displacement (2012–15) and its successor, the Platform on Disaster Displacement (2016–), that put climate change and disaster displacement on the global

[89] James Crawford, *The Creation of States in International Law* (2nd edn, OUP 2006) 700, 701, 715.

[90] ibid 89.

[91] In the climate change context, Kälin has argued that it is 'difficult to imagine that any other UN member state would want to tarnish its own reputation by being seen as lacking any compassion for the dire fate of such island states by asking for their exclusion from…international organisations': Walter Kälin, 'Conceptualising Climate-Induced Displacement' in Jane McAdam (ed), *Climate Change and Displacement: Multidisciplinary Perspectives* (Hart Publishing 2010) 102. Rayfuse argues that the 'deterritorialized' State would continue to interact as part of the international community for some time: Rosemary Rayfuse, 'W(h)ither Tuvalu? International Law and Disappearing States' [2009] University of New South Wales Faculty of Law Research Series 9; see also Maxine A Burkett, 'The Nation Ex-Situ' in Michael B Gerrard and Gregory E Wannier (eds), *Threatened Island Nations: Legal Implications of Rising Seas and a Changing Climate* (CUP 2013).

[93] For detailed analysis, see McAdam (n 10) ch 5; Jenny Grote Stoutenburg, *Disappearing Island States in International Law* (Martinus Nijhoff 2015); Rosemary Rayfuse, 'International Law and Disappearing States: Maritime Zones and the Criteria for Statehood' (2011) 41(6) Environmental Policy and Law 281.

[94] Ratifications have increased significantly as a result of UNHCR's IBelong campaign, and more States are establishing status determination procedures (although there are still relatively few in place). See Gábor Gyulai, 'Statelessness Determination and the Protection Status of Stateless Persons: A Summary Guide of Good Practices and Factors to Consider when Designing National Determination and Protection Mechanisms' (European Network on Statelessness 2013) 7; Katia Bianchini, 'A Comparative Analysis of Statelessness Determination Procedures in 10 EU States' (2017) 29 IJRL 42; Michelle Foster and Hélène Lambert, 'Statelessness as a Human Rights Issue: A Concept Whose Time Has Come' (2016) 28 IJRL 564.

policymaking map.[95] These State-led yet bottom-up consultative processes, involving States, experts, affected communities, and civil society, helped to generate and coordinate research on disaster displacement, resulting in more nuanced understandings of the phenomenon. In turn, they secured the inclusion of important language on disasters, climate change, and human mobility in a number of international instruments. These include the Sendai Framework for Disaster Risk Reduction 2015–2030,[96] the 2030 Agenda for Sustainable Development,[97] the 2015 Paris Outcome on climate change,[98] the Agenda for Humanity (annexed to the UN Secretary-General's report for the 2016 World Humanitarian Summit),[99] and—perhaps most significantly—the 2018 Global Compact for Safe, Orderly and Regular Migration.[100] A Task Force on Displacement was also developed as part of the UN Framework Convention on Climate Change (UNFCCC) process 'to develop recommendations for integrated approaches to avert, minimize and address displacement related to the adverse impacts of climate change'.[101]

The recommendations set out in the Nansen Initiative's Agenda for the Protection of Cross-Border Displaced Persons in the Context of Disasters and Climate Change, endorsed by 109 States in October 2015, continue to provide a roadmap for policy developments at the international, regional, and national levels. The Protection Agenda highlighted the normative gaps in addressing displacement, migration, and planned relocation; identified effective practices that States could incorporate into their own

[95] For background on institutional developments in this area, see Nina Hall, *Displacement, Development, and Climate Change: International Organizations Moving beyond Their Mandates* (Routledge 2016); Jane McAdam, 'Creating New Norms on Climate Change, Natural Disasters and Displacement: International Developments 2010–2013' (2014) 29(2) Refuge 11; Jane McAdam, 'From the Nansen Initiative to the Platform on Disaster Displacement: Shaping International Approaches to Climate Change, Disasters and Displacement' (2016) 39 UNSW Law Journal 1518.

laws and policies[102] (rather than advocating for a global guiding framework or a new treaty[103]); and set out priority areas for future work.[104] It advocated a toolbox of strategies to manage the risks of future displacement and build resilience in affected communities,[105] guided by the rationale that the most human rights-sensitive approach would mean enabling people to stay at home when desirable and safe,[106] and facilitating movement away from dangerous areas before disasters strike (rather than responding only once people were forced to flee).

In particular, the Protection Agenda recommended that States: (a) integrate mobility into disaster risk reduction and climate change adaptation strategies;[107] (b) ensure that the needs of IDPs displaced by the impacts of climate change and/or disasters are addressed by relevant laws;[108] (c) review and develop humanitarian protection mechanisms for (at least temporary) admission and stay;[109] (d) enhance migration opportunities ('migration with dignity') as a positive form of adaptation that can build people's long-term resilience and enable livelihood diversification;[110] and (e) consider the use of planned relocation as a preventative or remedial measure, mindful of its complexity and the need for in-depth consultation, consent, and planning.[111] States also have obligations to avert, minimize, and prevent foreseeable harm, including by safeguarding the right to life, which in some circumstances, could require the evacuation of people (on a temporary basis) from unsafe areas.[112] Implementing these responses demands a holistic, whole-of-government approach.

[102] Nansen Initiative (n 14); Nansen Initiative (n 72).

[103] For a critique, see Jane McAdam, 'Swimming against the Tide: Why a Climate Change Displacement Treaty is *Not* the Answer' (2011) 23 IJRL 1.

8. Conclusion

While there remain legal gaps when it comes to the protection of people displaced in the context of disasters and climate change, there is not a complete void. There are many effective practices that States could implement now to address mobility in this context. While international refugee law and human rights law provide some protection for those escaping the impacts of disasters and climate change, a longer-term and more sustainable approach lies in broader, systemic policies that take into account the nature of such movement—which are yet to be created in most settings. Pre-emptive strategies, ranging from disaster risk reduction and climate change adaptation, through to migration opportunities and planned relocation, may help to avert displacement in some cases, ensure that people are displaced for shorter periods of time in others, and provide durable solutions for those who need to move on a permanent basis. Such strategies also help people to maintain a degree of agency over if, when, and where they move.

As jurisprudence and State practice evolve, there will be an ongoing need to tease out the intersections between refugee law, human rights law, disaster law, environmental law, and climate change law at the international, regional, and domestic levels, as well as to scrutinize the outer limits of the principle of *non-refoulement* when it comes to protecting those at risk of—or already experiencing—displacement. Closer analysis of the impacts of displacement, migration, and planned relocation on particular groups, including women, children, and those with disabilities, would enable more targeted assistance and protection, especially to avoid the exacerbation of pre-existing vulnerabilities and patterns of discrimination.[113]

Equally, it will be important to find ways to ensure that the law has the capacity and reach to provide just outcomes for those who are affected by the adverse impacts of climate change and disasters, whether they remain *in situ* or move. In part, this raises the question whether the notion of climate justice can be translated into meaningful outcomes on the ground, especially as improvements in climate science make it easier to attribute causal links and responsibility.[114] A related and no less salient consideration is how to give effect to the principle of intergenerational equity in the context of climate change, given that the most devastating impacts of climate change will be felt most acutely by future generations.[115]

CHAPTER 47

INTERNAL DISPLACEMENT

WALTER KÄLIN

1. Introduction

In 2019, 10.8 million people affected by armed conflict and violence had to flee and find refuge within their own country, joining the estimated total of 50.8 million internally displaced persons (IDPs) worldwide.[1] During the period 2009–19, around 22.7 million people on average were newly displaced each year on account of sudden-onset disasters, most of them weather-related.[2] While these figures by far surpass the total number of refugees,[3] IDPs are all too often neglected—not only by their governments, but also by the international community.[4] The 'paucity of legal scholarship on IDPs', identified by Cantor, which is particularly 'notable when compared to that on other special interest groups, such as refugees, women, or children',[5] further reflects the fact that internal displacement is not sufficiently high up on national and international agendas.

[1] Internal Displacement Monitoring Centre (IDMC), *GRID 2020: Global Report on Internal Displacement* (IDMC 2020) 1.

[2] Calculated on the basis of the annual figures in ibid. The total stock of those internally displaced in the context of disasters and the adverse effects of climate change is unknown (especially in the context of slow-onset disasters). On the methodological difficulties and absence of data, see IDMC, 'Disaster Displacement: A Global Review, 2008–2018' (May 2019) 21 <www.internal-displacement.org/sites/default/files/publications/documents/201905-disaster-displacement-global-review-2008–2018.pdf> accessed 4 August 2019. See further Chapter 46 in this volume.

[3] At the end of 2018, UNHCR counted 20.4 million refugees under its mandate: UNHCR, 'Figures at a Glance' (19 June 2019) <www.unhcr.org/figures-at-a-glance.html> accessed 4 August 2019.

[4] UNHCR's budget allocations illustrate this situation significantly. Its revised budget for 2019 includes roughly US$6.7 billion for its global refugee programme while the amount foreseen to be spent in IDP operations is less than US$1.2 billion. See Executive Committee of the High Commissioner's Programme, 'Update on Budgets and Funding for 2018 and 2019', EC/70/SC/CRP.7/Rev.2 (4 March 2019) 25.

[5] David J Cantor, ' "The IDP in International Law"? Developments, Debates, Prospects' (2018) 30 IJRL 191, 192. Many of the publications listed in the comprehensive bibliography contained in Ala Al-Mahaidi, Léa Gross, and David Cantor, *Revitalising IDP Research: A 'State of the Art' Review* (Refugee Law Initiative 2018) 35–47 are policy-oriented rather than legal in nature.

The experiences of refugees and IDPs have much in common. Both are forced to leave their homes and habitual places of residence, leaving behind their livelihoods, property, and community assets. Both struggle to find safety somewhere else and risk becoming dependent on humanitarian assistance while return or other durable solutions ending their predicament remain elusive. Furthermore, the two categories may interact. On the one hand, refugees who lose their status and are repatriated or return to their country of nationality on a voluntary basis may become IDPs if, due to continuing insecurity, they are unable to go back to their homes.[6] On the other hand, IDPs may decide to leave their country at a later stage and seek asylum abroad.[7]

It is not surprising that social science approaches tend to lump refugees and IDPs together under the notion of 'forced displacement'.[8] By contrast, this chapter argues that refugee law and the law related to internal displacement are conceptually fundamentally different because IDPs remain citizens or habitual residents of their countries, and thus depend on the national protection of their governments, while refugees as foreigners are in need of international protection. Discussing the protection of IDPs from a comparative perspective, Section 2 analyses the Guiding Principles on Internal Displacement (Guiding Principles) and their impact as a soft law instrument,[9] as well as the legally binding Kampala Convention.[10] Section 3 explores the conceptual differences between the notion of 'refugee' and 'internally displaced person', and the ensuing lack of a specific legal status for IDPs. This leads to the identification, in Section 4, of the law of IDP protection as part of international human rights law, rather than as a separate branch of international law similar to refugee law. Section 5 examines why the concept of national protection for IDPs has specific implications for the role of the international community, including with regard to humanitarian access. Section 6 argues that despite these differences, IDP-related approaches to durable solutions can help to inform refugee law and policy, and that there is already a degree of convergence between the two areas. Section 7 concludes by suggesting some directions for further research.

2. The Normative Framework

International refugee law is mainly enshrined in binding treaties. Its history dates back to the refugee conventions adopted by the League of Nations in the early twenti-

eth century[11] and culminated with the adoption of the Refugee Convention in 1951. By contrast, attempts by the international community to create a normative framework for IDPs were until the 1990s limited to some scattered provisions in international humanitarian law.[12]

International humanitarian law does not use the notion of the 'IDP' *per se*, instead considering IDPs as part of the civilian population protected in times of armed conflict. Displacement-specific provisions in the Fourth Geneva Convention of 1949 and its Additional Protocols of 1977 are those prohibiting forced displacement unless it can be justified by 'imperative military reasons or to safeguard the security' of civilians living in an area affected by military operations.[13] Based on these provisions, forced displacement was declared a crime against humanity as well as a war crime in the Rome Statute of 1998.[14]

National protection remains precarious where IDPs have been displaced by the acts or omissions of their government or where governments are too weak or otherwise unable to provide the necessary protection. Putting the issue of IDP protection on the international agenda only became possible after the end of the Cold War,[15] when the then UN Human Rights Commission created the mandate of a Representative of the Secretary-General on Internally Displaced Persons in 1992.[16] The first mandate-holder, Dr Francis Deng, presented the Guiding Principles to the Commission in 1998 in response to a request 'to develop an appropriate framework…for the protection of internally displaced persons'.[17] The Guiding Principles combine a needs-based approach with a rights-based approach and cover all phases of the displacement cycle.[18] Focusing

[18] Principles 5–9 relate to protection from displacement. Principles 10–23 apply to protection during displacement while principles 24–27 address the issue of humanitarian assistance, and principles 28–30 cover guarantees relevant for 'return, resettlement and reintegration', that is, durable solutions ending displacement.

on the specific needs of IDPs, they 'identify rights and guarantees relevant to the protection of persons from forced displacement and to their protection and assistance during displacement as well as during return or resettlement and reintegration'.[19]

Unlike refugee law with its notion of 'international protection' as a substitute for the national protection which refugees no longer enjoy, the Guiding Principles rest on the key concept of national protection. Such protection has its roots in an understanding of sovereignty not as a right of States to do as they want but, as Deng and his co-authors put it, as their responsibility 'to ensure minimum standards of security and social welfare for their citizens and be accountable both to the national body politic and the international community'.[20] Principle 3 enshrines the concept of sovereignty as responsibility by insisting that 'the primary duty and responsibility to provide protection and humanitarian assistance to internally displaced persons within their jurisdiction' rests with the national authorities.

The Guiding Principles themselves are 'soft law' and not legally binding.[21] However, they 'reflect and are consistent with international human rights law and international humanitarian law'.[22] They spell out in more detail what is implicit in existing guarantees applicable to and relevant for IDPs, and thus draw their legal authority from the hard law on which they are built.[23] Thus, as highlighted by Cantor, they 'make an implicit claim to binding legal force'.[24] This is certainly true for most principles,[25] although when the Guiding Principles were published in 1998, some may have echoed a more a progressive development of the law than a mere restatement of it.[26] Since that time, however,

[22] Guiding Principles, Introduction, para 3.

[23] Principle 12, for example, first restates the right to be protected from arbitrary arrest and detention, alluding to ICCPR, art 9. It then highlights that, in order '[t]o give effect to this right', IDPs 'shall not be interned in or confined to a camp' unless absolutely necessary 'in exceptional circumstances', and that internment or confinement 'shall not last longer than required by the circumstances'. Finally, it recalls the absolute prohibition of hostage-taking as enshrined in international humanitarian law.

[26] See eg Principle 25(2) on the prohibition of arbitrary denial on humanitarian access. On the weak legal foundations of Principle 28 on the right to return, see Cantor (n 24) 80. On the notion of progressive development, see James Crawford, 'The Progressive Development of International Law: History, Theory and Practice' in Denis Alland, Vincent Chetail, Oliver de Frouville, and Jorge E Viñuales (eds), *Unité et diversité du droit international/Unity and Diversity of International Law: Ecrits en l'honneur du Professeur Pierre-Marie Dupuy/Essays in Honour of Professor Pierre-Marie Dupuy* (Brill 2014) 19.

'the Guiding Principles are legally "hardening" at the global level',[27] as well as in regions and countries affected by internal displacement.

Even though some States contested the validity of the Guiding Principles in the years after 1998,[28] by 2005 UN Member States unanimously recognized the Guiding Principles 'as an important international framework for the protection of internally displaced persons'.[29] This is not mere rhetoric: more than 40 States have adopted or are in the process of adopting laws, strategies, and policies fully or at least partially consistent with the Guiding Principles.[30] Although implementation often remains weak,[31] a recent study found that, '[o]n average, countries that institute domestic legislation to protect IDPs as prescribed by the Guiding Principles see a significant decrease in the magnitude of displacement'.[32] It concluded that '[t]he evidence suggests that a regime based on "soft law" has increasingly made a difference in national policies and practices'.[33]

In Africa, this 'hardening' of the Guiding Principles through a bottom-up process has been significantly reinforced by the Kampala Convention.[34] It not only addresses internal displacement in the context of armed conflict, violence, and disasters (article 1(k)) and climate change (article 5(4)), but is also applicable to displacement induced by development projects (article 10). While the Kampala Convention is based on the human rights of IDPs (in particular, the Guiding Principles), it is formulated in terms not of rights but rather the obligations of States and other actors: non-State actors (article 7), the African Union (article 8), and international humanitarian agencies and

[27] Cantor (n 5) 197. An example is United Nations Security Council Resolution 2139, UN doc S/RES/2139 (22 February 2014) regarding Syria, recognizing 'that arbitrary denial of humanitarian access... can constitute a violation of international humanitarian law'.

[28] See Weiss and Korn (n 15) 112, referring to the UN Economic and Social Council, where Egypt managed to prevent the adoption of a resolution on humanitarian issues in 2000, and other instances of opposition by Egypt, Sudan, and other States.

other organizations (article 6). It also contains a strong obligation to incorporate it into domestic law and create the necessary institutional arrangements (article 3(2)). As at mid-2020, the Kampala Convention had been ratified by 31 of the 55 Member States of the African Union,[35] and many lagged behind with the adoption of implementing legislation. In this regard, Orchard's conclusion that, at present, 'it is easier to discuss the Convention as having anticipatory enforcement mechanisms, rather than effective mechanisms'[36] is still a fair assessment. Nevertheless, the Kampala Convention provides a model for regional approaches to IDP protection, even though there are currently no attempts to develop binding law within the framework of other regional organizations. In Europe, in particular, tensions between countries such as Russia and Ukraine and between Armenia and Azerbaijan would make it extremely difficult for the Council of Europe to agree on such an instrument.[37]

Overall, the soft law approach of the Guiding Principles has been successful,[38] including by providing UN treaty bodies and regional human rights courts with entry points to assess human rights violations on the basis of the Principles' underlying hard law provisions. Soft law also has limitations, however. As observed by Bradley and Sherwood, 'IDP soft law tools do not yet comprehensively fill the interpretation gap arising from the hard law instruments from which they are derived'.[39] Furthermore, due to their lack of binding force, the Guiding Principles cannot prevent domestic laws and policies that deviate from and undermine international standards.

3. Notions: IDPs and Refugees Compared

The Guiding Principles and the Kampala Convention describe IDPs as

> persons or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of or in order to avoid the effects of armed conflict, situations of generalized violence, violations of human rights or natural or human-made disasters, and who have not crossed an internationally recognized State border.[40]

[35] See African Union, 'List of Countries Which Have Signed, Ratified/Acceded to the African Union Convention for the Protection and Assistance of Internally Displaced Persons in Africa (Kampala Convention)' (18 June 2020) <https://au.int/en/treaties/african-union-convention-protection-and-assistance-internally-displaced-persons-africa> accessed 16 October 2020.

[38] On some of the reasons for this success, see Walter Kälin, 'The Guiding Principles on Internal Displacement and the Search for a Universal Framework for the Protection of Internally Displaced Persons' in Vincent Chetail and Céline Bauloz (eds), *Research Handbook on International Law and Migration* (Edward Elgar 2014) 612, 631ff.

[39] Bradley and Sherwood (n 21) 180.

[40] Guiding Principles, Introduction, para 2; Kampala Convention, art 1(k).

Besides the fact that IDPs remain within their own country, this notion differs conceptually from the refugee definition in article 1A(2) of the Refugee Convention in several important respects. It only requires that flight is predominantly forced, leaving no or little room for choice. In particular, it is not necessary that it is motivated by a well-founded fear of persecution based on specific reasons. Rather, the list of circumstances that may trigger displacement is non-exhaustive.

Furthermore, the Guiding Principles and the Kampala Convention do not provide a specific legal status for persons forced to flee which may be granted as an outcome of status determination. This has several legal implications. In particular, there is no need for IDP equivalents to the cessation and exclusion clauses of the Refugee Convention (articles 1C[41] and 1F).[42] IDPs suspected of having committed crimes can be prosecuted as criminals, but this does not change the fact that they are displaced. Ending internal displacement is a factual situation and not an issue of withdrawing some form of legal status. The Guiding Principles and the Kampala Convention link rights to a specific factual situation and thus promote an approach similar to the conventions addressing the rights of the child or persons with disabilities.[43] States may nevertheless choose to create a legal status for IDPs in domestic law, an approach adopted by some European countries.[44] However, experience suggests that, by highlighting the 'otherness' of IDPs, a legal status may, rather than helping them, further contribute to their marginalization or even discrimination, particularly in situations of protracted displacement, and thus undermine their efforts to re-join mainstream life.

Finally, unlike refugees whose legal status may leave them with lesser entitlements than those enjoyed by citizens of the country of refuge,[45] IDPs—as citizens or habitual residents of their country—are entitled to enjoy the same level of protection as their non-displaced fellow citizens.[46]

4. IDP Protection as Human Rights Protection

The fact that being internally displaced does not entail a specific legal status means that the Guiding Principles, rather than creating a new branch of law analogous to refugee law, simply codify, highlight, and in a few cases progressively develop guarantees contained in international human rights and humanitarian law that are particularly

[41] See Chapter 57 in this volume.

[45] Refugee Convention, arts 13, 15, 17–19, 21, and 22(2) allow Contracting States to grant refugees rights at levels below those enjoyed by their own citizens.

[46] Kälin (n 25) 5.

relevant for the protection of IDPs. Thus, the international law of IDP protection remains part of these two branches of law.

This has the big advantage that—unlike in refugee law where the Refugee Convention and regional instruments do not provide for international monitoring mechanisms by independent experts or judges—UN treaty bodies and regional human rights mechanisms, as well as the UN's Universal Periodic Review (UPR) mechanisms,[47] are able to monitor the human rights situation of IDPs and decide individual cases submitted to them. This is an opportunity that counterbalances, to some extent, the challenges arising from the absence of 'international protection' in the sense of refugee law. UN treaty bodies regularly invoke the Guiding Principles,[48] albeit sometimes in a manner that fails to sufficiently take into account the subtleties of the hard law underlying them.[49] Cantor even goes as far as suggesting that, in their concluding observations on States' reports, UN treaty bodies are reading certain Principles back into hard human rights law in ways that go beyond mere interpretation, 'modify[ing] the original provisions from which [the Guiding Principles are] supposedly derived'.[50] However, this assessment might not sufficiently take into account the fact that treaty bodies are not exercising a quasi-judicial function when examining States' reports.[51]

Although their case law does not yet cover all relevant aspects of IDP protection, regional human rights courts play a particularly important role. The Inter-American Court of Human Rights, for instance, has found a violation of the prohibition of forced displacement in several cases, highlighting that such prohibition is implicit in the right to freedom of movement.[52] The European Court of Human Rights has concluded that internal displacement caused by violent acts attributable to the State may amount to inhuman treatment.[53] More generally, the Inter-American Court of Human Rights has highlighted that the condition of IDPs 'can be understood as a *de facto* situation of lack of' human rights protection which 'obliges the States to adopt measures of a positive nature

[47] Since the beginning of the UPR in 2008 until January 2020, 351 recommendations regarding IDPs were made to States under review. See the recommendations tagged with the issue 'Internally displaced persons' in UPR.Info, 'Database of Recommendations' <www.upr-info.org/database> accessed 16 October 2020.

[53] See *Yöyler v Türkey*, App No 26973/95 (ECtHR, 24 July 2015) paras 74f and 79, finding that the burning of houses and subsequent displacement amounted to violations of arts 3 and 8 of the ECHR.

to reverse the effects of [this] situation of weakness, vulnerability and defencelessness, even in relation to the actions and practices of private third parties'.[54] A particular risk for IDPs is being discriminated against as a displaced person either during or—as addressed by the European Court of Human Rights[55]—after displacement. Furthermore, regional courts recognize a right to return even though such right is not part of the wording of the conventions they apply. The European Court derives such a right from the right to respect for one's home and private life,[56] whereas the Inter-American Court has held that a State whose authorities have caused the displacement violates the right to liberty of movement and freedom to choose one's residence if it does not take measures allowing IDPs to rebuild their lives.[57] Similarly, the European Court has highlighted that 'the authorities have the primary duty and responsibility to establish conditions, as well as provide the means, which allow the applicants to return voluntarily, in safety and with dignity, to their homes or places of habitual residence, or to resettle voluntarily in another part of the country'.[58] Of importance, too, is the obligation of authorities to assist IDPs in recovering their property or, if this is not possible, obtaining compensation.[59]

The fact that international human rights and humanitarian law comprehensively protect IDPs leads to the question as to whether it makes sense to create a specific normative framework for them. Hathaway triggered an intense debate in 2007 when he claimed that promoting the protection of the rights of IDPs was just a 'key part of the strategy of containment' used by European States to limit the influx of refugees from the Balkans in the 1990s,[60] and asked '[w]hy should they be treated as a category of concern distinguished from other internal human rights victims who have not been displaced?'[61] As Cohen and others responded, the justification for specific provisions on internal displacement lies in the fact that IDPs have displacement-specific needs not shared by people who, despite being affected by armed conflict or disaster, are able to remain in their homes.[62] Unlike non-displaced people, they need *inter alia*[63] to be able to (i) be protected against arbitrary displacement; (ii) leave the danger zone and reach a (relatively) safe location and not be

[61] ibid 360.

[62] See Roberta Cohen, 'Response to Hathaway' (2007) 20 JRS 370; Erin Mooney, 'The Concept of Internal Displacement and the Case for Internally Displaced Persons as a Category of Concern' (2005) 24 RSQ 9.

[63] See Walter Kälin, 'Internal Displacement' in Elena Fiddian-Qasmiyeh, Gil Loescher, Katy Long, and Nando Sigona (eds), *The Oxford Handbook of Refugee and Forced Migration Studies* (OUP 2014) 163, 166f and references therein.

forced to return to such zone; (iii) find a place to stay temporarily, whether inside or outside a camp; (iv) avoid discrimination because of their being displaced; (v) have any lost personal documentation restituted and such documents issued to children born during displacement even if, according to the law, documentation can be obtained only at the place of habitual residence;[64] (vi) register as voters and participate in elections and referenda even if, according to the law, these political rights can only be exercised at the place of habitual residence;[65] (vii) have real estate and other immovable property left behind protected against being taken over by others or have them restituted; and (viii) find a durable solution ending their displacement.[66]

Thus, a specific focus on IDPs is not only justified, but is in fact required in light of the key human rights principles of equality and non-discrimination. These principles not only require States to treat people in like situations equally (equal treatment precept) but also to give everyone his or her due, as 'it is inadmissible to place on the same footing factual circumstances that are essentially different and thus require differentiated treatment (differentiation precept)'.[67] In other words, the special treatment of IDPs is legitimate because they find themselves in situations that are sufficiently different from those of non-displaced persons. As Mooney succinctly puts it, 'ensuring that IDPs can enjoy their human rights in full equality with others requires paying attention to and addressing the specific needs and risks to which the experience of internal displacement exposes them'.[68] Thus, the justification of conceptualizing IDPs as a special category of concern lies in their specific vulnerabilities and their ensuing right to protection.[69] This was explicitly recognized by the Inter-American Court of Human Rights when it held that 'the differentiated situation of displaced persons places States under the obligation to give them preferential treatment and to take positive steps to revert the effects of said condition of weakness, vulnerability, and defenselessness, including those vis-à-vis actions and practices of private third parties'.[70]

5. The Subsidiary Role of the International Community

Whereas the international community plays a key role in the (international) protection of refugees, it has a subsidiary, albeit important, role with respect to IDPs. It discharges

[64] See Conor Foley and Barbara McCallin, 'The Recovery of Personal Documentation' in Walter Kälin, Rhodri C Williams, Khalid Koser, and Andrew Solomon (eds), *Incorporating the Guiding Principles on Internal Displacement into Domestic Law: Issues and Challenges* (American Society of International Law and Brookings Institution 2010).

[70] *Mapiripán Massacre* (n 52) para 179.

this role mainly through the provision of humanitarian protection and assistance. While no single agency has a mandate for protecting and assisting IDPs (unlike UNHCR vis-à-vis refugees), the Emergency Relief Coordinator (ERC) and, through him or her, the Office for the Coordination of Humanitarian Affairs (OCHA) have been recognized by the General Assembly as playing a 'central role . . . for the coordination of, protection of and assistance to internally displaced persons, inter alia, through the inter-agency cluster system'.[71] However, the ERC's mandate is limited to humanitarian action, and the coordination position does not have an operational role, nor the capacity to focus primarily on IDPs. Thus, the UN system lacks a visible focal point with a clear mandate to assist and protect IDPs. This is a major institutional gap in the international response to the challenges of internal displacement.

The cluster system was introduced in 2005 to facilitate coordination among organizations in humanitarian emergencies and to ensure that the humanitarian response in key thematic areas (such as shelter, camp management, water, sanitation, health, and protection) would be predictable, timely, and effective.[72] In 2014, a study found that 'the overall international response to IDPs has improved over the past decade' and the 2005 '[h]umanitarian reform has made a difference in improving the effectiveness of international response'.[73] At the same time, the cluster system has been weak in assisting IDPs to rebuild their lives and find durable solutions ending their displacement. As highlighted by former UN Secretary-General Ban Ki-moon, all too often humanitarian actors 'provide short-term assistance to millions of displaced persons, sometimes for decades', instead of moving to an approach 'that goes from meeting immediate humanitarian needs to one that preserves the dignity and improves the lives and self-reliance of displaced persons'.[74]

A specific challenge often faced by humanitarian actors is the lack of access to IDPs in need of assistance. According to international law, humanitarian assistance by the international community can, in principle, only be provided with the consent of the State concerned.[75] Under article 2(1) of the ICESCR, however, States are obliged to work towards the full realization of rights, such as the right to adequate food and shelter and the right to health, not only 'individually' but also 'through international assistance and co-operation'. Thus, with regard to these rights, 'States have a joint and individual responsibility . . . to cooperate in providing disaster relief and humanitarian assistance in times of emergency, including assistance to refugees and internally displaced persons'.[76]

As such, States that are unable to provide necessary humanitarian assistance are arguably obliged to seek and authorize humanitarian assistance by international actors.

States are sometimes unwilling to request humanitarian assistance, however, particularly when they suspect that IDPs support insurgents.[77] To address such situations, Guiding Principle 25(2) stresses that consent to humanitarian assistance by international actors 'shall not be arbitrarily withheld, particularly when authorities concerned are unable or unwilling to provide the required humanitarian assistance'. In 2014, the UN Security Council, in Resolution 2139 on Syria, gave credence to this Guiding Principle by recalling 'that arbitrary denial of humanitarian access and depriving civilians of objects indispensable to their survival, including wilfully impeding relief supply and access, can constitute a violation of international humanitarian law'.[78] In the context of disasters, the International Law Commission has similarly recognized that '[c]onsent to external assistance shall not be withheld arbitrarily'.[79] Finally, the UN Human Rights Committee has recognized that denial of humanitarian access may amount to violations of the right to life and the prohibition of inhuman treatment, and has called on the State concerned to '[a]uthorize and facilitate the timely and unrestricted access of humanitarian assistance to civilian populations in all conflict-affected areas in full compliance with the prohibition of arbitrary denial of humanitarian access'.[80] These pronouncements are important contributions to a growing consensus that the primary responsibility of States to assist and protect IDPs may include the duty to grant humanitarian access.

6. Ending Displacement: Towards Convergence?

The cessation clause in article 1C of the Refugee Convention provides that refugee status ends either as a consequence of an act of the refugee him- or herself (such as re-establishment in his or her country of origin or the re-acquisition of a lost nationality),

[77] See UNGA, 'Protection of and Assistance to Internally Displaced Persons: Note by Secretary-General', UN doc A/65/282 (11 August 2010) paras 55–91, providing an overview of factual and legal challenges related to humanitarian access to IDPs. See also Dapo Akande and Emanuela-Chiara Gillard, 'Oxford Guidance on the Law relating to Humanitarian Relief Operations in Situations of Armed Conflict: Commissioned by the United Nations Office for the Coordination of Humanitarian Affairs' (October 2016) <www.unocha.org/sites/dms/Documents/Oxford%20Guidance%20pdf.pdf> accessed 26 August 2019; Felix Schwendimann, 'The Legal Framework of Humanitarian Access in Armed Conflict'(2011) 93 International Review of the Red Cross 993.

[78] UNSC Resolution 2139 (22 February 2014) 10th preambular para. In UNSC Resolution 2165 (14 July 2014), the Council found that Syria had arbitrarily withheld consent to relief operations and therefore authorized delivery of humanitarian goods across borders and conflict lines without Syria's consent.

[79] International Law Commission, 'Draft Articles on the Protection of Persons in the Event of Disasters', adopted by the International Law Commission at its 68th session: see International Law Commission, 'Report on the Work of the Sixty-Eighth Session', UN doc A/71/10 (2016) 59, art 13.

or through an administrative act by the country of asylum (such as the granting of citizenship or a decision that the refugee can no longer refuse to accept the protection of his or her country of origin).[81] While cessation does not automatically lead to a solution for refugees,[82] the two concepts are interlinked. Thus, in 1997, UNHCR stressed that a 'refugee ceases to require international protection where he or she repatriates voluntarily and reintegrates into the country of origin, or settles in the host country and obtains the nationality of that country, or resettles in another country and obtains the nationality of that country'.[83] The statement puts the emphasis on the moment when a refugee crosses the border to his or her country of origin or is granted citizenship by the country of asylum or resettlement, suggesting that refugees find a durable solution at a specific point in time.

As mentioned above, cessation clauses do not exist for IDPs. While return to the place of origin, local integration, and settlement in another part of the country (called 'resettlement' in Guiding Principles 28–30) parallel the three solutions envisaged for refugees, the Guiding Principles place the emphasis on the need for special efforts to 'establish conditions, as well as provide the means' to allow IDPs to return to their homes or settle elsewhere in the country and to facilitate their (re-)integration.[84] They therefore acknowledge that finding durable solutions is not a one-time event but rather a complex process.[85] According to the Inter-Agency Standing Committee (IASC) Framework on Durable Solutions for Internally Displaced Persons, such solutions are 'achieved when former IDPs no longer have specific assistance and protection needs that are linked to their displacement and such persons can enjoy their human rights without discrimination resulting from their displacement'.[86] In terms of process, achieving durable solutions requires, in particular, that IDPs are able to make a free and informed decision as to what kind of solution they prefer and are allowed to participate in planning and implementing it.[87] In substantive terms, durable solutions are achieved once IDPs enjoy, without discrimination, long-term safety and security; an adequate standard of living, including a minimum access to adequate food, water, housing, healthcare, and basic education; access to employment and livelihoods; and restitution of their property or compensation for it. Depending on the context, access to, and replacement of personal and other documentation, reunification with family members, the possibility to exercise their political rights, and access to effective remedies for displacement-related violations of their rights might be other elements necessary to make solutions durable.[88]

Addendum: Framework on Durable Solutions for Internally Displaced Persons', UN doc A/HRC/13/21/Add.4 (29 December 2009) para 15.

[86] ibid para 8. [87] ibid para 22. [88] ibid para 83.

While it has always been clear that, in many situations, the same conditions need to be met for refugees, traditional refugee law approaches have focused on issues such as the timing, conditions, and voluntariness of return[89] rather than the rights-based approach promoted by the IASC Framework. This may change now with the Comprehensive Refugee Response Framework (CRRF) adopted as part of the 2016 New York Declaration for Refugees and Migrants. The CRRF recognizes the importance of activities such as the provision of identity documents; facilitation of socio-economic reintegration of returnees or restitution of property;[90] provision of access to 'legal, physical and other support mechanisms';[91] and investments 'in building human capital, self-reliance and transferable skills as an essential step towards enabling long-term solutions'.[92] In the 2018 Global Compact on Refugees, States commit to support countries of origin 'with respect to social, political, economic and legal capacity to receive and reintegrate returnees', including 'support for development, livelihood and economic opportunities and measures to address housing, land and property issues'.[93] While these instruments do not present a comprehensive and coherent approach comparable to the one provided by the IASC Framework on Durable Solutions, they indicate a move towards a certain convergence of approaches to durable solutions for IDPs and refugees.

However, progress at the conceptual level is still not adequately reflected on the ground. On the occasion of the 2016 World Humanitarian Summit, then UN Secretary-General Ban Ki-moon called on the international community 'to collectively work towards a clear, ambitious and quantifiable target for reducing new and protracted internal displacement, in a dignified and safe manner'[94] and encouraged '[h]umanitarian and development actors…to work collaboratively across silos and mandates to implement plans with a clear and measurable collective outcome'[95] to increase the self-sufficiency and resilience of IDPs and achieve durable solutions for them. His call for a 'New Way of Working'[96] to meet 'people's immediate humanitarian needs while at the same time reducing risk and vulnerability over multiple years through the achievement of collective outcomes'[97] was endorsed by the UN General Assembly.[98] However, the implementation of this approach[99] requires fundamental changes in a UN institutional culture fraught with competition over resources and turf battles between agencies and

[98] 'Strengthening of the Coordination of Emergency Humanitarian Assistance of the United Nations', UNGA res 71/127 (8 December 2016) para 22.

[99] For more details, see Walter Kälin and Hannah Entwisle Chapuisat, *Breaking the Impasse: Reducing Protracted Internal Displacement as a Collective Outcome* (OCHA 2017) 54ff.

organizations, rather than valuing and rewarding genuine cooperation. A first important step was the recent strengthening of the role of Resident Coordinators as leaders of UN country teams with enhanced authority to build a solid nexus between humanitarian and development programming activities.[100] In addition, there needs to be a shift away from heavily earmarked short-term humanitarian funding provided by donors to their favourite agencies towards more flexible, long-term financing that provides incentives for cooperation towards collective outcomes addressing protracted internal displacement. Finally, seeing IDPs—and their hosts—as people with agency, and supporting them as active participants in the process of finding durable solutions, rather than as beneficiaries of assistance, would go a long way in overcoming traditional 'care and maintenance' approaches.

7. Outlook

In the past two decades, important progress has been made in terms of developing a normative framework for the protection and assistance of IDPs, and humanitarian responses providing life-saving support have become more effective. The record is less positive with regard to the implementation of existing norms and, in particular, the ability of States and the international community to address the widespread phenomenon of protracted internal displacement and to find durable solutions for IDPs.

Compared with the international regime for the protection of refugees, IDP protection lags behind with regard to the institutions and processes necessary to address internal displacement effectively. At the normative level, many States affected by internal displacement still lack adequate domestic laws, and outside Africa, binding regional conventions on the assistance and protection of IDPs (responsive to particular regional needs) do not exist. Institutionally, there is no clear and visible institutional home within the UN that transcends humanitarian action and human rights to bring together the UN system as a whole. Despite progress made with the UN's 'New Way of Working', joint outcome-oriented action by humanitarian, development, and, where relevant, peacebuilding actors remains insufficient. Donor incentives to work towards collective outcomes are still too limited. While UNHCR's Executive Committee or the Global Refugee Forum instituted by the Global Compact on Refugees facilitate ongoing discussions,[101] a comparable global platform for the comprehensive discussion of issues related to internal displacement does not exist.

[100] 'Repositioning of the United Nations Development System in the context of the Quadrennial Comprehensive Policy Review of Operational Activities for Development of the United Nations System', UNGA res 72/279 (31 May 2018) paras 7–17.

[101] Global Compact on Refugees, para 103.

These weaknesses are exacerbated by the rather limited interest of legal scholars to focus on the protection of IDPs, a situation that is at odds with the urgency and complexity of the worldwide internal displacement crisis. There are a number of topics requiring further exploration and analysis, including the interplay between the Guiding Principles as soft law and the hard law underlying them; the exact meaning of some of the Principles; the degree of legitimate limitations that States might impose on the rights of IDPs;[102] the role of international human rights and humanitarian law in preventing internal displacement;[103] the character and scale of positive legal obligations during displacement and with regard to durable solutions; the protection of IDPs displaced by disasters and the adverse effects of climate change; and the relevance of international criminal law to the protection of IDPs.[104]

PART VI

REFUGEE RIGHTS AND REALITIES

CHAPTER 48

THE RIGHT TO ASYLUM

MARÍA-TERESA GIL-BAZO AND ELSPETH GUILD

1. Introduction

Asylum, understood as 'the protection that a State grants on its territory or in some other place under the control of certain of its organs to a person who comes to seek it',[1] is a well-known institution in international law and its historical roots in State practice are well established.[2] Asylum is different from refugee status, as the former constitutes an institution for protection, while the latter refers to the content of the protection offered to those who meet the refugee definitions under the relevant international instruments. As such, asylum and refugee status are two separate but related institutions. More recently, the term 'international protection' has been coined to refer to the protection granted by States to various categories of persons, including those who are not refugees but benefit from other forms of protection, as discussed in Section 3.[3]

This chapter explores the right to asylum, including the right to seek asylum and the right to be granted asylum, in international law of universal and regional scope. It does so by examining the evolution of asylum in international law and practice, as well as the jurisprudence of a number of courts, most notably the Court of Justice of the European Union (CJEU) and the Inter-American Court of Human Rights (IACtHR). Although the African Court on Human and Peoples' Rights (ACtHPR) has not yet ruled explicitly on the right to asylum, the chapter does consider regional standards of protection in Africa.

The chapter explores these issues in historical perspective, offering a critique of the current state of play regarding asylum, refugee status, and international protection, including in the context of the Global Compact on Refugees in December 2018. It

examines trends arising in regional contexts and analyses their contribution to a holistic interpretation of States' obligations towards refugees and others in need of protection.

2. The Relationship between Asylum and Refugee Status

As stated above, asylum is different from refugee status: the former constitutes the institution for protection, while the latter refers to the content of the protection offered to those who benefit from asylum.[4] Furthermore, asylum is both a right of States to grant it, as well as a human right of individuals.[5]

The practice of asylum pre-dates the existence of the international regime for the protection of refugees (which arose during the inter-war period in the twentieth century) and the international regime for the protection of human rights (which was developed by the UN post-1948). Asylum constitutes the protection that a State grants to an individual on its territory (territorial asylum) or in some other place under the control of certain of its organs (such as diplomatic premises and warships).[6]

While it is beyond the scope of this chapter to offer a detailed account of the religious and historical foundations of human rights, which have been well explored in the literature,[7] asylum finds its roots in the most ancient bodies of norms for human conduct, both in relation to individuals as well as to societies. Indeed, evidence of the normative character of asylum can be found in its nature as a religious command, a call for divine protection against human in/justice. All three monotheistic religions impose a duty of hospitality and protection to strangers, which constitutes a notable aspect of the anthropological and historical background to the law and practice of asylum over time. Long before the international regime for the protection of refugees was born in the twentieth century, asylum had been practised for thousands of years, and was known in most ancient civilizations. The Kadesh Treaty—concluded in the thirteenth century BC between Ramses II and Hatusil III, king of the Hitittes—is the first known international

[6] Institute of International Law (n 1).

[7] On the historical and religious background of asylum, see Reale (n 2) 473–510; Cristina Gortázar Rotaeche, *Derecho de Asilo y 'No Rechazo' del Refugiado* (Dykinson 1997) 38–59; María-Teresa Gil-Bazo, *The Right to Asylum as an Individual Human Right in International Law: Special Reference to European Law* (UMI 1999) 33–56; William Felice, 'The Historical Foundation of Human Rights' (1998) 12 Ethics & International Affairs 221; and Christian Green and John Witte, 'Religion' in Dinah Shelton (ed), *The Oxford Handbook of International Human Rights Law* (OUP 2013).

treaty and it already contains protection clauses.[8] In nine provisions, the treaty establishes that the exchange of population between the two sovereigns will only take place on condition that neither the individuals themselves, nor their families, will be subject to punishment.[9] In its primitive form, asylum was not concerned with the politically persecuted, but rather with the broader category of those in distress, who could be innocent or guilty. Today, asylum is enshrined in constitutions around the world as a right of refugees and other persecuted individuals,[10] and it can be argued that it has acquired the status of a general principle of international law.[11]

By contrast, the status of refugees in international law was established by treaty only in the early twentieth century, identifying groups of persons who had lost the protection of their country of origin.[12] The adoption of international treaties establishing the standard of treatment of refugees reflected the understanding that refugees were a special group of non-nationals that required a collective response by the international community. The international refugee regime expressed the recognition amongst States of their mutual obligations in relation to this category of forced migrant, defined not so much by the causes of their flight or plight, but rather by the lack of protection by the State of their nationality. Today, the international legal regime for the protection of refugees is enshrined in the Refugee Convention and its 1967 Protocol, as well as regional instruments developed in Africa, Latin America, and, more recently, Europe.

In 2018, the UN General Assembly affirmed the Global Compact on Refugees. It highlights the identification of international protection needs as an area requiring support in order to ease the burden on host countries and to benefit refugees and host community members:

> Mechanisms for the fair and efficient determination of individual international protection claims provide an opportunity for States to duly determine the status of those on their territory in accordance with their applicable international and regional obligations (A/RES/72/150, para 51), in a way which avoids protection gaps and enables all those in need of international protection to find and enjoy it.[13]

[13] Global Compact on Refugees, para 61.

The Global Compact on Refugees is not legally binding. Instead, it is intended to aid more equitable burden- and responsibility-sharing amongst UN Member States in the delivery of their existing international protection obligations.

3. Asylum and International Protection

Even though asylum, as a long-established institution in international law, covers not only refugees but also other groups in need of protection, more recently the protection given to such persons has been encapsulated by the term 'international protection'. As Fortin convincingly argues, this term originally referred to the 'diplomatic protection' that the international community offers to refugees (and others, such as stateless persons),[14] and it is different from the set of rights, benefits, and obligations that the host State offers to refugees and which is better described by the term 'asylum'.[15] Despite the fact that international protection and asylum were well-established terms, the European Commission chose to part from that established terminology in 2000 and use international protection (instead of asylum) as the term to refer to the protection granted by EU Member States to refugees and beneficiaries of subsidiary protection.[16] The term then appeared in the European Commission's proposal for a so-called Qualification Directive in 2001[17] and eventually found its way into law for the first time in 2004 when the EU adopted the Qualification Directive on the status of refugees and persons eligible for subsidiary protection.[18]

Arguably, this shift is a way of trying to restrict asylum to refugees within the meaning of the Refugee Convention, with the new term applying to *all* individuals in need of

[14] Antonio Fortin, 'The Meaning of "Protection" in the Refugee Definition' (2000) 12 IJRL 548.

[17] European Commission, Proposal for a Council Directive on Minimum Standards for the Qualification and Status of Third Country Nationals and Stateless Persons as Refugees or as Persons Who Otherwise Need International Protection [2002] OJ C51 E/325.

[18] Council Directive 2004/83/EC of 29 April 2004 on Minimum Standards for the Qualification and Status of Third Country Nationals or Stateless Persons as Refugees or as Persons Who Otherwise Need International Protection and the Content of the Protection Granted [2004] OJ L304/12, art 2. This was recast in 2011: Directive 2011/95/EU of the European Parliament and of the Council of 13 December 2011 on Standards for the Qualification of Third-Country Nationals or Stateless Persons as Beneficiaries of International Protection, for a Uniform Status for Refugees or for Persons Eligible for Subsidiary Protection, and for the Content of the Protection Granted (recast) [2011] OJ L337/9.

protection (including those to whom asylum would have traditionally applied).[19] This approach by the EU eventually led to the adoption of the first legal instrument of a supranational nature containing a separate status for individuals protected under international human rights law, complementary to the Refugee Convention, rather than to the adoption of a single status for all persons granted asylum, whether on Refugee Convention grounds or on international human rights law grounds. As McAdam explains: '[I]t is essential to appreciate that the "complementary" aspect of "complementary protection" [derived from international human rights law] is not the form of protection or resultant status accorded to an individual, but rather the source of the additional protection. Its chief function is to provide an alternative basis for eligibility for protection.'[20] Indeed, the European Commission did consider the option of having '[a] single status, conferring the same types of rights on refugees recognised under the Geneva Convention and on persons enjoying subsidiary protection'.[21] However, this option was not favoured by all Member States and, therefore, the Directive on the matter introduced two separate statuses, as mentioned above.[22]

This European regional approach was later endorsed globally by UNHCR, which considered complementary protection in its 2000 Global Consultations. Rather than calling for an expanded refugee definition (as in the African or Latin American regions) with its corresponding single status for all persons in need of protection, it adopted an Agenda for protection, calling on

> States to consider the merits of establishing a single procedure in which there is first an examination of the 1951 Convention grounds for refugee status, to be followed, as necessary and appropriate, by the examination of the possible grounds for the grant of complementary forms of protection.[23]

In 2005, UNHCR's Executive Committee (ExCom) adopted a Conclusion promoting the use of complementary protection amongst States worldwide, which encouraged 'the use of complementary forms of protection for individuals in need of international protection who do not meet the refugee definition under the 1951 Convention or the 1967 Protocol'.[24]

[19] It should be stressed that asylum is an ancient legal institution that predates the refugee regime and, therefore, the beneficiaries of asylum have historically included not only the groups that were later identified as refugees within the meaning of the UN Refugee Convention, but many others. For an overview of asylum in historical terms, see Gil-Bazo (n 7).

[24] UNHCR ExCom Conclusion No 103 (LVI), 'The Provision on International Protection including through Complementary Forms of Protection' (2005) para (i).

It appears that a European regional approach whose purpose was arguably to restrict the right to asylum to Convention refugees only (parting from the historical tradition of asylum) was later uncritically endorsed by UNHCR globally, and seems to have found its way into the language of other regional bodies. Indeed, the IACtHR now refers to international protection in its decisions on asylum. It is most unfortunate that the Americas, with its long and principled tradition on asylum, has chosen to embrace a concept alien to its own practice and its expanded refugee definition.

To be clear, while international protection is rightly used to refer to the protection offered by UNHCR itself, the issue arises with the use of the term to refer to the protection offered by States, which constitutes an incorrect interpretation of the Refugee Convention[25] and abandons the use of the well-established and inclusive term 'asylum', which covers all those in need of protection. The history of asylum and its current wording in constitutional provisions show that asylum, as a protection institution, is not only open to refugees within the Refugee Convention, but also to other categories of persons in need of protection. There is no reason to exclude persons in need of protection for grounds other than those established in the Refugee Convention from the protection that asylum, as an institution of protection, provides.[26]

4. The Right to Seek Asylum in International Instruments

In international law, no universal treaty contains a right *to* asylum. The UDHR provides that '[e]veryone has the right *to seek and to enjoy asylum* from persecution',[27] but this is not reflected in the Refugee Convention, its Protocol, or the ICCPR, even though being able to seek asylum is a prerequisite to accessing refugee protection. The contemporary concern about the right to seek asylum is that it is all too frequently frustrated by States attempting to stop asylum seekers from reaching their territory.[28] This is despite the fact, so eloquently observed by Goodwin-Gill, that there is an 'obligation on states not to frustrate the exercise of the right to seek asylum in such ways as to leave individuals at risk of persecution or other relevant harm'.[29] As countries in the Global North have honed practices of deterrence,[30] academics and practitioners have turned to the right to seek asylum to test the legality in international law of these measures.[31] This section examines the meaning and scope of that right.

a. What is the Right to Seek Asylum?

It is perhaps not surprising that the right to seek asylum appears in the foundational human rights declaration adopted after the Second World War, a conflict that created millions of refugees, many of whom were still living in temporary camps. While for these refugees, the right to leave was not of immediate concern (since they were seeking a durable solution to their displacement), that right, contained in article 13(2) of the UDHR, has become an important consideration for many refugees around the world. However, it is not directly related to the right to seek asylum. The negotiation process of article 14 (the right to seek asylum) was based on two drafts, one provided by the Secretariat to the drafting committee (with additions by the US delegation),[32] and one by the UK.[33] The right to seek asylum was included in the Secretariat's draft, but only in the form of a right exercisable by States to grant asylum to refugees (thus a State sovereigntist provision). However, as Gammeltoft-Hansen and Gammeltoft-Hansen explain, two religiously based non-governmental organizations[34] pressed for the recognition of a right for individuals facing persecution not only to flee, but also to be received in another country.[35] There was no unanimity in the working group charged with negotiating the provision that a reference to asylum should even be included in the UDHR, and this further entitlement did not materialize on account of concerns about State sovereignty. While the asylum provision changed shape substantially over the course of the drafting process, with many alternative wordings suggested, it did survive in the final document. Even so, there was rather acute criticism by some delegations.[36] Indeed, opposition to the inclusion of a right to seek asylum created odd bedfellows in the UN General Assembly when the UDHR was finalized. Notably, the USSR and South Africa found themselves arguing together against any legal implications of such a right.[37]

Key to the acceptance of the asylum provision was that it was not equivalent to a right *to* asylum. Such a right would have created legal obligations on States to provide asylum, a matter that was not acceptable to many of the more vocal States. The right to seek asylum was understood as a right to a *procedure* through which an individual would be able to claim asylum, and States in the General Assembly did not find this controversial.

[36] The drafting history is well covered in Goodwin-Gill and McAdam (n 12) 358–62. Gammeltoft-Hansen and Gammeltoft-Hansen (n 35) have provided a critique of the drafting history of the right to seek asylum from the perspective of contemporary practices.

[37] For a fuller discussion, see Morsink (n 33) 7–35.

Even though the right to seek asylum was not incorporated into the Refugee Convention, its procedural characteristics are inherent in the principle of *non-refoulement*. Article 33(1) of the Refugee Convention obliges States to determine whether an individual is a refugee because to remove someone to a country where he or she has a well-founded fear of being persecuted is prohibited, unless article 33(2) applies. Lauterpacht, in his analysis of the UDHR in 1948,[38] was firmly of the view that article 14(1) constituted a right of every State to offer refuge—an interpretation that harks back to a State sovereigntist interpretation of the provision.

Article 14 of the UDHR has three parts: the right to seek asylum, the right to enjoy asylum, and a carve-out that the right may not be invoked in the case of prosecutions arising from non-political crimes or from acts contrary to the purposes and principles of the UN. The right to enjoy asylum, as analysed by Edwards, includes not only refugee status in accordance with the Refugee Convention, but also all human rights in other UN treaties.[39] The third part of the provision is reflected in the article 1F exclusion clause of the Refugee Convention,[40] and reveals the legal perception from the period when it was drafted that the right of asylum is a right of States. This perspective is well developed by Morgenstern, writing in 1949 from a comparative law perspective.[41] Morgenstern's discussion of the issue commences in a very traditional manner, repeating the doxa that 'there is an undisputed rule of international law to the effect that every state has exclusive control over the individuals on its territory'.[42] Such territorial sovereignty is presented as encompassing the power of the State to grant asylum. As Morgenstern bluntly stated of the international law of the era: 'international law as currently interpreted does not confer rights on individuals'.[43] The right of asylum is thus a right of a State in relation to the State of origin of the individual. The other aspect of Morgenstern's approach is the embeddedness of argument in comparative law of a small number of States, mainly France, Germany, the United Kingdom, and the United States. There is no regard as such to other potential sources of international law.

By 1966, Grahl-Madsen had developed a second component to the right to seek asylum which included at least an element of individual rights.[44] This was a substantial departure from the State-centric approach of earlier authors. In the following year, the General Assembly adopted the Declaration on Territorial Asylum,[45] which recalled the right to seek and to enjoy asylum in the UDHR, and noted that it is the duty of all States to respect the grant of asylum by a State. However, the Declaration did not blossom into a convention. Instead, the efforts in 1977 at the UN Conference on Territorial Asylum,

where it was intended that a treaty would be adopted, went badly wrong.[46] The purpose of the proposed new convention was to add a limited dimension of rights for individuals seeking asylum, in that States would be required to use their best endeavours to grant asylum in their territory to anyone fulfilling the criteria set out therein. Clearly, this was a step too far for States at the time. No further proposal for a convention was ever put forward at the UN level.

In 1983, Goodwin-Gill's first edition of *The Refugee in International Law* appeared.[47] There, and in subsequent editions,[48] the drafting history of the right to seek asylum in the UDHR was carefully examined and Goodwin-Gill concluded that the signatory States did not intend article 14(1) to constitute a substantive right to asylum or otherwise to affect States' sovereign claims over border control. When it came to the drafting of the Refugee Convention, asylum was mentioned only in the preamble and the Final Act of the Conference of Plenipotentiaries in the context of the need for international cooperation (since 'the grant of asylum may place unduly heavy burdens on certain countries').[49] Important post-1977 efforts to achieve progress on the elements of a right to seek asylum included the 1993 Vienna Declaration on Human Rights and Programme of Action, which reaffirmed the right to seek and enjoy asylum,[50] and a 2000 resolution by the Sub-Commission on Human Rights which called for respect of the right to seek and enjoy asylum.[51] The Sub-Commission also expressed concerns about restrictive non-entrée policies that effectively shut out people in search of asylum.[52] This became a major theme of analysis of article 14(1) of the UDHR from the early 2000s onwards.

UNHCR's Executive Committee has also stressed the importance of the right to seek asylum and States' duty not to frustrate its realization,[53] but this has not stopped a proliferation of deterrence measures.[54] The key elements for the individual—entry, stay, *non-refoulement*, and protection from prosecution for crossing borders in search of protection—are bundled into the Refugee Convention, with State contestation revolving around the exact meaning of what duty they have to admit a person seeking asylum to

their territory.[55] Where States recognize individuals as refugees, they generally grant them the right to remain, at the very least, as a by-product of the prohibition on *refoulement*.

b. The Right to Enjoy Asylum

A refugee's right to enjoy asylum is generally accepted as being codified in the Refugee Convention through the legal status set out there, supplemented by human rights law[56] (since some of the Convention rights are more limited). Specifically, the Refugee Convention sets out a series of rights on the basis of equality with either nationals of the State or aliens generally, including the right to freedom of religion, exemption from reciprocity, the right to property (including industrial), of association, of access to the courts, employment, self-employment, access to the liberal professions, rationing, housing, education, relief and social security, free movement within the State, identification papers, travel documents, fiscal charges, transfer of assets, and naturalization.[57] An example of a right that has subsequently been included in human rights conventions, but which is also important for refugees, is the right to health care.[58]

c. Identifying the Scope of the Right

The scope of article 14(1) of the UDHR is contested. It is a right that can be exercised against the State of origin, possibly in conjunction with article 12(2) of the ICCPR (the right to leave any country). So, for instance, an individual who seeks asylum in accordance with the UDHR could make the claim to an official of another State (in an embassy or consulate, for instance).[59] Whether or not an individual who comes within the scope of the provision will actually fulfil the conditions to be granted asylum, however, is another matter.

The right to seek asylum has primarily procedural implications.[60] States must have procedures through which an individual can exercise the right in order to give it effect. The procedures necessary to seek asylum, in addition to requiring States to make it possible for the individual to make a claim, must also respect the principles of the UDHR (such as the principle of non-discrimination in article 7). While the undertaking

in article 10 of the UDHR to a fair and public hearing is desirable, it is expressed to apply to a 'determination of… rights and obligations' and is thus unlikely to apply to asylum procedures.

Edwards argues that the procedural requirements of the right to seek asylum must be interpreted in light of, and subject to, the rights contained in subsequent human rights conventions.[61] Proper procedures ought to include guidance on how to assess the pertinent risk of persecution or serious harm. However, States may not have any procedures, or may have unsuitable ones. While States are apparently left to their own devices regarding the procedures to be put into place, developments in international refugee and human rights law on asylum procedures are significant. Under the Refugee Convention, the procedural gap was addressed in part by the adoption of UNHCR's *Handbook on Procedures and Criteria for Determining Refugee Status*.[62] Under international human rights law, supranational courts and treaty bodies have developed procedural standards under their *non-refoulement* caselaw, which in effect must be applied by States in asylum cases.[63] The discretion of States is not, therefore, unfettered as regards the necessary procedures to give effect to the right to seek asylum.

d. The Changing Nature of the UDHR?

One practical weakness of the right to seek asylum lies in the UDHR's non-binding nature. However, as is now well-established, many of the rights in the UDHR are in fact binding, for example if they reflect general principles of law or customary international law. In fact, the reference to the UDHR as part of customary law has become a standard argument amongst scholars.[64] Some commentators even argue that the UDHR has now acquired customary status *en bloc*,[65] but they are in a clear minority. Others draw a distinction between different provisions of the UDHR, insisting that State practice confirms the existence of only some rights as customary law.[66] The latter view takes into account the significance of contrary State practice and seems to be more nuanced. Given

widespread deterrence measures related to the right to seek asylum, it would be premature to consider that the right to seek asylum in the UDHR has become customary international law. However, since the process of generating custom is inherently dynamic, article 14 may yet become part of the corpus of customary law, even if it has not so far. This question warrants further research.

Perhaps there is a future for article 14(1) of the UDHR to assist States to transform their practices so as to give effect to a real right to seek asylum. Those Global North States whose executives have long resisted the legal effect of the UDHR, and article 14, in particular, may find that their judiciaries are more willing to listen to arguments regarding its force. This may particularly be the case where the judiciary is faced with egregious violence against asylum seekers for the sole purpose of preventing them from claiming their right to seek asylum.

5. The Right to Asylum in Regional Instruments

As noted above, the right to seek and enjoy asylum in the UDHR did not find its way into any UN treaty. However, this is not to say that there is no internationally recognized right to asylum. Indeed, this gap in the universal human rights system has been filled at the regional level by the American and African regional human rights treaties, as well as in Europe by the Charter of Fundamental Rights of the EU, all of which enshrine a right to asylum.[67] Furthermore, the right to asylum in the first two regional instruments goes beyond the mere right to seek asylum in the UDHR, and includes a right to 'obtain'[68] or 'be granted'[69] asylum. While this explicit wording appears in the American and African treaties, the wording of the right to asylum in the EU context is not explicit. However, research on the right to asylum in article 18 of the Charter of Fundamental Rights of the EU, and in particular on its negotiating history, shows that the legislator discussed and rejected an explicit formulation of the right to seek asylum, in favour of the broader right to asylum.[70]

Despite the existence of a right to be granted asylum in these regional instruments, judicial interpretation by the respective regional courts of this right is scarce. So far, the

only human rights court that has pronounced on the scope of the right to asylum is the IACtHR in a Consultative Opinion adopted in 2018,[71] 40 years after the entry into force of the American Convention on Human Rights. The IACtHR was seized by Ecuador on the institution of asylum as a human right in 2016. The court held a hearing in August 2017 where States, international governmental organizations, non-governmental organizations, and academics were invited to present their views. The court issued its opinion in May 2018. Although some scepticism has been expressed on the actual value of the right to asylum, based on the fact that regional instruments and constitutions often refer to international treaties and domestic legislation, the court made it clear that State discretion in the development of domestic legislation and the interpretation of international instruments can never undermine the essential content of the right:

> [T]he Convention and the American Declaration…refer to domestic legislation and to international conventions in order to make tangible the way in which the right of asylum becomes operational…. *This shall not, in any event, affect the essential core of the law and of the obligations acquired in the context of international human rights treaties*.[72]

The court further recalled that the human right to asylum under the Inter-American system is to 'seek' and to 'receive' asylum and stressed that '[t]hese words cannot be separated, i.e. the configuration of the law incorporates both components and it is therefore not permissible to adopt positions that seek to disintegrate their normative strength'.[73] Accordingly, the court went on to detail the content of these obligations, which include: the right to apply for asylum, the prohibition of rejection at the border without an individualized analysis of the claim, the duty of the State to allow entry into the territory and to give access to refugee status determination and asylum procedures, and the prohibition on States to take any action that prevents individuals from seeking protection.[74]

The court then went on to outline what the right to receive asylum means, emphasizing the principle of family unity and the extraterritorial effects of refugee status determination. The court affirmed that 'the right to receive asylum means that the State must grant protection provided that the requirements and conditions for it to be provided are met',[75] and that this extends to the applicant's family members, in accordance with the principle of family unity.

The court's opinion is already being referred to by domestic courts in the region. The Constitutional Court of Ecuador referred to it in a judgment suspending the application

of various government decrees that affected Venezuelan refugees' right to seek and to receive asylum, and whose compatibility with the Constitution is currently pending before the Constitutional Court.[76]

In the African system, the ACtHPR has not yet pronounced on the right to asylum in article 12(3) of the African Charter on Human and Peoples Rights, although it has some case law on the protection of non-nationals. The African Commission on Human and Peoples' Rights (AComHPR), however, has already outlined some of the content of the right to asylum. In a case against Rwanda involving the expulsion of long-settled Burundian refugees, who were given a month to leave the country and were not allowed to bring their case before a competent judicial authority, the Commission found that article 12

> should be read as including a general protection of all those who are subject to persecution, that they may seek refuge in another state. Article 12.4 prohibits the arbitrary expulsion of such persons from the country of asylum. The Burundian refugees in this situation were expelled in violation of Article … 12 of the African Charter.[77]

Most interestingly, the AComHPR has also found a violation of the Charter when a State persecutes one of its citizens forcing them to flee and seek refuge elsewhere. In a case against Kenya, the Commission found that 'the persecution of the Complainant and his subsequent flight to the Democratic Republic of the Congo to have greatly jeopardised his chances of enjoying his' Charter-based rights.[78] This position has been recently confirmed:

> As Sudanese nationals, the Commission considers that [the applicants] have a right of return to their country…, the Commission considers that their apprehension of a well-founded fear of persecution by the authorities should they return, is a violation of [the right to return to their country under] Article 12 (2) of the Charter.[79]

In Europe, the Court of Justice of the EU (CJEU) has not yet pronounced on the content of the right to asylum in article 18 of the Charter of Fundamental Rights of the EU, despite having been asked explicitly in the cases of *NS*[80] and *Halaf*.[81] However, in his

opinion in *Elgafaji*, Advocate General Maduro construed asylum in the EU not only as emanating from the Charter, but also being a binding general principle of EU Law, resulting from the constitutional traditions of its Member States: '[The] fundamental right to asylum . . . follows from the general principles of Community law which, themselves, are the result of constitutional traditions common to the Member States.'[82]

In addition to regional treaties, the right to asylum is enshrined in constitutions worldwide, speaking to the nature of asylum as a foundational principle of the State itself. An overview of constitutions around the world shows that the right to asylum is enshrined in constitutions of countries across continents and legal traditions, with the exception of the UK and States whose legal systems have a shared history with the UK. The constitutions of Angola, Bénin, Bolivia, Bulgaria, Burundi, Brazil, Cape Verde, Chad, China, Colombia, Costa Rica, Cuba, Democratic Republic of Congo, the Dominican Republic, Ecuador, Egypt, El Salvador, France, Germany, Guatemala, Guinea-Conakry, Honduras, Hungary, Italy, Ivory Coast, Mali, Mozambique, Nicaragua, Paraguay, Peru, Portugal, Spain, and Venezuela, to name a few, all recognize the right to asylum. They all draw from the liberal-democratic tradition that emerged from the French Revolution changing the conception of the State and the relationship between individuals and the State. The wording of such constitutions reflects this tradition of protection. The broad range of beneficiaries of asylum reflects the historical tradition of the institution that offers protection on a variety of grounds, including, but not only, those that give rise to refugee status, in addition to protecting persons who flee persecution on account of their fight for freedom (including national liberation), for democracy, or for the rights of others.[83]

Constitutional courts have therefore pronounced on the scope of the right to asylum by reference to regional instruments. In Europe, the Sofia City Administrative Court in Bulgaria asked the CJEU to interpret the content of the right to asylum in the case of *Halaf*, already mentioned. Following the judgment of the CJEU, the Sofia Court ruled in the national proceedings that

> the right to asylum guaranteed under article 18 of the Charter [of Fundamental Rights of the EU] and the Treaty on the Functioning of the European Union (TFEU) includes the right of every third-country national that the Member State where he has applied for asylum fulfil *its obligation* of achieving the purpose in article 78(1) TFEU '*to offer appropriate status* to any third-country national in need of international protection'.[84]

Likewise, the right to seek asylum in the African system has nevertheless been subject to examination by domestic courts in the region, referring to the specific regional instruments on refugee protection. In a landmark decision of December 2018, the South African Constitutional Court referred to article 12(3) of the African Charter, noting its particular pertinence to South Africa,[85] and found that 'South Africa's obligation is to ensure that refugees are afforded an opportunity to apply' for asylum.[86] The court went on to explain that the right to seek asylum and access to a proper determination procedure are constitutional imperatives derived from the principle of *non-refoulement*.[87] Likewise, any delays in applying for asylum can never result in 'an absolute disqualification from initiating the asylum application process'.[88]

6. Conclusion

This chapter examined the relationship between refugee status and asylum, noting that they are separate but related institutions. After identifying the nature of asylum as a right of States in the exercise of their sovereignty, as well as a right of individuals to receive it, the chapter considered the emergence of the concept of 'international protection' as a substitute term for asylum both in law and policy. The chapter then explored the right to asylum in the international system for the protection of human rights at the UN level, noting the limited scope of the right to seek and to enjoy asylum in the UDHR. The chapter further examined judicial interpretation of the right to asylum in international treaties of regional scope, showing that case law is scarce. Although the case law of constitutional courts on the right of asylum may compensate for the lack of detailed developments at the regional level, further research on State practice, and its significance to delimit a right to asylum in international law, remains an under-researched area.

CHAPTER 49

NATIONAL CONSTITUTIONS AND THE RIGHT TO ASYLUM

STEPHEN MEILI

1. Introduction

Until recently, the constitutional right to asylum was a rather neglected backwater of international refugee law. Although the constitutions of 35 per cent of the world's countries, including some of the largest refugee-receiving nations, contain a right to asylum, those provisions have received scant attention from scholars, judges, or lawyers. This is due to a variety of factors, including the Refugee Convention's domination of the refugee law regime, the weakness of the judiciary in many of the countries whose constitutions contain a right to asylum, and the non-humanitarian motivations for inclusion of that right in many constitutions.

More recently, however, a combination of factors has breathed new life into the constitutional right to asylum in some countries. These factors include the limitations of the Refugee Convention, the rise in nationalism and anti-globalization, and the growing influence of refugee lawyers who are utilizing the constitutional right to asylum—together with other constitutionalized human rights—in domestic courts, particularly in Latin America. The constitutional right to asylum is surely not a panacea for the world's growing refugee problems, but it is an increasingly important part of the toolkit for creative lawyers trying to alleviate them.

This chapter analyses the constitutional right to asylum from a historical, doctrinal, and practical perspective. Section 2 discusses the evolution of that right, and how it has manifested itself in different countries and regions of the world over time. Section 3 discusses why the constitutional right to asylum has been neglected and ineffectual for most of the past several decades. Section 4 analyses recent strategic litigation in Latin

America that has successfully utilized the constitutional right to asylum and may provide a blueprint for the effective use of such provisions in other countries. The conclusion includes recommendations for lawyers or other advocates considering strategic litigation that utilizes the constitutional right to asylum.

2. The Evolution of a Constitutional Right to Asylum

In 1950, only 19 per cent of the world's constitutions contained a right to asylum.[1] In most of these cases, the right had been created in the immediate aftermath of the Second World War and was thus influenced by two geopolitical factors: in some cases, such as France and Italy, it was included as a sign of the gratitude that those countries felt towards other States that had accepted French and Italian refugees before and during the Second World War.[2] And in Soviet Bloc countries such as Poland, the right to asylum was conditioned on shared ideologies.[3] As Kowalczyk and Versteeg note, political and economic self-interest, as opposed to humanitarian concern, drove many States to include a right to asylum in their constitution.[4] These self-interested motivations included condemning foreign States, encouraging opposition groups in foreign States, attracting a younger workforce, and announcing good intentions with little or no interest in actually following through.[5]

By 2017, the percentage of countries with constitutions containing a right to asylum had risen to 35, with the greatest increase occurring during the 1990s.[6] By this time, the

[1] Lucas Kowalczyk and Mila Versteeg, 'The Political Economy of the Constitutional Right to Asylum' (2017) 102(5) Cornell Law Review 1219, 1260–1.

[2] See Hélène Lambert, Francesco Messineo, and Paul Tiedemann, 'Comparative Perspectives of Constitutional Asylum in France, Italy, and Germany: Requiescat in Pace?' (2008) 27(3) RSQ 16, 17, 18, 21–2.

[3] Kowalczyk and Versteeg (n 1) 1226, 1269. One example of such an ideologically framed constitutional right to asylum is contained in the 1952 version of the Polish Constitution: 'The Polish People's Republic grants asylum to citizens of foreign countries persecuted for defending the interests of the working people, for fighting for social progress, for activity in defence of peace, for fighting for national liberation or for scientific activity', The Constitution of the Republic of Poland (*Konstytucj Rzeczyposplitej Polskiej*) (2 April 1997) article 75. Another example is the right to asylum in the Constitution of the Islamic Republic of Iran (1989), which states, in article 155, that 'The Islamic Republic of Iran shall offer sanctuary to all those asking for political asylum, excepting those who are known, in accordance with the laws of Iran, to be traitors and criminals'. Kowalczyk and Versteeg also note the trend, since the Cold War era, away from limiting the right to asylum to persons whose ideologies were consistent with the host country. Kowalczyk and Versteeg (n 1) 1269–73.

[4] Kowalczyk and Versteeg (n 1) 1250–7. [5] ibid.

[6] Kowalczyk and Versteeg (n 1) 1260. In their survey of the right to asylum in various national constitutions, Foster and Klaaren identify four ways in which such a right is articulated: (1) a substantive right conferred upon the individual; (2) a right conditioned on subsequent domestic legislation; (3) a negative right (ie *not* to be deported); and (4) a right belonging to the State to be conferred at its discretion. Michelle Foster and Jonathan Klaaren, 'Asylum and Refugees' in Mark Tushnet, Thomas Fleiner, and Cheryl Saunders (eds), *Routledge Handbook on Constitutional Law* (Routledge 2012) 416–17.

nature of the constitutional right to asylum came to reflect the emphasis on human rights that had taken hold in many parts of the world in the intervening decades. As Kowalczyk and Versteeg observe, most of these constitutional provisions (as well as updated provisions that were initially included in constitutions after the Second World War) frame asylum as a human right, rather than limiting it to those persons who can demonstrate a well-founded fear of persecution on account of one or more of the five grounds enumerated in the Refugee Convention.[7] Thus, under most of the constitutions within which the right to asylum appears, it is theoretically available to those non-citizens whose human rights have been violated by their countries of origin. In this way, the constitutionalized right to asylum mirrors what has come to be known as the human rights approach to asylum law, which links asylum to the denial of human rights protections by one's home country or territory.[8] Indeed, this broad view of the notion of asylum (ie broader than the definition of a refugee under the Refugee Convention), is what Gil-Bazo envisions in asserting that asylum is a general principle of international law.[9]

3. The Potential and the Limitations of a Constitutional Right to Asylum

While international refugee law sets out the parameters for refugee status, it does not compel individual States to grant asylum to anyone. Such a grant, and the permanent immigration status it confers, is purely a matter of domestic law applied by sovereign States. In most cases, that domestic law is a statute that, at a minimum, incorporates the definition of a refugee under the Refugee Convention and the principle of *non-refoulement*.[10] In this way, domestic law transforms international refugee law into a pathway to permanent protection.

[7] See Refugee Convention; Kowalczyk and Versteeg also note the trend, since the Cold War era, away from limiting the right to asylum to persons whose ideologies were consistent with the host country. Kowalczyk and Versteeg (n 1) 1269–73.

[8] See James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014) 194. See also Deborah Anker, 'Refugee Law, Gender, and the Human Rights Paradigm' (2002) 15 Harvard Human Rights Journal 133, 143 (finding that the human rights approach assists both the refugee law and human rights law regimes). The human rights approach manifests itself most prominently through domestic court interpretation of undefined terms in the Refugee Convention, such as 'being persecuted'. To proponents of this approach, it is appropriate—and logical—to rely on human rights treaties because these treaties reflect a global consensus about the scope of persecutory harms. See Hathaway and Foster 194.

[9] María-Teresa Gil-Bazo, 'Asylum as a General Principle of International Law' (2015) 27 IJRL 3.

[10] *Non-refoulement* prohibits a country from returning a non-citizen to a territory where she is likely to face torture or cruel, inhuman, or degrading treatment or punishment. See Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007); James C Hathaway, *The Rights of Refugees under International Law* (CUP 2005).

For the most part, however, those domestic statutes do not create a right to either apply for or receive asylum; they merely set forth an administrative procedure through which someone fleeing persecution or other harm can apply for protection. And, of course, such statutes can be amended to make the process of applying for asylum more logistically difficult and the standards for granting asylum more restrictive.[11]

Constitutions, and the rights they afford, are more durable than statutes. While they are certainly not set in stone, their provisions are generally more impervious to regime changes and political whims than statutes. As Kowalczyk and Versteeg have stated, 'where a right to asylum is constitutionalized, [S]tates effectively restrict their ability to make their response to refugees dependent on prevailing political sentiments'.[12] And, as noted above, Gil-Bazo argues that the right to asylum enshrined in national constitutions is broader than refugee status under the Refugee Convention (and other international instruments) thus affording broader protection to those fleeing persecution and other forms of harm in their States of origin.[13]

Constitutionalized asylum law also often has the benefit of being linked to regional human rights instruments whose grounds for protection are more extensive than those of the Refugee Convention. Thus, for example, the constitutions of many Latin American States incorporate the Cartagena Declaration, which broadens the Refugee Convention's definition of a refugee to include:

> persons who have fled their country because their lives, safety, or freedom have been threatened by generalized violence, foreign aggression, internal conflicts, massive violation of human rights or other circumstances which have severely disturbed public order.[14]

Similarly, the national constitutions of many African States incorporate the OAU Convention to include:

> every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.[15]

[11] In the face of the current crisis facing asylum seekers at the US–Mexico border, and in the interior of the US, President Trump has indicated that the problem could be eradicated quickly if Democrats in Congress would simply change the nation's immigration laws. Tim Mak, 'Trump Delays Immigration Raids, Giving Democrats "Two Weeks" to Change Asylum Laws', *NPR* (22 June 2019) <https://www.npr.org/2019/06/22/735083190/trump-delays-immigration-raids-giving-democrats-two-weeks-to-reform-asylum-laws?t=1,562,163,148,237> accessed 4 December 2019.

[15] OAU Convention, art 1(2).

As a result of these now-constitutionalized refugee definitions, individuals fleeing armed conflict, or the ravages of climate change are arguably entitled to asylum in many countries in Africa and Latin America. As with many constitutionalized human rights provisions, of course, the reality is much more limited than the words on constitutional parchment would suggest. Thus, very few countries have granted asylum based on these expanded definitions of a refugee. Nevertheless, recent evidence suggests that Mexico has granted asylum to a small number of individuals (ie just over 100) according to the Cartagena Declaration's expanded refugee definition. Most of these individuals are from Venezuela.[16]

The durability and breadth of a right to asylum in a national constitution is particularly important in today's geopolitical climate of nationalism, xenophobia, and anti-globalization, which has led to significant limitations on the rights of asylum seekers. At a time when many States scorn international constraints on their behaviour and question their obligation to protect refugees, constitutionalized asylum law would seem to be particularly vulnerable.[17] Ignoring—or altering—the rights of asylum seekers embedded in a national constitution presents more of a challenge, particularly in a country with a strong, independent judiciary.[18]

In addition, the constitutional right to asylum has the potential to assume a more meaningful role because of the increasingly apparent limitations of the Refugee Convention, which has for decades been the main source of protection for the world's refugees. These failings include—but are certainly not limited to—desperately underfunded humanitarian assistance programmes, nearly universal disregard for the socio-economic rights of refugees protected under international law, and inadequate and inconsistent refugee determination processes in various countries.[19] As a result, the world's refugees lack most of the legal, social, and economic guarantees to which they are entitled under international law.

Despite this potential, the constitutional right to asylum suffers from significant limitations. For example, Kowalczyk and Versteeg observe that constitutions can be

[16] Felipe Sánchez Nájera and Luisa Feline Freier, 'Expanded Refugee Protection for Some: Understanding the Application Patterns of the Cartagena Refugee Definition to Asylum Seekers in Mexico' (Fourth Annual Conference of the Refugee Law Initiative, University of London School of Advance Studies, 3 June 2019).

[17] Refugees have traditionally been amongst the most politically marginalized and powerless groups in any society. See Alison Brysk, *The Future of Human Rights* (Polity 2018) 10–11.

[18] An independent judiciary is consistently cited as one of the factors associated with improved human rights behaviour by States. See eg Wayne Sandholtz, 'Treaties, Constitutions and Courts: The Critical Combination' in Alison Brysk (ed), *The Politics of the Globalization of Law* (Routledge 2013) 29–46.

[19] Alexander Betts and Paul Collier, *Refuge: Transforming a Broken Refugee System* (OUP 2017) 7–8. The authors note that contrary to popular belief, most refugees around the world live in urban areas rather than in camps, in the Middle East and sub-Saharan Africa rather than in Europe, and are often left unsupported by their host countries. Under the Refugee Convention, refugees are entitled to the right to health care, education, employment, and other socio-economic benefits, but these often go unfulfilled. See also James L Carlin, 'Significant Refugee Crises Since World War II and the Response of the International Community' (1982) Michigan Yearbook of International Legal Studies 3, 3–5.

amended and that judges can defer to executive will.[20] Lambert, Messineo, and Tiedemann argue that because countries such as France, Germany and Italy have chosen to adjudicate asylum claims almost exclusively according to the Refugee Convention, constitutional asylum in those countries has become virtually meaningless.[21] In a similar vein, Gil-Bazo notes that because many countries have blurred the distinction between refugee status and asylum, constitutional asylum has come to be viewed as obsolete.[22]

In addition, most States include an 'escape clause' in their constitutionalized right to asylum, indicating that such a right will be interpreted according to national law.[23] Given that such laws can be more restrictive than the protections afforded by the Refugee Convention, a constitutional right to asylum may be of little use in these contexts.[24] Moreover, in some situations constitutional asylum is based on the same (limited) criteria as in the Refugee Convention.[25]

A constitutional right to asylum in some national contexts also suffers from the same source of ineffectiveness as other constitutionalized human rights: it is mere window dressing rather than a meaningful attempt to improve human rights outcomes for marginalized groups. States have many motivations for taking on human rights obligations that they have little intention of fulfilling. Much scholarly research has focused on the effectiveness (and lack thereof) of constitutionalized human rights law in particular.[26] The results of this research—much of it large-N analyses of statistically

[20] Kowalczyk and Versteeg (n 1) 1249–50.

[21] Lambert, Messineo, and Tiedemann (n 2) 16–17.

[22] Gil-Bazo (n 9) 4.

[23] My thanks to my University of Minnesota colleague Chris Roberts for this term. For example, the Constitution of Portugal states, in relevant part: 'The status of political refugees shall be defined by law.' Constitution of the Portuguese Republic (1976) article 22. Similarly, the Constitution of Poland states, in relevant part, 'Foreigners shall have a right of asylum in the Republic of Poland in accordance with principles specified by statute'. *Konstytucj Rzeczyposplitej Polskiej* (n 3) art 56.

[24] On the other hand, in some States, including Mexico, any 'escape clause' that is inconsistent with Mexico's obligations under international human rights law would be nullified. This is because article 1 of the Mexican Constitution stipulates that any limitation on the human rights included in the Constitution (such as the right to asylum) must originate in the Constitution itself: 'In the United Mexican States, all individuals shall be entitled to the human rights granted by this Constitution and the international treaties signed by the Mexican State, as well as to the guarantees for the protection of these rights. Such human rights shall not be restricted or suspended, except for the cases and under the conditions established by this Constitution itself.' Political Constitution of the United Mexican States (2015) (Mexican Constitution) art 1.

[25] For example, Hungary's Constitution of 2011 (Magyarország Alaptörvénye) art 65 states:

> Hungary shall grant asylum to all non-Hungarian citizens as requested if they are being persecuted or have a well-founded fear of persecution in their native countries or in the countries of their usual residence due to their racial or national identities, affiliation to a particular social group, or to their religious or political persuasions, unless they receive protection from their countries of origin or any other country.

[26] For a general discussion of this literature, see Stephen Meili, 'The Effectiveness of an Emerging Pathway of Rights: The Constitutionalization of Human Rights Law' in Alison Brysk and Michael Stohl (eds), *Contesting Human Rights: Norms, Institutions and Practice* (Edward Elgar 2019).

significant relationships between treaty ratification and State behaviour according to various benchmarks—is mixed.[27] Nevertheless, there are no quantitative studies of the relationship between the constitutionalized right to asylum and improved protections for asylum seekers and refugees.[28] Thus, we have no idea whether a constitutional right to asylum in a particular country of refuge makes it any more or less likely that a given asylum seeker will be granted asylum. Similarly, we do not know whether a constitutionalized right to asylum makes a particular country's asylum adjudication system more or less favourably disposed towards asylum seekers.

As the following section makes clear, however, there are signs that a constitutional right to asylum—especially when invoked in combination with other constitutionalized human rights law—has begun to have a positive impact on the rights of refugees, at least in Latin America.

4. The Constitutional Right to Asylum in Latin America

The constitutional right to asylum has been most aggressively utilized by practitioners in Latin America. For one, it is the region with the thickest concentration of such a right: with the exception of Chile, Panama, and Uruguay, the national constitutions in all countries in South America contain a right to asylum. This nearly universal adoption of the constitutional right to asylum in the region was likely due to the many exiles who sought asylum and other forms of protection from authoritarian regimes in the latter stages of the twentieth century. Indeed, democratic regimes in the region, seeking to distance themselves from their authoritarian past and hold State actors accountable, have incorporated entire human rights treaties, as well as specific human rights protec-

[27] One such study found a statistically significant association between the constitutionalization of two organizational rights (the rights to form political parties and unions) and improved human rights behaviour by States, but no such association with four individual rights (the rights to freedom of expression, association, religion, and movement). See Adam Chilton and Mila Versteeg, 'Do Constitutional Rights Make A Difference?' (2014) 60 American Journal of Political Science 575. One treaty protection that has been consistently shown *not* to be associated with improved State behaviour is the prohibition against torture, Meili (n 26) 129, 132–3.

[28] Kowalczyk and Versteeg (n 1) 1284 acknowledge this explicitly ('Although we do not provide an answer to the question whether the right to asylum is effective, the apparently self-serving motivations for including asylum rights are not necessarily detrimental for asylum seekers nor do they necessarily undermine the right'). See Stephen Meili, 'Constitutionalized Human Rights Law in Mexico—Hope for Central American Refugees' (2019) 32 Harvard Human Rights Law Journal 103.

tions such as the right to asylum, into their constitutions.[29] Another factor likely underlying the constitutionalization of human rights law in Latin America is the realization that domestic court judges in the region more frequently rely on international human rights law when it is incorporated into domestic law and particularly when it is incorporated into a nation's constitution.[30]

Despite its prevalence on paper, the constitutional right to asylum had been virtually dormant throughout Latin America until very recently. Within the past few years, however, restrictive State responses to refugee migration in Ecuador and Mexico have led lawyers in each of those countries to utilize the constitutional right to asylum—in conjunction with other constitutionalized human rights law—as part of strategic litigation on behalf of refugees. This section of the chapter reviews some of the key elements of that litigation and what it suggests about the circumstances under which such a right may become more significant in other parts of the world.

a. Ecuador

Article 41 of Ecuador's 2008 Constitution recognizes the right to asylum as well as the principle of *non-refoulement*. Moreover, its 'escape clause' stipulates that asylum be recognized 'in accordance with the law' but importantly adds to this, '*and international human rights instruments*'.[31] The latter part of that clause indicates that the broadened grounds for asylum contained in the Cartagena Declaration are now part of the Constitution.

[29] Daniel M Brinks and Abby Blass, *The DNA of Constitutional Justice in Latin America* (CUP 2018) 12 ('Latin America is one of the areas with the most active constitutional experimentation in the world'). This process of constitutionalizing human rights law is a subpart of a larger trend known as Transformational Constitutionalism (*Ius Constitutionale Commune en América Latina*) whose purposes include the diffusion of human rights standards in post-authoritarian Latin America. See Manuel Eduardo Góngora-Mera, 'The Block of Constitutionality as the Doctrinal Pivot of a Ius Commune' in Armin Von Bogandy, Eduardo Ferrer Mac-Gregor, Mariela Morales Antoniazzi, Flávia Piovesan, and Ximena Soley (eds), *Transformative Constitutionalism in Latin America* (OUP 2017) 235–6. There are many critics of this trend, including Roberto Gargarella, who has observed that its results have been disappointing because the constitutional reformers focused more on the creation of new rights rather than on the organization of power within society, which has made those rights virtually meaningless. Roberto Gargarella, 'Latin American Constitutionalism, 1810–2010: The Problem of the "Engine Room" of the Constitution' in Pedro Fortes, Larissa Boratti, Andrés Palacois, and Tom Gerald Daly (eds), *Law and Policy in Latin America: Transforming Courts, Institutions and Rights* (Palgrave Macmillan 2017) 213–16. In his view, such preferencing of rights over power has kept what he calls the 'engine room' of constitutions closed off, leaving the inequitable balance of power in the region unchanged. For a more in-depth analysis of the literature on the constitutionalization of human rights law in Latin America, see Meili (n 28).

[30] See Niels Goet and Ezequiel Gonzalez-Ocanto, 'International Law and Domestic Judicial Power: Strategic Citation in the Jurisprudence of Colombia's Constitutional Court' (Latin American Studies Association Annual Meeting, Barcelona, May 2018) 35–6. This preference for domesticized human rights law is not limited to Latin America. See eg Stephen Meili, 'Do Human Rights Treaties Help Asylum Seekers? Lessons from the United Kingdom' (2015) 48 Vanderbilt Journal of Transnational Law 123.

[31] Constitution of the Republic of Ecuador (2008) art 41, emphasis added.

This, and other constitutionalized human rights provisions, were utilized in recent litigation challenging a Presidential decree that severely limited the rights of asylum seekers in Ecuador, most of whom have been fleeing the armed conflict in neighbouring Colombia for the past few decades. That decree (No. 1182), issued in 2012 without legislative debate, reduced the time limit for applying for asylum in Ecuador from 90 days after arrival in the country to 15 days and reduced the time to appeal a rejected asylum claim from 15 days to three days.[32] It also narrowed the definition of 'refugee' under Ecuadoran law to exclude those fleeing generalized violence, such as the armed conflict in Colombia, thus effectively rescinding Ecuador's accession to the Cartagena Declaration.[33]

Pro bono lawyers at an NGO and a law school clinic challenged Decree 1182 in Ecuador's Constitutional Court. In a decision issued in August 2014, the court struck down most of the decree, reinstating the pre-existing deadlines as well as the broader scope of refugee status as stipulated under the Cartagena Declaration. The court's decision was based, in part, on its finding that returning refugees to a situation of armed conflict was an unconstitutional violation of the principle of *non-refoulement*, given that the Cartagena Declaration is incorporated into the Ecuadoran Constitution. The decision was also based on the principles of equality, due process, and non-discrimination, all of which are enshrined in the Ecuadoran Constitution. Thus, for example, the court reasoned that the shortened time limits created 'an unjustified difference' between deadlines relevant to asylum applications and those applicable to other administrative procedures under Ecuadoran law.[34]

The strategic litigation over Decree 1182, like the cases from Mexico reviewed below, demonstrates that the constitutionalized right to asylum has the most impact when it is combined with other constitutionalized human rights law. In this case, lawyers achieved a positive rights outcome by invoking specific constitutionalized human rights norms, such as due process, non-discrimination and *non-refoulement*, and by referencing specific human rights instruments, such as the ICCPR, the American Convention on Human Rights (ACHR)[35] and the Cartagena Declaration, which are incorporated into the Ecuadoran Constitution. Without the constitutional provisions that allowed for these human rights-based arguments, Decree 1182 would most likely still be in effect. But the constitutional right to asylum would not have been able to achieve that victory on its own.

[32] Stephen Meili, 'The Human Rights of Non-Citizens: Constitutionalized Treaty Law in Ecuador' (2017) 31 Georgetown Immigration Law Journal 347.

[33] ibid 371; Decree 1182 of 30 May 2012 (Ecuador) had its desired effect: both the number of asylum applications and the asylum grant rate dropped precipitously. In 2009, slightly over 34,300 asylum applications were filed, and the grant rate was 71.8 per cent. Between January and September 2013 (the year after Decree 1182 was issued) only 8,300 applications were filed, and the grant rate fell to 6.2 per cent.

[35] American Convention on Human Rights (adopted 22 November 1969, entered into force 18 July 1978) 1144 UNTS 123 (ACHR).

b. Mexico

As a prefatory note, strategic litigation is more challenging in Mexico than Ecuador for at least two reasons. First, Mexico does not have a Constitutional Court that, like the one in Ecuador, allows for original jurisdiction over legal challenges to State action on constitutional grounds. Secondly, Mexico's rules on judicial precedent are complex and restrictive. The only way a lower court case can become precedent is if (1) five appellate tribunals (the level between trial courts and the Supreme Court) have reached the same result in similar cases; or (2) a split in decisions between at least two appellate tribunals gives the Supreme Court the option to decide the case.[36] In addition, Mexican law does not allow class actions in the area of refugee law, which means that an individual refugee would need to endure the long delays and expense of protracted litigation in order for her case to establish precedent.

i. *Challenge to the 30-day Deadline for Filing Asylum Claims*

Under Mexico's refugee law, an asylum seeker must file her application for asylum within 30 days of entering the country.[37] This is an unreasonably brief application period. In addition to many of the typical hurdles obstructing asylum seekers in any country from lodging a claim soon after arriving in the country of refuge,[38] those seeking asylum in Mexico face the additional obstacle of the paucity of locations where they can actually file a claim. Comisión Mexicana de Ayuda a Refugiados (COMAR), the agency responsible for receiving and processing applications, has only four offices in the entire country, none of which are located near the southern border with Guatemala.[39]

Lawyers at a Mexico City-based NGO and university law clinic filed an *amparo* challenging the 30-day deadline.[40] In a decision issued in January 2019, an administrative court ruled that the deadline violates article 11 of the Mexican Constitution, which guarantees the right to asylum. In reaching this conclusion, the court held that

[36] See Ley de Amparo (Protection Act) (1967) (Mexico); Meili (n 26).

[37] See Ley Sobre Refugiados y Protección Complementaria Mexico, Diario Oficial de la Federación, 27-01-2011, últimas reformas DOF 30-10-2014, article 18 (Law on Refugee and Complementary Protections) <http://www.ordenjuridico.gob.mx/Documentos/Federal/pdf/wo57819.pdf> accessed 5 December 2019. The Refugee Convention contains no time limit within which an asylum seeker must file an application for asylum.

[38] These factors include lack of access to counsel, confusion about the asylum process in a new country, and psychological factors such as PTSD, which make it difficult for asylum seekers to recount the traumatic experiences that led them to flee their country of origin.

[39] Ana Campoy, 'The Key Reason Why Central Americans Don't Want Asylum in Mexico', *Quartz* (28 November 2018) <https://qz.com/1476490/why-central-americans-arent-applying-for-asylum-in-mexico/> accessed 4 December 2019.

[40] An *amparo* is a legal challenge to governmental action that allegedly has violated one or more constitutional rights of the aggrieved party. It is similar to a common law request for an injunction. See Rodrigo Camarena González, 'From *Jurisprudence Constante* to *Stare Decisis*: The Migration of the Doctrine of Precedent to Civil Law Constitutionalism' (2016) 7 Transnational Legal Theory 257.

the 30-day deadline unjustifiably and unreasonably limits this right, and has no support or constitutional foundation.[41] While the court noted that article 11 recognizes that domestic law shall regulate the conditions upon which asylum may be recognized in individual cases (ie Mexico's version of an 'escape clause'), such recognition must be in accordance with international law.[42] Since international law holds that an individual becomes a refugee at the time that she meets the definition of a refugee, rather than at the time that any particular country recognizes her as a refugee, any deadline for filing an application for asylum (and by extension refugee status) contravenes international law.[43]

The court also held that the 30-day deadline violates the principle of *non-refoulement*, which is embodied in article 11 of the Constitution. Here, the court reasoned that by denying an asylum application merely on the basis of failing to meet the application deadline, the policy risks returning a refugee to a situation where her life, integrity, and/or freedom will be at risk.[44]

In October 2019, the Supreme Court of Mexico reversed the lower court decision and declared the 30-day deadline for applying for asylum to be constitutional.[45] Despite this decision, the case is nevertheless hopeful for a number of reasons. First, it demonstrates that the Mexican Supreme Court is willing to engage with refugee and asylum matters, as there is very little Supreme Court jurisprudence in this area. Secondly, it suggests that, in some cases, lower court judges are willing to adopt an expansive view of the right to asylum, and more importantly, refugee status. The judge in this case held that the term 'refugee' attaches to a person whenever that person meets the relevant definition, rather than when a State officially determines that the individual has done so. Thirdly, the lower court relied on international human rights treaties (incorporated by article 1 of the Constitution) and the jurisprudence of the Inter-American Court of Human Rights. As this, and the other decisions reviewed in this chapter demonstrate, such reliance by Mexican domestic courts has become

[41] See Juicio de Amparo Indirecto 115/2018 (15 January 2019) (Jonathan Bass Herrera, Juez Segundo de Distrito del Centro Auxiliar de la Primera Región en Materia Administrativo) 39–43 (Decision 115/2018).

[42] ibid 39–44. [43] ibid 39–41.

[44] ibid 39–42. In reaching this conclusion, the court relied on the decision of the Inter-American Court of Human Rights in *Pacheo Tineo v Bolivia*, Inter-American Court of Human Rights Series C No 272 (25 November 2013) 42, where the court held that an erroneous or unfavourable decision on an asylum case could result in the risk of return of a person to a place where their life, safety and/or freedom are in danger. In addition, the court did not rule on several claims made by the applicant. These included the allegation that the 30-day deadline violates articles 14, 16, and 17 of the Constitution, which guarantee access to justice and due process. (See Decision 115/2018 (n 41) 39–44). In addition, the applicant had alleged that the 30-day deadline violates article 6 of the Constitution, which governs the right to access information (the applicant in this case was not informed of the process for filing an asylum application, as well as the 30-day deadline).

[45] See Amparo en Revisión, 353/2019 16 Oct 2019 (Ministro José Fernando Franco González Salas). In reaching this conclusion, the Supreme Court determined, amongst other things, that the deadline allowed for the immediate identification of the status of foreigners within Mexican territory, and protected refugees by minimizing their time in irregular status, which could be detrimental to their exercise of fundamental rights.

increasingly prevalent in recent years. In this case, it permitted the court to base its decision, in part, on *non-refoulement*, a bedrock principle of the international law of refugees.[46]

ii. *Deportation of Guatemalan Asylum Seeker*

In August 2017, Instituto Nacional de Migración (INM), the agency charged with enforcing Mexico's refugee law, arrested and detained a Guatemalan man who was fleeing drug violence in his home country. He was represented, without charge, by a law firm in Mexico City and applied for asylum. He did not remain in detention long: when he became increasingly worried about retribution from other detainees who knew he had identified drug dealers in Guatemala, he sought help from the officials running the detention centre. Rather than provide him increased protection, they suggested he abandon his asylum claim and return to Guatemala. He agreed and was deported to Guatemala, in October 2017, without notice to his attorneys. His lawyers do not know where he is, and the government refused their requests to view his file.

In March 2018, his lawyers filed an *amparo* claiming that their client's deportation constituted a forced disappearance by the Mexican government.[47] The *amparo* alleged several violations of the Mexican Constitution and the ACHR, including provisions related to due process and the right to seek asylum,[48] highlighting again the effectiveness of linking the right to asylum with other constitutionalized human rights provisions. His lawyers asserted that the lack of due process (including the failure to notify their client of the status of his case, to notify his lawyers that he was about to be deported, and the refusal to allow his lawyers to view his file) violated his right to asylum.[49] This claim illustrates that, in practical terms, the constitutional right to asylum is meaningless absent due process protections (such as the right to a hearing, access to counsel, etc) that provide it with real teeth.[50]

[46] Although, as suggested above, this decision has no precedential impact in and of itself, the government appealed it, perhaps indicating its concern that a series of similar results would afford it such impact.

[47] *Juicio de Amparo* 1452/2017 (30 April 2018) (Juan Pablo Gómez Fierro, Juez Cuarto de Distrito en Materia Administrativo) (Decision 1452/2017).

[48] The lawyers argued that the government had violated the following articles of the Mexican Constitution: article 1 (which incorporates all international treaties to which Mexico is a party); article 11 (right to seek and receive asylum and refugee status); article 14 (right to judicial process); articles 16 and 17 (right to due process and access to justice); and article 5 (the right to practise one's chosen profession). They also argued that the government had violated the following articles of the ACHR (n 35): article 8 (due process) and article 25 (judicial protection). See ibid 7.

[49] The linkage between due process and the right to asylum is reflected in the comment a Mexican lawyer made to the author during an interview about strategic litigation on behalf of refugees and asylum seekers in Mexico: 'It's not about refugee rights; it's about due process, all the time' Meili (n 26).

[50] Scholars have described the symbiotic relationship between procedural and substantive rights more generally, asserting that procedural rights are mere components of substantive rights lacking independent status. See Larry Alexander, 'Are Procedural Rights Derivative of Substantive Rights?' (1998) 17 Law and Philosophy 19.

In an April 2018 decision, an administrative judge granted nearly all of the claims in the *amparo*.[51] He held that the government violated the claimant's right to due process under both the Mexican Constitution and the ACHR in a number of ways.[52] Specifically, the court ruled that the government failed to advise the claimant that it was processing his asylum claim and that a decision on that claim was required within 45 days,[53] that it had failed to adequately protect the claimant from potential harm during his detention, and that it had failed to notify the claimant's attorneys of his release from detention and subsequent deportation.[54] Perhaps most significantly for purposes of this chapter, the judge ruled that these due process violations resulted in a violation of the claimant's right to seek asylum, which is guaranteed under both the Mexican Constitution and international law.[55]

This decision is not binding precedent at this point. Nevertheless, it is significant because it demonstrates that the right to asylum under the Mexican Constitution, when utilized in conjunction with due process protections, is capable of offering legal protection to asylum seekers.

iii. *COMAR's Delayed Processing of Asylum Claims*

As noted above, COMAR must make an initial decision on asylum claims within 45 days of its filing.[56] After an earthquake hit Mexico City in October 2017, COMAR declared that it was suspending its normal processing deadlines.[57] Its reasoning was that the earthquake had damaged the offices where its officers interview asylum applicants in the course of determining the validity of their claims.[58] Indeed, partly as a result of the earthquake, but also because of the significant increase in asylum applications filed by Venezuelan and Central American refugees in recent years, COMAR was failing to meet the 45-day deadline in most cases.[59]

[51] Decision 1452/2017 (n 47). [52] ibid 38–9.

[53] Under Mexican law, COMAR must render a decision on an asylum claim within 45 days of its filing. Law on Refugee and Complementary Protections (n 37) art 36.

[58] ibid.

[59] ibid. See also Lily Folkerts, 'Behind the Caravan: Seeking Asylum Isn't Easy, Especially in Mexico' (Latin American Working Group, 29 May 2018) <https://www.lawg.org/mexico-and-its-asylum-and-immigration-policies-have-recently-received-much-attention-thanks-to-president-trumps-fixation-on-the-migrant-caravan-an-annual-demonstration-in-which-central-americans-garne/> accessed 4 December 2019.

Lawyers from a large Mexico City law firm, representing a Salvadoran mother and her three children on a pro bono basis, filed an *amparo* challenging COMAR's suspension of the required deadline. The lawyers claimed that COMAR's actions violated several provisions of the Mexican Constitution, including the right to asylum, the right to justice, and the right to due process.[60] They also argued that it violated several provisions of the AHCR.

In a decision issued in April 2018, an administrative judge ruled in favour of the claimants.[61] He held that COMAR's suspension of the statutorily mandated deadline denied the claimants their right to effective justice under the Mexican Constitution and the ACHR.[62] Moreover, the judge held that the right to international protection under both Mexican and international law is meaningless absent an effective procedure for the timely processing of asylum applications.[63] He also ruled that the 45-day deadline was necessary in order for the Mexican government (in this case acting through COMAR) to comply with the right to asylum under the Mexican Constitution.[64] In this way, the effective exercise of the constitutional right to asylum was predicated on a purely administrative requirement (a deadline for reaching a decision on an asylum claim). Once again, this case demonstrates the interplay between the substantive right to asylum and the procedural rights through which it is realized.

The judge in this case, like the judge in the case involving the detained man from Guatemala, ruled that the relevant due process protections were particularly crucial because asylum seekers are in a position of vulnerability.[65] Here, the judge was concerned about the heightened vulnerability of the claimants who were children.[66]

This decision, even though it lacks precedential authority at this point, is significant for at least two reasons relevant to this chapter. First, it demonstrates that the constitutional right to asylum can make a practical difference in the lives of asylum seekers, as it increases the likelihood that future asylum seekers will receive initial decisions more quickly. The decision does not, of course, guarantee favourable decisions on asylum claims and does not address the factual and legal standards by which COMAR should evaluate such claims. A more efficient decision-making process does not guarantee an increase in the asylum grant rate.

[60] Article 17 of the Constitution of Mexico states in relevant part: 'The Mexican Congress shall enact laws to regulate collective actions. Such laws shall establish the cases in which each law applies.' Article 14 of the Constitution reads, in relevant part: 'No one can be deprived of his freedom, properties or rights without a trial before previously established courts, complying with the essential formalities of the proceedings and according to those laws issued beforehand.'

[61] *Juicio de Amparo* 1700/2017 (13 March 2018) (Rodrigo de la Peza López Figueroa, Juez Noveno de Distrito en Materia Administrativa en el Distrito Federal) (Decision 1700/2017).

[62] The ACHR describes an effective remedy or recourse as one that protects against violations of one's fundamental rights, including violations committed by those acting under the colour of law. Loretta Ortiz Ahlf, 'Es el Amparo un Recurso Efectivo para la Proteccio'n de los Derechos Humanos?' in Eduardo Ferrer Mac-Gregor and Ruben Sanchez Gil (eds), *El Juicio de Amparo a 160 Anos de la Primera Sentencia*, (Universidad Nacional Autonoma de Mexico, Instituto de Investigaciones Juridicas 2011) 192.

[63] Decision 1700/2017 (n 61) 22.

[64] ibid.

[65] ibid 23. See also Decision 1452/2017 (n 47) 41.

[66] Decision 1700/2017 (n 63) 23.

Secondly, the decision is another example of how at least some judges in Mexico are willing to link due process rights with the constitutional right to asylum. The judge in this case ruled that the constitutional right to asylum requires the government to abide by certain minimum standards of due process, including the timely processing of asylum claims, without which such a right would be rendered meaningless. In so doing, the judge held State actors accountable for a violation of the constitutional right to asylum. And while that right—as well as the due process rights that support it—have been enshrined in international instruments such as the ACHR for some time, it is the Mexican Constitution (through strategic litigation initiated by Mexican lawyers) that has suddenly brought it to life. As such, the constitutional right to asylum—at least in Mexico—is no longer mere words on parchment.

5. Conclusion

For most of its history, the constitutional right to asylum has exemplified the contention of many observers that constitutionalized human rights serve as window dressing, designed only to improve a State's image without improving human rights outcomes, and sometimes even worsening them. Recent developments in Latin America, however, suggest that under the right set of circumstances, a constitutional right to asylum can actually foster positive outcomes. In the context of strategic litigation, these circumstances include a reasonably independent judiciary willing to strike down policies and laws issued by the other branches of government and an active civil society (including lawyers) who creatively navigate the legal and political landscape in order to achieve positive results for their clients.

The cases analysed in this chapter illustrate three methods of such creative lawyering. The first is to combine the right to asylum with other constitutionalized human rights provisions. For while the right to asylum has had some impact in and of itself, it has been even more meaningful when combined with other constitutionalized human rights provisions, most of which have nothing to do, *per se*, with refugees or asylum seekers (such as due process or prohibitions against discrimination). Thus, for example, while the administrative court ruled that Mexico's 30-day deadline for applying for asylum violates the right to asylum under the Constitution, it only did so, in part, because that article must be interpreted according to international law, which is incorporated into the Mexican Constitution under its article 1. For this reason, neither practitioners nor scholars should view (or utilize) the constitutional right to asylum in a vacuum; rather, they should view it as part of a package of rights that can complement one another for the benefit of refugees and asylum seekers.

A second means of effective utilization of the constitutional right to asylum is careful selection of the cases in which to invoke it. Two of the three cases analysed in this chapter (COMAR's suspension of the 45-day deadline for an initial decision and the deportation of the Guatemalan asylum seeker without notice to his counsel) resulted in courts ordering the government to return to the *status quo* (ie following statutory deadlines and other procedures for handling asylum applications). These decisions might be thought of as 'low-hanging fruit'; that is, they do not challenge the *status quo* or force the State to do anything the legislature has not already dictated or that those agencies have already agreed to. Such relatively 'easy' cases are few and far between, however. The more challenging cases, such as the challenge to the 30-day deadline in Mexico, present a more severe test of the strength of the constitutionalized right to asylum and other human rights. These kinds of cases challenge the core principles and practices of State refugee and asylum policy. If successful, they will force the government to take action that it would prefer to avoid, be it for ideological, political, or financial reasons.

A third effective strategic litigation strategy in this regard is the selection of sympathetic claimants. Thus, for example, the *amparo* challenging COMAR's delayed processing of asylum claims was brought on behalf of a mother and three children who had fled violence, sexual assault, and other forms of persecution in their home country.[67] Including children as claimants in strategic litigation increases the likelihood of success, possibly because of an intangible yet very real appeal to emotion, but also because children enjoy special protection in international human rights law. Moreover, empirical studies have demonstrated that, under certain circumstances, women have a better chance of obtaining asylum or complementary protection than men.[68] Given that children are often the most vulnerable victims of restrictive asylum and refugee policies, it is likely that they will remain at the forefront of strategic litigation in this area.

In sum, despite its long period of dormancy and the many structural and political limitations that impede its usefulness, the constitutional right to asylum may be poised for a re-birth. Indeed, at a time when some scholars question whether refugee law has outlived its usefulness, constitutional asylum may help to revive it.[69]

[67] See Meili (n 26). While it did not involve the constitutional right to asylum, another recent example of effective strategic litigation on behalf of children was the decision by a Mexican judge ordering that children travelling in a caravan from Central America to the United States be granted *prima facie* refugee status. See Juicio de Amparo Indirecto 86/2018 (9 November 2018).

CHAPTER 50

NON-REFOULEMENT

PENELOPE MATHEW*

1. Introduction

This chapter concerns the most fundamental of all obligations owed to refugees—that of *non-refoulement*. The *raison d'être* of the obligation—protection—continues to provoke debate about the validity of the lines drawn between refugees, other beneficiaries of the obligation, and other migrants, and the way the purported provider of surrogate protection[1]—the State—is implicated in the production of forced migration. That background or deep structure of the State system, critiqued in other chapters in this volume,[2] assists in explaining the phenomena explored in this chapter: the interaction between shrinking and expansive approaches to *non-refoulement*.

The chapter first outlines the sources of the obligation, noting the obligation's place in the Refugee Convention and other treaties as well as its status as customary international law, and the corresponding beneficiaries of the obligation (refugees, asylum seekers, and other non-nationals at risk of irreparable harm). The scope of the obligation is examined next, with emphasis on States' attempts to divest their responsibilities through legal fictions ('excision' of State territory or creation of international zones) and extraterritorial immigration enforcement.[3] Application of *non-refoulement* to embassies abroad is also discussed. The chapter closes with a discussion of the concept of constructive or disguised *refoulement*—that is, when a refugee or an asylum seeker spontaneously leaves the country of asylum as a result of his or her treatment in that country.

* The law in this chapter is valid as at the date of 1 January 2020. The author has referred to a few subsequent developments where possible. The author wishes to acknowledge Madison Hughes for her excellent assistance with footnoting.

[2] In particular Chapter 2 in this volume.

[3] Discussed further in Chapter 27 in this volume.

2. Sources of the Obligation of *Non-refoulement*: Treaty Law

The cardinal obligation owed to refugees is the obligation of *non-refoulement* (literally meaning 'not to force back').[4] The Refugee Convention enshrines this obligation in article 33(1). Reservations may not be entered with respect to this provision.[5]

The obligation precludes 'chain' or indirect *refoulement*. A State may not send a refugee to another State which then returns the refugee to a place of persecution. This follows from the prohibition on *refoulement* 'in any manner whatsoever'.[6] However, the process of migration to a place of safety is not dealt with by the Convention, and the Convention does not expressly guarantee a right of entry to any particular State. As a consequence, the obligation of *non-refoulement* may be thwarted by the domestic legal framework governing migration (for example, requirements concerning visas) or more deliberately by various *non-entrée* measures.[7]

Since the adoption of the Refugee Convention, the obligation of *non-refoulement* has been included in regional instruments concerning refugees, including the OAU (now AU) Convention, the American Convention on Human Rights[8] and the Cartagena Declaration, as well as many human rights treaties. For example, article 3 of CAT, and article 16 of the International Convention for the Protection of All Persons from Enforced Disappearances[9] prohibit *refoulement*.

In other instruments, *non-refoulement* is an implicit obligation. The Human Rights Committee has found it attaches to the right to life and the prohibition on torture and related forms of ill-treatment,[10] while the European Court of Human Rights has also found it attaches to the prohibition on torture and related forms of ill-treatment[11] as well as flagrant violations of other rights contained in the European Convention for

[4] Hathaway notes the variations on the English translation of *non-refoulement*, including a commitment 'not to turn back': James C Hathaway, *The Rights of Refugees Under International Law* (CUP 2005) 316, citing Ad Hoc Committee on Statelessness and Related Problems, First Session, Summary Record of the Twentieth Meeting Held at Lake Success, New York (1 February 1950), UN doc E/AC.32/SR.20, 12 (statement by Mr Henkin, United States).

[11] See *Soering v UK* (1989) 11 EHRR 439, para 88; *JK v Sweden* (2017) 64 EHRR 15, para 79. For discussion, see Erna Kristín Blöndal and Oddný Mjöll Arnardóttir, 'Non-refoulement in Strasbourg: Making Sense of the Assessment of Individual Circumstances' (2018) 5 Oslo Law Review 147.

the Protection of Human Rights and Fundamental Freedoms (European Convention on Human Rights).[12] The Inter-American Court of Human Rights has similarly found that 'a flagrant violation of the basic guarantees of due process may result in the violation of the principle of *non-refoulement*'.[13] With respect to children, the Committee on the Rights of the Child has found that *non-refoulement* applies where there is a 'real risk of irreparable harm to the child', including where there is a threat to the survival and development of the child (articles 6 and 37 CRC),[14] while the Committee on the Elimination of All Forms of Racial Discrimination has referred to an implicit *non-refoulement* obligation attaching to article 5(b) of CERD.[15] Similarly, the Committee on the Elimination of Discrimination against Women has stated that a woman is not to be expelled to another State where 'her life, physical integrity, liberty and security of person would be threatened, or where she would risk suffering serious forms of discrimination, including serious forms of gender-based persecution or gender-based violence'.[16]

The incremental expansion of the rights to which *non-refoulement* attaches through the adoption of explicit treaty standards and judicial findings of implicit *non-refoulement* obligations raises a question as to whether *non-refoulement* attaches to all rights and what is the relevant threshold for its violation. States' acceptance of explicit *non-refoulement* norms for a relatively small number of rights suggests they recognize, rightly or wrongly, a hierarchy of rights. With respect to implicit *non-refoulement* obligations, courts and human rights treaty bodies appear to have followed suit.

Within the European human rights system, for example, rights identified as attracting a *non-refoulement* obligation include articles 4 (the prohibition on slavery and forced labour), 5 (liberty and security), 6 (fair trial), 7 (the prohibition on retrospective criminalization and punishment), 8 (privacy and family life) and 9 (freedom of thought, conscience, and religion). One may posit that *non-refoulement* follows from the *jus cogens* status and non-derogability of particular rights (the prohibitions on torture and

[12] Convention for the Protection of Human Rights and Fundamental Freedoms (adopted 4 November 1950, entered into force 3 September 1953) 213 UNTS 222. For a critical perspective, see Cathryn Costello, 'The Search for the Outer Edges of *Non-refoulement* in Europe: Exceptionality and Flagrant Breaches' in Bruce Burson and David James Cantor (eds), *Human Rights and the Refugee Definition: Comparative Legal Practice and Theory* (Brill 2016).

slavery, for example). However, the list accepted so far by the European Court of Human Rights goes beyond the usual candidates for *jus cogens*, so that basis for a hierarchy of norms and consequences is not applicable. The explicit basis for the jurisprudence of the European Court of Human Rights is the fundamental value enshrined in article 3 (and article 2, commonly treated together with article 3) and the idea that torture is an irreparable harm, while 'flagrant breaches' of other rights are required for *non-refoulement* to apply. This suggests that something that nullifies the right in question completely is irreparable. The problematic nature of this test has been noted by commentators and practitioners alike.[17]

In addition to expansion of the *non-refoulement* obligation through treaty adoption and interpretation by the treaty bodies, a process of judicial dialogue[18] has extended the scope of the obligation. For example, with respect to health and the obligation of *non-refoulement*, the Inter-American Court of Human Rights has held that because of the connection between life, personality and health care, return that results in harm to or serious deterioration in the person's health, or where it could lead to the person's death, may violate the obligation of *non-refoulement*.[19] In order to determine whether the American Convention on Human Rights or the American Declaration of the Rights and Duties of Man[20] have been violated, 'the status of the health or the type of ailment that the person suffers would have to be taken into account, as well as the health care available in the country of origin and the physical and financial accessibility to this, among other aspects'.[21] The Inter-American Court drew on jurisprudence from the European Court of Human Rights in this respect.[22]

The European Court has since refined its own jurisprudence on this topic, finding that article 3 of the European Convention on Human Rights is triggered in

> situations involving the removal of a seriously ill person in which substantial grounds have been shown for believing that he or she, although not at imminent risk of dying, would face a real risk, on account of the absence of appropriate treatment in the receiving country or the lack of access to such treatment, of

[17] For discussion, see Costello (n 12) 205–7.

[22] ibid para 229, n 445. The Inter-American Court cited the European Court's decision of *D v UK* (1997) 24 EHRR 423.

> being exposed to a serious, rapid and irreversible decline in his or her state of health resulting in intense suffering or to a significant reduction in life expectancy.[23]

Interestingly, the judicial dialogue in this case was more of a monologue as the court wrestled with its own previous jurisprudence and that of the Court of Justice of the European Union—the Inter-American Court's decision is not mentioned.

3. Beneficiaries of the Obligation

The extension of *non-refoulement* to new contexts means that it offers protection to persons who do not meet the definition of a refugee—whether the definition in article 1A(2) of the Refugee Convention as modified by the 1967 Protocol, or the broader definitions contained in the OAU Convention and the Cartagena Declaration. In the case of Latin America, for example, the Inter-American Court has ruled that article 22(8) of the American Convention on Human Rights extends the obligation of *non-refoulement* to any non-national whose life, integrity or freedom is endangered.[24] As stated by that court, 'the content of the principle of *non-refoulement* has a particular sphere of application *rationae personae and materiae*' depending on the branch of international law concerned—refugee law, human rights law, the prohibition of torture or article 22(8) of the American Convention on Human Rights.[25]

This insight is important with respect to 'dangerous refugees' denied the protection of *non-refoulement* under article 33(2) of the Refugee Convention and persons who are excluded from refugee status under article 1F of the Refugee Convention. The Inter-American Court has stated that complementary protection (non-return and protection of basic rights) is appropriate in these circumstances.[26] Implicitly acknowledging the balancing act between the rights of the individual and the rights of the community, the court has said:

> [t]his complementary protection should recognize the basic rights of the persons protected. The State may limit the exercise of certain rights when granting this protection, provided that this is based on sound and objective reasons and does not violate the principle of non-discrimination.[27]

States will need to interpret the court's guidance, but the court has clearly indicated that leaving people in a rightless limbo is not appropriate.

[23] See *Paposhvili v Belgium*, App No 41738/10 (ECtHR, Grand Chamber, 14 December 2016) para 183.

[25] *Rights and Guarantees of Children in the Context of Migration* (n 13) para 234.
[26] ibid paras 237–40. [27] ibid para 240.

4. *Non-refoulement* in Customary International Law

Most commentators also agree that the prohibition on *refoulement* of refugees is customary international law. There are many indications of *opinio juris* on the part of States confirming this is so. For example, in the New York Declaration for Refugees and Migrants, all members of the United Nations (over 40 of which are not party to the Refugee Convention or its 1967 Protocol) stated that:

> We reaffirm respect for the institution of asylum and the right to seek asylum. We reaffirm also respect for and adherence to the fundamental principle of non-refoulement in accordance with international refugee law.[28]

There is also judicial authority for the proposition. In particular, the Inter-American Court of Human Rights has consistently held that the obligation of *non-refoulement*, as found in the Refugee Convention and Protocol, is customary international law.[29]

It is also generally accepted that the prohibition on *refoulement* to a place of torture or related ill-treatment is customary international law and *jus cogens*.[30] There is, however, debate concerning *non-refoulement* of refugees as *jus cogens*.[31] Costello and Foster examine the potential consequences of the *jus cogens* character of *non-refoulement*,

[28] New York Declaration for Refugees and Migrants, para 67.

[29] *The Institution of Asylum and its Recognition as a Human Right in the Inter-American System of Protection (Interpretation and Scope of Articles 4, 22.7 and 22.8 in relation to Article 1(1) of the American Convention on Human Rights)*, Advisory Opinion OC-25/18, Inter-American Court of Human Rights Series A No 24 (30 May 2018) (only available in Spanish, unofficial English translation available at Inter-American Court of Human Rights, 'Advisory Opinion OC-25/18 of 30 May 2018 Requested by the Republic of Ecuador' (*Refworld*, 30 May 2018) <www.refworld.org/cases,IACRTHR,5c87ec454.html> accessed 30 June 2019) para 179; *Rights and Guarantees of Children in the Context of Migration* (n 13) para 211; *Pacheco Tineo* (n 24) para 151.

[30] For discussion, see Nigel S Rodley and Matt Pollard, *The Treatment of Prisoners under International Law* (3rd edn, OUP 2009). They note several judgments of the ICTY, along with decisions of the European Court of Human Rights and the Inter-American Court of Human Rights holding that torture and related forms of ill-treatment are both custom and *jus cogens*: 76. For a recent affirmation by the Inter-American Court of Human Rights, see *Institution of Asylum* (n 29) para 181.

[31] For discussion see Cathryn Costello and Michelle Foster, 'Non-refoulement as Custom and *Jus Cogens?* Putting the Prohibition to the Test' (2015) 46 Netherlands Yearbook of International Law 273, 306–10. They conclude that the *non-refoulement* obligation contained in the Refugee Convention is 'ripe for recognition as *jus cogens*': 309. The International Law Commission's special rapporteur on the topic of peremptory norms of general international law (*jus cogens*) has noted 'ample support' for the principle of *non-refoulement* as *jus cogens*: International Law Commission, 'Fourth Report on Peremptory Norms of General International Law (*Jus Cogens*) by Dire Tladi, Special Rapporteur', UN doc A/CN.4/727 (31 January 2019) para 131. However, *non-refoulement* was not included in the recommended draft conclusion containing the non-exhaustive list of peremptory norms.

noting that, at the very least, it means States cannot rely on the exception to *refoulement* contained in article 33(2) of the Refugee Convention where the person concerned faces a risk of torture or related ill-treatment.[32]

5. Content and Scope of the Obligation of *Non-refoulement*

Two concepts are included in article 33 of the Refugee Convention, namely expulsion and return. Expulsion is also referred to in article 32 of the Convention, which prohibits expulsion of a refugee lawfully in State territory save on grounds of national security or public order, and only 'in accordance with due process of law'. Consequently, expulsion for the purposes of articles 32 and 33 certainly encompasses a formal procedure for persons already lawfully within territory.[33] However, it is clear that the framers did not want to limit article 33 in this way,[34] and the concept of return in article 33 of the Convention, as will be shown below, has a broader scope.

The concept of expulsion has received judicial and expert attention in recent years. Notably, in *Hirsi Jamaa v Italy* the European Court on Human Rights found that the prohibition on collective expulsion in article 4 of protocol 4 to the European Convention on Human Rights and the implicit prohibition on *refoulement* in article 3 of the European Convention applied to asylum seekers on the High Seas.[35] The International Law Commission has also examined the topic.

In the International Law Commission's effort to codify and progressively develop the law relating to expulsion of aliens, the scope of lawful expulsion appears both broader and narrower than that recognized in the Refugee Convention or international human rights law. In the Draft Articles on the Expulsion of Aliens (Draft Articles), the Commission has specified that the concept of expulsion applies to non-nationals within State territory,[36] 'with no distinction between the various categories of persons involved, for example, aliens lawfully present in the territory of the expelling State, aliens unlawfully present, displaced persons, asylum seekers, persons granted asylum and stateless persons'.[37] Expulsion is defined for the purposes of the Draft Articles as 'a formal act or conduct attributable to a State, by which an alien is

[36] International Law Commission, 'Draft Articles on the Expulsion of Aliens' in *Report of the International Law Commission on the Work of its 66th session*, UN doc 14/69/10 (2014) ch 4, draft article 1(1).

[37] Ibid Commentaries on Draft Article 1, para 2.

compelled to leave the territory of that State', but does not include non-admission of a non-national to State territory.[38] Pursuant to draft article 26, procedural rights apply, with the possible exception of non-nationals unlawfully on State territory for a brief duration. Thus for the purposes of the Draft Articles, a non-national unlawfully present in State territory is covered by the concept of expulsion, while a non-national seeking admission at the border is not. The International Law Commission (ILC) has specified that this is without prejudice to the prohibition on expulsion or *refoulement* of refugees—a move that has met with criticism, given the lingering debate concerning the reach of *refoulement*.[39]

Interpreting article 33 of the Refugee Convention in light of article 32, it can be inferred that, in the absence of the phrase 'lawfully present in state territory', article 33 extends *rationae personae* to *all* refugees within State territory, including those unlawfully present, as well as to those beyond State territory. Nevertheless, States have attempted to avoid the obligation of *non-refoulement* through legal fictions such as 'excision' of territory[40] or treatment of areas such as airports as 'international zones',[41] and by interception of asylum seekers beyond their borders.

Fictions such as excision have easily been dismissed by supranational human rights courts and tribunals. For example, the Inter-American Court in its advisory opinion on *Rights and Guarantees of Children in the Context of Migration and/or in Need of International Protection* referred with approval to the Committee on the Rights of the Child's statement that 'State obligations cannot be arbitrarily and unilaterally curtailed either by excluding zones or areas from a State's territory or by defining particular zones or areas as not, or only partly, under the jurisdiction of the State'.[42]

The jurisprudence of supranational human rights courts should also have shifted the debate as to whether *non-refoulement* applies at the border or extraterritorially, but some States, in particular Australia and the United States, cling to the idea that article 33(1) is territorially bound. This outlying State practice threatens the proper functioning of the Refugee Convention, as the obligation of *non-refoulement* is key to other refugee rights.

[38] Ibid draft art 2(1).

[39] Ibid draft art 6. For discussion of the problems concerning this 'without prejudice' approach see Gerald L Neuman, 'Human Rights and the International Law Commission's Draft Articles on the Expulsion of Aliens' (2017) 30 Harvard Human Rights Journal 3, 12; Won Kidane, 'Missed Opportunities in the International Law Commission's Final Draft Articles on the Expulsion of Aliens' (2017) 30 Harvard Human Rights Journal 77, 81–3. Kidane also criticizes the melding of articles 32 and 33 in the ILC's approach: 81–3.

[40] Australia 'excised' certain territories from the migration zone following the arrival of the Norwegian freighter, the *Tampa*, which had rescued 433 asylum seekers from the Indian Ocean.

[41] For an example, see the French practice discussed in *Amuur v France* (1996) 22 EHRR 533 para 19. See also *ZA and Others v Russia*, App No 61411/15 (ECtHR, Grand Chamber, 21 November 2019). Regarding Hungary's actions with respect to transit zones along the Serbian-Hungarian border, see C-924/19 PPU and C-925/19 PPU (CJEU, 14 May 2020), and compare with *Ilias and Ahmed v Hungary*, App No 47287/15 (ECtHR, Grand Chamber, 21 November 2019).

[42] *Rights and Guarantees of Children in the Context of Migration* (n 13) para 220, citing UN Committee on the Rights of the Child (n 14).

6. Extraterritorial Scope of the Prohibition on *Refoulement*: Practice, Scholarship, and Case Law

Although the Refugee Convention does not contain an express right to entry or a right to be granted asylum (in the sense of refugee status and all consequent protections)[43] by any particular State, in practice the obligation of *non-refoulement* demands that a refugee be allowed to 'transgress an administrative border' of a country other than the persecutory country of origin.[44] Consequently, States have adopted many deflection strategies to avoid recognizing refugee status. Frequently, States have sought to externalize their border controls.[45] The avoidance strategies include visa controls and placement of airline liaison officers abroad. There is also at present a predilection for walls along borders, such as those built by US president Donald J Trump and Hungarian prime minister Viktor Orbán.

Another spectacular, if sometimes covert, example of States acting extraterritorially in an attempt to avoid the obligation of *non-refoulement* is interdiction at sea.[46] In Southeast Asia, for example, boat pushbacks were used to garner resettlement offers during the Indochinese refugee crisis in the 1970s and 1980s. The lack of a responsibility-sharing mechanism to ensure refugees are properly protected and supported is a legitimate complaint on the part of developing countries[47]—one that has

[43] The Inter-American Court has helpfully defined 'asylum' as 'the *protection* that a State offers to persons who are not its nationals when their life, personal integrity, security and/or freedom are or could be in danger, as a result of persecution for political offences, or for political reasons' (emphasis added): *Institution of Asylum* (n 29) para 66. Further, it has recognized that '[a]lthough the 1951 Convention does not explicitly establish the right of asylum as an explicit right, it is considered to be implicitly incorporated in its text, which contains the definition of a refugee, protection under the principle of *non-refoulement* and a catalogue of rights to which refugees have access' (footnote omitted): para 95. See also para 101.

[44] Gregor Noll, 'Seeking Asylum at Embassies: A Right to Entry under International Law?' (2005) 17 IJRL 542, 548. Similarly, the Committee against Torture has stated that '[a]ny person found to be at risk of torture if deported to a given State should be allowed to remain in the territory under the jurisdiction, control or authority of the State party concerned so long as the risk persists': UN Committee against Torture, 'General Comment 4 (2017) on the Implementation of Article 3 of the Convention in the Context of Article 22,' UN doc CAT/C/GC/4 (4 September 2018) para 12.

[45] For discussion, see Bill Frelick, Ian M Kysel and Jennifer Podkul, 'The Impact of Externalization of Migration Controls on the Rights of Asylum Seekers and Other Migrants' (2016) 4 Journal on Migration and Human Security 190.

[46] See Chapter 26 in this volume for the paradoxical situation in which refugees' interception at sea contributes to the phenomenon that asylum seekers are 'out of sight, out of mind', and yet are also highly visible—a 'border spectacle'.

[47] It should be noted that Malaysia, Thailand, and Indonesia are now classed as middle-income countries, however Indonesia is a lower-middle-income country characterized by high levels of poverty with around 9 per cent of the population living in absolute poverty, that is, under the national poverty line, which is set at around 82 US cents a day. The international poverty line is USD $2.00 per day, which sees a significant proportion of the Indonesian population living in poverty.

been responded to, at least in word, by the New York Declaration for Refugees and Migrants and subsequent Global Compact on Refugees.[48] However, it does not justify *refoulement*.

Pushbacks by Southeast Asian countries recurred during the Andaman Sea refugee crisis: Rohingya and Bangladeshis abandoned at sea by people smugglers during 2015 were initially turned away by the navies of Malaysia, Thailand, and Indonesia.[49] None of these three States are party to the Refugee Convention, and Malaysia is party to very few international human rights treaties, however, Indonesia and Thailand are party to a number of human rights treaties that prohibit *refoulement* and all are bound by customary international law. Eventually Indonesia and Malaysia agreed to permit disembarkation on condition that refugees would be resettled after a year.[50]

The United States' interception of Haitian asylum seekers in the 1990s led to a controversial decision by the US Supreme Court[51] that is relied upon to this day by governmental officials in some countries when seeking to justify their conduct. A prominent and long-standing example is Australia's 'Operation Sovereign Borders'. Operation Sovereign Borders is a militarized response to boat arrivals involving interception of boats at sea, along with offshore 'processing' (refugee status determination) on Nauru and Manus Island, Papua New Guinea.

It is well accepted by scholars that article 33 applies beyond State territory. Gammeltoft-Hansen offers a thorough analysis supporting the view that article 33 applies both at the physical border and beyond it.[52] Naturally, he begins with an examination of the text of the Refugee Convention in light of its object and purpose, as required by the standard rules of treaty interpretation reflected in articles 31 and 32 of the Vienna Convention on the Law of Treaties.[53]

The ordinary meaning of the term *refoulement* in French, and 'return', in English, encompass action taken at the border and beyond it. Further, unlike many refugee rights in the Refugee Convention that are premised upon a certain level of attachment to State territory, article 33(1) makes no mention of the territory of possible States of refuge, referring simply to a prohibition on expulsion or return ' "in any manner whatsoever" to the frontiers of territories where [the refugee's] life or freedom would be threatened'.[54]

[52] Thomas Gammeltoft-Hansen, *Access to Asylum: International Refugee Law and the Globalisation of Migration Control* (CUP 2011).

[53] The relevant provisions of the Vienna Convention on the Law of Treaties codify customary international law applicable to the Refugee Convention (the Convention having been adopted prior to the Vienna Convention).

[54] See UNHCR, 'Submissions of the Office of the United Nations High Commissioner for Refugees Seeking Leave to Intervene as Amicus Curiae', Submission in *CPCF v Minister for Immigration and Border Protection* No S169/2014 (15 September 2014) para 9.

Noting, however, that the *travaux preparatoires* reveals some resistance to this interpretation, at least in cases of mass influx,[55] Gammeltoft-Hansen argues that the meaning of the words are in fact influenced by whether one adopts a territorialist or universalist premise.[56] Therefore, it is argued, one must move beyond the text to examine 'informal sources', namely relevant resolutions,[57] State practice[58] and other human rights treaties,[59] which have extended *non-refoulement* to instances where State jurisdiction is exercised.

Utilizing other human rights treaties as subsidiary means of interpretation, Gammeltoft-Hansen concludes that these 'give additional support to an interpretation extending the applicability *ratione loci* to state jurisdiction for [a]rticle 33'.[60] As treaties must be interpreted so as to be effective, extraterritorial migration control will engage the obligation of *non-refoulement* in situations in which 'states can be said to exercise a sufficient degree of power over either the refugee encountered or the geographic area in which control takes place'.[61] Further, he argues that

> [a] strong presumption prevails that any interdiction measure, even if not amounting to effective control over individuals or a geographical area, through the act itself would entail jurisdiction and thus an obligation on behalf of the acting state to respect basic rights under international refugee and human rights law.[62]

Extraterritorial migration control occurring within the territory of another sovereign State, he argues, may be a different matter.[63]

There is also an important procedural element to the obligation of *non-refoulement*. The Refugee Convention does not refer to refugee status determination (RSD), except in passing.[64] National determinations of status are accepted as declaratory, rather than constitutive.[65] However, in order for States to meet the obligations set out in the Refugee Convention, including that of *non-refoulement*, RSD is essential (which, of course, may occur on a *prima facie* basis). Boat pushbacks generally do not involve RSD, and even

[55] The idea that there is an exception to *refoulement* in cases of mass influx is highly controversial today. But see Hathaway (n 4) 355–63.

[56] Gammeltoft-Hansen (n 52) 51.

[57] Conclusions of the Executive Committee of the High Commissioner's Programme and the 'Declaration on Territorial Asylum', UNGA res 2312 (XXII) (24 December 1967) confirm that the obligation of *non-refoulement* applies at the border and beyond: Gammeltoft-Hansen (n 52) 69.

[58] On the paucity of practice accompanied by claims of international lawfulness, see Gammeltoft-Hansen (n 52) 74.

[59] ibid 68. [60] ibid 93. [61] ibid 98.

[62] ibid 125. [63] ibid 132–3.

[64] In particular article 9 of the Refugee Convention concerning provisional measures adopted during time of war or exceptional circumstances stipulates that provisional measures should only be taken pending determination of refugee status.

[65] As stated in the UNHCR Handbook, a refugee 'does not become a refugee because of recognition, but is recognized because he is a refugee': UNHCR, *Handbook on Procedures and Criteria for Determining Refugee Status and Guidelines on International Protection under the 1951 Convention and the 1967 Protocol relating to the Status of Refugees*, HCR/1P/4/ENG/REV.4 (1979, reissued 2019) para 28.

where they have, the circumstances for RSD are likely to undermine its effectiveness.[66] Thus the Inter-American Court on Human Rights has concluded that interception at sea violates the principle of *non-refoulement* because the risks to individuals are not assessed.[67] Similarly, the Committee against Torture regards individual examination of cases as a preventative guarantee of the principle of *non-refoulement*.[68] As UNHCR submitted in its intervention as *amicus curiae* in an Australian High Court case involving the interception of Tamil asylum seekers, there is a 'duty of inquiry', that is, a State must 'establish, prior to returning a person to another country, that the person who they intend to return is not at risk of those harms that are covered by the *non-refoulement* obligation'.[69]

Controversially, in 1993, the US Supreme Court found that the relevant statute was not extraterritorial in reach.[70] The court bolstered this view with a strained interpretation of article 33 of the Refugee Convention to the effect that the exception in article 33(2) applied only to refugees within their territory, thus article 33(1) must also be so limited, along with two passages in the *travaux preparatoires* indicating that some States viewed article 33(1) as being limited to refugees on State territory.[71] The flawed assumption that returns can proceed in the absence, or on the basis, of inadequate RSD is central to the creation of a tension between the two paragraphs of article 33. As Wouters has written,

> applying Article 33(1) to refugees who are outside the host country's territory will involve the transportation of these refugees to the territory of the host State or the territory of a third country where the refugees will be received and their status assessed. Subsequently the question arises whether or not the refugee then poses a danger to the security of the territory he is in, in accordance with Article 33(2).[72]

The Inter-American Commission on Human Rights found that the United States had, *inter alia*, violated the right to seek and receive asylum in article 17 of the American Declaration of the Rights and Duties of Man[73] when it 'summarily interdicted and repatriated Haitian refugees to Haiti without making an adequate determination of

[66] The US 'process' concerning Haitians fleeing Haiti by boat was condemned as inadequate by the Inter-American Commission on Human Rights for this reason. See *Haitian Centre for Human Rights v United States* (*US Interdiction of Haitians on the High Seas*), Inter-American Commission on Human Rights Report No 51/96, Case 10.675 (13 March 1997) para 163. The Australian interceptions under Operation Sovereign Borders suffer from the same defects: Joyce Chia, Jane McAdam, and Kate Purcell, 'Asylum in Australia: "Operation Sovereign Borders" and International Law' (2014) 32 Australian Year Book of International Law 33.

their status [and] without granting them a hearing to ascertain whether they qualified as "refugees".[74] This finding led to the Inter-American Court's later jurisprudence concerning the extraterritorial application of the obligation of *non-refoulement*, including at sea.[75]

Similarly, as previously noted, when applying article 3 of the European Convention on Human Rights in *Hirsi Jamaa v Italy*, a 2012 decision that involved interception on the High Seas by Italy, the European Court of Human Rights held that the provision applied extraterritorially.[76] The ruling has not prevented Italy from experimenting. Italy is now before the court in a case that concerns its cooperation with Libya, which 'pulled back' asylum seekers to Libya.[77] This case promises to explore an instance of 'contactless control',[78] whereby one State uses another to achieve *refoulement*.[79]

In *Hirsi Jamaa v Italy*, it was clear that the asylum seekers would be returned to Libya, where protection, including from chain *refoulement*, was lacking, whereas the advisory opinions of the Inter-American Court (not surprisingly given the advisory jurisdiction) do not appear to be concerned with return to a particular destination. However, without due process, it will not be possible to determine whether any country is safe for intercepted individuals. In *Hirsi*, the court found a violation of article 13 (the right to a remedy) in conjunction with article 3 (along with article 4 of Protocol 4) of the European Convention.[80] This tends to confirm that absence of process may, in and of itself, be a violation of the obligation of *non-refoulement*, whether the deflection strategy is implemented with, or without, a clear destination State or purported 'safe third country'.[81] This is important because some States simply divert boats in the absence of cooperation with a destination State, a notable example being Australia's Operation Sovereign Borders. On one occasion, it became clear that India, the intended destination State for a boatload of Sri Lankan asylum seekers, was not going to accept them, resulting in the prolonged holding of the asylum seekers on board the Australian vessel to which they had been transferred.[82] A majority in the ensuing case before the High Court found a right to enter India was not a necessary condition for the decision to direct the vessel there, and nor was it necessary to afford the asylum seekers procedural fairness.[83] This is inconsistent with international law.

7. *Non-refoulement* and Diplomatic Asylum

A variant of extraterritorial application of *non-refoulement*, which has occupied a grey or liminal space, involves embassies in third States (ie not the country of origin). This was the key issue at stake in the Inter-American Court's 2018 advisory opinion on the institution of asylum. The request for the advisory opinion was brought by Ecuador at the time that WikiLeaks founder Julian Assange (an Australian national) had requested and received asylum in the Ecuadoran embassy in London.[84] The court held that article 22(7) of the American Convention on Human Rights and article XXVII of the American Declaration of the Rights and Duties of Man enshrine the right to request and receive *territorial* asylum,[85] and that there is no regional customary norm concerning diplomatic asylum.[86] However, the court also found that the principle of *non-refoulement* (which is broader under the Inter-American system than the Refugee Convention)[87] may be applicable and impose certain obligations on the State in whose embassy a non-national has sought protection.[88]

The court stated that *non-refoulement* imposes positive obligations,[89] including an 'individualized risk assessment and appropriate protective measures, including measures against arbitrary detention'.[90] It also said that the person cannot be left in limbo. Grant of asylum is not necessarily required but diplomatic measures are necessary, such as a request that the territorial State grant a laissez-passer in order to protect the asylum seeker's rights.[91]

In a subsequent case, the European Court of Human Rights ruled that Syrian asylum seekers who had applied for visas from the Belgian Embassy in Lebanon were not within Belgium's jurisdiction for the purposes of Article 3 of the European Convention on Human Rights and declared the case inadmissible.[92] The Court considered that 'to find otherwise would amount to enshrining a near-universal application of the Convention on the basis of the unilateral choices of any individual, irrespective of where in the world they find themselves, and therefore to create an unlimited obligation on the Contracting States to allow entry to an individual who might be at risk of ill-treatment contrary to the Convention outside their jurisdiction'.[93]

[84] The court gave the opinion on the basis that this was not a disguised contentious case. The UK is, of course, not a part of the Inter-American human rights system.

[85] This followed from the fact that these provisions refer to receiving protection 'in a foreign territory' and diplomatic legations are not foreign territory: *Institution of Asylum* (n 29) paras 155, 156, and *Dispositif*, paras 2, 3.

[86] ibid paras 162, 163. [87] ibid para 186. [88] ibid para 188.

[93] ibid para 123.

8. Constructive or Disguised *Refoulement*

A different strategy to the externalization of border control involves the effective internalization of the border by refugees and asylum seekers,[94] resulting in return on their own initiative. This is known as constructive or disguised *refoulement*.[95]

Spontaneous return is not *refoulement* if the decision to do so is voluntary, even where the circumstances in the country of origin remain such as to ground a well-founded fear of persecution. Voluntary repatriation, one of the three traditional durable solutions for refugees, is distinct from the situation of cessation of refugee status where the circumstances in the country of origin have fundamentally changed so that there is no well-founded fear of persecution.[96] However, there are often situations where the voluntariness of repatriation, including those conducted under the auspices of UNHCR, is questionable. As Long has noted,

> in many repatriations, including those to Afghanistan, South Sudan, and Angola, the interest of host and donor states in promoting return . . . continues to stretch the meaning of voluntariness to cover a number of persuasive and coercive tactics, from billboards and promotional T-shirts, through increasingly generous cash grants, to onerous processes of re-registration and increasingly public discussion of imminent cessation clauses.[97]

Meanwhile, in developed countries, policies that lead to the destitution of asylum seekers, have been quite common.[98]

In the United Kingdom, regulations denying income support to asylum seekers led to a case in which UNHCR argued that the situation was a case of constructive or disguised *refoulement*. In the event, the court decided the case for the asylum seekers on grounds other than constructive *refoulement*. However, Simon Brown LJ described the situation in terms that epitomize the phenomenon:

[94] This may be viewed as a variant of the embodied border. See Leila Marie Whitley, 'More than a Line: Borders as Embodied Sites' (DPhil thesis, Goldsmiths College, University of London 2015).

[95] As explained by the International Law Commission, translation of 'constructive' into other languages, particularly French, is difficult and might 'carry an undesirable positive connotation': Draft Articles (n 36) Commentaries on Draft Article 10, para 1.

[96] Refugee Convention, arts 1(C)(5), (6).

For discussion of recent Australian policy, see Refugee Council of Australia, 'Starving Them Out: How the Australian Government is Forcing People Seeking Asylum into Destitution' (Report, 26 March 2018).

> A significant number of genuine asylum seekers now find themselves faced with a bleak choice: whether to remain here destitute and homeless until their claims are finally determined or whether instead to abandon their claims and return to face the very persecution they have fled.[99]

Since then, there has been a small but growing body of jurisprudence acknowledging the concept of constructive or disguised *refoulement*.[100] The Committee against Torture has said in a General Comment that States should not 'compel' return through 'dissuasive measures or policies'.[101] The International Law Commission for its part has adopted a provision on 'disguised expulsions' in the Draft Articles.[102]

While the concept has received judicial and expert recognition, the requisite threshold is a matter for debate. The threshold adopted by the International Law Commission may be too stringent. Article 10(2) requires that States intend to cause return. This may be too high a threshold if it requires refugees and asylum seekers to prove intent, particularly when States may plausibly argue that they have other motivations for their behaviour. Faced with the Kenyan government's insistence that it did not intend to violate the *non-refoulement* principle by pursuing a policy of forced encampment of refugees, Judge DS Majana of the Kenyan High Court stated that 'violation of the principle may be indirect and may be the unintended consequence of a policy that does not, on its face, violate the principle'.[103]

In a case in which there was an effective finding of constructive or disguised *refoulement* (although the court did not use this terminology), *MS v Belgium*,[104] the European Court of Human Rights adopted a test of 'free consent' on the part of the individual to be returned. In this case, an Iraqi asylum seeker had been arrested for criminal association, fraud, and suspicion of links with Al-Qaeda and supply of documents allowing Islamists into Europe. He had been imprisoned and subjected to expulsion proceedings involving immigration detention and residence orders. Consequently, he decided to return home. The court said that

> [t]he applicant has been faced with the following choices: he could decide to stay in Belgium without any hope of obtaining, one day, the right to stay legally and without a real prospect of living freely; another option would be to return to Iraq, knowing of the risks of being arrested and subjected to ill treatment in prison; one

> last option would be to go to a third country, which is not practically feasible. The court is of the opinion that, in these circumstances, the conditions of 'free consent' were not met....[105]

If the concept of disguised or constructive *refoulement* is to be applied so as to prevent returns in cases like *MS*, it is arguable that the standard of proof or threshold for constructive *refoulement* where return has not yet occurred should be the same as the test applied in relation to the well-founded fear of persecution—is there a 'real chance' (or the equivalent test from other jurisdictions)[106] that a person will return if certain policies are pursued?[107] It is suggested that examination of the pressure applied through government policy and the individual vulnerabilities of the person concerned would be required. As I have written elsewhere, the concept of constructive *refoulement* could be particularly useful in cases where a putative 'safe third country' is involved. Constructive *refoulement* 'may work hand in hand with the concept of chain *refoulement* to prevent a sending state from relying on "protection elsewhere" when meaningful or effective protection is actually absent'.[108]

9. Conclusion

As the obligation of *non-refoulement* has expanded in reach, through the conscious law-making efforts of States in treaty creation, progressive judicial interpretation of the relevant instruments and affirmative *opinio juris* concerning its status as customary international law, States have often sought to avoid its application in practice. Some States have tried to avoid asylum seekers' presence on their territory—through interception at sea, for example—or to cause their return once they have arrived, sometimes through enforced destitution. As discussed above, significant judicial decisions of the Inter-American Court of Human Rights and the European Court of Human Rights have found that measures such as interception at sea breach the obligation of *non-refoulement*, given that States do not and cannot satisfy themselves as to the protection needs of the persons intercepted. The case law concerning constructive/disguised *refoulement* is still developing, however it is equally clear that States may violate the obligation of *non-refoulement* where asylum seekers are forced to return home because of policies of destitution.[109]

[105] ibid para 124 (unofficial translation by the author). The test has been applied again. See *NA v Finland*, App No 2524418 (ECtHR, 14 November 2019) para 60.

[106] The various tests are described in Hathaway and Foster (n 1) 113.

Researchers and practitioners may find it profitable to further explore the concept of constructive *refoulement*, particularly the questions concerning the standard of proof or threshold. Similarly, the issue of which rights attract the obligation of *non-refoulement* and the threshold for a violation of an implicit *non-refoulement* obligation are live questions. Given the inventiveness of States and their capacity to thwart asylum seekers' migration in areas beyond the public gaze, multidisciplinary research on the benefits of complementary migration pathways will be important given the limited nature of remedies for those who are returned to danger in spite of States' *non-refoulement* obligations.

CHAPTER 51

NON-PENALIZATION AND NON-CRIMINALIZATION

CATHRYN COSTELLO* AND YULIA IOFFE

1. Introduction

Refugees are often at the sharp end of migration controls. States and regions create a raft of legal and practical barriers to flight and onward travel in search of protection. While some aspects of immigration policies have become more liberal in the past decades, there is a widespread practice of containing would-be refugees in their home States and regions.[1] Refugee containment is the single dominant story in refugee studies since the end of the Cold War, as several other chapters in this *Handbook* attest.[2] Refugee containment means that when refugees do flee, in particular if they seek asylum in Europe, North America, or elsewhere in the Global North, they generally must use irregular means. Irregular travel is often dangerous as carrier sanctions in particular preclude access to safe, licit means of travel.

This facet of the contemporary predicament of refugees has been exacerbated by an increasingly criminal and punitive approach to dealing with irregular migration. Once a mere administrative matter, irregular migration and presence are now often made a crime in domestic laws, often with additional criminal offences such as for failure to cooperate in migration and asylum proceedings, or failure to have or produce identity documentation. In addition to criminalization, States also have meted out increasingly harsh treatment to those who breach their migration controls, irrespective of whether they are refugees or not. These practices have earned a new term, 'crimmigration', to convey how comprehensively criminal approaches to migration control have been

* Research for this chapter was supported by Cathryn Costello's European Research Council (ERC) grant under the European Union's Horizon 2020 research and innovation programme (Grant Agreement ERC STG 2016 RefMig (716968)).

imbricated.[3] While Stumpf coined the term in the US context, this field of inquiry has burgeoned globally. Against this backdrop, this chapter examines the protections under international law which purport to secure refugees' right to seek asylum by protecting them from penalization.

The chapter begins by analysing article 31 of the Refugee Convention, the provision which purports to protect refugees from penalization for 'illegal entry and stay', drawing on our previous work[4] and that of other scholars.[5] The chapter argues that non-penalization reflects one of the objects and purposes of the Refugee Convention. Accordingly, it considers the distinct obligation on States to refrain from any acts frustrating the treaty's object and purpose. It then explores whether international human rights law substantively limits States' 'right' to criminalize irregular entry and stay, not only as regards refugees but of other migrants too, who either have good cause to breach immigration laws, or whose irregular migration is harmless and not blameworthy. Finally, it considers whether non-penalization of irregular entry or stay may be an emerging general principle of law.[6] We do not explore the right to seek asylum (in the UDHR) or the right to seek and be granted asylum in regional instruments, which may provide a further means to challenge immigration controls,[7] or indeed the right to leave any country.[8]

2. Article 31 of the Refugee Convention

a. An 'Object and Purpose' of the Refugee Convention

Article 31 reflects one of the objects and purposes of the Refugee Convention, namely, to ensure to 'refugees the widest possible exercise of . . . fundamental rights and freedoms'[9] by balancing their rights to protection with the rights of States to impose migration con-

trols. The *travaux préparatoires* recognize that seeking protection may require refugees to breach domestic immigration rules.[10] The drafters observed:

> A refugee whose departure from his country of origin is usually a flight, is rarely in a position to comply with the requirements for legal entry (possession of national passport and visa) into the country of refuge. It would be in keeping with the notion of asylum to exempt from penalties a refugee, escaping from persecution, who after crossing the frontier clandestinely, presents himself as soon as possible to the authorities of the country of asylum and is recognized as a *bona fide* refugee.[11]

The discussion of non-penalization surfaced not only in the context of article 31, but also in the course of preparatory work on article 7 (exemption from reciprocity)[12] and article 9 (provisional measures).[13] Article 31 thus in itself reflects an 'object and purpose' of the Convention, which has an important bearing on the provision's interpretation, as the next section explains.

As parties to a treaty, the Contracting States to the Refugee Convention have an obligation not to defeat the instrument's object and purpose.[14] In the *Military and Paramilitary Activities Case*, the International Court of Justice (ICJ) opined that undermining a treaty's object and purpose was *independent* from a breach of the treaty's substantive provisions.[15] This means that a Contracting State to the Refugee Convention could act in a manner that is inimical to the object and purpose of the Convention, even when the act itself is not expressly prohibited by article 31.

Both articles 18[16] and 26[17] of the Vienna Convention on the Law of Treaties (VCLT) reflect customary international law. The drafters of the VCLT considered that States'

[10] See eg Ad Hoc Committee on Refugees and Stateless Persons, 'Status of Refugees and Stateless Persons: Memorandum by the Secretary-General', UN doc E/AC.32/2 (3 January 1950) ch XI, para 1.

[11] ibid para 2.

[12] The French representative stated that '[t]here was no doubt that refugees must not be penalized because they were refugees': Ad Hoc Committee on Refugees and Stateless Persons, Second Session, Summary Record of the Thirty-Fourth Meeting Held at the Palais des Nations, Geneva (14 August 1950), UN doc E/AC.32/SR.34, 16.

[13] The US representative observed: 'A country might have many provisions concerning aliens which were not based on security reasons alone, including confiscation measures, limitations on trade and so forth, and in such cases the *bona fide* refugee should not be penalized but be given the opportunity of showing his good faith' (ibid 19).

[14] Vienna Convention on the Law of Treaties (adopted 22 May 1969, entered into force 27 January 1980) 1155 UNTS 331 (VCLT), arts 18, 26; also under customary international law (which the VCLT reflects): *Military and Paramilitary Activities in and against Nicaragua (Nicaragua v USA)* (Merits) [1986] ICJ Rep 14, 136–7, para 273 (*Military and Paramilitary Activities Case*).

[15] *Military and Paramilitary Activities Case* (n 14) 136–7, para 273; cf dissenting opinions of Judge Oda 249, para 79 and Judge Jennings 542, arguing that the object and purpose of a treaty cannot exist independently of its terms. obligation to refrain from any acts frustrating the object and purpose of the treaty was 'clearly implicit in the obligation to perform the treaty in good faith'.[18] In fact, under article 18, the obligation not to defeat the object and purpose of a treaty exists prior to the treaty's entry into force, and continues after ratification under article 26 of the VCLT.[19]

Finally, under article 19 of the VCLT, reservations that are incompatible with a treaty's object and purpose are impermissible.[20] Several Contracting States have made reservations to article 31 of the Refugee Convention.[21] Since these reservations affect an essential element of the treaty—the protection of refugees from being penalized for violating domestic immigration law in order to seek asylum—they may be considered invalid.[22] This legal question warrants further doctrinal examination.

b. Elements of Article 31

Article 31 prohibits States from imposing 'penalties' on the grounds of illegal entry or presence of 'refugees' in their territory, as long as three conditions are met: 'directness' of flight, 'promptness' in notifying officials, and 'good cause' for entering without the requisite documents. This trio of interrelated conditions should be interpreted consistently, employing an individualized, subjective approach that takes into account the complexity of flight and a refugee's individual circumstances.

As we have argued elsewhere,[23] the term 'refugees' in article 31(1) should be interpreted broadly, and clearly includes asylum seekers, understood broadly to include all those in search of international protection.[24] There are also good legal reasons to regard refugees under expanded regional definitions as entitled to the protection in article 31.[25] As regards beneficiaries of subsidiary and other forms of protection, in many instances equality guarantees under international human rights law ought to ensure that they are also accorded the benefits of non-penalization. While State practice varies, including

[24] An asylum seeker is 'any person who claims to be in need of international protection; consequently, that person is presumptively entitled to receive the provisional benefit of the no penalties obligation in Article 31 until s/he is found not to be in need of international protection in a final decision following a fair procedure': UNHCR, 'Summary Conclusions: Article 31 of the 1951 Convention' (2003) para 10(g).

[25] Cartagena Declaration, conclusion III(8); Marina Sharpe, 'The 1969 African Refugee Convention: Innovations, Misconceptions, and Omissions' (2012) 58 McGill Law Journal 95, 129–45.

national court decisions on this point,[26] in our view a wide interpretation of the personal scope of article 31 is crucial.

The protection offered by article 31(1) is against the imposition of 'penalties' where there is a connection between the penalties in question and illegal entry or presence ('on account of'). While the English language version of the Convention refers broadly to 'penalties', the French version speaks of '*sanctions pénales*', implying penal measures (that is, measures primarily in the criminal sphere). In English, by contrast, a 'penalty' may be criminal or civil (a contractual penalty, for example), or more broadly a measure with a disadvantageous impact. If there is a discrepancy between language versions, article 33(4) of the VCLT provides that 'the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted'. In view of the protective purpose of article 31, article 33(4) of the VCLT tends to support the interpretation based on the broader wording if this supports the object and purpose of the treaty,[27] a position supported both by Goodwin-Gill[28] and Hathaway.[29] This broad reading of 'penalties' also has support in the case law[30] and legislation of many States.[31] This broad interpretation of penalization means that article 31(1) also prohibits the prosecution of refugees on account of illegal entry and stay,[32] where bringing prosecutions itself has adverse effects, although there is conflicting national authority on this point.[33] Furthermore, if economic or social rights are denied on account of illegal entry or presence, this may also constitute a 'penalty' in breach of article 31.[34]

[26] The Supreme Court of Denmark held that article 31 was only applicable to asylum seekers and recognized Convention refugees, and not to beneficiaries of subsidiary and other protection: *Decisions 178/2011 and 179/2011* (3 February 2012) (Supreme Court of Denmark) (this account is based on the summary in English provided by Simon Hein Nielsen (on file with the authors)). See further Jens Vedsted-Hansen, 'Straf eller straffrihed for asylansøgeres anvendelse af falske rejsedokumenter' (2012) Ugeskrift for Retsvaesen 360 (UfR online U.2012B.360).

[34] Costello, Ioffe, and Büchsel (n 4) 37.

Some States routinely detain asylum seekers who enter irregularly. If such detention can be characterized as a 'penalty' (punitive in character), then it is incompatible with article 31.[35] In order to establish whether detention is punitive, its purpose and character must be considered, including by ascertaining State's intent and objective in resorting to detention, as well as its effect.[36] If detention is used as a deterrent, then it violates article 31(1),[37] since its objective is similar to that of penal law. By contrast, recourse to non-punitive detention is limited by article 26 of the Refugee Convention on free movement.[38] Article 26 must be read in light of the prohibition on arbitrary detention in international human rights law, and so proscribes any automatic detention of asylum seekers or refugees, and also establishes important legal limits on the duration and conditions of detention.[39]

Article 31(1) protects refugees from being penalized 'on account of their illegal entry or presence'. The textual interpretation of the phrase 'on account of', a rather loose expression,[40] indicates that some causal connection between the penalty imposed and the illegal entry or presence must be demonstrated, but it applies not only to crimes encompassing illegal and entry or stay in themselves.[41] In particular, crimes relating to the use of false documents fall within the ambit of article 31(1), although some States wrongly exclude them from its scope.[42] To the extent that States seek to punish refugees for smuggling themselves or others into their territories, article 31(1) is applicable.[43] By contrast, it does not extend to other persons who assist refugees to enter a State for the purposes of seeking asylum, whether that assistance is framed as smuggling or otherwise. Article 31 is, however, legally relevant to understand what scope States have to criminalize such assistance. For example, the Supreme Court of Canada in its 2015 ruling in *Appulonappa* took article 31 into account in determining the proper scope of smuggling prohibitions, supporting its legal conclusion that the Canadian domestic prohibitions were 'overbroad'.[44]

As mentioned at the outset, article 31's protection against penalization is limited, reflecting a compromise between the refugee's right to seek asylum and the State's right

to impose border controls. Non-penalization only applies to those who come 'directly', present themselves 'without delay', and have 'good cause' for their illegal entry or stay. Directness is the most controversial element: 'coming directly from *a territory*' suggests that there is no requirement for a refugee to come directly from the country of origin or residence, provided that the territory is one where the person's life or freedom is threatened. The preparatory work confirms that the drafters envisaged the possibility that refugees might experience such threats at any point in their journey in search of protection.[45] In fact, the *travaux préparatoires* reveal that the 'directness' condition was only added to address a particular concern of the French delegation. They wished to exclude from article 31(2) a narrow category of refugees already afforded international protection in another State, but who still attempted to enter illegally.[46] The drafters also acknowledged that refugee flight may be perilous and non-linear because of the difficulties facing refugees arriving in a State 'which did not display a generous attitude'.[47] As a result, article 31 cannot be considered to require a person to seek international protection at the first effective opportunity.[48] As such, it is evident that the provision does not provide a basis for safe third country practices.[49] Indeed, to the contrary, it is based on the realization that refugees often transit through a number of countries before they find protection. It follows that an individualized, subjective approach, taking into account the reality of flight and individual circumstances, ought to be applied to the condition of directness. Some domestic courts, including in the United Kingdom,[50] the Netherlands,[51] New Zealand,[52] Germany,[53] and Finland,[54] indeed adopted such an

approach by developing a sophisticated individualized assessment. This assessment introduces a number of elements for the term 'coming directly', including the length of stay in the intermediate country, the reason for delay, and whether or not the refugee sought or found protection *de jure* or *de facto*.[55]

The second condition set out in article 31 is that refugees should present themselves to the authorities 'without delay'. The term 'without delay' is not synonymous with 'immediately', and its ordinary meaning does not require setting a rigid time limit. In fact, the ICJ has interpreted the term (albeit in a different context),[56] reiterating that 'neither the terms of the [Vienna] Convention as normally understood, nor its object and purpose, suggest that "without delay" is to be understood as "immediately"'.[57] The court underlined that the determination of whether conduct was undertaken 'without delay' should be made on the basis of individual circumstances.[58] According to UNHCR, the proper interpretation of 'without delay' in article 31 is a 'matter of fact and degree',[59] depending on 'the special situation of asylum seekers, in particular the effects of trauma, language problems, lack of information, previous experiences which often result in a suspicion of those in authority, feelings of insecurity'.[60] When it comes to domestic case law, two strands of interpretation have emerged. The first strand supports a flexible, individualized approach,[61] which in our view is appropriate. In contrast, the second strand interprets 'without delay' unnecessarily restrictively, imposing short and inflexible time limits.[62]

The criterion of 'good cause' for illegal entry is also sufficiently flexible to allow the individual circumstances of refugees to be taken into account.[63] Being a refugee is, in itself, a sufficiently 'good cause'.[64] Domestic practices again reflect two conflicting trends. Some courts have recognized that the 'good cause' condition is satisfied where refugees fail to avail themselves of protection opportunities out of misapprehension or fear, including a perception that it may be hazardous to claim asylum at border-crossing points.[65] By contrast, other courts have taken a less protective view, for instance, treating

the failure to apply for asylum at the point of arrival at an airport as evidence that there was no 'good cause' for the irregular entry.[66]

c. Implementation of Article 31

States often violate their obligations under the Refugee Convention and other human rights treaties, and article 31 appears to be particularly prone to misinterpretation and misapplication. Undoubtedly, there are some examples of good practice in terms of incorporation of article 31 into domestic legislation, as in South America.[67] For instance, national legislation in both Argentina[68] and Brazil[69] is framed in similar terms to article 31, specifying that both administrative and criminal sanctions are precluded. However, overall, refugee rights and realities diverge starkly when it comes to non-penalization for illegal entry.

First, some States and scholars, in particular in Europe, have read the 'coming directly' condition not only to limit the scope of article 31, but also to legitimize country of first asylum and safe third country practices.[70] As explained above, this is a profound misinterpretation of article 31, undermining the object and purpose of the Convention.

Secondly, many States do not implement article 31 properly, or in some cases at all.[71] For example, some domestic measures afford the protection of non-penalization only to a narrow category of offences. In the US, refugees are only protected from having certain civil penalties imposed, but are routinely prosecuted for various immigration offences, which is in violation of article 31 and other provisions of international refugee and human rights law.[72] Similarly in the UK, the domestic implementation of article 31 is too narrow. Its lack of protective effect has led UNHCR to argue that the manner of drafting and interpretation of the domestic provision has left refugees worse off.[73] The legislation does not include many common migration control-related

[73] UNHCR, 'UNHCR Intervention before the House of Lords in the Case of *Regina (Respondent) and Fregenet Asfaw (Appellant)*' (28 January 2008) para 7.

offences. The EU has also failed to implement article 31 within its own legal system. In *Qurbani*, for instance, the Court of Justice of the EU (CJEU) declined to provide interpretative guidance to a national court on the meaning of article 31, on the basis that article 31 did not fall within the scope of EU law, despite the fact that EU asylum law must be compatible with the Refugee Convention in general.[74] This ruling is unpersuasive and ought to be interpreted narrowly. As Holiday has suggested, article 31 is pertinent to the interpretation of many provisions of EU law, so falls properly within the CJEU's jurisdiction.[75]

Thirdly, prosecutorial authorities are often unaware of the provision, and may wrongly prosecute refugees. The contrast between the UK and Norwegian experience provides an illustration. In spite of (limited) domestic incorporation of article 31 and many high-level court rulings, the UK continued to prosecute many asylum seekers and refugees, arguably illegally. Many convicted refugees successfully had their cases overturned, after assessment by the body charged with dealing with miscarriages of justice, the Criminal Cases Review Commission.[76] This remedy often came years after their initial convictions. Strategic litigation attempted unsuccessfully to establish that prosecutions should not be brought in the first place,[77] but the Supreme Court rejected the argument narrowly on the facts.[78] In contrast, in Norway, a 2014 Supreme Court judgment established that the penalties imposed on a refugee who presented a forged document at the airport were not permitted by article 31.[79] In response, the Director of Public Prosecutions initiated reopening of cases against asylum seekers who had been penalized for having entered Norway irregularly, and suspended their gaol sentences.[80] The crucial point is that non-penalization requires that asylum seekers and refugees not be prosecuted, which means that article 31 must be understood and implemented within prosecutorial institutions.

Fourthly, there are many contexts where, despite article 31's incorporation in domestic law, other deficiencies in the asylum process render it ineffective. All too often, refugees are detained on arrival and deprived of effective access to asylum procedures. The protections of article 31 remain distant, as these presumptive refugees must wait long periods in order to even lodge an asylum claim.

3. The Criminalization of Irregular Migration under International Human Rights Law

Beyond article 31 of the Refugee Convention, this section looks to international human rights law as a potentially wider source of protection. In particular, this section examines whether the criminalization of irregular migration itself may be regarded as a human rights violation, thereby opening up a new avenue for legal research and advocacy. This section suggests that international human rights law may provide arguments to challenge the criminalization of refugees and others whose irregular migration is harmless or blameless, or who have good cause to breach migration controls.

There are strong arguments that, from an ethical standpoint, many of the current laws criminalizing migration are a misuse of the criminal law, being out of keeping with the proper scope of the criminal law in States that value the rule of law and individual liberties. Given the criminal law's stigmatic, punitive character, there is a consensus in liberal political and legal theory that its use should be limited. On this basis, an important body of scholarship in criminal law theory critiques the criminalization of migration as a distortion of the proper role of criminal law.[81] These authors generally argue that immigration law is itself often arbitrary, in that it excludes those with the strongest ethical and legal claim to admission, including refugees, and so criminalization of immigration itself is arbitrary. Another important line of argument focuses on the harmless and blameless nature of many immigration crimes. In general, criminal law theorists point out that irregular migration is not a crime entailing harm to others in the usual sense, but rather is a regulatory crime, whose suitability for criminalization is in doubt. There are often strict liability offences that bear down on those who are not blameworthy.

In some contexts, national constitutional law may be invoked to constrain the scope of criminalization. For instance, Criddle has powerfully argued that under the US Constitution's Eighth Amendment,[82] criminalization of refugees for irregular entry ought to be regarded as unconstitutional. The argument draws on constitutional jurisprudence that has precluded the criminalization of other blameless individuals, such as addicts and the homeless, where their predicaments lead them unavoidably to breach the criminal law.[83]

[82] Constitution of the United States of America, Eighth Amendment: 'Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted'.

[83] Criddle (n 72) 725, 761–2.

We suggest that international human rights law ought also to be read to limit criminalization. In general, international human rights law defers to States' rights to control the entry and residence of non-nationals. Indeed, many significant critiques of human rights law have argued that this deference to the 'statist migration control assumption' generates an unprincipled, unstable jurisprudence when migration control is invoked to limit human rights, including on detention, deportation, and non-discrimination.[84] Nonetheless, some authoritative interpretations of international human rights law criticize the criminalization of migration, including by the Inter-American Court of Human Rights (IACtHR), several Special Rapporteurs, and other human rights bodies.[85] In some instances, human rights institutions make general critiques of the impact of criminalization, for instance, that '[m]igration management based on criminal law tends to disregard a human rights dimension of migration'.[86] This section seeks to go beyond these general claims to begin to identify some principled material limits to criminalization.

Under the ECHR, the criminal law is tamed by various human rights provisions, such as the right to a fair trial and respect for the right to liberty. However, clear substantive limits on recourse to the criminal law have not emerged, although if conduct that is protected by the ambit of a substantive right is criminalized, that criminalization violates the right in question.[87] An important body of commentary on the ECtHR identifies a tendency to emphasize the 'sword' function of human rights law—that it sometimes *requires* criminalization in order to protect rights, over its 'shield function'—that it demands a limit on recourse to criminal law.[88]

[87] The European Court of Human Rights found criminalization of male same-sex activity/acts to be a violation of the right to private life under article 8 of the ECHR. See *Dudgeon v UK* (1982) 4 EHRR 149, paras 41, 63; *Norris v Ireland* (1988) 13 EHRR 186, paras 46–7; *Modinos v Cyprus* (1993) 16 EHRR 485, paras 24–5; *ADT v UK* (2000) 31 EHRR 803, paras 38–9.

[88] See in particular Françoise Tulkens, 'The Paradoxical Relationship between Criminal Law and Human Rights' (2011) 9 Journal of International Criminal Justice 577; Laurens Lavrysen and Natasa Mavronicola (eds), *Coercive Human Rights: Positive Duties to Mobilise the Criminal Law under the ECHR* (Hart 2020).

In contrast, the IACtHR has established just such limits. For example, in *Vélez Loor v Panama*, the court cited with approval a statement by the Working Group on Arbitrary Detention[89] that 'criminalizing an irregular entry into a country goes beyond the legitimate interest of States to control and regulate illegal immigration and leads to unnecessary detention'.[90] The court set out clear material limits on the punitive power of the State, observing that: 'In a democratic society punitive power is exercised only to the extent that is strictly necessary to protect fundamental legal rights from serious attacks that may impair or endanger them. The opposite would result in the abusive exercise of the punitive power of the State'.[91] The court held accordingly that the use of detention in the immigration context was a violation of human rights, in so doing construing the States' power to detain in a markedly narrower way than the European Court of Human Rights.[92] But even beyond the issue of detention, the court, most importantly, limited the use of the criminal law in this context.

The IACtHR approach was also endorsed by the former UN Special Rapporteur on the Human Rights of Migrants, François Crépeau, who stressed that irregular entry or stay should never be considered criminal offences, as they 'are not *per se* crimes against persons, property or national security'.[93] This logic seems to align with the criminal law theory approach, which requires a behaviour (irregular migration) to be sufficiently harmful and wrongful to be treated as a crime.

4. A General Principle of Non-penalization?

Aside from the treaty obligations under international refugee law and international human rights law, this section explores whether non-penalization of refugees and some other migrants for illegal entry or presence may be an emerging general principle of law, in the sense of article 38(1)(c) of the ICJ Statute. General principles perform several functions, such as to fill legal gaps, to serve as sources of rights and obligations, and to aid interpretation and reinforce legal reasoning.[94] Despite controversy and uncertainty

See also Bin Cheng, *General Principles of Law: As Applied by International Courts and Tribunals* (Stevens 1953) 390; Fabián Raimondo, *General Principles of Law in the Decisions of International Criminal Courts and Tribunals* (Brill 2008) 16, 20; Mads Andenas and Ludovica Chiussi, 'Cohesion, Convergence and Coherence of International Law' in Mads Andenas, Malgosia Fitzmaurice, Attila Tanzi, and Jan Wouters (eds), *General Principles and the Coherence of International Law* (Brill 2019) 10; Miles Jackson, 'State Instigation in International Law: A General Principle Transposed' (2019) 30 European Journal of International Law 391, 397.

about the content and origin of such general principles,[95] a widely accepted view amongst the scholars is that general principles may be derived not only from national legal systems but also formed within the international legal system.[96] The ICJ often refers to general principles that do not find a parallel in domestic laws.[97] We argue that there is an emerging general principle of non-penalization formed within the international legal system.

To ascertain whether a general principle of non-penalization formed within the international legal system exists, the requirement of recognition must be met.[98] Such recognition 'could take place by deduction or abstraction from existing rules of conventional and customary international law, or through acts of international organizations, such as resolutions of the General Assembly', indicating general acceptance by States.[99] Simma and Alston have discussed and encouraged the use of general principles derived from international law in the human rights context.[100] They describe the process of determining the existence of such general principles as 'a decidedly consensual process, giving "a sufficient expression in legal form" to the underlying humanitarian considerations'.[101] The origin of the principle of non-penalization can be found in the international legal system, which implies that the States recognize and accept the existence of this principle in their international relations.

Article 31 of the Refugee Convention reflects a widely accepted recognition that refugees should not be penalized when they have good cause to breach immigration laws. As discussed above, there is some support for non-penalization in international human rights law.[102] In addition, the international instruments in relation to both smuggling and trafficking assume that migrants should not be the main object of criminalization. Specifically, article 5 of the UN Smuggling Protocol shields irregular migrants from criminalization merely for seeking or gaining illegal entry with the assistance of smugglers.[103] This provision is important, in that migrants who have recourse to

See Global Compact for Migration, para 25; see also Chapter 29 in this volume.

smugglers may not be refugees, or even fleeing at all. Smuggling includes most forms of assistance in irregular border crossings. And yet, international law focuses on those who enable irregular migration, rather than those who engage in it, an acknowledgement that irregular migrants are not engaged in harmful or blameworthy conduct. The international instruments on trafficking reflect this approach,[104] albeit less clearly, although the case for the non-criminalization of victims of trafficking is even stronger. Schloenhardt and Markey-Towler persuasively argue that the principle of non-criminalization of victims of trafficking in persons has also been developing.[105] This argument is supported by the pronouncements of a number of international institutions.[106] Together, these provisions reflect a consensus of sorts that while States may be obliged to use the criminal law to seek to limit irregular migration, they should not criminalize migrants in so doing.

A further possibility, in need of further research, is whether there may be stronger regional principles of non-penalization. In South America, it appears States have prioritized non-penalization in their domestic law.[107] In his first report on general principles of law, the Special Rapporteur for the International Law Commission included the possibility of general principles of law with a regional scope of application.[108] Therefore, the move towards non-criminalization in South America in regional fora[109] and domestic

legislation could be relevant to the emergence of a non-penalization principle of regional scope. Since the question whether such regional general principles exist remains doctrinally unresolved,[110] it would be premature to consider non-penalization of illegal entry and stay a regional South American general principle of law, but this matter warrants further research.

5. Conclusion

This chapter has explored non-penalization for illegal entry and stay under article 31 of the Refugee Convention, and in the broader context of protection against penalization and criminalization in international human rights law. It argued that there is an emerging general principle of law relating to non-penalization of refugees and other vulnerable migrants. The doctrinal arguments in this chapter range from the well-settled (the interpretation of article 31 of the Refugee Convention espoused) to more speculative (a general principle of non-penalization). They all stand in stark contrast to the expansion of punitive and criminal measures towards individuals who cross borders in search of protection. This gap between legal protections and punitive practice demands new thinking about how to make refugee and human rights law more effective. One important strategy is to draw in more actors, both locally and transnationally—refugees, their NGO allies, prosecutors, courts, and legislators—in order to temper the executive excesses of criminalization and penalization of those in search of refuge and protection. It is our hope that some of the legal and ethical arguments in this chapter may inform such actions.

CHAPTER 52

THE RIGHT TO LIBERTY

EVE LESTER*

1. Introduction

The quintessential predicament of refugees, asylum seekers, and stateless persons in search of international protection (hereafter 'protection-seekers'), is that they are often forced to arrive at, or enter, a territory without prior authorization or without otherwise complying with immigration formalities.[1] In a growing number of States, it is a predicament that heightens their vulnerability to immigration detention. Often arbitrary, the use of immigration detention as a border control measure may impede an individual's right to seek asylum,[2] arguably a principle of customary international law,[3] and may expose her to the risk of *refoulement*,[4] including 'constructive *refoulement*'.[5] As such, alongside the catalogue of human rights issues to which the practice commonly gives rise, immigration detention can jeopardize some of international refugee law's most fundamental principles; indeed in some instances this is arguably its very purpose.

Since the end of the Cold War, the scale of immigration detention has grown alarmingly. Accurate data is difficult to obtain, but conservatively, many hundreds of

thousands of non-citizens in at least 1,249 locations in 129 countries are subject to immigration detention.[6] A significant percentage of these non-citizens fall under the rubric of international refugee law. An extensive literature documents its corrosive impact on mental and physical health, particularly where it is prolonged, or conditions are otherwise intolerable.[7]

This chapter explores how immigration detention has become such an intractable problem, international standards notwithstanding. It recognizes that while non-compliant State practice does not, as a matter of law, dilute those standards, in effect it undermines them through a collective, if disparate, inclination towards non-compliance and a (sometimes wilful) retreat behind sovereignty's 'corporate' veil. Before outlining my approach, I make three preliminary observations regarding the meaning of 'detention'; the relationship between the rights to liberty and freedom of movement; and the chapter's relevance to refugee camps.

UNHCR defines 'detention' in the context of refugee protection as 'the deprivation of liberty or confinement in a closed place which an asylum-seeker is not permitted to leave at will, including, though not limited to, prisons or purpose-built detention, closed reception or holding centres or facilities'.[8] Relatedly, 'immigration detention' describes an administrative form of detention applied as part of a State's suite of border control measures to non-citizens seeking, or subject to, a migration-related goal. It describes the use of detention (a) where the State seeks to prevent an unauthorized entry; (b) pending the outcome of a migration- or protection-related claim; or (c) in anticipation of, or to effect, removal or deportation. Such detention is best understood as a status detention, whose primary logic of power is diffuse in the sense of applying to categories of people rather than being individually targeted. Thus, where a State seeks to derive its legitimacy to control and deter unsolicited or unwanted migration from its capacity to protect the (way of) life of its people, immigration detention's purpose may be characterized as 'a model biopolitical project'.[9] In contrast, and despite there being some countries where irregular entry or presence is (still) a criminal offence,[10] detention of non-citizens as a custodial sanction arising under criminal law is beyond

the scope of this chapter.[11] Nevertheless, it is important to acknowledge that the deportation of protection-seekers who are ex-prisoners may constitute *refoulement*[12] and is a significant issue in some States.[13]

The right to freedom of movement enshrined in the ICCPR (article 12) and the Refugee Convention (article 26)[14] applies respectively to 'everyone' and 'refugees' *lawfully in* the territory of a Contracting State. While the meaning of 'lawfully' does not necessarily equate with its meaning in the domestic law of the putative country of asylum,[15] the present focus is on detention of those who that country regards as *unlawful* or *unauthorized*. As such, the most relevant provision in the Refugee Convention is article 31, which prohibits the imposition of penalties on refugees on account of their unlawful entry or presence in the country of asylum.[16] Read together, articles 26 and 31 remind us that, as a matter of law, immigration detention should be exceptional. Thus, although the rights to freedom of movement and to liberty sit along a continuum and within the same conceptual frame, and determining the difference between them may be a matter of degree and intensity rather than one of nature and substance,[17] this chapter's contextual emphasis along this continuum is on people held in closed environments.

My focus in this chapter on the right to liberty means that restrictions on freedom of movement which do not constitute a deprivation of the right to liberty are beyond its scope.[18] I recognize that detention takes place in diverse locations, whether at land and sea borders; in airport transit zones; on islands; on boats; in closed refugee camps; extraterritorially; and even in one's own home (house arrest).[19] In this regard, I thus recognize that deprivation of liberty is qualitatively different to other freedom of movement restrictions. Nevertheless, I acknowledge that confinement to a refugee camp may rise to the level of 'detention', and that different levels of confinement may be applied simultaneously in the same location.[20] Likewise, I view 'open prison' confinement to an island as capable of constituting a deprivation of liberty, even if that island is an entire nation-State.[21]

This chapter has four substantive sections. Section 2 situates the use of immigration detention in global and historical context. Section 3 provides an overview of key aspects of the international legal framework. Section 4 considers two factors shaping State practice that are crucial to contemporary understandings of, and justifications for, immigration detention. Finally, Section 5 suggests the Global Compact for Migration as a lens through which future research might usefully tackle the problem of immigration detention.

2. Some History and Context

Immigration detention's historical and geopolitical context helps us to understand its emergence and to think more deeply about the socio-political dynamics that have enabled it to become so widespread. Three aspects of this context considered in this section enable us to analyse critically the assumptions that underlie both international standards and State practice.

a. A Hallmark of the Rule of Law

The prohibition against arbitrary detention has long been a crucial safeguard against authoritarian rule and abuse of power—a hallmark of the rule of law. Prominent precursors to the human right to liberty,[22] wherein arbitrary detention was outlawed and due process rights embedded, include the Magna Carta (1215),[23] the writ of *habeas corpus*,[24] the French Declaration of the Rights of Man and the Citizen (1789),[25] and the US Constitution and Bill of Rights (1791).[26] Pre-eminent commentaries likewise underscore the great importance of the preservation of liberty.[27] For example, Blackstone recognizes that imprisonment without due process represents a 'dangerous engine of arbitrary government'.[28] Importantly, such commentaries do not limit the prohibition against arbitrary detention to citizens, raising the question of how early international legal theory conceptualized the foreigner and her right to liberty.

b. The Foreigner, Sovereignty, and the Right to Liberty

As an expression of the sovereign power of exclusion, immigration detention represents the flipside of modern international law's failure to recognize a foreigner's right to enter the territory of another State. In this sense, immigration detention is assumed by many States to be a necessary and therefore inevitable incident of sovereignty. This assumption imagines two things: first, that the absence of a foreigner's right to enter was ever thus; and secondly, that the figure of the foreigner was herself always and already an outsider, presumptively hostile to the State.

A genealogy of the foreigner–sovereign relation in early international law reminds us that, in contrast to the non-European 'barbarian' outsider, the figure of the 'foreigner' was conceptualized as a European insider—whether colonizer, trader, or (intra-European) exile.[29] Aligned with sovereign interests, this foreigner was a figure of privilege and power. Not subject to the vagaries of unfettered powers of exclusion, international law instead conferred on him (and I use the male pronoun advisedly) a host of self-proclaimed rights. These rights enabled him, *inter alia*, to assert the right to enter and reside in the territory of another State.[30]

Later, as a consequence of new migrations and changing political-economic dynamics, the nineteenth-century 'foreigner' became a mutable figure engendering increasingly restrictive migration laws.[31] These dynamics were deeply racialized and were reinforced by judiciaries in lockstep with legislative and societal expectations, producing juridical taxonomies that constructed the foreigner as an outsider subject to unfettered powers of exclusion.[32]

In the common law world, a potent combination of judicial precedent and instrumentalist use of international legal theory embedded the assumption that there is an unfettered power of exclusion,[33] an assumption that is historically produced rather than grounded in universal truths.[34] This assumption has also influenced civil law traditions[35] and to some extent supranational legal systems.[36] So, while there are good reasons to view this assumption with circumspection,[37] it has enabled an unfettered

power of exclusion to inveigle its way into the making of international human rights and refugee law.[38]

c. Making International Human Rights and Refugee Law

The coalescence of States post-Second World War appeared to signal a new orientation in international lawmaking. Yet despite a broad post-Second World War commitment to human rights, records of negotiations around the Charter of the United Nations (UN Charter)[39] and the UDHR, reveal the determination of a number of States to resist intrusion on the claim that sovereignty confers an absolute power to exclude aliens and the limits of international lawmaking.

Delegates insisted that immigration law and policy fell within the domestic jurisdiction of States and should therefore be insulated from international scrutiny.[40] Additionally, drafters of the Refugee Convention foresaw detention of enemy alien refugees during wartime (article 9),[41] and still permitted the use of border control measures, including detention, as long as such measures were not punitive (article 31).[42] Thus, while the right to seek asylum is sometimes framed as sovereignty's exception, its non-binding form affirms that the struggle to shake (judicial interpretations of) State practice free of the (misplaced) assumption that States can assert complete control over cross-border movement persists.[43] In many ways, immigration detention epitomizes this point of contestation, often assumed to be sovereignty's lawful and necessary corollary. Yet, how it has played out in practice is more about geopolitics than law.

d. The Cold War

During the Cold War, detention of non-citizens *qua* 'friendly aliens' generally took place for the purposes of removal rather than exclusion and was less widespread.[44] One notable (and salutary) exception was the detention of some 45,000 Indochinese 'boat

people' in Hong Kong, then a British colony.[45] A seemingly ahistorical harbinger of laws and policies that are now a constant theme in public policy debates on unsolicited migration,[46] it was also reminiscent of the racialized histories and political-economic interests and priorities embedded in both sovereignty doctrine and refugee law.[47]

One of the main explanations for lower levels of immigration detention during the Cold War is that contemporary barriers to entry (policies of *non-entrée*) that characterize State responses to unsolicited migration had not yet supplanted prevailing barriers to exit.[48] The Indochinese example reminds us that this shift had both racial and ideological dimensions. As Chimni reminds us, during the Cold War, conceptualizations of the refugee were first and foremost of someone who was 'white, male and anti-communist'.[49] Thus, the refugee was positioned ideologically—and racially—as welcome and worthy of freedom. So, despite exceptions[50] and immigration detention already having been in use in some States for decades and more,[51] refugees bypassing barriers to exit were celebrated; their liberated bodies viewed as triumphant symbols of freedom and of democracy's victory over totalitarianism.

e. A 'New Wall Order'

After the wall of communism crumbled (literally and figuratively), the heady early days of the post-Cold War era were short-lived. The ensuing 'global refugee crisis' of the 1990s, the so-called 'War on Terror' and mass displacement following the Arab Spring begot new walls of exclusion. New 'wall discourses' in effect normalized the otherwise exceptional and dehumanizing use of myriad physical, technological, or symbolic exclusion measures,[52] now central to the 'new wall order'.

In recent years, and integral to the same dynamic, we have also seen the proliferation of externalized migration controls designed to deny protection-seekers and other

migrants access to territory, and deflect responsibility—*de facto* or *de jure*—for their protection.[53] In this context, immigration detention, as it is practised (or procured) by some States, functions as both a last (and externalized first) line of defence in the project of exclusion. Data-mapping suggests that patterns of immigration detention intensify with proximity to the Global North, where neighbouring States are pressured to stop onward movement,[54] revealing an Orwellian style of sovereign relativism that has 'commercialized' and 'diffused' the sovereignty of weaker 'client' States,[55] with devastating effects.[56]

This overview makes visible how much law's context shapes its terms, enabling us to think more carefully about what law and policymakers do and why they do it.[57] So, while the analysis of law's enduring strengths, weaknesses, and possibilities is crucial, it is not a purely doctrinal inquiry.

3. International Standards

Immigration detention practices have metastasized, and raw numbers have grown exponentially in recent decades. Often detained without (meaningful) access to counsel or judicial processes, people seeking protection (including children) have been arbitrarily detained, including on the high seas[58] or in extraterritorial locations.[59] Detention may be for indefinite or prolonged periods.[60] Sometimes, its brevity may be what compromises access to protection.[61] Detention may be 'groundless', in the sense that detention for 'administrative convenience' includes no legal requirement that the detention decision be individualized, or based on generalized assumptions about flight risk.[62] It

may be automatic and therefore 'decision-less',[63] meaning that there is no administrative decision to detain and therefore nothing to review.

In detention, individuals may experience violence,[64] including sexual and gender-based violence and abuse,[65] and harsh and unsanitary conditions, including chronic overcrowding.[66] Even in States where detention numbers are comparatively low,[67] State practice may still be problematic. For example, for 'sans papiers' or where UNHCR-issued documentation is not recognized or respected, protection-seekers live in constant fear of the cycle of arrest and detention.[68]

a. The International Legal Architecture

The rights to freedom of movement and to liberty are fundamental and complementary human rights. Together, they underscore the principle that there should be a presumption against detention. To this end, international human rights law provides that restrictions on freedom of movement and the exceptional use of detention are permissible only when they take place on grounds prescribed, and in accordance with procedures authorized, by law.[69] This provides a critical safeguard against arbitrary detention,[70] requiring that it be in pursuit of a legitimate aim, necessary, reasonable, and proportionate in all the circumstances of the (individual) case,[71] and subject to meaningful, enforceable, and independent periodic review.[72] These standards apply to any person subject to detention of any kind. Self-evidently, therefore, they apply to immigration detainees.[73]

States are also obliged to ensure that detention provisions and procedures comply with requirements of legal certainty.[74] Detention failing to meet these standards is arbitrary, even if lawful in domestic law.[75] In this regard, while reservations have been

expressed about automatic or mandatory immigration detention in some contexts,[76] it has been condemned in others.[77] And while 'three-walled prison' arguments characterizing immigration detention as 'voluntary'—whether in airports or border transit zones, on islands, or on account of non-cooperation with the authorities—have found traction in some jurisdictions,[78] including at a regional level,[79] such arguments have not held sway at an international level.[80]

Here we see that, although international law does not *per se* prohibit immigration detention, it should be regarded as subject to constraints ordinarily applicable to other forms of detention. This makes sense when we consider detention's inherent harm.[81] Indeed, as the Working Group on Arbitrary Detention (WGAD) has emphasized, arbitrary detention can never be justified and its prohibition should be regarded as absolute, suggesting that 'it is a non-derogable norm of customary international law, or *jus cogens*.'[82] In international law, immigration detention should therefore be the exception not the rule; that is, a measure of last resort only to be used in an individual case if less coercive and intrusive alternatives are unsuitable.[83] Regarding children, some have gone further, stating unequivocally that immigration detention of children is prohibited;[84] that is, it can never be in a child's best interests.[85]

The right of immigration detainees to humane treatment and respect for their inherent dignity is clearly stated in treaty and soft law forms.[86] It includes the prohibition on torture, cruel, inhuman, or degrading treatment or punishment.[87] Where States practise arbitrary or unlawful detention, the risk of other human rights violations is heightened. Furthermore, where a State does so knowingly and/or with wilful disregard for international standards, detention's inherent harm suggests that arbitrary or unlawful detention would itself constitute inhuman or degrading treatment.[88]

b. Jurisprudential Developments in Immigration Detention

Targeted international scrutiny of States' immigration detention practices is a relatively recent development. While such scrutiny is largely attributable to new mechanisms for prosecuting complaints,[89] it also highlights how the problem has grown. These developments have played an important part in shaping the scope and content of the right to liberty writ large, and particularly of non-citizens.

We cannot canvas here all jurisprudence relevant to immigration detention. However, several observations can be made about jurisprudential developments. First, much of the jurisprudence is post-Cold War, and has therefore been skewed by a context dominated by policies of *non-entrée* implemented (or procured) by countries of the Global North. This has shifted the focus away from the higher ideological purpose of liberation from oppression, to one revealing the oppressive (and racialized) underbelly of State sovereignty.

Secondly, we need to distinguish jurisprudence emerging through the UN architecture and the mix of robust and permissive standards and interpretations that have emerged at regional level, predominantly in Europe and the Americas.[90] In this connection, there is evidence that the high levels of judicial deference that have entrenched immigration detention at a national level,[91] have been echoed by some regional mechanisms.[92] Thus, for example, a Euro-specific (if not Euro-centric) position that elasticizes the requirement of 'necessity' to authorize immigration detention for 'administrative convenience' without examining individual circumstances has created

a split between EU and international jurisprudence regarding the permissibility of immigration detention.[93] However, even international standards have been critiqued for their ambiguity and taking interpretations of detention's 'necessity' beyond the non-punitive spirit of the Refugee Convention.[94]

Finally, since immigration detention is in essence biopolitical, often arising from a State's general policy to prevent certain categories of people from entering, residing or remaining in its territory, detention policies and practices often overlook or resist the international legal requirement to individualize the assessment.[95]

c. Expanding International Refugee Law's Contextual Vision

UNHCR was the first international agency to turn its attention to the problem of immigration detention, producing standards and guidelines under its protection and supervisory mandates.[96] It has indicated that detention is 'inherently undesirable',[97] should 'normally be avoided',[98] and may only be resorted to if less coercive and intrusive alternatives have been found not to be suitable in an individual case.[99] Although these standards have a refugee law specificity, much of UNHCR's soft law guidance applies *mutatis mutandis* to other migrants.[100] As such, it is capable of providing important support, elaboration, and guidance to those falling under the wider rubric of international human rights law.[101] So, while on its face the wider population of immigration detainees is beyond the scope and reach of international refugee law, there are good reasons for international refugee law to have a broader, deeper and more nuanced wider contextual vision that recognizes its scope for informing standards applicable to the immigration detainee population[102] and the risks of not doing so. This approach also ensures that analyses do not fetishize categorization on the basis of migration status.[103]

4. Rationalization

Despite a comprehensive international legal framework governing immigration detention, a striking dissonance remains between international standards and State practice. While State practice varies, its influence transcends jurisdictional boundaries, with cross-contaminating ripple effects that are far-reaching. As a State practice, immigration detention has 'emerged infectiously',[104] not least through mutually reinforcing copycat laws, policies, and practices.[105] A flagship tool of exclusion, it is used predominantly—although not only—by (or for) rich countries in the Global North, which are increasingly adept at using criminalizing and securitizing discourses to rationalize a hitherto exceptional measure.[106]

As a carceral border control measure, immigration detention's 'success' lies not in its impact but in the narratives that rationalize its use, not least as a ('non-punitive') deterrent.[107] As several scholars have noted, however, there is a dearth of empirical evidence of its effectiveness as a deterrent,[108] and abundant evidence of its damaging effects.[109] Nevertheless, emboldened by a striking judicial reticence in some jurisdictions to engage critically with immigration detention's claimed purpose, States continue to assume immigration detention to be a necessary part of border control, as a matter of sovereign right and indeed obligation.

This section considers two discursive themes through which States rationalize their use (and extraterritorial procurement) of immigration detention: criminalization and securitization. Conceptualized as 'exceptional', we see that immigration detention and attendant human rights violations have undergone a process of 'normalization'—even 'trivialization'.[110] Despite its purpose deficit[111] and evidence of its catastrophic human effects,[112] the institutional (and public) tolerance of immigration detention raises the biopolitical spectre of racialized anxieties about the threat of the 'other' as providing its ultimate underpinning.

a. Criminalization

Although in some States 'illegal' (that is, unauthorized) migration is (still) a criminal offence, in practice one of the most significant ways in which irregular migration and the right to seek asylum are criminalized is through the arbitrary use of immigration detention—which is civil in nature—for deterrent or punitive purposes. Although an administrative form of detention, such use effectively imposes quasi-criminal sanctions for conduct that is not inherently criminal in character and often without safeguards regarded as integral to criminal justice systems.[113] Pervasive discourses of illegality have the effect of criminalizing unsolicited migration, arguably '[biting] most sharply at the asylum end of the immigration continuum'.[114] Immigration detention therefore holds a central and symbolic place within the broader phenomenon of using criminalizing discourses to denigrate migrants' motives. While reinforcing populist perceptions of criminality and deviance, *non-entrée* policies are discursively framed as measured expressions of the sovereign power of exclusion.[115] Crucially, it is the *administrative* character of immigration detention measures that insulates them from scrutiny, exacerbating the detainee's uncertainty about whether she is getting closer to a future she seeks or fears. Entangled in this uncertainty, the possibility of indefinite detention causes particularly high levels of anxiety.[116] In the result, discourses of deviance at once criminalize immigration detainees, deem them unworthy even of due process safeguards, and crush hope.

Although States commonly deny a punitive purpose to immigration detention,[117] in the absence of any other clear purpose, staff and detainees who operationalize and experience it are left to discern its purpose.[118] As Bosworth notes, while immigration detention's 'why' eludes them, they try to do so with both 'confusion and ambivalence', making sense of it by relying on parallels with the prison.[119] Significantly, many of those charged with overseeing detention 'compare themselves to prison officers'—or have backgrounds as prison officers—and find it 'hard to identify a vocabulary for understanding their work and its rationale in terms that [are] not penal'.[120] Unsurprisingly, therefore, 'prison cultures' are generated in administrative detention environments where power differentials heighten vulnerability to, and therefore the likelihood of, humiliation and abuse.[121]

b. Securitization

National security considerations are not new to international refugee and human rights law.[122] However, historically they were both limited and exceptional. More recently, the post-Cold War 'refugee crisis' of the 1990s and later the 11 September attacks that heralded the beginning of the so-called 'War on Terror' has enabled securitization discourses to assume a new prominence, acquiring a centrality in the development and rationalization of migration control measures.[123] Like criminalization discourses, securitization discourses have become part of both immigration detention's rationalization and its operationalization.[124] The social construction of unsolicited migration as a security question combined with immigration detention's symbolic power as a technology of control means security considerations have become embedded in immigration detention's institutional logic.[125]

The context of the 'War on Terror' also evokes an analogous form of detention—that of wartime internment as a security measure. In the context of immigration detention, legitimising discourses reminiscent of wartime purposes of protection and prevention from threat and hostility serve concurrent goals of cultivating fear and then appeasing the fearful. As such, an understanding of the history of internment of 'enemy aliens' during wartime and its securitized underpinnings may therefore help explain the rapid expansion of the use of immigration detention as a peacetime form of containment.[126] Reflecting on this history of internment, we can see that securitization discourses and anxious nationalism may construct 'friendly' foreigners as people in relation to whom there is a 'perpetual hostility', that is, as 'enemy aliens'.[127]

This trajectory reveals how such discourses construct a 'myth of invasion', presenting unauthorized migration as a threat, and transforming protection-seekers and many other non-citizens, hitherto 'friendly aliens' as a matter of law, into 'enemy aliens' framed as a threat to sovereignty.[128] These discourses have produced an environment in which

immigration detention has been able to flourish, legitimizing the use of (structurally and physically) violent measures that suppress the humanity of the 'other'.[129] Thus, international standards notwithstanding, the dominance of these discourses ensures that the primary logic of immigration detention remains biopolitical, obfuscating its deliberate harm.[130] It is little wonder that the WGAD has called for it to be gradually abolished.[131]

5. Looking Ahead

In September 2016, in the face of unprecedented levels of migration, the UN General Assembly unanimously adopted the New York Declaration for Refugees and Migrants. The New York Declaration emerged from a Summit that sought to recognize all refugees and migrants as rights holders and to condemn acts and manifestations of racism, xenophobia, and other forms of intolerance. The Declaration reaffirmed the importance of the international refugee regime and contained wide-ranging commitments by UN Member States to strengthen and enhance mechanisms to protect people on the move, whether refugees or migrants. It paved the way for two new global compacts in 2018, respectively covering refugees, and safe, orderly, and regular migration.

Although in this volume it may seem counterintuitive to turn to the Global Compact for Safe, Orderly, and Regular Migration (GCM), rather than its refugee counterpart, the Global Compact on Refugees (GCR), on the question of immigration detention there are good reasons for doing so in terms of both content and application. The GCM lays out 23 objectives, one of which addresses the right to liberty in detail, committing States to 'use immigration detention only as a measure of last resort and work towards alternatives' and spelling out eight ways of realizing that commitment.[132] The GCM position on detention is also consistent with both international refugee and human rights law standards as well as UNHCR's strong institutional commitment to steer State practice 'beyond detention'.[133] Furthermore, the GCM, which clearly extends to protection-seekers with irregular migration status and affirms the social and political reality that clear distinctions between refugees and other migrants cannot always be drawn,[134] provides a lens through which to consider several avenues for tackling the problem of immigration detention.

a. (Mis)using Fragile Legal Identities

States that detain non-citizens commonly justify doing so through the (mis)use of fragile legal identities. The construction of these identities may exploit charged terms such as 'infiltrators' that fuel fear and hostility,[135] as well as binary distinctions between, say, the 'real' or 'genuine' refugee and the 'illegal' migrant or 'bogus' asylum seeker. Thus, immigration detention is excused or explained on the basis of ascribed identities that imply deviance and criminality. This phenomenon has been described as a kind of 'categorical fetishism'[136] whereby people are shoehorned into particular categories; and then, *as a category* their rights are determined or dismissed. The effect of this is profound. As Crawley and Skleparis argue, '[t]his is not merely an issue of semantics. Categories have consequences';[137] and in this context, it is people in power who choose, use, and impose both the categories *and* consequences.

Even where legal texts are seemingly neutral, the distinctions and categorizations upon which law insists cannot be regarded as innocent.[138] Given that immigration detention is a prime site for categorical fetishism, the GCM lens underscores the imperative to consider the broader issue of immigration detention, not just its application to protection-seekers. This approach recognizes the commonalities, vulnerabilities, and intersectionality of the refugee and migrant experience, and averts the intellectual risk of sanctioning (even tacitly) detention of some non-citizens by privileging the rights and needs of others based on assumptions about worthiness. In this connection, it is salutary to recall that the Refugee Convention itself conceptualized and (mis)used fragile legal identities through which the 'worthy' refugee was a European 'insider'.[139]

b. A Paucity of Data

As an area of public administration, immigration detention is often practised in a manner that is opaque,[140] even secretive.[141] A paucity of data creates an overarching contextual challenge in the examination of State practice. Statistical data that disaggregates detained protection-seekers from other immigration detainees is notoriously difficult to obtain. Even where statistics are available, they are often politicized and

unreliable. Whether the resultant data deficit is the product of purposeful reticence or lack of capacity,[142] these failures mean that detailed statistics cannot be readily or usefully disaggregated, analysed, and compared,[143] even regarding children.[144] This data deficit has both legal and political implications, inhibiting comprehensive and evidence-based policy review and development, and undermining transparency and accountability. It is therefore incumbent civil society, including on the academy, to undertake research that recognizes the need for, and collects, clear and accurate data that can be readily disaggregated. Given its objective to '[c]ollect and utilize accurate and disaggregated data as a basis for evidence-based policies', the GCM is an appropriate lens through which to do so.[145]

c. A Possible Research Trajectory

While there may be undulations in the intensity (and harshness) of State practice, looking ahead there are few indications that immigration detention will cease to be a serious legal and public policy issue in the coming decades. Processes of legal investigation through strategic research and litigation, including through avenues such as the law of tort, continue to hold the promise of justice. Legal claims that unsettle assumptions that detention and related border control policies represent 'the last major redoubt of unfettered national sovereignty'[146] are indispensable.

However, while it is crucial to hold States to account by better identifying, understanding, harnessing, and strengthening international standards, the enduring gap between those standards and State practice means that it is not enough to do so. To help bridge that gap, we need to take the further step of trying to understand how and why immigration detention has become so widely (mis)used and unexceptional.

The GCM offers a trajectory along which constructive research opportunities lie for strengthening law, policy, and practice. It recognizes immigration detention to be an area where migrants and refugees face many common challenges and similar vulnerabilities.[147] It also makes visible the extent to which criminalizing and securitizing discourses are at the heart of immigration detention's policy rationale.[148] In this connection, three areas for academic research merit more focused multidisciplinary attention: expanding the use of alternatives to detention in the face of immigration detention's purpose deficit; addressing the data deficit as a way of enhancing accountability for its

human effects; and strengthening cross-sectoral and collaborative forms of participatory and longitudinal research so that the voices of those with lived experience of immigration detention are better able to inform policy.[149]

6. Conclusion

As States use increasingly cynical means to avoid compliance with their international obligations, whether through the deployment of legal fictions or more audacious measures, it is imperative that we think about and beyond immigration detention. For, despite reasonably robust international standards, a growing body of (sometimes damning) regional and international human rights jurisprudence, and increased attention on this issue on the part of UN special mechanisms and regional mechanisms, the deep cruelty of immigration detention remains a festering sore. Understanding law and its possibilities remains crucial. However, paying attention to its justifications and rationalizations, its history and context, and the voices of those it affects, will reveal more about what law is and does, and the mischiefs of which it is capable, than doctrinal analysis can do alone.

CHAPTER 53

THE RIGHT TO WORK

CATHRYN COSTELLO AND COLM Ó CINNÉIDE*

1. Introduction

Article 23(1) of the UDHR provides that 'Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment'. This composite right, whose distinctive facets are protected by a range of binding treaties, may be characterized as the 'right to decent work'. In this chapter, references to the 'right to work' connote this composite right.[1] The right cuts across the traditional bifurcation between civil and political, and socio-economic rights, and is also informed by core International Labour Organization (ILO) labour standards.[2]

To explore its application to asylum seekers and refugees, Section 2 analyses the right under international human rights law of global scope, in particular under the International Covenant on Economic, Social and Cultural Rights (ICESCR).[3] While that instrument is often perceived as being normatively weak, due in part to a misunderstanding about the 'progressive realization' standard, we highlight States' immediate

[3] Other pertinent provisions, not examined due to limitations of space, include CEDAW, art 11(1)(a); CERD, art 5(e)(i); CRC, art 32; Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families (adopted 18 December 1990, entered into force 1 July 2003) 2220 UNTS 3, arts 11, 25, 26, 40, 52, and 54; and Convention on the Rights of Persons with Disabilities (adopted 13 December 2016, entered into force 3 May 2008) 2515 UNTS 3, art 27.

'minimum core' obligations under the right to work. Section 3 examines the right under African, Inter-American, and European regional human rights mechanisms. Some deprivations of the right to work may entail breaches of regional treaties, both directly (for example, under article 15 of the African Charter of Human and Peoples' Rights, the right to work) or indirectly (for example, under article 8 ECHR, on life or article 3 ACHR, the right to juridical personality). Restrictions on the right to work may also contribute to violations of absolute rights, such as the prohibitions on inhuman and degrading treatment, or forced labour.

Taking this normative backdrop into account, we examine in Section 4 two possible means of securing this right. First, we analyse domestic litigation, with illustrations from four domestic systems—South Africa, Hong Kong, the UK, and Ireland. Secondly, we examine how the right has been 'leveraged' transnationally in recent initiatives to encourage States hosting many refugees to grant the right to work, looking at processes focusing on Turkey, Jordan, and latterly Ethiopia. We note that while these processes, and the Global Compact on Refugees (GCR) with its focus on 'self-reliance', may increase access to work for *some* refugees, their overall impact on access to decent work is as yet questionable.[4]

Before we turn to the doctrinal material, it is important to highlight the bleak situation that confronts asylum seekers and refugees. Both Mathew[5] and Zetter and Raudel[6] document the widespread limitations on asylum seekers' and refugees' right to work globally. Most refugees are in the Global South, where their access to work is often greatly limited by practices ranging from outright bans to highly restrictive permit systems. In the Global North, bans on asylum seekers working are relatively common, often combined with restrictions on place of residence and free movement (which in themselves hinder access to work). Moreover, when asylum procedures are protracted and/or fail to recognize refugees or siphon them into insecure statuses, the formal right of access to work enjoyed by recognized refugees is rendered ineffective.

Globally, welfare payments and/or humanitarian assistance are often imagined to compensate for this lack of legal access to work. However, these funds, even if they are available, rarely provide an adequate standard of living, so asylum seekers and refugees must find some way to earn their living—usually in the 'informal sector'. This term encompasses diverse forms of work, and in many States, the informal sector accounts

for most work.[7] The informal sector is generally underregulated and exploitative, reflecting gendered and racialized hierarchies (as does formal work). Yet, the 'informal sector' may also include self-employment and commercial activities that offer better conditions than 'formal' employment, in particular if 'formality' connotes working under highly restrictive migration statuses.[8] These generally entail increased dependency on employers, in-built risks of exploitation, and even forced labour.[9] Gaining a deeper understanding of 'informal' work is an urgent task for those who seek to advocate and work for better refugee work rights.[10] Finally, this chapter focuses on the rights of adults. Child labour is often prevalent amongst refugee communities when other economic opportunities are foreclosed, and raises distinctive human rights issues in need of deeper scholarly attention, which are beyond the scope of this chapter.[11]

2. The Right to Work in International Human Rights Law

a. The Dual Value of the Right to Work

The right to work has both instrumental and intrinsic value. Its instrumental value lies in the fact that work enables individuals to participate in social, economic, and political life, and crucially to earn a livelihood. Work is also intrinsically valuable, as people derive dignity and self-worth from their engagement with other people and their environments through work. Both aspects are widely recognized. The UN Committee on Economic, Social and Cultural Rights (CESCR) General Comment 18 acknowledges that work is both 'essential for realizing other human rights' and 'an inseparable and inherent part of human dignity'.[12]

The 'dual value' of this right is practically important, in particular for asylum seekers and refugees subject to prohibitions on working. States sometimes attempt to argue that providing financial support justifies work restrictions. However, while such financial assistance may provide a livelihood, it does not address the denial of the dignity-enhancing role of work. This is a key aspect of the right, so as is discussed further below,

even if the right to an adequate livelihood (article 11 ICESCR) is guaranteed, States are obliged to respect the intrinsic value of access to dignified work.

b. The Substantive Scope of the Right to Work in ICESCR

The affirmation of the right to decent work in article 23(1) UDHR finds binding expression in several international human rights treaties, most notably articles 6 and 7 ICESCR. Article 6 provides that individuals should enjoy free choice of labour ('work which he freely chooses or accepts'), and obliges States parties to take 'appropriate steps to safeguard this right' in order to achieve 'steady economic, social and cultural development and full and productive employment' under 'conditions safeguarding fundamental political and economic freedoms'. Article 7 ICESCR specifies the right to 'just and favourable conditions of work'. In interpreting article 6, the CESCR has emphasized that while it does not create a right to obtain employment as such, it 'affirms the obligation of States Parties to assure individuals their right to freely chosen or accepted work', encompassing the right 'not to be deprived of work unfairly' or to be 'forced in any way whatsoever to exercise or engage in employment'.[13] Furthermore, '[w]ork as specified in article 6 of the Covenant must be decent work', which 'provides an income allowing workers to support themselves and their families' and must be compatible with the 'physical and mental integrity' of the worker.[14] The Committee interprets ICESCR as requiring States to secure the 'following interdependent and essential elements' of the right to work,[15] namely (i) *availability*, in the sense that States parties must establish specialized services to assist and support individuals in finding employment;[16] (ii) *accessibility*, in the sense that States must prohibit discrimination in access to employment, and also implement national policies to promote equal access to the labour market;[17] and (iii) *acceptability*, in the sense that States must take steps to protect the rights of workers to enjoy just and favourable conditions of work, and to protect vulnerable categories of workers against exploitation—including by reducing 'to the fullest extent possible the number of workers outside the formal economy'.[18]

These obligations are often wrongly written off as 'soft'. However, article 2(1) ICESCR obliges States to give effect to their obligations under the Covenant 'individually and through international assistance and cooperation . . . to the maximum of [their] available resources, with a view to achieving progressively the full realization of the rights recognized in the present Covenant by all appropriate means'. Article 2(2) builds on this general requirement by requiring States parties to guarantee the Covenant rights 'without discrimination', while article 4 provides that any limitations on the enjoyment of these rights must be 'compatible with the nature of these rights and solely for the purpose of promoting the general welfare in a democratic society'. The reference to 'progressive realization' is often wrongly taken to dilute the ICESCR duties generally, but

[13] ibid para 4. [14] ibid para 7. [15] ibid para 12. [16] ibid para 19.
[17] ibid para 12. [18] ibid para 10.

legally, some obligations thereunder are of immediate effect, and subject to non-regression.[19] Obligations of immediate effect relate to the 'minimum core' of the rights, which in relation to the right to work include (i) ensuring non-discriminatory access to employment, (ii) taking measures to avoid labour exploitation, and (iii) adopting national employment strategies targeting 'disadvantaged and marginalized individuals and groups'.[20] This set of minimum core entitlements recognizes the intrinsic value of work, and is the minimum level of action that States are obliged to undertake under the Covenant.[21]

c. The Personal and Geographic Scope of the Right to Work in ICESCR

Article 6 ICESCR applies to 'everyone'. Its universal personal scope is buttressed by the non-discrimination guarantee in article 2(2), part of the 'minimum core'. Accordingly, as the CESCR has noted, article 6 and other ICESCR rights apply 'to everyone including non-nationals, such as refugees, asylum seekers, stateless persons, migrant workers, and victims of international trafficking, regardless of legal status and documentation'.[22] In its General Comment 23, the CESCR affirmed that article 7 ICESCR is a 'right of everyone, without distinction of any kind', specifically mentioning 'workers in the informal sector, migrant workers, workers from ethnic and other minorities, . . . refugee workers and unpaid workers'.[23] The Committee further explicitly acknowledged the vulnerability of refugees due to their 'often precarious legal status', accordingly asserting that States should 'enact legislation enabling refugees to work and under conditions no less favourable than for nationals'.[24] Notably, this 'national treatment' standard is higher than the requirement under the Refugee Convention. This reasoning applies equally to article 6 ICESCR.

However, there is a complicating factor. While article 2(2) enshrines non-discrimination, article 2(3) provides that '[d]eveloping countries, with due regard to human rights and their national economy, may determine to what extent they would

[19] See generally CESCR, 'General Comment No 3: The Nature of States Parties' Obligations', UN doc E/1991/23 (14 December 1990); Magdalena Sepúlveda Carmona, *The Nature of the Obligations under the International Covenant on Economic, Social and Cultural Rights* (Intersentia 2003); Economic and Social Council, 'The Limburg Principles on the Implementation of the International Covenant on Economic, Social and Cultural Rights', UN doc E/CN.4/1987/17, annex (8 January 1987) (Limburg Principles).

[24] ibid para 47 (e).

guarantee the economic rights recognized in the present Covenant to non-nationals'. The term 'developing countries' here is not defined, however, its usage within the UN offers clarity.[25] Article 2(3) thus appears at first glance to permit the States that host most refugees to deny their economic rights. However, we do not share the view that the provision is really 'potentially fatal…for the overwhelming majority of refugees',[26] when interpreted correctly. As a general matter, article 2(3) is a potential exception to the general prohibition on non-discrimination in article 2(2), and should be interpreted narrowly.[27]

To rely on article 2(3), States must have 'due regard to human rights', and so may not rely on article 2(3) to breach any non-economic rights under the Covenant, or indeed other human rights treaties. While the 'right to work' is clearly an 'economic right',[28] article 2(3) does not provide a basis for any work rights restrictions that may also entail breaches of, say, the right to be free from slavery or forced labour, or other non-economic rights.[29] Article 2(3) cannot be used to limit rights under other human rights treaties, including the right to work under regional treaties.[30] Secondly, the provision requires 'due regard' to the 'national economy'. To establish a rational degree of connection between a work rights restriction and the 'national economy', States would need to demonstrate that excluding non-nationals is economically beneficial. However, labour market exclusions generally are not. They risk creating a shadow workforce in the informal sector, ripe for exploitation, undercutting local workers' rights in the affected sector. Far from bringing benefits to the national economy, work rights restrictions are often counterproductive.[31] Notably, it appears that no State has explicitly invoked the provisions of article 2(3) to justify discrimination against non-nationals.[32] Finally, in light of the ambiguities of the text, we may also have regard to the *travaux préparatoires*,[33] which reveal that article 2(3) was inserted to ensure that formerly colonized States could take action to prevent non-nationals playing a dominant role in their economic life.[34] In other words, article 2(3) was intended to permit newly independent States to limit the role of a formerly dominant colonial elite, rather than to target a vulnerable population.

Our conclusion on the general applicability of article 6 ICESCR to refugees and asylum seekers on a non-discriminatory basis means that bans and other significant restrictions on asylum seekers and refugees working are arguably in breach, unless they can be shown to be objectively justified under article 4.[35] While article 4 permits some limitations on rights, they must be 'compatible with the nature of these rights and solely for the purpose of promoting the general welfare in a democratic society'.[36] Given that non-discriminatory access to work is part of the 'minimum core' of the right to work, and so essential to human dignity, States should have to show compelling justification for denying asylum seekers and refugees access to employment. Similarly, State failures to protect refugees and asylum seekers against labour exploitation will also *prima facie* breach the 'minimum core' requirements of article 6, as will their exclusion from national employment plans: again, any limitation of these core rights should have to be supported by compelling justification.

It is noteworthy that only two States parties to the ICESCR have entered reservations relating to the scope of article 6 ICESCR—France and the UK.[37] However, such reservations must be interpreted narrowly, and subject to the overall object and purpose of ICESCR to protect human dignity.[38] As such, the UK reservation is dubious, as restrictions on their access to work will have little or no tangible impact on the 'employment opportunities' of workers in general.

The CESCR gives effect to these obligations in its monitoring via States' periodic reports, and of late individual complaints.[39] The Committee increasingly expresses concern about high unemployment amongst refugees, calling on States to take concrete and specific measures.[40] It also calls on States to remove work bans on asylum seekers, to expedite asylum processing, and to take measures to eliminate discrimination in work against refugees and asylum seekers.[41] This jurisprudence remains a work in progress. Uncertainty persists as to the exact scope of State obligations to those with irregular

migration status, and where, for instance, unregistered asylum seekers and unrecognized refugees fall in that discussion.[42]

d. The Right to Work under the Refugee Convention

The Refugee Convention contains detailed provisions on work, reflecting its aim to create a legal status for millions of refugees left in limbo in Europe at the time of its drafting. Its rights catalogue is wide, including the right of association and to form trade unions (article 15), access to wage-earning employment (article 17), liberal professions (article 19), public relief (article 23), protection of labour legislation and social security (article 24), and the issuance of travel documents (article 28). Famously, Henkin, as US representative in the drafting process, stated that 'without the right to work all other rights were meaningless. Without that right no refugee could even become assimilated within his country of residence.'[43] This section is brief, as these provisions are examined thoroughly elsewhere.[44] We share Edwards' conclusion that 'the right to work under Article 6 ICESCR is arguably wider in scope than the [Refugee] Convention'.[45] Crucially, under article 5 of the Refugee Convention, refugees will usually be entitled to benefit from the higher standards under ICESCR.

Notwithstanding their centrality, the work-related rights reflect the compromises of the drafting process, in particular the assumption that an immediate work right for refugees was not feasible given the post-war devastation of European economies. Article 17 on 'wage-earning employment' is applicable to 'lawfully staying' refugees, with the standard of treatment set as 'the most favourable treatment accorded to nationals of a foreign country in the same circumstances'.[46] In contrast, article 18 on 'self-employment' is applicable to the wider category of refugees, those 'lawfully in' the territory, but at a lower standard of protection, namely that applicable to 'aliens generally in the same circumstances', as is article 19 on 'liberal professions'.

'Lawfully staying' in article 17 on employment connotes a stronger 'degree of attachment' than 'lawfully in' in article 18 on self-employment, to borrow Hathaway's phrase.[47] In the French text, 'lawfully staying' is 'résident reguliѐment'. Once a refugee

[47] See further Hathaway, *Rights* (n 45) ch 3.

is recognized (including on a *prima facie* basis) undoubtedly, she should thereby be treated as 'lawfully staying'. Crucially, 'lawfully staying' should also include asylum seekers, if their claims are not dealt with within a reasonable time.[48] 'Lawfully in', the standard for self-employment, is a weaker degree of attachment, which includes those admitted for any period, including asylum seekers, and those remaining under temporary or other informal protections.[49]

The right to work is to be accorded at the 'most favourable foreigner' standard.[50] To illustrate, this should mean that refugees are granted the same work rights as EU citizens (in EU Member States) or nationals of any such States who enjoy special rights under bilateral or regional agreements. Otherwise, if there is no such 'privileged' foreigner, the Michigan Guidelines urge that the appropriate comparator be 'permanent residents'.[51] Significantly, Edwards notes that most of the many reservations to the right to work under the Convention purport to exclude refugees from the standard that ought to be applicable as 'most favourable' (ie that under regional and other preferential agreements) or clarify that article 17 does not preclude requiring refugees to get work permits.[52] For self-employment, the 'aliens generally' standard for the right to self-employment requires the State to treat refugees as it does other foreigners in general, which may offer little economic freedom in practice.

Overall, the Refugee Convention's work provisions are important, but limited. However, as already noted, by virtue of article 5 of the Refugee Convention, refugees are entitled to the benefit of higher human rights standards, which generally will be those under ICESCR, or in particular in Africa, under its regional human rights instrument.

3. The Right to Work in Regional Human Rights Law

a. The African Charter of Human and Peoples' Rights

The African Charter adopts an integrated approach to human rights, both civil and political, and socio-economic.[53] Article 15 recognizes that '[e]very individual shall have the right to work under equitable and satisfactory conditions'. The Commission's initial interpretation of the right to work has emphasized how it guarantees equal access to decent work for all, generating obligations on States to regulate the conduct of private employers as well as State organs. Its approach reflects the 'minimum core' requirements of article 6 ICESCR.[54]

48 See Michigan Guidelines (n 45) para 8.

54 Rachel Murray, *The African Charter on Human and Peoples' Rights: A Commentary* (OUP 2019) 389–97.

There is nothing in the Charter to indicate that refugees and asylum seekers are excluded from its protection. Indeed, the African Commission on Human and Peoples' Rights (ACHPR) has repeatedly affirmed the equal application of the Charter to national and non-nationals alike. While its jurisprudence has not focused on refugees and asylum seekers in detail,[55] in the case of *Rencontre Africaine pour la Défense des Droits de l'Homme v Zambia* it confirmed that States must secure the rights under the Charter to everyone within their jurisdiction, including non-nationals.[56] In a number of resolutions and comments on State reports, the Commission has also called for speedier processing of asylum applications,[57] as well as the integration of refugees into the host society.[58]

b. The Inter-American System

The Charter of the Organization of American States (OAS) recognizes the importance of the right to work. Article 45(b) of the 1948 OAS Charter states:

> Work is a right and a social duty, it gives dignity to the one who performs it, and it should be performed under conditions, including a system of fair wages, that ensure life, health, and a decent standard of living for the worker and his family, both during his working years and in his old age, or when any circumstance deprives him of the possibility of working.[59]

The legally binding American Convention on Human Rights (ACHR), later drafted under the auspices of the OAS, mainly covers civil and political rights. However, article 26 of the ACHR commits States parties to progressively realizing the socio-economic rights recognized in the OAS Charter, including the right to work. Furthermore, the San Salvador Protocol to the Convention, which protects various socio-economic rights, provides in article 6(1) that: '[e]veryone has the right to work, which includes the opportunity to seek the means for living a dignified and decent existence by performing a freely elected or accepted lawful activity'. Not every States party to the ACHR has ratified this Protocol.[60]

[60] The Protocol has been ratified by 16 OAS States.

Crucially, the Inter-American Commission and Court of Human Rights recognize the interconnectedness of civil and political, and socio-economic rights. When they interpret and apply the Inter-American rights, they take into account the dual value of the right to work.[61] In particular, the Commission and court have affirmed aspects of the right to work of undocumented migrants under the right to equality and the right to juridical personality. For example, in its *Advisory Opinion on the Juridical Condition and Rights of Undocumented Migrants*,[62] the court concluded that denying undocumented migrants protection against workplace exploitation would be discriminatory. In *Undocumented Workers v United States of America*,[63] the Commission deemed legal protection against workplace exploitation to be a 'civil right' enjoyed under the right to juridical personality, and held that a failure to provide proper remedies for such exploitation constituted unjustified discrimination contrary to the requirements of the OAS Charter. The reasoning would seem to apply to asylum seekers and refugees *a fortiori*.

c. The Council of Europe System

The Council of Europe system reflects the bifurcation between civil and political and socio-economic rights. The explicit right to work is enshrined within the weaker socio-economic instrument, the European Social Charter. However, it also enjoys a degree of indirect protection via the ECHR.

i. *European Social Charter*

Adopted in 1961, the European Social Charter (ESC) predated ICESCR by five years, was the first international human rights treaty on socio-economic rights, and was intended to complement the ECHR. The right to work is central to the ESC,[64] appearing in article 1, which requires States (i) to take positive steps to maintain high levels of employment through the implementation of adequately resourced national employment and job creation policies, and (ii) to protect individuals against discrimination, forced labour, and other forms of exploitation. The decency of work is protected under a number of other interconnected ESC rights, including in particular the detailed provisions of article 2 (the right to just conditions of work), article 3 (the right to healthy and safe working conditions), and article 4 (the right to fair remuneration).

[61] See in general Verónica Gómez, 'Economic, Social, and Cultural Rights in the Inter-American System' in Mashood Baderin and Robert McCorquodale, *Economic, Social, and Cultural Rights in Action* (OUP 2007).

[63] *Undocumented Workers v United States of America*, Inter-American Commission on Human Right Report No 50/16, Case No 12.834 (30 June 2016).

[64] Simon Deakin, 'The Right to Work' in Niklas Bruun, Klaus Lorcher, Isabelle Schomann, and Stefan Clauwaert (eds), *The European Social Charter and the Employment Relation* (Hart 2017).

The European Committee on Social Rights (ECSR) interprets article 1 and these other provisions systematically.[65] They are read as imposing a range of detailed positive obligations on States to ensure workers enjoy access to decent work, with the Committee monitoring compliance with these requirements through a State-reporting process and also a 'collective complaints' mechanism.

Unlike most other human rights treaties, the ESC does not generally apply to nationals and non-nationals alike. The Appendix to the ESC governing the scope of the Charter limits it to non-nationals of States parties.[66] However, the exclusion is qualified by a provision covering 'refugees as defined in the [Refugee Convention]'. For those who are 'lawfully staying in its territory', States are required to extend 'treatment as favourable as possible, and in any case not less favourable than under the obligations accepted by the Party under the said convention and under any other existing international instruments applicable to those refugees'. The ECSR interprets this provision as requiring equal treatment between refugees and asylum seekers and nationals, except where a States party can show a compelling justification for differential treatment, and crucially that refugees should in all circumstances enjoy the protection of the essential features of the relevant ESC rights.[67] This focus on the 'core' of ESC rights, which would appear to cover the central elements of the right to decent work as protected by articles 1–4 ESC, has again echoes of the core requirements of article 6 ICESCR.

ii. *Systemic Integration of the Right to Work into the ECHR*

When interpreting civil and political rights, the ECtHR takes into account that their effectiveness depends on access to work and other core socio-economic entitlements. This has resulted in a partial integration of right to work concerns into the ECHR jurisprudence.[68] In *Niemietz v Germany*, the court stated that article 8 (the right to privacy) includes 'the right to establish and develop relationships with other human beings', including in working life, as it is in that context that 'the majority of people have a significant, if not the greatest, opportunity of developing relationships with the outside world'.[69] By extension, the ECtHR has interpreted article 8 and other Convention rights, taken together with the right to non-discrimination set out in article 14, as requiring States to protect individuals against discriminatory barriers to employment. Thus, in *Sidabras v Lithuania*,[70] the ECtHR held that 'a far-reaching ban' on taking up employment violated article 8 ECHR. Notably the court's reasoning reflected the dual value of the right to work.[71]

[65] ÓCinnéide, 'The Right to Work in International Human Rights Law' (n 22) 99–122.

[66] The Appendix states that persons covered by the ESC's provisions 'include foreigners only in so far as they are nationals of other Parties lawfully resident or working regularly within the territory of the Party concerned'.

[71] Mantouvalou, 'The Protection of the Right to Work' (n 69) 329.

Article 4 ECHR (protection against slavery, servitude, and forced labour) is of growing importance. While the wrongs outlined in article 4 are extreme, forced labour, often emerges when migration status limits free choice of employment.[72] There are also well-established links between trafficking and refugeehood.[73] Article 4 ECHR imposes a range of positive duties on States to take action to prevent exposure to these wrongs, including an obligation to work transnationally.[74] By extension, article 4 ECHR also arguably requires States to take positive steps to avoid extreme labour exploitation—an obligation that may extend to reform migration status, including work bans, to reduce risks of such exploitation.[75] Restrictions on the work rights of asylum seekers may also contribute to inhuman and degrading living conditions, as the ECtHR recognized in *MSS v Belgium and Greece*.[76] Notably, asylum seekers at the time in Greece could apply for a work permit, but this was acknowledged as being ineffective. Depending on their impacts, then, restrictions on work rights may contribute to a finding of a violation of articles 8, 3, or 4 ECHR. Refugees may also rely on article 14 ECHR to protect against discrimination between them and other migrants.[77] The partial integration of right to work into the ECHR opens up legal avenues for contesting labour market restrictions on asylum seekers and refugees.

4. Contesting Work Rights Restrictions

Many restrictions on the right to work of asylum seekers and refugees are incompatible not only with the right to work, but also with other human rights standards. This section explores two modes of realizing these rights. The first mode is domestic litigation and the second relates to transnational political processes, including under the Global Compact. The latter could be conceived as an effort to secure the right to work 'through international assistance and cooperation' as required under ICESCR,[78] although this linkage is often not made explicit.

a. Litigating the Right to Work

The explicit protection of the right to work in constitutional systems varies considerably,[79] as does these systems' openness to international law.[80] This section examines litigation in South Africa, Hong Kong, the UK, and Ireland.

Under South Africa's original refugee legislation, refugees had the right to work but the legislation was silent on asylum seekers.[81] In practice, asylum seekers were left in rightless limbo during long asylum proceedings that generally led to rejection of their claims. But asylum seekers successfully challenged their economic exclusion. On work and self-employment, the South African Constitutional Court found that the restrictions in question violated human dignity.[82] However, this case law did not engage deeply with international human rights or refugee law, in spite of the South African Constitution's openness thereto.[83] Instead, the court emphasized the combined effect of the denial of the right to work and lack of State social support,[84] emphasizing avoiding destitution, rather than the right to work *per se*.[85] In spite of the constitutional protections, in 2020, new legislation entered into force[86] that is in clear tension with this constitutional jurisprudence. The new policy aims to require asylum seekers to live in processing centres near land borders. Further constitutional litigation is inevitable. The existing case law's weakness is that its focus on non-destitution may leave open the possibility to justify work rights restrictions provided welfare provision is ensured, which would be incompatible with international human rights law.

In Hong Kong the courts have developed some protections against *refoulement*.[87] In addition, a work ban was successfully challenged, albeit on limited grounds, in *GA v Director of Immigration*.[88] Given the constitutional limitations in that jurisdiction, the court reviewed the ban on 'reasonableness' grounds, an approach that incorporated some human rights considerations. On the facts, the refusal of the permission to work was deemed unreasonable, but only in those extreme cases where a work ban may lead to inhuman and degrading conditions, rather than the right to work *per se*.[89]

A somewhat similar approach has been taken in the UK, where the ECHR serves as the effective domestic bill of rights, since its incorporation by the Human Rights Act.[90] The UK's highest court, in *Adam and Limbuela*, held that welfare restrictions violated article 3 ECHR, where the work ban combined with withdrawal of welfare support exposed asylum seekers to a risk of destitution.[91] Later, the English High Court in *Tekle*

accepted that the right to work fell within article 8 ECHR, but higher court rulings decided that issue on other grounds.[92] The UK still has one of the strictest approaches in Europe to the right to work for asylum seekers, only permitting them to work after 12 months, and then only in very limited fields. These restrictions are now the focus of a broad-based campaign for legal change.[93]

The outlier in our selection is Ireland in terms of giving effect to the right to work *per se*. In 2017, after many years of unsuccessful political campaigns against the asylum system's restrictive features, the Supreme Court held that the ban on asylum seekers working was a violation of the constitutional right to work.[94] Notably, Ireland had not opted into the pertinent EU rules, so the ban persisted for the entire duration of the asylum process.[95] The court held that the right to work also applied to non-citizens, given its roots in human dignity, although some limitations to their work rights were permissible. Although Ireland's is a strictly dualist system, the court cited the ICESCR.[96] The implementation of the ruling has led to some labour market access for asylum seekers after nine months, although many other restrictive features of its asylum system remain.[97]

These examples illustrate that in diverse constitutional orders, courts have tended to focus on a minimum protection against destitution, rather than protecting the right to work *per se*. The rulings also reflect the ambiguous position of asylum seekers and refugees in these diverse constitutional orders. Further research is needed on this topic of the comparative constitutional protection of refugee rights, and its links with the realization of international rights, as this brief comparison exemplifies. As Lester has explored in this volume, in some regions, notably Latin America, constitutional protection of the right to work for at least some refugees has been effective.[98]

b. Leveraging the Right to Work

One of the strongest elements of the Refugee Compact is to support refugee 'self-reliance'.[99] Against this backdrop, and in parallel to the emergence of the Compact, a

number of initiatives have been taken that aim to increase refugees' access to work. This section briefly examines three of the most prominent 'deals', namely those with Turkey and Jordan, noting that the Ethiopian Compact is in its incipient stage.[100] While the GCR has led to some action on refugees' access to work in the Global North,[101] most of the focus has been on host States in the Global South.

i. *Turkey*

One example of a 'deal' that aims to improve refugees' rights, while also containing them away from donors' own territories and labour markets, is the March 2016 'EU–Turkey Statement'.[102] Syrian refugees' with 'temporary protection' status in Turkey did not initially enjoy the right to work. The Statement notes the 'progress already achieved' 'including Turkey's opening of its labour market to Syrians under temporary protection'[103] referring to Turkey's decision in January 2016 to grant the right to work. In spite of this 'progress', the right to work remains heavily restricted in practice, with work permits being costly and held by the employer. It appears that less than 1 per cent of Syrians in Turkey are employed under these permits,[104] with the gender breakdown 10:1 men to women.[105] The situation of refugees of other nationalities is even more precarious in Turkey, with requirements to reside in 'satellite cities'. Those in need of work generally evade these restrictions and work informally in major cities.[106]

ii. *Jordan*

Under the 2016 Jordan Compact, Jordan agreed with 'donor states' to grant up to 200,000 Syrians work permits in exchange for World Bank loans and improved market access to the EU for goods manufactured in designated Special Economic Zones (SEZs), provided that at least 15 per cent of the workers were Syrian.[107] As Lenner and Turner have explained, the SEZ element in particular failed to deliver, as refugees were neither willing nor able to work under the poor conditions in the relevant sector, where most workers are migrant women from Southeast Asia.[108] These women's tied migrant status

means they often live in dormitories, work long hours, and invariably leave their children, if they have any, in their home countries. Aside from the failed SEZ plan, the Compact has been impactful. Official data indicates over 150,000 permits have been issued.[109] In terms of its deeper impact, it remains unclear whether the work permit improves pay or working conditions.[110] One striking further finding in relation to the Jordan Compact is that 'access to self-employment... has become even more restrictive for refugees since the Compact, which, given the preference of women for home-based work, has a detrimental gender impact'.[111] Overall, the Jordan Compact has met with criticism, in particular from the perspective of ensuring decent work.[112]

iii. *Ethiopia*

The Ethiopian Compact has led to a shift in the right to work of refugees, albeit as yet only on paper. Initially, the Compact also focused on export-oriented industrial parks, but lessons were learned from the Jordan Compact's failures. At the end of 2019, its sectors and geographic areas remain to be determined. However, even aside from questions of implementation, the Compact rests on weak normative commitments. In particular, the 'Refugees Proclamation' ties refugee work rights to those granted to other non-citizens in Ethiopia, which are restrictive.[113]

iv. *Assessment*

Securing the right to decent work for refugees, in particular in developing countries, is challenging. These processes are assumed to be political 'deals' rather than binding treaties (although that is a matter for assessment). The 'parties' are host States and donors, with refugees absent from the table. Aside from the failure to engage with those most affected, without some clear benchmarking and monitoring, these deals can easily become empty promises, or even lead to a deterioration in refugee rights. It has been suggested that getting national governments on board is only part of the process, and that local engagement is crucial.[114]

Secondly, at present, these 'deals' often promise permits for refugees' *employers*, rather than for refugees themselves. Issuing permits to employers may limit free choice of employment, a vital element of the right to work. While many labour migration systems issue work permits to the employer rather than the worker, this practice is invariably a risk factor for exploitation. A recent study confirmed that refugees perceived a number of risks' to their proposed mode of labour market inclusion, including greater exploit-

ation risks as 'the power remained with employers' and 'a work permit (which was time-bound and conditional) was not the same as having the right to work'.[115]

A third set of concerns arises around the links between these processes and mobility restrictions. The Jordan Compact was initially framed around a 'zonal development model', which envisaged refugees working in SEZs and living in adjacent camps. The Ethiopian Compact initially also focused on SEZs. Other new models of 'self-reliance' piloted as part of the GCR implementation also focus on particular settlements.[116] Given that mobility restrictions generally hamper the realization of the right to work,[117] that these processes seem to normalize mobility restrictions, which are in themselves often a human rights violation, is itself of concern.

Concerning non-discrimination, serious issues around nationality, race, and gender discrimination arise. Many of the deals only leverage better rights for one particular group of refugees, ignoring the others, as both the EU–Turkey deal and the Jordan Compact exemplify. Underlying this explicit nationality discrimination may be race or ethnicity discrimination by proxy.[118] The processes outlined above also illustrate a stunning failure to consider women's rights, in particular the deeply gendered nature of work and care.

The processes discussed above reflect many of the structural global inequalities that underpin refugee containment. A further challenge emerges from the range of actors involved in these processes. Beyond these specific agreements discussed above, the World Bank now offers financing to support refugee inclusion.[119] The ILO has recently remerged into the refugee rights field.[120] The contrasting roles of the ILO and international economic institutions in the refugee regime are in need of greater scholarly attention.[121] Refugees have not been included in the decision-making process, and as Gordon concludes, '[d]ecent work for refugees will not be achieved as an add-on; it must be part of the plan from the beginning'.[122]

5. Conclusion

This chapter has demonstrated that the right to decent work in international human rights law, in particular its 'minimum core', applies to asylum seekers and refugees. Many contemporary restrictions on asylum seekers and refugees' access to work are arguably in breach of ICESCR and regional human rights treaties. Making the right to decent work effective is thus the key challenge, and as demonstrated, both domestic litigation and transnational leveraging often lose sight of the basic elements of decent work, instead focusing on minimal elements of anti-destitution, or forgetting the basic insight that decent work is not about empowering employers, but should empower refugees *qua* workers and employers. The chapter has identified many issues in need of greater scholarly attention throughout, in particular in relation to the 'informal' economy, gendered and racialized divisions of labour, and the role of law in both limiting work rights, as well as enabling decent work. The GCR and the Compacts suggest an unmooring of refugee protection from law and normative commitments. However, for these processes to be meaningful and effective, establishing participatory forms of monitoring and benchmarking is vital, as are clear commitments rooted in human rights.

CHAPTER 54

THE RIGHT TO EDUCATION

SARAH DRYDEN-PETERSON AND HANIA MARIËN

1. Refugee Education: Background and Context

At the end of 2018, 25.9 million people lived as refugees globally, and more than half were children under the age of 18.[1] Of these refugees, 80 per cent lived in a country that neighbours their conflict-affected country of origin, most of which are low- and middle-income countries.[2] One-third of refugees live in States categorized as Least Developed Countries.[3] This geography of exile matters for refugee children and their access to education. Most refugee children globally seek access to education in situations where national education systems are overstretched and where citizen children also struggle to realize their right to education.[4] In 2017, only 61 per cent of refugee children enrolled in primary school compared to 92 per cent globally; and at secondary levels, only 23 per cent of refugees had access compared to 84 per cent globally.[5] Yet these global access rates mask a large variation: most refugees live in parts of States where school access rates are far lower. For example, in the Turkana region of Kenya, where most South Sudanese refugees live, only 11 per cent of young people have access to secondary school compared to 48 per cent in Kenya as a whole, a national rate that is still only half that of global levels.[6]

[6] UNICEF, 'Turkana Social Sector Budget Brief (2013–2014 to 2015–2016)' (2017) <https://www.unicef.org/esaro/UNICEF_Kenya_—_2017_—_Turkana_Budget_Brief.pdf> accessed 20 April 2020.

Over the last 10 years, both the nature of conflicts from which refugee children flee, and the policies designed to fulfil their right to education have changed. The conflicts from which they have fled are increasingly protracted. In 2011, the average conflict in low-income countries lasted 12 years and in middle-income countries 22 years.[7] By 2016, the average length of exile for a refugee was estimated at between 10 and 25 years, up to three times as long as it was in the early 1990s.[8] This long-term nature of exile, for many young refugees lasting the entire duration of their possible education, has altered the focus of global refugee education policy. Prior to 2012, in most settings, refugees were educated in parallel schools, separate from national students and often following the curriculum and in the language of instruction of the country of origin.[9] The UNHCR Global Education Strategy (GES) 2012–16 articulated a new approach to the education of refugees based on their inclusion in national education systems.[10] The adoption of this new approach was swift. In 2010, only five of 14 of the largest refugee-hosting States[11] used the national curriculum and national languages of instruction to teach refugee learners but, by 2014, 11 of these 14 States did.[12] Subsequently, the New York Declaration for Refugees and Migrants and the Global Compact on Refugees echoed this inclusion effort.[13]

International human rights instruments, including the UDHR, the CRC, the ICESCR, and the Refugee Convention, provide a framework for the right to education for refugees. As a social right, and as reflected in the ICESCR, the right to education is to be progressively realized and requires positive action and allocation of funding. Like all human rights, it is dependent on action by government, the availability of public resources, and enforcement mechanisms.[14] The devolution of responsibility for the education of refugees to States through recent policy further entrenches the role of the State in respecting, protecting, and fulfilling refugees' right to education.[15]

This chapter explores the intersection of global and national frameworks for the right to education for refugees and its realization in the form of access to schools. Though some scholarship has discussed the right to education for refugees, much of the literature surrounding children's rights as related to migration and refugee status omits, or only briefly addresses, the right to education. As Bhabha explained related to child migrants, 'state intervention has been pulled in different directions because of a clash between two opposing normative frameworks—immigration control preoccupations on the one hand, and welfare protection (including child's rights) concerns on the other'.[16] A prevailing focus at the State level on a child's migration status, rather than status as a child, precludes attention to the right to education. As Pobjoy explains, States tend to focus on 'a child's status as a migrant (inevitably enlivening discourses of suspicion and immigration control) rather than their status as a child (more likely to evoke discourses of welfare and protection)'.[17] Furthermore, the limited literature addressing the intersection of refugee law and the right to education for young refugees has focused on European countries as opposed to those States in which most refugees live.[18]

In looking across States, with a focus on the low- and middle-income ones in which most refugee children live, we find that despite the widely embraced global articulation of the right to education for all children, the realization of the right to education is highly variable, being largely dependent upon children's State of asylum. As argued elsewhere, we find that refugees' access to education is 'caught between the global promise of universal human rights, the definition of citizenship rights…, and the realization of these sets of rights in everyday practices'.[19] This tension between universal rights and local implementation is also both the genesis and ongoing preoccupation of global institutions and legal frameworks, including in education.

In the remainder of this chapter, we use two analytical frames to explore the right to education for refugees. The first draws on Somers and Roberts[20] who argue that rights are multifaceted and exist at 'multiple registers'. They define these 'registers' as normative aspirations, codification, and doctrines, and the mechanisms and institutions of enforcement. The second analytic draws on what Bartlett and Vavrus[21] call 'multi-scalar' research, which includes comparisons on three axes. One axis of analysis is vertical, comparing laws and policies related to refugee education at global and national levels.

[21] Lesley Bartlett and Frances K Vavrus, *Rethinking Case Study Research: A Comparative Approach* (Routledge 2017).

The second axis of comparison is horizontal across regions and States. The third axis is transversal, over time, situating laws and policies of refugee education in historical and contemporary contexts. Our approach overall is sociocultural, focused on understanding how legal frameworks at multiple levels interact with refugees' lived experiences of access to education. We also situate refugees' realization of the right to education in the context of the marginalized nationals amid whom they typically live and seek access to education. We thus build on Bhabha's conclusion that children's lack of access to rights is often as a result of the 'structures of inequality embedded in society [that] are not adequately corrected by the available resources'.[22]

2. Obligations for Refugee Education: A Multi-scalar View

a. Refugees' Right to Education

i. *Legal Obligations under International Human Rights Law*

Enshrined in the UDHR is the right to education for all (article 26), 'without distinction of any kind' including on 'national . . . origin'.[23] The CRC, with 196 States parties, includes article 28 on the right to education, specifying that States must 'make primary education compulsory and available free to all', 'with a view to achieving this right progressively and on the basis of equal opportunity'.[24] While immigration status is not explicitly noted as grounds for non-discrimination,[25] article 2 of the CRC provides that the Convention rights accrue to 'each child within their jurisdiction without discrimination of any kind', including on the basis of national origin or other status.[26] A child's right to education is echoed in regional treaties as well. The African Charter on Human and Peoples' Rights (Banjul Charter), for example, articulates that every person, regardless of status, is entitled to an education. Non-citizen children, including refugees, are clearly included within these global and regional articulations of the right to education.[27]

The right to education in ICESCR requires States parties to provide free and compulsory primary education to all children, with no limits on this right as related to national origin or other status.[28] ICESCR recognizes States' obligations to the rights outlined

therein, including to education, 'to the maximum of its available resources'.[29] This availability of resources is critical to the realization of the right to education for refugees. It is one reason for which, in many nation-States, and 'for millions of people throughout the world, the enjoyment of the right to education remains a distant goal'[30] now, as it was in 1966 when the ICESCR was adopted, and in 1999 when the Committee on Economic, Social and Cultural Rights (CESCR) issued its General Comment No 13 on the right to education.

This General Comment of the CESCR recalls States' 'minimum core obligation to ensure the satisfaction of, at the very least, minimum essential levels' of each of the rights enunciated in the Covenant, including 'the most basic forms of education', as outlined in General Comment No 3.[31] General Comment No 13 moreover added the obligation to not only 'ensure the right of access to public educational institutions and programmes on a non-discriminatory basis' for primary education, but 'to adopt and implement a national educational strategy which includes provision for secondary, higher and fundamental education'.[32] Additionally, General Comment No 20 on non-discrimination in economic, social, and cultural rights explicitly notes that Covenant rights 'apply to everyone including non-nationals, such as refugees'.[33] While General Comments are not legally binding in themselves, they often have greater legal influence than the UNGA resolutions discussed below, as they provide an authoritative interpretation of a binding treaty.[34]

ii. *Legal Obligations under the Refugee Convention*

Article 22 of the Refugee Convention on refugees' education provides that Contracting States 'shall accord to refugees the same treatment as is accorded to nationals with respect to elementary education . . . [and] treatment as favourable as possible . . . with respect to education other than elementary education'.[35] Though article 22 has been critiqued as being somewhat vague in its definition of 'elementary education',[36] the right to education as outlined in this article is notably stronger than some other Convention rights because it applies as soon as a refugee is within the jurisdiction of a State, unlike some other rights that require lawful presence.[37] Moreover, while some Convention

[37] Hathaway (n 36) 597.

rights are to be granted to refugees at the same level of provision as other non-nationals, the right to education is to be guaranteed at the level provided to nationals.[38]

While 146 States are party to the Refugee Convention and 147 to the 1967 Protocol, there are notable exceptions, including States where large numbers of people seek protection: India, Lebanon, Malaysia, and Pakistan, for example. In addition, some States have made expansive reservations to these treaties. Egypt, for example, has a sweeping reservation to article 22 on education, objecting to the provision as it 'consider[s] the refugee as equal to the national'.[39] Ethiopia, Malawi, Monaco, Mozambique, Papua New Guinea, Timor-Leste, Zambia, and Zimbabwe have also registered their reservations about article 22, noting that they consider access to education for refugees a recommendation but not a legally binding obligation.[40]

iii. *Soft Law and Policy Commitments*

Various UN bodies have consistently reaffirmed the right to education. Recent pronouncements have contained a specific focus on refugees and other children affected by armed conflict, pointing out that the progressive realization of the right to education for these groups is particularly challenging. The Human Rights Council (HRC) 2008 Resolution on the right to education registers 'deep concern' about the almost half of out-of-school children globally who live in conflict-affected fragile States and calls upon States to guarantee the right to education for marginalized groups, including refugees.[41] The Special Rapporteur on the Right to Education's 2010 report focuses on the need for adequate educational legislation to guarantee the right to education for migrants, refugees, and asylum seekers and, in particular, notes that human rights law 'does not sufficiently address the question of binding obligations of States to take positive measures and it is largely unclear which distinctions between migrants and citizens are admissible and which are not'.[42] In response to this report, in July 2010, the UNGA passed a resolution on the right to education in emergencies.[43] This resolution recognizes 'that a large proportion of the world's children out of school live in conflict-affected areas and in natural-disaster-stricken regions, and that this is a serious challenge to the fulfilment of the international education goals, including millennium development goal 2'.[44] It calls upon States to make resources available for education in emergency settings, but does not address the particularities of the status of refugees.[45]

[44] ibid preamble. [45] ibid paras 7–8.

Again in July 2019, the UNGA affirmed the right to education, as a follow up to the 2008 HRC Resolution.[46] This new resolution continues to recognize the 'negative impact of climate change, natural disasters, conflict and crisis on the full realization of the right to education, the fact that a large proportion of the world's out-of-school population lives in conflict-affected areas'[47] and '*[c]alls upon* States to take all necessary measures, including sufficient budgetary allocations, to ensure accessible, inclusive, equitable and non-discriminatory quality education, and to promote learning opportunities for all, paying particular attention to girls, marginalized children, older persons, persons with disabilities and all vulnerable and marginalized groups, including those affected by humanitarian emergencies and conflict situations'.[48] The resolution does not specifically address refugee children.

The UNHCR Executive Committee (ExCom), composed of Contracting States to the Refugee Convention as well as non-party States hosting a significant number of refugees, has discussed the right to education for refugee children in several recent Conclusions. UNHCR ExCom Conclusion No 107 (2007) reaffirmed refugee children's right to education calling upon States 'individually and collectively, to intensify their efforts, in co-operation with the High Commissioner, to ensure that all refugee children benefit from primary education of a satisfactory quality, that respects their cultural identity and is oriented towards an understanding of the country of asylum'.[49] ExCom Conclusion No 47 (1987) moved beyond a recommendation for primary education to suggest that 'the High Commissioner consider the provision of post-primary education within the general programme of assistance'.[50] However, similar to the mentioned above pronouncements of different UN bodies, these UNHCR ExCom Conclusions are non-binding.

The right to education for refugees has recently been explicit in global education policy frameworks. Unlike the precursor Education for All and the Millennium Development Goals, the key policy document associated with Sustainable Development Goal 4, the Incheon Declaration, and Education 2030: Framework for Action, specifically references the educational rights and needs of refugee children.[51] Paragraph 11 of the Incheon Declaration states:

> Furthermore, we note with serious concern that, today, a large proportion of the world's out-of-school population lives in conflict-affected areas, and that crises, violence and attacks on education institutions, natural disasters and pandemics continue to disrupt education and development globally. We commit to developing more inclusive, responsive and resilient education systems to meet the needs of children, youth and adults in these contexts, including internally displaced persons and refugees.

The right to education has become more prominent in global refugee policies. The 2016 New York Declaration reasserts the right to education, for both primary and secondary schooling,[52] while the Global Compact on Refugees commits 'to expand and enhance the quality and inclusiveness of national education systems'.[53] The shift to focus on host States as responsible for refugee education has also been articulated at regional levels. In 2017, the Intergovernmental Authority on Development (IGAD) Member States issued the Djibouti Declaration on Refugee Education with the goal to 'integrate education for refugees and returnees into National Education Sector Plans by 2020'.[54] In 2018, UNESCO and the African Union issued the Nairobi Declaration and Call for Action on Education committed to 'making our educational systems more responsive, flexible and resilient to include refugees and internally displaced people, and increasing investment for Education in Emergencies and Crises'.[55] Latin American and Caribbean States issued the 2016 Buenos Aires Declaration which committed to 'making our education systems more responsive, adaptable and resilient in order to meet the rights and satisfy the needs of migrants and refugees'.[56] And in 2018, States in the Arab region adopted the Dubai Roadmap for Education 2030, stating that they 'remain dedicated to the inclusion of refugee children and youth systematically in national educational planning processes in order to monitor their participation and educational attainment'.[57]

b. National Implementation

National commitments to the right to education in international human rights law instruments vary. To show these patterns, we examine six of the top 10 countries hosting the largest number of refugees globally: Bangladesh, Ethiopia, Jordan, Lebanon, Turkey, and Uganda, as well as Tanzania and Kenya, two States on the forefront of provision of education to refugees over the past several decades.[58] All of these States are States parties

to the CRC, and none of them has made reservations pertaining to the right to education.[59] Similarly, all of these States are States parties to the ICESCR, with Turkey submitting a reservation to article 13(3)–(4) and Bangladesh to articles 10 and 13.[60] Out of these eight States, five are Contracting States to the Refugee Convention,[61] Bangladesh, Jordan, and Lebanon are not, and only Ethiopia has submitted a reservation to article 22(1).[62]

In a recent study of Education Sector Plans across 41 refugee-hosting nation-States, Zeus found that only one-third make reference to refugees.[63] Whether or not refugees are mentioned specifically in national legislation or policy, their right to education generally requires that they be treated equally with nationals. Yet national treatment as regards the right to education is rarely granted, across the range of commitments to international instruments. For example, while net primary and secondary enrolment for citizens in Uganda is 91 per cent and 22 per cent, it is 71 per cent and 12 per cent for refugees[64]; for citizens in Ethiopia, 85 per cent at primary and 31 per cent at secondary, compared to 67 per cent and 9 per cent respectively for refugees[65]; and for citizens in Jordan 92 per cent at primary and 64 per cent at secondary, compared to 57 per cent for refugees at primary and secondary combined.[66]

Furthermore, recent research points to ways in which non-discrimination in education is in fact not about education that is the same for refugees and nationals.[67] Instead, 'equal opportunity' as stipulated in article 28 of the CRC requires differentiation. Achieving the four As, as outlined in General Comment 13 on the Right to Education—availability, accessibility, acceptability, and adaptability[68]—may justify differential treat-

ment of children, such as mother-tongue instruction,[69] separate classes to catch up on missed schooling, provision for psycho-social needs,[70] and culturally relevant curriculum.[71]

c. Local Implementation

Across global, national, and sub-national data, we see variation. While refugees are typically unable to access education at the same rates as nationals,[72] local rates do not always follow the patterns that might be expected by global and national frameworks and laws. Practices at the very local level are a critical element to complement global, regional, and national-level analysis. Indeed, normative commitments at the local and individual level are a powerful force for realizing the right to education. Refugee youth, teachers, and school leaders in areas where refugees live often describe the 'felt responsibility' of ensuring refugees' right to education.[73] There is no systematic data on how and with what frequency decisions to permit—or deny—refugees admission to schools occur. However, a few examples from our own field-based data are illustrative.[74]

i. *Uganda, 2003*

The Kyaka area of Uganda first hosted refugees in the late 1950s and early 1960s when thousands of Tutsi fled to Uganda in the aftermath of the Hutu Revolution and the installation of an all-Hutu government in post-colonial Rwanda.[75] The Kyaka II refugee

settlement was created in 1959, and many of the refugees who came at that time stayed in protracted exile until 1994, when some, but not all, returned to Rwanda. After 1994, the Kyaka II settlement hosted primarily Congolese refugees and ethnically Hutu Rwandans. In force at this time in Uganda was the 1960 Control of Alien Refugees Act (CARA), which predated Uganda's ratification of the Refugee Convention and made no provision for refugees' access to education. Nonetheless, as the District Inspector of Schools for Kyaka County explained, the schools in the settlement 'are like any other schools'.[76] The District Education Officer for Kyenjojo District, in which Kyaka is located, further explained: 'I grew up and found that these people are studying together .... [T]here is no way you can say that refugees go there', he pointed to one side, 'and those who are not refugees go there', he pointed in the other direction. '[T]he goal is to have the child educated. So we don't separate them.'[77]

ii. *Kenya, 2013*

At a primary school, in the Eastleigh neighbourhood of Nairobi, Kenya, is a Kenyan government school that also serves refugees. In 2013, there were 30 teachers at the school, all of whom were Kenyan nationals. Of the 782 students, 73 per cent were refugees, mostly with origins in Somalia and some in Ethiopia. At the school, refugees were admitted 'on site', with no questions asked. Teachers and students explained that many come 'disguised' as Kenyans, given challenges they have faced trying to register at some schools; some borrow identification cards from neighbours; and many produce a 'mandate', the UNHCR-issued card identifying them as registered refugees. As the Deputy Head Teacher explained, however, this school admits all children even without these papers. Not even a birth certificate is a condition of enrolment, he said. The rationale for this process is clear to the Deputy Head Teacher: 'They have a right to education'.[78]

This right to education in Nairobi, while clearly perceived by the Deputy Head Teacher at this school, was not as obvious in national legal frameworks and in the experiences of students at this school who had also sought access to other schools. Although Kenya is a Contracting State to the Refugee Convention, government directives issued between 2012 and 2014 promulgated an encampment policy, whereby residence in urban areas was no longer permitted, all refugees needed to reside only in designated camps, and that '[e]very refugee and asylum seeker shall ... not leave the designated refugee camp without the permission of the Refugee Camp Officer'.[79] Despite a 2013 High Court ruling that this government directive was in violation of the national

Constitutional right to freedom of movement,[80] a later 2014 ruling upheld the directive of encampment.[81] A 2014 press statement by the Cabinet Secretary for Interior and Coordination of National Government on Refugee and National Security Issues further directed that 'All Kenyans are requested to report to the Police any refugees and/or illegal immigrants found outside the designated refugee camps'. Despite being in contradiction of these directives, the Deputy Head Teacher at this school acted on a 'felt responsibility' to uphold the right to education for the children who sought admission to his school.[82] The 2013 High Court ruling, however, was later upheld on appeal in 2017.[83]

iii. *Lebanon, 2016*

In 2016, over 1.4 million Syrians registered with UNHCR lived in Lebanon, equivalent to one-third of the Lebanese population.[84] Lebanon is not a Contracting State to the Refugee Convention and has not recognized that these Syrians are refugees. The government of Lebanon generally refers to Syrians as 'persons displaced from Syria' (a term which includes Palestine refugees from Syria, Lebanese returnees from Syria, and registered/unregistered Syrian nationals); 'displaced Syrians' (referring only to Syrian nationals); or 'persons registered as refugees by UNHCR'.[85] The government has required that all education of Syrians take place within public schools in Lebanon, implementing a second shift programme in 2013 whereby Lebanese children attended school in the morning and Syrian children used the same school buildings for an afternoon shift.[86] Enrolment was highest in primary education, particularly grades one and two. At the secondary level, less than 2 per cent of Syrians of this age group enrolled in school.[87]

A critical barrier for Syrian young people in accessing their right to education in Lebanon was establishing equivalency for their prior education.[88] By policy, school

directors were to accept only Lebanese Brevet (Grade 9) certificates or documentation certified by the Ministry of Education and Higher Education (MEHE), a process that was slow and unpredictable. Amal, a young Syrian who arrived in Lebanon in 2012, did not have this official approval. Yet, as Chopra and Dryden-Peterson documented, 'Amal found a generous Lebanese school Director who made an exception by swiftly enrolling her in his public senior secondary school without waiting for her equivalency certificates'.[89]

Access to higher education was even more elusive for Syrians in Lebanon at this time, as it often is in refugee-hosting States.[90] MEHE required Syrians to submit Lebanese Baccalaureate (Grade 12) certificates or an equivalent document from Syria, certified by MEHE.[91] This certification by MEHE also depended on proof of legal residence in Lebanon, a process that had been suspended by the GoL in 2015.[92] Even with proof of legal residence, establishing equivalence was not a straightforward process. When Azaa arrived in Lebanon in 2013,

> she learnt she would need to restart her university education. Embodying her name's meaning—courage—Azaa refused to cave. She petitioned her case directly with the Ministry of Education. She describes walking into a bureaucrat's office, setting her bag on his table and waiting quietly in front of him for 50 minutes. When he finally took notice, she proclaimed, 'I'm in the third year and you will put me in the third year and if you don't want to put me in the third year, I will stay in your office forever…I want to continue my education and whether you like it or not, I'm going to do it.' The bureaucrat eventually agreed, only after letting her know that she had a 'mind of a rock.' Azaa finally enrolled in her third and final year at university, continuing from where she had left off in Syria.[93]

Across diverse regions, States, and time periods, these examples illustrate that individual and local action rooted in a deep sense of normative obligation to children and appreciation of education as a universal human right often determines whether the right to education is realized, even in situations where that right has no legal basis. Studying local implementation is accordingly crucial to understanding law-in-practice. Local experiences warrant further scholarly attention in particular in order to understand the role of host communities and refugees themselves in realizing rights. Moreover, widening the range of local

cases studied would allow for rigorous comparative study to understand the determinants of the effectiveness of rights, a matter in need of greater scholarly attention.

d. Monitoring and Enforcement

The preceding sections have outlined the commitment to the right to education in binding international law and States' programmatic commitments, as well as its implementation at national and local level. This section examines the monitoring and enforcement of the right at the international level. While the CRC, ICESCR, and the Refugee Convention are legally binding on States parties, the justiciability and enforceabilty of the right to education varies. As the Special Rapporteur noted in his 2010 report, '[t]he mechanisms for the enforcement of the right to education are still at an embryonic and fragile stage of development'.[94] In addition, as Willems and Vernimmen describe it, '[t]he right to (access to) education is applicable to refugee children. However, due to the careful phrasing of international treaties of how this right is to be achieved, the question of how those rights can effectively be invoked against States remains delicate.'[95] Horsch Carsley and Russell's analysis of the right to education shows that the Refugee Convention, the CRC, and the ICESCR are amongst the least enforceable treaties in international law.[96]

At the global level, there are two important monitoring mechanisms attached to the ICESCR and the CRC respectively, while the UN Special Rapporteur on the Right to Education also has an important, if less formal, role. The CESCR, created in 1985, monitors the ICESCR. Its specification of the 'essential features' of the right to education in General Comment No 13 sets important benchmarks for monitoring, stipulating that education must be *available* in sufficient quantity for all; be *accessible* to everyone, without discrimination; be *acceptable*, meaning relevant, of good quality, and culturally appropriate; and *adaptable* to meet the changing needs of society.[97] This General Comment also explicitly affirms the right to education that meets these four criteria for refugees, noting that 'the principle of non-discrimination extends to all persons of school age residing in the territory of a State party, including non-nationals, and irrespective of their legal status'.[98] In addition, while still recognizing obligations of progressive realization, it clearly states that 'the obligation to provide primary education for all is an immediate duty of all States parties'.[99] In 2013, the Optional Protocol to the ICESCR created the possibility for individuals also to submit

complaints against signatory States.[100] Moeckli argues that this new enforcement mechanism increased the juridical powers of the ICESCR.[101] To date, no complaints pertaining to the right to education have been ruled on.

The CRC also includes monitoring and complaints mechanisms, with States parties obliged to submit period reports.[102] Individual complaints may be brought to the Committee against States that have ratified the Optional Protocol.[103] One case on the right to education has been adjudicated by this body, related to the eviction of a Roma family in France and its consequences for education. However, the case was declared inadmissible.[104] Pending cases as of June 2019 are all in Europe, with the exception of three in Georgia, three in Argentina, one each in Panama, Paraguay, and Chile, and one joint complaint filed by 16 children in five States related to climate change; only one is connected to the right to education, for an unaccompanied migrant child in possession of documentation who had not been assigned a tutor.[105]

The UN Special Rapporteur on the Right to Education is appointed by the HRC to examine and report back on the status of realization of the right to education in various country contexts or as connected to a particular theme, as in education of migrants, refugees, and asylum seekers in 2010, as described above.[106] The Special Rapporteur can also receive and investigate individual complaints. There are no specific sets of recourse to these reports or investigations, instead findings can be used by the HRC and the UNGA in promoting dialogue on actions that States could take to ensure the right to education, or otherwise exposing States to political pressure.[107]

Local communities and State institutions, such as schools, often act on normative commitments, absent legal and institutional frameworks, to ensure that refugees can enrol in schools and realize their right to education. New orientations to ensuring realization of refugees' rights, as codified in the Global Compact on Refugees, describe the shift of inclusion of refugees in national education systems, for example, as a formalization of this 'responsibility-sharing', when accompanied by mechanisms to financially

[100] *Optional Protocol* to the International Covenant on Economic, Social and Cultural Rights (adopted 10 December 2008, entered into force 5 May 2013) UN doc A/63/435.

support the primarily low-income countries that host and seek to educate refugees.[108] Such ideas of 'responsibility-sharing' are bolstered by ICESCR article 2(1) stating that States parties should undertake steps 'individually and through international assistance' to achieve 'progressively the full realization of the rights recognized in the present Covenant'.[109] Yet early evidence, as pertaining to implementation of the right to education, shows instead outsourcing of responsibility by Western States, shifting the 'big responsibility' of social services like education to refugee-hosting nation-States.[110]

3. Future Directions

Our analysis has purposefully taken a multi-scalar approach to the right to education for refugees, moving across global, regional, and national frameworks. In many cases, the challenges to refugees realizing their right to education are not legal ones, but instead derive from policies and practices of exclusion in resource-constrained environments. These policy and practice gaps are further exacerbated by the number of actors ranging from governments, international agencies, NGOs, and the private sector, who are working on refugee education, and resulting uncertainty about the responsibility each holds in the provision of services.[111]

Understanding of the right to education in legal scholarship has been broadly defined in terms of access to school enrolment. Access to education for refugees is limited, as seen in refugees' school enrolment rates which are low and, in most cases, lower than nationals. More research is needed to better understand the extent of the limited realization of the right to education as measured by access. This research must take into account that data about refugee enrolment can be unreliable because identifying refugees within schools can be difficult, both when data collection schemes do not include refugee status, and when refugees seek to blend in to avoid discrimination and other risks.[112] Moreover, while national enrolment data provide overarching trends in enrolment, rates of access to education typically vary widely between regions of countries hosting the largest numbers of refugees, as well as amongst groups within those regions. For example, children in rural areas, girls, and ethnic and linguistic minorities may have lower levels of access to education.[113] For these reasons we suggest that future research focus not only on between-State variation as our analysis has, but on within-State vari-

ation at the local level in the realization of the right to education for refugees, with particular attention to the most vulnerable groups within refugee populations.

Echoing the shift from a focus on access to education in the Millennium Development Goals to the quality of education in the Sustainable Development Goals, a growing body of school-based research forces consideration of whether access to education reflects the purposes of the right to education. The right to education, as an enabling right, means that it enables the realization of other rights; it is not an end in itself. The *4 As framework*, outlined in the CESCR General Comment No 13, provides a starting point for thinking about how to imbed the purposes of education in considering what is needed to realize the right to education: education must be available, accessible, acceptable, and adaptable. Article 29 of the CRC also anticipates the need to address quality within the rights framework, establishing the right to a 'specific quality of education'.[114] The Committee on the Rights of the Child further defines elements of the right to a specific quality of education, including curriculum which is of 'direct relevance to the child's social, cultural, environmental and economic context and to his or her present and future needs and take full account of the child's evolving capacities'.[115] There are both resource and political constraints, however, to realizing the right to this type of education for refugees, particularly within refugee governance systems that favour inclusion of refugees within institutions of the nation-State.[116] Inclusion of refugees in national education systems, in theory, could enable access to quality education through, for example, already trained teachers and recognized certification.[117] And yet the content and nature of what children learn in school, which is central to the realization of the right to a 'specific quality of education', is typically highly contentious within nation-States, even in settings where schools do not serve non-citizens for whom the duration of schooling in that place is uncertain.

As approaches to global governance of refugees continue to favour the authority and responsibility of the host State, including in the provision of education, an important area of focus for research, practice, and policy is how a national curriculum can be both directly relevant to a refugee child's social, cultural, environmental, and economic contexts as well as to States' interests, capacities, and resources. The benefits of adapting curricula to be responsive to needs of specific learners accrue not only to refugees but to the learning of whole school populations and to the collective development of States.

CHAPTER 55

THE RIGHT TO FAMILY REUNIFICATION

FRANCES NICHOLSON

1. Introduction

Refugees fleeing persecution and armed conflict often become separated from their families or have to leave family members behind. Border guards, armed groups, smugglers, or simply force of circumstance may separate refugee families in the chaos of flight. For refugees and other beneficiaries of international protection,[1] family reunification in the country of asylum is generally the only way to ensure respect for their right to family life and family unity. Their situation is thus different from that of other migrants, who can generally enjoy this right in their country of origin.

This chapter examines the extent of the rights to family life and family unity under human rights law both globally and regionally (Section 2), with the right to family reunification itself also receiving widespread recognition (Section 3). In practice, however, in order to realize these rights, refugee families must surmount numerous legal and practical obstacles that can render reunification a tortuous or even impossible undertaking (Section 4). Section 5 takes a children's rights perspective, focusing notably on the situation of adopted, fostered, and unaccompanied children. Section 6 concludes with suggestions for future research.

[1] This chapter uses the term 'refugee' to include all beneficiaries of international protection, except where refugees' treatment differs from that of beneficiaries of complementary/subsidiary international protection, in which case corresponding distinctions are made. The focus is on persons whose need for international protection has been recognized, though the rights to family life and family unity are relevant in other forced displacement contexts.

2. The Rights to Family Life and Family Unity

The rights to family life and family unity are enshrined in international and regional human rights instruments. They apply to everyone, including asylum seekers, refugees and others in need of international protection. The principle of non-discrimination and the protections accorded to children are particularly important. The content of these rights has been further defined by international and regional tribunals and courts, initially in the expulsion context.

a. International Human Rights Law

International human rights law recognizes the family as the 'fundamental group unit of society' and as 'entitled to protection and assistance'.[2] It affirms the right to marry and found a family[3] and that '[n]o one shall be subjected to arbitrary or unlawful interference with [their] privacy, family, home or correspondence'.[4]

The Human Rights Committee (HRC) interprets the right to family life as precluding States from expelling non-citizens if their right to family life would be breached. When one member of a family faces expulsion and other(s) in the family are entitled to remain, the HRC assesses 'whether or not the specific interference with family life can be objectively justified' by balancing 'the significance of the State party's reasons for the removal of the person concerned' against 'the degree of hardship the family and its members would encounter as a consequence of such removal'.[5] Factors it has taken into account in this assessment include whether deportation would result in family ties being 'irreparably severed'.[6]

The CRC sets out some of the strongest protections of the child's right to family life and family unity. Underpinning them is the principle of the best interests of the child.[7] The Convention affirms the child's right 'to preserve his or her . . . family relations' and 'not [to] be separated from his or her parents against their will', unless this is in her/his best interests.[8] States parties must deal with family reunification applications by a child or her/his parents 'in a positive, humane and expeditious manner' and ensure that no child is 'subjected to arbitrary or unlawful interference' with her/his family life.[9] States

parties must ensure asylum-seeking and refugee children, whether unaccompanied or accompanied, receive 'appropriate protection and humanitarian assistance' and must cooperate in family tracing 'for the purpose of family reunification'.[10] Thus, for refugees, the CRC 'is not merely an explication of children's rights, but also an expression of the rights belonging to the family'.[11]

The Refugee Convention does not specifically refer to the family, but the Final Act of the Conference of Plenipotentiaries, which adopted the Convention, considered that 'the unity of the family . . . is an essential right of the refugee' and recommended governments 'take the necessary measures for the protection of the refugee's family, especially with a view to ensuring that the unity of the family is maintained'.[12] As Jastram and Newland emphasize, these rights reflect a 'universal consensus' that family unity is part of respecting 'the family as a "group" unit'. Family unity is implicit in 'the right to marry and found a family'. It is also 'drawn from the prohibition against arbitrary interference with the family and from the special family rights accorded to children under international law'.[13]

b. Regional Human Rights Protections

Regional human rights instruments reflect these standards. The family is recognized as the fundamental group unit of society and as entitled to protection and assistance, for instance, in the American Convention on Human Rights (ACHR), the African Charter on Human and Peoples' Rights, and the African Charter on the Rights and Welfare of the Child.[14] The right to marry and found a family is confirmed, for example, in the ACHR, the ECHR, and the EU Charter of Fundamental Rights.[15]

Family life is protected from arbitrary or unlawful interference, *inter alia*, by the ACHR, EU Charter, and ECHR. Article 8 ECHR affirms, for instance, that there shall be no interference with the right to family life, and that exceptions must be 'in accordance with the law' and 'necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or . . . of the rights and freedoms of others'.[16]

[14] American Convention on Human Rights (adopted 22 November 1969, entered into force 18 July 1978) 1144 UNTS 123 (ACHR) art 17(1); African Charter on Human and Peoples' Rights (adopted 27 June 1981, entered into force 21 October 1986) 21 ILM 58, art 18(1); African Charter on the Rights and Welfare of the Child (adopted 11 July 1990, entered into force 29 November 1999) OAU Doc CAB/LEG/24.9/49, art 18(1).

[15] See ACHR, art 17(2); ECHR, art 12; EU Charter of Fundamental Rights, art 9.

[16] See also ACHR, art 11(2); EU Charter of Fundamental Rights, art 7.

With regard to the rights of the child, article 19 of the African Charter on the Rights and Welfare of the Child echoes the child's rights under article 9 CRC regarding separation from her/his parents, while article 10 protects the child's privacy and 'family home' from arbitrary or unlawful interference. Article 19 ACHR affirms the child's right to protection by the family, society, and the State.

In expulsion cases involving families, the European Court of Human Rights (ECtHR) starts from the premise that migration control amounts to a 'pressing social need'.[17] It then identifies a range of factors that must be evaluated if States are to strike a 'fair balance . . . between the competing interests of the individual and of the community as a whole' and accords the State 'a certain margin of appreciation' in this respect.[18] Relevant factors it has identified when determining whether removal of a family member on account of criminal offences committed is in line with article 8 ECHR include 'the applicant's family situation, such as the length of the marriage; . . . whether the couple lead a real and genuine family life, . . . and whether there are children in the marriage and, if so, their age'.[19]

Where children are involved, the Grand Chamber highlights the requirement to evaluate their 'best interests and well-being' and 'the solidity of social, cultural and family ties with the host country and with the country of destination'.[20] Factors requiring evaluation that the ECtHR has identified include: the length and closeness of the bond with the parent or other family members; any custody proceedings; any disruption and stress already experienced; any special needs and care requirements; and any delays on the part of the authorities in seeking to expel the parent. The court also takes into account whether the child/children are 'of adaptable age' and could adapt to the deportation of a parent.[21] Exceptionally, it has accepted that the separation of older children from their parents may breach article 8 ECHR.[22] The child's best interests may shift the balance against a parent's removal[23] and are now seen as of 'paramount importance', which although not decisive alone must certainly be afforded 'significant weight'.[24]

Some authors have critiqued the 'casuistry' of the ECtHR's approach, which tends to 'assess the facts of each case separately [thus] minimis[ing] the precedent value of its judgments' and leading to 'structural instability'.[25] Some view the court as siding 'with the sovereign states' migration control prerogatives' and refer to 'aberrations in [its] reasoning'.[26] Others point to 'unexplained gendered assumptions concerning caring obligations', presumptions about the adaptability and risks faced by children of different ages, and the difficulties faced by single mothers of 'non-Western' origin and by parents seeking to reunify with adult children.[27]

In the Americas, the Inter-American Court of Human Rights (IACtHR) has stressed the 'intrinsic relationship' between the right to family unity and the best interests of the child. It determined in the expulsion context that the separation of children from their family is, 'under certain circumstances', a violation of the right to family unity, notably 'because even legal separations' must be 'duly justified in the best interests of the child, exceptional and, insofar as possible, temporary'.[28] With regard to the necessary balancing of national and individual interests in a decision 'on the eventual expulsion of one or both parents', in order to avoid 'any hint of arbitrariness', the IACtHR affirms that States are obliged to assess 'whether the measure: is established by law, and complies with the requirements of (a) suitability; (b) necessity, and (c) proportionality; in other words, it must be necessary in a democratic society'.[29] This requires an evaluation of 'the specific circumstances of the persons concerned'; 'the nationality, custody and residence of the children' involved; the 'scope of the harm caused by the rupture of the family owing to the expulsion'; and 'the disruption of the daily life of the child' owing to the 'expulsion of a person in charge of the child'. The IACtHR advises that 'all these circumstances' must be weighed 'rigorously in light of the best interest of the child in relation to the essential public interest that should be protected'.[30]

Comparing the interpretations of the IACtHR with those of the ECtHR suggests that the former has made clearer statements of principle than the latter, especially in the

context of its advisory opinions.[31] Thus far, however, the IACtHR case law directly relevant to refugees is less developed, as discussed below.

3. The Right to Family Reunification

But do the rights to family life/family unity result in a right to family reunification, in particular for refugees and other beneficiaries of international protection? Are States not only obliged not to imperil the right to family life in the context of expulsion, but also positively required to reunite family members, especially if they cannot enjoy family life elsewhere?

a. International Human Rights

At the international level, the HRC acknowledges that 'the possibility to live together implies' that States must adopt 'appropriate measures, both at the internal level and as the case may be, in cooperation with other States, to ensure the unity or reunification of families, particularly when their members are separated for political, economic or similar reasons'.[32] The ICCPR may protect a right to entry or residence 'when considerations of … respect for family life arise'.[33] The 2017 Joint General Comment by the Committees on the Protection of Migrant Workers and Members of their Families (CMW Committee) and on the Rights of the Child (CRC Committee) goes further, stating that States must also 'take positive measures to maintain the family unit, including the reunion of separated family members'.[34]

The case of *El Dernawi v Libya* specifically concerned a Libyan refugee in Switzerland, whose reunification there with his wife and children had been prevented, as they were unable to leave Libya to join him. The HRC affirmed that a refugee 'cannot reasonably be expected to return to [her or] his country of origin' to enjoy her/his right to family unity. It found violations of articles 17, 23, and 24 ICCPR, the latter 'in view of the advantage to a child's development in living with both parents'.[35]

b. Regional Human Rights Protections

With regard to the right to family reunification at the regional level, the African Charter on the Rights and Welfare of the Child contains specific provisions on tracing and reunifying asylum-seeking and refugee children with their 'parents or other close family'.[36] In Central and Latin America, the Cartagena Declaration affirms that the 'reunification of families constitutes a fundamental principle in regard to refugees'.[37]

In Europe, while the ECtHR's case law provides some protection against expulsion for settled migrants,[38] the rights of family members to enter are less protected. In immigration cases, the court accords States a wide 'margin of appreciation'. It has nonetheless regularly affirmed that 'there may . . . be positive obligations inherent in an effective "respect" for family life'.[39]

Amongst the factors circumscribing States' powers is whether the family separation was voluntary or not. The ECtHR recognizes this is not the case for persons who have fled persecution or indiscriminate violence, meaning that they could not 'be said to have voluntarily left family members behind'.[40] In such situations, the court recognizes that there are insurmountable obstacles to family life being enjoyed elsewhere, unlike in other migration situations. States' discretion to refuse family reunification in such cases is thus significantly limited, leading the court to rule that admission to the territory is the 'most adequate way of developing family life'.[41]

In the EU, the right to family reunification of lawfully resident, third-country nationals is explicitly affirmed in the Family Reunification Directive (FRD).[42] This defines family reunification as 'a necessary way of making family life possible' and as helping to create 'sociocultural stability', facilitate integration, and 'promote economic and social cohesion'.[43] The directive sets out more favourable conditions for refugees 'on account of the reasons which obliged them to flee their country and prevent them from leading a normal family life there', the situation for beneficiaries of subsidiary protection

being, however, less favourable, as discussed below.[44] Key judgments of the Court of Justice of the EU (CJEU) on these issues are referred to as relevant below.[45]

In the Americas, the Inter-American Commission and Court of Human Rights have thus far seldom ruled on the issue of refugee family reunification. This may change, given the mass flight of Venezuelan migrants and refugees to other Latin American countries in recent years, which could lead to an increase in family reunification requests and more litigation. National legislation in many Latin American States nonetheless clearly affirms the rights to family life/family unity, including specifically of refugees. The Constitutional Court of Colombia has considered family reunification a 'fundamental right'.[46]

Thus, instruments, guidance, and jurisprudence at international and regional level show that refugees and other beneficiaries of international protection, who are unable to enjoy their rights to family life/family unity elsewhere, do indeed have a right to family reunification.

4. Refugee Family Reunification in Practice

Refugees and other beneficiaries of international protection nevertheless face numerous, cumulative obstacles realizing their rights to family life and family unity. This section examines some of these obstacles and related, applicable legal standards.

a. Family Definition Applied

While there is no standard definition of the family in international or regional law, there is guidance on the meaning of 'family' beyond the nuclear or close family of spouse and minor children.

At the international level, the HRC has affirmed that 'the term "family" … [should] be given a broad interpretation to include all those comprising the family as understood in the society of the State party concerned'.[47] It has determined that a long-standing relationship between two persons, resulting in the birth of a son, constitutes a '*de facto*

[47] HRC, 'General Comment No 16: Article 17 (Right to Privacy), The Right to Respect of Privacy, Family, Home and Correspondence, and Protection of Honour and Reputation', UN doc HRI/GEN/1/Rev.1, 21 (8 April 1988) para 5; HRC, 'General Comment No 19' (n 32) para 2; *Aden and Hassan v Denmark*, UN doc CCPR/C/126/D/2531/2015 25 July 2019; Fareda Banda and John Eekelaar, 'International Conceptions of the Family' (2017) 66 ICLQ 833–62.

relationship akin to marriage'[48] and that protection of the family is not dependent on formal recognition nor 'necessarily displaced by geographical separation, infidelity, or the absence of conjugal relations'.[49]

The CMW and CRC Committees state that the term family 'must be interpreted in a broad sense to include biological, adoptive or foster parents or, where applicable, the members of the extended family or community as provided for by local custom' in accordance with article 5 CRC.[50] UNHCR's Executive Committee calls for the application of 'liberal criteria in identifying those family members who can be admitted with a view to promoting a comprehensive reunification of the family'.[51]

At the regional level, the Council of Europe's Parliamentary Assembly urges States to interpret the concept of 'family' as encompassing 'de facto family members . . . [including] a partner or natural children as well as elderly, infirm or otherwise dependent relations'.[52] It recommends that States adopt 'an enabling approach to family reunification beyond the traditional definition of family which does not necessarily correspond to the multitude of ways in which people live together as a family today'.[53] As for the ECtHR, some have critiqued it for accepting broader definitions of 'family' in other contexts, but insisting 'on the nuclear family approach in migration cases'.[54]

In the EU, the right to family reunification under the FRD extends only to nuclear family members. Member States *may* nevertheless extend this right to other family members, such as dependent parents of an adult applicant and dependent adult unmarried children.[55] The FRD also permits refugees to reunify with other dependent family members.[56]

In the Americas, the IACtHR goes beyond 'the traditional notion of a couple and their children' as constituting a family to include other blood relatives and others with no

biological relation amongst whom there are ‘close personal ties’ and notes that ‘in the migratory context, “family ties” may have been established between individuals who are not necessarily family members in a legal sense’.[57] The court has further ruled that ‘the term “family members or next of kin” should be understood in its broadest sense, including all those persons connected by a close relationship’.[58]

In Africa, the South African Constitutional Court has acknowledged in a migration case that ‘families come in many shapes and sizes’ and that the definition of the family ‘also changes as social practices and traditions change’.[59]

In practice, couples in common law, traditional, or religious marriages (including proxy marriages) encounter problems securing recognition of their relationship, since formal documentation may not be available. For persons in polygamous marriages, these may have been legally concluded in their country of origin, but are illegal in most countries of asylum, meaning only one spouse will be permitted to reunify.

Reunification cases involving child marriage raise complex questions. The age at which marriage is permitted under law (and in practice) varies widely between countries of origin and asylum.[60] International law prohibits child marriage and forced marriage, while the marriage of a child shall have no legal effect.[61] Arguably, this does not necessarily preclude the existence of *de facto* family life between the couple, meaning that denial of family reunification in such cases could potentially violate the right to family life.[62] In light of the arrival of numbers of married child refugees, Germany, the Netherlands, and Norway are amongst States that have recently raised the minimum age of marriage to 18 and/or ceased to recognize marriages concluded legally abroad where one or both spouses is/are under 18 years.

As for lesbian, gay, bisexual, transgender, or inter-sex (LGBTI) refugees, many courts recognize that same-sex relationships may constitute family life.[63] Generally, however, LGBTI refugees will struggle to provide evidence of a long-standing stable relationship, let alone marriage, as required if seeking family reunification, depending on their country of origin, individual situation, and circumstances of flight.

The concept of dependency is key to the assessment of whether members of the wider family beyond the close family should be considered family members. This assessment is 'essentially a question of fact, which must be determined on a case-by-case basis, requiring a flexible approach which takes account of cultural variations, and economic and emotional dependency factors'.[64] The CJEU has determined that assessing this 'factual situation' requires a case-by-case evaluation of the 'material support' required, including financial or health-related support, that has regard for the 'special situation of refugees', the material support actually provided, and whether the refugee is 'the family member most able to provide the material support required'.[65]

Thus, dependence can be *presumed* between close family members, but needs to be *established* for others. This assessment needs to take into account social, cultural, emotional and economic factors, not solely financial dependence, and to involve a detailed examination of all available evidence. It requires awareness of the socio-cultural contexts of family life in different countries and of the impact of flight and displacement on family formation and reformation.

b. Documenting and Proving Family Membership

People who have fled persecution and armed conflict often find it very difficult to provide documentation proving the identity of family members, a marriage or common law partnership, and/or the filiation/adoption of children. Documents may not exist, may have been lost, destroyed, or left behind due to flight. Obtaining replacements may be difficult or impossible and/or may expose family members to danger.

States nevertheless require refugees and their family members to obtain attestations from different authorities at various levels in the country where the document was issued or from an embassy of that State abroad. Minor discrepancies in documents provided may mean an application is rejected.

Acknowledging these issues, UNHCR's Executive Committee states: 'When deciding on family reunification, the absence of documentary proof of the formal validity of a marriage or of the filiation of children should not per se be considered as an impediment'.[66] Instead, documentary evidence requirements 'should be realistic and appropriate to the situation of the refugee and the conditions in the country of refuge as well as the country of origin' and a 'flexible approach should be adopted'.[67]

[64] UNHCR, 'Summary Conclusions: Family Unity, Expert Roundtable, Geneva, Switzerland, 8–9 November 2001' (UNHCR, Summary Conclusions, Family Unity) para 8. See also *L v The Netherlands*, App No 45582/99 (ECtHR, 2004) para 36.

[65] Case C-519/18, *TB v Bevándorlási és Menekültügyi Hivatal*, (CJEU, 12 December 2019) paras 47 and 77.

[66] ExCom Conclusion No 24 (n 51) para 6.

[67] UNHCR, Summary Conclusions, Family Unity (n 64) para 12.

In Europe, the Council of Europe recommends States 'should primarily rely on available documents provided by the applicant, by competent humanitarian agencies or in any other way' and that the 'absence of such documents should not per se be considered as an impediment to the application'.[68] In addition, the ECtHR has ruled that family reunification procedures must take 'into account the events that had disrupted and disturbed [the applicant's] family life and had led to his being granted refugee status'.[69]

The CJEU ruled on these issues in a case concerning a beneficiary of international protection seeking to reunite with her minor nephew who had been placed under her authority and guardianship after his parents died. The court determined that an application cannot be rejected for lack of official documentary evidence, even if the sponsor's explanation for its absence is deemed implausible; rather, it is necessary to take 'into consideration the specific circumstances of the sponsor and the minor and the particular difficulties they have encountered, according to their testimony, before and after fleeing their country of origin'.[70]

Where documentation proving a parent–child relationship cannot be provided, States increasingly require DNA testing. This is not, however, always affordable or even available in locations family members can reach. UNHCR recommends reliance on '[d]ocumentary proof, registration records, interviews with the individuals concerned and other forms of verification', with DNA testing 'only [being used] where serious doubts remain after all other types of proof have been examined, or, where there are strong indications of fraudulent intent and DNA testing is considered as the only reliable recourse to prove or disprove fraud'.[71]

Even where documentation can be provided, it may not be recognized as valid. Marriages or adoptions may be deemed valid under one legal regime but not under another.[72] The resulting interactions between international refugee law and international private law and family law are complex and have very real consequences for refugees seeking to reunite with family members. They are one area where further research could be fruitful.

c. Income, Accommodation, and Other Requirements

Many States recognize that refugees may be unable to meet requirements regarding income, accommodation, health insurance, and/or command of the national language that may otherwise be imposed on immigrants. They therefore offer preferential terms to refugees.

In the EU, however, Member States are permitted to restrict application of these preferential terms to refugees and their families who are able to apply within three months of the grant of international protection.[73] Yet refugees may not have clear information about the deadlines applying or may take time to trace family members, who may be in a conflict zone and/or displaced. Family members may face difficulties obtaining the required documentation. If a deadline for applications applies but cannot be met, resulting requirements regarding income etc may mean refugees cannot enjoy their right to family reunification.

d. Restrictions Based on Status and Other Legal Obstacles

In some States, beneficiaries of complementary/subsidiary international protection may not apply for family reunification under the preferential terms available to refugees or they may, unlike refugees, only be permitted to do so after a period of residence after recognition.[74] This has particularly been the case in Europe following the large numbers of asylum seekers arriving in 2015–16. Anticipating a resulting increase in applications for family reunification, some States introduced restrictions, notably for beneficiaries of subsidiary protection.[75] This has, in turn, led to more litigation seeking clarification of the law.

Where such restrictions apply, they effectively bar beneficiaries of subsidiary protection from enjoyment of their right to family life, at least for some years. Yet, like refugees, they cannot enjoy that right in their country of origin, meaning States have positive obligations towards them, including on non-discrimination grounds.[76] Indeed, the CJEU has ruled that a waiting period before family reunification may be sought 'cannot be imposed without taking into account, in specific cases, all the relevant factors' and that due regard must be had for 'the particular circumstances of specific cases [and] the best interests of minor children'.[77] Yet the CJEU has also ruled that the FRD 'must be interpreted as not applying to third-country national family members of a beneficiary of subsidiary protection'.[78]

[73] FRD, ch V and art 12(1). See also Case C-380/17, *K and B v Staatssecretaris van Veiligheid en Justitie* (CJEU, 7 November 2018) para 66.

[74] Article 12(2) FRD exempts refugees from such a requirement.

[75] Costello, Groenendijk, and Storgaard (n 17) 33–5; Nicholson, 'Essential Right' (n 17), 141–5.

[76] Costello, Groenendijk, and Storgaard (n 17) 23–6; Nicholson, 'Essential Right' (n 17) 149–63.

[77] *European Parliament v Council*, CJEU (n 43) paras 99–101.

[78] *K and B* (n 73) para 33.

Some States restrict refugees' right to family reunification depending on their manner of arrival. In Australia, for instance, reunification is 'effectively impossible' for refugees who arrive by sea without a valid visa, as they are given the lowest priority and places are limited.[79] Such restrictions raise similar concerns to those regarding beneficiaries of subsidiary protection.

Other obstacles include high fees, which may violate the principle of proportionality;[80] a lack of legal aid or representation, especially since reunification procedures have become increasingly complex in many States; and the absence of an appeal possibility. These further hurdles may undermine the right to an effective remedy, to good administration, and principles of equivalence and effectiveness.[81] Ultimately, they may preclude family reunification.

e. Practical Obstacles

Refugees and their families face numerous practical difficulties realizing their rights to family life/family unity.

Family members of refugees may remain in unstable or dangerous situations in the country of origin or be living in precarious exile, often facing great danger and hardship. This can lead to protection and survival strategies, such as illegal and/or exploitative work or child marriage, which create further problems.[82] Refugees and their families may also not receive timely information adapted to their circumstances about the reunification procedure. They may not know whether other family members are alive or where they are and may face difficulties tracing them.[83]

Family members, the majority of whom are women and children, who are required to travel to distant embassies/consulates, including in other countries, may face considerable risk and expense. They may have to cross borders illegally or survive precariously in a third country without legal stay as they seek to meet successive requirements of the authorities of the refugee family member's country of asylum.

Costs associated with reunification include procuring documentation; obtaining notarized copies and official translations of documentation, medical, or DNA tests; visa application and embassy fees; journeys to embassies/consulates; associated living costs;

appeals against negative decisions; legal representation; and finally the costs of travelling to join the family member. While loans are occasionally available, accumulated expenses may place reunification out of reach for some refugee families.

Administrative delays and obstacles present further problems. Sometimes they mean families spend years apart, as asylum and family reunification procedures succeed one another, exposing family members to hardship and danger and prolonging separation and uncertainty. In this context, the ECtHR has ruled that, in view of the appellant's refugee status, it is of overriding importance that the family's visa applications be examined 'promptly, attentively and with particular diligence'. It ruled that the authorities are obliged to institute a procedure that takes into account the events that disrupted and disturbed their family lives and led to their being granted refugee status. Ultimately, the court determined that the accumulation and prolongation of multiple difficulties and the authorities' failure to take account of the appellant's specific situation meant the process had not shown the guarantees of 'flexibility, promptness and effectiveness' needed to respect his right to family life.[84]

Continuing family separation is a key preoccupation of refugees. It can slow the process of integration in the country of asylum. The costs associated with the procedure may leave families with fewer resources to invest in housing, education, and integration more generally. The extent to which restrictive rules and/or practice on family reunification impede refugee integration may be difficult to measure. One study has nonetheless found that restrictive measures on the admission and residence of family members have not furthered integration but may have impeded it.[85] Ultimately, lengthy bureaucratic processes may push family members to try and find other, irregular routes to reunite.[86]

5. Children and Family Reunification

Children separated from their family because of displacement are particularly vulnerable. The CRC nevertheless accords some of the strongest protections of their right to family life and family unity.[87] In practice, children face significant difficulties reuniting with family members.

The African Committee of Experts on the Rights and Welfare of the Child has identified numerous challenges in Africa that also apply to a greater or lesser extent in

[87] See Section 2.a above, Chapter 41 in this volume, and Council of Europe, *Family Reunification for Refugee and Migrant Children: Standards and Promising Practices* (April 2020).

other regions. These include the lack of 'systematic assessment of the best interests of the child'; procedures to determine 'children's identity, age and nature of the relationship between separated child and accompanying adult [that] are not based on the best interests of the child'; and the absence of 'documentation, family tracing and guardian systems'.[88]

This section examines the situation of children, whether they are seeking to reunite with a refugee family member or are themselves unaccompanied child refugees. The emerging case law of the CRC Committee provides clear statements of principle on issues such as the child's best interests and her/his rights to development and to be heard, in contrast to some regional courts' more circumstantial approaches.

a. Child Members of a Refugee's Family

Adopted or foster children face particular hurdles reunifying with their refugee parents, guardians, or carers. Their situation raises important questions regarding the best interests principle and the difficulties faced meeting requirements for proof of sole custody, legal guardianship, and/or the death of a parent, including in situations where one parent cannot be traced.

With regard to the assessment of the child's best interests, the CRC Committee notes that, inter alia in family reunification cases, issues to be taken into account include the child's views; the preservation of the family unit; the care, protection, and safety of the child; their situation of vulnerability; and their right to health and education.[89] The committee further states that the child's right 'to maintain personal relations and direct contact with both parents on a regular basis' (CRC article 9(3)) 'also extends to any person holding custody rights, legal or customary primary caregivers, foster parents and persons with whom the child has a strong personal relationship'.[90]

Children in the *kafalah* system, a process of legal guardianship akin to adoption, face particular difficulties. Two recent rulings provide guidance. In a case concerning a young Moroccan girl taken in by a Belgian couple under the *kafalah* system, the CRC Committee ruled that, while States were not obliged 'in general to recognize the right to family reunification for children in *kafalah* arrangements', they were obliged to take into account 'the de facto ties' that existed and had developed on the basis of *kafalah* and the girl's right to be heard, even at the age of five years.[91] For its part, the CJEU determined

[88] African Committee of Experts on the Rights and Welfare of the Child, 'Mapping Children on the Move within Africa' (November 2018) 82.

[89] CRC Committee, 'General Comment No 14 (2013) on the Right of the Child to have His or Her Best Interests Taken as a Primary Consideration', UN doc CRC/C/GC/14 (29 May 2013) (CRC General Comment No 14) paras 52–79.

[90] CRC General Comment No 14 (n 89) para 60.

[91] *YB and NS v Belgium*, UN doc CRC/C/79/D/12/2017 (27 September 2018) paras 8.8–8.12.

that a *kafala* relationship can constitute family life depending on the individual circumstances, including the duration and quality of the relationship, and that a 'balanced and reasonable assessment of all the . . . circumstances of the case [must take] account of the various interests in play and, in particular, of the best interests of the child concerned'.[92]

Other children in a refugee family may end up being left behind, if parent(s) are obliged to choose between reunifying with one child and leaving another behind, for instance if an older child has recently reached the age of majority[93] and may no longer qualify for reunification, or if a child was born shortly after the departure of the father. The effect is to split rather than reunite families and may result in vulnerable children or young, still dependent adults being left to fend for themselves in a potentially hostile environment. Yet, as the ECtHR has ruled: 'When assessing the compliance of State authorities with their obligations under Article 8 [ECHR], it is necessary to take due account of the situation of all members of the family, as this provision guarantees protection to the whole family'.[94]

b. Unaccompanied Child Refugees

Unaccompanied and separated child refugees face particular challenges reunifying with their parents and other family members, even though they generally enjoy greater rights than adult refugees in this context.

To start with, an informed age assessment is fundamental, since its outcome determines their enjoyment of the rights under CRC.[95] The best interests principle provides further crucial protection.[96] The CRC Committee further states: '[T]he granting of refugee status constitutes a legally binding obstacle to return to the country of origin and, consequently, to family reunification therein.'[97]

[92] Case C-129/18, *SM v Entry Clearance Officer, UK Visa Section* (CJEU, 26 March 2019) paras 66–8.

[93] The CJEU has nevertheless clarified that the relevant date for 'determining whether an unmarried third country national or refugee [seeking to reunify with a parent] is a minor . . . is that of the submission of the application'. Thus, a child reaching majority during subsequent court proceedings is to be considered a minor. See Joined Cases C-133/19, C-136/19, and C-137/19, *BMM and Others v Belgium* (CJEU, 16 July 2020), para 47.

[94] *Jeunesse v The Netherlands* (n 23) para 117.

[96] CRC General Comment No 14 (n 89); Jorg Werner and Martine Goeman, *Families Constrained: An Analysis of the Best Interests of the Child in Family Migration Policies* (Defence for Children The Netherlands and Adessium Foundation 2015).

[97] CRC General Comment No 6 (n 94) para 82.

In a few States, unaccompanied child refugees are denied family reunification.[98] States may seek to justify this on the grounds that it deters parents from sending 'anchor children' on dangerous journeys so that they can later join them, but more research into the veracity of such assertions and the legality and impact of these policies could be useful.

In other States, unaccompanied child refugees may only reunify with their parent(s) and not (minor) siblings. This can present parent(s) with difficult choices between remaining separated from their child in the country of asylum or leaving other offspring behind, including in precarious and/or dangerous circumstances. Where an unaccompanied refugee child has lost her/his parent(s) or they cannot be traced, the child may have to prove that more than normal emotional ties exist with another family member and/or that this person has since been taking care of them to secure reunification. Where formal guardianship or adoption processes do not exist or function in practice this is particularly difficult.

Even unaccompanied refugee children who are permitted to reunite with parent(s) and/or minor siblings may face problems if they reach the age of majority during the asylum procedure. In some countries, this means their entitlement to family reunification with such family members is deemed no longer to apply. In the EU, the CJEU has nevertheless clarified that such persons are to be considered minors for the purposes of the FRD and that they retain their right to family reunification with their parents (and minor siblings if permitted in the national context).[99]

6. Conclusion

International and regional law recognizes the rights to family life/family unity and, for persons granted international protection, their right to family reunification in the country of asylum. In practice, refugees and their families face many obstacles reuniting. They may spend years apart before they can reunite or may not be able to do so at all. Where the process takes too long, family members may try to reunite using irregular routes, thereby exposing themselves to great danger, undermining the proper regulation of migration, and fuelling the smuggling trade.

The law concerning the family reunification of refugees before international, regional, and national courts is evolving quite rapidly. Its evolution merits further analysis, including regarding the similarities and divergences between the case law of the HRC and CRC Committee and of regional courts. Research into family reunification has

[98] Canada, Switzerland, the United Kingdom, and the United States do not permit unaccompanied child refugees/beneficiaries of complementary protection to reunite with their parents. Reunification in such cases is sometimes possible, but exceptions are generally heavily circumscribed and rarely applied.

[99] Case C-550/16, *A and S v Staatssecretaris van Veiligheid en Justitie* (CJEU, 12 April 2018).

tended to focus on the migration context more generally, but the particular situation of refugees and other beneficiaries of international protection warrants further investigation, including from an interdisciplinary angle. Canvassing refugee perspectives and narratives could strengthen understanding of gaps in protection, practical challenges faced, and the impact of separation on the lives and integration of refugees and their families. Such initiatives could enhance appreciation, amongst others, of the situation of family members left behind, single-parent families, unaccompanied children, vulnerable young adult family members, and elderly parents.

CHAPTER 56

THE DIGITAL TRANSFORMATION OF REFUGEE GOVERNANCE

KRISTIN BERGTORA SANDVIK

1. Introduction

Over the last 20 years, in tandem with the adoption of results-based management (RBM) systems[1] and the introduction of increasingly sophisticated registration software, there have been significant expansive shifts in the refugee digital ecosystem. This includes the growth of UNHCR platforms, the introduction of biometrics, and the proliferation of digital devices, meaning that refugees also produce and possess data of relevance to protection procedures, including registration, refugee status determination (RSD), and resettlement processes. At present, there is significant expectation that the introduction of new digital platforms, tools, and digitization processes will enable the international refugee regime to enhance accountability, effectiveness, and efficiency by improving verification procedures, shorten processing times, and better prioritize applications.[2] A great deal of technological optimism characterizes this development. The assumption is that technology will work as promised, have the capacity to fulfil strategic objectives, such as producing a given number of individual caseloads, and even to resolve difficult political struggles by automating integration, credibility, or vulnerability assessments. Problems related to technology

[1] A new public management approach.

[2] The chapter conceptualizes digitization as the conversion, articulation, and management of historically analogue information, processes, and actions through digital technology, meaning devices that transmit digital data, encompassing mobile phones, computers, and a range of digitally connected devices. Kristin Bergtora Sandvik, Katja Lindskov Jacobsen, and Sean Martin McDonald, 'Do No Harm: A Taxonomy of the Challenges of Humanitarian Experimentation' (2017) 99(904) International Review of the Red Cross 319.

adoption are often described as technical, infrastructural, or pertaining to capacity. In contrast, a growing critical literature argues that the digitization of all aspects of refugee protection engenders a wide range of risks, including cybersecurity, threats to data protection and privacy rights, and threats to due process arising from automated decision-making.[3]

Taking a socio-legal approach to problem framing, this chapter discusses four selected issues arising from the digital transformation of refugee protection, in order to explore how this transformation shapes and challenges refugee law.[4] The chapter explores the following domains, namely UNHCR's 2015 Data Protection Policy (the DPP),[5] a concept (legal identity), a platform (databases), and legal-bureaucratic processes (RSD and resettlement procedures). While the focus is on humanitarian actors in the Global South, the transformation is intrinsically connected to the priorities and practices of States in the Global East and the Global North.

Digital transformation generates new risks—in part because it is premised on a duty of refugee visibility. The chapter argues that international refugee law conceptually and in practice appears to be moving towards an idea of 'algorithmic protection'.[6] First, digitization and the integration of new technology create risks—and harms—that can compromise existing legal rights and procedural guarantees *but also* threaten the integrity of refugee protection in new ways. The digital transformation of the refugee regime engenders an expansion of refugee law to include new legal areas and formats with less stringent focus on due process and rule of law, such as data protection policies and algorithmic code. Furthermore, this shift places new topics within the bounds of what can reasonably be considered refugee law. A general set of risks concerning technological innovation and digitization affect the refugee management system along with

[4] Following Sheila Jasanoff's work, digital transformation can be construed as a form of 'technoscience': ordering practices that are materially productive, giving meaning to the 'how', 'whom', and 'what' of refugee protection. Importantly, these 'technical' measures and technology adaption thus have an explicitly political dimension that should not go unnoticed as they may otherwise risk when framed simply as 'technical'—rather than political— matters. Sheila Jasanoff (ed), *States of Knowledge: The Co-Production of Science and the Social Order* (Routledge 2004). See also Sally Engle Merry, *The Seductions of Quantification: Measuring Human Rights, Gender Violence, and Sex Trafficking* (University of Chicago Press 2016). For a critical unpacking of how digital transformation shapes UNHCR's accountability efforts, see Katja Lindskov Jacobsen and Kristin Bergtora Sandvik, 'UNHCR and the Pursuit of International Protection: Accountability through Technology?' (2018) 39(8) Third World Quarterly 150.

[5] UNHCR, 'Policy on the Protection of Personal Data of Persons of Concern to UNHCR' (May 2015) <https://www.refworld.org/docid/55643c1d4.html> accessed 3 May 2020 (DPP).

literally everyone else in the international community; this includes problems of criminality, such as the potential of data misuse and cyber/information data security breaches leading to identity theft, or theft, destruction, or manipulation of data. The humanitarian sector is at risk from technological experimentation, referring to the use of untested approaches in insecure and unstable mass displacement contexts, but also in stable contexts experiencing mass influx.[7] There are also risks connected to the persistence of digital divides, which is about the unequal access of people to Information and Communication Technology (ICT) and unequal possession of skills and experiences needed to optimize this technology.[8] When protection procedures are wrapped around digital structures, refugee populations in locations with unstable or inadequate electricity supply, Internet connectivity, or mobile networks, or without adequate digital literacy and access, will be disadvantaged. Additionally, there are specific risks that compromise the protection of individuals, protection infrastructure, and protection processes in themselves. This requires careful consideration of the legal, technical, and ethical obligations in relation to upholding the rights, autonomy, and dignity of individuals seeking protection as well as the security and integrity of protection data and the digital infrastructure.

Secondly, 'algorithmic protection' is a useful concept because the digital transformation of refugee protection means that the duty of visibility and acquiescence to become a data subject has become a requirement for being registered as a refugee, receiving aid (eg biometric banking) and having one's claim for a durable solution processed. To explore what algorithmic protection entails for individuals, the chapter uses the notion of 'digital bodies'. Digital technologies create corresponding 'digital bodies'—images, information, biometrics, and other data stored in digital space—that represent the physical bodies of populations affected by conflict and natural hazards, but over which these populations have little say or control. To understand the impact of the digital transformation we must understand the risks to refugees' physical bodies, their digital bodies, and the interplay between the two.[9] According to Privacy International, '[p]utting it bluntly, getting privacy wrong will get people arrested, imprisoned, tortured, and may sometimes lead to death'.[10] While refugee digital and physical bodies are not 'the same', compromising or neglecting the security of digital bodies may be *just as consequential* and lead to compromising the security and well-being of physical bodies. This must be the point of departure in exploring the digital transformation of international refugee law.

[10] Privacy International, 'Why We Work on Refugee Privacy' (8 July 2011) <https://privacyinternational.org/news-analysis/1322/why-we-work-refugee-privacy> accessed 6 May 2020.

The chapter aims to explore familiar topics in international refugee law in light of the challenges posed by digital transformation. To that end, the chapter opens a new multidisciplinary research agenda. The chapter proceeds in four sections, exploring UNHCR's data protection policy and providing a thematic mapping of legal identity, databases, and protection procedures. A brief conclusion follows.

2. UNHCR Data Governance: A Legalized Accountability Deficit for Digital Bodies?

International refugee law, including its soft law components, regulates the allocation of protection to individuals, sets out procedural rules, and includes specific regulations governing international organizations, and protecting them from interference. While there is a large literature documenting humanitarian failures,[11] until recently, little focus has been given to the need to protect refugees *against* humanitarian organizations and their private sector partners. With the linkages between the emergent global data economy and the regulation of mass displacement, privacy and data protection have become important issues for international refugee law, and squarely situated in the decades-old struggle for humanitarian accountability.[12] To ensure the protection of digital bodies, the challenges relating to UNHCR's data governance framework need urgent scrutiny.

With respect to the protection of civilians in emergencies, scholarly attention has been given to the different protection issues engendered by personal identifiable information (PII) and demographically identifiable information (DII),[13] which concerns the identification, tracking, and profiling of groups emerging from 'metadata'. Digital identities—both in terms of design, storage, and implementation—can produce data on location and services accessed on individual and group levels. While 'visibility' is presented as a beneficial aspect of legal identity, being visible may also produce harm, through surveillance itself, and also by exposing individuals to violence and harassment. The problem partly lies with the kind of information collected and the power differences inherent in the refugee context. While governments and the private sector may be restricted from collecting certain kinds of sensitive information, UNHCR is assumed to have a mandate to collect sensitive data. To obtain international protection, refugees must give away personal data. In a telling example from Myanmar, refugees

> worried about how information could end up in their countries of origin, or could be used to their disadvantage. They felt like the information belonged to them, and in some scenarios they took great care in protecting information about themselves and others. Yet they knew they must submit this information to UNHCR in exchange for protection.[14]

Furthermore, UNHCR does not have complete control over the information it collects, which must usually be shared with host governments, implementing partners, or resettlement countries.[15]

These issues have primarily been articulated and discussed as problems of data protection and privacy. While the Refugee Convention has no provision on privacy, the UDHR (article 12), the ICCPR (article 17) and the CRC (article 16) set out a right to privacy. These treaties do not specifically mention data protection, and are formulated in broad terms.[16] However, the UN Human Rights Committee has interpreted them to include core principles of data protection such as legality, lawfulness, rights of correction and elimination, and others.[17] To collect personal information, there must be a legal basis. The primary duty holder for refugee rights—on the basis of the Refugee Convention or human rights law—is the host State. NGOs, the UN, and domestic refugee bureaucracies are guided by different sets of principles and legislative frameworks. International rules land in a patchwork of domestic and regional standards on privacy and data protection or lack thereof, which are enforced or under-enforced to different degrees. This intersects with the fact that many refugee-hosting countries combine a lack of functioning refugee bureaucracies with sophisticated and intrusive surveillance systems in their treatment of displaced populations.

Regional frameworks are increasingly important in refugee protection. In Europe, the General Data Protection Regulation (GDPR) enshrines the key aspects of data protection law: the collection and processing of displaced individual's data must have a legal basis.[18] Legal requirements include informed consent and the right to understand the logic behind the process and the consequences of automated decisions. Article 5(1) of the GDPR includes the general requirements of the lawfulness, fairness, and

[14] Privacy International (n 10).

[15] The US Department of Homeland Security (DHS) has gathered the biometric information of tens of thousands of refugees, through a sharing arrangement with UNHCR: Eric Weiss, 'DHS and UNHCR are Sharing Biometric Data of Refugees', *Find Biometrics* (23 August 2019) <https://findbiometrics.com/dhs-unhcr-sharing-biometric-data-refugees-082304> accessed 6 May 2020; US Committee for Refugees and Immigrants, 'Security Screening of Refugees Admitted to the US' (2019) <https://refugees.org/explore-the-issues/our-work-with-refugees/security-screening/> accessed 6 May 2020.

[17] Christopher Kuner, 'International Organizations and the EU General Data Protection Regulation: Exploring the Interaction between EU Law and International Law' (2019) 16 International Organizations Law Review 158.

[18] Regulation (EU) 2016/679 of 27 April 2016 on the Protection of Natural Persons with regard to the Processing of Personal Data and on the Free Movement of Such Data, and Repealing Directive 95/64/ED (General Data Protection Regulation) [2016] OJ L119/1 (GDPR).

transparency of processing; as well as very specific constraints on data including purpose limitation, data minimization, and data accuracy.[19]

The rules on storage limitation stipulate that personal data should be deleted or anonymized when no longer needed for the original purpose. The GDPR allocates accountability to the data controller. While the GDPR applies to any entity collecting and processing personal data of any person residing in the EU (thus having effect *beyond* the EU as well), the GDPR procedures do not explicitly contemplate what data collection rights look like in a migration context, although it is argued that the humanitarian basis for data collection extends its scope somewhat.[20]

However, whereas the GDPR applies to UNHCR's European implementing partners, importantly, intergovernmental organizations, such as the UN, claim immunity from the GDPR and similar data regulations. While UNHCR processes the personal data of millions of refugees and other people of concern, as an international body, UNHCR—and UNHCR's records, archives, and host country agreements—is governed by privileges and immunities,[21] intended to assist the organization in fulfilling its mandate. This means that the organization is neither subject to domestic laws nor to regional frameworks, such as the GDPR. How far into the domain of refugee law—*de jure* and *de facto*—this reaches is unclear. In recent times, UNHCR has also claimed privileges and immunities when subjected to critical questions about cybersecurity glitches and personal data loss.[22]

The alternative legal basis is UNHCR's mandate function to protect people of concern and facilitate durable solutions and the 2015 UNHCR DPP.[23] The basic principles of the DPP are: (1) legitimate and fair processing, (2) purpose specification, (3) necessity and proportionality, (4) accuracy, (5) respect for individual rights, (6) confidentiality, (7) security, and (8) accountability and supervision (through data controllers, data protection focal points and data processers, and a Data Protection Officer (DPO) at UNHCR Headquarters). The policy applies a rights-based approach and emphasizes that UNHCR data and information activities will adhere to high international information and cybersecurity standards, including the concept of privacy, by design and by default.[24]

Scrutiny must be undertaken not only of the substantive content of this policy but also its legal effects. While it is mere policy, not law, refugees are effectively bound to

[24] UNHCR, 'Data Transformation Strategy 2020–2025' (September 2019) <https://www.unhcr.org/5dc2e4734.pdf> accessed 6 May 2020.

become digital subjects of UNHCR: the requirement of becoming a data subject entails providing extremely detailed data, collected and held in a manner suspended from the normal due process obligations applying to State bureaucracies. Refugees are enrolled in extremely lengthy processes—from initial screening to RSD interviews to resettlement perhaps years down the line—to build their own digital bodies. The harms that might befall refugees if data is mishandled are real.

A 2019 evaluation notes that UNHCR has 'rich and meaningful data collected on persons of concern, their protection risks, services and assistance provided to them, and their access to solutions, socioeconomic improvements in their lives, and the contexts in which they live'.[25] In UNHCR, there are broadly three different types of data: financial, human resources, and operational data, namely data from population management activities, protection risks and needs assessments, programme implementation, case management and monitoring, and evaluation. 'Personal data' means any data related to an individual who can be identified from that data, alone or combined with other information, or by means related to that data. Personal data includes biographical data (biodata) such as name, sex, marital status, date and place of birth, country of origin, country of asylum, individual registration number, occupation, religion and ethnicity, biometric data such as a photograph, fingerprint, facial, or iris image, as well as any expression of opinion about the individual, such as assessments of status and/or specific needs.[26]

In short, UNHCR has an enormous amount of data on individuals. As explained by the DPP, the individual case file is the central repository for data related to a specific person of concern, whether in hardcopy or electronic format, including all relevant correspondence created and received by UNHCR.[27] According to the guidance document on the DPP from 2018, this includes asylum application forms, protection needs assessments, registration forms, RSD application forms, signed consent and/or disclosure forms, interview transcripts and counselling notes, documents produced by the Persons of Concern (POC) and dependent family members, home visit requests and reports, medical documents (such as medical assessment forms), subsistence allowance documents, copies of Best Interest Assessments and Best Interest Determinations and related procedural steps, Resettlement Registration Forms (RRF), correspondence with partners, including government authorities and resettlement countries, and any printed email or other correspondence pertaining to the case.[28] Together, 'personal operational data' making up the individual case file conjures up a detailed imagery of a vulnerable digital body.

[28] ibid 6.

To date the ramifications of this situation, and specifically what is at stake in this digital transformation, have apparently been mischaracterized or partially misunderstood. UNHCR data protection standards are significantly lower than those that apply to many States and regions. Furthermore, there appears to be a lack of enforcement of those standards that do apply to UNHCR, including when negligence and/or incompetence put refugees at risk or cause actual harm. Overall, refugees have little capacity to exercise self-determination over their digital bodies. According to the DPP, 'personal data breach' means a breach of data security leading to the accidental or unlawful/illegitimate destruction, loss, alteration, unauthorized disclosure of, or access to, personal data transferred, stored, or otherwise processed. The DPP requires that in the event of such a breach that is likely to 'result in personal injury or harm to a data subject, the data controller should use his or her best efforts to communicate the personal data breach to the data subject and take mitigating measures as appropriate without undue delay'.[29] The 2019 UNHCR evaluation observes that 'typical data collection, sharing and storage processes are highly vulnerable to attacks and/or breaches'.[30] It is not only the collection process which poses problems: the report argues that 'in the field, certain actions and practices are commonplace (e.g. sharing documents containing sensitive information via email without password or encryption protections) and undermine this core organizational value, thereby potentially exposing operational data to privacy breaches and risks for persons of concern'.[31]

Furthermore, the report explains that 'from a risk management perspective, there is an understanding that failing to improve data and information systems would have consequences for the organization and the people UNHCR serves'.[32]

Nevertheless, the policy does not contain any provisions on accountability for staff breaches, whether committed accidentally, deliberately, or even fraudulently. Sanctions follow from other instruments, such as employment contracts, Standards of Procedure (SOPs), codes of conduct, or criteria for promotion. As an illustration, the 2019 evaluation never considers UNHCR's data governance in terms of regulation or legality—there is no mention of law, legal norms, or sanctions. Rather, it recommends that UNHCR improve on its data governance through the establishment of a data management 'rule book' that specifies the norms and conventions to govern and align the organization's data, stipulating the parameters for data collection, processing, protection, storage, analysis, and use. The approach is soft: information and data management is a responsibility of all staff, yet it is noted that staff members' confidence and capacities to identify, manage, and analyse operational data varies widely.[33] Similarly, according to UNHCR's senior Data Protection Officer, there is a need to 'establish an all-encompassing culture of data protection. There is a need to withstand internal and external pressure to compromise on data protection principles.'[34]

[34] Alexander Beck, 'Data Protection is Part and Parcel of Refugee Protection' (*UNHCR Blog*, 23 May 2018) <https://www.unhcr.org/blogs/data-protection-part-parcel-refugee-protection/> accessed 6 May 2020.

In addition to the lack of meaningful accountability, refugees and asylum seekers are increasingly disempowered in relation to their own digital bodies. With respect to content, it should also be noted that the GDPR has introduced new rights such as the 'right to be forgotten' (article 17) and 'right to data portability' (article 20) which are currently not mirrored in UNHCR's DPP.[35] As articulated in the DPP, the right to request the correction and/or deletion of data,[36] and the right to object to the processing of data[37] are very limited rights. The nature of UNHCR's work means that there is no free giving of consent in the first place: one cannot obtain refugee status or access a durable solution without providing data. And there is no right to be forgotten, even if an application is withdrawn, or rejected, for example. Individual case files, whether open or closed, are considered permanent records and remain in UNHCR's archives—or the databases of host countries or resettling countries—and are subject to whatever policies the agency adopts for sharing with third parties.[38]

3. Legal Identity

There is an established consensus across States, humanitarian organizations, and the private sector that lack of legal and verifiable identity works as a barrier to access basic services, financial inclusion, social integration, regularization, and to vetting for security purposes.[39] The aim of Sustainable Development Goal (SDG) 16 is to '[p]romote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels'.[40] For UNHCR, SDG 16.9, which calls for universal access to legal identity, has given new impetus and direction to the organization's long-standing work on refugee IDs. This section begins to critically unpack the digital transformation of UNHCR's legal identity work and its implications for protection.

35 GDPR (n 18) arts 17, 20.

36 According to DPP (n 5) para 3.3.1 'The data subject may request the correction or deletion of personal data that is inaccurate, incomplete, unnecessary or excessive', but according to para 3.3.2, the refugee has the burden of proof. According to para 4.3.1, 'UNHCR may correct or delete personal data held on its systems that is inaccurate, incomplete, unnecessary or excessive', and should according to para 4.3.2 periodically verify personal data records.

37 The right to object under ibid para 3.4 is caveated by extensive restrictions articulated under para 3.7.

38 According to ibid para 4.6.1, 'Personal data that is not recorded in individual case files is not to be retained longer than necessary for the purpose(s) for which it was collected'. However, as stated in para 4.6.2, all individual case files, whether open or closed, are considered permanent records, and must therefore be permanently retained in line with the Access Policy of UNHCR Archives.

39 UNHCR, 'Global Virtual Summit on Digital Identity for Refugees, Concluding Workshop: Summary Conclusions and Recommendation' (August 2019) <https://www.unhcr.org/idecosystem/wp-content/uploads/sites/69/2019/12/Conclusions_and_Recommendations.pdf> accessed 6 May 2020.

40 'Transforming our World: The 2030 Agenda for Sustainable Development,' UNGA res 70/1 (21 October 2015) goal 16.

Over the last century, it has been a priority of the international community to provide refugees with certificates that served both as an identity and a travel document, eg the Nansen passport. Host States are primarily responsible for providing refugees with a legal or foundational identity, supported by UNHCR where necessary. Article 27 of the Refugee Convention states that '[t]he Contracting States shall issue identity papers to any refugee in their territory who does not possess a valid travel document'. Identification documents include general documents, such as passports and national or local government ID, or sector-specific IDs, such as taxpayer ID numbers, criminal justice record numbers, or military service member IDs. In the context of forced displacement, refugees can be issued with 'local' IDs from service providers or government agencies. IDs also serve as a distribution tool: in refugee camps, UNHCR has historically used stamps, wristbands, photographs, or fingerprints to avoid multiple registrations.[41]

Attention must be given to how the duty of physical and digital visibility are put to work in UNHCR's legal identity efforts. There appears to be a nascent merger between legal and digital identities. This is particularly evident in the push for making legal identity systems the key to unlocking access to legal protection, vulnerability assessments, durable solutions (in particular resettlement-vetting), and material assistance. UNHCR's Strategy on Digital Identity and Inclusion states that '[r]efugees, asylum seekers, stateless persons, and other forcibly displaced persons should have a legally recognized as well as a digital identity. Individuals will be able to request UNHCR to certify their identity.'[42] Today, practically, a digital identity that enables protection, solutions and access to assistance includes a refugee's digitally stored identity records in UNHCR's Population and Refugee Identity Management Ecosystem (PRIMES) (see Section 4).[43] The long-term consequences of such a merger—in particular how and whether legal identity will exist as a meaningful right outside the digital ecosystem, and what kind of co-construction will occur between the two over time—need to be mapped out. In the following, the chapter provides two preliminary reflections.

One significant issue concerns how the underlying faith in technology—that it will work as planned and not have undesirable consequences—shapes the production of digital identity. Biometric systems have emerged globally as the solution to the problem of refugee legibility. Biometrics encompass the physiological and behavioural characteristics of individuals, such as fingerprints, voice, face, retina and iris patterns, hand

[43] According to the World Bank, a digital identity is an electronic representation of a person consisting of a set of electronically captured and stored attributes/credentials that uniquely identifies a person and is exclusively used by that person to carry out transactions and receive assistance. The World Bank, GMSA, and Secure Identity Alliance, 'Digital Identity: Towards Shared Principles for Public and Private Sector Cooperation' (July 2016) <http://documents.worldbank.org/curated/en/600821469220400272/pdf/107201-WP-PUBLIC-WB-GSMA-SIADigitalIdentity-WEB.pdf> accessed 6 May 2020.

geometry, gait, or DNA profiles. ID systems most commonly use facial photographs, fingerprints, and iris scans. These systems raise questions with respect to how to collect, store, and facilitate the responsible sharing of digital identity data, and when and how to enable the disposal and/or withholding of digital identities conferred on refugees. They rest on a promise of unprecedented precision and personalization, but the capacity to deliver on this promise varies significantly from technology to technology, population to population.[44] Biometric identification may fail due to physical attributes of individual refugees, such as fading fingerprints or eye diseases.[45] Human errors, be they technical or bureaucratic, for example, create significant problems if systems are assumed to be infallible. The consequences may include failing to access protection, services, and durable solutions.

A second issue relates to the type of problems digital identity systems are designed to solve. In displacement contexts, various aid providers develop their own digital identity systems, often neither appropriately adapted to the context nor interoperable with those of other providers.[46] Neither the very real marginalization of displaced individuals caused by the absence of ID nor policy objectives like SDG 16.9 can be used to justify any humanitarian identity system: legality, functionality, and purpose limitation is crucial. While the humanitarian sector is plagued by the prevalence of data silos, there are simultaneously none or few technical or legal barriers preventing mission or function creep.[47] New technologies interact with non-humanitarian systems in ways that can produce humanitarian *mission* creep—for example, UNHCR setting out to provide welfare services to non-displaced populations because it has processed the data to do so. Function creep occurs when data is appropriated by other actors who are not allowed to collect it but would like to use it for purposes contrary to UNHCR's protection mandate. This may occur when the use of artefacts, such as ID cards, are extended beyond original purposes and used for discriminatory purposes against the refugee population, or when existing ID systems are linked to new types of technologies, such as facial recognition and/or drone surveillance. As pointed out by Privacy International, as UNHCR is rolling out its global Biometric Information Management System (BIMS), providing enduring digital identity, the risk is that the profiles collected to allocate international protection will be used for distributing material assistance, and eventually shared with third parties to secure 'financial inclusion', joint registration exercises with host governments or joint resettlement-vetting processes with third countries.[48] As pertinently observed, this means that 'links between UNHCR's policies of inclusion and States' pol-

[48] ibid.

icies of exclusion are beginning to intersect, creating data protection and fundamental rights challenges that were not foreseen when BIMS was established'.[49]

4. Databases and Knowledge Management

In response to the quest for legibility, and born out of the need to provide financial and political accountability to donors and host States (through quantitative figures and individualized profiles of individual cases), international humanitarian organizations, including UNHCR, are building large databases where they collect enormous amounts of beneficiary data. While the platforms are iterations of previous databases and results-based management frameworks—in UNHCR's case, RBM was introduced in the late 1990s[50]—much remains unclear about how these platforms will work, how data will travel, who will be able to access it, how it will be stored and protected, how individuals will be able to access their own data, and what purposes these systems will ultimately serve.[51] As mentioned above with respect to cyber-attacks against the UNHCR, once databases are created they invariably become targets for criminal, State, and armed actors. If the database is closed down, the risk is that databases are *de facto* abandoned as data is inadequately destroyed and what remains is inadequately protected. New systems also interact with non-humanitarian systems in ways that can produce humanitarian mission creep and function creep. A further risk is 'vendor-lock in', the risk of making UNHCR dependent on a particular provider, including in relation to the control of personal data processed by proprietary systems.[52]

As a technological framework that influences how phenomena are captured and represented as data, the database is a key site for the production and materialization of social meaning. The database reflects values, norms, epistemologies, social relations, and power that in turn influence how people interact with the world and each other.[53] So far, these databases and the type of knowledge management and control they enable have received little scrutiny from refugee law scholars.[54] In the following, the chapter focuses on three interlinked problems.

[54] This also includes questions related to contractual agreements and legal frameworks governing development and operation of these platforms and the scope of duty of care.

The first concerns the possible shift occurring from legal to social protection. The Vulnerability Assessment Framework (VAF) was launched in Jordan in 2014 to develop a 'robust model' to map vulnerabilities of the Syrian non-camp population.[55] VAF is owned by UNHCR, the World Food Programme, and the UN Children's Charity, UNICEF, and is a proxy means-testing instrument intended to enable humanitarian organizations to optimize resource use. Its designers hoped that VAF would do this by categorizing and ranking refugees, thus enabling the identification and targeting of the most 'vulnerable' refugees. Data against VAF indicators should be collected by UNHCR at the registration stage, but vulnerability was primarily to be identified through the 'Home Visit Form', a vulnerability assessment questionnaire. This form was to be filled in during household visits by UN agencies and their implementing partners, to be then entered into the Refugee Assistance Information System (RAIS). This information includes the estimated ability of a household to cover its monthly expenses, the number of dependents, the shelter conditions, and access to healthcare. VAF was promoted as central to identifying and ranking demographic vulnerability through a 'vulnerability score' where one represents low vulnerability, two is mild, three is moderate, and four is high/severe. Quantifiable data is created through home visits and qualitative assessments, which is then processed algorithmically, generating a vulnerability score of one–four.[56] This score is a moving target, dependent on the total vulnerability score of the population, and while not officially stated, to receive assistance the highest scores (three–four) are required.[57]

Critics of this turn to proxy means-testing and the 'social protection' agenda of which it is a part have pointed to methodological problems, the prevalence of errors in targeting, its general neo-liberal tenor, and the exclusion of rights-based approaches. Contesting the possibility of 'perfect data' and the notion that such data is actionable across any local refugee protection field, practitioners have also noted inconsistencies in practice: while UNHCR relies heavily on implementing partners, the systems used for identifying vulnerability vary between UNHCR and its partners, and between the partners, for example with different partners using different scorecards. Moreover, there are reports that refugees have purposely been given inadequate information about their scores, and that complaint procedures have been inadequate and unfeasible.[58] All of these criticisms also give rise to due process and access to justice questions.

However, on a more general level, this turn also shifts the scope from legal to social protection, which will be important to explore. While the system is designed to produce knowledge about the protection needs of Syrian refugees in Jordan, it has moved the focus of protection from the interaction between protection officers and individuals, to the homes of refugees—a situation produced by UNHCR's 2009 urban refugee policy, 'allowing' refugees to reside outside camps. In practice, given the miniscule number of refugees who successfully manage to get resettled to a third country, the vulnerability assessment assumes a key role with respect to the actual protection received by refugees. In short, the encounter is no longer a face-to-face one between individual refugees and protection officers (and interpreters), but between refugee households 'performing' vulnerability and one or several UNHCR and NGO employees. RSD determination—and resettlement procedures—are premised on legal vocabularies and at least in theory on human rights and due process values. By contrast VAF is built on assigned scores fed into a socio-technical system that calculates final scores according to a larger matrix that takes into account living conditions more generally and the available resources for material support, and is adjusted for political pressures and priorities levied on UNHCR by the State, other humanitarian actors, and donors. While encounters between refugees and UNHCR protection staff are characterized by enormous power differences, leading to endemic problems of fairness, transparency, and timeliness,[59] something is arguably lost when the aspirations of international refugee law are replaced with technical yet deeply subjective criteria—and encounters structured in a no less disempowering manner than traditional RSD procedures.

The gradual development and overlap of domestic, regional, and global platforms also entails a merging and expansion of agendas. There is no need to romanticize the age of paper-based or local database protection systems: typically, a lack of technical expertise in the field has meant that local databases, solutions, and innovations—which have been invaluable in delivering protection and assistance—have not always been developed or managed with information security in mind.[60] Yet, as operational data moves along the dimension from local to global, it can be accessed and used in different combinations and for different purposes. This path of expansion can be illustrated by the emergence of RAIS and PRIMES. RAIS is an inter-agency tool for tracking assistance, referrals, and assessment information. RAIS was initially developed by UNHCR Jordan in 2009 to address the demands for better coordination of partners, effectiveness, and accountability. It enables UNHCR and partners to share assistance records, cross-check beneficiary lists, and hold various types of data. RAIS is used by 59 agencies in four countries.[61] As noted above, RAIS holds data from VAF, but also VAF's Lebanese and Egyptian 'siblings'—The Vulnerability Assessment of Syrian Refugees in Lebanon

[61] Inter 2016, -Agency coordinator 2017.

(VASyR)[62] and the Egypt Vulnerability Assessment for Syrian refugees (EVAR).[63] As these localized systems are folding, the data is being archived in RAIS. According to UNHCR, RAIS is a monitoring system that keeps refugee information up to date, prevents duplication of effort and helps provide targeted assistance to vulnerable people and 'persons of concern'.[64] These systems provide 'a comprehensive and collaborative data-driven system that features more in-depth collection of household information, and standardized definitions and benchmarks for determining vulnerability levels within different sectors'.[65] In itself, this entails the aggregation of an enormous amount of the very detailed data of millions of people—with the soft UNHCR data protection policy as the normative framework.

At the same time, RAIS is only one of several systems that, from 2018, have been integrated into PRIMES, which encompasses all interoperable UNHCR registration, identity management and caseload management tools and applications. The scope of PRIMES is enormous: it includes existing UNHCR tools such as proGres (a case-management software application), BIMS, the Global Distribution Tool (GDT), the Rapid Application (RApp), IrisGuard and RAIS, and tools to be developed in the future. It is designed to work in offline, online, and global system for mobile communication (GSM) environments, and will be interoperable with IT systems used by governments and partner organizations such as World Food Program's SCOPE and UNICEF's PRIMERO.[66] PRIMES will also move data from local databases worldwide and consolidate all UNHCR data in a single database that can be accessed via the web. These rapidly unfolding developments require refugee law scholars to rethink how and where we look for problems, the type of stakeholders we put under critical scrutiny—in particular private sector technology companies—and how we assess the linkages between due diligence defaults, deficiency, and malfunctions at the corporate end, and protection failures at the humanitarian end. For individual ICs, this concerns the ability to make corrections or changes to reflect the lifecycle of the digital body, but to make this resistant to fraudulent activity. The next section of this chapter problematizes the rise of automated processes in asylum and resettlement processing, to contemplate how automation and digitization may shift the substantive and procedural content of refugee protection.

5. Digitizing Protection Procedures: Credibility Assessments and Due Process

The fourth and final section considers the digital transformation of 'facts' and selection procedures in legal decision-making (RSD, resettlement, asylum). The chapter argues that digitization and automation both destabilize the parameters of these procedures and engender new risks to the integrity of legal and bureaucratic protection procedures. While these risks can at one level be articulated as direct risks to due process and access to justice, it is important that we also carefully consider any distributive consequences to the overarching value of international refugee law.

For grassroots and community-based civil society actors, digital devices are used to document and disseminate information about harms and threats, create digital support networks, give early warnings, and trigger support from powerful constituents. Yet, here, technology has an ambiguous position: on the one hand, for activists, technology produces indisputable 'facts', testimonies, or evidence of events in formats familiar and acceptable to those in power. Even if the physical body cannot speak with credibility—refugee narratives are often met with distrust[67]—digital devices have in recent decades been seen as credible conveyors of information.[68] On the other hand, in recent years countering misinformation, disinformation, and malinformation has become increasingly complicated.[69] In the past, the aim was to harness the power of social media to do good for refugees, but social media is now also seen as a potential source of harm. This type of digital harm can on its own constitute persecution, for example in the case of authentic or forged footage of sexual activity considered culturally unacceptable. At the same time, the rise of Deepfake images and videos/Generative adversarial networks (GANS) poses problems for refugee testimonies about atrocities in RSD and resettlement selection processes. With a specific view to the RSD process, concern has been voiced with respect to the ability of NGOs to provide effective filters for evidence arising from new forms of media in such a way that evidence produced will be viable in RSD processes.[70] For example, rumours about rapes and child killings usually trigger acts of revenge. Graphical illustrations of such crimes can prove fatal, regardless of whether or not they are true.

False attribution of imagery—such as the Deepfake application generating nude images of women—exacerbates vulnerability.[71] Whether the creation and dissemination of such imagery would amount to persecution requires a nuanced and situated social and forensic analysis of the technology and its use in a given social context. The procedural challenge is twofold: to develop guidance for assessing risk in rapidly changing contexts of activism and political repression, but also, in the context of a flood of information, to determine how digital evidence can be accessed, produced, sorted, and assessed. This also includes guidelines for admitting and disclosing evidence to better fortify procedural firewalls and fair process.[72] In a preliminary opinion, UNHCR states that it

> wishes to underline that the evidentiary value of electronic data should be considered with great care. Asylum-seekers will often avoid using their correct names on social media platforms, including to evade surveillance and possible persecution, or potential harm to their families in their country of origin. Further, digital and electronic evidence may in certain instances have limited reliability or accuracy or may be easily altered. Finally, it is relatively common for mobile devices to have been handed over or used by other individuals, including smugglers or traffickers. Due consideration should be given to these factors when verifying information or otherwise assessing the credibility of an asylum-seeker's application, based on information retrieved from electronic devices.[73]

Particular questions arise with respect to digital footprints produced by devices owned by refugees and asylum seekers in the process of establishing a legal identity. A number of domestic regulations now allow for the seizure and search of electronic devices in the context of asylum procedures. UNHCR has cautioned against this development, describing it as a 'highly intrusive measure that should only be conducted when strictly necessary, with the requisite safeguards, for a limited period of time, with respect to data protection laws and the right to an effective remedy'.[74] However, with respect to credibility assessments undertaken in the context of RSD and resettlement selection, we know little about how UNHCR in practice relates to these digital devices and their underlying data pools.

Beyond the RSD process, a different kind of verification issue arises with the production of not only credible but also 'deserving' candidates for third-country resettlement.

[73] UNHCR, 'Preliminary Legal Observations on the Seizure and Search of Electronic Devices of Asylum-Seekers' (4 August 2017) 2 2 <https://www.refworld.org/docid/59a5231b4.html> accessed 22 April 2020.

[74] UNHCR, 'UNHCR Calls on Austrian Government to Keep Refugee Protection at Centre of Asylum Law Amendments' (9 May 2018) <https://www.unhcr.org/news/press/2018/5/5af2bafd4/unhcr-calls-austrian-government-keep-refugee-protection-centre-asylum-law.html> accessed 7 May 2020.

While durable solutions are not anchored in international law, the resettlement process is constructed as a 'quasi-legal' process that entails vetting of candidates and their slotting into the different protection categories demarcated in the Resettlement Handbook, including physical and legal risk, women at risk, survivor of torture and violence, and so forth. While 'vulnerability'—in tandem with integration potential—has been a key criterion for resettlement, in recent years, the individual potential for labour market absorption has emerged as a key factor for most resettlement countries. Various models are now available: a Stanford project designed an algorithm which assigned placements for refugees that it projected 'would increase their chances of finding employment by roughly 40 to 70 percent compared with how the refugees actually fared'. Piloted in Switzerland, the project aimed to substantially increase employment rates with keeping a focus on family preferences.[75] The algorithm, which 'could be implemented at virtually no cost' was presented as a way to 'help resource-constrained governments and resettlement agencies find the best places for refugees to relocate'. [76] The algorithm Annie was developed in close collaboration with the US resettlement agency—the Hebrew Immigrant Aid Society—where the first version was deployed in May 2018. Annie promised to integrate 'machine learning and integer optimization' to suggest 'optimal placements while giving substantial autonomy for the resettlement staff' to place refugees with relatives in the US.[77] How the normalization of this kind of processing technology will reshape the relationship between protection norms and selection procedures remains to be seen.[78]

6. Conclusion

This chapter has linked well-known topics in the field of international refugee law to new challenges and risks arising from the introduction of technological tools and platforms, increased private sector collaboration and the digitization of protection procedures and assistance. In particular, the chapter has considered how this relates to

the allocation of protection to individuals, to procedural rules, as well as the need to protect refugees *against* humanitarian organizations and private sector partners. We are moving towards a complex idea of protection in international refugee law, incorporating the legal, technical, and ethical obligations to uphold the rights of individuals, protect their autonomy and dignity, as well as the security and integrity of protection data and the digital infrastructure. This development has been explored through the concept of algorithmic protection, where refugees' digital bodies both become the object of intervention and protection and where new vulnerabilities arise in conjunction with the emergence of refugees as digital subjects with a 'duty of visibility'. The turn to technology engenders a need to rethink the relationship between international refugee law, the duties and prerogatives of Refugee Convention parties, and those of technology actors. This shift also places new topics on the research agenda of those interested in refugee law. It is hoped that the scoping of the digital transformation of refugee protection presented in this chapter can contribute to charting new directions in international refugee law and scholarship.

PART VII

THE END OF REFUGEEHOOD— CESSATION AND DURABLE SOLUTIONS

CHAPTER 57

CESSATION

GEORGIA COLE

1. Introduction

Questions about when, how, and why refugee status ends remain critical for academics, States, UNHCR, and refugees alike. If States are uncertain about when their responsibilities towards refugees will end, the result may be ever-stricter policies concerning borders, refugee status determination procedures, and individuals—even once they have been granted some form of protection.[1] The changes wrought by this restrictionism would likely be to the long-term detriment of the laws, norms, and institutions of the refugee regime,[2] which is why the first United Nations High Commissioner for Refugees reflected that 'refugee status should "not be granted for a day longer than [i]s absolutely necessary" '.[3] Furthermore, the drafters of the Refugee Convention felt that it would be deleterious for refugees themselves to live outside of their country of origin indefinitely under 'international protection'. Critiques of their paternalism aside, the result is that article 1C of the Refugee Convention provides an exhaustive list of ways in which refugee status can end.

[1] This is exemplified in the proposed Qualification Regulation of the European Union (EU), which enumerates key issues that the European Commission (EC) considers require new regulation. One of these is 'the lack of cessation checks', which the EU assumes creates 'an additional incentive for those in need of international protection to come to the EU rather than to seek refuge in other places': UNHCR, 'UNHCR Comments on the European Commission Proposal for a Qualification Regulation—COM (2016) 466' (February 2018) 6 (emphasis omitted) <https://www.refworld.org/docid/5a7835f24.html> accessed 3 November 2019. To address this, the EC has recommended 'ensuring international protection is granted only as long as needed': 6 (emphasis omitted).

[3] UNHCR Standing Committee, 'Note on the Cessation Clauses', EC/47/SC/CRP.30 (30 May 1997) para 4.

Due to the significant consequences of the cessation of refugee status for individuals and States, however, legal experts and UNHCR promote a strict interpretation of article 1C. In *R (Hoxha) v Special Adjudicator*, Lord Hope of Craighead specified the reasons for such a '"strict" and "restrictive" approach':

> Once an asylum application has been formally determined and refugee status officially granted, with all the benefits both under the Convention and under national law which that carries with it, the refugee has the assurance of a secure future in the host country and a legitimate expectation that he will not henceforth be stripped of this save for demonstrably good and sufficient reason.[4]

This concern, coupled with the administrative and legal challenges discussed in this chapter, has been matched by States' historical reluctance to employ this aspect of the Refugee Convention's armoury. Reasons for this include 'the administrative costs involved' and 'the recognized likelihood that even where cessation results, it may not lead to return because those whose refugee status has ceased will have the possibility to remain under another status; and/or a State preference for naturalization under Article 34 of the Convention'.[5]

In the 1990s, however, interest in the cessation clauses burgeoned.[6] This shift was particularly pronounced in relation to article 1C(5), the 'ceased circumstances' cessation clause,[7] which Fitzpatrick suggested was invoked more frequently because of:

> democratization in some formerly repressive States; concern to prevent asylum from becoming a backdoor to immigration; experiments with temporary protection; stress upon repatriation as the optimal durable solution to displacement; and difficult dilemmas posed by repatriation to situations of conflict, danger and instability.[8]

UNHCR also appeared keen to 'poin[t] to its success in bringing refugee status to an end',[9] and to extricate itself from costly care and maintenance programmes and

[9] James C Hathaway, 'Refugee Solutions, or Solutions to Refugeehood?' (2007) 24 Refuge: Canada's Journal on Refugees 3, 6.

protracted refugee negotiations that, without decisive action, could consume the organization indefinitely.[10]

Putting the politics aside, analyses of article 1C invariably begin by dividing the provision into two discrete forms of cessation. As countless commentators, including UNHCR, put it, '[r]efugee status may cease either through the actions of the refugee (Article 1 C (1) to (4)), such as by re-establishment in his or her country of origin, or through fundamental changes in the objective circumstances in the country of origin (Article 1 C (5) and (6))'.[11] While useful, and reflected in the structure that this chapter assumes, this categorization nonetheless obscures the fact that while articles 1C(1)–(4) categorically involve the actions of refugees, 'fundamental changes in the objective circumstances in the country of origin' may, too. When the roles that refugees play in peace-building and political change from *outside* their countries are acknowledged,[12] such a clear-cut distinction breaks down. Similarly, a more contextualized understanding of 'the actions of the refugee', noting the ways in which their agency is affected by the many actors and systems with which they interact, challenges such a categorical reading of this population's autonomy in articles 1C(1)–(4).

2. Article 1C(1)–(4)

Within the first four cessation clauses, Hathaway and Foster present a rationale for further subdivision, noting the procedural similarities in paragraphs (1), (2), and (4).[13] Grouping these together, they state:

[10] During UNHCR's consultations on 'When Is International Protection No Longer Necessary?' in the early 2000s, Bonoan proposed greater flexibility towards the application of the cessation clauses: Rafael Bonoan, 'When Is International Protection No Longer Necessary? The "Ceased Circumstances" Provisions of the Cessation Clauses: Principles and UNHCR Practice, 1973–1999' (Background Paper for the Global Consultations on International Protection, 2001) para 56. <www.unhcr.org/protection/globalconsult/3bfe1cd84/international-protectionlonger-necessary-ceased-circumstances-provisions.html> accessed 3 November 2019. In suggesting that UNHCR should make decisions that support States' efforts to use cessation 'as a potentially effective method of deterring additional flows of refugees', Bonoan positioned UNHCR as the lapdog of State interests, not a vanguard of refugee law and rights: para 31. His proposals, therefore, sought to position cessation as a punitive tool for rectifying abuses of asylum, rather than a procedural tool designed to assist States and individuals in assessing the appropriate end point of refugeehood. At the UNHCR Global Consultation that followed these discussions, experts nonetheless noted that it 'is not necessarily the view that more flexible interpretation and/or more active use of the "ceased circumstances" cessation clauses' would result in States expanding protection: 'Summary Conclusions' (n 5) 546. The consultations concluded that a more flexible approach could be adopted towards operational procedures, not normative standards.

[11] UNHCR, 'UNHCR Observations on the Proposed Amendments to the Danish Aliens Legislation, L 87' (6 January 2016) para 29. <https://www.refworld.org/docid/5694ed3a4.html> accessed 3 November 2019.

[12] For a great example, see Megan Bradley, James Milner, and Blair Peruniak (eds), *Refugees' Roles in Resolving Displacement and Building Peace: Beyond Beneficiaries* (Georgetown University Press 2019).

[13] While there is extensive jurisprudence on art 1C(1), particularly on the question of whether applying for a passport constitutes the reacquisition of protection, there is little on arts 1C(2)–(4): Susan Kneebone and Maria O'Sullivan, 'Article 1 C' in Andreas Zimmermann (ed), *The 1951 Convention relating to the Status of Refugees and Its 1967 Protocol: A Commentary* (OUP 2011) paras 113–9.

> The refugee may elect to entrust her safety to the State of origin by way of re-availment of its formal protection, by re-acquisition of its nationality, or by re-establishment in its territory. Behavior of any of these three sorts is understood to reflect a determination by the refugee to entrust her well-being to her country of origin, an exercise of individuated self-determination in which international law can but acquiesce.[14]

The application of articles 1C(1), (2), and (4) requires the triad of 'voluntariness, intent, and effective protection'.[15] In a world where the 'voluntary' in voluntary repatriation has been stretched to its semantic breaking point,[16] this emphasis on intent appears critical for ensuring that re-entry is not conflated with re-availment or re-establishment of protection.[17] Even when the re-availment of national protection through mechanisms such as contact with the embassy of a refugee's country of origin, or renewal of a passport,[18] are determined to be *voluntary acts*,[19] of greater significance is whether such acts are undertaken with the *intent* of re-availing oneself of national protection,[20] and whether they result in the *normalization of relations* between the refugee and the State of origin.[21] As Hathaway and Foster note, 'when most persons approach consular or diplomatic authorities to secure the documentation needed for such purposes as travel, enrolment in school, or professional accreditation, they do so simply as a matter of routine, with no thought to the legal ramifications of their act'.[22] Factors including the purpose of trips back to the country of nationality, and whether such a purpose is successfully achieved, determine whether return could justify the cessation of status.[23]

[15] 'Summary Conclusions' (n 5) 550.

[16] BS Chimni, 'The Meaning of Words and the Role of UNHCR in Voluntary Repatriation' (1993) 5 IJRL 442.

[17] Hathaway and Foster raise the concern that where significant financial inducements are provided to refugees—such as when the Australian government offered Afghan refugees a grant equivalent to five years of salary if they accepted voluntary repatriation—return is not necessarily truly voluntary: Hathaway and Foster (n 14) 473.

[18] The French Office for the Protection of Refugees and Stateless Persons attempted to cease the refugee status of a Bangladeshi national after the individual approached the Bangladeshi embassy to renew their driving licence. This was overturned by the French National Court of Asylum in 2018, which assessed that this document, and the means by which it was procured, did not mean that the applicant was enjoying the protection of the Bangladeshi authorities: CNDA, 14 Sept 2018, No 16029914. See further European Database of Asylum Law, 'France—National Court of Asylum Rules in a Case of Cessation of Refugee Status' (14 September 2018) <www.asylumlawdatabase.eu/en/content/france-%E2%80%93-national-court-asylum-rules-case-cessation-refugee-status> accessed 3 November 2019.

[19] UNHCR nonetheless cautions that, '[i]f the refugee is compelled to act by circumstances beyond his/her control, such as at the instructions of the authorities of the country of asylum or in order to avert illegalities in regard to his/her stay there, such an act should not be considered as voluntary': UNHCR, 'The Cessation Clauses: Guidelines on Their Application' (26 April 1999) para 9.

[20] Kneebone and O'Sullivan (n 13) paras 113–9.

[22] ibid 465.

[23] Guy S Goodwin-Gill and Jane McAdam, *The Refugee in International Law* (3rd edn, OUP 2007) 136–9.

What frequency and duration of return movements should trigger articles 1C(1), (2), and (4) remains unsettled. Fitzpatrick argued that 're-establishment denotes both a subjective re-affiliation as well as an objectively durable presence'.[24] In the case of repeated visits by refugees to their country of origin, she suggested that, 'so long as the visits are of short duration and the refugees primary residence remains in the asylum State, invocation of article 1C(4) is inappropriate'.[25] The duration of stay is, however, a much less relevant proxy for the re-establishment of protection than the nature and 'formality'[26] of the refugee's link and 'commitment'[27] to their country of origin. UNHCR has reasoned that:

> A short stay may warrant cessation of refugee status if the refugee had carried on a normal livelihood without problems and performed obligations which a normal citizen would, such as paying taxes. Such behaviour would be indicative of a normalization of relations with the country. On the other hand, short visits to the country of origin for compelling reasons would not normally suffice for application of this clause.[28]

In this vein, UNHCR's Executive Committee (ExCom) Conclusion No 18 specifies that refugees should be able to make visits 'to their country of origin to inform themselves of the situation there—without such visits automatically involving loss of refugee status'.[29] Hathaway concurs that:

> the refugee who returns only loses his or her refugee status once a durable, ongoing presence in the home country is established. Up to that point, she remains a refugee and is legally entitled to go back to the asylum country and to resume refugee protection there if things do not work out as hoped . . . .[30]

Fitzpatrick extended this reasoning, advocating for an 'escape clause' for refugees whose attempts to re-establish themselves prove unsuccessful.[31]

As evidence suggests that individuals are more likely to repatriate if they know that attempts to re-establish themselves in potentially volatile contexts would not signal a hard end to their rights as a refugee, such an approach may open possibilities for more sustainable and stable models of refugee repatriation. But it also raises difficult normative questions, including how long any 'trial period' should last, over what timeframe individuals would remain entitled to re-acquire or 're-activate' protection in the country of asylum, and about who bears the responsibility for an unsuccessful attempt at re-establishment. Though a legal case could be made for the continuation of refugee status

if an individual's failure to re-establish themselves resulted from discrimination, persecution, or the State's unwillingness or inability to protect them, establishing a broader moral and political argument for an 'escape clause' would be challenging.

3. Article 1C(5)

Any systematic analysis of how article 1C(5) is invoked and implemented exposes the 'ceased circumstances' cessation clause as the apotheosis of the Refugee Convention's fragmented application. Part of this stems from the fact that the shortcomings in how articles 1C(5) and (6) are articulated are, as Goodwin-Gill subtly put it, 'glaring' and 'perverse'.[32] The confusing guidance on the change required to invoke article 1C(5) stems from UNHCR having set itself the impossible task of articulating a set of universal political standards that a State should reach before it is considered appropriate to cease the status of refugees from that country. This involves assessing:

> the fundamental character of the changes in the country of nationality or origin, including the general human rights situation, as well as the particular cause of fear of persecution, in order to make sure in an objective and verifiable way that the situation which justified the granting of refugee status has ceased to exist.[33]

ExCom Conclusion No 69 states that changes must be 'fundamental, stable and durable'.[34] UNHCR has argued that true stability in the country of origin requires a system of protection that extends beyond 'mere physical security and safety' to include:

> the existence of a functioning government and basic administrative structures, as evidenced for instance through a functioning system of law and justice, as well as the existence of adequate infrastructure to enable residents to exercise their rights, including their right to a basic livelihood.[35]

Despite numerous UNHCR checklists enumerating key indicators for determining whether the circumstances in connection with which a person who has been recognized as a refugee have ceased to exist,[36] State practice continues to challenge these guidelines in three main ways: on the grounds of procedural clarity and what role UNHCR should play; the relevance of certain indicators; and how exemption from cessation should be managed.

[32] Guy S Goodwin-Gill, *The Refugee in International Law* (2nd edn, OUP 1996) 84. This quote was not included in the following edition of that book in response to a concern that this was 'putting it too high': Goodwin-Gill and McAdam (n 23) 144.

[36] See eg UNHCR (n 19) paras 23–31.

a. UNHCR's Role and Procedural Clarity

Significant confusion surrounds what UNHCR's involvement in cessation should be. ExCom Conclusion No 69 specifies that the organization 'should be appropriately involved' in the application of cessation, but cautions that its 'application . . . rests exclusively with the Contracting States'.[37] On paper, the organization's role is limited to an advisory one, such as issuing recommendations about the suitability of the clause's application to a particular caseload of refugees. Even these non-legally binding pronouncements, however, are objected to by States.[38] Several reasons explain this. Procedurally, while UNHCR maintains that its recommendations regarding the suitability of invoking the article 1C(5) cessation clause are intended purely to *inform* States (with whom the ultimate decision rests), the nature of these pronouncements belie this role. These recommendations often contain timelines for the implementation process and deadlines by which individuals 'will cease to be refugees',[39] which reduce State autonomy in this process. Politically, if UNHCR issues a statement confirming that country conditions would justify the invocation of article 1C(5), governments hosting refugees from that State feel pressure to respond in ways that appear consistent with this judgment. If States do not heed UNHCR's advice, this can reveal doubts about the extent of political reform in a neighbouring State, or expose the political incentives that host States have to keep refugee populations *in situ*.[40] UNHCR's recommendations thus oblige States to initiate political discussions that may have widespread, long-lasting, and undesirable diplomatic consequences.

UNHCR's track record of recommending cessation in contexts where political changes have not been fully consolidated has also undermined its legitimacy in these discussions.[41] On multiple occasions, UNHCR has supported cessation in order to show public confidence in a new regime or State, despite significant concerns about the fundamental and durable nature of change. UNHCR's initial 'Declaration of

[37] UNHCR (n 33).

[38] For example, following UNHCR's recommendation that cessation be applied to Croatian refugees, the government of Serbia responded 'expressing its disagreement with UNHCR's recommendations' and 'reiterat[ing] its objection that cessation on the ground of the ceased circumstances had been prematurely applied': UNHCR, 'Third Progress Report: Implementation of the Durable Solutions Process (Sarajevo Process) for Refugees from Croatia Displaced by the 91–95 Conflict, including Cessation of Refugee Status' (25 August 2016) fn 15.

[39] See eg UNHCR, 'UNHCR Note on the Applicability of the Cessation Clauses of the UNHCR Statute and the 1951 Convention to Refugees from Bulgaria and Romania' (October 1997) para 3.

[40] Georgia Cole, 'Beyond the Politics of Labelling: Exploring the Cessation Clauses for Rwandan and Eritrean Refugees through Semiotics' (DPhil thesis, University of Oxford 2016).

[41] Hathaway and Foster concur that '[t]here has too often been an unhealthy willingness to assume change from formal declarations or promises of reform, without carefully assessing the resultant reality on the ground': Hathaway and Foster (n 14) 482. Furthermore, promises and reforms must be related to the reasons why an applicant was originally granted asylum. Generalized improvements in access to services and the economy do not equal the end of persecution or the willingness of a State to protect affected parties.

Cessation' for the Democratic Republic of East Timor, for example, stated that changes in the country were 'of a fundamental character'.[42] The organization nonetheless aired concerns elsewhere that 'the security situation throughout East Timor is expected to remain uncertain but relatively stable up to 2003', with the peaceful elections being secured by a 'United Nations Peace-Keeping Force and Civilian Police in the most sensitive regions'.[43] The lukewarm relationship between East Timor and Indonesia, which was seen as fundamental to lasting and stable peace in the former, was captured in the statement that '[b]oth sides are optimistic that this improving relationship will be long lasting'.[44] The availability of local integration for East Timorese in Indonesia, however, led the organization to reason that that, alongside the option of repatriation, meant this population was no longer in need of international protection.[45] A decade later, the International Crisis Group noted that there were concerns at the time about 'whether the move was premature, driven too much by a desire to support the development of the new state despite concerns of insufficient protection for those who returned'.[46]

Exactly how the cessation process should be instigated and implemented nonetheless remains underdefined. Instances where the country of origin has successfully lobbied for the application of article 1C(5) to its citizen-refugees, as the Rwandan government did throughout the 2000s, have been heavily criticized from a protection perspective,[47] yet there is little guidance on what the appropriate role for the country of origin, or indeed refugees, should be. What is clear is that the invocation of article 1C(5) should always be a purposive act undertaken by States, which have the responsibility to demonstrate that there has been a change of circumstances in the country of origin, rather than cessation applying automatically upon the expiry of a temporary protection visa (or refugees themselves having to show an ongoing protection need).[48] In terms of procedural safeguards, the application of article 1C should nonetheless be seen as a 'rebuttable presumption', with States putting in place procedures to allow refugees 'to contest the evidence supporting cessation'.[49]

[48] In Australia, the High Court held in the case of *Minister for Immigration and Multicultural and Indigenous Affairs v QAAH of 2004* [2006] HCA 53, (2003) 231 CLR 1 that an Afghan applicant wishing to renew their temporary protection visa had to prove their status afresh against art 1A(2), or it would otherwise automatically cease according to art 1C(5). For a detailed analysis of the flaws of this judgment, see Maria O'Sullivan, *Refugee Law and Durability of Protection: Temporary Residence and Cessation of Status* (Routledge 2019) 61–70.

[49] UNHCR (n 3) paras 37–8.

b. Assessing the Applicability of Article 1C(5)

A second major area of debate concerns what factors are relevant to an assessment of 'fundamental change'. The Australian government, for example, argues that the focus should be on whether the specific circumstances that led to the refugee claim being recognized have ceased to exist, and that the social and economic situation in the country of origin has no bearing on this.[50] In contrast, UNHCR states that '[e]conomic and social stability have relevance in so far as serious instability in the economic or social situation could generate further political unrest'.[51]

At the root of these discussions are fundamental questions concerning whether the invocation of article 1C(5) requires a separate, positive assessment of the *presence of effective protection* as well as the *absence* of the original persecutory risk, and thus how—or indeed whether—article 1C(5) mirrors article 1A(2).[52] States, including Australia, have claimed that 'the circumstances in connexion with which [an individual] has been recognized as a refugee', referred to in article 1C(5), concern only those related to the persecutory act, and that provided these have abated, it can be assumed that individuals no longer require international protection. The end of persecution is conflated with (or seen to automatically arise from) the availability of effective protection, which is not required to extend beyond protection against that threat *specifically*.

Legal scholars have challenged this to argue that there is no 'causal connection between the end of a danger of persecution and the re-availability of protection against persecution'.[53] O'Sullivan devotes her book to arguing that 'the test for cessation is not merely absence of persecution but a wider concept of "effective protection"',[54] which 'encompasses elements such as the rule of law, judicial and administrative infrastructure, human rights protections and the absence of armed conflict'.[55] Hathaway and Foster go to great lengths to articulate a positive obligation on States to identify expansive protection mechanisms in the country of origin before they can invoke cessation. Through complex legal reasoning, they locate this obligation in the fact that a refugee cannot 'avail himself of the protection of the country of his nationality', as per the third clause of article 1C(5), without an 'assessment of the availability in fact of such affirmative rights'.[56]

[50] John Vrachnas, 'The Operation and Scope of Article 1C(5) of the United Nations Convention relating to the Status of Refugees' (2005) 1 Journal of Migration and Refugee Issues 51.

[51] UNHCR (n 19) para 28.

[52] For an extensive discussion of this point, see Kneebone and O'Sullivan (n 13) para 188.

[53] Roland Banks, 'The Potential and Limitations of the Court of Justice of the European Union in Shaping International Refugee Law' (2015) 27 IJRL 213, 231.

[54] O'Sullivan (n 48) 41.

[55] ibid 51; O'Sullivan further argues that, in order for art 1C to be consistent in aims, particularly in the context of art 1C(3) referencing that an individual must 'enjo[y] the protection of the country of his nationality', an assessment of the availability and provision of protection must be made in all cessation decisions: at 52.

[56] Hathaway and Foster (n 14) 488.

While such 'affirmative rights' must be available, and not just because of a 'preferable interpretation' of the Refugee Convention, as Kneebone and O'Sullivan suggest,[57] the source and defence of these rights might be more easily derived from another clause of article 1C(5). Recognition of refugee status involves proof of several separate components, including persecution on particular grounds and an absence of State protection. Meeting a threshold in the change of 'circumstances in connexion with which he has been recognized as a refugee' thus implicitly entails demonstrating that *all* these components of article 1A(2), including that concerning State protection, are either ameliorated or restored.[58] Deriving this obligation from the second clause of article 1C(5) removes the need for Hathaway and Foster's complex legal argument.

The question this leaves unresolved is to what extent protection under article 1C(5) extends beyond the protection against persecution required under article 1A(2). In the recent ruling of the English Court of Appeal in 2018, Lady Justice Arden found that:

> the circumstances which caused the person to be a refugee have ceased to apply and there is no other basis on which he would be held to be a refugee. The recognising State does not in addition have to be satisfied that the country of origin has a system of government or an effective legal system for protecting basic human rights, though the absence of such systems may of course lead to the conclusion that a significant and non-temporary change in circumstances has not occurred.[59]

In *Abdulla v Bundesrepublik Deutschland*, which concerned the application of article 11 of the EU Qualification Directive to Iraqi refugees in Germany, the Court of Justice of the European Union (CJEU) provided guidance that protection in the country of origin should include 'an effective legal system for the detection, prosecution and punishment of acts constituting persecution and that the national concerned will have access to such protection'[60] and suggested that the relevant authorities 'may take into account . . . the extent to which basic human rights are guaranteed in that country'.[61] The guidance in *Abdulla* further suggested that determining that a refugee no longer has a well-founded fear of persecution requires a broader assessment than that their basic human rights will not be violated for any reason, whether due to the original grounds for persecution or

[57] Kneebone and O'Sullivan (n 13) para 195.

[58] The same argument applies to art 1C(6), and highlights its consistency with art 1C(5) despite the fact that art 1C(6) does not refer to the availability of protection in the country of former habitual residence. Hathaway and Foster suggest that this omission does not matter as they locate a State's obligation to assess the availability of 'affirmative rights' in the reference in art 1C(6) to refugees being 'able to return': Hathaway and Foster (n 14) 488–9. I would instead suggest that this obligation to identify a 'positive, protective relationship' (489) is absolutely fundamental to affirming that 'the circumstances in connexion with which he has been recognized as a refugee have ceased to exist'.

[61] ibid para 71.

for reasons that have emerged subsequently.[62] The EU Qualification Directive indeed contains provisions on the nature and content of this protection which 'do not figure in the Convention and which must be taken into account in cessation proceedings'.[63] How much the standard of protection required for the invocation of article 1C(5) extends beyond protection against persecution, however, remains unsettled in the jurisprudence and scholarship.[64]

Beyond this, article 1C(5) differs from article 1A(2) in several important ways. First, only after an individual's eligibility for refugee status has been determined can the application of article 1C(5) be considered.[65] Exemption from article 1C(5) similarly only applies to recognized refugees once cessation proceedings have been initiated against them, and should have no bearing on the initial granting of status. Secondly, while displaced persons must demonstrate that they meet the refugee definition in article 1A(2), States 'bear the burden of proving that the refugee is no longer in need of international protection'.[66] Once an individual has therefore been granted refugee status, this can only be ceased by States if they establish that the conditions of article 1C(5) have been fulfilled.[67]

Importantly, instances of voluntary repatriation must not be taken as conclusive evidence in favour of invoking cessation.[68] Using language with more than a hint of condescension towards governments in the Global South, Hathaway flags that this fact is lost on 'governments in most of the less-developed world' which:

> take UNHCR involvement in a given repatriation effort . . . as a sufficient basis . . . for the termination of their own duty to protect the refugees in question, with no real attention being paid to the actual legal criteria for cessation of status (much less to volition).[69]

It is unsurprising, however, that governments might be confused about the causal relationship between voluntary repatriation and cessation even if 'the standards and policies appropriate for each are different'.[70] In practice, the relationship appears

[62] ibid para 73; Evangelia Tsourdi, 'What Role for the Court of Justice of the EU in the Development of a European Asylum Policy? The Case of Loss and Denial of International Protection in the EU' (2013) 68 Tijdschrift voor bestuurswetenschappen en publiek recht 212.

[67] For a discussion of the importance of this point in the context of Australian case law, principally in the case of *QAAH* (n 48), see O'Sullivan (n 48) 59–70.

[68] The difference between the change of circumstances that would lead UNHCR to 'actively pursue the promotion of [voluntary repatriation]' as per paragraph (e) of ExCom Conclusion No 40 and that required to instead invoke Cessation is also unclear: UNHCR Executive Committee Conclusion No 40 (XXXVI) 'Voluntary Repatriation' (1985).

[69] Hathaway (n 9) 5.

[70] 'Summary Conclusions' (n 5) 549.

blurred. When discussing the possible invocation of the cessation clause for Chileans in 1994, UNHCR used successful repatriation as a proxy for 'the durable and fundamental nature of the changes that the Chilean institutions have undergone'.[71] Beyond exemplifying the lack of legal clarity about the relationship between return and cessation, this flags a point of much greater concern for refugee protection. In cases such as the Chilean one, UNHCR assesses the suitability of voluntary return, assists in encouraging and facilitating it based on this assessment, and analyses the 'success' of subsequent return movements against metrics it has designed. Based on the outcomes of this process, which it conceived, supported, and evaluated, UNHCR then decides to recommend cessation.[72] The organization's central role in every stage of this process, and its power to strongly encourage States to follow its recommended course of action (albeit in a non-binding way), suggests a short-circuit in refugee protection.[73] No one party should determine the rules of the game, compete in it, play referee, and then be entrusted to blow the final whistle.

A penultimate, related area of ambiguity is whether article 1C(5) can only be invoked if durable solutions are available. Experts have stated that, if the conditions for the clause's invocation have been met, it 'may be invoked without a durable solution having been found',[74] but that, '[a]s a guiding principle, cessation of refugee status should lead to a durable solution. It should not result in people residing in a host State with an uncertain status. Nor would cessation necessarily lead to return.'[75]

In its intervention in *Hoxha*, however, UNHCR stated that 'cessation should only be invoked where the refugee can and will, in fact, be returned to his country of origin'.[76] Drawing an explicit link between whether an individual can be repatriated and the suitability of cessation nonetheless seems unjustified, even if UNHCR is reticent to invoke cessation without solutions being available.[77] Cessation is not paired with any one durable solution, and should not be automatically associated with, nor arise from, return.[78] Once their status has been lost pursuant to article 1C(5), former refugees are indeed not protected under law by the same standards that would have previously applied to repatriation, resettlement, or naturalization.

[71] UNHCR, 'Applicability of the Cessation Clauses to Refugees from Chile' (28 March 1994) para 1.

[72] As Bakewell argues in the case of UNHCR discharging a role as both aid provider and protector, '[w]here refugees feel that their rights are being infringed in some way by the system ... they have few avenues for appeal when the very agency which is supposed to provide protection is co-ordinating the programmes they object to': Oliver Bakewell, 'Refugee Aid and Protection in Rural Africa: Working in Parallel or Cross-Purposes?' [77] UNHCR (n 35) para 6.

[78] In Germany, art 1C(5) is often used to cease an individual's refugee status, but leaves unaffected the residence/protection permit that enables them to stay within the country. O'Sullivan thus concludes that, in Germany, 'it appears that cessation is being used as a means of stripping away the rights of those refugees affected, rather than for the purpose of return to their country of origin': O'Sullivan (n 48) 2.

Finally, attempts to clarify what conditions must be in place to invoke article 1C(5) have raised new questions, including who counts as an 'actor of protection' in this context. This query has proven particularly contentious in the European context, where the EU Qualification Directive specifies that:

> Protection can be provided, where they are willing and able to offer protection, either by the State or by parties or organisations, including international organisations, meeting the conditions set out in this Directive, which control a region or a larger area within the territory of the State. Such protection should be effective and of a non-temporary nature.[79]

The EU Qualification Directive clarifies that these parties or organizations should, like a State, take 'reasonable steps to prevent the persecution or suffering of serious harm, inter alia, by operating an effective legal system for the detection, prosecution and punishment of acts constituting persecution or serious harm', and that the applicant must have 'access to such protection'.[80] In its guidance on the case of *Abdulla*, the CJEU suggested an expansion of the types of actors that fulfilled the criteria referred to in article 7(1)(b) of the Directive, noting that they 'may comprise international organisations controlling the State or a substantial part of the territory of the State, including by means of the presence of a multinational force in that territory'.[81] Rulings in the UK and France had already found this, deeming that both private and public entities, such as the Kosovo Force in Kosovo, may constitute 'actors of protection'.[82] Whether or not States require such entities to perform 'like a State' or to be mandated with specific responsibilities, such as by a UN body, varies across EU Member States,[83] and interpretations from outside the EU, notably in Canada and Australia, provide no further consistency on this point.[84]

Justifying the invocation of cessation based on protection provided by non-State entities is, however, deeply flawed. First, the meaning of 'the State' (and thus how a non-State entity will relate to it) is manifestly unclear. Does it need to be a bureaucratic apparatus that provides services, or a 'functioning government'[85] that provides 'political goods'?[86] Article 7(3) of the EU Qualification Directive describes international organizations as controlling 'a State or a substantial part of its territory'.[87] This introduces confusion as to whether non-State actors must have control over, and work through, a State's administrative functions and/or its territory, and whether the, or a, 'State' must be functional in the area controlled by these 'actors of protection'.[88] Furthermore, and

[79] EU Qualification Directive, preamble, para 26. [80] ibid art 7(2).

[84] O'Sullivan (n 48) 118. [85] O'Sullivan (n 83) 89. [86] O'Sullivan (n 48) 130–1.

[87] EU Qualification Directive, art 7(3).

[88] Even 'country of nationality', however, references both territorial and rights-bearing components as individuals 'return to countries of nationality', implying a territorial entity, and avail themselves of the protection of countries of nationality, rendering 'country' as also metonymic for a bureaucratic or 'functioning government'.

following Storey's work, O'Sullivan notes the shortcomings of adopting 'a very "statist" approach to protection [that] reflects western liberal democratic values of the centrality of State institutions that may not be relevant in other political contexts'.[89]

Secondly, while international actors such as a UN peace-keeping force or the International Committee of the Red Cross may establish a 'stable' presence and 'effective and available'[90] control over a territory, they are transient entities. In the European context, the Qualification Directive nonetheless specifies that refugee status can only cease in the context of 'a change of circumstances of a significant and non-temporary nature'.[91] If organizations like UNHCR can only provide temporary protection in the country of asylum, and are not bound by the same human rights laws as States are, it is inconsistent to see their presence, control, and actions in the country of origin as constituting a categorically different form of protection, particularly one that qualifies as durable and non-temporary.[92]

Thirdly, O'Sullivan uses the theoretical foundations of refugeehood to argue that the granting of refugee status is based upon the political relationship between citizens *and the State* breaking down. Protection provided by non-State actors cannot ameliorate this because 'it cannot repair the severed bond between citizen and state that was ruptured when persecution took place, when the protection of the state failed and refugeehood was established'.[93] In other words, it cannot ensure the rights and obligations attached to citizenship and nationality, which O'Sullivan argues are key to the restoration of effective protection.[94] While O'Sullivan's demand that this relationship be based on 'the consent of the governed'[95] would establish a benchmark higher than many States currently achieve, re-centring the relationship between citizen and State appears vital for realigning the interpretation of the Convention with its objects and purpose.

c. Exemption

Given that the Refugee Convention limits the 'exemption' paragraph of articles 1C(5) and (6) to article 1A(1) refugees, UNHCR and States have been progressively extending the humanitarian and legal case for this paragraph to cover those granted refugee status under article 1A(2) of the Refugee Convention and related regional instruments.[96] The UK Home Office has noted that '[a]pplication of the "compelling reasons" exception is

[89] O'Sullivan (n 48) 128.

[90] UNHCR (n 35) para 15.

[91] EU Qualification Directive, art 11(2).

[92] Any transition of power away from non-State entities to other actors may also create volatile conditions. For further discussion of the protection that non-State armed groups can provide, see Chapter 63 in this volume.

[93] O'Sullivan (n 83) 102.

[94] O'Sullivan (n 48) 107–8, 117.

[95] O'Sullivan (n 83) 102.

[96] In the case of the OAU Convention, UNHCR has argued that, although it does not contain this provision, 'this phrase should be read as subsumed within Article 4(e) of the OAU Convention' given that 'the OAU Convention complements the 1951 Convention and the close connection between the purposes of the African Union and the United Nations are recognized': UNHCR, 'Guidelines on Exemption Procedures in respect of Cessation Declarations' (December 2011) 4 fn 7.

interpreted to extend beyond the actual words of the provision to apply to Article 1A(2) refugees and reflects a general humanitarian principle'.[97] The EU Qualification Directive similarly extends the exemption provisions to all refugees affected by its two 'ceased circumstances' cessation clauses.[98] However, whether exemption should be made available to all refugees, either because it is customary international law,[99] or so that the Refugee Convention is aligned with UNHCR's statute, remains disputed,[100] as does what the outcome of the application of exemption should be,[101] given States and UNHCR would wish administratively costly cessation proceedings to translate into a reduction in the number of refugees requiring protection.

Efforts have also been made to expand the grounds on which individuals can claim exemption beyond 'compelling reasons arising out of previous persecution',[102] such as physical and psychological trauma, and towards 'integrative factors', such as length of stay and family ties.[103] UNHCR has drawn upon the notions of 'acquired rights' and 'legitimate expectations' to assert that social, economic, cultural, and professional ties should be given consideration in exemption decisions. It has argued that refugee status is not just declarative of a status and way of life, but is 'also constitutive of rights' around and upon which refugees build a life and that 'must be respected by States pursuant to the doctrine of acquired rights'.[104] Further to this, UNHCR has introduced the concept of 'legitimate expectations' to refer to refugees' sense that they will not be arbitrarily deprived of a status that they had not expected to lose. At the very least, it is argued that this should encourage States to provide them with alternative residency statuses or pathways to legal citizenship.[105]

These unresolved legal debates aside, the application and implementation of article 1C(5) ultimately rests more on politics than law. In the related context of withdrawing temporary protection, Fitzpatrick and Bonoan wrote in 2001 that: 'In recent practice, individual States have withdrawn temporary protection at different times, creating an impression that the assessment process is not determined by objective criteria.'[106]

[97] Home Office, 'Asylum Policy Instruction: Revocation of Refugee Status—Version 4.0' (19 January 2016) 26 <https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/493918/revocation_of_refugee_status_v4_0_EXT.pdf> accessed 3 November 2019.

[98] EU Qualification Directive, art 11(3).

[99] See O'Sullivan (n 48) 156–7.

[100] For an extensive discussion of legal issues on the scope of exemption, see Hathaway and Foster (n 14) 491–4.

[101] Kneebone and O'Sullivan (n 13) paras 206–9.

[102] O'Sullivan (n 48) devotes chapter six of her book to arguing that the impacts of 'previous persecution' must be understood in broader terms than the narrow view taken by current jurisprudence.

[103] O'Sullivan (n 48) 163.

[104] UNHCR (n 7) para 15(iii).

[105] O'Sullivan (n 48) 173; O'Sullivan's argument on this point is nonetheless confusing. She states that 'the cessation clauses pursue a legitimate aim—to return persons who are no longer refugees back to their country of origin': 190. As such, she wrongly collapses the cessation of refugee status and return into one act, despite there being no automatic relationship between the two, in order to use this as an argument *against* 'ceasing the status of refugees who have been resident in an asylum host State for significant periods of time', rather than arguing *for* the granting of citizenship, permanent residency, or complementary protection.

[106] Joan Fitzpatrick and Rafael Bonoan, 'Cessation of Refugee Protection' in Feller, Türk, and Nicholson (n 5) 522.

Striving for 'objectivity' in terms of assessment criteria, decision-making, and implementation is, however, an unattainable task. The financial costs and benefits of hosting refugees, the desire to expedite their repatriation in order to put a 'seal of approval' on new governing regimes, and the oscillating political pros and cons of supporting cessation all influence how the process plays out.[107] Hosting and receiving refugees has a political economy, and the 'ceased circumstances' cessation clause is an inextricable part of this.

4. The 'Ceased Circumstances' Cessation Clauses in Relation to Stateless Persons

Several features of the relationship between paragraphs 1C(5) and (6)[108] and States' responsibilities under the Convention on the Reduction of Statelessness[109] warrant consideration, though they are touched upon only briefly here. The first concerns refugees who lost their nationality upon becoming displaced, and who are unwilling or unable to re-acquire it upon return. Fitzpatrick cautioned that all decisions about article 1C(6) should be undertaken with a view to preventing these individuals' statuses from becoming 'undesirably irregular', such as through specifying that 'cessation under Article 1C(6) may not be followed by repatriation if a stateless refugee refuses to comply with the administrative protocol for re-acquisition of the nationality of the State of origin'.[110] UNHCR has also cautioned against the invocation of a cessation clause if this would lead to statelessness.[111]

Fitzpatrick's analysis nonetheless failed to account for a second situation involving individuals who were stateless in the country of former habitual residence prior to displacement, and thus have no nationality to re-acquire. In UNHCR's recommendation that article 1C(5) be applied to Romanian and Bulgarian refugees in 1997, it noted the dangers of returning those without documentation to Romania, and cautioned against the return of stateless individuals until 'the nationality issue [is] resolved with the

[107] See Yasmeen Siddiqui, 'Reviewing the Application of the Cessation Clause of the 1951 Convention Relating to the Status of Refugees in Africa' (Refugee Studies Centre Working Paper Series No 76, 2011).

[108] It is worth noting that the OAU Convention has no equivalent of art 1C(6). Its article on cessation instead contains two paragraphs similar to the exclusion clauses of the Refugee Convention (subparagraphs 1(4)(f) and (g)), which numerous commentators protest 'is not consistent with the function of cessation clauses': Kneebone and O'Sullivan (n 13) para 93.

[109] Convention on the Reduction of Statelessness (adopted 30 August 1961, entered into force 13 December 1975) 989 UNTS 175 (Statelessness Convention).

[110] Fitzpatrick (n 8) para 28; Fitzpatrick nonetheless went on to state that, 'where a refugee refuses to re-acquire a lost nationality, but the state of origin will accept his return and persecutory risks have been eliminated, cessation under Article 1C(6) might be imposed': para 29.

[111] UNHCR, 'Applicability of the "Ceased Circumstances" Cessation Clauses to Pre-1991 Refugees from Ethiopia' (23 September 1999) para 6.

Romanian authorities'.[112] A State that cancels the status of a refugee who is stateless, and returns those individuals to their country of former habitual residence, could be failing to uphold its responsibilities under the Statelessness Convention.

5. Future Applications

The use of article 1C, and particularly article 1C(5), may well increase in future years in line with 'an increased interest in utilising cessation as a mechanism to compel refugees to return to their country of origin'.[113] This has already resulted in trends towards 'partial cessation',[114] as applied by the Norwegian government to Somalis originating from Mogadishu specifically;[115] time-bound cessation, as applied by several countries of asylum to Rwandan refugees who fled the country between 1959 and 1998; and the application of the 'ceased circumstances' cessation clauses to individual cases as well as groups.[116] Alongside monitoring the legality of these developments, the relationship between the cessation clauses and both complementary protection and temporary protection requires further clarification.[117] In particular, lawyers must resist States' attempts to use the possibility of invoking article 1C(5) *in the future* to justify temporary protection statuses *now*, and the move by asylum States to use the previous invocation of article 1C(5) to justify their refusal to grant status to individuals from that State under article 1A(2).[118]

112 UNHCR (n 39) para 7.

113 O'Sullivan (n 48) 1.

114 O'Sullivan argues strongly against this territorially circumscribed application of cessation through a comparison with the internal flight alternative, and by using UNHCR's guidance on internal relocation: see ibid 96–7, 86, respectively. For a discussion on the internal flight/protection alternative, see Chapter 38 in this volume.

117 O'Sullivan (n 48) 195–6.

118 The French government, for example, has channelled asylum seekers from States that have been subject to a declaration of cessation towards accelerated determination procedures without adequate safeguards: Fitzpatrick and Bonoan (n 106) 531 fn 171.

CHAPTER 58

REFUGEE NATURALIZATION AND INTEGRATION

FATIMA KHAN AND REUVEN (RUVI) ZIEGLER

1. Naturalization and Integration in Context

Article 34 of the Refugee Convention postulates that States '*shall as far as possible facilitate* the *assimilation* and *naturalization* of refugees. They shall, in particular, make every effort to *expedite* naturalization *proceedings* and to *reduce as far as possible* the *charges and costs* of such proceedings' (emphasis added). While the provision does not require host countries to naturalize refugees, it favours integration therein through its 'time and ties' approach to the incremental acquisition of rights. Moreover, while voluntary repatriation triggers cessation of refugee status,[1] (involuntary) expulsion and *refoulement* are generally proscribed.[2]

In 2005, UNHCR recommended that host countries provide a 'progressively wider range of rights and entitlements that are broadly commensurate with those enjoyed by its citizens and, over time, the possibility of naturalising'.[3] Whereas it is too early to appraise the impact that the Global Compact on Refugees[4] may have on refugee protec-

[1] Refugee Convention, art 1C(4). See Vincent Chetail, 'Voluntary Repatriation' (2004) 23(3) RSQ 11 (arguing that '[t]he continued emphasis upon voluntary repatriation by the General Assembly contributes to create a growing discrepancy between the institutional responsibilities of UNHCR and the legal framework provided for in the Refugee Convention').

[2] Article 32 of the Refugee Convention bars expulsion of refugees except for exceptional circumstances; art 33 lays down the fundamental principle of *non-refoulement*.

[3] UNHCR Executive Committee (ExCom) Conclusion No 104 (LVI), 'Local Integration' (2005).

[4] The Global Compact on Refugees was adopted on 13 November 2018 by 176 affirmative votes, one against (US), three abstentions (Eritrea, Liberia, and Libya), and 13 abstentions.

tion, not least given its non-binding nature, its timid reference to the prospects of host countries 'providing durable legal status and naturalization' as 'useful'[5] is noteworthy. The Compact posits that 'local integration is a sovereign decision and an option to be exercised by host countries, guided by their treaty obligations and human rights principles'[6] and omits naturalization and 'local' integration from its list of objectives.[7] In this respect, it reflects contemporary reluctance to bolster obligations in this area.

Access to host country citizenship is *the* route to full permanent political membership, bringing an end to indefinite transience, as reflected by the fact that it brings cessation of refugee status, pursuant to article 1C(3) of the Refugee Convention. Indeed, rather than local integration, it is naturalization, coupled with effective[8] State protection,[9] that constitutes a 'durable solution' on a par with resettlement and repatriation.[10] As Grahl-Madsen notes, the situation of refugees is 'abnormal and should not be regarded as permanent';[11] thus conceived, naturalization may rectify an 'anomaly'.[12]

Consistent with UNHCR's long-standing articulation, the Global Compact on Refugees refers to the Refugee Convention as 'the foundation of the international refugee protection regime'.[13] However, it refrains even from recommending ease of access to naturalization, as is arguably mandated by article 34.[14] There is no ranking or prioritization of 'durable' solutions in the Convention,[15] but the Global Compact prioritizes (voluntary) repatriation, and *de-emphasize*s the significance of acquiring host State

[5] Global Compact on Refugees, para 97. [6] ibid.

[7] ibid para 7 ('The objectives of the global compact as a whole are to: (i) ease pressures on host countries; (ii) enhance refugee self-reliance; (iii) expand access to third country solutions; (iv) support conditions in countries of origin for return in safety and dignity').

[8] For discussion, see Cathryn Costello, 'On Refugeehood and Citizenship' in Ayelet Shachar, Rainer Bauböck, Irene Bloemraad, and Maarten Vink (eds), *The Oxford Handbook of Citizenship* (OUP 2017) 717, 720. Refugees holding their country of origin's nationality are sometimes referred to in the literature as '*de facto* stateless'. See eg Carol A Batchelor, 'Statelessness and the Problem of Resolving Nationality Status' (1998) 10 IJRL 156, 172.

[9] See James C Hathaway and Michelle Foster, *The Law of Refugee Status* (2nd edn, CUP 2014) 462.

[10] See eg the reference in the Global Compact on Refugees, para 85 to 'the three traditional durable solutions of voluntary repatriation, resettlement and local integration'. See also David Weissbrodt, *The Human Rights of Non-Citizens* (OUP 2008) 168.

[11] Atle Grahl-Madsen, *Commentary on the Refugee Convention 1951 (Articles 2–11, 13–37)* (UNHCR 1997) 247.

[12] See eg Emma Haddad, *The Refugee In International Society: Between Sovereigns* (CUP 2008); see also the classic stipulation in the *Nottebohm Case* (*Liechtenstein v Guatemala*) (Second Phase) [1955] ICJ Rep 4, 23 that 'nationality is a legal bond having as its basis a social fact of attachment, a genuine connection of existence, interest and sentiments, together with the existence of reciprocal rights and duties'.

[13] Global Compact on Refugees, para 65.

[14] cf '*Model International Mobility Convention*', according to which refugees and other forced migrants are ineligible to form political associations and, unlike other migrants, are not granted a 'right to citizenship after a specified period of legal residence in the country not exceeding ten years': Global Policy Initiative Columbia University, 'Model International Mobility Convention' (2017). <https://mobilityconvention.columbia.edu/sites/default/files/content/pdf/mimc_document_web.pdf> accessed 13 October 2020.

[15] See UNHCR, 'Solutions' <https://www.unhcr.org/solutions.html> accessed 13 October 2020.

citizenship, while seemingly adding a fourth (non-durable) 'solution' to the arsenal, entitled 'other local solutions'. This approach may represent a pragmatic acknowledgement of a reality in which naturalization of refugees and those in protracted situations is generally unavailable in many host countries.[16] Naturalization practices vary significantly even across the Contracting States to the Refugee Convention (irrespective of whether they have formally entered reservations thereto), evincing a strong Global North/Global South divide.

Practices further diverge regarding the content of 'integration' and related naturalization requirements. Here, terminology plays an important role: while article 34 of the Refugee Convention refers to 'assimilation', contemporary sources (regional instruments, policy documents, UNHCR) nearly uniformly refer to 'integration'. Does this linguistic transformation from assimilation to integration matter, given the clarifications sought and offered regarding the former in the *travaux préparatoires*?

The shift away from naturalization is coupled with an endorsement of economically 'self-reliant' refugees, aiming to facilitate meaningful livelihoods for refugees in host countries: a form of 'social citizenship', absent a secure and permanent legal status. UNHCR notes that self-reliance is 'not a durable solution in itself' but 'can be a precursor to any of the three durable solutions'.[17] *Prima facie*, the notion of refugee 'self-reliance' redefines the host country's role: from guarantor of rights to facilitator of refugee activities. Moreover, as self-reliant refugees 'contribute to the sustainable social and economic development',[18] the host country is also a potential beneficiary of their presence. Yet, it is the host country that controls access to vital components of self-reliance and effective 'local' integration. Given voluntary repatriation is cast by UNHCR as the 'preferred solution in the majority of refugee situations',[19] with no designated temporal limit for reversing this presumption, host countries are arguably being sent ambivalent messages about refugee integration, which may affect their policies.

This ambivalence is reflected in State practice on both freedom of movement and political participation rights. Intra-State freedom of movement is 'an indispensable condition for the free development of a person'.[20] Not only does article 26 of the Refugee Convention, coupled with article 12 of the ICCPR, require host countries to ensure it—but the absence of such freedom of movement significantly affects

[16] UNHCR currently estimates that 78 per cent of refugees are in protracted situations, that is, displaced for more than five years. UNHCR, 'Global Trends: Forced Displacement in 2018' <https://www.unhcr.org/statistics/unhcrstats/5d08d7ee7/unhcr-global-trends-2018.html> accessed 13 October 2020; see also UNHCR, 'Ending Statelessness' <https://www.unhcr.org/ending-statelessness.html> accessed 13 October 2020. For interrelations between statelessness and refugeehood see Chapter 44 in this volume.

[17] 'Self-reliance' has long featured in UNHCR documents. See ExCom, 'Local Integration and Self-Reliance', EC/55/SC/CRP.15 (2 June 2005) para 8.

[18] ibid para 9. [19] Global Compact on Refugees, para 87.

effective realization of other rights, most notably the right to work and social integration.[21] Yet, post-recognition, assigned residence and encampment policies are common in both the Global South and the Global North. Refugees' rights to political participation, both formal (membership of or other forms of association with political parties, and electoral rights)[22] and informal (including involvement in consultative bodies, civil society organizations, protests and grassroots initiatives, and other means of political activism) are widely limited.[23] While the Global Compact recommends inclusion in informal contexts,[24] it remains silent on formal political inclusion.[25]

In contradistinction, while exile effectively excludes refugees, symbolically and physically, from participation in the political life of their country of origin,[26] there appears to be (renewed) interest in facilitating refugee participation in the electoral processes of such countries.[27] Now, refugees' normative claim to be included in the political life of a country that directly threatened or failed to guarantee their fundamental rights is strong—indeed, arguably stronger than other categories of migrants who voluntarily emigrate. Nevertheless, when international bodies, including UNHCR, are involved in enabling and facilitating such participation, and when host countries acquiesce to such processes,[28] they are locating the refugee as a political being vis-à-vis their country of origin. Legally and normatively, participation in country of origin and host country electoral processes need not be conceived of as mutually exclusive; nevertheless, the international community's pivoting towards facilitation of out-of-country voting is instructive.

Section 2 considers the rights/citizenship conundrum facing refugees. Section 3 frames the international law discussion around refugee naturalization. Section 4 appraises the global divide regarding naturalization practices. Section 5 addresses (local) integration and its challenges. Section 6 offers concluding thoughts on ways to address existing shortcomings.

[28] Refugees are often reluctant to politically engage with their country of origin as it may be perceived by host countries as re-availment of protection. See also OAU Convention, art III (prohibiting 'subversive activities' undertaken by refugees, including 'any activity likely to cause tension between Member States').

2. The Rights/Citizenship Conundrum: Does Naturalization Matter to Refugees?

Most human rights apply to 'everyone'[29] within a State's jurisdiction, including refugees.[30] In international human rights law (IHRL), exceptions to non-discrimination between citizens and non-citizens in relation to internationally recognized human rights pertain to two main areas.[31] First, as Bosniak argues, citizens have an unqualified right to territorial security in their country of citizenship: they may not be expelled, and if they exit, they have the right to re-enter.[32] This right is not generally extended to non-citizens. Secondly, whereas citizens have a prima facie right to vote in elections of their countries of nationality, neither IHRL nor international refugee law require enfranchisement of non-citizens. In many refugee-hosting countries, other significant rights, notably intra-State freedom of movement and access to employment, are also contingent on holding that country's citizenship. In other instances, refugees may perceive citizenship as a necessary step for ensuring a sense of belonging and safeguarding *de facto* integration.[33]

The general vulnerabilities experienced by non-citizens on account of their alienage from the political community of their country of origin are compounded for refugees due to the circumstances that led to their departure from their country of origin, and the indeterminacy of their stay in the host country.[34] Accordingly, for refugees, citizenship

[30] Note art 5 of the Refugee Convention, according to which '[n]othing in this Convention shall be deemed to impair any rights and benefits granted by a Contracting State to refugees apart from this Convention'.

[31] Note art 2(3) of the ICESCR, which stipulates that 'developing countries, with due regard to human rights and their national economy, may determine to what extent they would guarantee the economic rights recognized in the present Covenant to non-nationals'. For interrelations between international refugee law and IHRL, see Chapter 11 in this volume.

[32] Linda Bosniak, 'Status Non-Citizens' in Shachar, Bauböck, Bloemraad, and Vink (n 8) 326. While rejecting Hannah Arendt's stipulation in *The Origins of Totalitarianism* (Harcourt 1968) 296 that citizenship manifests 'the right to have rights', Bosniak notes that '[w]hatever other rights and protections an individual possesses, these are held contingent on the non-exercise of expulsion power' (328). Note, however, art 12(4) of the ICCPR which protects individuals' right to enter their 'own country', and has been interpreted by the HRC as broader than 'country of nationality', and 'might embrace other categories of long-term residents': HRC (n 20) para 20.

[33] See eg Amelia Kuch, 'Naturalization of Burundian Refugees in Tanzania: The Debates on Local Integration and the Meaning of Citizenship Revisited' (2016) 30(3) JRS 468, 484. More generally, see David Weissbrodt and Michael Divine, 'Unequal Access to Human Rights: The Categories of Noncitizenship' in Katherine Tonkiss (ed), *Theorising Noncitizenship* (Routledge 2016) 34 (citizenship is a 'de facto gate keeper to the enjoyment of other derivative rights').

[34] Ziegler (n 22) 197.

can be instrumentally significant, notwithstanding the considerable costs of acquiring it, which may include having to forgo the citizenship of their country of origin[35] Yet, oftentimes, refugees are either not offered pathways to host country naturalization or must meet naturalization conditions that are as demanding as, or more onerous than, those generally imposed on other non-citizens.[36] Refugees may therefore be adversely affected by a reality of citizenship-contingent rights, coupled with limited access to host State citizenship.

We contend that many host countries consider naturalization to be challenging precisely because it brings the refugee into their political community,[37] whereas they may view refugees' presence as non-permanent and contest the legitimacy of their stakeholding.[38] This may, in turn, affect host countries' willingness to integrate refugees fully. Therefore, absent naturalization, the limits of local integration encompassing 'self-reliance' and a form of 'social citizenship' must be acknowledged.

3. Naturalization: Past and Contemporary Challenges

a. The Nature of the Article 34 Obligation

Brubaker defines citizenship as an 'international filing system, a mechanism for allocating persons to states'.[39] Yet, '[t]here is no global authority that sorts individuals into states'.[40] Indeed, nationality law has been referred to as 'the last bastion in the citadel of sovereignty'.[41] Nationality is acquired by birth on the territory (*jus soli*), through descent (*jus sanguinis*), or through naturalization.[42]

Article 34 of the Refugee Convention stipulates that host countries 'shall as far as possible' facilitate the assimilation and naturalization of refugees. The term 'shall' indicates

[35] See subsection 3(d).

[36] Naturalization requirements vary significantly across countries in the absence of global standardization. See GLOBALCIT (n 23).

[37] Notwithstanding an individualized, burden-reversing revocation process; ibid.

[38] cf Michael Walzer, *Spheres of Justice: A Defense of Pluralism and Equality* (Basic Books 1983) 62 (arguing that, once first admissions decisions were made, there must be a pathway to naturalization, because 'the rule of citizens over non-citizens is probably the most common form of tyranny in human history').

[42] Liav Orgad, 'Naturalisation' in Shachar, Bauböck, Bloemraad, and Vink (n 8) 349, 351 (further noting that 'The French word *naturel* is rooted in the Latin word *natio*, which means "birth"; naturalization, thus, means to make a person like a natural-born citizen' (339)). The Oxford English Dictionary (2015) defines naturalization as 'the admittance of a foreigner to the citizenship of a country'.

a requirement to act, and the (non-exhaustive)[43] examples provided—make 'every effort' to *expedite* naturalization proceedings and reduce their cost—present an expectation that, if naturalization is available for other non-citizens, naturalization conditions for refugees will be *more* favourable,[44] especially in respect of the length of residence required, the cost involved in the application process, and the procedural requirements attached thereto.[45]

In light of article 34, a host country that offers non-citizens pathways to naturalization should make them available to refugees[46] on a *non-discriminatory* basis, providing them with the necessary information on the regulations and procedures in force.[47] It is less clear whether a country that generally does not naturalize non-citizens must make an exception for refugees.[48] Grahl-Madsen claims that a host country 'cannot be compelled to grant its nationality, even after a long waiting period, to a refugee settled in its territory since naturalization confers on the naturalized citizen a series of privileges including political rights'.[49] He nevertheless concedes that '[i]f . . . a contracting state outright fails to allow any refugee to be assimilated or naturalized and is not able to show any other reason than unwillingness, the other contracting states may have a ground for complaint'.[50]

b. Forced/Semi-forced Naturalization?

Refugees ought not to be forced to naturalize. As the *travaux préparatoires* note, even long-term refugees 'may remain fundamentally attached to [their] country of origin and cherish the hope of returning . . . Nationality should not be imposed on a refugee in violence to his inmost feelings'; the Israeli representative argued that, citizenship 'if it were not voluntary . . . would be an attack upon the spiritual independence of the refugee'.[51] Refugees may resist naturalization if their country of origin is likely to denationalize

[43] Grahl-Madsen (n 11) 247.
[44] For plural citizenship, see sub-section (d).
[45] For an overview of existing naturalization conditions globally, see GLOBALCIT (n 23). Other common naturalization conditions include age, language, citizenship tests, 'good character', and 'no recourse to public funds'.
[46] cf Reinhard Marx, 'Article 34 (Naturalisation/Naturalisation)' in Andreas Zimmermann (ed), *The 1951 Convention relating to the Status of Refugees and Its 1967 Protocol: A Commentary* (OUP 2011) 1441, 1452 (arguing that it is incumbent upon host countries, at the very least, to provide a good faith justification for the formal or *de facto* exclusion of refugees from naturalization proceedings).
[47] UNHCR, 'Positive Steps Forward in the Field of Citizenship' (2006).
[48] But see Maria O'Sullivan, *Refugee Law and the Durability of Protection* (Routledge 2019) ch 2 (arguing that temporary protection visas and time-limited residence permits for refugees, which may prevent assimilation and naturalization of refugees, conflict with the article 34 obligation). The broader question is whether offering no pathway to naturalization, including for long-term residents, is compatible with human rights obligations. See also María-Teresa Gil-Bazo, 'Refugee Protection under International Human Rights Law: From Non-Refoulement to Residence and Citizenship' (2015) 34(1) RSQ 11.
[49] Grahl-Madsen (n 11) 245.

[51] Quoted in Hathaway and Foster (n 9) 497.

them upon receipt of host country citizenship.[52] Notwithstanding such risks, refugees may not wish to fully—and permanently—associate themselves with the political community of their host country.

The question then arises whether host countries (can) engage in semi-forced naturalization practices. We contend that conditioning enjoyment of rights on the acquisition of host country citizenship may amount to coercion, especially with respect to refugees. The proposition that, after a certain period, refugees can be made to choose between naturalization and cessation of refugee status should be rejected: an offer of naturalization should not be used as a litmus test for refugees' legitimate protection needs, nor used to provide or deny rights.

c. Assimilation

Article 34 requires host countries to facilitate *assimilation*, making no reference to the term 'integration', the preferred term in contemporary legal and political discourse. In their worst form, assimilationist policies entail extreme pressure on minorities, including refugees, to relinquish their culture and adopt the host country's culture in order to ensure a homogeneous national identity.[53] Integration, in contrast, allows for cultural differences and occurs when different groups in society can coexist as equals.[54] Refugees must, of course, 'conform' to the host country's 'laws and regulations as well as to measures taken for the maintenance of public order'.[55] But this does not mean that their rights there are contingent on forgoing their own identity, culture, and practices.

During the drafting of the Convention, the Israeli representative submitted that assimilation was a term 'well-known in sociology [that] bore an unpleasant connotation vaguely related to the use of force'.[56] 'If assimilation was not voluntary', he intimated, 'it would be an attack on the spiritual independence of the refugee'.[57] He proposed instead to use 'adaptation' or 'adjustment'.[58] Alas, assimilation was retained, notwithstanding assurances that it should be understood in the sense of integration into the economic, social, and cultural life of the host community *without* forcing refugees to forsake their own culture and way of life.[59] It is noteworthy that the term

[52] See sub-section (e).

[59] See Brown and Bean (n 53).

'assimilation' has virtually vanished from instruments and policy documents pertaining to treatment of refugees in host countries.[60]

d. Plural Citizenship

Times have changed since the 1930 Convention on Certain Questions relating to the Conflict of Nationality (in)famously proclaimed that persons should only have one nationality.[61] Today, three-quarters of countries tolerate plural citizenship and do not require those born with more than one citizenship to choose between them.[62] Yet, much of the Global South still rejects plural citizenship.[63] In such countries, refugees wishing to naturalize while also retaining their country of origin's citizenship face a double challenge: both their host country and their country of origin must tolerate plural citizenship. Refugees may worry that forgoing their country of origin's citizenship would affect citizenship-contingent rights, including their right to return. Notwithstanding broader justifications for embracing plural citizenship,[64] it is contended that host countries that generally do not allow it should exempt refugees from the requirement to renounce their country of origin's citizenship.[65] Yet, even if they were to do so, host countries are unable to control the policies of the refugee's country of origin; 'a hard, universal rule requiring acceptance of dual citizenship is not an immediate prospect'.[66]

Ironically, if either host countries or countries of origin do not permit plural citizenship and a refugee naturalizes in the host country, the likelihood of return may *decrease*—arguably an incentive for host countries to tolerate plural citizenship. When host countries are members of supranational organizations, such as the EU or Mercosur, acquiring their citizenship brings about derivative benefits for refugees.[67]

e. Intergenerational Refugeehood and Statelessness

For children born to refugees, there is often a real risk of statelessness. If a refugee child is born to stateless parents and/or does not receive the citizenship of at least one of their parents (*jus sanguinis*), to avoid statelessness, *jus soli* (law of the soil) must apply. This usually entails citizenship at birth and/or naturalization upon reaching adulthood, potentially subject to residence criteria. The 75 States parties to the Convention on the Reduction of Statelessness[68] undertake in article 1 thereof to grant 'nationality to a person born in its territory who would otherwise be stateless'; yet, many host countries are not internationally committed to preventing statelessness for refugee children; their citizenship policies have alarming results, particularly in the Middle East, where statelessness is pervasive.[69]

4. Naturalization: Global North–Global South Divergences

a. Regional Instruments, Reservations to Article 34, and State Practice

Regional practices diverge significantly on the question of refugee naturalization. In 2005, UNHCR drew a distinction between 'industrialized States with developed asylum systems' where 'local integration is the predominant durable solution for recognized refugees', and (implicitly) all others.[70] By and large, there is a strong correlation between world regions where most refugees are hosted (due in no small part to expansive refugee definitions),[71] coupled with non-rejection policies,[72] and those regions where refugees are least likely to be offered their host State's citizenship (and be able to accept such an offer without having to forgo their country of origin's citizenship).

The Global Compact on Refugees notes that 'regional frameworks which may complement national laws in offering pathways to durable legal status or naturalization for refugees will be explored, where appropriate'.[73] Alas, there is no reference to *integration* or to *naturalization* in the main Global South regional instruments, namely the OAU Convention, the Cartagena Declaration, or the Bangkok Principles.[74]

[68] Convention on the Reduction of Statelessness (adopted 30 August 1961, entered into force 13 December 1975) 989 UNTS 175.

[72] See eg Bonaventure Rutinwa, 'The Tanzanian Government's Response to the Rwandan Emergency' (1996) 9(3) JRS 291.

[73] Global Compact on Refugees, para 99.

[74] Bangkok Principles on the Status and Treatment of Refugees (31 December 1966) (reaffirmed 24 June 2001, New Delhi).

In the EU, while article 34 of the Qualification Directive (recast) is arguably more detailed in respect of integration than article 34 of the Refugee Convention, it does not explicitly reference *naturalization*. Recital 47 of the Directive's preamble states that '[t]he specific needs and particularities of the situation of beneficiaries of refugee status and of subsidiary protection status should be taken into account, as far as possible, in the integration programmes provided to them including, where appropriate, language training and the provision of information concerning individual rights and obligations relating to their protection status in the Member State concerned'. However, a 2012 UNHCR report[75] notes that existing EU-level reports and policy documents do not differentiate between different types of migrants, beyond distinguishing between second country nationals (citizens of other EU countries) and third country nationals, and refugee integration is generally mainstreamed in immigration policies for the latter.[76]

States parties to the European Convention on Nationality[77] undertake in article 6(4)(g) to facilitate the acquisition of their nationality by 'stateless persons and recognised refugees lawfully and habitually resident on its territory'. Article 16 maintains that a State should not make 'the renunciation or loss of another nationality . . . a condition for the acquisition or retention of its nationality where such renunciation or loss is not possible or cannot reasonably be required'. The Explanatory Report notes that 'refugees cannot generally be expected to return to their country of origin or to request their diplomatic or consular representation to renounce or to obtain their release from their nationality'.[78]

In Africa, Botswana, Malawi, and Mozambique have made reservations to article 34 of the Refugee Convention,[79] stating that they are not bound to 'grant to refugees any more favourable naturalization facilities' than to 'aliens in general'.[80] In other African countries that have not made reservations (including Angola, Ghana, Guinea Bissau, Lesotho, Mozambique, and South Africa), the naturalization process is often more cumbersome than for other non-citizens, contrary to the spirit of article 34.[81] Legislation in large-scale refugee-hosting countries such as Kenya[82] and Tanzania[83] does not regulate their naturalization.

[80] See also Bronwen Manby, *Citizenship Law in Africa: A Comparative Study* (African Minds 2016) 128.

[81] ibid. In South Africa, the Refugees Amendment Act No 11 (2017) doubled from five to ten years the required residence period for recognized refugees before they could apply for certification of their refugee status (required for application for permanent residence). The Department of Home Affairs, 'White Paper on International Migration' (2017) 43 describes refugee status as 'inherently temporary' and 'the granting of citizenship to foreign nationals' as 'exceptional'.

[82] Kenyan Refugees Act No 13 (2006).

[83] Tanzanian Refugees Act (1998).

Indeed, instances of refugee naturalization in Africa are few and far between and have often been based on policy directives rather than legislation. Tanzania's decision to offer a pathway to naturalization to 160,000 Burundians who resided in the country since 1972 is a case in point.[84] According to Manby, '[i]t is indicative of the difficulty of naturalization that there are almost no published statistics about the numbers naturalized in most African countries',[85] leading her to posit that 'the process of bringing naturalization procedures within the frame of human rights, legitimate expectation and due process has not begun in African States (with some very few and limited exceptions)'.[86]

In the Americas, only two countries have made reservations to article 34: Honduras noted that it 'shall not be obligated to guarantee refugees more favourable naturalization facilities than those ordinarily granted to aliens in accordance with the laws of the country', while Chile states that it is unable to 'grant to refugees facilities greater that those granted to aliens in general, in view of the liberal nature of Chilean naturalization laws'.[87] Acosta argues that naturalization practices in South America reveal more favourable conditions towards citizens of other countries in the region than towards refugees coming from elsewhere.[88]

Wonk's survey of the contemporary citizenship laws of 22 countries in Asia (Afghanistan, Bangladesh, Cambodia, China, East Timor, India, Indonesia, Japan, Laos, Malaysia, Mongolia, Myanmar, Nepal, North Korea, Pakistan, Philippines, Singapore, South Korea, Sri Lanka, Taiwan, Thailand, and Vietnam) concluded that 'naturalisation patterns in Asia clearly resemble more closely those in Latin America and Africa than those in Europe'.[89] Moreover, only seven of the 22 countries (Afghanistan, Cambodia, China, East Timor, Japan, Philippines, and South Korea) have ratified the Refugee Convention, and a majority reject dual citizenship.

Meanwhile, while interdiction, border closures, and non-entrée policies often aim to prevent access and make it very difficult for refugees to enter countries in the Global North,[90] for recognized refugees there is often a pathway to full integration and, indeed,

[84] See Sreeram Sundar Chaulia, 'The Politics of Refugee Hosting in Tanzania: From Open Door to Unsustainability, Insecurity and Receding Receptivity' (2003) 16(2) JRS 147; see also Kuch (n 33).

[90] See Chapter 27 in this volume.

naturalization. Only Latvia retains a reservation to article 34[91] and a considerable number of countries apply favourable conditions to refugee naturalization, notably regarding length of residence.[92]

Taking a global perspective,[93] even where pathways to naturalization exist with favourable conditions for refugees, such as shorter residence periods, they are often limited to *Convention refugees*, excluding those with other protection statuses,[94] such as subsidiary or temporary protection. This means that, even in the Global North, many of those with recognized protection needs do not enjoy (favourable) access to naturalization.

States' divergent approaches to naturalization may partly be explained by the fact that refugee flows in the Global South are often both large and rapid, originating from conflict-torn neighbouring countries, whereas at least in some countries in the Global North, they tend to be slower, more managed, and originating further afield.[95] Where flows are (perceived to be) managed, and where the primary or exclusive basis for protection is the Refugee Convention definition, easier access to host country citizenship may ensue. For instance, both Canada[96] and Australia[97] offer permanent residence (and a pathway to citizenship) to resettled refugees upon their arrival and offer a permanent residence route to certain recognized refugees in-country (following status determination). The United States makes permanent residence available (in fact, mandatory) for refugees one year after resettlement or the grant of asylum.[98] In comparison, South Africa, a Global South country that has experienced spontaneous flows of refugees, has recently toughened naturalization requirements for refugees, making applications for permanent residence contingent on ten years' residence post-recognition, rather than five years.[99]

b. Resistance to Naturalization

Resistance to naturalization appears greater in the main refugee-hosting regions and extends beyond the rejection of plural citizenship. One obvious explanation pertains to

[91] Greece, Italy, and Malta withdrew their reservations. In Oceania, Papua New Guinea made a reservation in respect of several provisions, including art 34.

[92] For instance, the required length of residence for refugees is six years instead of eight in Germany; three years instead of six in Belgium; four years instead of five in the Netherlands and Sweden; five years instead of 10 in Italy and Spain. For select Global North practices, see Marx (n 46) paras 50–63.

the multiple effects of inclusion. First, almost universally, electoral participation in national elections is contingent on citizenship. Secondly, notwithstanding IHRL provisions, full access to rights and resources is often restricted to citizens. Thirdly, citizenship offers permanent security of residence and hence operates as a constraint on host countries' future prerogative; countries also often assume that, once naturalized, refugees are unlikely to repatriate.[100] Given the above, preventing or delaying access to naturalization could be politically attractive. Put simply, if the public perceives refugees as draining or competing for resources, making that competition harder may be politically rewarding.

Many African countries require individuals wishing to naturalize to be economically solvent and not a 'burden' on the State, which creates a vicious cycle for refugees if they are denied freedom of movement and full access to employment.[101] Moreover, many of these countries were established as part of a decolonization process: they may therefore consider stricter naturalization proceedings as part of retaining greater sovereignty and control over their national identity which, in turn, may bolster xenophobic rhetoric, as refugees are often blamed for societal problems and branded as social and economic burdens.[102] In this context, it is instructive to compare approaches in Africa to those in South America, where countries gained their independence (from Spain or Portugal) in the early nineteenth century, and which tend to adopt more inclusive policies.[103]

5. Challenges of (Local) Integration

a. The Tri-dimensional Conceptualization of (Local) Integration

Ultimately, for (local) integration to be a 'durable' solution, it must culminate in pathways to naturalization, lest refugees remain perpetually vulnerable. Nevertheless, given the arguably sequential framing in article 34 ('assimilation and naturalization'), Hathaway's bifurcated approach to article 34 which assumes a 'durable legal status'[104] may be helpful for ascertaining whether, short of naturalization, the range of the rights available to refugees can 'allow the refugee to live a meaningful life in the host country'.[105]

[105] ExCom Conclusion No 104 (n 3).

This, in turn, may assist in appraising integration in the light of Marshall's characterization of modern citizenship as tri-dimensional: civil, political, and social.[106] 'Civil' citizenship includes 'rights necessary for individual freedom, liberty of the person, freedom of speech, thought and faith, the right to own property and to conclude valid contracts, and the right to justice'.[107] In turn, 'political' citizenship pertains to 'the right to participate in the exercise of political power, as a member of a body invested with political authority or as an elector of the members of such a body'.[108] Finally, 'social' citizenship encompasses 'the whole range from the right to a modicum of economic welfare and security to the right to share to the full in the social heritage and to live the life of a civilized being according to the standards in the society'.[109]

Compare Marshall's three citizenship dimensions with UNHCR's articulation of three dimensions of refugee integration: *legal* (a 'progressively wider range of rights and entitlements to refugees that are broadly commensurate with those enjoyed by its citizens and, over time, the possibility of naturalising');[110] *economic* (refugees are to 'improve their potential to establish sustainable livelihood, to attain a growing degree of self-reliance and to become progressively less reliant on state aid or humanitarian assistance');[111] and *social/cultural* ('preparedness on the part of the refugees to adapt to the host society, without having to forego their own cultural identity', and where 'communities [are] welcoming and responsive to refugees, and public institutions . . . are able to meet the needs of the diverse population').[112]

Hovil contends that 'local belonging' is unstable without national recognition: localized forms of integration have the potential to be undermined should external circumstances change; yet national citizenship holds little promise if individuals and groups are not accepted within a particular locality.[113] Arguably, legal rights and entitlements facilitate refugees' self-reliance and (non-forced) acculturation. The challenge lies in host countries' reluctance to accord them.

b. Intra-State Freedom of Movement

Article 26 of the Refugee Convention stipulates that a host country should grant 'refugees lawfully in its territory the right to choose their place of residence and to move freely within its territory', and only restrict their freedom of movement to regulations that are 'applicable to aliens generally in the same circumstances'.[114] Yet, in many

[114] See also ICCPR, art 12(3); HRC (n 29).

refugee-hosting countries, particularly in the Global South, refugee mobility is severely curtailed through designation of residence and/or regulation of movement. Such stipulations not only limit refugees' mobility, but also restrict their access to other rights, such as employment and education.

A considerable number of countries have made reservations to article 26. In Africa, using largely similar linguistic formulations, Angola, Malawi, Mozambique, Rwanda, Zambia, and Zimbabwe reserve their right to designate, prescribe, transfer, or circumscribe the place of residence of certain refugees, and to restrict their freedom of movement, whenever considerations of national or international order make it advisable to do so. Botswana has made a general reservation to the provision. In Asia, Iran 'considers the stipulations . . . as being recommendations only', and Papua New Guinea 'does not accept the obligations'.[115] In Europe, Latvia and the Netherlands reserve 'the right to designate a place of principal residence for certain refugees or groups of refugees in the public interest'; Moldova 'reserves the right to establish the place of residence for certain refugees or groups of refugees in the interest of the state and society'; and Spain has not precluded 'the adoption of special measures concerning the place of residence of particular refugees, in accordance with Spanish law'.[116]

Regionally, the EU Qualification Directive extends the scope of intra-State freedom of movement beyond those recognised pursuant to the Refugee Convention to also include those with subsidiary protection.[117] In contradistinction, article 2(6) of the OAU Convention appears to condone assigned residence in certain circumstances, stipulating that host countries 'shall, as far as possible, settle refugees at a reasonable distance from the frontier of their country of origin'.

Encampment is a prevailing practice in many protracted refugee situations. In 2013, the High Court of Kenya quashed a government directive requiring all refugees to move to one of Kenya's refugee camps.[118] The court held that 'refugees who have established some normalcy and residence in urban areas will have their dignity violated in the event the directives are to be effected. Family, work, neighbours, and school all contribute to the dignity of the individual.'[119] Intriguingly, in the EU, the Court of Justice of the EU has not ruled out the possibility of making provision of services to refugees contingent on assigned residence, provided that there are cogent reasons to believe this will *facilitate* integration of the group subject to such restrictions—but not solely for the purpose of distribution of social assistance burdens.[120]

[115] 'Convention relating to the Status of Refugees: Declarations and Reservations' (n 87).

[116] ibid.

[117] EU Qualification Directive (recast), art 33. Article 26 guarantees beneficiaries of international protection 'full access' to the labour market on equivalent terms as nationals, and to 'employment-related educational opportunities', implementing three provisions of the Refugee Convention: art 17 (wage-earning employment; art 18 (self-employment); art 19 (recognition of certificates in the liberal professions).

[120] Joined Cases C-443/14 and C-444/14, *Alo & Osso v Region Hannover* (CJEU, 1 March 2016).

As Crisp notes, it stands to reason that the 'warehousing' of refugees for years on end prevents them from developing their human potential and limits their ability to make a positive contribution to the economy and society of the country of asylum. It also means that they will lack the skills and motivation they need if it does eventually become possible for them to return to and reintegrate in their country of origin.[121] Economic integration is likely to make social integration easier, but with refugees in 'care and maintenance programmes' in refugee camps, neither is genuinely possible. Hovil cogently argues that 'local integration—and, therefore, a degree of self-reliance—can only take place if people have freedom of movement and freedom to make their own choices of where to live, how to support themselves, how to best utilize the limited resources that they have, and which markets to access'.[122] Indeed, the emphasis that recently naturalized Tanzanians (previously Burundian refugees) have placed on mobility as an incentive for naturalization sheds light on the long-term consequences that the denial of that right has for people living in protracted displacement.[123]

c. 'Self-reliance' Meets Mixed Messaging in Protracted Refugee Situations

The notion of refugee 'self'-reliance may come into tension with the host country's role as respecting, protecting, and fulfilling refugee rights under the Refugee Convention, including rights to housing (article 21), public relief (article 23), administrative assistance (article 25), and identity and travel documents that enable refugees to receive services in-country and to travel elsewhere (articles 27 and 28, respectively). It is also greatly affected by host countries' receptiveness to family unification applications. Yet, given divergent socio-economic conditions in host countries, self-reliance may displace *external* humanitarian aid, rather than (unavailable) host country assistance.

To facilitate integration and, indeed, self-reliance, UNHCR has previously postulated that the cessation clauses of the Refugee Convention should be interpreted restrictively so as to 'provide refugees with the assurance that their status will not be subject to constant review in the light of temporary changes not of a fundamental character to the situation in their country of origin'.[124] Now, as noted above, globally, 78 per cent of refugees are in protracted displacement.[125] Protracted displacement is a state of affairs marked by insecurity and inability to make future plans, absent the 'durability' that comes with security of residence.

Yet, prioritization of repatriation is sending host countries mixed messages: as they invest in integrating refugees, they also, Janus-like, search for prospects of repatriation as soon as it is safe to do so.[126] Arguably, for refugees to become self-reliant and integrated, host countries must (psychologically and legally) accept that they are likely to remain, rather than thwart their integration, hoping that it will accelerate their departure.[127] In fact, Crisp argues that refugees who enjoy a high degree of legal, economic, and social security in their country of asylum are *better* equipped to return and reintegrate.[128]

To facilitate naturalization, refugees' legal status in host countries must gradually proceed from entry, to lawful stay, to durable (permanent or indefinite) stay. Yet, in many Global South countries, when refugees' presence is tolerated, the progressive acquisition of residence status and ensuing rights does not take place. The rights/citizenship conundrum, described in Section 2, thus comes to light.

6. Conclusion

Refugees' host countries are the gatekeepers to local integration and naturalization. Their acquiescence to refugees' presence on their territory does not necessarily open these other gates. Global practices diverge profoundly on both integration and naturalization, but a pattern emerges: it seems that countries with high 'first admission' bars (that is, barriers to accessing their territory) are more open to granting access to 'second admissions' (that is, to membership of their political community) when compared with countries to which refugees may flee relatively easily, but where there are many barriers to local integration and naturalization.

For local integration to be considered a 'durable solution' in the substantive sense, it must include pathways to naturalization. It is unhelpful to describe forms of integration that fall short of this as 'durable'. The socio-political reality is that many refugees find themselves in protracted displacement with neither a 'durable' solution in sight, nor the legal, economic, and social capacity to properly integrate in their asylum countries. They are caught in a vicious cycle in which host country citizenship is out of reach and yet determines access to rights. IHRL and international refugee law, taken together, provide a firm basis for demanding that host countries, irrespective of naturalization prospects, respect, protect, and fulfil refugees' rights—first and foremost mobility rights, given their critical enabling role—with the help and insistence of the international community.

CHAPTER 59

REIMAGINING VOLUNTARY REPATRIATION

MARJOLEINE ZIECK

1. Introduction

UNHCR has been charged to pursue durable solutions to the problem of refugees: voluntary repatriation to the country of origin, local integration in the country of refuge, or resettlement in a third State.[1] These durable solutions signify an end to refugee status. Indeed, in the original drafts of the UNHCR Statute, the reference was tellingly to final rather than durable solutions. The notion of finality that inheres in these solutions has recently been eroded by UNHCR when it suggested to add two solutions to the classical three: 'other local solutions', that is, arrangements that do not constitute parallel systems for refugees and fall short of naturalization, and 'complementary pathways', such as temporary stay in third States for educational or labour purposes.[2] Along with it, the idea of regaining full citizenship in the country of origin or elsewhere, key to the classical three durable solutions, is lost.

Voluntary repatriation denotes the return of refugees to their country of origin, that is, of those who are defined as unrepatriable in all the relevant legal instruments. It is therefore inherently problematic, yet the preferred, and invariably qualified as the best,

[1] Statute UNHCR, Annex to UN doc A/Res428(V) (14 December 1950) ch 1 para 1.
[2] Assistant UNHCR Protection, speech at the ATCR on 2 July 2019.

even ideal solution,[3] though for whom is never made explicit.[4] The number of refugees who voluntarily return to their countries of origin is nonetheless modest, particularly when compared to the millions who returned following the end to the Cold War.[5] At the same time, the number of refugees in the world is increasing and along with it, the pressure on voluntary repatriation is mounting. It is submitted that numbers, compounded by the lack of a responsibility-sharing mechanism,[6] rather than geopolitical interests, lie at the root of States suggesting the creation of de-escalation zones;[7] safe havens under their control in States that are otherwise still in turmoil to which the refugees they host should return;[8] or their simply arranging return on a bilateral basis with the country of origin in the absence of any beneficial change of the circumstances that forced people to flee in the first place.[9]

[3] See *inter alia*, UNHCR ExCom, 'Update on Voluntary Repatriation', UN doc EC/67/SC/CRP.13 (7 June 2016) para 1 (preferred solution); UNHCR ExCom Conclusions No 68 (1992), sub (s); No 99 (2004) sub (u); No 104 (2005), No 109 (2009) (the most preferred solution); 'Voluntary Repatriation', UN doc EC/SCP/41 (1980) para 7 (best solution); ExCom Conclusion No 74 (1994) para v (ideal solution).

[4] Postcolonial analyses explain this preference by the desire to keep the refugees in the global south, see eg BS Chimni, 'From Resettlement to Involuntary Repatriation: Towards a Critical History of Durable Solutions to Refugee Problems' (2004) 23 RSQ 55, 66 et seq. In addition or alternatively, repatriation is considered to be the ultimate success in the humanitarian management of displaced populations; Bram Jansen, 'The Accidental City. Violence, Economy and Humanitarianism in Kakuma Refugee Camp, Kenya' (PhD thesis, University Wageningen 2011) 202.

[6] As a result of which 85 per cent of the world's refugees are hosted by developing States (and 6.7 million of the total number of refugees by the least developed States). UNHCR, 'Global Trends Forced Displacement in 2019' 2.

[7] See *inter alia*, Aron Lund, 'Safe Zones. "De-escalation Zones" Unlikely to Entirely Wind Down the War in Syria' *News Deeply* (8 May 2017).

[8] See Sarah Dadouch, 'Turkey Aims to Form Safe Zones in Syria for Refugees to Return' *Reuters* (24 January 2019); 'Turkey, US Agree to Launch 1st Phase of Safe Zone Plan' *Hürriyet Daily News* (22 August 2019); Carlotta Gall, 'Turkey Wants Refugees to Move to a "Safe Zone". It's a Tough Sell' *The New York Times* (1 November 2019); 'Bangladesh Proposes Safe Zone in Myanmar for Rohingya Refugees' *Al Jazeera* (13 February 2019).

[9] Thu Thu Aung, 'Myanmar, Bangladesh Ink Rohingya Return Deal Amid Concern Over Army's Role' *Reuters* (23 November 2017). This agreement was followed by a repatriation agreement in January 2018, 'The Bangladesh–Myanmar Agreement on Rohingya Repatriation' *Refugees International* (17 January 2018). The agreement and actual repatriation met with the outspoken protest of the refugees concerned; Naimul Haq, 'Rohingya Protest Against Return to Myanmar and Halt Repatriation' *Inter Press Service* (16 November 2018). More agreements were signed, one in April 2018 between Bangladesh and UNHCR on voluntary repatriation, and another one between the UN (that is, UNHCR and UNDP) and Myanmar in June 2018. The latter was rejected by the Rohingya who had not been consulted, see Shaikh Azizur Rahman,'Rohingya Refugees Reject UN–Myanmar Repatriation Agreement' *The Guardian* (6 July 2018).

The protection that is due to refugees is for the duration of need, as defined and delimited by the Refugee Convention in its inclusion and cessation clauses.[10] Since (organized) voluntary repatriation invariably takes place when protection against *refoulement* is still called for,[11] the question arises why return should actually be promoted when the need for protection continues. Is this really what UNHCR has been charged to do? This question becomes more pressing when the evolution of the concept of voluntary repatriation as developed by UNHCR and its implementation in practice are taken into consideration. Both theory and practice—including that of States—move away from the concept as initially defined by UNHCR,[12] at the expense of the entitlement to protection of refugees.

It is therefore proposed to reimagine this solution by revisiting the past, that is, the (voluntary) repatriation practice of UNHCR's immediate predecessors, on the assumption that this practice induced the drafters to include voluntary repatriation in the UNHCR Statute.[13] It will be followed by a sketch of what the reimagined solution of voluntary repatriation would entail.

2. UNHCR's Concept of 'Voluntary Repatriation'

a. Voluntary Repatriation Is Part of International Protection

Chapter I of the UNHCR Statute provides that the High Commissioner:

> shall assume the function of providing international protection [...] to refugees who fall within the scope of the present Statute and of seeking permanent solutions for the problem of refugees by assisting Governments and, subject to the approval of the Governments concerned, private organizations to facilitate the voluntary repatriation of such refugees.[14]

The pursuit of voluntary repatriation recurs in Chapter II of the Statute which elaborates the functions of UNHCR: UNHCR shall provide for the protection of refugees falling under the competence of his Office by '[a]ssisting governmental and private efforts to promote voluntary repatriation or assimilation within new national communities'.[15] This task underlines clearly that the durable solutions, despite the apparent dichotomy

[10] Articles 1A(2) and 1C.
[11] Refugee Convention, art 33(1), alternatively on the basis of customary international law.
[12] UNHCR, 'Draft Protection Guidelines on Voluntary Repatriation' (September 1993).
[13] cf Kim Salomon, 'The Cold War Heritage: UNRRA and the IRO as Predecessors of UNHCR' in Göran Rystad (ed), *The Uprooted. Forced Migration as an International Problem in the Post-War Era* (Lund University Press 1990).
[14] Statute UNHCR, ch I, para 1.
[15] Statute UNHCR, ch II, para 8 sub (c).

between international protection and the pursuit of durable solutions in Chapter I of the Statute, are considered to be part of international protection.[16]

A subsequent paragraph provides that UNHCR shall engage in such additional activities, including repatriation and resettlement, as the General Assembly may determine, within the limits of the resources placed at his disposal.[17] This paragraph relegates the durable solutions to 'additional' activities. It would seem that this relegation is due to the expenses that may be involved in those solutions.[18] In that respect it is significant that the durable solution of 'local integration' is not so relegated, arguably since that does not entail any expenditures on the part of UNHCR.

b. Overall Legal Framework

The clear assignment given to UNHCR regarding the pursuit of durable solutions meant that UNHCR had to develop those solutions.[19] Apart from the fact that this pursuit is part of its primary task of providing international protection,[20] it arguably had to do so within the framework of the international conventions for the protection of refugees, in particular the Refugee Convention and its Protocol, even though those instruments do not address any of the durable solutions.[21] UNHCR's proceeding from those treaties is not an obvious point of departure.[22] First of all, neither UNHCR nor the UN, of which it is an integral part, are parties to those treaties. Their being a party to these treaties

[16] Initially, however, the function of international protection as detailed in ch II, para 8, was considered to be 'a long-term function which will normally only operate if repatriation, resettlement and naturalization are impossible', Appendix I to UN doc A/1385 (22 September 1950).

[17] Statute UNHCR, ch II, para 9.

[18] UNHCR was devised as a non-operational agency with a matching limited budget (amounting to US$300,000 in 1951): the current budget is US$8,667.7 million for 2020, and US$8.615.8 million for 2021, Biennial Programme Budget 2020-2021 of the Office of the United Nations High Commissioner for Refugees, UN doc A/AC.96/1191/Add.1 (8 October 2019) para 10.

[19] The result of which was referred to in 1993 as 'a coherent repatriation doctrine', UNHCR, 'Information Note on the Development of UNHCR's Guidelines on the Protection Aspects of Voluntary Repatriation', UN doc EC/SCP/80 (3 August 1993) para 2, which was subsequently laid down in UNHCR's Handbook Voluntary Repatriation: International Protection of 1996.

[20] UNHCR explains that this task, which is not defined in its Statute, means safeguarding the rights of refugees, UNHCR Global Report 2006, 18; 'UNHCR actions are firmly based in and guided by universal refugee protection principles and international human rights standards', UNHCR, 'Note on International Protection', UN doc EC/48/SC/CRP.27 (25 May 1998) para 43.

[21] Probably since the Refugee Convention was drafted at 'a time when voluntary repatriation was effectively obsolete'; Guy S Goodwin-Gill, 'Asylum: The Law and Politics of Change' (1995) 7 IJRL, 1, 8. The solution is addressed in art V of the OAU Convention Governing the Specific Aspects of Refugee Problems in Africa.

[22] In a draft of the Statute, the task assigned to UNHCR was followed by an indication of the relevant legal framework: 'In carrying out his task, the High Commissioner shall be guided by the principles contained in the Universal Declaration of Human Rights and in the preamble to the International Convention Relating to the Status of Refugees adopted by the United Nations', UN doc E/AC.7/L.60 (31 July 1950) 2.

would, however, not make sense since most of the obligations the treaties comprise are in essence of a kind that can only be discharged by territorial States, the subjects hosting refugees, rather than UNHCR which is, despite its omnipresence in the territory of States, a non-territorial entity.

Apart from the fact that implementing its own tasks in a way that would contravene the obligations of States pertaining to refugees would negatively affect, if not wholly undermine, its role as supervisor of the application of international conventions for the protection of refugees,[23] the question whether UNHCR bears any relevant obligations is not exhausted by the fact that it is not a party to the relevant treaties. The reason for which is the highly operational role UNHCR has acquired.[24] Although the Statute is cast in terms of UNHCR's *assisting* governments and private efforts to promote voluntary repatriation, UNHCR often takes the lead,[25] and States are obliged to cooperate with UNHCR in the exercise of its functions.[26] Since States are responsible for observing their treaty obligations, UNHCR's taking the lead should not frustrate that responsibility: in that sense, the obligation of States to cooperate with UNHCR in the exercise of its functions is limited by the other provisions of the Convention. In view of this, it would be incongruous if cooperation with UNHCR on the basis of article 35(1) would be the cause of the host State's contravening its obligations pertaining to the refugees it hosts.[27] That, in turn, entails that UNHCR has to observe the relevant obligations of States when taking the lead. Worth adding is the fact that the inclusion and cessation clauses in the UNHCR Statute are comparable to those laid down in the Refugee Convention, which means that the temporal demarcation of the entitlements of refugees that should be observed is the same for States and UNHCR.

UNHCR has developed the practice of concluding agreements with States (usually the country of origin, and one or more countries of refuge) on voluntary repatriation,[28]

[23] Statute UNHCR, ch II, para 8 sub (a).

[24] See Marjoleine Zieck, *UNHCR's Worldwide Presence in the Field, A Legal Analysis of UNHCR's Cooperation Agreements* (Wolf Legal Publishers 2006) ch 2.

[25] UNHCR's leading role is considered by ExCom to be a core element of voluntary repatriation, ExCom Conclusion No 74 (1994) reaffirms 'the leading role of UNHCR in promoting, facilitating, and coordinating voluntary repatriation' sub (y); see also UNHCR Handbook (n 19) 13, where UNHCR simply states that the country of asylum 'should respect the leading role of UNHCR in promoting, facilitating and coordinating voluntary repatriation'.

[26] Article 35(1), Refugee Convention (an obligation that applies irrespective of the legal basis of those functions); Atle Grahl-Madsen, *Commentary on the Refugee Convention 1951 Articles 2–11, 13–37* (UNHCR 1997) art 35, para 4.

[27] Hathaway refers to the '*de facto* dominance of UNHCR in repatriation practice', and criticizes the Convention-blind deference of States to UNHCR's repatriation practice; James C Hathaway, 'The Right of States to Repatriate Former Refugees' (2005) 20 Ohio State Journal on Dispute Resolution 175, 198 (quote), and *passim*.

[28] A sample agreement is included in Annex 4, UNHCR Handbook (n 19); for an overview of the agreements that have been concluded from UNHCR's creation until 2002 Zieck 2006 (n. 25) Annex 4, and for the period from 2002 until the fall of 2011 (almost 100 agreements), Annex to Marjoleine Zieck, 'The Limitations of Voluntary Repatriation and Resettlement of Refugees' in Vincent Chetail and Céline Bauloz (eds), *Research Handbook on International Law and Migration* (Edward Elgar 2014).

that is, agreements that govern specific return movements.[29] The key obligation laid down in those agreements is the requirement of voluntariness, and the identical temporal demarcation referred to means that this requirement only ceases to apply when the cessation clauses on changed circumstances in the country of origin can be applied:[30] '[t]he legal process provides only two choices: either to uphold the principle of voluntariness or to apply the relevant cessation clause if the conditions so warrant'.[31] Although both States and UNHCR can apply those clauses, the application by States has more impact since their decision may entail (forced) return.[32]

c. Timing

Voluntary repatriation is implemented during the time when the refugee is *ex definitio* unrepatriable, and therefore entitled to protection against *refoulement*. Since the refugee is at the material time unrepatriable, it is clear that the decision to exercise the right to return must be a voluntary one.[33] So when is voluntary repatriation warranted? According to UNHCR 'once conditions are conducive to return'.[34]

Apart from spontaneous returns, which are traditionally merely facilitated by UNHCR since these may include a return to unsafe countries of origin, those which are promoted by UNHCR are related to beneficial changes in the country of origin that tangibly foreshadow the end to the root cause of flight, and hence cessation of refugee status. UNHCR uses the time between such changes and their consolidation over time to promote voluntary repatriation and in that sense voluntary repatriation takes place at a lower threshold than cessation of refugee status by virtue of changed circumstances in the country of origin:[35] 'The idea behind promoting and subsequently encouraging

[29] These are legally binding agreements, cf *inter alia*, UNHCR, 'Voluntary Repatriation', UN doc EC/GC/02/5 (25 April 2002) para 10.

[30] Refugee Convention, art 1C(5)–(6); see UNHCR's Guidelines on International Protection No 3: Cessation of Refugee Status under Article 1C(5) and (6) of the 1951 Convention relating to the Status of Refugees, HCR/GIP/03/03 (10 February 2003). On cessation, see Chapter 57 in this volume.

[31] UNHCR Guidelines (n 12) 56.

[32] UNHCR's Guidelines on Cessation (n 30) provide in para 7 that 'Cessation under Article 1C(5) and 1C(6) does not require the consent of or a voluntary act by the refugee. Cessation of refugee status terminates rights that accompany that status. It may bring about the return of the person to the country of origin [...]'; 'may' but not necessarily so: when the protection as a refugee comes to an end, the host government is entitled to require the former refugee to depart its territory (James C Hathaway, *The Rights of Refugees under International Law* (CUP 2005) 920–1, 929); Hathaway (n 27), but it may also allow the continued residence of the former refugee on the basis of acquired rights or social membership on which, see Cathryn Costello, *The Human Rights of Migrants in European Law* (OUP 2015) ch 3. On repatriation without return, see Katy Long, *The Point of No Return. Refugees, Rights, and Repatriation* (OUP 2013) ch 9.

[33] On the right of return, see art 12(4) ICCPR: 'No one shall be arbitrarily deprived of the right to enter one's country.'

[34] UNHCR Handbook (n 19) 5, elaborated at 16. Subsequently, UNHCR indicated that it itself promotes the conditions conducive to return; UNHCR, 'Legal Safety in the Context of Voluntary Repatriation', UN doc EC/54/SC/CRP.12 (7 June 2004) para 1.

[35] UNHCR Guidelines (n 12) 4, 43; UNHCR Handbook (n 19) 10; cf the observation that 'successful completion of voluntary repatriation programmes often indicate that circumstances which caused flight no longer exist' and are 'relevant to declaring general cessation as foreseen in Article 1C(5)', UNHCR, 'Voluntary Repatriation', UN doc EC/GC/02/5 (25 April 2002) para 8.

voluntary repatriation is to give the refugee an opportunity to voluntarily return home with UNHCR protection and assistance *before* he or she formally ceases to be a refugee'.[36] UNHCR appears to systematically lower this threshold.

Although UNHCR initially clearly stated that one of the fundamental prerequisites for its encouraging repatriation was 'a general improvement in the situation in the country of origin',[37] the timing has since gradually been changed. In its Handbook on Voluntary Repatriation of 1996, UNHCR indicates that it promotes voluntary repatriation when it appears that, objectively, it is safe for most refugees to return and that such returns have good prospects of being durable.[38] In 2004, UNHCR's Executive Committee (ExCom) observed that 'voluntary repatriation should not necessarily be conditioned on the accomplishment of political solutions in the country of origin in order not to impede the exercise of the refugees' right to return'.[39] This particular phrasing has a ring of disingenuity since refugees may always return, but the issue really is the timing of UNHCR's organizing and promoting of such return. The New York Declaration for Refugees and Migrants repeated this particular observation in 2016,[40] and so does the Global Compact on Refugees of 2018.[41]

d. Limitations

Apart from the timing of specific repatriation operations, the overarching question as to when voluntary repatriation should be considered to be the appropriate solution has never been raised by UNHCR. Voluntary repatriation is rather viewed by UNHCR as a timeless solution that is considered appropriate, regardless of the fact that the refugees whose return is promoted are second, third, and perchance fourth generation refugees,[42] refugees with extremely tenuous links to a nominal country of origin.[43] Apart from

[36] UNHCR Guidelines (n 12) 43. [37] ibid 33. [38] UNHCR Handbook (n 19) 16.

[39] ExCom Conclusion No 101 (2004) sub (e); repeated in Conclusion No 112 (2016) para 7.

[40] UN doc A/Res/71/1 (9 September 2016), para 76.

[41] UN doc A/Res/73/12 (Part II) (17 December 2018), para 87.

[42] cf UNHCR's Executive Committee, which considers voluntary repatriation even the priority solution for those trapped in protracted refugee situations; UNHCR, 'Protracted Refugee Situations', UN doc EC/54/SCP/CRP.14 (10 June 2004) para 3; and the same applies to UNHCR's parent organ: the UN General Assembly, too, encourages UNHCR to 'actively promote durable solutions, particularly in protracted refugee situations, with a focus on sustainable, timely, voluntary, safe and dignified return', UN doc A/Res/72/150 (17 January 2018) para 42; likewise, UN doc A/Res/73/151 (10 January 2019), para 48. The reference should be taken to protracted situations such as that of Afghan refugees rather than the equally protracted ones of Palestinian and Sahrawi refugees whose return is inextricably linked to the exercise of the right to self-determination. At the end of 2019, 77 per cent of all refugees—amounting to 15.7 million—were in protracted situations, UNHCR, 'Global Trends Forced Displacement in 2019' (n 6) 24. In 2018, UNHCR estimated that about 36 per cent of those refugees lived in situations lasting for 20 years or more, UNHCR, 'Global Trends Forced Displacement in 2018'.

[43] It is a moot point, therefore, whether UNHCR's observation that voluntary repatriation 'remains the durable solution sought by the largest number of refugees' is tenable; UNHCR, 'Legal Safety Issues in the context of Voluntary Repatriation', UN doc EC/54/SC/CRP.12 (7 June 2004) para 1.

ethical limits that militate against such timelessness, the legal right to return of those who are descendants of habitual residents rather than nationals may be extremely weak, if not non-existent.[44] The passage of time should serve as a bar, in the sense that voluntary repatriation should not be pursued dogmatically at the expense of the pursuit of other, more suitable options for the refugees concerned.

A different kind of limitation is of a political nature and pertains to refugees belonging to minority populations in the country of origin. Historical research demonstrates that the repatriation of ethnic, national, and religious minorities is often the result of force rather than the voluntary exercise of the right to return.[45] In view of this fact, it is a moot point whether voluntary repatriation should invariably be pursued: as in the case of protracted refugee situations, the question should be posed whether the return of the refugees concerned would be in their—rather than States' or UNHCR's—interest. It is worth recalling that UNHCR initially stated that the promotion and facilitation of voluntary repatriation should be guided by the 'principle of the best interest of the refugee'.[46] Apart from the fact that it has never been repeated, it is, considering the limitations referred to, a moot point whether that principle informed UNHCR's voluntary repatriation practice, which often compromises the rights of refugees.[47] Refugees themselves have not generally been given a voice in the organization of voluntary repatriation operations:[48] refugees are not, for instance, involved in the conclusion of voluntary repatriation agreements nor do they participate in the commissions that are established on the basis of those agreements,[49] charged with addressing many practical issues that affect their return.

[44] Marjoleine Zieck, 'Refugees and the Right to Freedom of Movement: From Flight to Return' (2018) 39 Michigan Journal of International Law 21, 109–11.

[45] Howard Adelman and Elazar Barkan, *No Return, No Refuge. Rites and Rights in Minority Repatriation* (Columbia University Press 2011); cf Myron Weiner, 'The Clash of Norms: Dilemmas in Refugee Policies' (1998) 11 JRS 433, 449 (cautioning against undoing ethnic cleansing by insisting on the refugees' right to return).

[46] UNHCR Guidelines (n 12) 30; see also 38: 'The principle objective in the promotion of voluntary repatriation is the interest of the refugee.' The idea seems to stem from the early days of UNHCR's existence, cf Jacques Vernant's survey of 1951 who argued the need for an international organization 'acting as a guardian to the refugees' (The Refugee in the Post-War World, Preliminary Report of a Survey of the Refugee Problem, 1951, 24).

[47] See Tor Krever, '"Mopping-up": UNHCR, Neutrality and *Non-Refoulement* since the Cold War' (2011) 10 Chinese Journal of International Law 587 on UNHCR's 'pursuit of State, not refugee, interests', in the post-Cold War era.

[48] Occasionally refugees take the lead: the Rohingya refugees in Bangladesh recently prevented their return by means of protests—'There will be no repatriation without talking to us first', the Rohingya stated in response to a third attempt to return them to Myanmar; Vidya Krishnan, 'Tensions Flare as Bangladesh Tries to Send Rohingya Home' *The New Humanitarian* (21 August 2019); see also Lund (n 7); in the past Salvadoran and Guatemalan refugees clearly defined the time and terms of their return, Marjoleine Zieck, *UNHCR and Voluntary Repatriation of Refugees, A Legal Analysis* (Martinus Nijhoff 1997) 121–2.

[49] Apart from the fact that it stands to reason to give refugees a voice, particularly since they can rarely enforce their rights, their voice could counter the pressure that may be exerted by UNHCR, NGOs, and the host State to consent to premature voluntary repatriation; for an illustration, see Jansen (n 4) 207, 211, 220–1 relating to the voluntary repatriation of South Sudanese refugees from Kenya.

3. Practice

a. Timing

In practice, the timing of voluntary repatriation operations is problematic. First of all, UNHCR has been confronted with situations where return to circumstances that had not or had hardly been changed was, all things considered, a better option than prolonged stay in the country of refuge on account of sub-standard conditions of asylum. Nonetheless, the true nature of the return was concealed by UNHCR, and the, in essence, enforced mode of return was passed off as a voluntary return movement.[50] Cases in point are the return of the Rohingya in 1978[51] and 1993,[52] that of Cambodian refugees in 1981,[53] Ethiopian refugees from Djibouti in 1983,[54] and Rwandan refugees from Zaire and Tanzania in 1996.[55] However, from 1996 onwards, UNHCR decided to designate this type of return as 'imposed return',[56] making it clear what is being implemented. Years later, the same pragmatic practice, that is, of organizing return when the security situation in the country of asylum becomes more dangerous than that prevailing in the country of origin, was qualified as 'an evacuation to save lives'.[57]

Another practice that is hard to reconcile with voluntary repatriation, but is nonetheless passed off as voluntary return, consists of operations where return is coupled to a pre-determined date on which the cessation clauses pertaining to changed circumstances will be invoked, or is otherwise tied to the end of legal stay in the country of refuge. It corresponds with the way UNHCR links voluntary repatriation to cessation: the former is a prelude based on beneficial changes in the country of origin that may lead to cessation in due course. In practice, the cessation date is set, and the time until then is

[50] This practice should be distinguished from 'emergency repatriation operations', that are not passed off as voluntary repatriation exercises; cf the emergency repatriation of Liberian refugees (who were harassed by the local population who accused them of siding with the rebels) in Côte d'Ivoire to Liberia in 2003; UNHCR, 'Emergency Repatriation for Liberians in Western Ivorian Crisis; Top UNHCR Official Plans Visit' (14 January 2003).

[56] Chimni (n 4) 63.

[57] UNHCR, 'Voluntary Repatriation', UN doc EC/GC/02/5 (25 April 2002) para 17. The emergency evacuation of Sierra Leonean refugees in Guinea in 2000–01 is a case in point.

used for voluntary repatriation.[58] An example of the former is the return of Rwandan refugees in Uganda,[59] and of the latter, the periodically enforced return of Afghan refugees from Pakistan,[60] which is tied to the temporally limited validity of the Proof of Registration (PoR) card that entitles the Afghans to reside in Pakistan (the latest extension dates of 27 June 2019, extending the validity of the PoR card until 30 June 2020).[61] A comparable practice is simply announcing a date before which return should be effectuated. Examples of this practice include UNHCR's commitment to realize the return of Rohingya refugees to Myanmar before 31 December 1995,[62] and the public announcement by the Tanzanian government that Rwandan refugees were expected to return home by 31 December 1996.[63]

A comparable time limit that drives the timing of voluntary repatriation is based on the conviction that refugees are part of the solution of the problem that gave rise to their flight. Illustrative for this conviction is the timing of the airlift of 43,000 Namibian refugees in 1989, preceding the independence of Namibia, to enable them to take part in the elections,[64] and the organized repatriation of Cambodian refugees in 1992–93 with a view to securing their participation in the national elections.[65]

Announcing a date on which the camps where the refugees live will be closed, and thus cause their repatriation, is another way of setting a temporal limit. Illustrative is the envisaged return of over a quarter of a million mostly Somali refugees from Kenya by means of closing the Dadaab camp. Although the Kenya High Court ruled in 2017 that closing Dadaab is unconstitutional since returning the refugees would be in breach of Kenya's international obligations, closure and hence enforced return was nonetheless (re)scheduled for August 2019.[66]

The timing of voluntary repatriation operations may alternatively be induced by the creation of safe areas in the country of origin. Examples are the return of the Kurds to Northern Iraq in 1991,[67] and the contemporary proposals to return Syrian refugees to de-escalation or safe zones in Syria.[68] Obviously, such returns have

[58] But see the decision of the Botswana High Court of January 2016 that halted this type of enforced return, Khonani Ontebetse, 'Botswana, Namibia, UNHCR in Refugee Repatriation Row' *Sunday Standard* (11 January 2016).

[68] See Lund (n 7) and (n 8).

nothing to do with the idea of refugees voluntarily re-availing themselves of the protection of their country of origin and are therefore a travesty of the notion of voluntary repatriation.

The last timing worth mentioning is in essence a lack of any timing when voluntary repatriation proceeds from the premise that a solution to the root cause of flight is not a pre-condition to return. Illustrative for this are the words of Lebanese President Aoun: 'Lebanon will continue to work to ensure the return of Syrian refugees to safe areas in Syria, and we will not wait for a political solution to the Syrian crisis as it may take long.'[69] It is symptomatic of the pressure that host States exert, and to which UNHCR on occasion succumbs.[70] Countries of origin too may exert pressure on States to return their citizens, demonstrating to the world at large that they have their house in order and deserve to (re)gain international legitimacy.[71]

Obviously, all those variants have corresponding negative repercussions for the degree to which return will be voluntary: if temporal limits are set and expulsion is the next step even when following a temporal reprieve by means of a voluntary repatriation fig leaf, there is obviously no choice, and the result is *refoulement*. The same applies to situations where facilities are reduced or cut off entirely: in case refugees are dependent on those facilities, they have no genuine choice either.[72] A comparable lack of choice is inherent to debt-induced repatriation[73] and forcing refugees to sign voluntary repatriation forms.[74]

A less immediately obvious practice but nonetheless one that effectively undermines the voluntariness of entire operations is UNHCR's practice regarding those who refuse to return in an organized repatriation operation, usually designated as the residual caseload. They are subjected to status re-determination that proceeds from an *ex nunc* assessment of the circumstances in the country of origin, and hence to denial of refugee

[69] 'Lebanese President Pledges Safe Return of Syrian Refugees' *Arab News* (26 February 2019). Similarly, the Russian ambassador in Lebanon who stated that repatriation 'should be implemented regardless of political differences and without linking it directly to a political settlement'; Samar Kadi, 'Syrian Refugees' Repatriation a Slow, Long-Term Process' *MEO* (29 December 2018). A variant of this theme is simply denying that the refugees concerned are in need of international protection; Patrick Wintour, 'Thousands of Syrian Refugees Could Be Sent Back, Says Lebanese Minister' *The Guardian* (15 June 2019).

[70] Human Rights Watch, 'The UN Should Just Say No to Returning Refugees to Danger' (27 February 2017).

[71] 'Uganda Moves to Expel Burundian Refugees' *DW* (15 February 2017), that is, following a request of Burundi. The desire to gain international legitimacy also seems to drive Syria's President; Jesse Marks and Lina Kreidie, 'Assad Needs UN Assistance to Repatriate Refugees' *Atlantic Council* (31 November 2018). See also Andrew Wolman, 'Chinese Pressure to Repatriate Asylum Seekers: An International Law Analysis' (2017) 29 IJRL 84, for a repatriation practice geared to controlling dissent and preventing separatism.

[72] See Katy Long, 'Back to Where You Once Belonged. A Historical Review of UNHCR Policy and Practice on Refugee Repatriation', PDES/2013/14, 19–21 for examples.

[73] Keven Sieff, ' "What Other Choice Do I Have"? How Debt-Ridden Refugees Are Being Forced to a War Zone' *The Washington Post* (15 December 2017).

[74] Human Rights Watch, 'Turkey Forcibly Returning Syrians to Danger. Authorities Detain, Coerce Syrians to Sign "Voluntary Return" Forms' (26 July 2019).

status usually followed by (enforced) return,[75] This fate has repercussions beyond the individual refugees concerned since it signifies that return was the ultimate end of the operation, and it turns the solution of voluntary repatriation into a mode of cessation *sui generis*.

The result is a practice that appears (far) removed from a voluntary return if and when conditions in the country of origin warrant return. The question is whether the applicable legal norms, in particular that of protection against forced return, justify such a pliant and little principled voluntary repatriation practice. On the assumption that the Statutory assignment to pursue voluntary repatriation derives from the experience and practice in the wake of the Second World War,[76] resort will be taken to this period of time. What did voluntary repatriation mean at the time? In addition, could it be argued that the then prevailing understanding of voluntary repatriation—rather than the current malleable one—should be adhered to? What if it is adhered to? Would it better align with the obligations of States under the Refugee Convention and Protocol? What would be lost and what would be gained?

4. Back to the Origins: Post Second World War

The issue of return became prominent in the wake of the Second World War on account of the large numbers of displaced persons in Europe, the Middle East, and Asia.[77] The allied States assumed that all those who were displaced would want to return home. Organizing the repatriation of all displaced persons and refugees after the termination of the War was the responsibility of the Allied Forces. They came very well prepared. The plan of the Supreme Headquarters Allied Expeditionary Force (SHAEF) was ready on 3 June 1944, and was adjusted in December that year to the advance into Germany.[78]

[75] In the UNHCR Guidelines (n 12) 6, 48, 64, this practice was not considered to be acceptable, and those who would opt not to avail themselves of voluntary repatriation would remain refugees, enjoy continued asylum, and were not to be subjected to status re-determination until such time as the relevant cessation clause is applicable. This clear stance was not included in the UNHCR Handbook (n 19), and along with this change, status re-determination, and involuntary return, became practice. Examples of this practice are the treatment of the residual caseload in two voluntary repatriation operations considered qualified as exemplary operations by UNHCR, namely Cambodian and Mozambican refugees, see Zieck (n 48) 311–12, 415–16.

[76] Repatriation did not play a significant role in the interbellum; Claudena Skran, *Refugees in Inter-War Europe* (OUP 1995) 48.

[77] Numbering over 30 million in Europe, Michael Marrus, *The Unwanted. European Refugees in the Twentieth Century* (OUP 1985) 297; no reliable figures could be found for the Middle East and Asia.

[78] Malcolm Proudfoot, *European Refugees: 1939–52. A Study in Forced Population Movement* (Faber and Faber 1956) 111, 147 (the text of the 16 April 1945 version of this plan—Administrative Memorandum Number 39—is included in this book as appendix B).

The SHAEF plan clearly indicated that displaced persons of United and Associated Nations (ie the States that had been fighting the Axis powers during the War and friendly powers) who refused to return were not to be returned to their countries of nationality or districts of former residence.[79] If the reasons for refusal were substantial, provision would be made for their resettlement, if not, the military authorities could not take further responsibility for their care and maintenance (and the same applied to those who refused to accept provision for their resettlement).[80]

The United Nations Relief and Rehabilitation Administration, UNRRA, established in November 1943 to plan, coordinate, administer, or arrange for the administration of measures for the relief of victims of war in any area under the control of any of the United Nations through the provision of food, fuel, clothing, shelter and other basic necessities, medical, and other essential services,[81] gradually assumed responsibility for the repatriation of displaced persons and refugees albeit under military control.[82] UNRRA was soon confronted with resistance to return.[83]

The issue of return became a bone of contention,[84] also in the recently established United Nations. On 29 January 1946, the General Assembly adopted resolution 8(I), which provided that: 'no refugees or displaced persons who have finally and definitely, in complete freedom, and after receiving full knowledge of the facts (…) expressed valid objections to returning to their countries of origin (…) shall be compelled to return to their country of origin.'[85]

The Constitution of the International Refugee Organization (IRO), the organization charged with encouraging and assisting the early return of those persons who were its concern, having regard to the principles set out in resolution 8(I),[86] provided that refugees and displaced persons would become its concern either if they could be repatriated, and its help would be required in order to provide for their repatriation, or if they expressed valid objections to return.[87] Valid objections comprised (fear of) persecution,

[79] Para 30 of the revised version of the plan dating of 16 April 1945 (it is not clear whether the option to refuse return was also part of the original version dating of December 1944). The return of Soviet citizens and POWs had been made mandatory by virtue of the Yalta agreements of 11 February 1945 (concluded between Britain and the Soviet Union, and the US and the Soviet Union; see Nikolai Tolstoy, *Victims of Yalta* (Hodder and Stoughton 1977); Mark Elliott, *Pawns of Yalta. Soviet Refugees and America's Role in Their Repatriation* (University of Illinois Press 1982).

[87] Part I, section C, art 1(1), IRO Constitution.

objections of a political nature judged by the IRO to be valid,[88] and compelling family reasons arising out of previous persecution or compelling reasons of infirmity or illness.[89] Those with valid objections to return were not expected to return; they would either settle in the country of refuge or resettle in third countries.[90] The IRO was thus not charged with voluntary repatriation but with repatriation or early return, albeit within the prohibitive constraints of valid objections.[91]

The system of the Refugee Convention and the UNHCR Statute differs from that of the IRO in the sense that the beneficiaries (refugees and displaced persons) and the eligibility criteria (conditions under which refugees and displaced persons will become the concern of the organization) were defined separately in the IRO Constitution but were merged in the new instruments. Those who satisfy the relevant definition of refugee—defined as persons with a well-founded fear of persecution, one of the IRO eligibility criteria—are entitled to the rights listed in the 1951 Convention, including in particular the protection against *refoulement*, and are the concern of UNHCR. Following the logic of the IRO Constitution, only local integration and resettlement elsewhere would be options for them.

UNHCR's Statute nonetheless comprises voluntary repatriation, and the question is what exactly is meant by that? Proceeding from IRO practice, it could simply mean that refugees cannot be forced to return,[92] so in effect a reminder of what the General Assembly had indicated in its resolution 8(I) (more was not needed in view of the fact that UNHCR—unlike the IRO—was created as a non-operational agency). It would explain why voluntary repatriation was not included in the Refugee Convention since that is wholly geared to protecting those who are by definition unrepatriable, and explicitly prohibits States to forcibly return refugees. Along with the adoption of the new legal regime, new questions arise. Since return is not an option for those who are unrepatriable—the beneficiaries of UNHCR are similarly defined as unrepatriable persons—why suggest it to them nonetheless? Is UNHCR's argument that the return of refugees (rather than former refugees) enables it to provide them with protection and assistance before they formally cease to be refugees legally decisive?

[88] It had been suggested to replace the phrase 'valid objections' by 'expressed the desire not to', a suggestion that was refuted since it would render the objections wholly subjective while the validity of the refugee's motives should be decided upon by the IRO; Vernant (n 46) 33.

5. Reimagining Voluntary Repatriation

UNHCR took the Statutory assignment to pursue voluntary repatriation as the voluntary return of unrepatriable persons, which of necessity puts a heavy premium on the voluntariness of return. Nothing in the Statute militates against adopting an alternative understanding of voluntary repatriation that is closer to the practice of UNHCR's predecessors: providing assistance to refugees and displaced persons who are repatriable (that is, do no longer have a well-founded fear of persecution), and protection—and alternative solutions—to those who are not repatriable. In terms of the time-line UNHCR applies now, it would mean that repatriation would take place not preceding cessation of refugee status but following cessation of refugee status.[93] If this, arguably, original, understanding and function of voluntary repatriation would be adopted,[94] what would that signify and entail?

It would mean that return would only be an option when there are no valid objections to return anymore in the sense of the definition of refugee. It would signify a clear set of limits: no return of any refugee before the end to their refugee status following the application of the cessation clauses pertaining to changed circumstances in the country of origin. Any return that is forced and has so far been masked by a thin veneer of voluntary repatriation should give way to a clear verdict of *refoulement*. For the States hosting refugees, it would mean that they have to refrain from organizing any return preceding a formal (individual) determination that cessation is warranted. The yardstick would be that of the relevant cessation clauses.

For UNHCR it would signify that it would continue to facilitate return when refugees want to return even when they are still refugees and conditions in the country of origin have not changed. It could, in addition, assist in the return of former refugees upon cessation of their status on account of changed circumstances in the country of origin. As indicated earlier, promoting and encouraging the voluntary repatriation of refugees was considered by UNHCR as giving them an opportunity to voluntarily return home with UNHCR protection and assistance before they cease to be refugees. The tacit implication of which is that UNHCR cannot extend such protection and assistance when the refugees have lost their status. It arguably can. First of all, UNHCR itself claims its man-

[93] It would seem that early UNHCR practice resembles the suggested course of action; see the General Assembly resolutions on refugees from Algeria in Morocco and Tunisia which simply refer to their (orderly) return, UN docs A/Res/1389(XIV) (20 November 1959); 1500(XV) (5 December 1960); 1672(XVI) (18 December 1961); likewise pertaining to 'refugees in Africa', UN doc A/Res/2040(XX) (7 December 1965).

[94] The Statutory assignment to assist governmental and private efforts to promote voluntary repatriation was taken to mean the following by the first High Commissioner: 'The intent of this provision is that whenever a refugee no longer regards himself as such and the reasons for which he has become a refugee has ceased to exist, he should be assisted in availing himself of the protection of the government of his country of origin'; Gerrit Jan van Heuven Goedhart, 'The Problem of Refugees' (1954) 82 Collected Courses of the Hague Academy of International Law 261, 309.

date includes a role with respect to the return—or integration—of persons who lost their refugee status as a result of the fifth and sixth cessation clauses 'for a period of grace'.[95] In addition, the actual return of the former refugees—following a proper application of the cessation clauses—is a task the International Organization for Migration is well equipped for, specialized as it is in travel logistics pertaining to the movement of refugees and migrants.[96] Secondly, UNHCR's mandate comprises assisting and monitoring returnees, that is former refugees, after they have returned.[97] If a formal extension of UNHCR's mandate would nonetheless be required to sustain a prolonged role in the country of origin in the sense indicated, this could easily be effectuated by the General Assembly, in the same way it extended UNHCR's mandate into the country of origin for the benefit of returnees.[98]

A possible drawback of adjusting UNHCR's repatriation practice could be the durability aspect of voluntary repatriation. Actual return would take place following a fundamental change in circumstances in the country of origin. The threshold of the relevant clauses has been raised considerably by UNHCR and its Executive Committee.[99] If that rather exacting threshold is observed—and here UNHCR's supervisory function would be vital—much of what is currently done to secure durability would not be required since it is already part of meeting that threshold, and hence should have been taken care of preceding return. Many of the issues that need to be addressed in the country of origin, such as reclaiming property, restitution, reparations, compensation for losses, access to justice, etc are, moreover, the responsibility of the country of origin,[100] rather than UNHCR.

Adjusting voluntary repatriation in the sense indicated does not change or otherwise affect the obligations of States under the Refugee Convention and Protocol, and it, in addition reduces the risk of reverse movements that are inherent to any premature return; that is, a return preceding the time loss of refugee status is justified on account of changed circumstances in the country of origin.

[95] UNHCR's Guidelines on Cessation (n 30) para 25 (viii); cf Botswana that grants former Namibian refugees a period of grace following cessation of their refugee status, which enables them to return with UNHCR assistance to Namibia; Terttu Newaka, 'Botswana to Deport over 800 Namibian Refugees' *The Namibian* (13 September 2019).

[96] See Constitution of IOM, art 1(1).

[97] Despite the fourth cessation clause that provides that the competence of UNHCR 'shall cease to apply to any person defined in section A above if (…) (d) He has voluntarily re-established himself in the country which he left or outside which he remained owing to fear of persecution (…)'.

[98] The UNGA endorsed this extension as formulated by ExCom in Conclusion No 40 (1985) sub (l) in UN doc A/Res/40/118 (13 December 1985) sub (7).

[99] See UNHCR's Guidelines on Cessation (n 30) in particular also the requisite restoration of protection, paras 15–16; Hathaway (n 32) 920; James C Hathaway and Michelle Foster, *The Law of Refugee Status* (CUP 2014) 478, 481–9.

[100] On the responsibilities of the countries of origin, cast in terms of a just return, see Megan Bradley, *Refugee Repatriation. Justice, Responsibility and Redress* (CUP 2013).

CHAPTER 60

RESETTLEMENT

SUSAN KNEEBONE AND AUDREY MACKLIN

1. Introduction

This chapter examines and critiques refugee resettlement, ostensibly a 'durable solution' to displacement. Contemporary resettlement is practised mainly by high-income liberal democracies of the Global North, the same States that reluctantly receive asylum seekers coming mainly from the Global South. This tension between asylum and resettlement explains many of the features of contemporary resettlement practices, with asylum legally regulated, and resettlement usually framed as a matter of discretion.

We understand asylum as linking the provision of refuge from harm with the opportunity to create a new home elsewhere. The object of resettlement is also integration in a new 'third' country. It is traditionally referred to as the third durable solution, preceded by 'local integration in the country of first asylum',[1] and voluntary repatriation (or return) to the country of origin. These first two solutions are underwritten by the legal prohibition on *refoulement*, while resettlement is presented as a 'voluntary',[2] or 'non-legal obligation'[3] of States. Resettlement lacks 'a binding legal framework',[4] and, in comparison to asylum, falls 'outside the realm of international law'.[5] While asylum seekers

[5] Hashimoto (n 3) 165.

have a 'right to seek asylum',[6] refugees cannot claim a right in international law to be resettled.

This incongruity between asylum and resettlement matters legally and politically. Asylum seekers make a claim of right based on States' international legal commitments. In contrast, refugees seeking resettlement make a moral appeal to humanitarian discretion. And because resettlement can furnish real benefits to refugees (safe passage, protection, and support) that asylum seekers do not enjoy, States appear virtuous when endorsing resettlement over asylum. But because it is not backed up by an enforceable legal duty, States can wield resettlement against asylum for rhetorical and political purposes, while actually resettling few or no refugees. Although resettlement is presented as an equal alternative to local integration and voluntary return, resettlement is weaker because it remains untethered to obligation. The conundrum—which we do not resolve—is how one can justify this normative asymmetry amongst the three 'durable solutions'.

Integration is central to resettlement's character as a durable or lasting solution for individual refugees. The first Executive Committee (ExCom) Conclusion specifically referring to resettlement dates from 1976—25 years after the making of the Refugee Convention.[7] It exhorts States '[t]o offer resettlement opportunities to those who ha[ve] been unable to obtain permanent residence in the State of *first asylum*'.[8] UNHCR's Resettlement Handbook (2011)[9] describes resettlement as:

> [t]he selection and transfer of refugees from a State in which they have sought protection to *a third State* which has agreed to admit them—as refugees—with permanent residence status.[10]

In this framing, protection in the host country (typically in the Global South) is succeeded by integration in the resettlement country (in the Global North). This reflects the use of resettlement in the late twentieth century, and the incapacity of States in the Global South to satisfy the settlement needs of asylum seekers.[11] It conjures up the image of refugees who reach States of first asylum, and stay there. This leaves asylum seekers who leave countries of first asylum to seek refugee protection in Europe, North America, or Australia/New Zealand dangling awkwardly at the edges of the frame delimiting the three durable solutions.

The appearance of the term 'durable solutions' in UNHCR ExCom Conclusions dating from the 1980s[12] was animated by concern about the prevention of 'secondary

[12] eg UNHCR ExCom Conclusion No 23 (XXXII), 'Problems Related to the Rescue of Asylum Seekers in Distress at Sea' (1981) para 57(3).

movements' from countries of first asylum in the context of the Indochinese crisis.[13] States in the Global North offered resettlement as an instrument of international 'responsibility-sharing', to relieve the burden of asylum on host countries in the Global South. However, as noted above, current resettlement practices must be interpreted in light of their relationship to asylum in the Global North. States use resettlement strategically to pit resettled refugees against asylum seekers. They do this discursively by delegitimizing asylum seekers as undeserving compared to resettled refugees, and literally (in the case of Australia) by establishing a global quota of refugees who will be admitted in a given year, and subtracting asylum seeker arrivals from the spaces available for resettled refugees.

The preamble and article 35 of the Refugee Convention hint at an obligation to resettle, by invoking obligations to cooperate with UNHCR on the 'problem of refugees' and the need to share the 'burden' of this problem.[14] However, the Convention neither addresses collective solutions,[15] nor enshrines an individual right to access asylum[16] except by default through *non-refoulement*. Asylum seekers do not appear in policy discourse in resettlement States of the Global North as potential subjects of durable solutions, even as they remain hyper-visible in policy agendas. The Refugee Convention primarily recognizes individual refugee status,[17] although echoes of the resettlement experiences in the inter-war years (1921–39) are audible in its emphasis on travel,[18] identity documents,[19] employment rights[20] for refugees and asylum seekers, and transfer of assets for asylum seekers admitted 'for the purpose of resettlement'.[21] In contrast, UNHCR is mandated to develop solutions for 'groups and categories of refugees'.[22] The Statute establishing UNHCR in 1950, 'calls upon' 'governments' to cooperate with UNHCR 'especially by' admitting refugees to their territories (to seek asylum), and providing refugees with 'travel and other documents' to 'facilitate their resettlement'.[23] Chapter 1, paragraph 1 of the Statute describes the role of UNHCR as working with States in 'seeking permanent solutions'.

[13] UNHCR ExCom Conclusion No 58 (XL), 'The Problem of Refugees and Asylum Seekers Who Move in an Irregular Manner from a Country in Which They Have Already Found Protection' (1989).

[14] See art 35 and preambular clauses 4, 5, 6 of the Refugee Convention regarding cooperation between States and UNHCR. Article 31(2)—the right to freedom of movement to obtain 'admission into another country' also recognizes resettlement.

[15] OAU Convention, art II(4)—'African solidarity and cooperation … to lighten the burden of the Member State granting asylum'; art II(5)—temporary protection pending resettlement. See Sharpe, Chapter 15 in this volume, who explains how the combination of arts II(4) and II(5) was employed in the 1970s and 1980s to resettle refugees to Tanzania, Zambia, and Zimbabwe.

[16] Note that OAU Convention, arts II(1) and (2) specifically mention a right to asylum.

[17] Contrast art 1C(5) and (6) of the Refugee Convention which are applied to both groups and individuals.

[23] ibid preambular clauses 2(c), (d), and (f). See also the High Commissioner activities—ch II 8 (c)—promoting of voluntary repatriation and assimilation and subsection (e)—transfer of assets for resettlement; ch II 9—repatriation and resettlement.

To reveal and explore this tension between asylum and resettlement, and examine resettlement's shifting and problematic role in refugee protection, we first survey its historical development (Section 2). We, then turn to three key aspects of contemporary practice (Section 3), namely its relationship with sovereignty, its decision-making processes, and States, treatment of resettled refugees.

2. A Brief History of Resettlement: From the Pilgrims of Plymouth to Asylum 'Trade-offs'

a. Early Refugee Population Movements

Resettlement is linked to the early history of refugees. Refugees fleeing religious and other persecution have long been associated with group and community movement leading to the creation of new settlements and colonies. For example, after the Revocation of the Edict of Nantes in 1685, many Huguenots fled from France *en masse* to the Channel Islands and the United Kingdom, as well as to new colonies further afield. The East Coast of what is now the United States received the Pilgrims of Plymouth and other groups from England and Europe in the early seventeenth century. Free settler communities coexisted with these 'self-selecting' movements of refugee communities. By contrast, later, in particular in the post-war period (1946–52), resettlement became an individual solution for displaced persons and refugees.

The eighteenth and nineteenth centuries were a period of great population movement, particularly in the service of the project of creating colonial settler societies. Some recent scholarship repositions resettlement alongside population management and relocation of groups of people as a remedy to the problem of 'over-population' in Europe. It argues that population transfer became 'normative' in the context of colonization; that when resettlement was proposed for Jewish (and other groups of) refugees in the inter-war years in the twentieth century, 'it was evolutionary rather than novel'.[24]

b. Resettlement in the Inter-war Years

In the inter-war years, State responses to refugees included the development of international institutions. Europe faced a crisis of mass displacement after the First World

[24] Jane McAdam, 'Relocation and Resettlement from Colonization to Climate Change: The Perennial Solution to "Danger Zones"' (2015) 3(1) London Review of International Law 93, 95.

War.[25] This period was marked by the breakdown of old multinational empires in the Balkans and expansionist tendencies of nation-States in Eastern Europe, leaving large stateless, homeless populations. It was also an era of institutional experimentation, beginning with the establishment of the first High Commissioner for Refugees (HCR) by the League of Nations (LN) in 1921.[26] The needs of this displaced population were evident, in that they needed work to survive and identity documents to regularize their (often stateless) status so they could travel or migrate onwards for employment. During Fridtjof Nansen's tenure as HCR (1921–30), thousands of Greek, Bulgarian, and Armenian refugees were resettled with the support of participating governments.[27] The ILO (1925–29) acted as a clearing house and labour exchange.[28] It established a Refugee Section to provide information on employment matching between countries, and extended resettlement beyond Europe to Canada and Brazil.[29] Skran described refugee settlement in this period as involving emigration, economic opportunities, and the linkage of refugee assistance with economic development.[30]

The main focus of solutions in this period was on the resettlement of *groups* of displaced persons, which increasingly meant Jewish persons. In their case, anti-Semitism amplified economically motivated opposition to resettlement. In the 1930s, the effects of the Depression, the rise of Nazi Germany and the prospect of another world conflict eroded support for resettlement. During this period US President Franklin D Roosevelt established a secret project—the 'M' project—to find resettlement sites and establish colonies for Jewish refugees.[31] Other efforts to address the plight of Jewish refugees failed, such as the creation of dedicated institutions and conferences, including the 1938 Evian Conference.[32]

Overall, in this period, refugee protection policy grew increasingly politicized and allied to the interests of powerful States: while governments supported refugee protection for security and foreign policy reasons as much as for pure humanitarian concerns, they were 'more likely to aid refugees fleeing from enemies than friends'.[33]

[25] Emma Haddad, *The Refugee in International Society* (CUP 2008) 99: by 1926 there was a refugee population of 26 million and more than 20 million persons displaced within States.

[33] Loescher (n 26) 27.

c. The War and Aftermath

It was estimated that 20 to 30 million persons were displaced during the Second World War, with another 9.5 million Germans and another 4 million 'war fugitives'.[34] Two main initiatives, both of which were financed by the British and the US governments, were created to deal with this displacement. The US-favoured Intergovernmental Committe on Refugees (IGCR) (1938–47) arose out of the Evian Conference.[35] In 1946, IGCR began to look into resettlement possibilities for persons displaced during the Second World War.[36] However, it had resettled only 38,000 displaced persons by July 1947 when the International Refugee Organisation (IRO) took over.[37] United Nations Relief and Rehabilitation Agency (UNRRA) was established by governments to implement repatriation,[38] but it also engaged in resettlement activities[39] although the numbers resettled were 'very low'.[40] During its existence from 1942 to 1946, it assisted seven million displaced persons with repatriation.[41] Despite the 'modest scale'[42] of resettlement in this period, it was an established solution. Resettlement institutions needed political support and funds, which enabled the Great Powers to steer their direction and activities.

The Great Powers exerted their influence steadily, and refugee protection took on a more individualized approach. Hathaway acknowledges that 'even in this largely humanitarian phase, the nation-state philosophy and promotion of national economic goals'[43] were decisive factors. In a Europe under reconstruction, the divisions that would define the Cold War emerged. McAdam suggests that it was the political failure of proposed large-scale resettlement schemes, including the potential for ghettoization, that led to post-war refugee resettlement becoming an individualized solution.[44] In the same vein, individual refugee status under the Refugee Convention replaced group-defined protection, and an individual right to asylum was enshrined in international law under the UDHR.

The IRO (1946–52) arose out of both the IGCR and UNRRA. Its mission was planned resettlement on a 'large scale'[45] for 'genuine refugees and displaced persons'.[46] Within a

year, it resettled the caseload of 1 million it inherited from UNRRA,[47] 31.7 per cent of eligible persons going to the US; 17.5 per cent to Australia; 12.7 per cent to Israel; 11.9 per cent to Canada, and 8.3 per cent to the UK.[48] These States took advantage of the IRO's mass resettlement programme to fill their needs for post-war reconstruction. The refugees, generally known as Displaced Persons, were accepted as labour migrants for the construction and agriculture sectors, often under conditions tantamount to indentured labour.[49] Participating governments were selective in the persons to whom they offered resettlement,[50] including restrictions based on race. Most resettlement countries preferred Baltic refugees, for instance.[51] IRO resettlement was tested towards the end of its operation when it had to find settlement places for 150,000 so-called 'hard core' cases, mainly deemed unfit for labour. This led to change in the framing of resettlement, from mainly economic to humanitarian.[52]

d. Resettlement and the Cold War Era

The IRO era normalized resettlement as dictated by the selective practices of destination States, rather than as a matter of refugee rights. Later, during the Cold War, resettlement was used strategically in localized contexts. Two key refugee crises during the Cold War period, after the Refugee Convention entered into force, demonstrated the use of resettlement strategically to relieve the 'burden' on countries of first asylum. These were, first, the responses to the Hungarian exodus in 1956, and then the 'Indochinese crisis' commencing in the 1970s and 1980s.

The first crisis arose out of the USSR repression of the Hungarian uprising in 1956, which caused an exodus of 200,000 people, mainly to Austria.[53] Austria, still hosting 'left-over' refugees from the Second World War, appealed to UNHCR for assistance. UNHCR's call for resettlement places was successful, with only 410 refugees left in Austria and the others resettled across 36 other States globally.[54] This episode presaged contemporary resettlement practices in two respects. First, States applied various selection criteria, ranging from none, to exclusion of communists and criminals, to a preference for certain categories of entrants, such as women and children, Jewish refugees, or workers.[55] Secondly, the refugees were admitted with diverse legal statuses, from temporary to permanent residence and even 'transit asylum'.[56]

[54] ibid 59–60. [55] ibid 54–5. [56] ibid 56–8.

The exodus of three million people in the 1970s and 1980s from the conflict in Indochina[57] led to a resettlement arrangement brokered by the UN Secretary-General in 1979, and later in 1989, with the decade-long Comprehensive Plan of Action (CPA).[58] The importance of these arrangements is that countries in the region, which were not parties to the Refugee Convention agreed to provide temporary 'first' asylum on the basis that States outside the region would grant resettlement on a permanent basis. Proponents praised the CPA for manifesting international solidarity, or burden-sharing, through resettlement on a global scale.[59] Although commentators differ on the 'success' of these arrangements, it is generally agreed that resettlement was 'the engine that powered the many moving parts of the CPA'.[60] In each case, resettlement was used to preserve asylum in the first country of refuge. Under the CPA, asylum adjudication was generally conducted on an individualized basis and thus the norm of an individual right to asylum was respected.

While the preferential resettlement offered by Western States to Hungarian refugees exemplifies resettlement's utility in waging ideological Cold War battles,[61] the resettlement of Indochinese refugees suggests acceptance of political responsibility for the flight of refugees consequential to a proxy Cold War. Scholars note the popularity of resettlement in the 'civilized West' during this period when a 'rescue' narrative of refugee escapees from communism prevailed.[62] The end of the Cold War generated a new narrative, largely led by UNHCR, that altered the rationales and uses of resettlement, and its position in relation to asylum.

e. Resettlement since the 1990s

By the late 1990s, the arrival of migrants and refugees from the Global South, dubbed the 'phenomenon of mixed flows',[63] was increasingly problematized as the 'asylum/ migration' nexus.[64] In a context where refugee movement to the Global North was

increasingly securitized and merged into international migration,[65] and attempts to contain refugees in regions of origin expanded, support for asylum contracted in wealthy States.[66] UNHCR, in particular ExCom, narrowed its focus, exhorting States to furnish 'adequate' resettlement places as 'an instrument of protection' for specific members of 'vulnerable groups'[67] (eg 'refugee women at risk'[68]), those in 'urgent or emergency'[69] situations, or other 'compelling'[70] protection cases. Between 1976 (the year of the first UNHCR ExCom Conclusion on Resettlement) and 2001, ExCom issued 16 statements about resettlement as an instrument of international burden-sharing and protection.[71]

In the 1990s, UNHCR attempted to counter the 'containment trend' and revitalize the use of resettlement. UNHCR issued guidelines on resettlement in 1990 and, following an influential 1994 review,[72] published the first UNHCR Handbook[73] on resettlement in 1997. In the late 2000s, UNHCR launched the Global Consultations on International Protection,[74] leading to a focus on the 'Strategic Use of Resettlement', which involved

> the planned use of resettlement in a manner that maximizes the benefits, directly or indirectly, other than those received by the refugees being resettled. Those benefits might accrue to other refugees, the hosting state, or other states or the international protection regime in general.[75]

While emphasizing 'that the first purpose of resettlement must always be the provision of individual protection for those who cannot secure asylum in the first asylum country',[76] subsequent examples of regional burden-sharing revealed States' primary intention to repel and deter asylum seekers.[77]

This goal continues to animate resettlement in the twenty-first century, underpinning reciprocal agreements such as those between Australia and the US[78] and the EU and Turkey.[79] Under these agreements, one State/region is permitted to repel asylum seekers, and instead admit a stipulated number of resettled refugees. These seemingly senseless refugee 'swaps' are a sovereignty spectacle, where control is reasserted by 'choosing' to resettle rather than being 'obliged' to protect those who arrive as asylum seekers. Beyond the EU–Turkey deal, the European Commission has repeatedly attempted to coordinate national resettlement practices, both by increasing targets and proposing the adoption of binding legislation, but has failed in both endeavours.[80] One of the most egregious illustrations concerns migrants and refugees in Libya who are intercepted and returned if they attempt to leave irregularly for Italy.[81] They are then subject to arbitrary detention and grave human rights abuses in Libya. In response, UNHCR has evacuated some refugees and asylum seekers from Libya to Niger and Rwanda under its Emergency Transit Mechanism, amid putative undertakings of resettlement to European States. But resettlement has largely failed to materialize, leaving refugees in Niger and Rwanda where protection is inadequate.[82]

In addition to the resettlement of groups of refugees under strategic 'trade-offs',[83] resettlement countries have offered places to specific groups arising from particular emergencies, often where there is perceived 'proximity'[84] in terms of geography, causation or 'identity' between the refugees and inhabitants of the resettling State. Referred to as situations of 'enhanced responsibility'[85] or international solidarity in certain conflict

situations, these include the 1999 evacuation/resettlement of Kosovars to various NATO Member States following the NATO bombing of Serbian forces in Kosovo, and the resettlement of Syrian refugees from Lebanon and Jordan. Additionally, strategic resettlement includes 'enhanced legal'[86] and 'complementary' pathways, a term which UNHCR has embraced in recent policy.[87]

3. Contemporary Resettlement Practices in Critical Perspective

a. Sovereignty, Resettlement, and Asylum

Across destination States in the Global North, asylum seekers are portrayed as imposing themselves on a receiving State, in contrast to the passive refugees awaiting selection for resettlement. In this sense, resettlement does not disturb the conviction that States ought to possess unfettered sovereign discretion to choose individual entrants; asylum challenges it. The arrival of asylum seekers (allegedly) signifies a loss of State control over who enters, but the contrast is false. In reality, the voluntary assumption of the legal obligation of *non-refoulement* by ratifying the Refugee Convention is also a paradigmatic sovereign act.[88] Nevertheless, the appeal of choosing refugees from afar partly explains the attractiveness of refugee swaps, extraterritorial asylum processing, and regional disembarkation platforms.[89] They offer the prospect of converting by stealth a legal duty of *non-refoulement* into desultory and optional resettlement.

In political environments hostile to asylum seekers, some States play resettlement off against asylum. Australia set the precedent by creating a single refugee admissions quota and deducting asylum arrivals from potential resettlement spaces in a zero-sum calculus. The US under President Trump followed suit by justifying a reduction in resettlement on the basis that the government needed to redirect resources from resettlement to the backlog of asylum applications.[90]

Statistically, the odds of resettlement today are miniscule. Both the total number of refugees worldwide, and those categorized by UNHCR as requiring resettlement,

have increased greatly since 2014, yet available resettlement spaces are declining overall. In 2017, only one in 21 refugees identified by UNHCR as requiring resettlement departed for a resettlement State. By the end of the second decade of the twenty-first century, UN High Commissioner for Refugees Filippo Grandi lamented that 'only about half of one percent of the world's 26 million refugees . . . are resettled to any country'.[91] UNHCR refers less than 5 per cent of over 20 million refugees worldwide for resettlement; less than 10 per cent of those referred are typically offered a resettlement place, and that number dropped below 5 per cent in 2018.[92] Yet, the mere possibility of resettlement produces a hypothetical queue, which real asylum seekers are accused of jumping.

Ironically, the cost of resettlement can be also harnessed in the service of a 'humanitarian alibi',[93] in the form of a utilitarian argument that expenditures on humanitarian relief in countries of first asylum are preferable because they deliver greater good to greater numbers than resettlement for a select few in the Global North.[94]

b. Resettlement Decision-making

As of 2019, 29 States actively participate in refugee resettlement.[95] Historically, established leaders in global refugee resettlement have been the US, Canada, Australia, and the Nordic States, but the US slashed its resettlement ceiling under President Trump to the lowest level since the Refugee Act of 1980.[96] In any given year, Canada or Australia resettle the most refugees per capita. It is notable that the top three resettlement States are settler societies with sophisticated migration regimes and long histories of immigrant incorporation. Resettlement States rely to varying degrees on UNHCR for identification, refugee status determination, referral and dossier preparation for prospective resettlement cases. Some States also conduct independent selection through their own embassies or special missions. UNHCR may contract

with international NGO partners to assist in their own referral process, with the International Organization for Migration (IOM) often providing logistical support.

The governance of resettlement reflects its character as an exercise of humanitarian discretion rather than legal entitlement.[97] Accordingly, there is little hard law regulating international or domestic practice. UNHCR's Resettlement Handbook establishes a permissive soft law framework which, in principle, may discipline the drift towards arbitrariness and abuse of power by structuring and guiding the exercise of discretion.[98] However, as Sandvik notes in the resettlement context, soft law brings 'a host of new irregularities' in part arising out of 'the insurmountable challenges of offering "international protection" to the large refugee population' and in part from UNHCR's organizational culture. In this context, informal administrative techniques pervade the 'survival strategies' of UNHCR protection officers.[99] The Handbook commits UNHCR to external transparency and internal accountability in its resettlement process, recognizing in particular the importance of sustaining resettlement States' confidence.[100] In 'Combating Fraud and Corruption in the Resettlement Process',[101] it emphasizes that resettlement spaces are a scarce and precious resource whose distribution invites significant moral hazard.[102] Bribery and corruption scandals involving cash for resettlement places have positioned refugees both as potential perpetrators and victims of unscrupulous practices.[103] Where resettlement is understood as a 'demonstration of generosity'[104] to the refugee and an 'expression of solidarity' with other States, it follows that States will not subject their own conduct to external accountability. Resettlement States are not accountable to each other or to UNHCR for fulfilment of their resettlement undertakings.

Nor is UNHCR answerable to refugees about its resettlement procedures or decisions.[105] While the Handbook pays detailed attention to evidence, documentation, interview techniques, and confidentiality, refugees remain objects, not subjects, of

governance. Procedures aim at efficient and accurate distribution of a scarce resource amongst a large population, not at legitimating the exercise of authority or recognizing refugees' dignity interest in fairness. Refugees may not apply for resettlement, and attempting to exercise agency in this way may actually impugn their credibility.[106] After initial screening, they may submit documents to support their account, but the utility and function served by documents remains random and obscure.[107]

Refugees are not entitled to see or respond to adverse evidence, to obtain reasons for decision, or to appeal a decision not to refer them for resettlement. Perhaps ironically, decision-makers tasked with resettlement referral seem no less susceptible to a culture of suspicion about refugees' credibility than adjudicators in national asylum regimes, even as national authorities seek to discredit asylum seekers by comparison to the 'authentic' refugees in camps.[108] Refugees' experience of an opaque system that does not afford them procedural fairness 'is partly explained by what soft-law regulation is not—namely, an instrument for upholding individual rights'.[109] Refugees who hope for resettlement in a stable and prosperous country are investing in a dream that is acutely potent, exceedingly remote, potentially indeterminate, and beyond control or even comprehension. The psycho-social toll on individual refugees and communities who endure this agonizing limbo can be profound and debilitating.[110]

As noted above, political interests and ideological commitments may orient the direction of national preferences.[111] A preference for refugees whom the nation-State understands as proximate in a relevant sense—ideologically, religiously, or ethnically—may also play a role. A State may embrace refugees whom it accepts some responsibility for creating (as in the case of the US and Indochinese, or Canada and Kosovars) and reject resettlement of those whom it disavows any role in producing (as in the case of the US and Chilean refugees of the 1970s). Apart from these explicitly political considerations, States may emphasize particular geographical location and/or refugee profiles (eg unaccompanied minors, women at risk, sexual minorities, or those with urgent medical needs). When States embark on Selection Missions, they accept files prepared by UNHCR and, in some cases, by designated NGOs that operate in the field.

However, resettlement States' criteria or interpretation of criteria can and do deviate from UNHCR priorities.

Representatives of resettlement States indicate the number and desired composition of the resettlement cohort; UNHCR then supplies files from their inventory of resettlement referrals, and States meet, interview, and select refugees for resettlement.[112] The Handbook does articulate a principle of formal equality: 'when UNHCR submits a refugee with a certain profile within a given population for resettlement, it should, as a general rule, be willing to submit all cases with a similar profile'.[113] This is probably best read as aspirational, as it would be impossible to comply with this norm, given the paucity of resettlement places.

The UNHCR screens all refugees for resettlement, and triages cases suitable for resettlement into sub-categories of urgency. Ordinary cases may take months or years from referral to departure. There are now seven resettlement classes listed (in contrast to the loosely defined 'vulnerable groups' described in the earlier ExCom Conclusions). In addition to the category of women and girls at risk, these are: those with specific protection needs who are at threat of *refoulement*; survivors of torture and/or violence; those with specific medical needs, in particular where life-saving treatment is unavailable in the country of refuge; family reunification; children and adolescents at risk; and those for whom there is lack of foreseeable alternative durable solutions.[114] Although resettlement is represented as a 'humanitarian' endeavour, the selection criteria applied by many States reproduce all three pillars of contemporary migration regimes: humanitarian, family, and economic. The first captures the refugee's need for resettlement. Kinship arises in the demarcation of the family unit for purposes of resettlement, and also in the weight attached to reuniting a refugee with relatives in the destination State. Economic criteria may inflect an assessment of the refugee's 'integration potential' based on human capital factors such as education, skills, and language ability; this evaluation may also include coded indicators that purport to measure 'values', 'attitudes', and 'cultural affinity'.

UNHCR does not endorse the evaluation of resettlement candidates according to economic or social indicia of 'integration potential' but cannot preclude States from using them. UNHCR can only rely on moral suasion to discourage States from selecting on the basis of invidious preferences. The Handbook acknowledges that '[d]iscriminatory selection criteria adopted by some resettlement States can limit the access to resettlement for refugees most at risk, and have a negative impact overall on the global resettlement programme.'[115] There is irony in the fact that States may discriminate in their resettlement selection for reasons that the Refugee Convention

[112] UNHCR, 'Resettlement Handbook' (n 9), section 7.7—the Handbook does not explain how UNHCR selects files for review by State Selection Missions.

[115] UNHCR, *Resettlement Handbook* (n 9) 70.

identifies as grounds of persecution[116] and which international human rights law would regard as suspect.[117]

Post-9/11 securitization has distorted many features of national migration regimes, including resettlement. Muslim and Middle-Eastern refugees, especially single men, have been prominent targets of discrimination in resettlement. The US explicitly publicizes the religious identification of refugees in its annual resettlement statistics.[118] Christian refugees almost always exceed Muslim refugees; their proportion increased dramatically after 2016. UNHCR may informally request a State to reconsider a decision to reject a resettlement referral, but there is no official recourse to an appeal. In principle, refusal of resettlement is an administrative decision that could attract judicial review under national law according to administrative law principles.[119] In practice, legal accountability under national law for resettlement decisions seldom arises because decisions are rendered extra-territorially to people who lack information, legal representation or means to pursue a legal challenge. Where judicial reviews do occur, as happens in Canada from time to time, most applicants are supported by an NGO, relative, or sponsor, suggesting the critical role played by domestic resettlement allies.[120] *Turani*[121] is a rare UK case in which a domestic court allowed a claim of discrimination brought by Palestinian refugees from Syria who were denied access to the UK resettlement scheme for Syrians.

In recent years, economists have turned their attention to devising algorithmic models for allocating refugees to different States. These mechanisms variously apply to asylum seekers and/or refugees seeking resettlement, and include quotas (sometimes tradable) and matching mechanisms that enable both States and refugees to rank their preferences.[122] Detractors deplore the appearance of refugee commodification in some of these matching schemes, while promoters contend that selection processes which are

[116] *Turani v Secretary of State for the Home Department* [2019] EWHC 1586 (Admin) discussed below is a rare exception.

transparent, comprehensive, efficient, and take refugees' preferences seriously will optimize the volume and distribution of resettlement opportunities.

c. National Integration Regimes

Each State's resettlement mechanism is unique, although there are common elements across jurisdictions.[123] The national executive or legislature typically sets a quota or range of refugees who will be selected for resettlement in a given year. They may consult in advance with sub-State government and civil society actors, as well as international and non-governmental partners and stakeholders.[124] Domestic laws enable and structure resettlement, but do not usually mandate it, thereby limiting opportunities to challenge discretionary decision-making by national actors.

Most resettlement States confer refugee status on resettled refugees before or upon arrival, as well as permanent resident status. Some extend permanent resident status immediately, while others provide a temporary or renewable status that may eventually be converted to permanent residence if certain conditions are fulfilled. As long as refugee status remains intact, a resettled refugee is protected from *refoulement* under the Refugee Convention. Refugee status formally ceases upon voluntary naturalization,[125] in which cases resettlement acts as a gateway to the genuinely durable solution of a new nationality. Resettled refugees are generally afforded a secure right of residence.[126] However, resettlement often drifts away from durability where, for example, resettled refugees are merely accorded temporary migration status, or where their refugee status is subject to cessation provisions.[127]

The goal of the resettlement process is integration, which involves reciprocal adaptation by newcomer and receiving State. From the State perspective, integration is often equated with 'self-sufficiency', which in turn denotes that the refugee is not a fiscal burden. A liberal model of economic self-reliance is baked into national resettlement schemes, whatever its role in initial selection: the refugee boards the plane as a passive

[123] For individual country reports on resettlement programmes, see UNHCR, 'Resettlement Handbook and Country Chapters' (April 2018) <https://www.unhcr.org/protection/resettlement/4a2ccf4c6/unhcr-resettlement-handbook-country-chapters.html?query=resettlement%20handbook> accessed 28 October 2019; see also Amanda Cellini, 'Annex: Current Refugee Resettlement Program Profiles' in Garnier, Jubilut, and Sandvik (n 4).

[124] For example, in Canada although resettlement is governed nationally, the province of Quebec is authorized to operate its own refugee resettlement programme.

recipient of global humanitarian benevolence, and disembarks as an incipient self-supporting market actor in a national order.

Although resettlement is primarily an enterprise led by the State, virtually all governments collaborate with sub-State entities and non-governmental organizations for delivery of settlement and integration programmes. In this sense, most arrangements are more like 'public–private partnerships',[128] as are community sponsorship programmes for resettlement. Although Canada pioneered this concept, many other countries have now introduced their own models of 'private' or 'community' resettlement.[129] One rationale for such schemes is that they enhance the integration prospects of the resettled refugees through the support and transfer of social capital from citizen-volunteers to newcomers.[130]

Some States have developed initiatives which seek to develop non-humanitarian pathways for migrants who also happen to be refugees. Talent Beyond Boundaries matches refugees possessing technical or professional skills with employers in destination countries in order to facilitate their admission as economic immigrants.[131] Latin America operates a model regional 'solidarity' resettlement scheme.[132] It proceeds from a historical framing of refugee protection as asylum,[133] but also incorporates labour mobility as a solution.[134] The Solidarity Resettlement Programme co-exists with Mercosur's Labour Mobility Programme; work permits rather than asylum are favoured.[135] These and other 'complementary pathways' offer the prospect of supplementing traditional modes of refugee resettlement, but their merits depend on the security, status, and settlement support that they provide. These pathways also pose a risk of eroding publicly supported refugee integration if they detract from the number of refugees resettled on the basis of non-economic criteria.

4. Conclusion

Resettlement portrays sovereignty in its most flattering light. States assert control over selection and admission of refugees, but exercise their sovereign power to advance humanitarian goals. While it is universally accepted that asylum is grounded in international law principles, resettlement's provenance is doubted, even though it shares *non-refoulement* as a substrate. In our view, the Refugee Convention endorses the inter-war practice of State-managed refugee resettlement and anticipates its continuance as an expression of *non-refoulement*. The history of resettlement shows its genesis in State power and supporting institutions. One might optimistically describe law's relationship to resettlement as inchoate but not absent. Soft law guides UNHCR and its partners. Individual States may enact enabling legislation, though there is little accountability through judicial review or otherwise. At present, asylum is a call to justice and law; resettlement is a response in the key of humanitarianism and discretion.

In principle, law could enhance resettlement's capacity to contribute meaningfully to a global regime of equitable responsibility-sharing and solidarity, and to promotion of relationships of dignity and respect between refugees and agents of power. The current prospects for realizing these goals seem dim. Meanwhile, the number of available resettlement places remains miniscule relative to both need and the burden on countries of first asylum. The disquieting deployment of resettlement to the detriment of asylum seekers further corrodes responsibility-sharing and solidarity. None of this detracts from the value and benefits of resettlement to resettled refugees and to receiving States, or resettlement's symbolic importance. And nothing precludes States from doing better.

CHAPTER 61

ONWARD MIGRATION

KATY LONG

1. Introduction

This chapter considers an important question about the relationship between displacement and migration: how does 'onward migration', or 'onward movement', fit into existing frameworks for refugee protection? This is examined not only in relation to those seeking asylum, but also in relation to the experiences of refugees during exile and the durable solutions that might bring displacement to an end. Should refugees and asylum seekers be able to choose their country of destination, even if arriving there involves crossing through other States that might be able to offer 'effective protection'? Do 'durable solutions' require refugees to stop moving, or can migration play a part in solving their displacement?

Interest in facilitating refugee mobility has always been in tension with political interests in stopping, or even reversing, refugee movements. Fridtjof Nansen, the first League of Nations High Commissioner for Refugees, pursued refugee repatriation as the 'ideal' solution, even as he recognized the limits of such a policy in practice. But he also developed the so-called Nansen Passport to facilitate onward migration as an alternative, since valid identity documents would permit travel to reunite with family or secure employment. Archival materials make it very clear that prior to the adoption of the Refugee Convention in 1951, refugees were essentially thought of as a special category of migrant whose needs could best be met through facilitated onward emigration.[1]

In some respects, this approach can still be seen in some regions today. Under the Economic Community of West African States (ECOWAS) Free Movement Protocols,

[1] Katy Long, 'Early Repatriation Policy: Russian Refugee Return 1922–1924' (2009) 22 JRS 133; Claudena M Skran, *Refugees in Inter-War Europe: The Emergence of a Regime* (OUP 1995); Katy Long, 'When Refugees Stopped Being Migrants: Movement, Labour and Humanitarian Protection' (2013) 1 Migration Studies 4.

for instance, West African citizens have the right to move, work, and reside across the region, which has provided a basis for some Sierra Leonean and Liberian refugees to pursue local integration.[2] Venezuelans may still enter the EU and travel freely through the Schengen Area without a visa,[3] despite the fact that they might be asylum seekers fleeing political persecution. This is in stark contrast to the stringent visa requirements imposed on other populations with high levels of displacement, such as Afghanistan and Iraq.[4]

Perceptions of refugees' onward movement are often influenced by domestic concerns about immigration. As a result, many States tend to view their 'refugee problem' as the act of (frequently unauthorized) border-crossing and the consequent disruption that the arrival of asylum seekers and refugees may bring in terms of local policy agendas. From this perspective, refugee movements *are* the problem because they threaten to undermine national control of immigration, and onward movement in search of better protection should be heavily circumscribed.

By contrast, advocates of refugee mobility point to the important role that migration can play in helping refugees to secure effective protection. They point to patterns of mobility that may predate conflict and crisis—such as Afghan seasonal migration to Pakistan—and explain how opportunities to migrate through other channels (as a worker or a student, for instance) may provide a helpful alternative to the asylum process.[5]

2. Definitions

Disputes about refugees' onward movement often start with debates about definitions. It is well-established that the lines between 'refugee', 'forced migrant', and 'migrant' are often blurry, and such overlap is crucial when considering refugees' onward movement.[6] Even when fleeing persecution and conflict, many refugees are able to exercise some agency in choosing exactly when and where to go, weighing up economic, social, and security factors. Equally, some who move for work, education, or family reunion—as 'migrants', rather than beneficiaries of international protection—may have had no choice but to leave their country of origin, yet remain outside the asylum system, either with some other immigration status or irregularly.[7]

In this chapter, 'forced migrant' is used as a broad term to encompass all those who move *because they have to*, whether fleeing persecution, conflict, or poverty, and whether moving in search of protection, as a 'legal' migrant, or irregularly. The term 'asylum seeker' is used to describe those who move across borders in order to seek international protection but whose claim has not yet been assessed. The term 'refugee' is used to describe forced migrants whose asylum claims have been recognized and who have been granted refugee status. As this chapter makes clear, the legal and political framework governing onward migration varies significantly depending on whether an individual is a refugee, an asylum seeker, or a forced migrant outside the asylum system.

This is in part because the term 'onward migration' is itself problematic and heavily politicized. Labelling any movement after initial flight as 'onward migration' or 'secondary movement' often reflects less the reality of a refugee's journey—which may involve crossing through multiple States, in multiple stages, in order to find effective protection—than the political interests of States anxious to control and limit disorderly movement. Sometimes, a long journey may have been intended from the outset—as, for instance, with Congolese who cross to Brazil to travel northwards and claim asylum in the United States. At other times, the journey may not have been planned but may have resulted from inadequate or deteriorating conditions in the first asylum country. For this reason, blanket use of terms like 'transit country' can be an oversimplification, either overlooking the fact that even a stay of several years in one country (eg Brazil for Congolese travelling north to the US) may always have been intended to be temporary, or failing to reflect that protection gaps may leave refugees unable to find effective protection at their first destination, forcing them to continue on.[8]

[6] Amongst the seminal works on this topic are Andrew Shacknove, 'Who is a Refugee?' (1985) 95 Ethics 274; Roger Zetter, 'More Labels, Fewer Refugees: Remaking the Refugee Label in an Era of Globalization' (2007) 20 JRS 172. See also Chapter 7 in this volume.

[7] See eg Nicholas Van Hear, Oliver Bakewell, and Katy Long, 'Push–Pull Plus: Reconsidering the Drivers of Migration' (2018) 44 Journal of Ethnic and Migration Studies 927.

[8] Katy Long, 'The Last Cola in the Desert', *The Documentary* (*BBC World Service*, 3 September 2019) <https://www.bbc.co.uk/programmes/w3csz5f0> accessed 2 December 2019.

Nevertheless, it can be helpful to think about the term 'onward movement'—often used interchangeably with 'secondary migration'—at three different stages of a refugees' journey. First, it is often used to refer to refugees, asylum seekers, and other forced migrants who, after crossing one international border, do not remain in that country but instead move on to a preferred final destination. Examples might include Libyans or Syrians trying to reach Germany or Sweden via Italy and Turkey during the so-called Mediterranean 'crisis' in 2015–16, or Guatemalans and Salvadorans seeking refuge in the US having travelled through Mexico. This type of onward migration is often irregular, with people travelling without visas or other papers and seeking to evade authorities, and it can lead to dangerous outcomes. Rarely, governments may issue temporary transit papers to facilitate this type of movement.[9]

Secondly, the term 'onward migration' can be used to describe the further movement of those already in exile. Often this refers to internal movement, such as refugees moving from a camp like Dadaab in Kenya to Nairobi in search of work or better services, or from a resettlement hub in the US (like Dallas) to a town like Cactus in Texas, with a meatpacking plant and readily available jobs. Such migration may be clandestine and irregular, or legally authorized, or may be permitted but accompanied by the loss of benefits and services associated with an assigned location.[10]

Thirdly, 'onward migration' has increasingly become associated with new thinking on approaches to solving displacement—in other words, with durable solutions. States' concerns about the uncontrolled movement of people, particularly the kind of disorganized or clandestine movements that can characterize flight from persecution, help to explain why 'solving' displacement has usually been presented as a question of stopping—or even reversing—migration.

The three traditional durable solutions for refugees—repatriation, local integration in a first country of asylum, and resettlement in a third country—typically have been framed as the end of movement.[11] However, over the past decade, a number of researchers have argued that this framing is problematic, both empirically and theoretically.[12] There has also been growing interest in so-called 'complementary' pathways for refugees,

[9] For a discussion on some of the main drivers of onward or transit migration and difficulties in defining and framing this movement, see eg UN Human Rights Council, 'Situation of Migrants in Transit', UN doc A/HRC/31/35 (27 January 2016) paras 4–10. such as private refugee sponsorship, temporary labour mobility, and student visas.[13] These are referenced in the 2018 Global Compact on Refugees, which commits to 'increasing significantly their availability and predictability'.[14] The search for new and alternative migration pathways for refugees in part reflects the increasing body of scholarly work showing that the movement of people across borders is often not linear but instead circular, seasonal, and temporary, and that such continual and ongoing migration can contribute to broader development and peace-building goals in settings of mass displacement (such as in Haiti following the 2010 earthquake).[15]

This chapter therefore considers the legal and political framing of onward migration at different junctures. The first section considers the rights of asylum seekers and refugees to engage in onward migration as part of a search for effective, durable protection. The chapter then explores potential challenges—both legal and political—for refugees who migrate through complementary pathways as a 'fourth durable solution' to displacement. The final section draws some broad conclusions about the place of onward migration in addressing displacement, and the broader tension that this specific debate reflects in a world of unequal bordered States and restricted human mobility.

3. Seeking Asylum and Onward Migration

The ability to cross an international border is central to the activation of the international refugee regime. By definition, a refugee is someone who is *outside* the country of his or her nationality or former habitual residence.[16] A person normally becomes a refugee by leaving their country,[17] and being outside it is a prerequisite for accessing other refugee rights. Article 13(2) of the UDHR provides that '[e]veryone has the right to leave any country, including his own', which is reinforced by article 12 of the ICCPR.

Not all States are equal when it comes to refugee protection. First, there are significant differences in terms of how asylum cases are determined.[18] Refugee recognition rates

[16] Refugee Convention, art 1A(2).

[17] There are, of course, exceptions to this. For instance, a refugee *sur place* may claim asylum many years after having migrated to a third country for reasons of work or education. In some cases—such as that of Palestinian refugees—third, fourth, and even fifth generation refugees have inherited their refugee status from great-great grandparents, and have never engaged in any kind of migration at all.

[18] See Chapter 32 in this volume.

for similar caseloads can vary wildly from one State to another. In 2017, for instance, 85 per cent of Afghan asylum seekers were recognized by France as refugees, compared to 36 per cent by the United Kingdom and just 1½ per cent by Bulgaria.[19]

Secondly, the rights and opportunities afforded to asylum seekers and refugees once they are registered can also vary considerably between States. For instance, in Uganda, refugees are allowed to move freely and to work, while in Kenya they are required to live in camps and are not permitted to work.[20] Additionally, asylum seekers may have preferences about where they would like to claim refugee status based upon factors other than protection alone, such as family and diaspora connections, the size of the labour market, language skills, the availability of social protection programmes and safety nets, and the relative openness of the country of destination.[21] For these reasons, considerable numbers of asylum seekers engage in onward movement, often following well-established routes (such as the route from South and Central America north towards the United States and Canada).

Do asylum seekers have a right to migrate from the first country they arrive in when looking for protection? Article 31 of the Refugee Convention underlines that 'illegal' entry is no barrier to a refugee making an asylum claim, nor a justification for imposing penalties on that person, if he or she comes '*directly* from a territory where their life of freedom was threatened'. The issue of what constitutes 'coming directly' is key. Experts have generally considered that the term 'should be understood not only in its literal (temporal or geographical) sense, as refugees are not required to have travelled without pause or transit and without crossing other countries from their country of origin'.[22] In other words, if a refugee's intention has always been to claim asylum in country A, but he

or she crossed into country B and was later delayed in country C due to lack of funds, the asylum claim is not necessarily invalid.

However, it is equally clear that there are limits to such an approach. It is generally understood that article 31 'does not however cover situations where a refugee has found asylum, or where there [sic] may have had a reasonable opportunity to seek and enjoy protection in a previous country en route, or if he or she had settled in another country'.[23] The difficulty lies in determining whether the details of each specific case constitute 'reasonable opportunity' or 'settlement'. Transiting through country B within a 24-hour period is very different from working in country C for several years, but experts have also argued that 'no strict time limit for the passage through or stop in another country can be applied to the concept of "coming directly" '. The result is a careful balancing of the rights of asylum seekers and States, such that 'there is no obligation under international law for a person to seek international protection at the first effective opportunity . . . [but] there is equally no unfettered right for a person to choose that country'.[24]

States have generally agreed—at least in theory—that refugees do have a right to expect and enjoy 'effective' protection in a 'safe third country',[25] meaning that if the first country they arrive in cannot meet their protection needs, they are justified in continuing their journey to one that can. UNHCR Executive Committee Conclusion No 58 deals with refugees who have moved in an irregular manner from a country of first asylum (where they have found protection), and notes that they can only be returned to that country if they will then be 'permitted to remain [in the third country], and . . . treated in accordance with recognized basic human rights standards until a durable solution is found for them'.[26] However, the meaning of 'effective protection' is vague, and as one commentator noted in 2005, 'these days, everybody seems to talk about "effective protection", but without ever defining its precise meaning'.[27]

Just as with voluntary repatriation in safety and dignity,[28] the methods used to determine 'effective protection' have often resulted in elastic standard-setting. Politicians

[23] UNHCR 2015 (n 22) para 22; see also Summary Conclusions (n 22) para 10(c).

[24] UNHCR 2015 (n 22) paras 21, 17.

[25] See Chapter 28 in this volume.

[26] UNHCR Executive Committee Conclusion No 58 (XL), 'The Problem of Refugees and Asylum-Seekers Who Move in an Irregular Manner from a Country in Which They Had Already Found Protection' (1989) para f(ii).

[27] Catherine Phuong, 'The Concept of "Effective Protection" in the context of Irregular Secondary Movements and Protection in Regions of Origin' (Global Migration Perspectives No 26, Global Commission on International Migration 2005) 2 <https://www.refworld.org/docid/42ce51df4.html> accessed 5 September 2019.

[28] The phrase 'voluntary repatriation in safety and dignity' does not appear in the Convention but reflects evolving approaches to refugee return. The insistence on voluntary return predates the Convention (see 'Question of Refugees', UNGA res 8(I) (12 February 1946) para c(ii)), and the phrase 'in safety and dignity' has been used by UNHCR since 1992 (see eg UNHCR, 'Discussion Note on Protection Aspects of Voluntary Repatriation', EC/1992/SCP/CRP.3 (1 April 1992) <http://www.refworld.org/docid/3ae68cd314.html> accessed 13 March 2020). For a discussion of how these standards have often proven to be elastic in practice, see Katy Long, 'Back to Where You Once Belonged: A Historical Review of UNHCR Policy and Practice on Refugee Repatriation', UNHCR Policy Development and Evaluation Service, PDES/2013/14 (2013).

anxious to prevent asylum seekers from moving onwards often claim that they have left 'safe' countries.[29] For instance, in 2019, US President Donald Trump and Guatemalan President Jimmy Morales sought to designate Guatemala as a 'safe third country' for asylum seekers heading north towards the US.[30] This drew fierce criticism and was immediately subject to legal challenges on the basis that Guatemala—a country beset by violence and corruption—does not have the capacity to operate a 'full and fair' asylum system.[31] Similar criticisms have dogged the 2016 'safe third country' arrangement between the EU and Turkey, given serious concerns about Turkey's capacity to provide protection.[32] The language of the EU–Turkey statement, promising the readmission of all who 'illegally and directly entered the territory of the Member States after having stayed on, or transited through, the territory of Turkey', underlines the preoccupation of the EU Member States with effectively ending the independent movement of asylum seekers and refugees.[33]

Nevertheless, the view remains prevalent that asylum seekers should seek protection in the first 'safe' country they reach and secure 'effective' protection there, and that all onward movement is a problem to be discouraged. This is particularly obvious when intra-EU mechanisms for responsibility-sharing and establishing common asylum standards are examined.

4. Dublin III and Onward Migration

The so-called Dublin Regulation (Dublin III) is a cornerstone of the Common European Asylum System (CEAS), establishing Member States' responsibilities vis-à-vis asylum seekers who arrive in the EU.[34] The various instruments adopted as part of the CEAS are intended to set out common standards for processing and receiving asylum seekers

[32] Agreement between the European Union and the Republic of Turkey on the Readmission of Persons Residing without Authorization OJ L134, (7 May 2014) 3–27 (EU and Turkey Agreement); for a summary of key points see Council of the European Union, 'EU–Turkey Statement' (18 March 2016) <https://www.refworld.org/docid/5857b3444.html> accessed 15 November 2019. It should be noted that in exchange for Turkish readmission of asylum seekers, the EU agreed to admit an equal number of *recognized* Syrian refugees from Turkey, as well as providing €3 billion in development aid.

[33] EU and Turkey Agreement (n 32) 3–27, art 4(1)(c).

[34] Council Regulation (EU) No 604/2013 of 26 June 2013 Establishing the Criteria and Mechanisms for Determining the Member State Responsible for Examining an Application for International Protection Lodged in One of the Member States by a Third-Country National or a Stateless Person (recast) [2013] OJ L180/31 (Dublin III); see Chapter 19 in this volume.

within the EU, and Dublin III is intended to allocate responsibility for doing so. It is based on the presumption that 'Member States, all respecting the principle of *non-refoulement*, are considered as safe countries for third-country nationals'.[35] Working in combination with the EURODAC Regulation, which established a Europe-wide fingerprinting database for unauthorized EU entrants, Dublin III sets out 'the criteria and mechanisms for determining the Member State responsible for examining an application for international protection'.[36] The main criterion relates to the presence of family members in other Member States;[37] others include the person having a valid residence document for a particular Member State,[38] or being the first EU Member State whose territory the asylum seeker entered irregularly.[39] The practical impact is to tie asylum seekers to one Member State, and to prevent (or drive underground) onward migration, which may be characterized as 'absconding' from the asylum process and thus as grounds for detention.[40]

Both the European Council on Refugees and Exiles and UNHCR have stated on numerous occasions that the Dublin system fails to provide fair, efficient, or effective protection.[41] Indeed, critics argue that its responsibility allocation mechanism was a contributing factor in the humanitarian crisis in Greece in 2015, when the country's fragile asylum system was overwhelmed by large numbers of Syrians and other forced migrants, resulting in hundreds of thousands of people being held in overcrowded, violent, and insanitary camps.[42] Commentators have also suggested that 'the Syrian refugee crisis turned into what was perceived as a European refugee crisis *due* to the European policy of prohibiting refugees from travelling legally to the EU'.[43]

EU Member States were extremely reluctant to commit to more meaningful responsibility-sharing arrangements, however. Hungary's anti-migration government, for instance, refused to receive back asylum applicants who had crossed into other EU

Member States.[44] Germany responded by invoking the 'sovereignty clause' of Dublin III and agreeing to process Syrian asylum applications already lodged in other Member States.[45] While it is difficult to measure the precise effect of this offer on the movement of asylum seekers towards Germany, it is clear that opponents of German Chancellor Angela Merkel's decision saw it as critical—an interpretation that helped to trigger a domestic political backlash and provided other EU Member States, such as the Czech Republic, with a justification for effectively abandoning Dublin III altogether, arguing that the rules had proven 'ineffective'.[46] A plan to distribute protection obligations more equitably across the EU by relocating 160,000 refugees from Greece and Italy also failed. Only 34,705 people had moved by the time the initiative ended in 2017.[47] Denmark and the UK refused to participate in the scheme at all, while Hungary and Poland accepted no refugees, Austria accepted 45, Slovakia took 16, and the Czech Republic accepted only 12.[48]

This refusal to countenance even organized, orderly, onward movement of asylum seekers and refugees is indicative of the very limited interest of wealthy and powerful States (not directly adjacent to refugee-producing countries) to host large numbers of asylum seekers and refugees. One consequence of this is that, in political terms, the onward movement of asylum seekers has become an easy target for politicians running on anti-migration platforms, who point to smuggling, trafficking, and the disorderly movement of asylum seekers and other forced migrants as emblematic of a breakdown in order that can only be remedied by imposing more restrictive controls.

Increasingly xenophobic and nationalist politics across a number of EU Member States further undermines the likelihood of establishing new and better-functioning systems to share responsibility. However, since it is not in the interests of first asylum States, such as Italy and Greece, to prevent onward movement, many forced migrants are able to continue their journeys through Europe with relative ease, albeit clandestinely. Some have resorted to desperate measures to avoid being traced if they

move from one Member State to another, such as burning or scarring their fingers so that they cannot be tracked through the EURODAC system.[49]

5. Refugee Rights and Onward Migration

Once a refugee's claim to international protection has been recognized, a number of provisions in the Refugee Convention support their right to freedom of movement. First, pursuant to article 26, they have the right to move within their country of asylum. Secondly, they have the right to request travel documents from that State 'for the purpose of travel outside their territory'.[50] These provisions reflect the fact that even after refugees have been granted international protection, they may have valid reasons to move. For instance, in Uganda, refugees may often 'commute' between rural refugee settlements (where some members of the family may remain, collecting rations and tending to crops) and urban areas like Kampala to seek work, attend school, or obtain healthcare. In the US, the secondary movement of refugees has long been recognized, with many refugee communities establishing themselves in States like Nebraska and Kansas around meatpacking plants.[51]

However, States frequently seek to restrict refugees' movement. Security concerns have been used by States to justify refugee encampment (in a proscribed and usually segregated area), particularly in places where terrorists or insurgents have close links to a refugee population. Examples include Kenyan treatment of Somali refugees, and Kurdish authorities' detention and screening of Arab refugees from Islamic State-controlled areas in 2015. In other cases, concerns may be political or socio-economic: Germany, for instance, does not use physical barriers but may still limit refugees' legal rights of residence to specific areas, or prevent refugees from moving into municipalities with structural economic difficulties or a comparatively high number of migrants and refugees.[52]

[49] See eg Harriet Grant and John Domokos, 'Dublin Regulation Leaves Asylum Seekers with Their Fingers Burnt', *The Guardian* (7 October 2011) <https://www.theguardian.com/world/2011/oct/07/dublin-regulation-european-asylum-seekers> accessed 13 March 2020.

[50] Refugee Convention, art 28. Under ICCPR, art 12(2), every person has the right to leave any country.

Circumscribing refugees' freedom of movement (almost always alongside the limiting of other social and economic rights, such as access to the labour market) can become a driver of what is more classically understood as onward movement: refugees who are unable to move between a camp and a city (or to look for work legally) decide to migrate more permanently, whether internally or across an international border. In so doing, they often move irregularly, without work authorization or the identity documents to legally cross an international border.

In theory, article 28 of the Refugee Convention should assist with this last requirement by providing access to travel documents needed for international travel, thus facilitating the legal onward movement of recognized refugees who wish to migrate to a third country.[53] For instance, a recognized Afghan refugee living in Italy should be able to apply for and use a Convention Travel Document (CTD) to migrate to Canada as a student or under a labour migration programme (provided he or she meets other conditions). However, as with passports, the costs of acquiring a CTD may prove prohibitive in practice, particularly for refugees with limited funds. Even when a refugee is able to afford a CTD, many States are extremely slow to process applications, and officials may simply refuse to do so or demand an additional (corrupt) payment. Even when a refugee can obtain a CTD, the document can be difficult to travel with compared to a passport. Many officials are unfamiliar with them and reluctant to admit those using them.[54]

The International Civil Aviation Organization's requirement that all travel documents be machine readable, alongside an increasing focus on the biometric identification capacity of passports, have further limited the capacity of some States to issue CTDs accepted for international travel. Evidence suggests that over 40 per cent of refugees have no access to any kind of travel document. This means that they have no legal means of moving across an international border for reasons other than seeking international protection.[55]

As a result, refugees often apply for visas using their own national passports or irregularly obtained passports from their country of first asylum in preference to CTDs.[56] But this strategy has risks—even in cases where refugees can apply for or still

[56] During field research in Kampala in 2012, for example, the author documented two cases of Somali refugees who were long-term residents of Uganda who had travelled to the UK and Canada to take advantage of educational scholarships using irregularly acquired Ugandan passports. See also UNHCR and International Labor Organization, 'Labour Mobility for Refugees: Workshop in Geneva, 11–12 September 2012: Summary Conclusions' (25 October 2012) <https://www.refworld.org/docid/508e4fa72.html> accessed 5 September 2019.

hold a passport from their home country. The use of a passport by a refugee to travel across an international border has in the past been taken as evidence that an individual has voluntarily re-availed him- or herself of the protection of the country of origin and is therefore no longer in need of refugee status.[57]

6. Using Migration as an Alternative Solution

In the past decade, a growing body of research has stressed the importance of refugee mobility as a fourth durable solution to displacement.[58] This has stemmed from work on refugees' right to freedom of movement within existing global frameworks, and concerns about the large number of refugees trapped in protracted displacement for decades, with little prospect of being able to repatriate, integrate locally, or resettle elsewhere.

Empirically, evidence shows that refugee movement does not necessarily end with repatriation, local integration, or resettlement.[59] In some cases, continued movement arguably reflects the failure of a 'solution'—such as the large-scale secondary displacement of Afghan returnees back to Pakistan and Iran and/or to other regions of Afghanistan due to economic fragility and insecurity. However, in other cases, such onward migration can represent a positive and pragmatic choice that does amount to a real solution, such as recognized refugees in the EU moving within that region to Member States with more robust labour markets, larger diaspora communities, or where they speak the language.[60]

In addition, a number of researchers have noted that while all three traditional durable solutions envisage permanent settlement, this similarity is superficial. They argue that the fundamental common core of the three durable solutions is, in fact, the restoration of meaningful citizenship, either by the refugee becoming a member of a new community (through local integration or resettlement) or through the reconstitution of a political community that is able and willing to protect the (former) refugee in the country of origin, with this social contract restored through the act of physical

return. Physical migration is only a symptom of political alienation; in itself, it is neither the cause nor the cure for displacement.[61]

As a result, there has been a surge of interest in the use of mobility—onward migration—as a 'fourth solution' to displacement. The failure of the international community to respond to the resettlement needs of large numbers of Syrian refugees (in particular) in 2015–16 influenced calls for more 'complementary pathways' for refugees, with the 2016 New York Declaration for Refugees and Migrants stating the intention to 'expand the number and range of legal pathways available for refugees to be admitted to or resettled in third countries' and considering the potential 'opportunities for labour mobility for refugees, including through private sector partnerships, and for education, such as scholarships'.[62]

Two years later, the Global Compact on Refugees reiterated that 'pathways for the admission of persons with international protection needs can facilitate access to protection and/or solutions', defining such pathways to include 'humanitarian visas, humanitarian corridors and other humanitarian admission programmes; educational opportunities for refugees (including women and girls) through grant of scholarships and student visas, including through partnerships between governments and academic institutions; and labour mobility opportunities for refugees, including through the identification of refugees with skills that are needed in third countries'.[63] A number of programmes that fall within this framework are being piloted or are already operational, including the Global Refugee Sponsorship Initiative to expand private and community sponsorship of refugees in need of resettlement, scholarships for refugee education (such as those operated by the Windle Trust), and skills-matching for labour migration (such as the initiative as operated by Talent Beyond Boundaries).[64]

Other initiatives predate the 2015 'crisis'. In 2012, Brazil began granting humanitarian visas to Haitians affected by the 2010 Haitian earthquake, and in 2013 the programme was extended to cover Syrian refugees. These humanitarian visas allowed those in search of protection (with a valid passport and the ability to pay passage to Brazil) to travel legally to Brazil where they could then apply for asylum. Over 8,500 humanitarian visas were issued in the three years to 2016, including over 2000 to Syrian refugees.[65] This model for facilitating the legal movement of asylum seekers to third countries was widely praised by refugee advocates, but critics pointed to the fact that, upon arrival, visa holders still needed to apply for asylum in order to be afforded international

protection (or otherwise seek some other form of legal status).[66] However, since Brazil's humanitarian visas were established by Executive order, their future remains uncertain in light of the election of President Bolsonaro in 2018 on an anti-migrant platform. Even so, in October 2019, Brazil announced a simplified process through which Syrians can continue to apply for humanitarian visas.[67]

Despite States' rhetorical commitment to improving refugees' access to migration opportunities, in practice onward migration is still viewed as a problem rather than a tool. Borders often become more securitized and less permeable after conflict (for example, in Afghanistan and the Horn of Africa), even though transnational, seasonal labour migration networks long pre-dated the conflict (and displacement). Attempts in 2003–05 to incorporate a 'migration and development' strategy into planning for Afghan refugee repatriation, envisaging the continued presence of Afghan workers in Iran and Pakistan so as to secure sustainable return of the majority of the refugees (by providing access to labour markets and income unavailable in post-conflict Afghanistan), met with limited success.[68]

Additionally, increased interest in complementary pathways for refugee migration must be balanced against the sharp decline in global resettlement numbers since 2017.[69] This has primarily been driven by drastic shifts in US policy. In November 2016, President Obama set the refugee ceiling for 2017 at 110,000; seven days after taking office in January 2017, President Trump cut this number to 50,000. In October 2019, the US resettlement cap was set at an historic low of 18,000 places.[70]

The concept of migration as a solution to displacement has, in fact, a long history. In the 1920s, the International Labor Organization (ILO) was tasked with operational responsibilities for settling refugees, and embarked upon a process of matching refugees' skills against job shortages, especially in South America.[71] As the contemporary

[71] See Long 2013 (n 1) 7.

refugee regime was established in the 1950s, the Provisional Intergovernmental Committee for the Movement of Migrants from Europe (PICMME) was established and was initially viewed as the organization most likely to 'resolve' Europe's displaced persons crisis by dealing not only with the transportation of refugees, but also of migrants, from overpopulated and underdeveloped areas of Europe to the Americas and Australasia. By 1989, PICMME had become the International Organization for Migration.[72]

However, several of the obstacles that limited the success of these earlier schemes to settle refugees as labour migrants in the 1920s and 1950s remain today. First, the success of any plan to organize refugee migration through labour migration channels is dependent upon the economic and political climate. The ILO's efforts in the 1920s, for example, ended with the Great Depression. Post-2015, the strength of anti-migrant political parties in Europe, Australia, and North America has limited attempts to develop wide-scale refugee-as-worker initiatives. Secondly, relatively few refugees are highly skilled workers in shortage occupations with the requisite language skills to qualify to move as an *immigrant* under existing immigration laws in most States.[73] To enable such movement, States would either have to make exceptions on humanitarian grounds, or accept that this type of migration is likely to benefit only relatively few refugees. Thirdly, there are serious concerns that labour markets that do have a significant demand for relatively low-entry migrant labour (such as Qatar and the United Arab Emirates) have often failed to meet basic standards relating to working conditions, pay, and even basic health and safety standards. This makes it ethically very difficult for the international community to promote such migration pathways as alternatives to the three traditional durable solutions.

The idea of using migration pathways as a means of 'solving' refugee 'crises' also raises a serious question regarding refugees' right to be protected against *refoulement*. Immigrants are usually admitted to a country on a conditional basis and only qualify for permanent residency, naturalization, and some degree of protection against deportation after some years of living in a host country. If they breach their visa conditions—which may tie them to a specific employer/sponsor—migrants can be swiftly removed to their country of origin.

However, refugees must not be sent to any country where they have a well-founded fear of being persecuted.[74] While some States—most notably Canada and Australia—do allow for labour migrants or family members of those already in the country to apply for

entry as permanent residents, policy in a number of other similar States (such as the US and the UK) are moving in the opposite direction, towards more temporary and precarious labour migration and family reunification.

7. Conclusion: Structural Asymmetry of Borders in a Mobile World

The complexities of how onward movement fits into the realities of refugee protection today reflect the fundamental asymmetries of a system of global governance in which the right of individuals to move across international borders is highly regulated. The right to leave one's country is recognized as a universal human right, but the right to enter any other country is not. While refugee and human rights law precludes States from sending people who fear persecution or other serious harm to places where they are at risk, accessing such protection remains challenging.

Since a refugee's right to seek asylum is a carve-out from States' otherwise unfettered discretion in immigration matters, some States have repeatedly sought to limit its scope of application. Attempts by States to circumscribe the onward migration of asylum seekers and refugees is highly problematic because, rather than reducing the demand or need for such onward migration, the movements themselves are criminalized, creating new markets for smugglers and traffickers, and for irregular migration and employment.[75]

In recent years, researchers and policymakers have tried to develop new approaches that take the fact of human mobility as a starting point—whether the person on the move is in search of protection or opportunity, asylum or employment, education or family reunion. This is reflected in international agreements as well, including the 2018 Global Compact on Refugees. However, in practice, there is currently almost no political will to use migration as a solution to displacement, except for a very small number of highly skilled refugees.

In conclusion, this chapter returns to the question posed at the beginning: how does onward migration fit into existing frameworks for refugee protection? One answer is that the capacity to move lies at the core of how refugee protection is imagined: the ability to seek asylum rests upon the ability to move across borders. In a world in which all States offered protection to refugees, there would be little need for refugees to engage in onward movement beyond the first border crossed—and little reason for States to fear it. Yet, the manifest inequalities within the global regime—not only concerning States' approaches to asylum, but also more generally with respect to wealth and economic opportunity (often deeply rooted in history and geography)—mean that refugees and

[75] See Chapter 7 in this volume.

asylum seekers will continue to engage in onward mobility. Without a change in approach, States will continue to fear such movement and attempt to heavily circumscribe or even outlaw it.

This means the challenge for the international refugee protection regime is to try to restore a delicate balance between the existing system of bordered States, around which international order and global governance is organized, and the reality of human mobility in an increasingly interconnected, but ever more unequal, world.

PART VIII

ACCOUNTABILITY FOR DISPLACEMENT AND REFUGEE RIGHTS VIOLATIONS

CHAPTER 62

RESTITUTION AND OTHER REMEDIES FOR REFUGEES AND INTERNALLY DISPLACED PERSONS

MEGAN BRADLEY

1. Introduction

Most refugees and internally displaced persons (IDPs) never receive any formal redress for the wrongs they have suffered. Yet over the past 30 years, significant progress has been made in advancing international norms on remedies for refugees and IDPs, and experiences in countries from Bosnia and Kosovo to Rwanda and Iraq have strengthened understanding of the challenges involved in translating these principles into practice. Efforts have focused predominantly on the restitution of housing, land, and property (HLP), with the assumption that this is the most pertinent remedy for forced migrants, particularly because it may help enable return as the 'preferred' solution to displacement.[1]

This chapter assesses these developments and the state of research on this pivotal challenge. It reviews the approaches taken in major peace treaties, court decisions, and

[1] See eg Anneke Smit, *The Property Rights of Refugees and Internally Displaced Persons: Beyond Restitution* (Routledge 2012); Guilia Paglione, 'Individual Property Restitution: From Deng to Pinheiro—and the Challenges Ahead' (2008) 20 IJRL 391; Megan Bradley, *Refugee Repatriation: Justice, Responsibility and Redress* (CUP 2013). On the purported preferability of return, see Megan Bradley, 'Is Return the Preferred Solution to Refugee Crises?' in David Miller and Christine Straehle (eds), *The Political Philosophy of Refuge* (CUP 2019).

standards such as the 1998 Guiding Principles on Internal Displacement,[2] the 2005 UN Principles on Housing and Property Restitution for Refugees and Displaced Persons (the Pinheiro Principles),[3] the 2009 African Union Convention for the Protection and Assistance of Internally Displaced Persons in Africa (the Kampala Convention),[4] and the 2010 Inter-Agency Standing Committee (IASC) Framework on Durable Solutions for Internally Displaced Persons.[5] It then reflects on five intertwined challenges: (i) developing appropriate data collection techniques and evidentiary standards; (ii) balancing the rights of 'secondary occupants' and people in protracted displacement; (iii) mitigating risks associated with HLP restitution; (iv) developing a better understanding of how gender, race, class, and other intersecting power relations influence redress; and (v) moving beyond a narrow focus on property restitution to consider the wider range of losses associated with displacement.

The laws and standards examined here should inform policy and practice at local, national, and international levels, and may bolster refugee and IDP protection. But they are also fraught with tensions, and efforts to implement them come up against thorny political questions. For example, should homes and lands be restored to the displaced if this would exacerbate inequality and instability, or lead to further displacement? How should efforts to redress displaced persons' HLP claims relate to broader post-conflict land reform processes? What are the implications of efforts to redress displacement for peacebuilding? While largely outside the scope of this chapter, assessments of international standards on redress for refugees and IDPs must be cognizant of such questions.

A word on this chapter's approach: Before, during and after displacement, refugees and IDPs often experience rights violations requiring remedy, such as torture, rape, and other forms of violence. Being displaced can increase vulnerability to rights violations and hinder opportunities to participate in and benefit from redress processes. However, this chapter focuses primarily on redress for displacement *per se*, and for violations such as *refoulement* and the loss of homes and lands. Historically, restitution—the restoration of the *status quo ante*—has been seen as the most appropriate remedy in cases involving breaches of international legal obligations. However, this chapter follows the 2005 UN Basic Principles and Guidelines on the Right to a Remedy and Reparation for Victims of Gross Violations of International Human Rights Law and Serious Violations of International Humanitarian Law (UN Reparations Principles) in questioning the preference conventionally accorded to restitution. As the UN Reparations Principles indicate, the most appropriate remedy (or remedies) depends on context, with possibilities

including not only restitution, but also approaches such as compensation, apologies, trials and/or truth-telling. Some of these processes are closely associated with transitional justice.[6] While this discussion is not framed in terms of transitional justice, it acknowledges that efforts to redress forced migrants' losses, including through HLP restitution, may indeed be a critical dimension of transitional justice.[7]

2. The Rise of Restitution as the Primary Remedy for Displacement: Context and Dynamics

As survivors of human rights violations, refugees and IDPs are entitled to reparation—whether through restitution, compensation, or other mechanisms—under general principles of international human rights law, and may also claim reparations under mechanisms provided for in international criminal law, such as through Reparations Orders issued by the International Criminal Court.[8] Rulings such as that issued in 2013 by the Inter-American Court of Human Rights in the case of Leopoldo García Lucero confirm the right to reparation even when survivors have been exiled and are unable or unwilling to return.[9] Beyond the remedial rights of displaced individuals, standards such as the International Law Commission Articles on State Responsibility address reparation for internationally wrongful acts between States and could in theory be used, for example, by host States that have suffered harms linked to large influxes of refugees to seek remedies from the State(s) responsible.

Despite the broad legal foundations underpinning displaced persons' right to a wide range of reparations for the diverse losses they suffer, in practice attention has focused predominantly on the loss of HLP, and restitution as the primary remedy for these losses. This reflects the fact that HLP disputes are a defining feature of many conflicts involving massive displacement, and a predictable feature of almost every return and peacebuilding process. In voluntary repatriation intention surveys, refugees typically

rank HLP as the third or fourth barrier to return, after safety, livelihoods, and access to services, suggesting that resolving HLP claims is a critical concern for many.[10] Addressing displacement-related land grievances is particularly urgent given increased pressure on HLP resources associated with urbanization and the effects of climate change, which render some areas unsafe or uninhabitable.

Since the 1990s, major restitution processes involving displaced persons have been implemented in countries including Bosnia, Croatia, Kosovo, Georgia, South Africa, Mozambique, Rwanda, Iraq, and Colombia, with literature analysing experiences in these cases.[11] Formal, internationally supported restitution processes are more often launched in middle-income countries, where claims pertain primarily to properties owned by displaced individuals under statutory systems. Typically, these processes focus on the restitution of real property, particularly residences, rather than rented homes, moveable property or other assets. The literature broadly underscores the importance of administrative rather than judicial approaches to resolving claims as regular courts are typically out of reach and unable to handle significant numbers of HLP cases, leading to protracted disputes and congestion. It has often been vital to have empowered international actors working closely with domestic authorities to ensure the enforcement of decisions in favour of displaced claimants.[12]

While these are important insights, there is a need for more research on addressing HLP losses in customary or hybrid tenure systems which predominate across much of the Global South, where the vast majority of refugees and IDPs remain.[13] In sub-Saharan Africa, for example, an estimated 90 per cent of rural populations access land through customary or informal tenure systems; similarly, approximately 90 per cent of new urban communities in sub-Saharan Africa are slums or irregular settlements in which land is held informally.[14] In such contexts, informal or customary mechanisms often play critical roles in resolving claims and mediating disputes. These mechanisms do not necessarily adhere to international standards; in some instances their departure from these principles may be integral to their perceived credibility. They also may be difficult

to access and navigate for refugees, IDPs, and returnees who have been absent for long periods, and disconnected from the norms and networks that shape these institutions' work.[15]

Whether formal or informal, restitution processes have had to grapple with challenges including competing claims, widespread damage and destruction of HLP, land grabbing, lack of documents and land records, or destruction of these materials, and coercive or 'bad faith' HLP transactions, sometimes followed by 'good faith' transactions.[16] Conflicts involving genocide or ethnic cleansing raise particularly severe hurdles, as the displacement of entire groups may be accompanied by deliberate efforts to prevent returns, such as through wholesale destruction of HLP and landmarks. In such instances, restitution and returns have been portrayed as essential to principled opposition to ethnic cleansing. From this perspective, remedies such as compensation may be rejected as 'blood money' that attempts to legitimize the dispossession of entire communities. And yet, given their experiences, some refugees and IDPs may prefer compensation over restitution and return, raising complex questions about how displaced persons' diverse perspectives and preferences should figure in the design and implementation of redress programmes. The development of international norms on redress for refugees and IDPs must be understood in relation to these dynamics.

3. Developing Norms on Redress for Refugees and IDPs: Focus on HLP Restitution

Opinions are divided on the state of the normative framework regarding HLP restitution for refugees and IDPs. Some suggest that existing international legal tools are 'robust', while others stress that minimum standards are difficult to precisely discern, as there is no explicit, binding provision in current international law on HLP restitution or other forms of redress for displaced persons.[17] Neither the Refugee Convention nor the OAU Convention directly address refugees' rights to remedies such as restitution. Rather, most general provisions on the subject are reflected in soft law. A wide

range of international resolutions and agreements, as well as national laws and policies, address restitution and other remedies for specific displaced groups, often emphasizing their link to enabling returns. By 2007, over 240 international, regional and national agreements, laws, and judicial decisions addressed HLP restitution for displaced persons; this number has kept growing, suggesting increased recognition of the general principle that refugees and IDPs have the right to have HLP assets restored, and the right to return to use them.[18] Reflecting this trend, the International Committee of the Red Cross (ICRC) has concluded that as a matter of customary International Humanitarian Law (IHL), '[d]isplaced persons have a right to voluntary return in safety and dignity to their homes or places of habitual residence as soon as the reasons for their displacement cease to exist', and that the 'property rights of displaced persons must be respected'.[19] The 'fact that violations of property rights may impede implementation of the right to return … further supports the customary nature of this rule'.[20]

a. UN Resolutions and Peace Agreements

The UN Secretary-General has called for negotiators to include 'the right to return and restitution of housing, land or property in all future peace agreements and all relevant [Security] Council resolutions'.[21] In addition, scores of UN General Assembly and Human Rights Council resolutions address the issue. Perhaps the earliest and certainly the most reaffirmed UN resolution related to refugees' remedial rights is UN General Assembly Resolution 194 (III) of 1948, which resolves that Palestinian

> refugees wishing to return to their homes and live at peace with their neighbours should be permitted to do so at the earliest practicable date, and that compensation should be paid for the property of those choosing not to return and for loss of or damage to property which, under principles of international law or in equity, should be made good by the Governments or authorities responsible.[22]

Resolution 194 has of course never been implemented, but its provisions have been echoed in many subsequent General Assembly resolutions, helping to cement the connection between the right of return and the reclamation of lost homes.[23]

[23] Gail Boling, 'Palestinian Refugees and the Right of Return: An International Law Analysis' (Information and Discussion Brief No 8, BADIL 2001).

The 1992 General Peace Agreement for Mozambique stands out as one of the first major post-Second World War treaties to explicitly acknowledge and detail plans to realize displaced persons' rights to return and restitution, indicating that 'Mozambican refugees and displaced persons shall be guaranteed restitution of property owned by them which is still in existence and the right to take legal action to secure the return of such property from individuals in possession of it'.[24] However, the 1995 General Framework Agreement for Peace in Bosnia and Herzegovina (Dayton Agreement) was a turning point in the promotion of restitution rights for refugees and IDPs, and by extension the right of return—understood as the right not only to re-enter one's country, but to reclaim and resume living in former residences. The Dayton Agreement surpassed previous treaties in its level of detail and international support for its implementation in an attempt to challenge the ethnic cleansing of Bosnia by insisting on the twin rights of return and restitution.[25] Annex VII of the agreement indicates that, '[a]ll refugees and displaced persons have the right freely to return to their homes of origin. They shall have the right to have restored to them property of which they were deprived in the course of hostilities since 1991 . . . .'[26]

Through a pivotal Property Law Implementation Plan, the process eventually resolved more than 215,000 claims, 92 per cent of which were enforced in favour of displaced claimants.[27] The restitution process did not translate into high levels of 'minority returns'; many refugees and IDPs who would have been in the ethnic minority if they returned to their pre-war homes, instead sold their properties and re-established themselves elsewhere in the country. However, building on this precedent, virtually every post-1995 peace agreement recognizes displaced persons' rights to return, restitution, or other forms of redress.[28] Handbooks and preparatory tools for peace negotiators now emphasize that all agreements aiming to resolve conflicts characterized by massive forced migration should address the right of return and the resolution of displaced persons' HLP claims.[29] Most recently, agreements to end the conflict in Colombia involve extensive, ongoing efforts to restore IDPs' lost homes

and lands, alongside a range of other remedies for the displaced, including compensation and truth-telling.[30]

b. IDP Standards

The development of the normative framework on IDPs has played an important role in confirming, clarifying, and advancing displaced persons' rights to redress, including but not limited to HLP losses. While the Guiding Principles on Internal Displacement address remedies for IDPs only in terms of property losses, they buck the trend of focusing narrowly on return, also emphasizing the need to address the claims of resettled IDPs. Principle 29.2 states:

> Competent authorities have the duty and responsibility to assist returned and/or resettled internally displaced persons to recover, to the extent possible, their property and possessions which they left behind or were dispossessed of upon their displacement. When recovery of such property and possessions is not possible, competent authorities shall provide or assist these persons in obtaining appropriate compensation or another form of just reparation.[31]

The Guiding Principles thus reflect the view that restitution is generally the preferred approach to redressing displaced persons' property losses, but recognize the potential importance of other remedies. Significantly, Principle 29.2 addresses both real property and other possessions, although implementation efforts have focused primarily on HLP.

Comparing the 1995 Compilation and Analysis of Legal Norms informing the development of the Guiding Principles, and the revised 2008 Annotations to the Guiding Principles, underscores how rapidly norms on restitution developed in a relatively short period. The 1995 Compilation recognized that IDPs' return 'raises questions concerning the right to restitution for the property or compensation for its loss. There is a certain trend in general human rights instruments, along with the progressive development of international law, to answer these questions in the affirmative.'[32] However, the Compilation indicated that while regional bodies, such as the Inter-American Commission on Human Rights, had recommended remedies for IDPs' property losses,

[31] Guiding Principle 29.2.

[32] UN Commission on Human Rights, 'Internally Displaced Persons, Report of the Representative of the Secretary-General, Francis Deng, submitted pursuant to Commission on Human Rights Resolution 1995/57: Compilation and Analysis of Legal Norms', UN doc E/CN.4/1996/52/Add.2 (5 December 1995) para 275.

'the right to restitution of property lost as a consequence of displacement or compensation for its loss is not fully recognized'.[33] In comparison, the 2008 edition of the Annotations indicates that while 'there is [still] no general rule in present human rights law that explicitly affirms the right of internally displaced persons to return to their original places of residence . . . such a right can be deduced from the right to the liberty of movement and the right to choose one's residence'.[34] The revised Annotations identify many new standards relevant to restitution and return, and elaborate on the expanding grounds underpinning IDPs' right to restitution or other remedies for their HLP losses, linking this to protection of the rights to property, freedom from arbitrary interference with one's home, and adequate housing.[35]

Building on the Guiding Principles and developed under the leadership of the Representative of the UN Secretary-General on the Human Rights of IDPs, the IASC Framework on Durable Solutions for IDPs distils rights-based criteria and processes related to the resolution of internal displacement. The Framework specifies that durable solutions have been achieved when IDPs 'no longer have any specific assistance and protection needs that are linked to their displacement and such persons can enjoy their human rights without discrimination resulting from their displacement'.[36] The Framework maps out eight criteria that can be used to discern the extent to which durable solutions have been achieved, including two directly pertinent to redress: 'restoration of housing, land and property' and 'access to effective remedies and justice'.[37] According to the Framework, 'IDPs who have achieved a durable solution have access to effective mechanisms for timely restitution of their housing, land and property, regardless of whether they return or opt to integrate locally or settle elsewhere in the country'.[38] Whereas the Guiding Principles focus on restitution of 'property and possessions', the IASC Framework follows the Pinheiro Principles in addressing not only real property independently owned under statutory law, but also the loss of housing and land held under tenancy or lease agreements, or under informal, customary, or collective arrangements.[39] Importantly, the Framework goes beyond a narrow focus on HLP, clarifying that

> IDPs who have been victims of violations of international human rights or humanitarian law, including arbitrary displacement, must have full and non-discriminatory access to effective remedies and access to justice, including, where appropriate, access to existing transitional justice mechanisms, reparations and information on the causes of violations.[40]

[38] ibid 35. [39] ibid 35–8. [40] ibid 42.

The Kampala Convention also takes an expansive approach to remedies for IDPs. Strikingly, the Convention does not directly mention restitution or explicitly recognize IDPs' right to have lost homes or lands restored to them, although article 11 does provide that 'States Parties shall establish appropriate mechanisms providing for simplified procedures where necessary, for resolving disputes relating to the property of internally displaced persons', and that 'States Parties shall take all appropriate measures, whenever possible, to restore the lands of communities with special dependency and attachment to such lands upon the communities' return, reintegration, and reinsertion'.[41] Rather, in article 12 on 'Compensation', the Convention indicates that States parties 'shall provide persons affected by displacement with effective remedies' and 'shall establish an effective legal framework to provide just and fair compensation and other forms of reparations, where appropriate, to internally displaced persons for damage incurred as a result of displacement, in accordance with international standards'.[42] In this way, the Convention recognizes the wide range of harms for which IDPs may seek redress, including but not limited to HLP losses. By specifying that effective remedies should be provided to those 'affected by displacement', the Convention dramatically expands the range of parties who could potentially seek redress, such as members of return and host communities who have been burdened or harmed by displacement. However, there is little evidence that these provisions have been leveraged to secure meaningful remedies for people 'affected by displacement' in signatory States.[43]

c. The UN Principles on Housing and Property Restitution for Refugees and Displaced Persons (Pinheiro Principles)

The Pinheiro Principles are the most prominent international standard focused on redressing forced migrants' HLP losses.[44] Named for Paulo Sérgio Pinheiro, the former Special Rapporteur on Housing and Property Restitution for Refugees and Internally Displaced Persons, the Principles were presented as the first 'consolidated and universal approach' to refugee and IDPs' HLP claims, rooted in existing international legal standards.[45]

[41] Kampala Convention (n 4) art 11(4), 11(5).

[42] ibid art 12(1), 12(2). In art 12(3), the Convention also articulates a particular obligation for States parties to redress IDPs 'for damage when such a State Party refrains from protecting and assisting internally displaced persons in the event of natural disasters'.

[43] Mike Asplet and Megan Bradley, 'Strengthened Protection for Internally Displaced Persons in Africa: The Kampala Convention Comes into Force' (2012) 16(36) ASIL Insights 1.

[44] Relevant regional standards include the International Conference on the Great Lakes Region, 'Protocol on the Property Rights of Returning Persons' (30 November 2006) <https://www.refworld.org/docid/595c92644.html> accessed 20 February 2020.

[45] Scott Leckie, 'An Introduction to the "Pinheiro Principles"' in *The Pinheiro Principles: United Nations Principles on Housing and Property Restitution for Refugees and Displaced Persons* (Centre on Housing Rights and Evictions 2005) 4.

The Pinheiro Principles provide that '[a]ll refugees and displaced persons have the right to have restored to them any housing, land and/or property of which they were arbitrarily or unlawfully deprived, or to be compensated for any housing, land and/or property that is factually impossible to restore', and insists that States should 'demonstrably prioritize the right to restitution as the preferred remedy for displacement and as a key element of restorative justice'.[46] While the Principles recognize that the 'right to restitution exists as a distinct right, and is prejudiced neither by the actual return nor non-return of refugees and displaced persons', they reflect the view that restitution and return are two sides of the same coin, and that return is the preferred solution to displacement. Section IV is devoted to 'The Right to Voluntary Return in Safety and Dignity', and return is addressed extensively throughout the document, which is otherwise almost silent on how restitution may support other durable solutions. Introducing the Principles, Pinheiro argued that the

> best solution to the plight of millions of refugees and displaced persons around the world is to ensure they attain the right to return freely to their countries and to have restored to them housing and property of which they were deprived during the course of displacement, or to be compensated for any property that cannot be restored to them. It is the most desired, sustainable, and dignified solution to displacement.[47]

In adopting this position, the Principles accord with many treaties, resolutions, and national laws and policies that prioritize return and restitution, but diverge from standards such as the Guiding Principles and the IASC Framework which instead emphasize the value of informed choice and the equal legitimacy of return, local integration, and relocation as avenues to resolving displacement.

In 2007, a collection of UN agencies and non-governmental organisations published a Handbook on Implementing the Pinheiro Principles, which was complemented by the release in 2016 of a legal commentary on the Principles.[48] The Principles have become widely referenced, informing court decisions and laws such as Colombia's influential Victims' Law.[49] However, they have also been forcefully critiqued by scholars, advocates, and practitioners concerned that, *inter alia*, the Principles overstate the implications of existing international law related to restitution, inappropriately privilege return over other durable solutions, and minimize the complexity of addressing the rights of

[46] Pinheiro Principles (n 3) Principle 2(1)–(2).

secondary occupants, and that their rigid prioritization of restitution over other approaches may jeopardize fragile peace processes.[50]

4. Key Challenges

The international standards discussed above have been complemented by a raft of national laws and policies, some focused on particular displaced populations, or more broadly on responses to forced migration in the context of conflict, disasters, or development projects.[51] Despite these advances, major challenges remain for research, practice, and further normative developments.

a. Data Collection and Evidentiary Standards

Lack of clear documentation is a key challenge facing efforts to implement national and international standards on redress for refugees and IDPs, but important advances have been made in understanding how alternative evidentiary standards and tailored approaches to demonstrating ownership or occupancy may address this concern.[52] These techniques include gathering evidence on HLP claims during refugee and IDP registration processes and subsequent data collection efforts, community-based mapping and land registration efforts, forensic surveying, and recording customary practices that corroborate HLP claims, including testimony from owners, users, and community leaders.[53] Gathering evidence of claims and making these processes known even as conflict is ongoing may have a 'pre-emptive effect on some forms of dislocation', discouraging displacement and land grabbing by making clear that the ground has been laid for future restitution claims, and that it is therefore unlikely that occupied land can be legally retained.[54] However, deploying these techniques and advancing HLP restitution in the context of ongoing conflict may also present significant risks, particularly in the absence of effective institutions that can protect those who regain their homes and lands from coercive pressure to sell them at fire sale rates.

[50] See eg Smit (n 1); Megan Ballard, 'Post-Conflict Property Restitution: Flawed Legal and Theoretical Foundations' (2010) 28 Berkeley Journal of International Law 1; Paglione (n 1).

[51] See eg Michael Cernea and Hari Mathur (eds), *Can Compensation Prevent Impoverishment? Reforming Resettlement through Investments and Benefit-Sharing* (OUP 2008). The extent to which national laws and policies adhere to international, rights-based standards on durable solutions and redress for displacement varies dramatically. See Megan Bradley and Angela Sherwood, 'Addressing and Resolving Internal Displacement: Reflections on a Soft Law "Success Story"' in Thomas Gammeltoft-Hansen, Stephanie Lagoutte, and John Cerone (eds), *Tracing the Roles of Soft Law in Human Rights* (OUP 2016) 155–82.

[54] Unruh (n 16) 111.

b. Balancing the Rights of 'Secondary Occupants' and People in Protracted Displacement

The increasingly protracted nature of refugee situations and internal displacement raises important questions regarding the rights of so-called 'secondary occupants' of forced migrants' homes and lands. 'Secondary occupants' is somewhat misleading as repeated displacements often mean that homes and lands may be occupied and abandoned multiple times; secondary occupants are often themselves displaced, and have had their own homes taken over by others. In the context of long-standing patterns of dispossession associated with colonialism and the ouster of indigenous populations, refugees or IDPs identified as the rightful claimants in post-conflict restitution processes based on statutory law may themselves be reasserting control over resources wrongfully taken from others in dispossessions deemed outside the remedial timeframe.

Evicting long-standing secondary occupants to make way for returnees, or to enable displaced claimants to repossess and sell their property, is itself a form of displacement, and in some cases arguably entails harms disproportionate to the value of the justice that would be achieved through restitution.[55] This is a particular concern in cases in which restitution would uproot people who had themselves been displaced or were deeply impoverished and homeless, and had been resident in good faith on lands left behind by others. Adverse possession laws may provide some legal grounding for secondary occupants' claims to remain, although these laws are rarely intended to apply in conflict situations and can raise serious challenges regarding respect for displaced persons' HLP rights.[56] It is often unclear if war-time occupation 'counts towards the time requirements for claiming land via adverse possession'.[57] Adverse possession laws may be used to undermine restitution, as took place for example in Guatemala in relation to restitution claims made by some indigenous displaced persons. In some cases, elite property owners may attempt to forcibly evict IDPs if they fear that war-time secondary occupation may be used to underpin adverse possession claims. As experiences in Liberia have demonstrated, this risk may be particularly pronounced as the end of the adverse possession period nears.[58]

[55] For an influential theoretical examination of this dilemma see Jeremy Waldron, 'Superseding Historic Injustice' (1992) 103 Ethics 4; Jeremy Waldron, 'Settlement, Return and the Supersession Thesis' (2004) 5 Theoretical Inquiries in Law 237. Extensive literature considers how compensation for Palestinian refugees may figure in an eventual peace agreement, and how this relates to refugees' rights to return and restitution. See eg Rex Brynen and Roula El-Rifai (eds), *Compensation to Palestinian Refugees and the Search for Palestinian–Israeli Peace* (Pluto Press 2013); IOM, *Property Restitution and Compensation: Practices and Experiences of Claims Programs* (2008).

[56] Adverse possession is 'a legal approach to acquisition of title by possession or occupation of land or property for a certain period of time under certain conditions'. (Unruh (n 16) 119). On the relationship between HLP restitution and adverse possession, see Smit (n 1).

[57] Unruh (n 16) 119.

[58] ibid. See also John Unruh, 'Land Rights in Postwar Liberia: The Volatile Part of the Peace Process' (2009) 26 Land Use Policy 425.

Existing international standards and scholarly literature provide limited guidance on addressing the complex challenges associated with balancing the rights and well-being of secondary occupants and displaced persons, particularly in protracted situations. The Pinheiro Principles do provide some protection for secondary occupants, but ultimately strongly favour granting refugee and IDPs' restitution claims. For example, principle 17.1 indicates that

> States should ensure that secondary occupants are protected against arbitrary or unlawful forced eviction. States shall ensure, in cases where evictions of such occupants are deemed justifiable and unavoidable for the purposes of housing, land and property restitution, that evictions are carried out in a manner that is compatible with international human rights law and standards, such that secondary occupants are afforded safeguards of due process, including an opportunity for genuine consultation, adequate and reasonable notice, and the provision of legal remedies, including opportunities for legal redress.[59]

The Principles also emphasize the need to protect evicted secondary occupants from homelessness,[60] but indicate that delays associated with upholding due process or securing alternative accommodation for secondary occupants should not 'prejudice the rights of legitimate owners, tenants and other rights holders to repossess the housing, land and property in question in a just and timely manner'.[61]

The complex series of rulings issued by the European Court of Human Rights in relation to displacement and restitution in Cyprus, stemming from the landmark 1996 ruling in *Loizidou v Turkey*, offer valuable insight into this legally and politically fraught question. The court's '*Loizidou* line of decisions' has often been interpreted as strongly favouring restitution and return, as promoted by Greek Cypriot negotiators. While the decisions clearly preclude earlier Turkish Cypriot proposals favouring a 'global exchange' of property and little to no return, in more recent judgments the court has accepted revamped Turkish compensation programmes as providing an 'effective domestic remedy' to dispossessed Greek Cypriots for the loss of use of their property, 'explicitly reject[ing] the Greek Cypriot position that remedies other than restitution should be limited to circumstances of "material impossibility" '.[62]

c. Mitigating Risks

HLP restitution efforts may inadvertently introduce risks to displaced persons' rights and well-being, which necessitate closer examination and mitigation. For example,

[59] Pinheiro Principles (n 3) Principle 17.1.
[60] ibid Principle 17.3. [61] ibid Principle 17.2.
[62] Rhodri Williams and Ayla Gürel, *The European Court of Human Rights and the Cyprus Property Issue: Charting a Way Forward* (PCC Paper 1/2011, PRIO Cyprus Papers 2011) 3–4.

while customary or informal tenure arrangements are predominant in much of the Global South, standards such as the Pinheiro Principles encourage the formalization of HLP rights with a view to limiting future conflict, and various restitution programmes have incorporated formalization efforts.[63] However, title formalization efforts are highly vulnerable to elite capture; that is, these processes are often manipulated by powerful economic actors, and entrench the marginalization of poorer populations, including displaced persons. In countries such as Colombia, restitution processes have been implemented in the context of ongoing violence. In the absence of institutions willing and able to protect against coercive transactions, displaced persons and communities who receive formal title through the restitution process have subsequently been pressured into selling their homes and lands to powerful actors connected to gangs, paramilitaries, and other armed groups, well below market rates. Such experiences underscore the need to ensure that the drive to resolve claims in a timely way does not exacerbate risks facing refugees and IDPs.[64]

These experiences also point to the risks associated with a disconnect between restitution programmes promoted by humanitarians focused on refugees and IDPs, and broader pro-poor tenure management efforts, typically led by development specialists. As Unruh stresses, 'land law reform usually always follows civil war . . . if approaches to HLP restitution which interact significantly with local populations are applied early, this can provide a valuable head start on this important phase, potentially . . . speeding up postwar HLP reform'.[65] Alternatively, approaches that treat displaced persons' HLP rights separately from those of the broader community may heighten resentment and confusion.[66]

d. The Influence of Gender, Class, and Other Power Structures on Redress

An increasing body of research considers how 'intersecting constellations of power relationships' associated with constructs such as gender, age, race, and class 'produce unequal material realities and distinctive social experiences for individuals and groups associated with them', including in contexts of conflict and displacement.[67] Some researchers have considered how factors such as gender and age influence restitution processes, bringing into focus how, for example, gendered distributions of HLP resources and legal systems that privilege older men can negatively affect the ability of

women and young people to benefit from restitution.[68] To date, however, relatively little research has explored restitution and other approaches to redressing displacement from an intersectional perspective, although such approaches could helpfully bring into focus how 'individuals and groups can *simultaneously* experience privilege and disadvantage', including in contested efforts to resolve HLP claims and redress other aspects of forced migration.[69]

Gender-sensitive and intersectional perspectives reveal how restitution can function as a double-edged sword, restoring valuable resources that refugees and IDPs can use to rebuild their lives, while also reproducing inequality by seeking to restore the *status quo ante*, rather than recast power relations through redistribution. In particular, there is a stark need for research on restitution and other forms of redress to devote more attention to race, class, and the effects of national socio-economic contexts on decisions to promote restitution. Significant international investments in support of restitution and compensation are more common in the context of displacement in European and middle-income countries, where real property is more likely to be held under statutory laws. This disproportionately benefits middle-class and elite claimants who are more likely to own property, and erroneously suggests that losses are less important in deeply impoverished communities—whereas it is precisely in the context of severe resource scarcity that restitution or other material remedies may prove critical to forced migrants' ability to re-establish themselves. The tendency in research, law, policy, and practice to focus on restitution of real property also merits reconsideration to better account for the experiences and perspectives of indigenous communities who do not necessarily see land as property, and for whom the restoration of communal lands may carry broader spiritual or cultural significance.[70]

e. Remedies beyond HLP Restitution

The injustices of displacement go far beyond the loss of housing, land, and possessions. Although remedies for refugees and IDPs have focused primarily on HLP restitution, there is a need to consider the wider ranges of losses associated with forced migration—including refoulement and displacement as harms in their own right—and how these wrongs may be redressed. A limited but growing body of cases and literature provides insight into this issue, with the International Law Association's 1992 Cairo Declaration of Principles of International Law on Compensation to Refugees stressing that responsibility for redressing refugees rests first and foremost with State

[68] See eg Sharanya Mohan, 'The Battle after the War: Gender Discrimination in Property Rights and Post-Conflict Property Restitution' (2011) 36 Yale Journal of International Law 461; Sandra Joireman, 'Intergenerational Land Conflict in Northern Uganda: Children, Customary Law and Return Migration' (2018) 33 Africa 81.

[70] See eg LeMaitre and Sandvik (n 30) on experiences of indigenous communities in Colombia.

authorities involved in generating refugee flows.[71] This is typically the State of origin, but aggressor States in international armed conflicts may also incur obligations to compensate or otherwise provide redress to people displaced as a result of their actions. For example, the UN Compensation Commission (UNCC) was established in 1991 to redress harms against individuals, States, and companies stemming from Iraq's invasion of Kuwait, and compensated thousands of people forced to flee Kuwait and Iraq, with funds from Iraqi oil sales.[72] Reparations for *refoulement* remain rare, but in an exception to this trend, the settlement with Holocaust survivors negotiated and financed by the Swiss government and Swiss banks provided compensation to refugees who sought shelter in Switzerland and were turned away or subsequently *refouled*.[73] More recently, some refugees and asylum seekers who have been unlawfully harmed as they have sought protection have used class action lawsuits to secure some redress for their losses. For example, in 2018 the Australian courts awarded 1,700 former Manus Island detainees AUS$70 million in compensation for false imprisonment in the largest human rights class action settlement in Australian history.[74] While such efforts rely on domestic tort law rather than public international law, and are generally limited to defendant countries in the Global North, they represent a potentially important avenue for advancing refugees' remedial rights, and perhaps deterring some particularly flagrant violations of their rights.

The 2005 UN Reparations Principles suggest that enabling displaced persons to return to their homes may be a form of redress, while scholars such as Souter have suggested that the provision of asylum or support for alternative durable solutions such as resettlement or local integration may also, depending on the context, be framed as reparative measures.[75] Efforts to provide redress to IDPs in Colombia provide insight into how a range of remedies, including restitution, compensation, apologies, and support for durable solutions may be blended. At the same time, the process highlights the bureaucratic and political challenges associated with implementing such comparatively ambitious reparation efforts, and the risks that come with offering remedies with a view to closing the books on displacement.[76] In such cases, those who object to the forms of redress that are extended, or who continue to identify themselves as displaced despite the remedies offered, may be painted as recalcitrant

[76] Vidal López (n 30); LeMaitre and Sandvik (n 30).

spoilers out of step with the peace process, rather than legitimate victims with unresolved claims.[77]

International humanitarian law and international criminal law prohibits deportation or forcible population transfers in particular contexts, and in recent years an increasing number of international and *ad hoc* tribunals have attempted to prosecute these acts as war crimes or crimes against humanity.[78] For example, the Rome Statute of the International Criminal Court defines deportation or forcible transfer of population as 'forced displacement of the persons concerned by expulsion or other coercive acts from the area in which they are lawfully present, without grounds permitted under international law', and recognizes this as a crime against humanity when it is 'committed as part of a widespread or systematic attack directed against any civilian population, with knowledge of the attack'.[79] However, demonstrating that displacement meets these conditions has proven difficult, and it is unclear that criminal prosecution deters population displacement in war, or responds in a meaningful way to displaced persons' priorities and preferences in relation to redress. While prosecuting the architects of massive displacement or ethnic cleansing can send a powerful political signal, the local level perpetrators of such actions often go unpunished, with their presence in communities of origin undercutting the possibility of safe and sustainable returns.[80] In addition to efforts to redress deportations and forcible population transfers through prosecutions, some advocates are attempting to use international courts to uphold responsibility for policies that result in migrant deaths. For example, recent submissions to the International Criminal Court (ICC) encourage the prosecution of the European Union and key States including Italy, Germany, and France for deterrence efforts that have led to thousands of migrants dying while attempting to cross the Mediterranean.[81]

Beyond attempts to offer redress to displaced individuals, host States may also have significant claims for compensation in relation to the expenses and challenges associated with sheltering large numbers of refugees.[82] Does framing the act of extending asylum or sheltering displaced populations as a harm requiring redress actually encourage welcoming policies and advance rights protection overall? This is an open question.

Elevating the pursuit of redress for wrongs can crowd out visions of political life based on other values such as solidarity and social justice—values that may ultimately be more conducive to welcoming, assisting and protecting the displaced.

5. Conclusion

The challenges discussed above are by no means exhaustive. Considerable progress has been made since the end of the Cold War in developing normative standards on redress for refugees and IDPs, and some important lessons have been gleaned on implementing these norms. Yet the extent to which these have translated into direct benefits for the displaced remain starkly limited. Moving forward, there is a need to look beyond the predominant, narrow focus on restitution of real property, to better consider the rights and well-being of those without land to repossess, and account for the broader range of harms suffered by forced migrants. While this discussion has focused on redress for refugees and IDPs in the context of violence and conflict, the rights and claims of those uprooted in disasters also demand more careful consideration.[83] Although there has, to date, been less attention devoted to remedies for displacement in disaster situations, this issue is becoming increasingly salient as the effects of climate change become more pronounced.[84]

CHAPTER 63

THE RESPONSIBILITY OF ARMED GROUPS CONCERNING DISPLACEMENT

BEN SAUL

1. Introduction

Displacement frequently occurs in non-international armed conflicts (NIACs), whether as an incidental effect of actual or impending hostilities, a deliberate tactic of warfare, or as a preventive, protective measure to evacuate civilians at risk. In contrast to States parties to a NIAC, however, non-State armed groups (NSAGs) involved in conflict bear far fewer international obligations concerning protection from, during, and after displacement.

This chapter first charts how most of the relevant international law—refugee law, international human rights law (IHRL), international humanitarian law (IHL), and international criminal law (ICL)—imposes obligations principally on States. Under the law of State responsibility, a State is only responsible for a NSAG's conduct in a limited range of situations. Even where State responsibility formally exists, it will often be an ineffective means of accountability in practice (particularly where a NSAG exercises governmental authority over territory to the exclusion of the State authorities), and NSAGs themselves may not separately bear direct responsibility for their conduct.

A critical, second issue discussed in this chapter, therefore, is the extent to which international law directly binds NSAGs and holds them responsible for their breaches. By disaggregating the applicable specialized branches of law, the chapter shows that NSAGs are clearly bound by IHL *as groups*, while ICL imposes *individual* criminal liability on their members. Both of these branches of law contain norms concerning displacement, although IHL rules are far more limited in NIACs than in international armed conflicts (IACs), significantly limiting protection as regards refugees, persons who flee or are evacuated within a territory, and those who move voluntarily. Although it might be desirable for the rules in NIACs to align more closely with those of IACs, politically this seems unlikely to occur.

Whether, and to what extent, NSAGs are collectively bound by IHRL and international refugee law obligations remains more contested and uncertain. There is increasing consensus that at least some NSAGs (namely, *de facto* authorities controlling territory) are bound by IHRL to some degree (depending on their capacities). Formalism aside, in practice, NSAGs have occasionally committed to norms preventing displacement and/or have exercised protection functions during displacement and in relation to repatriation.

While it is clearly desirable for relevant aspects of refugee law and IHRL to apply to NSAGs, the political polarization on this issue inhibits both explicit reform and evolutionary interpretation, although the latter is a more likely pathway to change. Even if substantive obligations bind NSAGs, however, this chapter further shows that the modalities for invoking the collective responsibility of NSAGs remain underdeveloped. This renders it even more difficult to hold NSAGs accountable for violations than is the case with States. Reform of procedures and mechanisms must therefore go hand-in-hand with normative expansion.

2. International Refugee Law

a. State Responsibility for Persecution by NSAGs

In the interpretation and application of refugee law, NSAGs are encountered primarily as *sources of persecution* rather than as *providers of protection*. Under the law of State responsibility, a State is legally responsible for persecution by a non-State actor in a number of circumstances. Foremost is where a NSAG is the *de facto* (not *de jure*) State authority exercising control over the State's territory and population, and thereby constitutes a State organ.[1] An example is the Taliban controlling Afghanistan until late 2001.

The second set of circumstances grounding State responsibility is where the State authorities are closely connected to the group, namely where: the State empowers it to exercise elements of governmental authority (such as by delegating authority to an armed group over part of its territory or in relation to security or administrative functions); the group is acting under the State's instructions or direction or control (in relation to specific operations); or the State (*post facto*) acknowledges and adopts the group's conduct as its own.[2]

[1] International Law Commission, 'Draft Articles on Responsibility of States for Internationally Wrongful Acts' (2001) II(2) ILC Yearbook 26, art 4.

[2] ibid (see arts 5, 8, 11).

The third set of circumstances is where the group acts independently of the State authorities but its conduct is nonetheless formally imputed to the State: the group is exercising elements of governmental authority in the absence or default of the official authorities, in circumstances which call for such authority to be exercised (such as where State authority is partly, not fully, displaced by a NSAG in armed conflict); or an insurrectional movement succeeds in establishing itself as the new government or a new State and its prior acts become attributable.[3]

Where a NSAG's conduct is not attributable to a State, the State is not responsible for refugee law breaches by the NSAG. However, the NSAG may still be considered a source of persecution if the State is unable or unwilling to protect the person from such harm.[4] Article 1A(2) of the Refugee Convention does not limit the source of persecution to States,[5] although that was the original context for which it was envisaged. The view that non-State actors may be persecutors is consistent with the humanitarian object and purpose of the Convention, the practice of States, and the position of UNHCR.[6] Relatedly, a risk of persecution posed by NSAGs will be relevant in assessing whether an internal flight alternative exists within a country,[7] irrespective of whether the person is fleeing persecution by the State or a NSAG (in the absence of effective State protection).

In situations of mass influx into neighbouring States, the existence of a NIAC (of which a NSAG is a part) may provide the basis for *prima facie* determination of refugee status. This could occur, for example, where the NSAG targets a population (or part of it) on Refugee Convention grounds, or where civilians in general flee the conflict.

b. State Responsibility for Protection by NSAGs

The issue of the responsibility of NSAGs to *provide* protection has also arisen under refugee law. The Refugee Convention and Protocol do not explicitly mention non-State actors or impose obligations on NSAGs concerning *non-refoulement* or refugee rights. However, as outlined above, the State's refugee law obligations will be engaged (in principle) where it is legally responsible for the NSAG's conduct. The most pertinent situations are where the NSAG is the *de facto* State authority or is exercising elements of government authority in the absence/default of the State. While the legal principles

[7] UNHCR, 'Guidelines on International Protection: "Internal Flight or Relocation Alternative" within the Context of Article 1A(2) of the 1951 Convention and/or 1967 Protocol relating to the Status of Refugees', HCR/GIP/03/04 (23 July 2003) paras 15–17.

seem clear, however, their application is difficult when the factual situation fluctuates during conflict. It may also be complex to assess whether a NSAG is providing protection that satisfies the preconditions for an internal flight alternative.[8]

Several consequences arise from State responsibility for NSAGs. Breaches of international refugee law resulting from the NSAG's acts or omissions are attributable to the State, including *refoulement* or violations of other Refugee Convention rights (whether through interference in those rights, or the failure to protect or provide them). Where the NSAG constitutes the *de facto* or *de jure* government of the State, attribution of responsibility is straightforward, since the NSAG now constitutes the State's organs. Furthermore, its control of the State's administrative machinery means that the NSAG is likely to possess the practical capacity to fulfil international obligations and make reparation for breaches.

In contrast, where a NSAG is exercising elements of governmental authority in the absence or default of the official authorities, in practice the State is unlikely to accept that it is responsible for the conduct of an adversary NSAG exercising rival authority in its territory.[9] The government will simply not be capable of ensuring that the NSAG meets the State's refugee law obligations, notwithstanding that the State is (artificially held) strictly responsible for breaches resulting from NSAG conduct. In such cases, the conventional analysis is that the NSAG itself cannot bear direct international responsibility (see Section 3).

3. Direct Obligations and Responsibility of NSAGs: Refugee Law and IHRL

The direct application of refugee law to NSAGs (including those exercising elements of governmental authority to the exclusion of the State authorities) is controversial and mirrors the wider debate about the direct application of IHRL obligations to NSAGs.[10]

[8] Chapter 38 in this volume.

[9] Where NSAGs do not exercise such authority, the State is not responsible for the conduct of insurrectional movements (unless they succeed), but only for failures to diligently suppress insurgent violence.

[10] See Nigel Rodley, 'Can Armed Opposition Groups Violate Human Rights Standards?' in Kathleen Mahoney and Paul Mahoney (eds), *Human Rights in the Twenty-First Century* (Martinus Nijhoff 1993) 297; Andrew Clapham, *Human Rights Obligations of Non-State Actors* (OUP 2010) chs 1, 7; Sandesh Sivakumaran, *The Law of Non-International Armed Conflict* (OUP 2012) 95–6; Noam Lubell, 'Challenges in Applying Human Rights Law to Armed Conflict' (2005) 87 International Review of the Red Cross 737; Andrew Clapham, 'Human Rights Obligations of Non-State Actors in Conflict Situations' (2006) 88 International Review of the Red Cross 491; Christian Tomuschat, 'The Applicability of Human Rights Law to Insurgent Movements' in Horst Fischer and others (eds), *Crisis Management and Humanitarian Protection* (Berliner Wissenschafts-Verlag 2004) 573; Andrew Clapham, 'Focusing on Armed Non-State Actors' in Andrew Clapham and Paola Gaeta (eds), *The Oxford Handbook of International Law in Armed Conflict* (OUP 2014) 786.

As mentioned, NSAGs are not parties to refugee or IHRL treaties and such treaties do not explicitly impose obligations on them. Some States are also wary of legitimizing NSAGs[11] or regarding them as actors capable of providing protection.[12]

Particularly those NSAGs that are not exercising any form of governmental authority will seldom, if ever, be capable of providing effective, durable protection against *refoulement*, recognizing and guaranteeing refugee status, or securing the extensive suite of refugee and human rights under international law. They lack the institutional and administrative means, including territorial control and governmental authority, to do so.[13] Even NSAGs exercising governmental authority may only have a precarious hold over territory and not be well placed to provide protection.

In such situations, there is a gap in refugee law as conventionally understood. A NSAG is clearly capable of adversely affecting refugee rights, whether by generating refugee flows, *refouling* refugees, or interfering in their rights. Yet, neither the State nor the NSAG as a group can be held responsible. As discussed below, other areas of international law provide some, albeit imperfect, protection: IHL imposes obligations on NSAGs (as groups) not to unlawfully displace civilians, while ICL imposes individual criminal liability for breaches.

There is, however, growing support for the view that, under customary international law, at least some IHRL obligations apply to NSAGs in certain contexts, particularly where NSAGs are *de facto* State authorities with stable control over territory and a population.[14] UN bodies have increasingly called on NSAGs to respect IHRL since the 1990s,[15] as well as refugee law.[16]

The protection capacity of NSAGs has been legally recognized in limited contexts, for instance to deny protection in other States. The EU Qualification Directive provides that 'parties or organisations . . . controlling the State or a substantial part of the territory of the State' can confer protection against persecution, as long as they are 'willing and able to offer protection'.[17] Protection must be effective and non-temporary, and the non-State actor must operate an effective and accessible legal system to detect, prosecute, punish,

and prevent persecution.[18] In such cases, an individual will be ineligible for refugee status or subsidiary protection in the EU. EU law does not, however, impose protection obligations directly on NSAGs (nor attribute their conduct to a State—although such NSAGs would likely be exercising governmental authority in the absence or default of the State).

If it is accepted that some NSAGs are capable of bearing IHRL obligations in principle, which co-apply with IHL in armed conflict, numerous substantive obligations are relevant to displacement. These include: liberty of movement and freedom to choose one's residence; the freedom to leave any country, including one's own; the right not to be arbitrarily deprived of the right to enter one's own country; freedom from arbitrary or unlawful interference in one's privacy, family or home; and family rights.[19] Where displacement has a persecutory dimension, non-discrimination and cultural rights may be relevant.[20] The suite of economic, social, and cultural rights (under the ICESCR) is also relevant during displacement, while the UN Guiding Principles on Internal Displacement[21] (discussed in Section 5.a.*i*) elaborate upon and/or particularize their application in the displacement context.

Most of these rights are subject to necessary and proportionate limitations in pursuit of legitimate aims under IHRL (such as security).[22] However, such limitations must be interpreted in the light of the *lex specialis* in armed conflict: IHL. Specifically, IHRL cannot authorize greater restrictions on movement and residence than IHL allows (see Section 5 below).

Beyond the scope of this chapter, more difficult questions include whether NSAGs bear the same number and type of obligations as States, and whether the content of particular rights or obligations can be flexibly interpreted or tailored to the circumstances (especially in light of the different nature and/or level of control or jurisdiction exercised by NSAGs). Under IHRL (and arguably also refugee law), the orthodox tripartite typology of State obligations is a helpful starting point. In principle, a NSAG may have duties: (1) not to interfere in rights (such as by unlawfully displacing people, or *refouling* refugees); (2) to protect against (other) private interferences in rights (as by preventing other NSAGs from displacing people); and (3) to positively provide rights (such as food, water, health care, education, and shelter).

Even amid a conflict, NSAGs may be expected to refrain from returning people to harm. However, it may be too much to expect them to maintain a full asylum determination system granting permanent, effective protection—something many States do not even provide. Further, some acts of protection by NSAGs may have no practical effect—for example, issuing refugee identity or travel documents that States are unlikely to recognize. The next section considers particular areas in which NSAGs have engaged with protection.

[22] See eg ICCPR, art 12(3).

4. NSAGs as Providers of Refugee Protection

Quite apart from the normative questions of legal responsibility, an empirical question is whether NSAGs provide protection in practice. In some conflicts, NSAGs will not encounter refugees (unless they are already present in the territory). Refugee law is limited to cross-border displacement. NSAGs are typically engaged in NIACs, in which displacement is either internal or *to*—not *from*—other countries. The former Taliban regime in Afghanistan, Islamic State in Iraq and Syria (ISIS) in Syria or Iraq, Liberation Tigers of Tamil Eelam (LTTE) in Sri Lanka, or Revolutionary Armed Forces of Colombia (FARC) in Colombia were hardly destinations of choice (or even necessity) for refugees.

That said, some NSAGs in NIACs follow refugee populations into exile and remain closely connected to them. Examples include Hutu armed groups amongst Rwandan refugees in the Democratic Republic of Congo after the 1994 genocide;[23] Myanmarese armed elements amongst refugees in Thai border camps;[24] the Polisario Front (the Western Saharan liberation movement) organizing Sahrawi refugees in Algeria;[25] and armed factions administering Palestinian refugee camps in Lebanon.[26] Engagement by NSAGs varies, from coercive control (Hutus in Congo), to informal activities (Myanmarese in Thailand), to State-building (Polisario in Algeria).

One long-running example is the daily administration of Palestinian refugee camps in Lebanon by 'popular committees' drawn from the (armed) Palestinian factions (including the Palestine Liberation Organization (PLO)/Fatah, Hamas, and Islamic Jihad). The arrangement arose under the Cairo Agreement of 1969 between Lebanon and the PLO, which granted administrative autonomy to Palestinian refugees in place of Lebanese military control. The committees perform 'municipal functions such as providing water and electricity, collecting social contributions', manage law and order and disputes, and represent refugees to the Lebanese authorities and the UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA).[27] Challenges include factionalism, cronyism, skills and funding shortages, and armed violence. The Lebanon experience contrasts with suppression of Palestinian self-governance in Jordan.[28]

One of the more sophisticated and successful examples of cooperative State/non-State refugee protection involves refugees from Western Sahara in Algeria, after Morocco unlaw-

fully occupied Spanish Sahara in 1975. Algeria permits the Polisario government-in-exile of the Sahrawi Arab Democratic Republic (SADR) to self-govern up to 165,000 Sahrawi refugees in camps. SADR governance includes a constitution, parliament, government, administration, and security institutions. Popular committees administer education, health, food, handicraft work, and justice,[29] in concert with UN actors and non-governmental organizations. External security is provided by the Algerian military. SADR has also engaged in dialogue with, and monitoring by, Human Rights Watch on protection issues.[30]

In many situations, however, the presence of armed elements in refugee camps undermines protection. Fighters do not enjoy refugee status[31] and military activities are incompatible with the civilian and humanitarian character of asylum,[32] which host States must guarantee.[33] UNHCR recommends that States should identify, disarm, separate, and intern fighters as early as possible,[34] locate camps away from the border, exclude weapons, and prevent recruitment.[35]

There are other, less intensive ways that NSAGs may be involved in facilitating (if not directly providing) protection. For example, the political wing of Hezbollah has informally contributed humanitarian relief to Syrian refugees in Lebanon (who come under the protection of Lebanon, assisted by UNHCR) during the Syrian war since 2012.[36]

At the international level, actors have often been reluctant to engage with NSAGs on protection (although the International Committee of the Red Cross (ICRC) has routinely engaged them on IHL). This is partly due to legal uncertainties about the obligations of NSAGs and the actor's own mandate (including the need for State consent). Some States are also concerned about legitimizing NSAGs,[37] while NSAGs can be suspicious of outsiders, particularly in an era of counterterrorism.

In the field, UNHCR has often engaged informally with NSAGs. A review of engagement from 1982 to 2012 found that discussion of protection issues with NSAGs had often proved more difficult than engaging on security or access of humanitarian actors, or diplomacy for repatriation or peacebuilding.[38] There is also a tension in that raising protection concerns could prejudice humanitarian access.[39]

There are numerous extra-legal reasons for adherence by NSAGs to protective norms on displacement. Protecting refugees may elicit the sympathy of, and mobilize support from, international actors, foreign States and publics, or diaspora communities. It may enhance the NSAG's political legitimacy and authority amongst refugee or internally displaced person (IDP) constituencies. Many NSAGs care about their reputation and providing protection may be consistent with their identity, moral convictions, religion, ideology, or politics.

5. International Humanitarian Law

All NSAGs in NIACs are bound by common article 3 of the 1949 Geneva Conventions, which requires each 'party' to a conflict to respect minimum humanitarian obligations, as well as customary IHL.[40] In addition, Additional Protocol II of 1977 (APII) may apply where NSAGs exercise territorial control.[41] However, the law applicable in NIACs remains less developed than in IACs, including as regards displacement. In IAC, States have extensive obligations with respect to refugees,[42] displacement and evacuations,[43] and voluntary internal or international movement.[44]

a. Displacement in NIAC

In contrast, in NIAC, common article 3 does not address refugees, displacement, or voluntary departure from the territory at all, while APII does not address refugees but provides important protections against displacement. Before discussing these issues, it should be emphasized that other, general IHL rules *are* indirectly relevant to preventing displacement. These include prohibitions on attacking civilians or civilian objects (including property and vital infrastructure), indiscriminate attacks, dispro-

portionate attacks, violence to life and person, use of prohibited weapons, and intentionally spreading terror amongst civilians. Respect for IHL at large, from the conduct of hostilities to humanitarian assistance, is one of the most effective means of preventing displacement.[45]

Nonetheless, IHL violations all too frequently both produce displacement and endanger displaced people. As the UN Secretary-General observed, refugees and IDPs 'were exposed [in 2016] to serious protection risks, including killings, sexual and gender-based violence, torture, forced recruitment, trafficking in persons, early and forced marriage and arbitrary arrest and detention'.[46] In that year, IDP camps were attacked in Iraq, Myanmar, Nigeria, South Sudan, and the Syrian Arab Republic.[47]

In extreme cases, NSAGs have destroyed whole settlements, as when the Alliance of Democratic Forces for the Liberation of the Congo disbanded five (partly militarized) Rwandan Hutu refugee camps in 1996 (with the support of the Rwandan army), displacing 722,000 people.[48] Attacks on refugees have also intersected with repressive border protection policies. For example, an airstrike by an armed faction in the Libyan civil war killed 40 people and wounded 80 at a refugee/migrant camp housing over 600 people in Tripoli in 2019—many of whom were detained after Libyan naval interdiction at the EU's behest.[49]

While some NSAGs perceive a military advantage in causing displacement, there are powerful countervailing advantages. Managing displacement imposes heavy costs on NSAGs,[50] including the diversion of limited resources and the disruption of business, employment, and livelihoods that would otherwise contribute to the NSAG's war economy. These are additional to the moral, legitimacy, and legal reasons for compliance mentioned above.

i. *Internal Displacement*

Concerning internal displacement, article 17(1) of APII largely reflects the position in IAC:[51]

> The displacement of the civilian population shall not be ordered for reasons related to the conflict unless the security of the civilians involved or imperative military reasons so demand. Should such displacements have to be carried out, all possible measures shall be taken in order that the civilian population may be received under satisfactory conditions of shelter, hygiene, health, safety and nutrition.

[50] ICRC (n 45) 63. [51] It is based on GCIV (n 40) art 49.

The rule reflects customary IHL.[52] It is understood not as being limited to 'ordering' displacement (as the text literally indicates), but encompasses the implementation of such orders or other practices of displacement (by whomsoever, even absent orders), and threats thereof.[53]

However, it does not extend to displacement that is *incidentally* caused by military hostilities[54] unless the pattern of violence is deliberately aimed at constructive expulsion. This is a gap under IHL, which does not require the parties to protect civilians who flee from the hostilities (unlike, for instance, the law of occupation in IAC). It is assumed (optimistically) that States parties will take care of their populations, but no obligations to do so are imposed on either States or NSAGs.

Given the risk of abuse, as in IAC, the thresholds for justifying (lawful) displacement under APII are high: it must be *necessary* for the security of civilians or *imperative* for military reasons. The first ground contemplates the evacuation of civilians from areas of military operations or the vicinity of a military objective (as required by IHL).[55] The second covers, for example, moving civilians whose presence would impede military operations.[56] Political motives,[57] speculative military advantage, or demographic engineering are not acceptable reasons, and an unjustifiable evacuation would include moving civilians to deprive a NSAG of its support base, to enable closer control of the population, or to obstruct the adversary's movements with 'human shields'.

In addition, the 'soft law' Guiding Principles on Internal Displacement recommend that (1) all feasible alternatives to displacement should be first explored, and (2) where there are no alternatives, displacement and its adverse effects should be minimized.[58] These import human rights-based necessity and proportionality conditions into the IHL rule.[59]

Since displacement is only justified for as long as civilian security or military imperatives so demand, article 17(1) of APII implicitly entails a right of civilians to return to home after such reasons no longer exist (as does customary IHL).[60] By further implication, NSAGs must not obstruct returns and should, depending on capacity, facilitate them, including through measures such as 'mine clearance, provision of basic needs, agricultural

equipment, rehabilitation of schools, [and] skills training'.[61] Separately, article 4(3)(b) of APII guarantees that 'all appropriate steps shall be taken to facilitate the reunion of families temporarily separated', whether from lawful, unlawful, or incidental displacement.

Article 17(1) of APII does not restrict the right of civilians to move freely within the State[62] (subject to permissible restrictions under IHRL, such as security). However, unlike IHRL, IHL does not explicitly guarantee internal freedom of movement, which is necessary to enable civilians to flee conflict.[63] For this reason, the co-application of IHRL in NIAC is vital—but also problematic if the traditional legal view is taken that NSAGs do not bear IHRL obligations.

ii. *Cross-border (External or Internal) Displacement*

In relation to *cross-border* displacement, article 17(2) of APII is stricter than IHL in IACs in that it *absolutely* prohibits transboundary displacement. The provision applies to two situations: displacement across an international border, and displacement across the 'border' of the (internal) territory of the State controlled respectively by the State and a NSAG.[64] The latter is an important guarantee against displacing civilians for persecutory reasons or because of perceived association with the adversary. Such persons could be doubly victimized if the party to which they were displaced itself targeted them for those reasons.

On the one hand, the prohibition on *international* displacement in NIACs may be seen as more protective than IHL in IACs, in that it ensures civilians retain the protection of their presumptive State of nationality or residence. They therefore cannot be compelled to move to another State where the IHL protections in NIACs may not apply (since the other State is unlikely to be a party to the NIAC in the first State), the other State may be hostile to their presence, and their legal status under the law of the other State may be highly precarious.

On the other hand, the restrictive approach in article 17(2) of APII may undermine the security of civilians if temporary transboundary movement (such as because of geographical proximity or safer conditions across a border, including the presence of humanitarian actors) could provide the most expeditious and effective means of protecting them. Where such movement occurs with the consent of the foreign State, the adverse impacts of such movements on civilians may be minimized.

A lacuna could remain, however, because the State and NSAG parties to the conflict are likely to have no legal or practical means of exercising effective protective jurisdiction on the territory of the foreign State, including in respect of its treatment of those displaced. On balance, the strict approach of article 17(2) is normally justified. The provision, in any event, does not restrict the IHRL right to voluntarily leave one's

State[65] (including to seek protection), although again, IHL does not explicitly guarantee such right in NIACs.

b. *Non-refoulement* in NIAC

The justifications for displacement under APII and customary IHL assume that displaced civilians will remain under the control and protection of the party responsible for their displacement, elsewhere in its territory. The rules authorizing displacement do not, however, permit the transfer of a person to the territory or custody of other actors. International law in general does not positively authorize NSAGs to transfer persons. In practice, however, transfers of both nationals and foreigners occur, whether informally and summarily, or pursuant to more formal non-State equivalents of (the State processes of) extradition or deportation.

The question then arises whether NSAGs are bound by the international law principle of *non-refoulement* (under both refugee and human rights law).[66] The principle of *non-refoulement* applies to State transfers into the custody of both State and non-State actors, as well as to cross-border and internal transfers (as where different authorities exist within the same territory).

Since neither refugee law nor IHRL expressly binds NSAGs, the conventional answer is that NSAGs do not bear *non-refoulement* obligations. Again, the more progressive view is that at least *de facto* authorities controlling territory are bound. In respect of NSAGs, IHL arguably provides the most secure basis for this argument.

Common article 3 of the Geneva Conventions and APII are silent on *non-refoulement* in NIAC, in contrast to express protections in IAC.[67] However, the ICRC correctly takes the view that because common article 3 protects fundamental rights, it 'should be understood as also prohibiting Parties to the conflict from transferring persons in their power to another authority when those persons would be in danger of suffering a violation of those fundamental rights upon transfer'.[68] It thus prohibits transfers 'to violence to life and person, such as murder or torture and other forms of ill-treatment', as well as manifestly unfair trials.[69] Otherwise a party could circumvent its IHL obligations through

[65] ICRC (n 53) para 4851.

[66] Refugee Convention art 33(1). See further Chapter 36 in this volume.

[67] GCIII (n 40) art 12; GCIV (n 40) art 45(3)–(4).

Geneva 12 August 1949, Article 3: Conflicts not of an International Character' para 708. See also ICRC, 'Note on Migration and the Principle of Non-Refoulement' (2017) 99 International Review of the Red Cross 345; Helen Obregon Gieseken, 'The Protection of Migrants under International Humanitarian Law' (2017) 99 International Review of the Red Cross 121, 162, 145; Cordula Droege, 'Transfers of Detainees: Legal Framework, *Non-Refoulement* and Contemporary Challenges' (2008) 90 International Review of the Red Cross 675.

[69] ICRC 2016 (n 68) para 710.

such transfers.[70] Given the fundamental rights protected by common article 3, no exceptions to the principle of *non-refoulement* can exist, in contrast to refugee law.[71]

Implied *non-refoulement* obligations under IHL thus extend to both States and non-States parties to a NIAC who transfer control over a person, cover transfers to State and non-State actors, and encompass internal[72] and transboundary movements.[73] They likely also extend to 'chain *refoulement*' (where the receiving authority transfers the person to a real risk of harm).[74] Procedurally, the transferring party 'must assess carefully and in good faith whether there are substantial grounds for believing' that a person would be at risk, and refrain from making a transfer unless measures are taken to effectively remove the risk (such as effective post-transfer monitoring).[75]

In practice, there is evidence that NSAGs have violated the principle of *non-refoulement*. In 2019, rebel Syrian Democratic Forces (SDF) transferred 300 ISIS detainees from Syria to the Iraqi authorities, despite known risks of torture of terrorism suspects,[76] the death penalty for terrorism offences,[77] and manifestly unfair trials.[78] Separately, the SDF transferred over 300 ISIS detainees to tribal justice in Syria,[79] raising risks of persecution, ill-treatment, irregular trials, and harsh penalties such as banishment or collective punishment of families.

6. Internally Displaced Persons

While there is no binding universal instrument on IDPs, the non-binding Guiding Principles on Internal Displacement particularize the application of relevant standards (particularly IHL and IHRL) to IDPs. They cover protection from displacement, assistance during it, and return, resettlement, and reintegration, and stipulate that the full

spectrum of human rights applies to those displaced. Key principles include the prohibition on arbitrary displacement[80] (with displacement in conflict governed by the IHL standard);[81] the prohibition of all forms of violence against IDPs;[82] and the requirement to facilitate humanitarian relief.[83]

The Guiding Principles are addressed to 'all authorities, groups and persons irrespective of their legal status',[84] which includes NSAGs. Some NSAGs have been influenced by, or supportive of, the Guiding Principles, including the Sudan People's Liberation Movement and Army and the LTTE in Sri Lanka,[85] and the *de facto* authority in Abkhazia.[86] Some have also committed to facilitating voluntary returns, as in Sri Lanka, the Democratic Republic of Congo, and the former Yugoslavia.[87]

More broadly, NSAGs have sometimes assumed responsibility for IDPs. Geneva Call has identified 44 normative commitments made by NSAGs that address displacement.[88] Many refer to different phases of displacement, although few explicitly prohibit it or refer to the rights of the displaced or to norms, and most commitments deal with post-conflict return/reintegration. In practice, NSAGs have also sustained IDP populations. For example, the rebel SDF, which controlled over 30 per cent of Syria's territory by mid-2019,[89] housed (in closed camps) 80,000 persons who were displaced during or after ISIS's loss of its territory in Syria in 2019. The SDF administers the camps, assisted by humanitarian actors, although conditions (of safety and basic needs) do not meet international standards.[90]

Whereas it may not be onerous for NSAGs to refrain from causing displacement or interfering in IDP rights, it is far more difficult for them to fulfil positive obligations such as providing health care and education.[91] They therefore have a duty to accept international assistance where they are unable to meet humanitarian/protection needs.

7. Accountability

a. 'Group' Responsibility

Even though NSAGs bear obligations as groups under common article 3 of the Geneva Conventions, APII, and customary IHL, the mechanisms for holding NSAGs account-

91 The Kampala Convention prohibits NSAGs from doing certain acts but does not impose positive obligations: Ruaudel (n 12) 23, referring to African Union Convention for the Protection and Assistance of Internally Displaced Persons in Africa (adopted 23 October 2009, entered into force 6 December 2012) 49 ILM 86 (Kampala Convention).

able for violations concerning displacement are far less developed than for States. First, there is no general notion of 'group responsibility' akin to the responsibility of States or international organizations[92] (along with the associated rules for attributing conduct, invoking responsibility, and reparation). Whereas States have a duty under IHL to pay compensation for violations,[93] NSAGs do not.[94]

Secondly, NSAGs are not subject to the numerous permanent, institutionalized treaty-based reporting, monitoring, fact-finding, or verification mechanisms applicable to States.[95] Nor can legal claims be brought against NSAGs in the International Court of Justice, regional human rights courts, or the UN human rights treaty bodies.

Certainly some NSAGs (such as ISIS) have been investigated by *ad hoc* mechanisms, such as UN Human Rights Council commissions of inquiry[96] or investigative mechanisms of the General Assembly or Security Council.[97] Some NSAGs have also been subject to Security Council sanctions,[98] including to curb abuses of IHL, ICL, or IHRL, or even referrals by the Council to the International Criminal Court (as in the case of Darfur, Sudan, involving extensive displacement).[99]

However, while these processes often identify violations, they do not normally call for reparation by NSAGs, and only a few UN resolutions or inquiries have encouraged NSAGs provide it so.[100] Other obstacles to accountability include that NSAGs may lack the resources to make reparation; they may lack domestic legal personality; they may

dissolve after a conflict; and identifying perpetrators or superior responsibility may be difficult.[101]

In practice, the provision by NSAGs of compensation or reparation to victims is rare,[102] and has variously taken the form of commitments to provide it (as in the Philippines),[103] *ex gratia* payments, or post-conflict peace or transitional justice arrangements (as in Uganda and Colombia).[104] In the 2006 Darfur peace agreement in Sudan, restitution of, or compensation for, property was guaranteed to displaced persons.[105] After the 2016 peace agreement in Colombia, FARC surrendered US$330 million in assets to fund victim compensation, including for displacement,[106] in a conflict that displaced 7.5 million people. A few NSAGs have created mechanisms to allow civilians to complain of abuses by fighters, including the National Transitional Council of Libya,[107] the Taliban,[108] and ISIS.[109]

b. International Criminal Law

ICL imposes liability for international crimes directly on individual members of NSAGs, but it does not hold NSAGs criminally responsible *as groups*[110] (just as there is no notion of State criminality). The principle of command/superior responsibility, and the extended modes of criminal liability (such as ordering/soliciting/inducing, complicity, and conspiracy), may, however, capture many forms of criminal participation in terrorist organizations. It is a war crime to order the displacement of a civilian population for reasons related to an IAC (but not a NIAC) unless the security of civilians or imperative military reasons demand it.[111] However, it is a crime against humanity (by a State or

non-State actor, including in a NIAC) to deport or forcibly transfer a population (in peace or conflict), when committed as part of a widespread or systematic attack directed against a civilian population.[112]

A number of more specialized crimes may also be relevant to suppressing unlawful displacement by NSAGs. The crime of genocide includes, *inter alia*, forcibly transferring children of one group to another group, or deliberately inflicting on the group conditions of life calculated to physically destroy it[113] (which could include via displacement). Slavery, servitude, and forced labour are international crimes[114] (including war crimes in IAC and NIAC[115] and crimes against humanity[116]) and may cause displacement or target the displaced. For instance, the Security Council has condemned sexual slavery by Boko Haram in Nigeria[117] and by ISIS in Iraq and Syria,[118] and slavery practices by the Taliban, Nepalese Maoists, PKK, LTTE, and Al Shabaab.[119] Refugees and IDPs may also be vulnerable to the treaty-based offence of human trafficking.[120]

8. Conclusion: Developing Norms and Enhancing Compliance

As this chapter has discussed, NSAGs are not parties to treaties (and have played a negligible role in making international treaty or customary law),[121] and they may not be for-

mally bound by IHRL or refugee law (by contrast to IHL or ICL). Even where a State is formally responsible for NSAG conduct, reparation may be unenforceable in practice against the State, and the NSAG itself will not separately bear the primary international obligations.

However, while the applicable norms are limited, they are not insignificant. NSAGs must not: (1) displace civilians, except for the security of such civilians or imperative military reasons, and then only under satisfactory conditions; (2) compel civilians to leave their own territory; (3) violate the principle of *non-refoulement* in any internal or cross-border transfers; and (4) impede impartial humanitarian relief to displaced persons.

From a protection standpoint, however, there remains room for normative improvement, even if it is politically unlikely. First, the more extensive IHL norms on displacement in IAC could guide the evolution of norms in NIAC (even if wholesale convergence may not necessarily be desirable), particularly as regards the more explicit protection of refugees and norms on displacement, cross-border evacuations for protection reasons, and voluntary internal or international movements. Secondly, some tailored norms from international refugee law and IHRL should be recognized as formally applicable to suitable NSAGs. Thirdly, there needs to be greater recognition of—and lessons learned from—any existing good protection practices by NSAGs.

Whatever the applicable norms, securing NSAGs' compliance with them will always be challenging, given the conflict-fuelled pressures that induce violations and the limited existing mechanisms for externally influencing NSAG behaviour. There is clearly scope for expanding international procedures for monitoring NSAG compliance and engaging NSAGs directly, particularly if, as suggested above, aspects of refugee law and IHRL are recognized as binding on certain NSAGs. State sovereignty objections must give way to enhancing protection against, during, and after displacement. Recognizing the applicability of the primary rules of IHRL and refugee law to NSAGs also opens up the foundations and possible modalities of 'group responsibility' and associated prospects for seeking reparation.

CHAPTER 64

THE ACCOUNTABILITY OF INTERNATIONAL ORGANIZATIONS IN REFUGEE AND MIGRATION LAW

JAN KLABBERS

1. Introduction

The accountability of international organizations is a topic of bewildering complexity, legally, morally, and politically. Scandals and incidents associated with international organizations abound, ranging from the UN's inaction in the face of the Rwandan genocide to the World Bank's projects leading to mass displacements; from the UN's role in bringing cholera to Haiti to the possibly premature promulgation of health pandemics by the World Health Organization (WHO). Faced with these scenarios, things seem rather obvious: of course the UN should be held responsible if its agents act in ways that are clearly harmful. However, cracks quickly emerge in the moral certitude. While there is no excuse for some forms of wrongdoing, such as peacekeepers sexually abusing minors, other issues are more morally ambiguous. The WHO's decision-makers may have sincerely thought that a pandemic had broken out, based on analysing all the relevant information available at the time.[1] And what if the World Bank's project is intended to improve the fate of the entire nation, and may even actually do so, albeit at the expense of the displaced individuals? In such a scenario, a cost–benefit analysis might even support the World Bank's position.

[1] Much decision-making takes place in difficult circumstances, including time-pressure and incomplete information. See eg Friedrich Kratochwil, *Praxis: On Acting and Knowing* (CUP 2018).

Further moral ambiguities emerge when we consider that bad acts may be the result of good intentions; bad acts may be the result of sincere and rigorous, if thoughtless, rule-following.[2] Or such acts may be part of a larger context, knowledge of which helps to put things in perspective. For example, on its face, NATO dropping bombs on Belgrade in 1999 was an act of aggression. Nonetheless, many thought it was undertaken for lofty reasons, namely to help stop the ethnic cleansing going on in Kosovo.[3] For better or worse, international law—and international lawyers—are markedly ambivalent when it comes to holding international organizations responsible. Obviously, bad behaviour ought not to be tolerated, but equally obviously, international organizations are generally seen as forces for good, whose existence and activities ought to be facilitated. Unlike States (which are highly unlikely to become insolvent), international organizations have no steady source of income and are often pressured by their Member States to work on the cheap, sometimes leading to sub-quality performances or even to the sort of incident that provokes outcries concerning responsibility. It is possible, for example, to connect the UN's procurement of the services of a cheap local waste management company in Haiti, to the subsequent outbreak of cholera.[4] Morally speaking, too, things are not always self-evident: the ethical appraisal of an international organization's acts or omissions strongly depends on one's general ethical outlook. This helps explain why the lawyers in the World Bank struggle to convince the economists to take human rights into account: human rights are hard to fit into any cost–benefit calculation.[5]

This chapter sets out the general responsibility regime as it applies to international organizations with special reference to refugee protection. Several international organizations are pertinent: most prominently UNHCR and the International Organization for Migration (IOM), but also the EU through its European Agency for the Management of Operational Cooperation at the External Borders (Frontex), and the UN Office of the High Commissioner for Human Rights (OHCHR). Refugee protection also involves several different settings, from the running of refugee camps and the guarding of borders to the handling of individual asylum applications. In general, this chapter demonstrates that responsibility is highly elusive.

In addition to responsibility itself being complicated, the surrounding regime does not help much. The attribution problem has ontological origins: it is never quite clear where the Member States end and the international organization begins, or *vice versa*—it is not even clear which is the correct way of putting it.[6] Organizations generally enjoy a wide scope of privileges and immunities, including immunity from legal proceedings,[7]

[6] Seminal is Catherine M Brölmann, *The Institutional Veil in Public International Law* (Hart 2007).

[7] Officials of international organizations may not always be able to claim that immunity also covers their private acts. See already *Essayan v Jouve*, Tribunal de Grande Instance de la Seine [1962] UNJY 290 (France) (concerning the private residence of UNHCR's delegate in France).

which means that domestic courts have lacked opportunities to clarify or develop the law on the responsibility of international organizations. And international tribunals, including the International Court of Justice (ICJ), do not provide international organizations with *locus standi*, likewise resulting in a dearth of authoritative legal opinion on responsibility.[8] It is hardly a coincidence that the first lengthy studies on the responsibility of international organizations quickly turned to Member State responsibility: normatively, the idea that organizations could do wrong was anathema, and practically, no materials were available which said otherwise.[9]

2. Responsibility and International Organizations: The Bird's-Eye View

When first created in the latter half of the nineteenth century, international organizations were envisaged as merely doing things for, on behalf of, and limited to, their Member States.[10] Even if quite a few organizations owed their existence in part to private initiatives (think of novelist Victor Hugo campaigning for an International Copyright Union), they were formally set up by States, and supposed only to affect those States. This was always a chimera: who else was to benefit from the International Copyright Union but the individual novelist or poet? Even so, it was an influential chimera, helping to frame the way we look at international organizations and strongly influencing our legal perceptions and ideas. This particular way of framing organizations developed into a theoretical approach, already authoritatively formulated more than a century ago, according to which international organizations exercise delegated powers in the pursuit of a particular function. They do so on behalf of their Member States and eventually this will benefit humanity at large. Thus, the theory of functionalism was born but, for all its merits, it came with an important limitation: it applied only, and could apply only, to relations between the organization and its Member States. There was no external world envisaged, neither in terms of the nationals of those Member States (the individual novelists or poets), nor in terms of States other than those Member States. An important corollary was that issues of responsibility could hardly arise: if the organization were to do something to displease one of its Member States, the Member States could hold it to account. But if it did something to affect another State, a company somewhere, or an individual somewhere, the law had no resources. And it had no resources because the underlying theory could not even

[8] There have been several arbitral awards involving complaints against the EU, but these are not public.

[9] Clyde Eagleton, 'International Organizations and the Law of Responsibility' (1950) 76 Recueil des Cours 319; Konrad Ginther, *Die völkerrechtliche Verantwortlichkeit internationaler Organisationen gegenüber Drittstaaten* (Springer 1969).

begin to envisage the legal relationship involving the organization and third parties: the 'operating system' of international organizations law could not handle the unfamiliar 'software'.

This became painfully clear in the 1980s. First, in 1980, the ICJ found it impossible for the WHO unilaterally to terminate its headquarters agreement with Egypt, *nota bene* a Member State.[11] Secondly, several years later the International Tin Council (ITC) became insolvent, leaving several of its creditors empty-handed.[12] It turned out that organizations could affect third parties, and it turned out that the law, always revolving around the relationship between the organization and its members, excluding the external world, lacked the resources to do something about it.

Consequently, since the 1980s the responsibility of international organizations came to be problematized. In the literature, the idea of holding international organizations responsible in their own right and for their own conduct was still considered difficult: the first studies that appeared following the collapse of the ITC were premised on the assumption that organizations were controlled by Member States, and thus the position of the Member States was worth focusing on. Findings typically suggested either that Member States cannot be responsible for the acts of their organizations, or that such responsibility can only arise indirectly or secondarily.[13]

Doing so, however, largely missed the point, and around the turn of the century attention shifted to the responsibility of the organization in its own right. This required a shared set of assumptions. Holding organizations responsible assumes, first, that they can act independently from their Member States, and while that was long accepted as a sociological matter, giving it a legal formulation proved difficult. In the end, most observers agree that international organizations can only meaningfully be held responsible if they have international legal personality. This makes eminent sense in the abstract, but many classic organizations have never been explicitly endowed with such personality—including the UN and the EU.[14] The upshot then is that international legal personality either does not attach to many international organizations (which seems an untenable proposition), or is so common as to be almost meaningless. Moreover, much cooperation between States takes place in informal entities, either self-proclaimed extra-legal, such as the Organization for Security and Co-operation in Europe (OSCE), or more or less explicitly given a loose institutional structure, such as the Conferences (or Meetings, or Assemblies) of the Parties

[11] See *Interpretation of the Agreement of 25 March 1951 between the WHO and Egypt* (Advisory Opinion) [1980] ICJ Re 73; for discussion see Jan Klabbers, 'The EJIL Foreword: The Transformation of International Organizations Law' (2015) 26 European Journal of International Law 9.

[12] Seminal is Romana Sadurska and Christine Chinkin, 'The Collapse of the International Tin Council: A Case of State Responsibility?' (1990) 30 Virginia Journal of International Law 845.

[13] Matthias Hartwig, *Die Haftung der Mitgliedstaaten für International Organisationen* (Springer 1993); Moshe Hirsch, *The Responsibility of International Organizations toward Third Parties: Some Basic Principles* (Martinus Nijhoff 1995).

[14] In both cases, courts had to decide the issue, and did so without much by way of compelling argument. See for the UN, *Reparation for Injuries Suffered in the Service of the United Nations* (Advisory Opinion) [1949] ICJ Rep 174; for the EU, see Case 22/70, *Commission v Council (ERTA)* [1971] ECR 263.

set up under environmental agreements but also informing the Framework Convention on Tobacco Control or the International Criminal Court. Functionally it makes sense to think of these as having international legal personality, but their Member States might object, in particular if they either erroneously or tendentiously equated the grant of legal personality as synonymous with a loss of sovereignty. As it is, under the authoritative International Law Commission (ILC) Articles on the Responsibility of International Organizations (ARIO), only those entities that possess international legal personality can even engage in internationally wrongful acts to begin with.[15] As a result, the acts of 'coalitions of the willing' may well be excluded, as may acts of Meetings of Parties, or Assemblies of States Parties or such 'soft organizations' as may exist.[16]

Secondly, it is assumed that international organizations are actually bound to respect international law. Obvious as this sounds, it is actually unclear how far this obligation extends. The ICJ, in the aforementioned WHO/Egypt opinion, opined that organizations are bound by the treaties to which they are parties, by their internal rules,[17] and by the 'general rules of international law'. Furthermore, the mandate of the organization can itself also generate tangible obligations.[18] If the references to treaties and internal rules are relatively clear, the reference to 'general rules of international law' is not. It is often taken as a reference to the corpus of customary international law, but doing so begs various questions. If the ICJ wanted to refer to customary international law, it could have done so explicitly. And can customary international law become binding on organizations without them having had a chance to influence their contents or engage in any relevant practice? Do the practices of organizations themselves qualify as 'practice' for purposes of the formation of customary international law? The more modest view suggests that organizations are bound by what Hart referred to as the secondary rules of international law, that is, those relating to how the system works, more so than to the primary rules operating within the system.[19] Thus, organizations cannot single-handedly modify or ignore

[15] International Law Commission, 'Draft Articles on Responsibility of States for Internationally Wrongful Acts' (2001) II(2) ILC Yearbook 26.

[16] Jan Klabbers, 'Institutional Ambivalence by Design: Soft Organizations in International Law' (2001) 70 Nordic Journal of International Law 403. The OSCE may have changed its mind: see Mateja Steinbrück Platise, Carolyn Moser, and Anne Peters (eds), *The Legal Framework of the OSCE* (CUP 2019).

[17] The 'internal rules' at the very least comprise constitutional instruments, but may also cover all sorts of internal guidelines, instructions, regulations, codes of conduct, and the like, as well as 'external provisions' taken over or incorporated by the organizations concerned. The ICJ never clarified its position on this issue. For a fine discussion of some of the underlying theoretical problems, see Lorenzo Gasbarri, 'The Dual Legality of the Rules of International Organizations' (2017) 14 International Organizations Law Review 87.

[18] Jan Klabbers, 'Reflections on Role Responsibility: The Responsibility of International Organizations for Failing to Act' (2017) 28 European Journal of International Law 1133.

[19] Jan Klabbers, 'The Sources of International Organizations' Law: Reflections on Accountability' in Samantha Besson and Jean d'Aspremont (eds), *The Oxford Handbook of the Sources of International Law* (OUP 2017). The reference is to HLA Hart, *The Concept of Law* (Clarendon 1961).

the law of treaties or, indeed, basic principles of responsibility, but if the above is plausible then it follows that organizations cannot, without some further intellectual activity, be considered bound by customary rules on, say, innocent passage, or even, it seems, basic human rights.[20]

There might be one exception, and that is the category of *jus cogens* norms. Their binding force on international organizations stems from the concept of *jus cogens* itself. By its nature, *jus cogens* is binding on each and every one of us, 'even without any conventional obligation'.[21] If international organizations violate *jus cogens* norms, such as the prohibitions of torture or *refoulement*, [22] that would trigger the responsibility of the organization concerned. Even if international organizations do not directly torture or *refoule*, there is general agreement that *jus cogens* prohibitions also encompass closely related acts. To illustrate, handing over an individual in the near-certainty that this person will be tortured may not constitute torture in and of itself, but does form part of a constellation of surrounding acts that should trigger responsibility.[23] Whether this will have significant practical implications remains to be seen. However, the ICJ has held that States may claim immunities from jurisdiction even with respect to *jus cogens* violations, and there is little reason to expect a different treatment of international organizations on this point.[24]

The ILC and its Special Rapporteur, Professor (now Judge) Giorgio Gaja, openly acknowledged struggling with these fundamental jurisprudential questions. While the ILC was drafting its ARIO, others also presented models of coming to terms with misbehaviour by international organizations. The International Law Association adopted in 2004 a set of recommended rules and practices, which intentionally circumvented the question of whether and why international law would bind international organizations. Utilizing the broader concept of accountability, its work posited the existence of rules and practices, and expressed the hope that organizations might abide by them.[25] Likewise, scholars unified under the heading of 'global administrative law' posited a number of sensible, largely Western, administrative law principles as relevant to the activities of international organizations, but again did so by ignoring the

[20] This is subject to considerable controversy, with many holding that organizations are at a minimum under an international legal obligation to respect human rights. A thoughtful contribution is Kristina Daugirdas, 'How and Why International Law Binds International Organizations' (2016) 57 Harvard International Law Journal 325.

[21] In the early conceptualization of the ICJ in *Reservations to the Convention on the Prevention and Punishment of the Crime of Genocide* (Advisory Opinion) [1951] ICJ Rep 15, 23.

[22] See Cathryn Costello and Michelle Foster, '*Non-refoulement* as Custom and *Jus Cogens*? Putting the Prohibition to the Test' (2015) 46 Netherlands Yearbook of International Law 273.

[23] For discussion of torture constituting a collective practice, see Rebecca Gordon, *Mainstreaming Torture: Ethical Approaches in the Post-9/11 United States* (OUP 2014).

[24] *Jurisdictional Immunities of the State (Germany v Italy, Greece intervening)* [2012] ICJ Rep 99. The ICJ held that *jus cogens* refers to substantive norms which may continue to apply and remain unaffected even if they cannot be enforced in a concrete case due to procedural devices, such as (*dixit* the ICJ) the rules on immunities.

[25] For text and discussion, see International Law Association, *Report of the Seventy-First Conference: Berlin 2004* (ILA 2004) 164–241.

question of legal obligation, and provoking debate on the representativeness of such notions.[26] A different research project carried out at the Heidelberg Max Planck Institute went a step further and proposed a novel legal nomenclature to address the exercise of public authority by international organizations.[27]

It is this latter aspect relating to the exercise of public authority that is absent from the ARIO. The ARIO have been criticized for a variety of reasons,[28] in particular that they are limited by their two threshold conditions: only organizations with international legal personality can commit an internationally wrongful act for purposes of the ARIO (and thus eventually be held responsible), and such an act must comprise a violation of an international legal obligation incumbent on the organization in question. A further significant, yet less widely recognized, problem relates to invocability. The invocability problem is that for all practical purposes, the ARIO can only be invoked by States or by other international organizations.[29] In everyday language: should the IOM violate a treaty commitment towards Norway, then Norway can invoke the ARIO in order to hold the IOM to account. Should however the IOM violate the same commitment vis-à-vis someone who just happens to be in Norway, then that individual has little opportunity to hold the IOM to account. Under the ARIO, she is not entitled to do so herself. This need not be a huge practical problem if she is a Norwegian national: she might be able to ask Norway to exercise diplomatic protection on her behalf. But if she is an Australian academic or a Syrian refugee temporarily residing in Norway, the ARIO offer little solace. Neither Australia nor Syria would, in such a scenario, have much of a right to invoke IOM's responsibility unless it concerns an *erga omnes* obligation,[30] let alone whether they would have much of an incentive.

Admittedly, the ARIO itself provides an escape, or a safety valve, when claiming that it is without prejudice to any other basis an individual or other entity may have to invoke the responsibility of the organization concerned.[31] But those instances are few and far between, with the obvious and unpleasant conclusion being that precisely when most needed (ie when organizations exercise public power over individuals), it becomes extremely difficult to hold them to account.

[26] See eg BS Chimni, 'Co-optation and Resistance: Two Faces of Global Administrative Law' (2005) 37 New York University Journal of International Law and Politics 799.

[27] Armin von Bogdandy, Rüdiger Wolfrum, Jochen Bernstorff, Philipp Dann, and Matthias Goldmann (eds), *The Exercise of Public Authority by International Institutions: Advancing International Institutional Law* (Springer 2010); Matthias Goldmann, *Internationale öffentliche Gewalt* (Springer 2015).

[28] See eg Maurizio Ragazzi (ed), *Responsibility of International Organizations* (Martinus Nijhoff 2013).

[29] See also Armin von Bogdandy and Mateja Steinbrück Platise, 'ARIO and Human Rights: Leaving the Individual in the Cold' (2012) 9 International Organizations Law Review 67.

[30] See ARIO, art 49. *Erga omnes* obligations are usually cast as the procedural complements to *jus cogens* norms, the idea being that everyone has a legal interest in seeing such a norm enforced. The concept was launched by the ICJ in *Barcelona Traction, Light and Power Company, Limited (Belgium v Spain)* [1970] ICJ Rep 3 and is to some extent, and in varying forms, recognized in positive law. For instance, while the term is absent, art 48 of the ILC's Articles on State Responsibility and art 49 of the ARIO can be read this way.

[31] ARIO, art 50. See also art 57 on countermeasures.

3. An Overview of the ARIO

Notwithstanding the above, the most authoritative international legal provisions are precisely those contained in the ARIO. The regime as a whole is thus well worth having a closer look at, on the understanding that invocation by victimized individuals, including refugees and migrants, is not encouraged. At the core of the ARIO is a deceptively simple proposition: international organizations having international legal personality can be held responsible for their internationally wrongful acts, and those acts must meet with two requirements: they must be attributable to the organization concerned, and must entail a violation of an international legal obligation incumbent on that organization.[32] This clarifies two things. First, international organizations are not responsible for behaviour that is not theirs, in particular that of their Member States. Secondly, as with State responsibility, international organizations cannot be held legally responsible for doing morally wrong (without also violating a legal obligation); they cannot be held responsible for violating obligations resting upon their Member States but not on them.[33] And their responsibility is 'objective': neither *culpa* nor damage is required.

The above presupposes a degree of analytical precision rarely met in the messy circumstances of international governance, so it is no surprise that the ARIO address situations where international organizations act through others, or may have collaborated with others.[34] Organizations are generally responsible for behaviour of their officials and organs,[35] and even that of their Member States when these implement an organizational directive.[36] Responsibility can be shared, as accepted, for example, by the Dutch Supreme Court;[37] the more limited view that responsibility exclusively rests upon either an organization or its Member States, endorsed by the European Court of Human Rights (ECtHR) in 2007, is often seen as mistaken.[38] Organizations are free to decide on issues of responsibility or liability in advance.[39] This applies, for example, to accidents taking place during NATO training exercises: it is agreed that liability rests with the State of nationality of the 'culprit'.[40] The bottom line can be summarized as follows: international organizations may, under the ARIO, incur responsibility for their own acts and omissions, including those of their organs and officials, as well as those of their Member States when these act in implementation of an organiza-

[32] ARIO, art 4. The personality requirement derives from art 2.

[33] Member States may remain responsible for their voting within organizations: Ana Sofia Barros, *Governance as Responsibility: Member States as Human Rights Protectors in International Financial Institutions* (CUP 2019).

[34] See in particular ARIO, arts 14–16. [35] ibid art 6. [36] ibid art 17.

[39] Article 64 ARIO allows for *lex specialis* regimes.

[40] See generally Kirsten Schmalenbach, *Die Haftung internationaler Organisationen* (Peter Lang 2004).

tional decision. Where the Member State has discretion, either because the decision is non-binding or because its wording leaves discretion, responsibility is more likely to rest with the Member State.

Given that the ARIO's invocability is limited to States and other international organizations, the ARIO is most likely to be invoked when an organization violates some sort of consensual arrangement concluded with either a State or another international organization. In particular, the latter is a rapidly growing category, for fairly obvious functionalist reasons. An organization such as UNHCR has been given a specific function, and should not act outside its competences (*ultra vires*). The same applies to other organizations. As a result, in crisis situations, a multitude of organizations are usually active, each with its own mandates and competences. They need to agree on how to cooperate and divide tasks. UNHCR's partners often include the WHO, the United Nations Development Program (UNDP), the UN Children's Fund (UNICEF), and in particular the World Food Programme (WFP).[41] The resulting inter-organizational agreements often take the form of Memoranda of Understanding (MoUs), whose legal nature is debated. If such MoUs are legally binding, then their violation amounts to an internationally wrongful act, entailing legal responsibility on the part of the organization in question.[42]

4. Triggering Responsibility

A serious intellectual problem concerns the awkward circumstance that the acts (and omissions) of international organizations almost by definition have distributive consequences, even when organizations act within their mandate and competences. Those distributive consequences can be serious, but often the organization may rely on its general mandate, or even specific instructions, to justify its behaviour. This would suggest that as a general rule, it will be difficult to hold organizations to account for the consequences of their actions (incidental or otherwise), yet this is precisely the focus of many critiques. In turn, this reveals that some critiques are politically motivated, in the sense that organizations are often criticized not so much for what they actually do, but for what they represent. Yet, as long as they stay within their mandate, the law remains fairly toothless. At best, in such a situation, organizations can be held to account, in public debate if not necessarily in court, for failing to exercise due diligence, for failing to recognize that a chosen and, in itself, perfectly lawful policy or plan may come with

41 Intensive cooperation may also generate problems of attribution: the problem of the 'many hands'. See Mark Bovens, *The Quest for Responsibility* (CUP 1998).

42 Anthony Aust, *Modern Treaty Law and Practice* (2nd edn, CUP 2007), arguing that MoUs are usually not intended to have legal effect, cf Jan Klabbers, *The Concept of Treaty in International Law* (Kluwer 1996), arguing that there are good grounds (theoretical and empirical) to suggest that MoUs, regardless of subjective intent, are to be seen as binding treaties. Note that often international organizations lack explicit treaty-making powers (which makes it difficult formally to conclude treaties), but conclude MoUs as a functional substitute.

nefarious side effects. This move has a 'clutching at straws' quality, as the legal basis of the obligation to exercise 'due diligence' is not entirely clear.[43] It seems premature to posit a general legal obligation to the effect that in the proper exercise of their powers, organizations should make sure not to cause adverse consequences, desirable as such may be from an ethical point of view.[44]

Generally speaking, moreover, organizations often find themselves in policy dilemmas of the 'damned if you do, damned if you don't' variety. Such dilemmas apply in particular to organizations involved in crisis management, including those engaged with refugees and migration.[45] UNHCR's practices around 'returns' reflect such dilemmas, often entailing practices that put the voluntariness of returns in doubt, and risk *refoulement*. For example, in the 1990s UNHCR was confronted with large refugee flows from Cambodia, so much so that temporary camps threatened to become semi-permanent settlements of far larger size than the neighbouring countries claimed to be able to handle. This prompted UNHCR to arrange with Cambodia for the more or less voluntary return of many of the refugees, skirting the boundaries of individual consent and possibly amounting to *refoulement*. The policy dilemma was clear, and is well-nigh perennial: either send back people, even if they are reluctant to return, or run the risk of establishing semi-permanent settlements threatening to undermine the very basis of refugee protection—the worry is that large-scale semi-permanent settlements become unsustainable in the long run, solidifying a situation many deem undesirable to begin with: putting people in camps is not particularly human rights-friendly. UNHCR's leadership in Southeast Asia chose the first option, mindful that either choice would be questionable.[46] In the event, many would deem UNHCR's choice acceptable. This general problem persists. Hosting large numbers of refugees often stretches the capacities of host States, and without greater international efforts in terms of both funding and resettlement, the pressure to push for premature 'returns' may be immense. The current plight of the Rohingya in Bangladesh is one of many illustrations.

There are a number of activities for which organizations operating in the refugee domain could possibly incur responsibility. Setting up refugee camps is in itself an activity of doubtful legality: the Refugee Convention does not offer camps as a solution, and generally, camps are considered to be in tension with the protection of basic individual rights.[47] Yet, sometimes there is little choice but to operate a camp: when

[43] For a positive appraisal of the due diligence principle, while warning against its juridification, see Neil McDonald, 'The Role of Due Diligence in International Law' (2019) 68 ICLQ 1041.

[44] See eg Jan Klabbers, 'The Virtues of Expertise' in Monika Ambrus, Karin Arts, Ellen Hey, and Helena Raulus (eds), *The Role of 'Experts' in International and European Decision-Making Processes: Advisors, Decision-Makers, or Irrelevant Actors?* (CUP 2014).

[45] By comparison, organizations such as the World Meteorological Organization or the Universal Postal Union rarely need to handle urgent crises.

[46] See Samantha Power, *Chasing the Flame: Sergio Vieira de Mello and the Fight to Save the World* (Penguin 2008) 85–91, and generally Marjoleine Zieck, *UNHCR and Voluntary Repatriation of Refugees* (Martinus Nijhoff 1997).

[47] UNHCR itself views camps as a measure of last resort, which ought to be temporary by definition: see UNHCR, 'UNHCR Emergency Handbook' <https://emergency.unhcr.org/entry/42974/camp-coordination-camp-management-cccm#5,1569408927745> accessed 25 September 2019.

people flee their country in large numbers, the only feasible option might be to centralize aid and support. Provided, indeed, that the search for other solutions continues, the bigger problem would be the way camps are run. Thus, a management decision to withhold food to promote orderly behaviour seems highly suspect, neither easy to reconcile with general human rights concerns nor with the humanitarian mission of UNHCR.[48] Such a decision most likely meets the twin standards of the ARIO: it is attributable to the organization,[49] and entails a violation of an international legal obligation resting upon UNHCR. Even if UNHCR is not a party to human rights treaties, and even if customary international human rights law cannot with great ease be applied, as discussed above, UNHCR is bound to act in accordance with its own mandate.[50]

UNHCR engages in refugee status determination (RSD), and its determinations, so the ECtHR has indicated, must be given 'due weight' by States.[51] UNHCR's RSD practices have been born out of practice and necessity. An express mandate is absent from the Refugee Convention and its Protocol as well as from the Statute establishing UNHCR.[52] There exist several possible internal oversight mechanisms ('appeal mechanism' is too strong a term here) within UNHCR, but these tend to be mostly general oversight bodies, investigating various kinds of misconduct by staff. The oversight bodies are not specialized in RSD. And to the limited extent that they are open to individual complaints by directly affected individuals, the rate at which they are used is 'astonishingly low'.[53]

Where nefarious conduct is done by individuals in the conduct of their office, the organization too may possibly be held responsible. Surely, an argument can be made that UNHCR employees working in the field should not sexually or otherwise abuse those within their protection. Even if a direct legal obligation not to engage in sexual abuse may be hard to find, an organization such as UNHCR applies the standards of the Humanitarian Accountability Project (HAP), dating back to 2010 and specifically including a duty of care both for the crisis-affected people and for the staff in camps.[54]

[48] The example is derived from Verdirame (n 38) 2.

[49] Here it might be argued that since UNHCR is a programme of the UN, UNHCR's actions are attributable to the UN.

[50] Support for this proposition can draw on the *Effect of Awards of Compensation Made by the UN Administrative Tribunal* (Advisory Opinion) [1954] ICJ Rep 47 (holding that the creation of an administrative tribunal within the UN to provide staff members with access to justice was justifiable in light of the UN's general task in achieving justice, even in the absence of an express power to set up an administrative tribunal). See also n 17.

[51] See *Jabari v Turkey*, App No 40035/98 (ECtHR, 11 July 2000) para 41. The same term 'due weight' is used in *Abdolkhani and Karimnia v Turkey*, App No 30471/08 (ECtHR, 22 September 2009) para 82.

[52] See Maja Smrkolj, 'International Institutions and Individualized Decision-Making: An Example of UNHCR's Refugee Status Determination' in von Bogdandy, Wolfrum, Bernstorff, Dann, and Goldmann (n 27).

[53] ibid 189. See also Mark Pallis, 'The Operation of UNHCR's Accountability Mechanisms' (2005) 37 New York University Journal of International Law and Politics 869.

[54] Humanitarian Accountability Project, *The 2010 HAP Standard in Accountability and Quality Management* (HAP International 2010).

Indeed, more generally, the operations of international organizations are embedded in legal frameworks, typically consisting of arrangements with host States, agreements with other international organizations, and sets of general principles or guidelines by which the organization declares itself to be bound,[55] complemented by general obligations resting on UNHCR by virtue of being part of the UN.[56] Even if organizations are parties to few general treaties and customary international law may not immediately apply, they do not operate in a legal vacuum. Where UNHCR itself accepts a duty of care, whether in the form of HAP standards or otherwise, it can be held responsible when performing under par. Things are less clear with respect to the IOM, which appears to pay much attention to evaluation of the effectiveness of its activities and preventing individual cases of fraud and corruption (its website even has a ready-made form to report such things),[57] but is decidedly less forthcoming on its possible accountability for wrongdoing.

If the establishment of refugee camps may accompany an urgent and serious political crisis, this is less obviously the case with migration processing centres such as the offshore camps operated by IOM at the behest of Australia.[58] These usually spring from the desire on the part of the destination State to preclude access to their territory. When a State keeps its doors closed, many may be knocking at the same time, creating a need to somehow manage the group of people thus assembled. In this, IOM sometimes plays an important role: it lends its services and expertise to those of its Member States willing to pay for it. IOM is financially constrained, so often agrees to contain would-be migrants and refugees for revenue. It is dependent on voluntary contributions and the sale of its services for the lion's share of its budget.[59] Here accountability may depend on the precise terms of the agreement between IOM and the destination State—and examples of such agreements are hard to come by as they are rarely in the public domain. That said, IOM too, having become a UN-related organization in 2016, should be held to the minimum standard to which the UN is held, if only because the UN–IOM agreement specifies as much. It holds that IOM recognizes the purposes and principles of the UN and related agencies, and undertakes to work in accordance with the purposes and principles of the UN and the policies the UN has adopted to further its purposes and principles.[60]

[55] These can be very detailed: UNHCR, 'Guidelines on Assessing and Determining the Best Interests of the Child' (November 2018) comprises over 120 pages.

[56] This is, admittedly, a vague source of law, but one might suggest that with being part of the UN family comes a general obligation to act decently. Put differently, it would make sense to suggest even on positivist premises that parts of the UN family are bound to act in ways more conducive to humanitarian concerns than applies to an interest organization such as the Organization of Petroleum Exporting Countries (OPEC) or the Organization of Islamic Countries (OIC).

A relative newcomer is Frontex, the border control agency of the European Union, and generally thought to be an operational arm of the EU rather than an entity with its own personality under international law.[61] Its general mandate suggests that Frontex is occupied with the regulation of migration into the EU and has a 'preoccupation with security'.[62] However, as EU Member States separately have all sorts of human rights obligations, Frontex cannot, effectively, ignore this. While Frontex is not legally bound by obligations resting on EU Member States, being an EU agency entails that should Frontex do wrong, its wrongdoings are, legally speaking, likely to be attributed to the EU, rather than to Frontex in its own right.[63] Accordingly, Frontex stands in an accountability relationship to the EU. It is unlikely to be held responsible under international law, but can be held accountable by the other institutions of the EU and EU Member States, possibly (if not likely) also for actions violating international law, to the extent that international law is binding on the EU.[64]

International organizations may incur responsibility not merely for their operational activities (running a refugee camp or migration processing centre) but, in principle, *also for their standard-setting activities*. Should UNHCR's Emergency Handbook allow for torture in specified circumstances (the example is hypothetical) then surely UNHCR should be held to account. Domestic courts have sometimes relied on the authoritative (even if not legally binding) nature of handbooks produced by UNHCR,[65] in particular the Handbook on Procedures and Criteria for Determining Refugee Status.[66] Courts may depart from it, but are unlikely to cast it aside as irrelevant;[67] as a result, such handbooks qualify as exercises of public authority (epistemic authority),[68] and may therefore trigger accountability concerns. Likewise, should IOM incite to racial hatred, it may be held responsible should the prohibition of incitement to racial hatred have passed into customary international law or been accepted by the IOM as applicable to it. Much the same, and on the same assumption, could apply to Frontex, if it were to call on the EU and its Member States to exclude women from rescue missions.

Responsibility may also be incurred for *not giving effect to the organization's mandate*, at least in situations where the organization may legitimately be expected to act. This is an

[68] Jan Klabbers, 'The Normative Gap in International Organizations Law: The Case of the WHO' (2019) 16 International Organizations Law Review 272.

underdeveloped area of the law on responsibility, but an example may help. It seems clear that the UN wilfully ignored its mandate during the Rwandan genocide: having the general task to maintain and restore peace and security, it singularly failed to prevent the slaughter of some 800,000 people, despite having a military and political presence on the spot.[69] This is to be distinguished from the situation of UNHCR which, when all is said and done, is often accused of having prioritized immediate protection and *non-refoulement* over the development of more permanent solutions, for instance in the form of asylum policies.[70] This may owe something to the urgency of crises in conjunction with scarce financial resources—a prioritization that is difficult to criticize, given these circumstances.

More difficult, but perhaps not entirely impossible, is holding international organizations to account *for not living up to their own promises*. Should an organization adopt a decision to engage in a certain activity and then fail to engage in that activity, or do it badly, it is not impossible that it might be held to account, provided a few hurdles are overcome. For legal responsibility to arise, it would seem to be necessary for the decision in question to be legally binding. As international organizations typically depend on Member States for implementation, if the wrongdoing stems from a lack of implementation on the part of these Member States, then the problem of attribution manifests itself. Wrongdoing by Member States cannot, as a general rule, be attributed to an international organization, except if those Member States are seen as organs of the organization concerned. In a variation on this theme, it is not entirely excluded that various parts of the same organization give each other assignments that may have legal consequences. This is not lightly to be presumed, but one could, for example, think of the UN Human Rights Council (HRC) assigning a task to OHCHR, and OHCHR being not particularly diligent in performing that task.[71]

5. Mechanisms

Since UNHCR, being part of the UN system, is generally immune from prosecution before national courts, it will be difficult, perhaps impossible, to appeal UNHCR-mandated RSD decisions before domestic courts. Immunity from legal proceedings and other legal considerations may prevent access to national courts.[72] At best, UNHCR

[69] Romeo Dallaire, *Shake Hands with the Devil* (Carroll and Graf 2004).

[70] See eg Ingo Venzke, *How Interpretation Makes International Law: On Semantic Change and Normative Twists* (OUP 2012). For this dual mandate, see Statute of the United Nations High Commissioner for Refugees (adopted 14 December 1950) UNGA res 428(V) art 1.

[71] A possible (if not very strong) example is how the HRC 'requests' OHCHR to produce a database on companies engaged in business relations with the Israel occupied territories: HRC, 'Israeli Settlements in the Occupied Palestinian Territory, including East Jerusalem, and in the Occupied Syrian Golan', UN doc A/HRC/RES/31/36 (20 April 2016) para 17.

[72] The Belgian Conseil d'État held in 1978 that a decision by UNHCR's Belgian representative did not form part of Belgium's administrative system, and could therefore not be appealed under Belgian administrative law: see *Lusnjani v Belgium and Belgian Representative of the United Nations High Commissioner for Refugees* (1988) 77 International Law Reports 417.

activities may be raised in incidental manner in domestic proceedings, introduced as evidence concerning domestic legal issues such as whether the individual ought to be recognized as a refugee by the competent domestic authorities, or whether the country to which he or she may be sent back can be considered a safe country.[73] Courts will naturally be inclined to treat UNHCR opinions as authoritative, so one can only hope UNHCR gets it right more often than not. To some extent, the acts of UNHCR are scrutinized by the ECtHR, albeit indirectly perhaps, as UNHCR is not itself a party to the ECHR. Not only has the court indicated that 'due weight' be given to decisions of UNHCR, as noted above, but it also exercises some indirect judicial review, noting for instance in *D and Others* that UNHCR had rejected a demand for asylum 'with little reason'.[74]

Theoretically, as observed above, international organizations law forms a closed circle: organizations are established by Member States to perform tasks for their Member States. The Member States remain in full control (on paper, that is), and this entails that they are also in a position to hold their organizations to account. The Member States remain *Herren der Verträge* ('masters of the treaties'), and can and should intervene when their organization does something wrong. The wrong can be an act outside its proper powers (*ultra vires*) or can be a violation of an international legal obligation. In both cases, so functionalist theory prescribes, the Member States are in a position to tell the organization to cease and desist.

In practice, things do not always work out this neatly, due to several factors. An obvious problem is that not all Member States may agree that the organization does wrong; if some dissent, it will not be held to account. The Member States may even find that, though legally wrong, the action may be desirable. A possible example of this scenario is NATO's 1999 humanitarian intervention in Kosovo. Some organizations may be dominated by a single Member State or small group, effectively depriving the others of a voice.[75] And in most organizations, the Secretariat will play an important role, performing all sorts of activities that cannot directly be traced back to the collective will of the Member States,[76] and thus often escape Member State control.

In part as a result, many organizations have created their own accountability mechanisms, whether relating to financial accountability (auditing boards) or to testing the propriety of the organization's actions. In many organizations, compliance offices, integrity offices, or inspection panels have been established.[77] The UN's General Office

[73] An example is *Ceskovic v Minister for Immigration and Ethnic Affairs* (1979) 27 ALR 423.

[74] *D and others v Turkey*, App No 24245/03 (ECtHR, 22 June 2006) para 21. The Contracting Parties to the ECHR cannot delegate their human rights obligations to entities such as UNHCR, as the ECtHR suggested in *Muslim v Turkey,* App No 53566/99 (ECtHR, 1 October 2002) (holding in part B2 that the fact that UNHCR was better informed in the case at hand was not 'un point déterminant').

[75] The international financial institutions tend to listen more carefully to the US Treasury Department than to other Member States: see Randall Stone, *Controlling Institutions* (CUP 2011).

[76] John Mathiason, *Invisible Governance* (Kumarian Press 2007); Michael Barnett and Martha Finnemore, *Rules for the World: International Organizations in Global Politics* (Cornell University Press 2004).

[77] Jan Klabbers, 'Self-Control: International Organizations and the Quest for Accountability' in Malcolm Evans and Panos Koutrakos (eds), *The International Legal Responsibility of the European Union* (Hart 2013) 75.

of Internal Oversight Services[78] may scrutinize UNHCR generally, while UNHCR's Policy Department and Evaluation Service evaluates and assesses policies and programmes, and the Inspector General's Office can receive individual complaints.[79] The IOM likewise has an Office of the Inspector General, largely for financial issues, and an Ethics and Conduct Office, which can receive complaints about misconduct, harassment, and discrimination, amongst others.[80]

Overall, accountability via public opinion may be most powerful, if challenging to ensure. International organizations compete with each other for scarce resources, including funding and the more elusive resources of political legitimacy and a decent reputation.[81] Scandals may hit them hard, and public outrage may prove an effective technique for bringing them into line. Non-governmental organizations (NGOs) active in the field may condemn organizations, and engage in 'naming and shaming'. If done cleverly, such advocacy may be presented as 'speaking truth to power', and may induce the organization concerned to exercise greater care in the future or even change its policies altogether. However, the capacity for NGOs to call international organizations to account varies. In the refugee regime, many NGOs do regular business and are heavily financially dependent on UNHCR in particular, and may accordingly be unlikely to bite the hand that feeds them. Moreover, the general institutional drawback is obvious: if the NGOs act as guardians, then who guards *them*?

6. Concluding Remarks

Accountability is the Achilles' heel of international organizations. With the exception of accountability towards its Member States (rarely achieved at any rate), the law, epistemologically premised as it is on a view of organizations as relating solely to their Member States, simply lacks the resources properly to address other possible accountability relationships, whether of the organization towards individuals, towards the private sector, towards third States, or towards other international organizations. The ARIO help with the latter two categories, where legal relationships can possibly be said to rest on a consensual basis. With individuals and the private sector this is far harder to maintain: here, organizations often exercise public power, and that does not fit the functionalist model on which international organizations law is based.

What holds true for international organizations generally also holds true for organizations in the domain of refugee and migration movement. The law does not

[78] It remains unclear whether this now also applies to IOM; the UN–IOM agreement of 2016 does not explicitly mention such a construction.

[79] Smrkolj (n 52) 188–9.

distinguish between organizations, and does not treat those working with vulnerable people differently from those working with powerful private conglomerates or the financial sector. Yet, it is usually precisely when organizations deal with vulnerable people that they are engaged in the exercise of public power, and thus accountability towards those in the organization's care becomes imperative. It seems more than likely though that accountability can only be achieved (if at all) following theoretical renewal of international organizations law. As long as the discipline does not allow for the possibility of organizations exercising public power in much the same way as public authorities everywhere, accountability will remain elusive.

CHAPTER 65

BORDER CRIMES AS CRIMES AGAINST HUMANITY

ITAMAR MANN*

1. Introduction

During the 2020 Democratic Party campaign for the United States Presidential nomination, former Attorney General of California, Kamala Harris, repeatedly described President Trump's treatment of asylum seekers as a 'crime against humanity'.[1] The fervour around violent border enforcement policies was comparable to the mood about George W Bush's torture policies at the cusp of the Obama era.[2] Obama chose not to prosecute officials from the former's administration. Irrespective of whether Americans give Donald J Trump another term in office, the campaign to criminalize extreme border violence will not abate. It is a campaign that has been directed, for the last few years, against violence in many parts of the world. These include European and Australian practices and policies (this chapter's focus), as well as atrocities in many developing

* This chapter stems amongst other things from my own experience as a legal adviser for the Global Legal Action Network (GLAN). In the latter capacity I co-authored a complaint to the International Criminal Court concerning practices of offshore detention and other forms of ill-treatment, commissioned *inter alia* by Australian agents. Many thanks to the editors of this volume for their invaluable comments. Any errors are of course mine alone.

countries.[3] Once social movements put them on the table, such agendas do not evaporate quickly.[4]

As States escalate border violence, commentators have appealed to crimes against humanity to describe the underlying practices and policies. How have some of us come to think of violations of refugee rights as fitting into this legal category?[5] While part of the work needed to explain this is doctrinal, positive law is not the entire story. Choosing between legal interpretations is also an exercise in moral and political theory. Below, I begin from a doctrinal outline of the legal bases for such charges. I then elucidate three theories buttressing the claims that crimes against refugees have (sometimes) become crimes against humanity.

At the very core of international criminal law, the crimes of forcible transfer of populations[6] and displacement[7] proscribe the coerced movement of people.[8] But of course, not all forms of violence commissioned in the context of human mobility are criminal. 'Border violence', meaning the violent means States use to enforce their own border controls, is often acceptable under international law. Yet the charge that some such border violence may amount to crimes against humanity is not unusual. Note a few of its recent invocations. In 2016, legal scholar Vincent Chetail argued that deportation could amount to crimes against humanity. In his words: 'Is there blood on my hands?' This is a question shared by an increasing number of people who observe or carry out migration control in the Global North and the rest of the world'.[9] Agnes Callamard, Special Rapporteur on Extrajudicial, Summary, or Arbitrary Executions, has argued in 2017 that '[s]hould the jurisdictional requirements of the International Criminal Court be met, investigations into crimes against refugees and migrants by State officials and non-State actors should be opened'.[10] Ben Ferencz, the last surviving prosecutor at the Nuremberg trials, opined that Trump committed a crime against humanity with his practices of deliberate family separation and detention.[11]

In order to assess such claims, one first must understand what they mean; or rather, what we as advocates mean when we make them.[12] Section 2 below briefly explains what it takes to interpret the phrase 'crimes against humanity', as it appears in article 7 of the Rome Statute, in light of rules of interpretation articulated in the Vienna Convention on the Law of Treaties. Three theories of crimes against humanity follow, shedding further light on such accusations. Section 3 introduces the first, following a basic tenet of Kantian ethics: the charge of crimes against humanity denounces the transformation of humans from ends in themselves to means of governing, or even of eliminating, the lives of others. A second option, described in Section 4, posits that the key aspect of claims concerning crimes against humanity directed at refugees is that they exert a kind of structural violence: certain kinds of border violence establish a system that extinguishes legal protections for humans, while making such results appear natural. Unlike other cases in which structural violence is rendered transparent to criminal law, contemporary border violence against asylum seekers and refugees *can* be effectively captured within a criminal law framework. A third interpretive theory, advanced in Section 5, suggests that border violence is deleterious towards our social lives, as it separates us into hermetic units and prevents interaction and mobility between groups. Proponents of this view may proceed to argue that sealing borders and eliminating the right to asylum is part of a larger plan for solidifying global racial and economic hierarchies: a 'global apartheid'.[13]

The purpose of this chapter is to introduce each of the theories and assess their respective merits. I conclude in Section 6 by discussing which of the three theories is most compelling as the moral and political framework we need in order to understand the law.[14] I examine their overlaps and mutual tensions, with hope of contributing an understanding of the wider turn to criminal law in the protection of refugees.[15] While each of the interpretive approaches is valuable, the third one is the most crucial, as it outlines a positive vision for the role of prosecutions. The doctrinal basis of international law is rightly silent on the political vision motivating it. This does not mean that from a situated advocate's perspective, such silence is advisable. Ultimately, this chapter also raises a question of philosophical and practical importance for lawyers working for social change: what is the relationship, indeed what should be the relationship, between advancing a doctrinally rigorous interpretation, and articulating the vision for social transformation resting behind it?

2. Interpreting 'Crimes against Humanity'

Like any law, international criminal law allows for multiple incongruent interpretations.[16] Choosing between them demands a more general account of the political and moral aims and purposes the law should seek to serve.[17]

The prohibition of crimes against humanity has a rich history, and multiple legal sources. As the authors of the entry on 'Crimes against Humanity' in the Max Planck Encyclopaedia of Public International Law tell us, the expression apparently emerged in 1915, when France, Great Britain, and Russia stated with regard to 'the massacre of Armenians' that 'they would hold personally responsible all persons implicated in these "new crimes of Turkey against humanity and civilization" '.[18] At least since the framing of the Charter of the International Military Tribunal at Nuremberg (1945), it has been enshrined in customary international law.[19] It has since appeared in numerous international legal instruments and has been codified in the domestic laws of multiple countries. Today, the most universally accepted international legal instrument is the Rome Statute, which established the International Criminal Court (ICC). It is for this reason that, in discussing the interpretive theories below, I will refer to the Rome Statute. However, the theories elucidated here are equally useful in interpreting other instruments, including domestic ones. Within the context of the Statute, crimes against humanity are one category amongst several, including war crimes and the crime of genocide.

International criminal law aims to hold accountable and punish the perpetrators of the most heinous crimes. A lively debate has been going on for at least a decade, on whether the institutions of international criminal law, specifically the ICC, can ever be expected to accomplish this aim. Evidently, there are major concerns about the efficacy of the ICC as an institution to hold the perpetrators of the most heinous crimes to account. This chapter does not assume that institution's efficacy, but rather outlines how the concept of crimes against humanity ought to be understood, leaving open the possibility that this concept could be operationalized either before the ICC or before domestic courts. The structure of the Rome Statute is thus important. Its preamble

emphasizes that the role of the ICC is to try 'the most serious crimes, of concern to the international community as a whole',[20] and the jurisdiction of the court is limited to such crimes.[21]

According to the Statute, whether an international crime within the ICC's jurisdiction, has been committed, is not limited to questions about the criminal act (*actus reus*) or criminal intent (*mens rea*), but also includes a threshold of seriousness. Unlike war crimes, crimes against humanity do not have to be committed in the context of armed conflict, but rather in the context of 'a widespread or systematic attack directed against any civilian population'.[22] After this so-called *chapeau* requirement, the Statute proceeds to a list of prohibited acts and policies: murder (article 7(1)(a)); extermination (article 7(1)(b)); enslavement (article 7(1)(c)); deportation or forcible transfer (article 7(1)(d)); imprisonment in violation of fundamental rules of international law (article 7(1)(e)); torture (article 7(1)(f)); rape and other kinds of sexual violence (article 7(1)(g)); persecution against identifiable groups (article 7(1)(h)); enforced disappearances (article 7(1)(i)); apartheid (article 7(1)(j)); and 'other inhumane acts' (article 7(1)(k)). In the migration context, advocates have based allegations of crimes against humanity on many or all of these categories. Chetail, for example, has emphasized the crime of deportation.[23] The crime of deportation has further become central to the legal discussion surrounding refugees recently, as it has triggered the ICC's jurisdiction with respect to the protection of members of the Rohingya minority.[24] Others have organized their claims around imprisonment, torture, persecution, enslavement, or murder. Recently, commentators have drawn powerful analogies between violations in the migration context and enforced disappearances.[25] Alston has even warned of a kind of global apartheid regime, as States may respond harshly to those displaced by climate change.[26]

Whether one ultimately agrees with all or any of such doctrinal accounts, it likely does not depend exclusively on the Rome Statute (or any other positive source, for that matter). The language of the treaty has an 'open texture'.[27] Any interpretation makes assumptions about what it is in human life that merits protection.[28] Different assumptions on the role of international law in such protection lead to different interpretations of international crimes. Article 7(1) specifies what is often referred to as 'the contextual elements': as indicated above acts must be 'committed as part of a widespread or system-

atic attack directed against any civilian population, with knowledge of the attack'. When do instances of certain criminal behaviour towards asylum seekers and refugees become an 'attack', be it 'widespread' or 'systematic'? That question too, depends on the purpose of the prohibition of crimes against humanity, as explored in the three interpretive theories explored below.

3. Against Weaponizing Humans

The first interpretative theory reaches back to a cornerstone of enlightenment moral theory, namely Immanuel Kant's 'categorical imperative'. The so-called 'humanity formulation' of Kant's categorical imperative states that we should never act in such a way that we treat humanity, whether in ourselves or in others, as a means only but always as an end in itself.[29] Rulers in many parts of the world have historically decapitated or impaled captured enemy soldiers, exposing their bodies along the outer city walls as warning signs.[30] Such displays of corpses or suffering human bodies treat humans as a very specific kind of means: they become weapons in an ongoing war. The laws of war now prohibit such policies, and human rights law too rejects them.[31] Yet violent borders often impose a similar instrumentalization of human lives, outside of armed conflict. This is not merely hyperbole. As Trump's instructions to 'build an alligator moat' at the US–Mexican border reveal, some policy discussions have revived medieval techniques.[32] Though ridiculous, the discourse reveals a return to deep impulses that have survived millennia, namely meting out harsh and inhumane treatment in order to deter others or demonstrate power.[33]

The manifest suffering of asylum seekers has become an essential border enforcement tool, especially for Western democracies. 'Host countries' extend detention periods only to communicate the news amongst audiences in 'countries of origin'. In 'No Friend but the Mountains', author and Iranian refugee Behrouz Boochani describes how this works in the infamous Australian Manus Island facility: 'The deal is that we have to be a

warning, a lesson for people who want to seek protection in Australia.'[34] According to this first interpretive theory, the distinct flavour of evil in crimes against humanity directed at refugees is that they systematically pit human beings in a fight against other humans who may seek protection.

Hathaway has identified the turn to deterrence as early as 1992.[35] More recently, Gammeltoft-Hansen has characterized 'the deterrence paradigm' in a series of articles authored with Hathaway and with Tan.[36] While they define the term in a slightly broader way, this chapter treats deterrence straightforwardly to encapsulate any policy intentionally inflicting pain and suffering upon asylum seekers and refugees, in order to warn other would-be asylum seekers and migrants that if they attempt entry—they too will suffer.[37] If we follow Kant, such deterrence is immoral *per se*. Yet it is far from clear that all its instances are also illegal. François Crépeau, Special Rapporteur on the human rights of migrants, has said that '[i]t is a fundamental principle of human rights law that one person cannot be punished only for the reason of deterring another'.[38] Yet, as Gammeltoft-Hansen and Tan have explained, 'the deterrence paradigm is not premised on the rejection of international law as such'.[39] Be that as it may, in some instances, the extent of suffering and harm intentionally inflicted as a warning is so high that it does meet the definition of 'crime against humanity' as enumerated in article 7 of the Rome Statute. Where border violence entails torture, inhumane imprisonment, deportation, persecution, and according to some advocates, murder, it may entail 'crimes against humanity'. The contextual elements of the crimes, their link with 'systemic attacks', lie in the systemic nature of deterrence practices, which also allows us to see their heinousness clearly. 'Deterrence' may very well have a pride of place in a particular 'concept of evil'.[40]

Several of the scholarly and activist attempts to treat border violence as a crime against humanity emphasize the deterrence turn. For example, concerning the crime of

murder under article 7(1)(a), Branco and Shatz have argued that this crime is perpetrated in Europe's failure to render assistance to migrants crossing the Mediterranean. According to their explanation, European government agents have committed the crime in causing the death of thousands, by way of omission to render a legal duty of rescue.[41] Deterrence is crucial here, because it adds the necessary component of criminal intent, or *mens rea*. As they write: 'Increased death at sea is not an unintended consequence, but part and parcel of strategies that hinge on deterrence to curb migration'.[42] Following important work by Heller and Pezzani, they provide evidence that European border officials have purposefully or knowingly designed a policy that would increase migrant drownings—to send a message.[43] Human rights activist and Burmese refugee in Australia, U Ne Oo, argues that his adopted country's offshore detention policies amount to the crime of enslavement under article 7(1)(c).[44] His accusation relies on an interpretation of the provision, according to which Australia has 'lent' asylum seekers to for-profit private contractors, who maintain them in custody in Manus Island or Nauru. It has therefore allowed the companies, Broadspectrum and Ferrovial, to exploit asylum seekers in conditions tantamount to enslavement.[45] Observe that deterrence plays a pivotal interpretive role in this argument: 'The Labor government's initial purpose of deterrent measures…appeared to have evolved into the enslavement of asylum-seekers'.[46] While these interpretations of both murder and enslavement may be somewhat unorthodox, the relevance of deterrence in the argumentation is noteworthy.

Turning to the crimes of deportation (article 7(1)(d)), imprisonment (article 7(1)(d)), and torture (article 7(1)(f)), compelling interpretations also focus on deterrence. Van Schaack, for example, has argued that Trump's child separation policy amounts to

[46] U Ne Oo (n 44) 4.

torture.[47] She uses the administration's statements that the policy is meant as a deterrent to reveal the 'coercion' of would-be migrants, part of the US domestic definition of torture. Whether such torture reaches the level of a crime against humanity depends on whether one deems child separation part of a 'widespread or systematic attack directed against any civilian population, with knowledge of the attack'. That child separation is specifically designed to send a threatening message to other parents that may consider entry sheds light on its systematic and assaultive nature.

Similarly, the Global Legal Action Network and the Stanford Law School Human Rights Clinic highlighted deterrence measures in their Communication to the ICC prosecutor concerning Australia's offshore detention practices.[48] The Communication focuses on the offences of imprisonment,[49] torture,[50] 'other inhumane acts',[51] deportation,[52] and persecution.[53] The Communication quotes Liz Thompson, a former Australian migration agent, who had characterized the offshore camps as 'an experiment in the ultimate logic of deterrence, designed to frustrate the hell out of people and terrify them so that they go home'.[54] The discussion of deterrence in the submission exposes the systematic character of the inhuman and degrading practices in Australia's offshore facilities, and how they have entrenched practices of torture.

On 12 February 2020, the ICC rejected the Communication without preliminary investigation with a reasoned letter,[55] accepting that 'some of the conduct' constituted the underlying acts for the crimes of imprisonment and cruel, inhuman, or degrading treatment, and that 'the gravity of the alleged conduct thus appears to have been such that it was in violation of fundamental rules of international law'. Nonetheless, it concluded that the allegations did 'not appear to satisfy the contextual elements of crimes against humanity under article 7 of the Statute'.[56] This is because the underlying policy was not 'deliberately aimed at encouraging an "attack", within the meaning of article 7'. The letter acknowledged that offshore detention was 'initiated to pursue, among other things, a policy of immigration deterrence', but nonetheless concluded that 'the information available at this stage does not support a finding that cruel, inhuman, or degrading treatment was a deliberate, or purposefully designed, aspect of the policy'. In other words, the rejection turned on a finding that it is not enough for practices to be

intentional (indeed the deterrent rationale was accepted), but rather required that the cruelty, inhumanity or degradation must itself be *deliberate* or 'purposefully designed'. The legal cogency of this finding may be questioned.[57]

Even if Australia only intended to apply pain and suffering *below* the level of cruel, inhuman or degrading treatment for deterrence purposes, but ended up exceeding that threshold, it has commissioned a systematic attack against a civilian population. Applying pain and suffering on persons for deterrence purposes—which it is not disputed that Australia did—is inherently attack-like. Deterrence is based upon the presumption that human behaviour is simply the result of carrot and stick incentives, which migration scholars often call 'push' and 'pull' factors. By manipulating such incentives it is possible to manage refugee flows, while ignoring the underlying claims and grievances refugees seek to express and closing paths to asylum. In 2012, the architect of offshore detention and head of the Expert Panel on Asylum Seekers, Air Chief Marshall Angus Houston, stated that Australia must 'shift the balance of risk and incentive in favour of regular migration pathways and established international protections and against high-risk maritime migration'.[58] In practice, this meant rationing the suffering exerted on detainees in the offshore facilities so that it is worse than the suffering that asylum seekers would otherwise experience.

These examples illustrate the moral repugnancy of the deterrence model. Only some practices that rest on this model reach the level of criminality, let alone constitute a 'crime against humanity'. Deterrence practices may invariably be a violation of the Kantian imperative, but that in itself is not sufficient to make them illegal. However, advocates focus on deterrence in this context because it reveals the systematic and assaultive character of the crimes in question: suffering is meted out in a carefully calibrated way, using human beings as spectacle in a power play.

4. Against Structural Violence

The first account of crimes against humanity, rooted in Kantian ethics, may seem mere moralism, detached from a wider account of politics. Following Marks, we might fault an account of crimes against humanity, even when motivated by an intention to deter as failing to offer 'analytically substantive accounts of the forces of injustice or injury'; instead, they might be perceived to merely 'condemn the manifestation of these forces in particular . . . events'.[59] This second account aims to put front and centre the social

contexts in interpreting crimes against humanity, by locating the wrongfulness of crimes against humanity directed at refugees precisely in their social context; or rather, in their *lack* of social context, best exemplified by the very fact that they are still often not recognized as international crimes.[60] This may seem like a paradoxical proposal: 'they are crimes against humanity precisely because we normally do not think of them as such!' Agnes Callamard, Special Rapporteur on Extrajudicial, Summary, or Arbitrary Executions, has explained the idea. In her 2017 report on unlawful migrant deaths, she expresses concern at 'an international crime whose very banality in the eyes of many makes its tragedy particularly grave and disturbing'.[61] As emphasized above, the Rome Statute requires an assessment of whether crimes are 'of concern to the international community as a whole'. International criminal law is widely associated with *direct violence*, such as killing or maiming bodies, paradigmatically during times of war.[62] This view is reflected in the institution of the International Military Tribunal, and other iconic examples, such as the International Tribunal for the Former Yugoslavia and the International Tribunal for Rwanda. The image of an international crime brings to mind countless civilian bodies attacked by an armed group, in violation of fundamental rules of *jus in bello*.

Sociologist Johan Galtung has also called such acts 'personal violence', distinguishing it from 'structural violence'. The latter category refers to the slower and less visible, but no less lethal, processes in which people become victims of structural forces such as poverty and inequality, for example through food shortages, or lack of access to water or to adequate health or education services.[63] As Galtung emphasizes, structural violence is often not even seen as violence. Terrible as personal violence is, we are overly focused exclusively upon it. This is not only because personal violence is transmitted more easily on the media—on television in Galtung's time, and online in our own. It is also because of a certain metaphysics of evil, in which individual agents and bad intentions are held as essential for the possibility of moral reprimand. The ICC rejection discussed above is one apposite example of this focus on deliberate acts. More specifically, a harmful motivation is held by some theorists as necessary for an act to be evil or atrocious.[64] While Kant was our hero with the first theory proposed above, here Kant figures at the source of a problem; for there is perhaps no one who better embodies the primacy of intention and the autonomy of the individual than Kant.[65] His views on subjectivity may

indeed lead us to think that moral reprimand is just about personal decisions. This may further distract us from our historical situatedness, as well as structural conditions in which social wrongs can endure. Flowing from the enlightenment view, personal violence and not structural violence thus comprises the 'bread and butter' of criminal law (international criminal law included). Structural violence remains far removed from criminal accountability. Critics working in a Marxist tradition may even regard criminal law as a way of legitimizing structural violence by distracting us from it.

Against this backdrop, crimes against asylum seekers and migrants may be an exceptional category; one that sheds light on what it means to commit an atrocity, and that thus merits specific concern from the 'international community'. Crimes against asylum seekers and migrants may reveal a kind of intermediate space between Galtung's two kinds of violence, revealing the difficulty of clearly distinguishing them. On the one hand, they should be thought of as instances of structural violence. At least in democracies, they do not *normally* involve instances of direct intentional violence by State agents. Inasmuch as prolonged or indefinite detention for deterrence purposes is concerned, such measures are often disregarded as unfortunate but ultimately legitimate outcomes of global disparities of wealth: rich countries have a right to protect their borders. On the other hand, unlike other instances of 'structural violence' in which poverty leads to indirect results such as reduced life expectancy, disease, or drug abuse, border violence still involves *some* direct violence. In other words, we find that structural violence is traceable to its embodiment in direct violence. This is true not only when border enforcement personnel shoot at asylum seekers, whether to intimidate, disable, or kill them. It is also true in any instance in which detention and deportation are involved. To put it plainly, this is the use of force required to keep some of the world's poorest people from opportunities and resources (which in turn could also generate structural political transformation).

This use of force may characterize the still-inchoate category of international crimes against asylum seekers. If investigated and prosecuted, they may enable international criminal law to respond somehow to heinous wrongs that are normally considered beyond its reach. The popular imagination of international criminal law may thereby be recast: no longer a form of sanction against political and military leaders who have lost touch with the imperative of being 'civilized'.[66] The discipline may, rather, emerge as enforcing the rights of those whose de-humanization is often deemed an acceptable outcome of the fact that the world is divided by borders.

Such 'banal' international crimes are those whose gravity emanates precisely from the fact they normally cannot be seen from the perspective of their victims.[67] They are grave because the current world order conceals their adverse consequences on the populations they target.[68] This egregiousness of crimes against asylum seekers militates towards

[66] This is the imagination Makau Mutua ascribes to the human rights movement more generally. See Makau Mutua, 'Savages, Victims, and Saviors: The Metaphor of Human Rights' (2001) 42 Harvard International Law Journal 201.

their interpretation as crimes against humanity, as it may help fulfil the chapeau requirement and reveal that seemingly discrete instances of violence at borders are in fact 'systematic' or 'widespread'. The insight is supported by how often they are disregarded as the unfortunate but legitimate outcome of global inequality. Crimes against asylum seekers and other unauthorized migrants are where personal violence visibly meets structural violence, delineating an overlap between the two.

5. 'Cosmopolitics'

The third theory draws on the interpretation of crimes against humanity offered by Luban,[69] although modifying it significantly. Luban's account addresses the perennial question of what it means to commit a crime 'against humanity'. Rather than engage in a metaphysical debate about human nature, he turns to the law itself. As he puts it 'it seems likely that *any* metaphysical theory of humanness will prove far more debatable than the intuitions it is supposed to anchor. . . . [W]e should seek the idea in the same set of intuitions that informs the law of crimes against humanity. That is, we should seek the image of humanness reflected in the law.'[70] However, Luban ultimately does rely on philosophical sources that illuminate the essence of what is valuable in human life, drawing on the work of Hannah Arendt. For Luban, crimes against humanity are crimes against the political nature of humans.[71] As he explains, '[c]rimes against humanity are not just horrible crimes; they are horrible *political* crimes, crimes of *politics gone cancerous*. The legal category of "crimes against humanity" recognizes the special danger that governments, which are supposed to protect the people who live in their territory, will instead murder them, enslave them, and persecute them, transforming their homeland from a haven into a killing field'.[72] With these words, Luban alludes to article 7. The categories he mentions—murder, enslavement, and persecution—are all within the Rome Statute enumeration of crimes against humanity. The distinctiveness of 'crimes against humanity', for Luban, is that they are particularly abusive towards our ability to live in groups. For him, these are crimes where the institutions that are supposed to enable our life in political communities are turned against their purposes. Luban's theory illuminates the distinction between crimes against humanity and war crimes. Whereas the latter are about atrocious acts within an armed conflict between two or more groups, the former are about the nature of government. The underlying imagination (one which also animates Arendt's thinking), is one of totalitarianism. Apart from Nazi Germany and the Soviet Union, apposite examples include Augusto Pinochet's treatment of Chileans during the 1970s and 1980s; Bashar Al-Assad's crushing of an initially peaceful uprising against him, starting from 2011; Omar Al-Bashir's extermination of Darfurians and mistreatment of other Sudanese groups until he was

[70] ibid 109. [71] ibid 110. [72] ibid 117 (emphasis added).

ousted in 2019; and many comparable others. These are all crimes against humanity not *only* because torture, extermination, or apartheid are systematically or widely inflicted upon civilians (which is what the law says). Such criteria are advanced purposively, to prevent the State, our vehicle for leading meaningful political lives, from being instrumentalized against us.

Admittedly, Luban's reference to 'governments who are supposed to protect the people *who live in their territory*'[73] may sound like an awkward basis for a theory of 'crimes against refugees as crimes against humanity'. When governments commit crimes of border violence, they commit crimes precisely against those who seek a haven in their territory but may not have established it (yet). If crimes against humanity are to be interpreted by reference to human sociability and our nature as 'political animals', what about people who are neither part of our society nor of our polity? Beyond the mere fact of inhabiting a territory, part of the force of Luban's account lies in his emphasis on a special relationship between a government and its citizens. The emphasis on territory and citizenship in Luban's account reflects a traditional conception of the scope of government responsibilities in liberal political theory.[74] Crimes against humanity thus emerge when that conception itself becomes the source of danger. The crime of apartheid, for example, transformed the link of South African citizenship to an instrument of domination.

The crimes of border violence are crimes against non-citizens, often extraterritorial. Those who commit crimes against refugees often invoke the rhetoric of *protecting* the cohesiveness of society and polity to justify their heinous acts. Think, once again, of the separation of children from their families at the US–Mexican border, a policy that has been described as torture. Imagining such policies as crimes of governments against their people misconstrues them. Their heinousness stems precisely from *hierarchical* relationships in which the victims are vulnerable because they are foreigners.

To allow for an understanding of examples where refugees are exposed to widespread or systematic egregious violence as crimes against humanity, we need to adapt Luban's theory. The rationale for the prohibition of crimes against humanity should be understood not (only) in national terms, but rather as a sort of social protection, in which the relatively porous borders between our societies is acknowledged as intrinsically valuable and necessary for our political lives. This cosmopolitan reading highlights the ongoing interactions that constitute both national and transnational political community.

A wide variety of authors have advanced political theories that demand borders be porous to some degree.[75] These include liberal nationalists as well as cosmopolitans.

[73] ibid (emphasis added).

[74] See eg ICCPR, art 2 (defining jurisdiction).

[75] Of the cosmopolitan camp I focus on here, especially salient are eg Seyla Benhabib, *The Rights of Others: Aliens, Residents, and Citizens* (CUP 2012); Seyla Benhabib, *Another Cosmopolitanism: Hospitality, Sovereignty, and Democratic Iterations* (OUP 2006); Kwame Anthony Appiah, *Cosmopolitanism: Ethics in a World of Strangers* (reprint edn, WW Norton & Company 2007); Bonnie Honig, *Democracy and the Foreigner* (Princeton University Press 2003); Homi K Bhabha, *Our Neighbours, Ourselves* (De Gruyer 2011).

Neither argue for hermetically closed borders. Thomas quotes Édouard Glissant, who has introduced a particularly apposite brand of cosmopolitanism, championing 'the encounter, the interference, the shock, the harmonies and disharmonies among cultures'.[76] As Thomas explains, Bonnie Honig proposed the label of 'cosmopolitics'.[77] Honig's theoretical move intended to signal a turn away from the Kantian notion of cosmopolitanism as incremental progress towards global perpetual peace. Glissant's 'encounter' and 'interference'—and indeed a broader programme for porous borders—are worthwhile not only for the sake of an aspirational future, but also for what they bring to us *today*.

Such cosmopolitan views typically highlight that our most vibrant communities are never composed exclusively of compatriots.[78] They are nearly always homes for migrants and refugees; and members of such groups contribute to the regeneration of the 'demos'.[79] We live together politically not only in our own pre-existing communities. Essential to any conception of humans as 'political animals' is defending their rights to go beyond their communities and request asylum elsewhere. Equally important as a basis for political life is the duty to heed the call of those who need such safety, and to display solidarity with them. Ultimately, political participation, too, goes beyond national borders and the strict definition of citizenship. Starting from Luban's idea of crimes against humanity as crimes against our political nature, we thus arrive at the idea of crimes against humanity as crimes against our cosmopolitan political life. There is a conceptual gap here. Luban is concerned about a lack of societal agreement about metaphysical understandings of the value of human lives. And indeed, the position I articulate here departs, to some degree, from any identifiable political consensus. After all, we are not all cosmopolitans in our basic political convictions—far from it.

As I have acknowledged elsewhere, in some instances, a theory of crimes against humanity resting entirely/predominantly on a controversial political theory may not be a good basis for prosecution. In extremis, it may lead to criminal proceedings that violate the principle of legality, or that are directed against defendants who lack culpability in the sense of understanding their own wrongdoing.[80] Yet inasmuch as prosecutions can avoid such pitfalls, prosecutions based on such accounts may be worthwhile. They invite law to be interpreted with a distinct vision of political ends in mind. Crimes against humanity, in this view, are not simply about eliminating torture, extermination, or mass rape. They are about generating a world in which societies evolve from inter-social and intercultural relations, and from opportunities to encounter each other. Whoever utilizes politics and the State in order to prevent such encounters

through systematically violent measures, amounting to the subheadings of article 7, should be held accountable under international criminal law. The crime's basic elements, the *actus reus* and *mens rea*, remain; yet their understanding is laden with a specific political vision. International criminal law is granted positive ends, not only negative ones. It is no longer simply about imposing accountability for the worst of crimes. It is also about advancing and promoting an understanding of what it means to live in a good (global) society.

Admittedly, such a vision cannot rely on international criminal law alone, but rather must be embedded in a much wider political project that reimagines and reinterprets international law. In this tradition, public international law as a whole protects a 'cosmopolitan right' concerning 'the relations of Right between persons and foreign states'.[81] These abstract principles require a historical corrective, a rejection of the traditions that allow such rights to be denied *in reality*. After all, the need for asylum and protection from grave human rights abuses is not equally distributed on the face of the planet; nor is the rate in which societies choose to close their doors.[82] Achiume's work is informative in this context. Achiume has contributed to upending the xenophobia hard-wired into a dominant understanding of international law.[83] She has then gone further to argue that migration from former colonies to States that have participated in their colonization is a form of emancipatory action.[84] An international criminal prohibition informed by a need to protect refugees should be understood, in this view, as one small component of a reorientation of international law towards dismantling global racial hierarchies.

The global regime of violent borders is sometimes characterized as apartheid.[85] Alston mentioned a global apartheid in which borders are closed to prevent the movement of poor migrants seeking protection from the risks of climate change. Economic historian Quinn Slobodian has shown how early in the twentieth century, the racism of apartheid germinated not only into global economic policy but also into the governance of multiple national borders.[86] Political theorist Achille Mbembe has gone further, and has advanced an analysis of contemporary world politics based on what he calls 'the logic of enclosure': a comparison between apartheid and border violence.[87] Complementary to the positive vision of cosmopolitanism or cosmopolitics, the negative vision attached to crimes of humanity against refugees may best be framed as one of a global apartheid. Apartheid occupies a separate subheading in the Rome Statute definition of crimes against humanity—article 7(1)(j). It reminds us that systems of

racialized hierarchy and exclusion have earned a distinctive form of global legal condemnation. This section suggests that that reasoning may have wider application, to serve as an interpretative frame for crimes against humanity generally.

6. Conclusion

The three interpretive theories discussed above aim to support the claim that border violence sometimes entails crimes against humanity. Connecting the three interpretations, the argument moves along two axes, from morality to politics, and from a negative to a positive vision.

The 'deterrence paradigm' emphasized the *moral* injury in instrumentalizing human life. It was animated by a negative vision of wrongdoing, although that vision may generate a society where no such instrumentalization would occur, a 'kingdom of ends', to use Kant's term. 'Cosmopolitics', in contrast, aimed to provide a programmatic agenda. Its antithesis is global apartheid, but it also provides a sketch of the kind of society we should strive for: a multicultural and multiracial society with porous borders. Some readers may respond that precisely such societies generated considerable backlash in many parts of the world, with Brexit and Trumpism being just two examples. Such backlash does not mean that the positive vision should be abandoned.

Between these two categories, lies the idea of criminalizing structural violence. The idea of 'banal international crimes' has a moral valence, namely, reprimanding conditions in which certain humans can simply be rendered rightless. While it did not outline a positive political theory, the notion of structural violence generates a larger political programme. At the very least, background conditions of global inequality are highlighted as both part of what makes crimes against some people seem 'natural', yet also warranting global legal opprobrium.

Where do we, as advocates, want to stand on this continuum? In the larger context of a fiery public debate, simply adopting a 'culture of formalism' may neither be possible, nor advisable.[88] A programme to reorient international criminal law towards prioritizing condemnation of border violence, and holding accountable those responsible for it, does not rest on doctrinal grounds alone. It requires a purposive account of crimes against humanity that inevitably rests both on ethics and politics. This chapter aims to join a conversation that must include not only amongst scholars, but also activists, politicians, refugees and citizens of 'host countries'. Prosecution, even prosecution at an international criminal tribunal, is ultimately a political act. International criminal law is only relevant to curtailing border violence as part of a larger shared vision of justice.
